"I think so. Let me check." He covered his right eye again, but found that his eye, dazzled by brighter light, could no longer pick up the faint gleam he had marked. "That's the best I can do."

Hans stretched a string along the marked direction. "My turn. Note your time." He took the spectacles, quickly gave Charlie a direction, coached him into place. The two lines differed by about ten degrees.

"Figure your hour angle," Hans said and looked at his watch.

The time was nine-thirty ... and the Sun moved fifteen degrees each hour...two and a half hours to noon; that's thirty-seven and a half degrees and each minute on the face of his watch was six degrees, so — Charlie was getting confused. He looked up, saw that Hans had placed his watch on the ground and was laying out base line. Hans' watch had a twenty-four hour face; he simply pointed the hour hand at the Sun and the XII spot then pointed along base line.

No mental arithmetic, no monkeying around — "Gosh, I wish I had a watch like that!"

"Don't need it," Hans answered without looking up.

"But it makes it so simple. You just — "

"Your watch is okay. Make yourself a twenty-four hour dial out of cardboard."

"That would work? Yeah, it would! I wish I had one now.,'

Hans fumbled in his duffel bag. "Uh, I made you one." He handed it over without looking up — a cardboard clock face, laid out for twenty-four hours.

Charlie was almost speechless. "Gee! Nixie, look at that! Say, Hans, I don't know how to thank you."

“Don’t want you and Nixie getting lost," Hans answered gruffly.

Charlie took it, aimed nine-thirty along his line, marked noon and restretched the string to match. Base line, according to his sighting, differed by ten degrees from that of Hans. In the meantime, two patrol leaders had stretched a line at right angles to base line, along where the troop was spread out. One of them moved down the line, checking angles with a protractor. Mr. Qu'an followed, checked Charlie's layout himself. "About nine degrees off," he told Charlie. "Not bad for a first try."

Charlie felt crestfallen. He knew that he and Hans could not both be right but he had had a small hope that his answer was nearer the correct one. "Uh...which way am I wrong?"

"Left-demi. Look at Hans' — he's dead on...as usual." The Scoutmaster raised his voice. "All right, gang! Bush formation, route march. Flamers out, right and left. Rusty on point, Bill on drag –

shake it up!"

"Heel, Nixie."

The road cut straight through the jungle. The clearing had been flamed back wider than the road so that the jungle did not arch over it. The column kept — to the middle where the ground was packed by vehicles running to and from outlying plantations. The flamers on the flanks, both of them Explorer Scouts, walked close to the walls of green and occasionally used their flame guns to cut back some new encroachment of vine or tree or grass. Each time they did so, they kept moving and a scavenger gang moved out, tossed the debris back into the living forest, and quickly rejoined the column. It was everybody's business to keep the roads open; the colony depended on roads more than Ancient Rome had depended on theirs.

Presently it began to rain. No one paid attention; rain was as normal as ice in Greenland. Rain was welcome; it washed off everpresent sweat and gave an illusion of coolness.

Presently Point (Rusty Dunlop) stopped, sighted back at Drag, and shouted, "Right demi fifteen degrees!"

Drag answered, "Check!" Point continued around the slight bend in the road. They had left Borealis heading "south" of course, since no other direction was possible, but that particular south was base thirty-two degrees right demi, to which was now added fifteen degrees clockwise.

It was Point's duty to set trail, keep lookout ahead, and announce his estimate of every change in direction. It was Drag's business to have eyes in the back of his head (since even here the jungle was not without power to strike), keep count of his paces, and keep written record of all course changes and the number of paces between each dead reckoning navigation marked down in a waterproof notebook strapped to his wrist. He was picked for his reliability and the evenness of his strides.

A dozen other boys were doing the same things, imitating both Point and Drag, and recording everything, paces, times, and course changes, in preparation for Pathfinder merit badges. Each time the troop stopped, each would again establish base direction and record it. Later, after the hike, they would attempt to map where they had been, using only their notes.

It was just practice, since the road was surveyed and mapped, but practice that could determine later whether they lived, or died miserably in the jungle. Mr. Qu'an had no intention of taking the troop, including tenderfoot town boys not yet twenty Venus years old, into unexplored jungle. But older boys, seasoned explorer Scouts did go into trackless bush; some were already marking out land they would claim and try to conquer. On their ability to proceed by dead reckoning through bush and swamp and return to where they had started depended both their lives and their future livelihoods.

Mr. Qu'an dropped back, fell in beside Charlie. "Counting paces?"

"Yes, sir."

"Where's your notebook?"

"Uh, it was getting soggy in the rain, so I put it away. I'm keeping track in my head."

"That's a fine way to wind up at South Pole. Next time, bring a waterproof one."

Charlie didn't answer. He had wanted one, as he had wanted a polarizing sighter and many other things. But the Vaughn family was still scratching for a toehold; luxuries had to wait.

Mr. Qu'an looked at Charlie. "If convenient, that is," he went on gently. "Right now I don't want you to count paces anyhow."

"Sir?"

"You can't learn everything at once, and today you can't get lost. I want you to soak up junglecraft. Hans, you two move to the flank. Give Charlie a chance to see what we're passing through. Lecture him about it, and for goodness' sake try to say more than two words at a time!"

"Yes, sir."

"And — " The Scoutmaster got no further; he was hailed by the boss of the scavenger gang. "Mr. Qu'an! Squint's got a screwbug!"

The man said something bitter under his breath, started to run. The two boys followed. The scavengers had been moving a large branch, freshly flamed down. Now they were clustered around one boy, who was gripping his forearm. Mr. Qu'an burst into the group, grabbed the kid by that arm without saying a word, and examined it. He shifted his grip so that the skin was drawn tight at one spot, reached for his belt and drew a knife, dug the point into skin, and, as if he were cutting a bad spot out of an apple, excised a small chunk of flesh. Squint screwed up his face and tears came into his eyes, but he did not cry out.

The scavenger boss had his first-aid kit open. As the Scoutmaster handed his knife to a boy near him, the gang boss placed a shaker bottle in Mr. Qu'an's hand. The Scoutmaster squirted powder into the wound, accepted a pressure patch and plastered it over the cut.

Then he turned sternly to the gang boss. "Pete, why didn't you do it?"

"Squint wanted you."

"So? Squint, you know better. Next time, let the boy closest to you get it — or cut it out yourself. It could have gone in another half inch while I was getting to you. And next time be more careful where you put your hands!"

The column had halted. Point, looking back, saw Mr. Qu'an's wave, lifted his own arm and brought it down smartly. They moved on. Charlie said to Hans, "What's a screwbug?"

"Little thing, bright red. Cling underneath leaves."

"What do they do to you?"

"Burrow in. Abscess. Don't get 'em out, maybe lose an arm."

"Oh." Charlie added, "Could they get on Nixie?"

"Doubt it. 'Cept maybe his nose. Ought to check him over every chance we get. Other things, too."

They were on higher and drier ground now; the bush around them did not go up so high, was not quite as dense. Charlie peered into it, trying to sort out details, while Hans kept up what he probably felt was a lively discourse — usually one word at a time, such as: "Poison," "Physic," or "Eat those."

"Eat what?" Charlie asked, when Hans had made the last comment. He looked where Hans pointed, saw nothing looking like fruit, berries or nuts.

"That stuff. Sugar stick." Hans thrust cautiously into the brush with his staff, pushed aside a Venus nettle, and broke off a foot of brown twig. "Nixie! Get out of there! Heel!"

Charlie accepted half of it, bit cautiously when he saw Hans do so.

It chewed easily. Yes, it did have a sweetish taste, about like corn syrup. Not bad!

Hans spat out pulp. "Don't swallow the cud — give you trouble."

"I wouldn't've guessed you could eat this."

"Never go hungry in the bush."

"Hans? What do you do for water? If you haven't got any?"

"Huh? Water all around you."

"Yeah, but good water."

All water is good water...if you clean it." Hans' eyes darted around. "Find a filter ball. Chop off top and bottom. Run water through. I'll spot one, show you."

Hans found one shortly, a gross and poisonous looking fungus. But it was some distance off the clearing and when Hans started after it, he was told gruffly by the flamer on that flank to get back from the edge and stay there. Hans shrugged. "Later."

The procession stopped in the road clearing, lunched from duffel bags. Nixie was allowed to run free, with strict instructions to stay away from the trees. Nixie didn't mind. He sampled every lunch. After a rest they went on. Occasionally they all gave way to let some plantation family, mounted on high trucks with great, low-pressure bolster wheels, roll past on the way to a Saturday night in town. The main road led past narrow tunnels cut into the bush, side roads to plantations. Late in the afternoon they passed one such; Hans hooked a thumb at it. "Home."

"Yours?"

"Half a mile in."

A couple of miles farther the troop left the road and started across country. But this was high land, fairly dry and semi-open, no more difficult than most forest back Earthside. Hans merely saw to it that Nixie stayed close at heel and cautioned Charlie, "Mind where you step...and if anything drops on you, brush it off quick."

They broke out shortly into a clearing, made camp, and started supper. The clearing was manmade, having been flamed down, although a green carpet had formed underfoot. The first step in making camp was to establish four corners of a rectangle, using Scout staffs; then Jock Quentin, the troop's radioman, clamped mirrors to them. After much fiddling he had a system rigged by which a powerful flashlight beam bounced around the rectangle and back into a long tube which housed a photocell; the camp was now surrounded by an invisible fence. Whenever the beam was broken an alarm would sound.

While this was going on other Scouts were lashing staffs together, three to a unit, into long poles. Rags were sopped with a sickly-sweet fluid, fastened to the ends and the poles were erected, one at each corner of the rectangle. Charlie sniffed and made a face, "What's that stuff?"

"For dragonflies. They hate it."

"I don't blame 'em!"

"Haven't seen one lately. But if they were swarming, you'd rub it on your hide and be glad of the stink."

"Hans? Is it true that a dragonfly sting can paralyze a man?"

"No."

"Huh? But they say — "

"Takes three or four stings. One sting will just do for an arm or a leg — unless it gets you in the spine."

"Oh." Charlie couldn't see much improvement.

"I was stung once," Hans added.

"You *were*? But you're still alive."

"My paw fought it off and killed it. Couldn't use my left leg for a while."

"Boy! You must be lucky."

"Unlucky, I'd say. But not unlucky as it was. We ate it."

"You *ate* it?"

"Sure. Mighty tasty, they are."

Charlie felt queasy. "You eat insects?"

Hans thought about it. "You ever eat a lobster?"

"Sure. But that's different."

"It sure is. Seen pictures of lobsters. Disgusting."

This gourmets' discussion was broken up by the Scoutmaster. "Hans! How about scaring up some oil weed?"

"Okay." Hans headed far the bush. Charlie followed and Nixie trotted after. Hans stopped. "Make him stay behind. We can't gather weed and watch him, too."

"All right."

Nixie protested, since it was his duty to guard Charlie. But once he understood that Charlie meant it and would not be swayed, he trotted back, tail in air, and supervised campmaking.

The boys went on. Charlie asked, "This clearing...is it the regular Scout camp?"

Hans looked surprised. "I guess so. Paw and I aren't going to set a crop till we flame it a few more times."

"You mean it's *yours*? Why didn't you say so?"

"You never asked." Presently he added, "Some planters, they don't like Scouts tromping around, maybe hurting a crop."

Oil weed was a low plant, resembling bracken. They gathered it in silence, except once when Hans brushed something off Charlie's arm. "Want to watch that."

While they were loading with weed Hans made quite a long speech: "These dragonflies, they aren't much. You hear them coming. You can fight 'em off, even with your hands, because they can't sting till they light. They won't sting anyway, except when they're swarming — then it's just females, ready to lay eggs." He added thoughtfully, "They're stupid, they don't know the eggs won't hatch in a man."

"They won't?"

"No. Not that it does the man much good; he dies anyway. But they think they're stinging a big amphibian, thing called kteela."

"I've seen pictures of kteela."

"So? Wait till you see one. But don't let it scare you. Kteela can't hurt you and they're more scared than you are — they just look fearsome." He brushed at his arm. "It's little things you got to watch."

Oil weed burned with a clear steady flame; the boys had a hot dinner and hot tea. No precautions were taken against fire; of the many hazards on Venus, fire was not one. The problem was to get anything to burn, not to avoid forest fire.

After they had eaten, one boy was examined by Mr. Qu'an in first-aid and artificial respiration. Listening, Charlie found that there was much that he must learn and unlearn; conditions were different. Then Rusty Dunlop broke out a mouth organ and they sang.

Finally Mr. Qu'an yawned and said, "Sack in, Scouts. Hard day tomorrow. Pedro, first watch — then rotate down the list."

Charlie thought he would never get to sleep. The ground underneath his waterproof was not hard, but he was not used to sleeping with lighted sky in his eyes. Besides that, he was acutely aware of strange noises in the bush around them.

He was awakened by a shout. "Dragons! Heads up, gang! Watch yourself'!"

Without stopping to think, Charlie reached down, grabbed Nixie to his chest, then looked around. Several boys were pointing. Charlie looked and thought at first that he was seeing a helicopter.

Suddenly it came into perspective and he realized that it was an enormous insect...unbelievably huge, larger than had been seen on Earth since the Carboniferous period, a quarter of a billion years ago.

It was coming toward camp. Something about it — its wings? — made a whining buzz.

It approached the tall poles with the smelly rags, hesitated, turned away. Mr. Qu'an looked thoughtfully after it, glanced at Hans.

"They're not swarming," Hans stated positively. "Anyhow, that was a male."

"Mmm...No doubt you're right. Still — double guard the rest of the night, down the roster. Tenderfeet makeelearnee only." He lay down.

The troop started back the next morning — "Morning" by clock; Charlie, awakening stiff and sleepy to the same dull-bright, changeless sky, felt as if he had napped too long but not well during an afternoon. They headed back the way they had come. Once on the cleared road, Hans left Charlie and looked up the Scoutmaster. He was back shortly, grinning. "Stay over night with me? You and Nixie?"

"Gee! Is it okay? Your folks won't mind?"

"They like company. You can ride in with Paw in the morning."

"It 'ould be swell, Hans...but how about my folks? Uh, do you suppose Jock could raise 'em on the portable?"

"Everything's okay. Mr. Qu'an will phone 'em when the troop gets in...and you can call them soon as we get to my place. If they holler, I can still catch you up with the troop."

So it was settled. When they got to the little side road for the Kuppenheimer plantation Mr. Qu'an ordered them to head for the house and no monkey business. They solemnly agreed and left the troop.

The side road was a dark tunnel; Hans hurried them through it. A few hundred yards farther on they came out into cultivated fields and Hans slowed down. "That's the only bad stretch. You okay?"

"Sure."

"Let's check Nixie."

If anything had attached itself to Nixie, they could not find it and his wagging tail gave no sign of distress; they went on. Charlie looked around with interest. "What are you cropping?"

"Jungle bread on the right. Once it's established you don't have to worry about it, smothers anything else, mostly. Other side is mutated bananas. They take more care."

Shortly they came to the house, on a rise and with no growth around it — a typical Venus settler's house, long and low and built of spongy logs and native bamboo. Hans' mother greeted Charlie as if he were a neighbor boy, seen daily, and she petted Nixie. "He minds me of a hund I had in Hamburg." Then she set out banana cake and mugs of coffee that were mostly milk. Nixie had his cake on the floor.

There were several kids around, younger than Hans and looking like him. Charlie did not get them straight, as they talked even less than Hans did and hung back from Nixie — unlike their mother, they found him utterly strange. But presently, seeing how the monster behaved with Hans and with their mother, they timidly patted him. After that, Nixie was the center of attention while they continued shyly to ignore Charlie.

Hans bolted his cake, hurried out. He was back a few minutes later. "Maw, where's the flamer?"

"Paw is using it."

Hans looked blank. "Well...we don't have to have it. Come on, Chuck." He carried two hefty machetes, a blade in each hand; he handed one to Charlie.

"Okay." Charlie stood up. "Thanks, Mrs. Kuppenheimer — thanks a lot."

"Call me 'Maw."

"Hurry up, Charlie."

"Right. Say — how about that call to my folks?"

"I forgot! Maw, would you phone Mrs. Vaughn? Tell her Chuck is staying all night?"

"Yes, surely. What's your frequency, Charlie?"

"Uh, you have to call city exchange and ask them to relay."

"Jawohl. You boys run along."

They headed off through the fields. Nixie was allowed to run, which be did with glee, returning every thirty seconds or so to see that his charges had not fainted nor been kidnapped in his absence.

"Where are we going, Hans?"

Hans' eyes brightened. "To see the prettiest plantation land on Venus!"

"It's mighty pretty, no doubt about it."

"Not Paw's land. I mean my plantation."

"Yours?"

"Will be mine. Paw posted an option bond. When I'm old enough, I'll prove it." He hurried on.

Shortly Charlie realized that he was lost even though they were in a cultivated grove. "Hold it, Hans! Can I borrow your polarizer?"

"What for?"

"I want to establish base, that's what. I'm all mixed up.”

"Base is that direction," Hans answered, pointing with his machete. "My polarizer is at the house. We don't need it."

"I just thought I ought to keep straight."

"Look, Chuck, I can't get lost around here; I was born on this piece."

"But I wasn't."

"Keep your eyes open; you'll learn the landmarks. We're heading that way — " Hans pointed again. " — for that big tree." Charlie looked, saw several big trees. "We cut over a ridge. Pretty soon we come to my land. Okay?"

"I guess so."

"I won't let you get lost. Look, I'll show you the bush way to establish base — polarizers are for townies." He looked around, his quick eyes picking up and discarding details. "There's one."

"One what?"

"Compass bug. Right there. Don't scare him. Back, Nixie!"

Charlie looked, discovered a small, beetle-like creature with striped wing casings. Hans went on, "When they fly, they take right off toward the Sun. Every time. Then they level off and head home — they live in nests." Hans slapped the ground beside the little creature; it took off as if jet propelled. "So the Sun is that way. What time is it?"

"Ten thirty, about."

"So where is base?"

Charlie thought about it. "Must be about there."

"Isn't that the way I pointed? Now find another compass bug. Always one around, if you look."

Charlie found one — frightened it, watched it take off in the same direction as the first. "You know, Hans," he said slowly, "bees do something like that — fly by polarized light, I mean. That's the way they get back to their hives on cloudy days. I read about it."

"Bees? Those Earth bugs that make sugar?"

"Yes. But they aren't bugs."

"Okay," Hans answered indifferently. "I'll never see one. Let's get moving."

Presently they left cultivation, started into bush. Hans required Nixie to heel. Even though they were going uphill, the bush got thicker, became dense jungle. Hans led the way, occasionally chopping an obstacle.

He stopped. "Trash!" he said bitterly.

"Trouble?"

"This is why I wanted the flamer. This bit grows pretty solid."

"Can't we chop it?"

"Take all day with a bush knife; need heat on it. Going to have to poison this whole stretch 'fore I get a road through from Paw's place to mine."

"What do we do?"

"Go around, what else?" He headed left. Charlie could not see that Hans was following any track, decided he must know his way by the contour of the ground. About half an hour later Hans paused and whispered, "Keep quiet. Make Nixie keep quiet."

"What for?" Charlie whispered back.

"Good chance you'll see kteela, if we don't scare them." He went noiselessly ahead, with the other boy and the dog on his heels. He stopped. "There."

Charlie oozed forward, looked over Hans' shoulder — found that he was looking down at a stream. He heard a splash on his right, turned his head just in time to see spreading ripples. "Did you see him?" asked Hans in a normal voice.

“No.”

"Shucks, he was right there. A big one. Their houses are just downstream. They often fish along here. Have to keep your eyes open, Chuck." Hans looked thoughtful. "Kteela are people."

"Huh?"

"They're people. Paw thinks so. If we could just get acquainted with them, we could prove it. But they're timid. Come on — we cross here." Hans descended the bank, sat down on muddy sand by running water and started taking his shoes off. "Mind where you sit."

Charlie did the same. Barefooted and bare-legged, Hans picked up Nixie. "I'll lead. This stretch is shallow — keep moving and don't stumble."

The water was warm and the bottom felt mucky; Charlie was glad when they reached the far side. "Get the leeches off," Hans commanded as he put Nixie down. Charlie looked down at his legs, was amazed to find half a dozen purple blobs, large as hens' eggs, clinging to him. Hans cleaned his own legs, helped Charlie make sure that he was free of the parasites. "Run your fingers between your toes. Try to get the sand fleas off as you put on your boots, too — though they don't really matter."

"Anything else in that water?" Charlie asked, much subdued.

"Oh, glass fish can bite a chunk out of you...but they aren't poisonous. Kteela keep this stream cleaned up. Let's go."

They went up the far side, reached a stretch that was higher and fairly dry. Charlie thought that they were probably going upstream, he could not be sure.

Hans stopped suddenly. "Dragonfly. Hear it?"

Charlie listened, heard the high, motor-like hum he had heard the night before. "There it is," Hans said quickly. "Hang onto Nixie and be ready to beat it off. I'm going to attract its attention."

Charlie felt that attracting its attention was in a class with teasing a rattlesnake, but it was too late to object; Hans was waving his arms.

The fly hesitated, veered, headed straight for him. Charlie felt a moment of dreadful anticipation — then saw Hans take one swipe with his machete. The humming stopped; the thing fluttered to the ground.

Hans was grinning. The dragonfly jerked in reflex, but it was dead, the head neatly chopped off. "Didn't waste a bit," Hans said proudly.

"Huh?"

"That's lunch. Cut some of that oil weed behind you." Hans squatted down. In three quick slices he cut off the stinger and the wings; what was left was the size of a medium lobster. Using the chrome-sharp machete as delicately as a surgeon's knife, he split the underside of the exoskeleton, gently and neatly stripped out the gut. He started to throw it away, then paused and stared at it thoughtfully.

Charlie had been watching in queasy fascination. "Trouble?"

"Egg sac is full. They're going to swarm."

"That's bad, isn't it?"

"Some. They swarm every three, four years." Hans' hesitated. "We'd better skip seeing my land. Got to tell Paw, so they'll keep the kids in."

"Okay, let's get started."

"We'll eat lunch first. Ten minutes won't matter — they aren't really swarming yet, or this one wouldn't have been alone."

Charlie started to say that he wasn't interested in lunch — not this lunch — but Hans was already starting a fire.

What was left in the exoskeleton was clean milky white meat, lean flying muscle. Hans cut out chunks, toasted them over the fire, salted them from a pocket shaker. "Have some."

"Uh, I'm not hungry."

"You're crazy in the head, too. Here, Nixie." Nixie had been waiting politely but with his nose quivering. He snapped the tidbit out of the air, gulped it down, waited still more eagerly while Hans ate the next piece.

It did smell good...and it looked good, when he kept his mind off the source. Charlie's mouth began to water. Hans looked up. "Change your mind?"

"Uh...let me taste just a bite."

It reminded Charlie of crab meat. A few minutes later the exoskeleton was stripped too clean to interest even Nixie. Charlie stood up, burped gently, and said, "Ready?"

"Yeah. Uh, Chuck, one thing I do want to show you...and there's a way back above it maybe quicker than the way we came."

"What is it?"

"You'll see." Hans headed off in a new direction. Charlie wondered how Hans had picked it without the aid of a compass bug.

In a few minutes they were going downhill. Hans stopped. "Hear it?"

Charlie listened, seemed to pick out a soft roar under the everpresent multiple voice of the jungle. "It's not a dragonfly?"

"Of course not. You've got ears."

"What is it?" Hans did not reply, led on. Presently they broke into a clearing, or rather a room, for the jungle closed in overhead. It enclosed a delightful, surprising waterfall; the muted roar was its song.

"Isn't that swell?"

"It sure is," Charlie agreed. "I haven't seen anything so pretty in years."

"Sure, it's pretty. But that's not the point. My land is just above. I'll put a water wheel here and have my own power." Hans led his two friends down near it, began to talk excitedly about his plans. The noise of falling water was so great that he had to shout.

So neither one of them heard it. Charlie heard Nixie bark, turned his head and saw it at the last moment. "Hans! Dragon!"

Too late — the thing nailed Hans between his shoulder blades. It laid no eggs; Charlie killed it, crushed it with his hands. But Hans had already been stung.

Charlie wiped his trembling hands on his pants and looked down at his chum. Hans had collapsed even as Charlie had killed the thing; he lay crumpled on the ground. Charlie bent over him. "Hans! Hans, answer me!"

Hans' — eyelids fluttered. "Get Paw."

"Hans...can you stand up?"

"Sorry...Chuck" — then very feebly, "My fault." His eyes stayed open, but Charlie could get no more out of him. —

Even in his distress Charlie's training stayed with him. He could not find Hans' pulse, so he listened for his heart...was rewarded and greatly relieved by a steady, strong flub-a-dub!...flub-a-dub! Hans looked ghastly — but apparently it was true that they just paralyzed; they didn't kill.

But what to do?

Hans had said to get his father. Sure — but how? Could he find his way to the house? Even if he could, could he lead them back here? No, he wouldn't have to — surely Mr. Kuppenheimer would know where the waterfall was that Hans meant to harness. So what he had to do was simply get back. Now let's see; they had come down the bank there — and after they had crossed the stream — it must be this same stream; they hadn't gone over any watershed. Or had they?

Well, it had better be the same stream, else he was lost beyond hope. Back through the bush, then and across the stream — How was he going to cut back in and hit the stream at the place where it could be forded? The bush all looked pretty much alike.

Maybe he had better go downstream along the bank until he hit it. Then cross, and if he could find a compass bug, he could strike off in the general direction of the Kuppenheimers until he came to civilization. He remembered which way base was when they had first started out; that would orient him.

Or would it? They had gone first to that place that couldn't be passed without a flamer — but where had they gone then? How many turns? Which way were they heading when they reached the place where he had not quite seen a kteela?

Well, he would just have to try. At least he could get onto the same side of the stream as the plantation.

Nixie had been sniffing at Hans' still body. Now he began to whine steadily. "Shut up, you!" Charlie snapped. "I don't want any trouble out of you, too."

Nixie shut up.

Charlie decided that he couldn't leave Hans; he would have to take him with him. He kneeled down and started wrestling Hans' limp body into a fireman's carry, while wondering miserably whether or not Hans had told his mother where they were going? Or if it would do any good if he had, since they were not where Hans had originally intended to take them.

"Heel, Nixie."

An indefinitely long time later Charlie put Hans down on the ground in a fairly open place. It had taken only a few minutes of struggle to convince him that he could not carry Hans along the bank of the stream. A man might have been able to carve his way through with a machete — but while Charlie had two machetes he could not swing them and carry Hans as well. After giving that route up, he abandoned one machete by the waterfall, thinking that Hans could find it there some other day. He was tempted to abandon both, for the one on his belt was heavy and got in his way, but he decided that he might have to have it; they had done plenty of chopping in getting here.

So he set out again, this time trying to retrace their steps through the bush, hoping to spot the places they had chopped to help him find his way.

He never spotted such a sign; the living green maze swallowed all such puny marks.

After a long time he decided to go back to the familiar waterfall — he would stay there, nurse Hans, filter water for them all, and wait. Surely Mr. Kuppenheimer would eventually think of the waterfall!

So he turned back...and could not find the waterfall. Not even the stream.

He walked through something. He couldn't see it, there were branches in his face. Whatever it was it clung to his legs like red-hot wires; he stumbled and almost dropped Hans getting free of it. Then his leg did not stop paining him. The fiery burning dropped off a little but a numbness crept up his right leg.

He was glad indeed to put Hans on the ground at the first fairly open place he came to. He sat down and rubbed his leg, then checked Hans — still breathing, heart still beating...but out like a light.

Nixie sniffed Hans again, then looked up and whined inquiringly. "I can't help it," Charlie said to him. "He's a mess. I'm a mess. You're a mess, too."

Nixie barked.

"I will, I will...just as soon as I can move. Don't hurry me. How would you like to carry him for a while?"

Charlie continued to rub his leg. The pain was going away but the numbness was worse. At last he said to Nixie, "I guess we ought to try it, pal. Wait a second while I look for a compass bug — the way I figure it, we came mostly base, so I guess we ought to try to head reverse." He glanced at his wrist to see what time it was.

His watch had stopped.

But it couldn't stop — it was self-winding.

Nevertheless it had. Perhaps he had banged it in the bush, perhaps...no matter, it had stopped. He looked for Hans' watch, thinking that its twenty-four-hour face was easier to use as a compass dial anyhow.

But Hans was not wearing his watch, nor was it in any of his pockets. Whether he had left it at the house, along with his polarizer and duffel bag, or whether it had dropped off while Charlie was carrying him, did not matter. They had no watch between them and Charlie did not know what time it was, not even approximately. It seemed to him that he had been carrying Hans, fighting this dreary bush, for a week.

So a compass bug couldn't tell him anything.

He almost felt defeated at that moment. But he rallied, telling himself that if he went downhill he was bound to find that stream...then he would either find the ford or the waterfall, one or the other. He hauled himself around into position to lift Hans, favoring his right leg.

He need not have bothered; his right leg was not working.

The "pins and needles" in it were almost unbearable, as if he had sat much too long in a cramped position. But they would not go away as they always had in the past; nothing he could do would make that leg obey his orders. He lowered his head against Hans and bawled.

He became aware that Nixie was licking his face and whining. He stopped his useless blubbering and raised his head. "It's all right, fellow. Don't you worry."

But it wasn't all right. While Charlie was no jungle rat, he did know that search parties could comb the area for weeks — and not find them, could pass within feet of the spot and never see them. Possibly no human being had ever been where they were now; possibly no human would reach this spot in many years to come.

If he didn't use his head now, they would never get out. Nixie sat patiently, watching him, trusting him. "Nixie, this is up to you now, boy. You understand me?"

Nixie whined. "Go back to the house. Fetch! Fetch Maw. Fetch anybody. Right now! Go back to the house."

Nixie barked.

"Don't argue with me. You've got to do it. Go home! Go back and fetch somebody!"

Nixie looked — dubious, trotted a few steps in the direction in which they had come, stopped and looked around inquiringly. "That's right! Keep going! Go back to the house! Fetch somebody! Go!"

Nixie looked sharply at him, then trotted away in businesslike fashion.

Sometime later Charlie raised his head and shook it. Gosh! He must have gone to sleep...couldn't do that…what if another dragonfly came along...have to stay awake. Was Hans all right? Have to pick him up and get out of here...where was Nixie? "Nixie!"

No answer. That was the last straw. But he'd have to get moving anyhow — His leg wouldn't work...felt funny. "Nixie! *Nixie*!

Mrs. Kuppenheimer heard the scratching and whining at the door, wiped her hands on her apron and went to open it. When she saw what was there she threw her hands up. "Lieber Gott! What happened to you?" She knelt swiftly, picked up the little dog and put him on her clean table, bent over him, talking to him and picking leeches from him, wiping away blood. "Schrecklich!"

"What happened to him, Mama?"

"I don't know." She went on working. But Nixie jumped out of her arms, charged straight for the closed door, tried to crash his way out—unsuccessful, he leaped and clawed at it and howled.

Mrs. Kuppenheimer gathered him up and held his struggling body against her breast. "Gerta! Get Paw!"

"What's the matter with him, Mama?"

"Something dreadful has happened. *Run*!"

The Borealis council hall was filled with Scouts and older people. Hans and Charlie were seated in the front row, with Nixie on a chair between them. Hans had crutches across one knee; Charlie had a cane. Mr. Qu'an came down the aisle, saw them, and sat down as Charlie moved Nixie over to share his seat. The Scoutmaster said to Hans, "I thought you were off those things?" His glance touched the crutches.

"I am — but Maw made me bring them."

"I — " Mr. Qu'an stopped. An older man had just taken his place at a table in the front of the hall at which were seated half a dozen others.

"Quiet, please." The man waited a moment. "This Court of Honor is met in special session for awards. It is our first duty tonight — and proud pleasure — to award a lifesaving medal. Will Tenderfoot Scout Nixie Vaughn please come forward?"

"Now, Nixie!" Charlie whispered.

Nixie jumped off the chair, trotted forward, sat at attention and saluted, trembling.

All You Zombies

2217 Time Zone V (EST) 7 Nov. 1970 - NTC – 'Pop's Place':

I was polishing a brandy snifter when the Unmarried Mother came in. I noted the time—10:17 P. M. zone five, or eastern time, November 7th, 1970. Temporal agents always notice time and date; we must.

The Unmarried Mother was a man twenty-five years old, no taller than I am, childish features and a touchy temper. I didn't like his looks—I never had—but he was a lad I was here to recruit, he was my boy. I gave him my best barkeep's smile.

Maybe I'm too critical. He wasn't swish; his nickname came from what he always said when some nosy type asked him his line: “I’m an unmarried mother.” If he felt less than murderous he would add: “at four cents a word. I write confession stories.”

If he felt nasty, he would wait for somebody to make something of it. He had a lethal style of infighting, like a female cop—one reason I wanted him. Not the only one.

He had a load on, and his face showed that he despised people more than usual. Silently I poured a double shot of Old Underwear and left the bottle. He drank it, poured another.

I wiped the bar top. “How’s the ‘Unmarried Mother’ racket?”

His fingers tightened on the glass and he seemed about to throw it at me. I felt for the sap under the bar. In temporal manipulation you try to figure everything, but there are so many factors that you never take needless risks.

I saw him relax that tiny amount they teach you to watch for in the Bureau’s training school. “Sorry,” I said. “Just asking, ‘How’s business?’ Make it ‘How’s the weather?’”

He looked sour. “Business is okay. I write ‘em, they print ‘em, I eat.”

I poured myself one, leaned toward him. “Matter of fact,” I said, “you write a nice stick. I’ve sampled a few. You have an amazingly sure touch with the woman’s angle.”

It was a slip I had to risk; he never admitted what pen-names he used. But he was boiled enough to pick up only the last: “Woman’s angle!” he repeated with a snort. “Yeah, I know the woman’s angle. I should.”

“So?” I said doubtfully. “Sisters?”

“No. You wouldn’t believe me if I told you.”

“Now, now,” I answered mildly, “bartenders and psychiatrists learn that nothing is stranger than truth. Why, son, if you heard the stories I do—well, you’d make yourself rich. Incredible.”

“You don’t know what ‘incredible’ means!”

“So? Nothing astonishes me. I’ve always heard worse.”

He snorted again. “Want to bet the rest of the bottle?”

“I’ll bet a full bottle.” I placed one on the bar.

“Well,” I signaled my other bartender to handle the trade. We were at the far end, a single-stool space that I kept private by loading the bar top by it with jars of pickled eggs and other clutter. A few were at the other end watching the fights and somebody was playing the juke box-private as a bed where we were.

“Okay,” he began, “to start with, I’m a bastard.”

“No distinction around here,” I said.

“I mean it,” he snapped. “My parents weren’t married.”

“Still no distinction,” I insisted. “Neither were mine.”

"When—" He stopped, gave me the first warm look I ever saw on him. "You mean that?"

"I do. A one-hundred-percent bastard. In fact," I added, "no one in my family ever marries. All bastards."

"Don't try to top me—*you're* married." He pointed at my ring.

"Oh, that." I showed it to him. "It just looks like a wedding ring; I wear it to keep women off. It is an antique I bought in 1985 from a fellow operative—he had fetched it from pre-Christian Crete. The Worm Ouroboros... the World Snake that eats its own tail, forever without end. A symbol of the Great Paradox."

He barely glanced at it. "If you're really a bastard, you know how it feels. When I was a little girl—"

"Wups!" I said. "Did I hear you correctly?"

"Who's telling this story? When I was a little girl—Look, ever hear of Christine Jorgenson? Or Roberta Cowell?"

"Uh, sex-change cases? You're trying to tell me,"

"Don't interrupt or swelp me, I won't talk. I was a foundling, left at an orphanage in Cleveland in 1945 when I was a month old. When I was a little girl, I envied kids with parents. Then, when I learned about sex—and, believe me, Pop, you learn fast in an orphanage—"

"I know."

"—I made a solemn vow that any kid of mine would have both a pop and a mom. It kept me 'pure', quite a feat in that vicinity. I had to learn to fight to manage it. Then I got older and realized I stood darn little chance of getting married—for the same reason I hadn't been adopted." He scowled. "I was horsefaced and buck-toothed, flat-chested and straight-haired."

"You don't look any worse than I do."

"Who cares how a barkeep looks? Or a writer? But people wanting to adopt would pick a little blue-eyed golden-haired moron. Later on, the boys want bulging breasts, a cute face, and an oh-you-wonderful-male manner." He shrugged. "I couldn't compete. So I decided to join the W. E. N. C. H. E. S."

"Eh?"

"Women's Emergency National Corps, Hospitality & Entertainment Section, what they now call 'Space Angels'—Auxiliary Nursing Group, Extraterrestrial Legions."

I knew both terms, once I had them chronized. We use still a third name, it's that elite military service corps: Women's Hospitality Order Refortifying & Encouraging Spacemen. Vocabulary shift is the worst hurdle in timejumps—did you know that 'service station' once meant a dispensary for petroleum fractions? Once on an assignment in the Churchill Era, a woman said to me, "Meet me at the service station next door"—which is *not* what it sounds; a 'service station' (then) wouldn't have a bed in it.

He went on: "It was when they first admitted you can't send men into space for months and years and not relieve the tension. You remember how the wowsers screamed? That improved my chance, since volunteers were scarce. A gal had to be respectable, preferably virgin (they liked to train them from scratch), above average mentally, and stable emotionally. But most volunteers were old hookers, or neurotics who would crack up ten days off Earth. So I didn't need looks; if they accepted me, they would fix my buck teeth, put a wave in my hair, teach me to walk and dance and how to listen to a man pleasingly, and everything else—plus training for the prime duties. They would even use plastic surgery if it would help—nothing too good for our Boys."

"Best yet, they made sure you didn't get pregnant during your enlistment—and you were almost certain to marry at the end of your hitch. Same way today, A. N. G. E. L. S. marry spacers—they talk the language."

"When I was eighteen I was placed as a 'mother's helper'. This family simply wanted a cheap servant, but I didn't mind as I couldn't enlist till I was twenty-one. I did housework and went to night school —pretending to continue my high school typing and shorthand but going to a charm class instead, to better my chances for enlistment."

"Then I met this city slicker with his hundred-dollar bills." He scowled. "The no-good actually did have a wad of hundred-dollar bills. He showed me one night, told me to help myself."

"But I didn't. I liked him. He was the first man I ever met who was nice to me without trying to take my pants off. I quit night school to see him oftener. It was the happiest time of my life."

"Then one night in the park my pants did come off."

He stopped. I said, "And then?"

"And then *nothing*! I never saw him again. He walked me home and told me he loved me and kissed me goodnight and never came back." He looked grim. "If I could find him, I'd kill him!"

"Well," I sympathized, "I know how you feel. But killing him just for doing what comes naturally—hmm... Did you struggle?"

"Huh? What's that got to do with it?"

"Quite a bit. Maybe he deserves a couple of broken arms for running out on you, but..."

"He deserves worse than that! Wait till you hear. Somehow I kept anyone from suspecting and decided it was all for the best. I hadn't really loved him and probably would never love anybody, and I was more eager to join the W. E. N. C. H. E. S. than ever. I wasn't disqualified, they didn't insist on virgins. I cheered up. It wasn't until my skirts got tight that I realized."

“Pregnant?”

“He had me higher ‘n a kite! Those skinflints I lived with ignored it as long as I could work, then kicked me out, and the orphanage wouldn’t take me back. I landed in a charity ward surrounded by other big bellies and trotted bedpans until my time came.”

“One night I found myself on an operating table, with a nurse saying, ‘Relax. Now breathe deeply.’ I woke up in bed, numb from the chest down. My surgeon came in. ‘How do you feel?’ he says cheerfully.”

“Like a mummy.”

“Naturally. You’re wrapped like one and full of dope to keep you numb. You’ll get well—but a Cesarean isn’t a hangnail.”

“‘Cesarean’ I said. *‘Doc—did I lose the baby?’*”

“Oh, no. Your baby’s fine.”

“Oh. Boy or girl?”

“A healthy little girl. Five pounds, three ounces.”

“I relaxed. It’s something, to have made a baby. I told myself I would go somewhere and tack ‘Mrs.’ on my name and let the kid think her papa was dead—no orphanage for my kid!”

“But the surgeon was talking. ‘Tell me, uh—" He avoided my name. "—did you ever think your glandular setup was odd?’”

“I said, ‘Huh? Of course not. What are you driving at?’”

“He hesitated. ‘I’ll give you this in one dose, then a hypo to let you sleep off your jitters. You’ll have ‘em.’”

“‘Why?’ I demanded.”

“Ever hear of that Scottish physician who was female until she was thirty-five?—then had surgery and became legally and medically a man? Got married. All okay.”

“What’s that got to do with me?”

“That’s what I’m saying. You’re a man.”

“I tried to sit up. ‘*What?*’”

“‘Take it easy. When I opened you, I found a mess. I sent for the Chief of Surgery while I got the baby out, then we held a consultation with you on the table, and worked for hours to salvage what we could. You had two full sets of organs, both immature, but with the female set well enough developed for you to have a baby. They could never be any use to you again, so we took them out and rearranged things so that you can develop properly as a man.’ He put a hand on me. ‘Don’t worry. You’re young, your bones will readjust, we’ll watch your glandular balance and make a fine young man out of you.’”

“I started to cry. ‘What about my baby?’”

“Well, you can’t nurse her, you haven’t milk enough for a kitten. If I were you, I wouldn’t see her—put her up for adoption.”

“No!”

"He shrugged. 'The choice is yours; you're her mother—well, her parent. But don't worry now; we'll get you well first.'"

"Next day they let me see the kid and I saw her daily, trying to get used to her. I had never seen a brand new baby and had no idea how awful they look—my daughter looked like an orange monkey. My feelings changed to cold determination to do right by her. But four weeks later that didn't mean anything."

"Eh?"

"She was snatched."

"Snatched?"

The Unmarried Mother almost knocked over the bottle we had bet. "Kidnapped—stolen from the hospital nursery!" He breathed hard. "How's that for taking the last a man's got to live for?"

"A bad deal," I agreed. "Let's pour you another. No clues?"

"Nothing the police could trace. Somebody came to see her, claimed to be her uncle. While the nurse had her back turned, he walked out with her."

"Description?"

"Just a man, with a face—shaped face, like yours or mine." He frowned. "I think it was the baby's father. The nurse swore it was an older man but he probably used makeup. Who else would swipe my baby? Childless women pull such stunts—but whoever heard of a man doing it?"

"What happened to you then?"

"Eleven more months of that grim place and three operations. In four months I started to grow a beard; before I was out I was shaving regularly and no longer doubted that I was male." He grinned wryly. "I was staring down nurses necklines."

"Well," I said, "seems to me you came through okay. Here you are, a normal man, making good money, no real troubles. And the life of a female is not an easy one."

He glared at me. "A lot you know about it!"

"So?"

"Ever hear the expression 'a ruined woman'?"

"Mmm, years ago. Doesn't mean much today."

"I was as ruined as a woman can be; that bum really ruined me—I was no longer a woman and I didn't know *how* to be a man."

"Takes getting used to, I suppose."

"You have no idea. I don't mean learning how to dress, or not walking into the wrong rest room; I learned those in the hospital. But how could I *live*? What job could I get? Hell, I couldn't even drive a car. I didn't know a trade; I couldn't do manual labor—too much scar tissue, too tender."

"I hated him for having ruined me for the W. E. N. C. H. E. S., too, but I didn't know how much until I tried to join the Space Corps instead. One look at my belly and I was marked unfit for military service. The medical officer spent time on me just from curiosity; he had read about my case."

"So I changed my name and came to New York. I got by as a fry cook, then rented a typewriter and set myself up as a public stenographer—what a laugh! In four months I typed four letters and one manuscript. The manuscript was for *Real Life Tales* and a waste of paper, but the goof who wrote it sold it. Which gave me an idea; I bought a stack of confession magazines and studied them." He looked cynical. "Now you know how I get the authentic woman's angle on an unmarried-mother story, through the only version I haven't sold—the true one. Do I win the bottle?"

I pushed it toward him. I was upset myself, but there was work to do. I said, "Son, you still want to lay hands on that so-and-so?"

His eyes lighted up—a feral gleam.

"Hold it!" I said. "You wouldn't kill him?"

He chuckled nastily. "Try me."

"Take it easy. I know more about it than you think I do. I can help you. I know where he is."

He reached across the bar. "*Where is he?*"

I said softly, "Let go my shirt, sonny or you'll land in the alley and we'll tell the cops you fainted." I showed him the sap.

He let go. "Sorry. But where is he?" He looked at me. "And how do you know so much?"

"All in good time. There are records—hospital records, orphanage records, medical records. The matron of your orphanage was Mrs. Fetherage, right? She was followed by Mrs. Gruenstein, right? Your name, as a girl, was 'Jane', right? And you didn't tell me any of this—right?"

I had him baffled and a bit scared. "What's this? You trying to make trouble for me?"

"No indeed. I've your welfare at heart. I can put this character in your lap. You do to him as you see fit and I guarantee that you'll get away with it. But I don't think you'll kill him. You'd be nuts to and you aren't nuts. Not quite."

He brushed it aside. "Cut the noise. *Where is he*?"

I poured him a short one; he was drunk, but anger was offsetting it. "Not so fast. I do something for you—you do something for me."

"Uh ... what?"

"You don't like your work. What would you say to high pay, steady work, unlimited expense account, your own boss on the job, and lots of variety and adventure?"

He stared. "I'd say, 'Get those goddam reindeer off my roof!' Shove it, Pop—there's no such job."

"Okay, put it this way: I hand him to you, you settle with him, then try my job. If it's not all I claim—well, I can't hold you."

He was wavering; the last drink did it, "When d'yuh d'liver 'im?" he said thickly.

He shoved out his hand. "It's a deal!"

"If it's a deal—*right now*!"

I nodded to my assistant to watch both ends, noted the time, 2300, started to duck through the gate under the bar, when the juke box blared out: '*I'm My Own Grandpaw*!' The service man had orders to load it with Americana and classics because I couldn't stomach the 'music' of 1970, but I hadn't known that tape was in it. I called out, "Shut that off! Give the customer his money back." I added, "Storeroom, back in a moment," and headed there with my Unmarried Mother following.

It was down the passage across from the johns, a steel door to which no one but my day manager and myself had a key; inside was a door to an inner room to which only I had a key. We went there.

He looked blearily around at windowless walls. "Where is he?"

"Right away." I opened a case, the only thing in the room; it was a U. S. F. F. Coordinates Transformer Field Kit, series 1992, Mod. II—a beauty, no moving parts, weight twentythree kilos fully charged, and shaped to pass as a suitcase. I had adjusted it precisely earlier that day; all I had to do was to shake out the metal net which limits the transformation field. Which I did.

"What's that?" he demanded.

"Time machine," I said and tossed the net over us.

"Hey!" he yelled and stepped back.

There is a technique to this; the net has to be thrown so that the subject will instinctively step back *onto* the metal mesh, then you close the net with both of you inside completely—else you might leave shoe soles behind or a piece of foot, or scoop up a slice of floor. But that's all the skill it takes. Some agents con a subject into the net; I tell the truth and use that instant of utter astonishment to flip the switch. Which I did.

1030-V-3 April 1963—Cleveland, Ohio, Apex Bldg.

"Hey!" he repeated. "Take this damn thing off!"

"Sorry," I apologized and did so, stuffed the net into the case, closed it. "You said you wanted to find him."

"But you said that was a time machine!"

I pointed out a window. "Does that look like November? Or New York?" While he was gawking at new buds and spring weather, I reopened the case, took out a packet of hundred-dollar bills, checked that the numbers and signatures were compatible with 1963. The Temporal Bureau doesn't care how much you spend (it costs nothing) but they don't like unnecessary anachronisms. Too many mistakes, and a general courtmartial will exile you for a year in a nasty period, say 1974 with its strict rationing and forced labor. I never make such mistakes; the money was okay.

He turned around and said, "What happened?"

"He's here. Go outside and take him. Here's expense money." I shoved it at him and added, "Settle him, then I'll pick you up."

Hundred-dollar bills have a hypnotic effect on a person not used to them. He was thumbing them unbelievingly as I eased him into the hall, locked him out. The next jump was easy, a small shift in era.

1100-V-10 March 1964—Cleveland-Apex Bldg. There was a notice under the door saying that my lease expired next week; otherwise the room looked as it had a moment before. Outside, trees were bare and snow threatened. I hurried, stopping only for contemporary money and a coat, hat, and topcoat I had left there when I leased the room. I hired a car, went to the hospital. It took twenty minutes to bore the nursery attendant to the point where I could swipe the baby without being noticed. We went back to the Apex Building. This dial setting was more involved, as the building did not yet exist in 1945. But I had precalculated it.

0100-V-20 Sept. 1945—Cleveland-Skyview Motel. Field kit, baby, and I arrived in a motel outside town. Earlier I had registered as 'Gregory Johnson, Warren, Ohio,' so we arrived in a room with curtains closed, windows locked, and doors bolted, and the floor cleared to allow for waver as the machine hunts. You can get a nasty bruise from a chair where it shouldn't be—not the chair, of course, but backlash from the field.

No trouble. Jane was sleeping soundly; I carried her out, put her in a grocery box on the seat of a car I had provided earlier, drove to the orphanage, put her on the steps, drove two blocks to a 'service station' (the petroleum-products sort) and phoned the orphanage, drove back in time to see them taking the box inside, kept going and abandoned the car near the motel—walked to it and jumped forward to the Apex Building in 1963.

2200-V-24 April 1963—Cleveland-Apex Bldg. I had cut the time rather fine—temporal accuracy depends on span, except on return to zero. If I had it right, Jane was discovering, out in the park this balmy spring night, that she wasn't quite as nice a girl as she had thought. I grabbed a taxi to the home of those skinflints, had the hackie wait around a corner while I lurked in shadows.

Presently I spotted them down the street, arms around each other. He took her up on the porch and made a long job of kissing her goodnight—longer than I thought. Then she went in and he came down the walk, turned away. I slid into step and hooked an arm in his. “That’s all, son,” I announced quietly. “I’m back to pick you up.”

“*You*!” He gasped and caught his breath.

“Me. Now you know who *he* is—and after you think it over you’ll know who *you* are and if you think hard enough, you’ll figure out who the baby is and…who *I* am.”

He didn’t answer, he was badly shaken. It’s a shock to have it proved to you that you can’t resist seducing yourself. I took him to the Apex Building and we jumped again.

2300-VII-12 Aug. 1985—Sub Rockies Base. I woke the duty sergeant, showed my I. D., told the sergeant to bed my companion down with a happy pill and recruit him in the moming. The sergeant looked sour, but rank is rank, regardless of era; he did what I said, thinking, no doubt, that the next time we met he might be the colonel and I the sergeant. Which can happen in our corps. “What name?” he asked.

I wrote it out. He raised his eyebrows. “Like so, eh? *Hmm*—”

“You just do your job, Sergeant.” I turned to my companion.

“Son, your troubles are over. You’re about to start the best job a man ever held, and you’ll do well. I *know*.”

“That you will!” agreed the sergeant. “Look at me—born in 1917, still around, still young, still enjoying life.”

I went back to the jump room, set everything on preselected zero.

2301-V-7 Nov. 1970—NYC-‘Pop’s Place’. I came out of the storeroom carrying a fifth of Drambuie to account for the minute I had been gone. My assistant was arguing with the customer who had been playing ‘*I’m My Own Grand-Paw!’* I said, “Oh, let him play it, then unplug it.” I was very tired.

It’s rough, but somebody must do it, and it’s very hard to recruit anyone in the later years, since the Mistake of 1972. Can you think of a better source than to pick people all fouled up where they are and give them well-paid, interesting (even though dangerous) work in a necessary cause? Everybody knows now why the Fizzle War of 1963 fizzled. The bomb with New York’s number on it didn’t go off, a hundred other things didn’t go as planned—all arranged by the likes of me.

But not the Mistake of ‘72; that one is not our fault, and can’t be undone; there’s no paradox to resolve. A thing either is, or it isn’t, now and forever amen. But there won't be another like it; an order dated '1992' takes precedence any year.

I closed five minutes early, leaving a letter in the cash register telling my day manager that I was accepting his offer to buy me out, to see my lawyer as I was leaving on a long vacation. The Bureau might or might not pick up his payments, but they want things left tidy. I went to the room in the back of the storeroom and forward to 1993.

2200-VII-12 Jan 1993—Sub Rockies Annex-HQ Temporal DOL. I checked in with the duty officer and went to my quarters, intending to sleep for a week. I had fetched the bottle we bet (after all, I won it) and took a drink before I wrote my report. It tasted foul, and I wondered why I had ever liked Old Underwear. But it was better than nothing; I don't like to be cold sober, I think too much. But I don't really hit the bottle either; other people have snakes—I have people.

I dictated my report; forty recruitments all okayed by the Psych Bureau, counting my own, which I knew would be okayed. I was here, wasn't I? Then I taped a request for assignment to operations; I was sick of recruiting. I dropped both in the slot and headed for bed.

My eye fell on 'The By-Laws of Time' over my bed:

Never Do Yesterday What Should Be Done Tomorrow.
If at Last You Do Succeed, Never Try Again.
A Stitch in Time Saves Nine Billion.
A Paradox May Be Paradoctored.
It Is Earlier When You Think.
Ancestors Are Just People.
Even Jove Nods.

They didn't inspire me the way they had when I was a recruit; thirty subjective-years of timejumping wears you down. I undressed, and when I got down to the hide I looked at my belly. A Cesarean leaves a big scar, but I'm so hairy now that I don't notice it unless I look for it.

Then I glanced at the ring on my finger.

The Snake That Eats Its Own Tail, Forever and Ever. I *know* where I came from, but *where did all you zombies come from?*

I felt a headache coming on, but a headache powder is one thing I do not take. I did once and you all went away.

So I crawled into bed and whistled out the light.

You aren't really there at all. There isn't anybody but me, Jane, here alone in the dark.

I miss you dreadfully!

SEARCHLIGHT

"Will she hear you?"

"If she's on this face of the Moon. If she was able to get out of the ship. If her suit radio wasn't damaged. If she has it turned on. If she is alive. Since the ship is silent and no radar beacon has been spotted, it is unlikely that she or the pilot lived through it."

"She's got to be found! Stand by, Space Station. Tycho Base, acknowledge."

Reply lagged about three seconds, Washington to Moon and back. "Lunar Base, Commanding General."

"General, put every man on the Moon out searching for Betsy!"

Speed-of-light lag made the answer sound grudging. "Sir, do you know how big the Moon is?"

"No matter! Betsy Barnes is there somewhere—so every man is to search until she is found. If she's dead, your precious pilot would be better off dead, too!"

"Sir, the Moon is almost fifteen million square miles. If I used every man I have, each would have over a thousand square miles to search. I gave Betsy my best pilot. I won't listen to threats against him when he can't answer back. Not from anyone, sir! I'm sick of being told what to do by people who don't know Lunar conditions. My advice—my official advice sir is to let Meridian Station try. Maybe they can Work a miracle."

The answer rapped back, "Very well, General! I'll speak to you later. Meridian Station! Report your plans." Elizabeth Barnes, "Blind Betsy", child genius of the piano, had been making a USO tour of the Moon. She "wowed 'em" at Tycho Base, then lifted by jeep rocket for Farside Hardbase, to entertain our lonely missilemen behind the Moon. She should have been there in an hour. Her pilot was a safety pilot; such ships shuttled unpiloted between Tycho and Farside daily.

After liftoff her ship departed from its programming, was lost by Tycho's radars. It was ... somewhere.

Not in space, else it would be radioing for help and its radar beacon would be seen by other ships, space stations, surface bases. It had crashed—or made emergency landing—somewhere on the vastness of Luna.

"Meridian Space Station, Director speaking—" Lag was unnoticeable; radio bounce between Washington and the station only 22,300 miles up was only a quarter second. "We've patched Earthside stations to blanket the Moon with our call. Another broadcast blankets the far side from Station Newton at the three-body stable position. Ships from Tycho are orbiting the Moon's rim—that band around the edge which is in radio shadow from us and from the Newton. If we hear-"

"Yes, yes! How about radar search?"

"Sir, a rocket on the surface looks to radar like a million other features the same size. Our one chance is to get them to answer ... if they can. Ultrahigh-resolution radar might spot them in months—but suits worn in those little rockets carry only six hours air. We are praying they will hear and answer."

"When they answer, you'll slap a radio direction finder on them. Eh?"

"No, sir."

"In God's name, why not?"

"Sir, a direction finder is useless for this job. It would tell us only that the signal came from the Moon—which doesn't help."

"Doctor, you're saying that you might hear Betsy—and not know where she is?"

"We're as blind as she is. We hope that she will be able to lead us to her ... if she hears us."

"How?"

"With a Laser. An intense, very tight beam of light. She'll hear it—"

"Hear a beam of light?"

"Yes, sir. We are jury-rigging to scan like radar—that won't show anything. But we are modulating it to give a carrier wave in radio frequency, then modulating that into audio frequency—and controlling that by a piano. If she hears us, we'll tell her to listen while we scan the Moon and run the scale on the piano—"

"All this while a little girl is dying?"

"Mister President—*shut up*!"

"Who was *THAT*?"

"I'm Betsy's father. They've patched me from Omaha. Please, Mr. President, keep quiet and let them work. I want my daughter back."

The President answered tightly, "Yes, Mr. Barnes. Go ahead, Director. Order anything you need."

In Station Meridian the director wiped his face. "Getting anything?"

"No. Boss, can't something be done about that Rio station? It's sitting right on the frequency!"

"We'll drop a brick on them. Or a bomb. Joe, tell the President"

"I heard, Director. They'll be silenced!"

"Sh! Quiet! Betsy—do you hear me?" The operator looked intent, made an adjustment.

From a speaker came a girl's light, sweet voice: "—to hear somebody! Gee, I'm glad! Better come quick—the Major is hurt."

The Director jumped to the microphone. "Yes, Betsy, we'll hurry. You've got to help us. Do you know where you are?"

"Somewhere on the Moon, I guess. We bumped hard and I was going to kid him about it when the ship fell over. I got unstrapped and found Major Peters and he isn't moving. Not dead—I don't think so; his suits puffs out like mine and I hear something when I push my helmet against him. I just now managed to get the door open." She added, "This can't be Farside; it's supposed to be night there. I'm in sunshine, I'm sure. This suit is pretty hot."

"Betsy, you must stay outside. You've got to be where you can see us."

She chuckled. "That's a good one. I see with my ears."

"Yes. You'll see us, with your ears. Listen, Betsy. We're going to scan the Moon with a beam of light. You'll hear it as a piano note. We've got the Moon split into the eighty-eight piano notes. When you hear one, yell, 'Now!' Then tell us what note you heard. Can you do that?"

"Of course," she said confidently, "if the piano is in tune."

"It is. All right, we're starting–"

"Now!"

"What note, Betsy?"

"E flat, the first octave above middle C."

"This note, Betsy?"

"That's what I said."

The Director called out, "Where's that on the grid? In Mare Nubium? Tell the General!" He said to the microphone, "We're finding you, Betsy honey! Now we scan just that part you're on. We have to change the setup. Want to talk to your Daddy meanwhile?"

"Gosh! Could I?"

"Yes indeed!"

Twenty minutes later he cut in and heard: "—of course not, Daddy. Oh, a teensy bit scared when the ship fell. But people take care of me, always have."

"Betsy?"

"Yes, sir?"

"Be ready to tell us again."

"Now!' She added, "That's a bullfrog G, three octaves down."

"This note?"

"That's right."

"Get that on the grid and tell the General to get his ships up! That cuts it to a square ten miles on a side! Now, Betsy—we know almost where you are. We are going to focus still closer. Want to go inside and cool off?"

"I'm not too hot. Just sweaty."

Forty minutes later the General's voice rang out: 'They've spotted the ship! They see her waving!"

FREE MEN

"That makes three provisional presidents so far," the Leader said. "I wonder how many more there are?" He handed the flimsy sheet back to the runner, who placed it in his mouth and chewed it up like gum.

The third man shrugged. "No telling. What worries me—" A mockingbird interrupted. "Doity, doity, doity," he sang. "Terloo, terloo, terloo, purty-purty-purty-purty."

The clearing was suddenly empty.

"As I was saying," came the voice of the third man in a whisper in the Leader's ear, "it ain't how many worries me, but how you tell a de Gaulle from a Laval. See anything?"

"Convoy. Stopped below us." The Leader peered through bushes and down the side of a bluff. The high ground pushed out toward the river here, squeezing the river road between it and the water. The road stretched away to the left, where the valley widened out into farmland, and ran into the outskirts of Barclay ten miles away.

The convoy was directly below them, eight trucks preceded and followed by halftracks. The following halftrack was backing, vortex gun cast loose and ready for trouble. Its commander apparently wanted elbow room against a possible trap.

At the second truck helmeted figures gathered around its rear end, which was jacked up. As the Leader watched he saw one wheel removed.

"Trouble?"

"I think not. Just a breakdown. They'll be gone soon." He wondered what was in the trucks. Food, probably. His mouth watered. A few weeks ago an opportunity like this would have meant generous rations for all, but the conquerors had smartened up.

He put useless thoughts away. "It's not that that worries me, Dad," he added, returning to the subject. "We'll be able to tell quislings from loyal Americans. But how do you tell men from boys?"

"Thinking of Joe Benz?"

"Maybe. I'd give a lot to know how far we can trust Joe. But I could have been thinking of young Morrie."

"You can trust him."

"Certainly. At thirteen he doesn't drink—and he wouldn't crack if they burned his feet off. Same with Cathleen. It's not age or sex—but how can you tell? And you've *got* to be able to tell."

There was a flurry below. Guards had slipped down from the trucks and withdrawn from the road when the convoy had stopped, in accordance with an orderly plan for such emergencies. Now two of them returned to the convoy, hustling between them a figure not in uniform.

The mockingbird set up a frenetic whistling.

"It's the messenger," said the Leader. "The dumb fool! Why didn't he lie quiet? Tell Ted we've seen it."

Dad pursed his lips and whistled: "Keewah, keewah, keewah, terloo."

The other "mockingbird" answered, "Terloo," and shut up.

"We'll need a new post office now," said the Leader. "Take care of it, Dad."

"Okay."

"There's no real answer to the problem," the Leader said. "You can limit size of units, so that one person can't give away too many—but take a colony like ours. It needs to be a dozen or more to work. That means they all have to be dependable, or they all go down together. So each one has a loaded gun at the head of each other one."

Dad grinned, wryly. "Sounds like the United Nations before the Blow Off. Cheer up, Ed. Don't burn your bridges before you cross them."

"I won't. The convoy is ready to roll."

When the convoy had disappeared in the distance, Ed Morgan, the Leader, and his deputy Dad Carter stood up and stretched. The "mockingbird" had announced safety loudly and cheerfully. "Tell Ted to cover us into camp," Morgan ordered.

Dad wheepled and chirruped and received acknowledgment. They started back into the hills. Their route was roundabout and included check points from which they could study their back track and receive reports from Ted. Morgan was not worried about Ted being followed—he was confident that Ted could steal baby 'possums from mama's pouch. But the convoy breakdown might have been a trap—there was no way to tell that all of the soldiers had got back into the trucks. The messenger might have been followed; certainly he had been trapped too easily.

Morgan wondered how much the messenger would spill. He could not spill much about Morgan's own people, for the "post office" rendezvous was all that he knew about them.

The base of Morgan's group was neither better nor worse than average of the several thousand other camps of recalcitrant guerrillas throughout the area that once called itself the United States. The Twenty Minute War had not surprised everyone. The mushrooms which had blossomed over Washington, Detroit, and a score of other places had been shocking but expected—by some.

Morgan had made no grand preparations. He had simply conceived it as a good period in which to stay footloose and not too close to a target area. He had taken squatter's rights in an abandoned mine and had stocked it with tools, food, and other useful items. He had had the simple intention to survive; it was during the weeks after Final Sunday that he discovered that there was no way for a man with foresight to avoid becoming a leader.

Morgan and Dad Carter entered the mine by a new shaft and tunnel which appeared on no map, by a dry rock route which was intended to puzzle even a bloodhound. They crawled through the tunnel, were able to raise their heads when they reached the armory, and stepped out into the common room of the colony, the largest chamber, ten by thirty feet and as high as it was wide.

Their advent surprised no one, else they might not have lived to enter. A microphone concealed in the tunnel had conveyed their shibboleths before them. The room was unoccupied save for a young woman stirring something over a tiny, hooded fire and a girl who sat at a typewriter table mounted in front of a radio. She was wearing earphones and shoved one back and turned to face them as they came in.

"Howdy, Boss!"

"Hi, Margie. What's the good word?" Then to the other, "What's for lunch?"

"Bark soup and a notch in your belt."

"Cathleen, you depress me."

"Well . . . mushrooms fried in rabbit fat, but darn few of them."

"That's better."

"You better tell your boys to be more careful what they bring in. One more rabbit with tularemia and we won't have to worry about what to eat."

"Hard to avoid, Cathy. You must be sure you handle them the way Doc taught you." He turned to the girl. "Jerry in the upper tunnel?"

"Yes."

"Get him down here, will you?"

"Yes, sir." She pulled a sheet out of her typewriter and handed it to him, along with others, then left the room.

Morgan glanced over them. The enemy had abolished soap opera and singing commercials but he could not say that radio had been improved. There was an unnewsy sameness to the propaganda which now came over the air. He checked through while wishing for just one old-fashioned, uncensored newscast.

"Here's an item!" he said suddenly. "Get this, Dad—"

"Read it to me, Ed." Dad's spectacles had been broken on Final Sunday. He could bring down a deer, or a man, at a thousand yards—but he might never read again.

"'New Center, 28 April—It is with deep regret that Continental Coordinating Authority for World Unification, North American District, announces that the former city of St. Joseph, Missouri, has been subjected to sanitary measures. It is ordered that a memorial plaque setting forth the circumstances be erected on the former site of St. Joseph as soon as radioactivity permits. Despite repeated warnings the former inhabitants of this lamented city encouraged and succored marauding bands of outlaws skulking around the outskirts of their community. It is hoped that the sad fate of St. Joseph will encourage the native authorities of all North American communities to take all necessary steps to suppress treasonable intercourse with the few remaining lawless elements in our continental society.'"

Dad cocked a brow at Morgan. "How many does that make since they took over?"

"Let's see . . . Salinas . . . Colorado Springs . . . uh, six, including St. Joe."

"Son, there weren't more than sixty million Americans left after Final Sunday. If they keep up, we'll be kind of thinned out in a few years."

"I know." Morgan looked troubled. "We've got to work out ways to operate without calling attention to the towns. Too many hostages."

A short, dark man dressed in dirty dungarees entered from a side tunnel, followed by Margie. "You wanted me, boss?"

"Yes, Jerry. I want to get word to McCracken to come in for a meeting. Two hours from now, if he can get here."

"Boss, you're using radio too much. You'll get him shot and us, too."

"I thought that business of bouncing it off the cliff face was foolproof?"

"Well . . . a dodge I can work up, somebody else can figure out. Besides, I've got the chassis unshipped. I was working on it."

"How long to rig it?"

"Oh, half an hour—twenty minutes."

"Do it. This may be the last time we'll use radio, except as utter last resort."

"Okay, boss."

The meeting was in the common room. Morgan called it to order once all were present or accounted for. McCracken arrived just as he had decided to proceed without him. McCracken had a pass for the countryside, being a veterinarian, and held proxy for the colony's underground associates in Barclay.

"The Barclay Free Company, a provisional unit of the United States of America, is now in session," Morgan announced formally. "Does any member have any item to lay before the Company?"

He looked around; there was no response. "How about you?" he challenged Joe Benz. "I heard that you had some things you thought the Company ought to hear."

Benz started to speak, shook his head. "I'll wait."

"Don't wait too long," Morgan said mildly. "Well, I have two points to bring up for discussion—"

"Three," corrected Dr. McCracken. "I'm glad you sent for me." He stepped up to Morgan and handed him a large, much folded piece of paper. Morgan looked it over, refolded it, and put it in his pocket.

"It fits in," he said to McCracken. "What do the folks in town say?"

"They are waiting to hear from you. They'll back you up—so far, anyway."

"All right." Morgan turned back to the group. "First item—we got a message today, passed by hand and about three weeks old, setting up another provisional government. The courier was grabbed right under our noses. Maybe he was a stooge; maybe he was careless—that's neither here nor there at the moment. The message was that the Honorable Albert M. Brockman proclaimed himself provisional President of these United States, under derived authority, and appointed Brigadier General Dewey Fenton commander of armed forces including irregular militia—meaning us—and called on all citizens to unite to throw the Invader out. All formal and proper. So what do we do about it?"

"And who the devil is the Honorable Albert M. Brockman?" asked someone in the rear.

"I've been trying to remember. The message listed government jobs he's held, including some assistant secretary job—I suppose that's the 'derived authority' angle. But I can't place him."

"I recall him," Dr. McCracken said suddenly. "I met him when I was in the Bureau of Animal Husbandry. A career civil servant . . . and a stuffed shirt."

There was a gloomy silence. Ted spoke up. "Then why bother with him?"

The Leader shook his head. "It's not that simple, Ted. We can't assume that he's no good. Napoleon might have been a minor clerk under different circumstances. And the Honorable Mr. Brockman may be a revolutionary genius disguised as a bureaucrat. But that's not the point. We need nationwide unification more than anything. It doesn't matter right now who the titular leader is. The theory of derived authority may be shaky but it may be the only way to get everybody to accept one leadership. Little bands like ours can never win back the country. We've got to have unity—and that's why we can't ignore Brockman."

"The thing that burns me," McCracken said savagely, "is that it need never have happened at all! It could have been prevented."

"No use getting in a sweat about it," Morgan told him. "It's easy to see the government's mistakes now, but just the same I think there was an honest effort to prevent war right up to the last. It takes all nations to keep the peace, but it only takes one to start a war."

"No, no, no—I don't mean that, Captain," McCracken answered. "I don't mean the War could have been prevented. I suppose it could have been—once. But everybody knew that another war could happen, and everybody—*everybody,* I say, knew that if it came, it would start with the blasting of American cities. Every congressman, every senator knew that a war would destroy Washington and leave the country with no government, flopping around like a chicken with its head off. They *knew*—why didn't they *do* something!"

"What could they do? Washington couldn't be protected."

"Do? Why, they could have made plans for their own deaths! They could have slapped through a constitutional amendment calling for an alternate president and alternate congressmen and made it illegal for the alternates to be in target areas—or any scheme to provide for orderly succession in case of disaster. They could have set up secret and protected centers of government to use for storm cellars. They could have planned the same way a father takes out life insurance for his kids. Instead they went stumbling along, fat, dumb, and happy, and let themselves get killed, with no provision to carry out their sworn duties after they were dead. Theory of 'derived authority,' pfui! It's not just disastrous; it's ridiculous! We used to be the greatest country in the world—now look at us!"

"Take it easy, Doc," Morgan suggested. "Hindsight is easier than foresight."

"Hummm! *I* saw it coming. I quit my Washington job and took a country practice, five years ahead of time. Why couldn't a congressman be as bright as I am?"

"Hmmm . . . well—you're right. But we might just as well worry over the Dred Scott Decision. Let's get on with the problem. How about Brockman? Ideas?"

"What do you propose, boss?"

"I'd rather have it come from the floor."

"Oh, quit scraping your foot, boss," urged Ted. "We elected you to lead."

"Okay. I propose to send somebody to backtrack on the message and locate Brockman—smell him out and see what he's got. I'll consult with as many groups as we can reach in this state and across the river, and we'll try to manage unanimous action. I was thinking of sending Dad and Morrie."

Cathleen shook her head. "Even with faked registration cards and travel permits they'd be grabbed for the Reconstruction Battalions. I'll go."

"In a pig's eye," Morgan answered. "You'd be grabbed for something a danged sight worse. It's got to be a man."

"I am afraid Cathleen is right," McCracken commented. "They shipped twelve-year-old boys and old men who could hardly walk for the Detroit project. They don't care how soon the radiation gets them —it's a plan to thin us out."

"Are the cities still that bad?"

"From what I hear, yes. Detroit is still 'hot' and she was one of the first to get it."

"I'm going to go." The voice was high and thin, and rarely heard in conference.

"Now, Mother—" said Dad Carter.

"You keep out of this, Dad. The men and young women would be grabbed, but they won't bother with *me.* All I need is a paper saying I have a permit to rejoin my grandson, or something."

McCracken nodded. "I can supply that."

Morgan paused, then said suddenly, "Mrs. Carter will contact Brockman. It is so ordered. Next order of business," he went on briskly. "You've all seen the news about St. Joe—this is what they posted in Barclay last night." He hauled out and held up the paper McCracken had given him. It was a printed notice, placing the City of Barclay on probation, subject to the ability of "local authorities" to suppress "bands of roving criminals."

There was a stir, but no comment. Most of them had lived in Barclay; all had ties there.

"I guess you're waiting for me," McCracken began. "We held a meeting as soon as this was posted. We weren't all there—it's getting harder to cover up even the smallest gathering—but there was no disagreement. We're behind you but we want you to go a little easy. We suggest that you cut out pulling raids within, oh, say twenty miles of Barclay, and that you stop all killing unless absolutely necessary to avoid capture. It's the killings they get excited about—it was killing of the district director that touched off St. Joe."

Benz sniffed. "So we don't do anything. We just give up—and stay here in the hills and starve."

"Let me finish, Benz. We don't propose to let them scare us out and keep us enslaved forever. But casual raids don't do them any real harm. They're mostly for food for the Underground and for minor retaliations. We've got to conserve our strength and increase it and organize, until we can hit hard enough to make it stick. We won't let you starve. I can do more organizing among the farmers and some animals can be hidden out, unregistered. We can get you meat—some, anyhow. And we'll split our rations with you. They've got us on 1800 calories now, but we can share it. Something can be done through the black market, too. There are ways."

Benz made a contemptuous sound. Morgan looked at him.

"Speak up, Joe. What's on your mind?"

"I will. It's not a plan; it's a disorderly retreat. A year from now we'll be twice as hungry and no further along—and they'll be better dug in and stronger. Where does it get us?"

Morgan shook his head. "You've got it wrong. Even if we hadn't had it forced on us, we would have been moving into this stage anyhow. The Free Companies have got to quit drawing attention to themselves. Once the food problem is solved we've got to build up our strength and weapons. We've got to have organization and weapons—nationwide organization and guns, knives, and hand grenades. We've got to turn this mine into a factory. There are people down in Barclay who can use the stuff we can make here—but we can't risk letting Barclay be blasted in the meantime. Easy does it."

"Ed Morgan, you're kidding yourself and you know it."

"How?"

"'How?' Look, you sold me the idea of staying on the dodge and joining up—"

"You volunteered."

"Okay, I volunteered. It was all because you were so filled with fire and vinegar about how we would throw the enemy back into the ocean. You talked about France and Poland and how the Filipinos kept on fighting after they were occupied. You sold me a bill of goods. But there was something you didn't tell me—"

"Go on."

"There never was an Underground that freed its own country. All of them had to be pulled out of the soup by an invasion from outside. Nobody is going to pull *us* out."

There was silence after this remark. The statement had too much truth in it, but it was truth that no member of the Company could afford to think about. Young Morrie broke it. "Captain?"

"Yes, Morrie." Being a fighting man, Morrie was therefore a citizen and a voter.

"How can Joe be so sure he knows what he's talking about? History doesn't repeat. Anyhow, maybe we will get some help. England, maybe—or even the Russians."

Benz snorted. "Listen to the punk! Look, kid, England was smashed like we were, only worse—and Russia, too. Grow up; quit daydreaming."

The boy looked at him doggedly. "You don't know that. We only know what they chose to tell us. And there aren't enough of them to hold down the whole world, everybody, everywhere. We never managed to lick the Yaquis, or the Moros. And they can't lick us *unless we let them.* I've read some history too."

Benz shrugged. "Okay, okay. Now we can all sing 'My Country 'Tis of Thee' and recite the Scout oath. That ought to make Morrie happy —"

"Take it easy, Joe!"

"We have free speech here, don't we? What I want to know is: How long does this go on? I'm getting tired of competing with coyotes for the privilege of eating jackrabbits. You know I've fought with the best of them. I've gone on the raids. Well, haven't I? Haven't I? You can't call *me* yellow."

"You've been on some raids," Morgan conceded.

"All right. I'd go along indefinitely if I could see some sensible plan. That's why I ask, 'How long does this go on?' When do we move? Next spring? Next year?"

Morgan gestured impatiently. "How do I know? It may be next spring; it may be ten years. The Poles waited three hundred years."

"That tears it," Benz said slowly. "I was hoping you could offer some reasonable plan. Wait and arm ourselves—that's a pretty picture! Homemade hand grenades against atom bombs! Why don't you quit kidding yourselves? We're *licked!*" He hitched at his belt. "The rest of you can do as you please—I'm through."

Morgan shrugged. "If a man won't fight, I can't make him. You're assigned noncombatant duties. Turn in your gun. Report to Cathleen."

"You don't get me, Ed. I'm *through.*"

"You don't get *me,* Joe. You don't resign from an Underground."

"There's no risk, I'll leave quietly, and let myself be registered as a straggler. It doesn't mean anything to the rest of you. I'll keep my mouth shut—that goes without saying."

Morgan took a long breath, then answered, "Joe, I've learned by bitter experience not to trust statements set off by 'naturally,' 'of course,' or 'that goes without saying.'"

"Oh, so you don't trust me?"

"As Captain of this Company I can't afford to. Unless you can get the Company to recall me from office, my rulings stand. You're under arrest. Hand over your gun."

Benz glanced around, at blank, unfriendly faces. He reached for his waist. "With your left hand, Joe!"

Instead of complying, Benz drew suddenly, backed away. "Keep clear!" he said shrilly. "I don't want to hurt anybody—but keep clear!"

Morgan was unarmed. There might have been a knife or two in the assembly, but most of them had come directly from the dinner table. It was not their custom to be armed inside the mine.

Young Morrie was armed with a rifle, having come from lookout duty. He did not have room to bring it into play, but Morgan could see that he intended to try. So could Benz.

"Stop it, Morrie!" Morgan assumed obedience and turned instantly to the others. "Let him go. Nobody move. Get going, Joe."

"That's better." Benz backed down the main tunnel, toward the main entrance, weed and drift choked for years. Its unused condition was their principal camouflage, but it could be negotiated.

He backed away into the gloom, still covering them. The tunnel curved; shortly he was concealed by the bend.

Dad Carter went scurrying in the other direction as soon as Benz no longer covered them. He reappeared at once, carrying something. "Heads down!" he shouted, as he passed through them and took out after Benz.

"Dad!" shouted Morgan. But Carter was gone.

Seconds later a concussion tore at their ears and noses.

Morgan picked himself up and brushed at his clothes, saying in annoyed tones, "I never did like explosives in cramped quarters. Cleve—Art. Go check on it. Move!"

"Right, boss!" They were gone.

"The rest of you get ready to carry out withdrawal plan—full plan, with provisions and supplies. Jerry, don't disconnect either the receiver or the line-of-sight till I give the word. Margie will help you. Cathleen, get ready to serve anything that can't be carried. We'll have one big meal. 'The condemned ate hearty.'"

"Just a moment, Captain." McCracken touched his sleeve. "I had better get a message into Barclay."

"Soon as the boys report. You better get back into town."

"I wonder. Benz knows me. I think I'm here to stay."

"Hm . . . well, you know best. How about your family?"

McCracken shrugged. "They can't be worse off than they would be if I'm picked up. I'd like to have them warned and then arrangements made for them to rejoin me if possible."

"We'll do it. You'll have to give me a new contact."

"Planned for. This message will go through and my number-two man will step into my shoes. The name is Hobart—runs a feed store on Pelham Street."

Morgan nodded. "Should have known you had it worked out. Well, what we don't know—" He was interrupted by Cleve, reporting.

"He got away, Boss."

"Why didn't you go after him?"

"Half the roof came down when Dad chucked the grenade. Tunnel's choked with rock. Found a place where I could see but couldn't crawl through. He's not in the tunnel."

"How about Dad?"

"He's all right. Got clipped on the head with a splinter but not really hurt."

Morgan stopped two of the women hurrying past, intent on preparations for withdrawal. "Here—Jean, and you, Mrs. Bowen. Go take care of Dad Carter and tell Art to get back here fast. Shake a leg!"

When Art reported Morgan said, "You and Cleve go out and find Benz. Assume that he is heading for Barclay. Stop him and bring him in if you can. Otherwise kill him. Art is in charge. Get going." He turned to McCracken. "Now for a message." He fumbled in his pocket for paper, found the poster notice that McCracken had given him, tore off a piece, and started to write. He showed it to McCracken. "How's that?" he asked.

The message warned Hobart of Benz and asked him to try to head him off. It did not tell him that the Barclay Free Company was moving but did designate the "post office" through which next contact would be expected—the men's rest room of the bus station.

"Better cut out the post office," McCracken advised. "Hobart knows it and we may contact him half a dozen other ways. But I'd like to ask him to get my family out of sight. Just tell him that we are sorry to hear that Aunt Dinah is dead."

"Is that enough?"

"Yes."

"Okay." Morgan made the changes, then called, "Margie! Put this in code and tell Jerry to get it out fast. Tell him it's the strike-out edition. He can knock down his sets as soon as it's out."

"Okay, boss." Margie had no knowledge of cryptography. Instead she had command of jive talk, adolescent slang, and high school doubletalk which would be meaningless to any but another American bobby-soxer. At the other end a fifteen-year-old interpreted her butchered English by methods which impressed her foster parents as being telepathy—but it worked.

The fifteen-year-old could be trusted. Her entire family, save herself, had been in Los Angeles on Final Sunday.

Art and Cleve had no trouble picking up Benz's trail. His tracks were on the tailings spilling down from the main entrance to the mine. The earth and rock had been undisturbed since the last heavy rain; Benz's flight left clear traces.

But the trail was cold by more than twenty minutes; they had left the mine by the secret entrance a quarter of a mile from where Benz had made his exit.

Art picked it up where Benz had left the tailings and followed it through brush with the woodsmanship of the Eagle Scout he had been. From the careless signs he left behind Benz was evidently in a hurry and heading by the shortest route for the highway. The two followed him as fast as they could cover ground, discarding caution for speed.

They checked just before entering the highway. "See anything?" asked Cleve.

"No."

"Which way would he go?"

"The Old Man said to head him off from Barclay."

"Yeah, but suppose he headed south instead? He used to work in Wickamton. He might head that way."

"The Boss said to cover Barclay. Let's go."

They had to cache their guns; from here on it would be their wits and their knives. An armed American on a highway would be as conspicuous as a nudist at a garden party.

Their object now was speed; they must catch up with him, or get ahead of him and waylay him.

Nine miles and two and a half hours later—one hundred and fifty minutes of dog trot, with time lost lying in the roadside brush when convoys thundered past—they were in the outskirts of Barclay. Around a bend, out of sight, was the roadblock of the Invaders' check station. The point was a bottleneck; Benz must come this way if he were heading for Barclay.

"Is he ahead or behind us?" asked Cleve, peering out through bushes.

"Behind, unless he was picked up by a convoy—or sprouted wings. We'll give him an hour."

A horsedrawn hayrack lumbered up the road. Cleve studied it. Americans were permitted no power vehicles except under supervision, but this farmer and his load could go into town with only routine check at the road block. "Maybe we ought to hide in that and look for him in town."

"And get a bayonet in your ribs? Don't be silly."

"Okay. Don't blow your top." Cleve continued to watch the rig. "Hey," he said presently. "Get a load of that!"

"That" was a figure which dropped from the tail of the wagon as it started around the bend, rolled to the ditch on the far side, and slithered out of sight.

"That was Joe!"

"Are you sure?"

"Sure! Here we go."

"How?" Art objected. "Take it easy. Follow me." They faded back two hundred yards, to where they could cross the road on hands and knees through a drainage pipe. Then they worked up the other side to where Benz had disappeared in weeds.

They found the place where he had been; grass and weeds were still straightening up. The route he must have taken was evident—down toward the river bank, then upstream to the city. There were drops of blood. "Dad must have missed stopping him by a gnat's whisker," Cleve commented.

"Bad job he didn't."

"Another thing—he said he was going to give himself up. I don't think he is, or he would have stayed with the wagon and turned himself in at the check station. He's heading for some hideout. Who does he know in Barclay?"

"I don't know. We'd better get going."

"Wait a minute. If he touches off an alarm, they'll shoot him for us. If he gets by the 'eyes,' we've lost him and we'll have to pick him up inside. Either way, we don't gain anything by blundering ahead. We've got to go in by the chute."

Like all cities the Invader had consolidated, Barclay was girdled by electric-eye circuits. The enemy had trimmed the town to fit, dynamiting and burning where necessary to achieve unbroken sequence of automatic sentries. But the "chute"—an abandoned and forgotten aqueduct—passed under the alarms. Art knew how to use it; he had been in town twice since Final Sunday.

They worked back up the highway, crossed over, and took to the hills. Thirty minutes later they were on the streets of Barclay, reasonably safe as long as they were quick to step off the sidewalk for the occasional Invader.

The first "post office," a clothesline near their exit, told them nothing—the line was bare. They went to the bus station. Cleve studied the notices posted for inhabitants while Art went into the men's rest room. On the wall, defaced by scrawlings of every sort, mostly vulgar, he found what he sought: "Killroy was here." The misspelling of Kilroy was the clue—exactly eighteen inches below it and six to the right was an address: "1745 Spruce—ask for Mabel."

He read it as 2856 Pine—one block beyond Spruce. Art passed the address to Cleve, then they set out separately, hurrying to beat the curfew but proceeding with caution—at least one of them must get through. They met in the backyard of the translated address. Art knocked on the kitchen door. It was opened a crack by a middle-aged man who did not seem glad to see them. "Well?"

"We're looking for Mabel."

"Nobody here by that name."

"Sorry," said Art. "We must have made a mistake." He shivered. "Chilly out," he remarked. "The nights are getting longer."

"They'll get shorter by and by," the man answered.

"We've got to think so, anyhow," Art countered.

"Come in," the man said. "The patrol may see you." He opened the door and stepped aside. "My name's Hobart. What's your business?"

"We're looking for a man named Benz. He may have sneaked into town this afternoon and found someplace to—"

"Yes, yes," Hobart said impatiently. "He got in about an hour ago and he's holed up with a character named Moyland." As he spoke he removed a half loaf of bread from a cupboard, cut four slices, and added cold sausage, producing two sandwiches. He did not ask if they were hungry; he simply handed them to Art and Cleve.

"Thanks, pal. So he's holed up. Haven't you done anything about it? He has got to be shut up at once or he'll spill his guts."

"We've got a tap in on the telephone line. We had to wait for dark. You can't expect me to sacrifice good boys just to shut his mouth unless it's absolutely necessary."

"Well, it's dark now, and we'll be the boys you mentioned. You can call yours off."

"Okay." Hobart started pulling on shoes.

"No need for you to stick your neck out," Art told him. "Just tell us where this Moyland lives."

"And get your throat cut, too. I'll take you."

"What sort of a guy is this Moyland? Is he safe?"

"You can't prove it by me. He's a black market broker, but that doesn't prove anything. He's not part of the organization but we haven't anything against him."

Hobart took them over his back fence, across a dark side street, through a playground, where they lay for several minutes under bushes because of a false alarm, then through many more backyards, back alleys, and dark byways. The man seemed to have a nose for the enemy; there were no more alarms. At last he brought them through a cellar door into a private home. They went upstairs and through a room where a woman was nursing a baby. She looked up, but otherwise ignored them. They ended up in a dark attic. "Hi, Jim," Hobart called out softly. "What's new?"

The man addressed lay propped on his elbows, peering out into the night through opera glasses held to slots of a ventilating louvre. He rolled over and lowered the glasses, pushing one of a pair of earphones from his head as he did so. "Hello, Chief. Nothing much. Benz is getting drunk, it looks like."

"I'd like to know where Moyland gets it," Hobart said. "Has he telephoned?"

"Would I be doing nothing if he had? A couple of calls came in, but they didn't amount to anything, so I let him talk."

"How do you know they didn't amount to anything?"

Jim shrugged, turned back to the louvre. "Moyland just pulled down the shade," he announced.

Art turned to Hobart. "We can't wait. We're going in.

Benz arrived at Moyland's house in bad condition. The wound in his shoulder, caused by Carter's grenade, was bleeding. He had pushed a handkerchief up against it as a compress, but his activity started the blood again; he was shaking for fear his condition would attract attention before he could get under cover.

Moyland answered the door. "Is that you, Zack?" Benz demanded, shrinking back as he spoke.

"Yes. Who is it?"

"It's me—Joe Benz. Let me in, Zack—quick!"

Moyland seemed about to close the door, then suddenly opened it. "Get inside." When the door was bolted, he demanded, "Now—what's your trouble? Why come to me?"

"I had to go someplace, Zack. I had to get off the street. They'd pick me up."

Moyland studied him. "You're not registered. Why not?"

Benz did not answer. Moyland waited, then went on, "You know what I can get for harboring a fugitive. You're in the Underground—aren't you?"

"Oh, no, Zack! I wouldn't do that to you. I'm just a—a straggler. I gotta get registered, Zack."

"That's blood on your coat. How?"

"Uh . . . just an accident. Maybe you could let me have clean rags and some iodine."

Moyland stared at him, his bland face expressionless, then smiled. "You've got no troubles we can't fix. Sit down." He stepped to a cabinet and took out a bottle of bourbon, poured three fingers in a water glass, and handed it to Benz. "Work on that and I'll fix you up."

He returned with some torn toweling and a bottle. "Sit here with your back to the window, and open your shirt. Have another drink. You'll need it before I'm through."

Benz glanced nervously at the window. "Why don't you draw the shade?"

"It would attract attention. Honest people leave their shades up these days. Hold still. This is going to hurt."

Three drinks later Benz was feeling better. Moyland seemed willing to sit and drink with him and to soothe his nerves. "You did well to come in," Moyland told him. "There's no sense hiding like a scared rabbit. It's just butting your head against a stone wall. Stupid."

Benz nodded. "That's what I told them."

"Told who?"

"Hunh? Oh, nobody. Just some guys I was talking to. Tramps."

Moyland poured him another drink. "As a matter of fact you *were* in the Underground."

"Me? Don't be silly, Zack."

"Look, Joe, you don't have to kid me. I'm your friend. Even if you did tell me it wouldn't matter. In the first place, I wouldn't have any proof. In the second place, I'm sympathetic to the Underground—any American is. I just think they're wrongheaded and foolish. Otherwise I'd join 'em myself."

"They're foolish all right! You can say that again."

"So you *were* in it?"

"Huh? You're trying to trap me. I gave my word of honor—"

"Oh, relax!" Moyland said hastily. "Forget it. I didn't hear anything; I can't tell anything. Hear no evil, see no evil—that's me." He changed the subject.

The level of the bottle dropped while Moyland explained current events as he saw them. "It's a shame we had to take such a shellacking to learn our lesson but the fact of the matter is, we were standing in the way of the natural logic of progress. There was a time back in '45 when we could have pulled the same stunt ourselves, only we weren't bright enough to do it. World organization, world government. We stood in the way, so we got smeared. It had to come. A smart man can see that."

Benz was bleary but he did not find this comment easy to take. "Look, Zack—you don't mean you *like* what happened to us?"

"Like it? Of course not. But it was necessary. You don't have to like having a tooth pulled—but it has to be done. Anyhow," he went on, "it's not all bad. The big cities were economically unsound anyway. We should have blown them up ourselves. Slum clearance, you might call it."

Benz banged his empty glass down. "Maybe so—but they made slaves out of us!"

"Take it easy, Joe," Moyland said, filling his glass, "you're talking abstractions. The cop on the corner could push you around whenever he wanted to. Is that freedom? Does it matter whether the cop talks with an Irish accent or some other accent? No, chum, there's a lot of guff talked about freedom. No man is free. There is no such thing as freedom. There are only various privileges. Free speech—we're talking freely now, aren't we? After all, you don't want to get up on a platform and shoot off your face. Free press? When did *you* ever own a newspaper? Don't be a chump. Now that you've shown sense and come in, you are going to find that things aren't so very different. A little more orderly and no more fear of war, that's all. Girls make love just like they used to, the smart guys get along, and the suckers still get the short end of the deal."

Benz nodded. "You're right, Zack. I've been a fool."

"I'm glad you see it. Now take those wild men you were with. What freedom have they got? Freedom to starve, freedom to sleep on the cold ground, freedom to be hunted."

"That was it," Benz agreed. "Did you ever sleep in a mine, Zack? Cold. That ain't half of it. Damp, too."

"I can imagine," Moyland agreed. "The Capehart Lode always was wet."

"It wasn't the Capehart; it was the Harkn—" He caught himself and looked puzzled.

"The Harkness, eh? That's the headquarters?"

"I didn't say that! You're putting words in my mouth! You—"

"Calm yourself, Joe. Forget it." Moyland got up and drew down the shade. "You didn't say anything."

"Of course I didn't." Benz stared at his glass. "Say, Zack, where do I sleep? I don't feel good."

"You'll have a nice place to sleep any minute now."

"Huh? Well, show me. I gotta fold up."

"Any minute. You've got to check in first."

"Huh? Oh, I can't do that tonight, Zack. I'm in no shape."

"I'm afraid you'll have to. See me pull that shade down? They'll be along any moment."

Benz stood up, swaying a little. "You framed me!" he yelled, and lunged at his host.

Moyland sidestepped, put a hand on his shoulder and pushed him down into the chair. "Sit down, sucker," he said pleasantly. "You don't expect me to get Abombed just for you and your pals, do you?" Benz shook his head, then began to sob.

Hobart escorted them out of the house, saying to Art as they left, "If you get back, tell McCracken that Aunt Dinah is resting peacefully."

"Okay."

"Give us two minutes, then go in. Good luck."

Cleve took the outside; Art went in. The back door was locked, but the upper panel was glass. He broke it with the hilt of his knife, reached in and unbolted the door. He was inside when Moyland showed up to investigate the noise.

Art kicked him in the belly, then let him have the point in the neck as he went down. Art stopped just long enough to insure that Moyland would stay dead, then went looking for the room where Benz had been when the shade was drawn.

He found Benz in it. The man blinked his eyes and tried to focus them, as if he found it impossible to believe what he saw. "Art!" he got out at last. "Jeez, boy! Am I glad to see you! Let's get out of here—this place is 'hot.' "

Art advanced, knife out.

Benz looked amazed. "Hey, Art! Art! You're making a mistake. Art. You can't do this—" Art let him have the first one in the soft tissues under the breast bone, then cut his throat to be sure. After that he got out quickly.

Thirty-five minutes later he was emerging from the country end of the chute. His throat was burning from exertion and his left arm was useless—he could not tell whether it was broken or simply wounded.

Cleve lay dead in the alley behind Moyland's house, having done a good job of covering Art's rear.

It took Art all night and part of the next morning to get back near the mine. He had to go through the hills the entire way; the highway was, he judged, too warm at the moment.

He did not expect that the Company would still be there. He was reasonably sure that Morgan would have carried out the evacuation pending certain evidence that Benz's mouth had been shut. He hurried.

But he did not expect what he did find—a helicopter hovering over the neighborhood of the mine.

He stopped to consider the matter. If Morgan had got them out safely, he knew where to rejoin. If they were still inside, he had to figure out some way to help them. The futility of his position depressed him—one man, with a knife and a bad arm, against a helicopter.

Somewhere a bluejay screamed and cursed. Without much hope he chirped his own identification. The bluejay shut up and a mockingbird answered him—Ted.

Art signaled that he would wait where he was. He considered himself well hidden; he expected to have to signal again when Ted got closer, but he underestimated Ted's ability. A hand was laid on his shoulder.

He rolled over, knife out, and hurt his shoulder as he did so. "Ted! Man, do you look good to me!"

"Same here. Did you get him?"

"Benz? Yes, but maybe not in time. Where's the gang?"

"A quarter mile north of back door. We're pinned down. Where's Cleve?"

"Cleve's not coming back. What do you mean 'pinned down'?"

"That damned 'copter can see right down the draw we're in. Dad's got 'em under an overhang and they're safe enough for the moment, but we can't move."

"What do you mean 'Dad's got 'em'?" demanded Art. "Where's the Boss?"

"He ain't in such good shape, Art. Got a machine gun slug in the ribs. We had a dust-up. Cathleen's dead."

"The hell you say!"

"That's right. Margie and Maw Carter have got her baby. But that's one reason why we're pinned down—the Boss and the kid, I mean."

A mockingbird's call sounded far away. "There's Dad," Ted announced. "We got to get back."

"Can we?"

"Sure. Just keep behind me. I'll watch out that I don't get too far ahead."

Art followed Ted in, by a circuitous and, at one point, almost perpendicular route. He found the Company huddled under a shelf of rock which had been undercut by a stream, now dry. Against the wall Morgan was on his back, with Dad Carter and Dr. McCracken squatting beside him. Art went up and made his report.

Morgan nodded, his face gray with pain. His shirt had been cut away; bandaging was wrapped around his ribs, covering a thick pad. "You did well, Art. Too bad about Cleve. Ted, we're getting out of here and you're going first, because you're taking the kid."

"The baby? How—"

"Doc'll dope it so that it won't let out a peep. Then you strap it to your back, papoose fashion."

Ted thought about it. "No, to my front. There's some knee-and-shoulder work on the best way out."

"Okay. It's your job."

"How do *you* get out, boss?"

"Don't be silly."

"Look here, boss, if you think we're going to walk off and leave you, you've got another—"

"Shut up and scram!" The exertion hurt Morgan; he coughed and wiped his mouth.

"Yes, sir." Ted and Art backed away.

"Now, Ed—" said Carter.

"You shut up, too. You still sure you don't want to be Captain?"

"You know better than that, Ed. They took things from me while I was your deppity, but they wouldn't have me for Captain."

"That puts it up to you, Doc."

McCracken looked troubled. "They don't know me that well, Captain."

"They'll take you. People have an instinct for such things."

"Anyhow, if I am Captain, I won't agree to your plan of staying here by yourself. We'll stay till dark and carry you out."

"And get picked up by an infrared spotter, like sitting ducks? That's supposing they let you alone until sundown—that other 'copter will be back with more troops before long."

"I don't think they'd let me walk off on you."

"It's up to you to *make* them. Oh, I appreciate your kindly thoughts, Doc, but you'll think differently as soon as you're Captain. You'll know you have to cut your losses."

McCracken did not answer. Morgan turned his head to Carter. "Gather them around, Dad."

They crowded in, shoulder to shoulder. Morgan looked from one troubled face to another and smiled. "The Barclay Free Company, a provisional unit of the United States of America, is now in session," he announced, his voice suddenly firm. "I'm resigning the captaincy for reasons of physical disability. Any nominations?"

The silence was disturbed only by calls of birds, the sounds of insects.

Morgan caught Carter's eyes. Dad cleared his throat. "I nominate Doc McCracken."

"Any other nominations?" He waited, then continued, "All right, all in favor of Doc make it known by raising your right hand. Okay—opposed the same sign. Dr. McCracken is unanimously elected. It's all yours, Captain. Good luck to you."

McCracken stood up, stooping to avoid the rock overhead. "We're evacuating at once. Mrs. Carter, give the baby about another tablespoon of the syrup, then help Ted. He knows what to do. You'll follow Ted. Then Jerry. Margie, you are next. I'll assign the others presently. Once out of the canyon, spread out and go it alone. Rendezvous at dusk, same place as under Captain Morgan's withdrawal plan—the cave." He paused. Morgan caught his eye and motioned him over, "That's all until Ted and the baby are ready to leave. Now back away and give Captain Morgan a little air."

When they had withdrawn McCracken leaned over Morgan the better to hear his weak words. "Don't be too sure you've seen the last of me, Captain. I might join up in a few days."

"You might at that. I'm going to leave you bundled up warm and plenty of water within reach. I'll leave you some pills, too—that'll give you some comfort and ease. Only half a pill for you—they're intended for cows." He grinned at his patient.

"Half a pill it is. Why not let Dad handle the evacuation? He'll make you a good deputy—and I'd like to talk with you until you leave."

"Right." He called Carter over, instructed him, and turned back to Morgan.

"After you join up with Powell's outfit," whispered Morgan, "your first job is to get into touch with Brockman. Better get Mrs. Carter started right away, once you've talked it over with Powell."

"I will."

"That's the most important thing we've got to worry about, Doc. We've got to have unity, and one plan, from coast to coast. I look forward to a day when there will be an American assigned, by name, to each and every one of them. Then at a set time—zzzt!" He drew a thumb across his throat.

McCracken nodded. "Could be. It *will* be. How long do you think it will take us?"

"I don't know. I don't think about 'how long.' Two years, five years, ten years—maybe a century. That's not the point. The only question is whether or not there are any guts left in America." He glanced out where the fifth person to leave was awaiting a signal from Carter, who in turn was awaiting a signal from Art, hidden out where he could watch for the helicopter. "Those people will stick."

"I'm sure of that."

Presently Morgan added, "There's one thing this has taught me: You can't enslave a free man. Only person can do that to a man is himself. No, sir—you can't enslave a free man. The most you can do is kill him."

"That's a fact, Ed."

"It is. Got a cigarette, Doc?"

"It won't do you any good, Ed."

"It won't do me any harm, either—now, will it?"

"Well, not much." McCracken unregretfully gave him his last and watched him smoke it.

Later, Morgan said, "Dad's ready for you, Captain. So long."

"So long. Don't forget. Half a pill at a time. Drink all the water you want, but don't take your blankets off, no matter how hot you get."

"Half a pill it is. Good luck."

"I'll have Ted check on you tomorrow."

Morgan shook his head. "That's too soon. Not for a couple of days at least."

McCracken smiled. "I'll decide that, Ed. You just keep yourself wrapped up. Good luck." He withdrew to where Carter waited for him. "You go ahead, Dad. I'll bring up the rear. Signal Art to start."

Carter hesitated. "Tell me straight, Doc. What kind of shape is he in?"

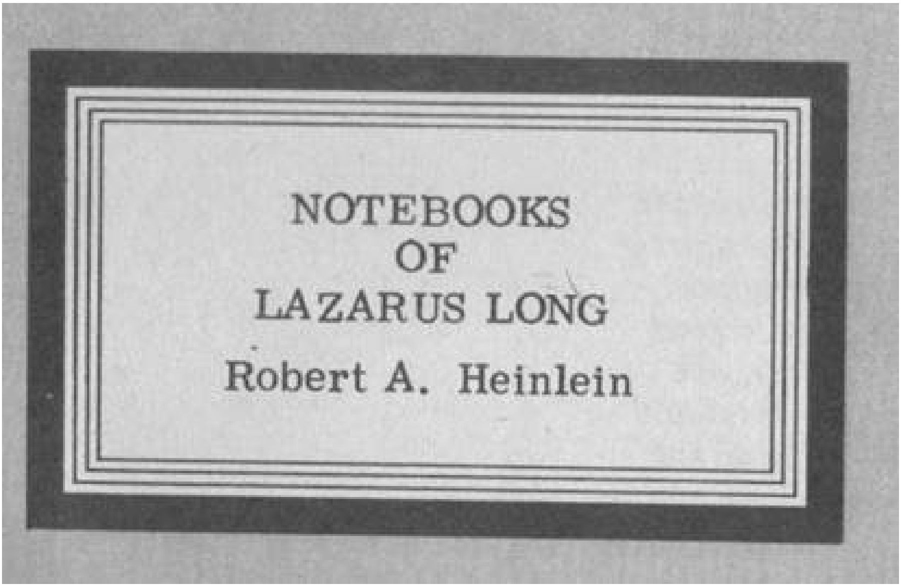
McCracken studied Carter's face, then said in a low voice, "I give him about two hours."

"I'll stay behind with him."

"No, Dad, you'll carry out your orders." Seeing the distress in the old man's eyes, he added, "Don't you worry about Morgan. A free man can take care of himself. Now get moving."

"Yes, sir."

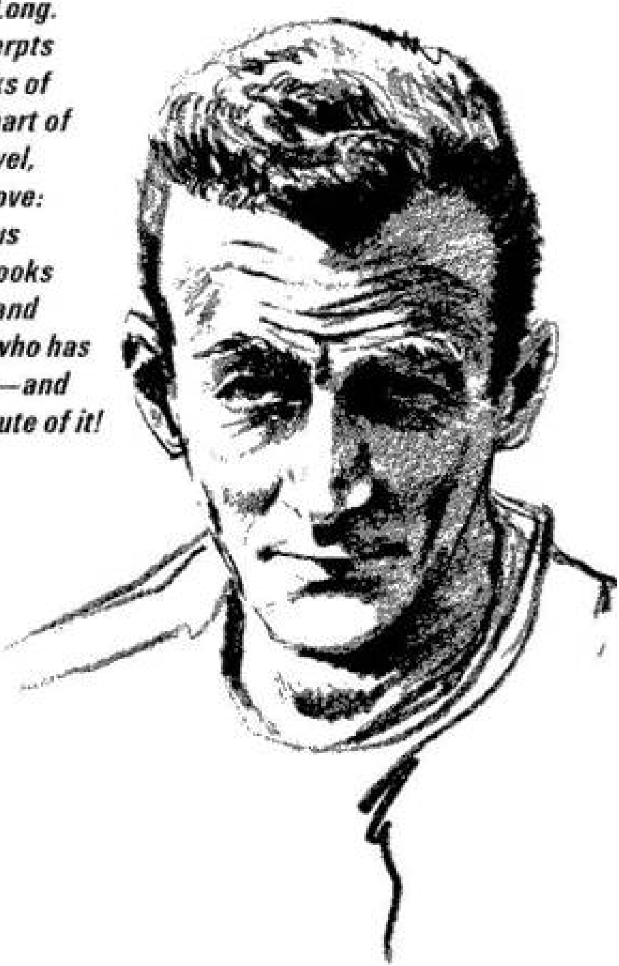
Notebooks of Lazarus Long



NOTEBOOKS
OF
LAZARUS LONG

Robert A. Heinlein

In the July 1941 issue of Astounding Science Fiction, Robert A. Heinlein's novel, "Methuselah's Children," introduced the virtually immortal Lazarus Long. The following excerpts from the Notebooks of Lazarus Long are part of Heinlein's new novel, "Time Enough for Love: The Lives of Lazarus Long." The Notebooks represent the wit and wisdom of a man who has lived for centuries—and enjoyed every minute of it!



§ Always store beer in a dark place.

§ By the data to date, there is only one animal in the galaxy dangerous to man—man himself. So he must supply his own indispensable competition. He has no enemy to help him.

§ Men are more sentimental than women. It blurs their thinking.

§ Certainly the game is rigged. Don't let that stop you; if you don't bet, you can't win.

§ Any priest or shaman must be presumed guilty until proved innocent.

§ Always listen to the experts. They'll tell you what can't be done, and why. Then do it.

§ Get a shot off *fast*. This upsets him long enough to let you make your second shot perfect.

§ There is no conclusive evidence of life after death. But there is no evidence of any sort against it. Soon enough you will *know*. So why fret about it?

§ If it can't be expressed in figures, it is not science; it is opinion.

§ It has long been known that one horse can run faster than another—but *which one*? Differences are crucial.

§ A fake fortuneteller can be tolerated. But an authentic soothsayer should be shot on sight. Cassandra did not get half the kicking around she deserved.

§ Delusions are often functional. A mother's opinions about her children's beauty, intelligence, goodness, *et cetera* ad nauseam, keep her from drowning them at birth.

§ Most "scientists" are bottle washers and button sorters.

§ A "pacifist male" is a contradiction in terms. Most self-described "pacifists" are not pacific; they simply assume false colors. When the wind changes, they hoist the Jolly Roger.

§ Nursing does not diminish the beauty of a woman's breasts; it enhances their charm by making them look lived in and happy.

§ A generation that ignores history has no past—and no future.

§ A poet who reads his verse in public may have other nasty habits.

§ What a wonderful world it is that has girls in it!

§ Small change can often be found under seat cushions.

§ History does not record anywhere at any time a religion that has any rational basis. Religion is a crutch for people not strong enough to stand up to the unknown without help. But, like dandruff, most people do have a religion and spend time and money on it and seem to derive considerable pleasure from fiddling with it.

§ It's amazing how much "mature wisdom" resembles being too tired.

§ If you don't like yourself, you *can't* like other people.

§ Your enemy is never a villain in his own eyes. Keep this in mind; it may offer a way to make him your friend. If not, you can kill him without hate—and quickly.

§ A motion to adjourn is always in order.

§ No state has an inherent right to survive through conscript troops and, in the long run, no state ever has. Roman matrons used to say to their sons; "Come back with your shield, or on it." Later on, this custom declined. So did Rome.

§ Of all the strange "crimes" that human beings have legislated out of nothing, "blasphemy" is the most amazing—with "obscenity" and "indecent exposure" fighting it out for second and third place.

§ Cheops' Law: Nothing *ever* gets built on schedule or within budget.

§ It is better to copulate than never.

§ All societies are based on rules to protect pregnant women and young children. All else is surplusage, excrescence, adornment, luxury, or folly which can—and must—be dumped in emergency to preserve this prime function. As racial survival is the *only* universal morality, no other basic is possible. Attempts to formulate a "perfect society" on any foundation other than "Women and children first!" is not only witless, it is automatically genocidal. Nevertheless, starry-eyed idealists (all of them male) have tried endlessly—and no doubt will keep on trying.

§ All men are created unequal.

§ Money is a powerful aphrodisiac. But flowers work almost as well.

§ A brute kills for pleasure. A fool kills from hate.

§ There is only one way to console a widow. But remember the risk.

§ When the need arises—and it does—you must be able to shoot your own dog. Don't farm it out—that doesn't make it nicer, it makes it worse.

§ Everything in excess! To enjoy the flavor of life, take big bites. Moderation is for monks.

§ It may be better to be a live jackal than a dead lion, but it is better still to be a live lion. And usually easier.

§ One man's theology is another man's belly laugh.

§ Sex should be friendly. Otherwise stick to mechanical toys; it's more sanitary.

§ Men rarely (if ever) manage to dream up a god superior to themselves. Most gods have the manners and morals of a spoiled child.

§ Never appeal to a man's "better nature." He may not have one. Invoking his self-interest gives you more leverage.

§ Little girls, like butterflies, need no excuse.

§ You can have peace. Or you can have freedom. Don't ever count on having both at once.

§ Avoid making irrevocable decisions while tired or hungry. N.B.: Circumstances can force your hand. so think ahead!

§ Place your clothes and weapons where you can find them in the dark.

§ An elephant: A mouse built to government specifications.

§ Throughout history, poverty is the normal condition of man. Advances which permit this norm to be exceeded—here and there, now and then—are the work of an extremely small minority, frequently despised, often condemned, and almost always opposed by all right-thinking people. Whenever this tiny minority is kept from creating, or (as sometimes happens) is driven out of a society, the people slip back into abject poverty. This is known as "bad luck."

§ In a mature society, "civil servant" is semantically equal to "civil *master*."

§ When a place gets crowded enough to require ID's, social collapse is not far away. It is time to go elsewhere. The best thing about space travel is that it made it possible to go elsewhere.

§ A woman is not property, and husbands who think otherwise are living in a dream world.

§ The second best thing about space travel is that distances involved make war very difficult, usually impractical, and almost always unnecessary. This is probably a loss for most people, since war is our race's most popular diversion, one which gives purpose and color to dull and stupid lives. But it is a great boon to the intelligent man who fights only when he must—never for sport.

§ A zygote is a gamete's way of producing more gametes. This may be the purpose of the universe.

§ There are hidden contradictions in the minds of people who "love Nature" while deploring the "artificialities" with which "Man has spoiled 'Nature.'" The obvious contradiction lies in their choice of words, which imply that Man and his artifacts are *not* part of "Nature"—but beavers and their dams *are*. But the contradictions go deeper than the prima facie absurdity. In declaring his love for a beaver dam (erected by beavers for beaver's purposes) and his hatred for dams erected be men (for the purposes of men) the "Naturist" reveals his hatred for his own race—that is, his own self-hatred. In the case of "Naturists" such self-hatred is understandable; they are such a sorry lot. But hatred is too strong an emotion to feel toward them; pity and contempt are the most they rate. As for me, willy-nilly I am a man, not a beaver, and H. Sapiens is the only race I have or can have. Fortunately for me, I *like* being a part of a race made up of men and women—it strikes me as a fine arrangement and perfectly "natural."

Believe it or not there were "Naturists" who opposed the first flight to old Earth's Moon as being "unnatural" and a "despoiling of nature."

§ "No man is an island—" Much as we may feel and act as individuals, our race is a single organism, always growing and branching—which must be pruned, regularly to be healthy. This necessity need not be argued; anyone with eyes can see that any organism which grows without limits always dies in its own poisons. The only rational question is whether pruning is best done before or after birth. Being an incurable sentimentalist I favor the former of these methods—killing makes me queasy, even when its a case of "He's dead and I'm alive and that's the way I wanted it to be." But this may be a matter of taste. Some shamans think that it is better to be killed in a war, or to die in childbirth, or to starve in misery, than never to have lived at all. They may be right. But I don't have to like it—and I don't.

§ Democracy is based on the assumption that a million men are wiser than one man. How's that again? I missed something.

§ Autocracy is based on the assumption that one man is wiser than a million men. Let's play that over again, too. Who decides?

§ Any government will work if authority and responsibility are equal and coordinate. This does not insure "good" government; it simply insures that it will work. But such governments are rare—most people want to run things but want no part of the blame. This used to be called the "backseat driver syndrome."

§ What are the facts? Again and again and again—what are the *facts*? Shun wishful thinking, ignore divine revelation, forget what "the stars foretell," avoid opinion, care not what the neighbors think, never mind the unguessable "verdict of history"—what are the facts, and to how many decimal places? You pilot always into an unknown future; facts are your single clue. Get the facts!

§ Stupidity cannot be cured with money, or through education, or by legislation. Stupidity is not a sin, the victim can't help being stupid. But stupidity is the only universal capital crime; the sentence is death, there is no appeal, and execution is carried out automatically and without pity.

§ God is omnipotent, omniscient, and omnibenevolent—it says so right here on the label. If you have a mind capable of believing all three of these Divine attributes simultaneously, I have a wonderful bargain for you. No checks, please. Cash and in small bills.

§ Courage is the complement of fear. A man who is fearless cannot be courageous. (He is also a fool.)

§ The two highest achievements of the human mind are the twin concepts of "loyalty" and "duty." Whenever these twin concepts fall into disrepute—get out of there fast! you may possibly save yourself but it is too late to save that society. It is doomed.

§ People who go broke in a big way never miss any meals. It is the poor jerk who is shy a half slug who must tighten his belt.

§ The truth of a proposition has nothing to do with its credibility. And vice versa.

§ Anyone who cannot cope with mathematics is not fully human. At best he is a tolerable subhuman who has learned to wear shoes, bathe, and not make messes in the house.

§ Moving parts in rubbing contact require lubrication to avoid excessive wear. Honorifics and formal politeness provide lubrication where people rub together. Often the very young, the untraveled, the naive, the unsophisticated, deplore these formalities as "empty," "meaningless," or "dishonest," and scorn to use them. No matter how "pure" their motives, they thereby throw sand into machinery that does not work too well at best.

§ A human being should be able to change a diaper, plan an invasion, butcher a hog, conn a ship, design a building, write a sonnet, balance accounts, build a wall, set a bone, comfort the dying, take orders, giver orders, cooperate. act alone, solve equations, analyze a new problem, pitch manure, program a computer, cook a tasty meal, fight efficiently, die gallantly. Specialization is for insects.

§ The more you love, the more you *can* love—and the more intensely you love. Nor is there any limit on how *many* you can love. If a person had time enough, he could love all of that majority who are decent and just.

§ Masturbation is cheap, clean, convenient, and free of any possibility of wrongdoing—and you don't have to go home in the cold. But it's *lonely*.

§ Beware of altruism. It is based on self-deception, the root of all evil.

§ If tempted by something that feels "altruistic," examine your motives and root out the self-deception. Then if you still want to do it —wallow in it!

§ The most preposterous notion that H. Sapiens has ever dreamed up is that the Lord God of Creation, Shaper and Ruler of all the Universes, wants the saccharine adoration of His creatures, can be swayed by their prayers, and becomes petulant if He does not receive this flattery. Yet this absurd fantasy, without a shred of evidence to bolster it, pays the expenses of the oldest, largest, and least productive industry in all history.

§ The second most preposterous notion is that copulation is inherently sinful.

§ Writing is not necessarily something to be ashamed of—but do it in private and wash your hands afterwards.

§ A hundred dollars paced at seven percent interest compounded quarterly for two hundred years will increase to more than a hundred million dollars—by which time it will be worth nothing.

§ Dear, don't bore him with trivia nor burden him with your past mistakes. The happiest way to deal with a man is never to tell him anything that he does not need to know.

§ Darling, a true lady takes off her dignity with her clothes and does her whorish best. At other times you can be as modest and dignified as your persona requires.

§ Everybody lies about sex.

§ If men were the automatons that behaviorists claim they are, the behaviorist psychologists could not have invented the amazing nonsense called "behaviorist psychology." So they are wrong from scratch—as clever and as wrong as phlogiston chemists.

§ The shamans are forever yacking about their snake-oil "miracles." I prefer the Real McCoy—a pregnant woman.

§ If the universe has any purpose more important than topping a woman you love and making a baby with her hearty help, I've never heard of it.

§ Thou shalt remember the Eleventh Commandment and keep it Wholly.

§ A touchstone to determine the actual worth of an "intellectual"—find out how he feels about astrology.

§ Taxes are not levied for the benefit of the taxed.

§ There is no such thing as "social gambling." Either you are there to cut the other bloke's heart out and eat it—or you are a sucker. If you don't like this choice, don't gamble.

§ When the ship lifts, all bills are paid. No regrets.

§ The first time I was a drill instructor I was too inexperienced for the job—the things I taught those lads must have got some of them killed. War is too serious a matter to be taught by the inexperienced.

§ A competent and self-confident person is incapable of jealousy in anything. Jealousy is invariably a symptom of neurotic insecurity.

§ Money is the sincerest of all flattery. Women love to be flattered. So do men.

§ You live and learn. Or you don't live long.

§ Whenever women have insisted on absolute equality with men, they have invariably wound up with the dirty end of the stick. What they are and what they can do makes them superior to men, and their proper tactic is to demand special privileges, all the traffic will bear. They should never settle merely for equality. For women, "equality" is a disaster.

§ Peace is an extension of war by political means. Plenty of elbow room is pleasanter—and much safer.

§ One man's "magic" is another man's engineering. "Supernatural" is a null word.

§ The phrase "we (I)(you) simply must—" designates something that need not be done. "That goes without saying" is a red warning.

§ "Of course" means you had best check it yourself. These small-change cliches and others like them, when read correctly, are reliable channel markers.

§ Don't handicap your children by making their lives easy.

§ Rub her feet.

§ If you happen to be one of the fretful minority who can do creative work, never force an idea; you'll abort it if you do. Be patient and you'll give birth to it when the time is ripe. Learn to wait.

§ Never crowd youngsters about their private affairs—sex especially. When they are growing up, they are nerve ends all over, and resent (quite properly) any invasion of their privacy. Oh, sure, they'll make mistakes—but that's their business, not yours. (You made your own mistakes, did you not?)

§ Never underestimate the power of human stupidity.

§ Always tell her she is beautiful, especially if she's not.

§ If you are part of a society that votes, then do so. There may be no candidates and no measures you want to vote *for*... but there are certain to be ones you wish to vote AGAINST. In case of doubt, vote *against*. By this rule you will rarely go wrong. If this is too blind for your taste, consult some well-meaning fool (there is always one around) and ask his advice. then vote the other way. This enables you to be a good citizen (if such is your wish) without spending the enormous amount of time on it that truly intelligent exercise of franchise requires.

§ Sovereign ingredient for happy marriage: Pay cash or do without. Interest charges not only eat up a household budget; awareness of debt eats up domestic felicity.

§ Those who refuse to support and defend a state have no claim to protection by that state. Killing an anarchist or a pacifist should not be defined as "murder" in a legalistic sense. The offense against the state, if any, should be "using deadly weapons inside city limits," or "Creating a traffic hazard," or "Endangering bystanders," or other misdemeanor. However, the state may reasonably place a closed season on these exotic asocial animals whenever they are in danger of becoming extinct. An authentic buck pacifist has rarely been seen off Earth and it is doubtful that any have survived the troubles there...regrettable, as they had the biggest mouths and the smallest brains of any of the primates. The small-mouthed variety of anarchist has spread through the galaxy at the very wave front of the Diaspora; there is no need to protect them. But they often shoot back.

§ Another ingredient for a happy marriage: budget the luxuries *first*!

§ And still another: See to it that she has her own desk—then keep your hands off it!

§ And another: In a family argument, if it turns out you are right—apologize at once!

§ "God split himself into myriad parts that he might have friends." This may not be true but it sounds good—and is no sillier than any other theology.

§ To stay young requires unceasing cultivation of the ability to unlearn old falsehoods.

§ Does history record *any* case in which the majority was right?

§ When the fox gnaws—Smile!

§ A "critic" is a man who creates nothing and thereby feels qualified to judge the work of creative men. There is a logic in this: he is unbiased—he hates all creative people equally.

§ Money is truthful. If a man speaks of his honor, make him pay cash.

§ Never frighten a little man. He'll kill you.

§ Only a sadistic scoundrel—or a fool—tells the bald truth on social occasions.

§ This sad little lizard told me that he was a brontosaurus on his mother's side. I did not laugh; people who boast of ancestry often have little else to sustain them. Humoring them costs nothing and adds happiness in a world in which happiness is always in short supply.

§ In handling a stinging insect, move very slowly.

§ To be "matter of fact" about the world is to blunder into fantasy—and dull fantasy at that, as the real world is strange and wonderful.

§ The difference between science and the fuzzy subjects is that science requires reasoning, while those other subjects merely require scholarship.

§ Copulation is spiritual in essence—or it is merely friendly exercise. On second thought, strike out "merely"—even when it is just a happy pastime for two strangers. But copulation at its spiritual best is so much more than physical coupling that it is different in kind as well as degree. The saddest feature of homosexuality is not that it is "wrong" or "sinful" or even that it can't lead to progeny—but that it is more difficult to reach through it this spiritual union. Not impossible—but the cards are stacked against it. But—most sorrowfully—many people never achieve spiritual sharing even with the help of male-female advantage; they are condemned to wander through life alone.

§ Touch is the most fundamental sense. A baby experiences it, all over, before he is born and long before he learns to use sight, hearing, or taste, and no human ever ceases to need it. Keep your children short on pocket money—but long on hugs.

§ Secrecy is the beginning of tyranny.

§ The greatest productive force is human selfishness.

§ Be wary of strong drink. It can make you shoot at tax collectors—and miss.

§ The profession of shaman has many advantages. It offers high status with safe livelihood free of work in the dreary, sweaty sense. In most societies it offers legal privileges and immunities not granted to other men. But it is hard to see how a man who has been given a mandate from on High to spread tidings of joy to all mankind can be seriously interested in taking up a collection to pay his salary; it causes one to suspect that the shaman is on the moral level of any other conman. But it's lovely work if you can stomach it.

§ A whore should be judged by the same criteria as other professionals offering services for pay—such as dentists, lawyers, hairdressers, physicians, plumbers, et cetera. Is she professionally competent? Does she give good measure? Is she honest with her clients? It is possible that the percentage of honest and competent whores is higher than that of plumbers and much higher than that of lawyers. And *enormously* higher than that of professors.

§ Minimize your therbligs until it becomes automatic; this doubles your effective lifetime—and thereby gives time to enjoy butterflies and kittens and rainbows.

§ Have you noticed how much they look like orchids? Lovely!

§ Expertise in one field does not carry over into other fields. But experts often think so. The narrower their field of knowledge the more likely they are to think so.

§ Never try to outstubborn a cat.

§ Tilting at windmills hurts you more than the windmills.

§ Yield to temptation, it may not pass your way again.

§ Waking a person unnecessarily should not be considered a capital crime. For a first offense, that it.

§ "Go to HELL!" or other direct insult is all the answer a snoopy question rates.

§ The correct way to punctuate a sentence that starts: "Of course it is none of my business but—" is to place a period after the word "but." Don't use excessive force in supplying such a moron with a period. Cutting his throat is only a momentary pleasure and is bound to get you talked about.

§ A man does not insist on physical beauty in a woman who builds up his morale. After a while he realizes that she IS beautiful—he just hadn't noticed at first.

§ A skunk is better company than a person who prides himself on being "frank."

§ "All's fair in love and war"—what a contemptible lie!

§ Beware of the "Black Swan" fallacy. Deductive logic is tautological; there is no way to get a new truth out of it and it manipulates false statements as readily as true ones. If you fail to remember this, it can trip you—with perfect logic. The designers of the earliest computers called this the "Gigo Law," that is, "Garbage in, garbage out." Inductive logic is *much* more difficult—but can produce new truths.

§ A "practical joker" deserves applause for his wit according to its quality. Bastinado is about right. for exceptional wit one might grant keelhauling. But staking him out on an ant hill should be reserved for the very wittiest.

§ Natural laws have no pity.

§ On the planet Tranquille around KM849(G-O) lives a little animal known as a "knafn." It is herbivorous and has no natural enemies and is easily approached and may be petted—sort of a six-legged puppy with scales. Stroking it is very pleasant; it wiggles its pleasure and broadcasts euphoria in some band that humans can detect. Its worth the trip. Someday some bright boy will figure out how to record its broadcast, then some smart boy will see commercial angles—and not long after that it will be regulated and taxed. In the meantime I have faked the name and catalog number; it is several thousand lightyears off in another direction. Selfish of me—

§ Freedom begins when you tell Mrs. Grundy to go fly a kite.

§ Take care of the cojones and the frijoles will take care of themselves. Try to have getaway money—but don't be fanatic about it.

§ If "everybody knows" such-and-such, then it ain't so, by at least ten thousand to one.

§ Political rags—such as royalist, communist, democrat, populist, fascist, liberal, conservative, and so forth—are never basic criteria. The human race divides politically into those who want people to be controlled and those who have no such desire. The former are idealists acting from the highest motives, for the greatest good of the greatest number. The latter are surly curmudgeons, suspicious and lacking in altruism. But they are more comfortable neighbors than the other sort.

§ All cats are *not* grey after midnight. Endless variety—

§ Sin lies only in hurting other people unnecessarily. All other "sins" are invented nonsense. (Hurting yourself is not sinful—just stupid.)

§ Being generous is inborn; being altruistic is a learned perversity. No resemblance—

§ It is impossible for a man to love his wife wholeheartedly without loving all women somewhat. I suppose that the converse must be true of women.

§ You can go wrong by being too skeptical as readily as by being too trusting.

§ Formal courtesy between husband and wife is even more important than it is between strangers.

§ Anything free is worth what you pay for it.

§ Don't store garlic near other victuals.

§ Climate is what we expect, weather is what we get.

§ Pessimist by policy, optimist by temperament—it is possible to be both. How? By never taking an unnecessary chance and by minimizing risks you can't avoid. This permits you to play out the game happily, untroubled by the certainty of the outcome.

§ Do not confuse "duty" with what other people expect of you; they are utterly different. Duty is a debt you owe to yourself to fulfill obligations you have assumed voluntarily. Paying that debt can entail anything from years of patient work to instant willingness to die. Difficult it may be, but the reward is self-respect. But there is no reward at all for doing what other people expect of you, and to do so is not merely difficult, but impossible. It is easier to deal with a footpad than it is with the leech who wants "just a few minutes of your time, please—this won't take long." Time is your total capital, and the minutes of your life are painfully few. If you allow yourself to fall into the vice of agreeing to such requests, they quickly snowball to the point where these parasites will use up a hundred percent of your time—and squawk for more! So learn to say No—and to be rude about it when necessary. Otherwise you will not have time to carry out your duty, nor to do your own work, and certainly no time for love and happiness. The termites will nibble away your life and leave none of it for you. (This rule does not mean that you must not do a favor for a friend, or even a stranger. But let the choice be *yours*! Don't do it because it is "expected" of you.)

§ "I came, I saw, she conquered." (The original Latin seems to have been garbled.)

§ A committee is a life form with six or more legs and no brain.

§ Animals can be driven crazy by placing too many in too small a pen. Homo Sapiens is the only animal that voluntarily does this to himself.

§ Don't try to have the last word. You might get it.

Notes from Magdalen Moore

L*Z*R*S L*NG

Any instant idea is suspect—it is either superficial or a cliché.

A man should never let his wit trap him. The witty man often finds himself the victim of aphorism. He is unable to hold a true conversation, for he speaks only pithy quotable observations. Such a one has no friends. He has only students, or, heaven help him, *followers*.

You can always tell saints—they never tell *you* what they are.

Innocence is not ignorance. There is a difference, and if you plan to be a "sweet young thing," keep it in mind. Learn everything you can about sex, but do not ever speak your knowledge. Show it subtly, deceptively; that is, be able to blush at the most obscure references. This can be highly entertaining for everyone concerned, especially for the "sweet young thing".

Are they making love or fighting? Both?

Nothing tastes good when you have to eat alone.

Life is like a *crème de menthe* bottle—it looks much fuller when you invert it.

There Ain't No Such Thing As A Free Lunch. There are, however, cheap ones aplenty if you know where to look.

I am often grateful that I am free of the personal ignorance that many men have. I am sometimes resentful that many men know themselves better than I. This makes me even with humanity, in case you were keeping score.

Sex is a comforting aggravation.

No man is an island, but I have met many isthmuses, and even a few peninsulas.

Cookies are better comfort than religion—more immediate and understandable, and hardly likely to do any lasting harm.

Massage his scalp.

What is man but a mote of dust to the universe? Why, he *is* the universe! All we can ever know is ourselves.

Always carry a grapefruit.

A BATHROOM OF HER OWN

Ever step on a top step that wasn't there?

That's the way I felt when I saw my honorable opponent for the office of city councilman, third district.

Tom Griffith had telephoned at the close of filing, to let me know my opponents. "Alfred McNye," he said, "and Francis X. Nelson."

"McNye we can forget," I mused. "He files just for the advertising. It's a three-way race—me, this Nelson party, and the present encumbrance, Judge Jorgens. Maybe we'll settle it in the primaries." Our fair city has the system laughingly called "non-partisan"; a man can be elected in the primary by getting a clear majority.

"Jorgens didn't file, Jack. The old thief isn't running for reelection."

I let this sink in. "Tom, we might as well tear up those photostats. Do you suppose Tully's boys are conceding our district?"

"The machine *can't* concede the third district, not this year. It must be Nelson."

"I suppose so . . . it can't be McNye. What d'you know about him?"

"Nothing."

"Nor I. Well, we'll look him over tonight." The Civic League had called a "meet-the-candidates" meeting that night. I drove out to the trailer camp where I hang my hat—then a shower, a shave, put on my hurtin' shoes, and back to town. It gave me time to think.

It's not unusual for a machine to replace—temporarily—a man whose record smells too ripe with a citizen of no background to be sniped at. I could visualize Nelson—young, manly looking, probably a lawyer and certainly a veteran. He would be so politically naive that he would stand without hitching, or so ambitious that it would blind him to what he must do to keep the support of the machine. Either way the machine could use him.

I got there just in time to be introduced and take a seat on the platform. I couldn't spot Nelson but I did see Cliff Meyers, standing with some girl. Meyers is a handyman for Boss Tully—Nelson would be around close.

McNye accepted the call of the peepul in a few hundred well-worn words, then the chairman introduced Nelson. "—a veteran of this war and candidate for the same office."

The girl standing with Meyers walked up and took the stage.

They clapped and somebody in the balcony gave a wolf whistle. Instead of getting flustered, she smiled up and said, "Thank you!"

They clapped again, and whistled and stomped. She started talking. I'm not bright—I had trouble learning to wave bye-bye and never did master pattycake. I expected her to apologize for Nelson's absence and identify herself as his wife or sister or something. She was into her fourth paragraph before I realized that *she* was Nelson.

Francis X. Nelson—*Frances* X. Nelson. I wondered what I had done to deserve this. Female candidates are poison to run against at best; you don't dare use the ordinary rough-and-tumble, while she is free to use anything from a blacksnake whip to mickeys in your coffee.

Add to that ladylike good looks, obvious intelligence, platform poise—and a veteran. I couldn't have lived that wrong. I tried to catch Tom Griffith's eye to share my misery, but he was looking at *her* and the lunk was lapping it up.

Nelson—*Miss* Nelson—was going to town on housing. "You promised him that when he got out of that foxhole nothing would be too good for him. And what did he get? A shack in shanty-town, the sofa in his in-laws' parlor, a garage with no plumbing. If I am elected I shall make it my first concern—"

You couldn't argue against it. Like good roads, good weather, and the American Home, everybody is for veterans' housing.

When the meeting broke up, I snagged Tom and we rounded up the leaders of the Third District Association and adjourned to the home of one of the members. "Look, folks," I told them, "when we caucused and I agreed to run, our purpose was to take a bite out of the machine by kicking out Jorgens. Well, the situation has changed. It's not too late for me to forfeit the filing fee. How about it?"

Mrs. Holmes—Mrs. Bixby Holmes, as fine an old warhorse as ever swung a gavel—looked amazed. "What's gotten into you, Jack? Getting rid of Jorgens is only half of it. We have to put in men we can depend on. For this district, you're it."

I shook my head. "I didn't want to be the candidate; I wanted to manage. We should have had a veteran—"

"There's nothing wrong with your war record," put in Dick Blair.

"Maybe not, but it's useless politically. We needed a veteran." I had shuffled papers in the legal section of the Manhattan project—in civilian clothes. Dick Blair, a paratrooper and Purple Heart, had been my choice. But Dick had begged off, and who is to tell a combat veteran that he has got to make further sacrifice for the dear peepul?

"I abided by the will of the group, because Jorgens was not a veteran either. Now look at the damn thing—What makes you think I can beat her? She's got political sex-appeal."

"She's got more than political sex-appeal"—this from Tom.

When Dr. Potter spoke we listened; he's the old head in our group. "That's the wrong tack, Jack. It does not matter whether you win."

"I don't believe in lost causes, Doctor."

"I do. And so will you, someday. If Miss Nelson is Tully's choice to succeed Jorgens, then we must oppose her."

"She *is* with the machine, isn't she?" asked Mrs. Holmes.

"Sure she is," Tom told her. "Didn't you see that Cliff Meyers had her in tow? She's a stooge—the Stooge with the Light Brown Hair."

I insisted on a vote; they were all against me. "Okay," I agreed, "if you can take it, I can. This means a tougher campaign. We thought the dirt we had on Jorgens was enough; now we've got to dig."

"Don't fret, Jack," Mrs. Holmes soothed me. "We'll dig. I'll take charge of the precinct work."

"I thought your daughter in Denver was having a baby?"

"So she is. I'll stick."

I ducked out soon after, feeling much better, not because I thought I could win, but because of Mrs. Holmes and Dr. Potter and more like them. The team spirit you get in a campaign is pretty swell; I was feeling it again and recovering my pre-War zip.

Before the War our community was in good shape. We had kicked out the local machine, tightened up civil service, sent a police lieutenant to jail, and had put the bidding for contracts on an honest-to-goodness competitive basis—not by praying on Sunday, either, but by volunteer efforts of private citizens willing to get out and punch doorbells.

Then the War came along and everything came unstuck.

Naturally, the people who can be depended on for the in-and-out-of-season grind of volunteer politics are also the ones who took the

War the most seriously. From Pearl Harbor to Hiroshima they had no time for politics. It's a wonder the city hall wasn't stolen during the War—bolted to its foundations, I guess.

On my way home I stopped at a drive-in for a hamburger and some thought. Another car squeezed in close beside me. I glanced up, then blinked my eyes. "Well, I'll be—Miss Nelson! Who let you out alone?"

She jerked her head around, ready to bristle, then turned on the vote-getter. "You startled me. You're Mr. Ross, aren't you?"

"Your future councilman," I agreed. "You startled *me.* How's the politicking? Where's Cliff Meyers? Dump him down a sewer?"

She giggled. "Poor Mr. Meyers! I said goodnight to him at my door, then came over here. I was hungry."

"That's no way to win elections. Why didn't you invite him in and scramble some eggs?"

"Well, I just didn't want—I mean I wanted a chance to think. You won't tell on me?" She gave me the you-great-big-strong-man look.

"I'm the enemy—remember? But I won't. Shall I go away, too?"

"No, don't. Since you are going to be my councilman, I ought to get acquainted. Why are you so sure you will beat me, Mr. Ross?"

"Jack Ross—your friend and mine. Have a cigar. I'm not at all sure I can beat you. With your natural advantages and Tully's gang behind you I should 'a stood in bed."

Her eyes went narrow; the vote-getter smile was gone. "What do you mean?" she said slowly. "I'm an independent candidate."

It was my cue to crawl, but I passed. "You expect me to swallow that? With Cliff Meyers at your elbow—" The car hop interrupted us; we placed our orders and I resumed. She cut in.

"I *do* want to be alone," she snapped and started to close her window.

I reached out and placed a hand on the glass. "Just a moment. This is politics; you are judged by the company you keep. You show up at your first meeting and Cliff Meyers has you under his wing."

"What's wrong with that? Mr. Meyers is a perfect gentleman."

"And he's good to his mother. He's a man with no visible means of support, who does chores for Boss Tully. I thought what everybody thought, that the boss had sent him to chaperone a green candidate."

"It's not true!"

"No? You're caught in the jam cupboard. What's your story?"

She bit her lip. "I don't have to explain anything to you."

"No. But if you won't, the circumstances speak for themselves." She didn't answer. We sat there, ignoring each other, while we ate. When she switched on the ignition, I said, "I'm going to tail you home."

"It's not necessary, thank you."

"This town is a rough place since the War. A young woman should not be out alone at night. Even Cliff Meyers is better than nobody."

"That's why I let them— Do as you see fit!" I had to skim red lights, but I kept close behind her. I expected her to rush inside and slam the door, but she was waiting by the curb. "Thank you for seeing me home, Mr. Ross."

"Quite all right." I went up on her front porch with her and said goodnight.

"Mr. Ross—I shouldn't care what you think, but I'm not with Boss Tully. I'm independent." I waited. Presently she said, "You don't believe me." The big, beautiful eyes were shiny with tears.

"I didn't say so—but I'm waiting for you to explain."

"But what is there to explain?"

"Plenty." I sat down on the porch swing. "Come here, and tell papa. Why did you decide to run for office?"

"Well . . ." She sat down beside me; I caught a disturbing whiff of perfume. "It started because I couldn't find an apartment. No, it didn't—it was farther back, out in the South Pacific. I could stand the insects and the heat. Even the idiotic way the Army does things didn't fret me much. But we had to queue up to use the wash basins. There was even a time when baths were rationed. I hated it. I used to lie on my cot at night, awake in the heat, and dream about a bathroom of my own. A bathroom of my own! A deep tub of water and time to soak. Shampoos and manicures and big, fluffy towels! I wanted to lock myself in and live there. Then I got out of the Army—"

"Yes?"

She shrugged. "The only apartment I could find carried a bonus bigger than my discharge pay, and I couldn't afford it anyhow."

"What's wrong with your own home?"

"This? This is my aunt's home. Seven in the family and I make eight—one bathroom. I'm lucky to brush my teeth. And I share a three-quarters bed with my eight-year-old cousin."

"I see. But that doesn't tell why you are running for office."

"Yes, it does. Uncle Sam was here one night and I was boiling over about the housing shortage and what I would like to do to Congress. He said I ought to be in politics; I said I'd welcome the chance. He phoned the next day and asked how would I like to run for his seat? I said—"

"Uncle Sam—Sam Jorgens!"

"Yes. He's not my uncle, but I've known him since I was little. I was scared, but he said not to worry, he would help me out and advise me. So I did and that's all there is to it. You see now?"

I saw all right. The political acumen of an Easter bunny—except that the bunny rabbit was likely to lick the socks off me. "Okay," I told her, "but housing isn't the only issue. How about the gas company franchise, for example and the sewage disposal plant? And the tax rate? What airport deal do you favor? Do you think we ought to ease up on zoning and how about the freeways?"

"I'm going after housing. Those issues can wait."

I snorted. "They won't let you wait. While you're riding your hobbyhorse, the boys will steal the public blind—again."

"Hobbyhorse! Mister Smarty-Britches, getting a house is the most important thing in the world to the man who hasn't one. You wouldn't be so smug if you were in that fix."

"Keep your shirt on. Me, I'm sleeping in a leaky trailer. I'm strong for plenty of housing—but how do you propose to get it?"

"How? Don't be silly. I'll back the measures that push it."

"Such as? Do you think the city ought to get into the building business? Or should it be strictly private enterprise? Should we sell bonds and finance new homes? Limit it to veterans, or will you help me, too? Heads of families only, or are you going to cut yourself in on it? How about prefabrication? Can we do everything you want to do under a building code that was written in 1911?" I paused for breath. "Well?"

"You're being nasty, Jack."

"I sure am. But that's not half of it. I'll challenge you to debate on everything from dog licenses to patent paving materials. A nice, clean campaign and may the best man win—providing his name is Ross."

"I won't accept."

"You'll wish you had, before we're through. My boys and girls will be at all your meetings, asking embarrassing questions."

She looked at me. "Of all the dirty politics!"

"You're a candidate, kid; you're supposed to know the answers."

She looked upset. "I *told* Uncle Sam," she said, half to herself, "that I didn't know enough about such things, but he said—"

"Go on, Frances. What did he say?"

She shook her head. "I've told you too much already."

"I'll tell you. You were not to worry your pretty head, because he would be there to tell you how to vote. That was it, wasn't it?"

"Well, not in so many words. He said—"

"But it amounted to that. And he brought Meyers around and said Meyers would show you the ropes. You didn't want to cause trouble, so you did what Meyers told you to do. Right?"

"You've got the nastiest way of putting things."

"That's not all. You honestly think you are independent. But you do what Sam Jorgens tells you and Sam Jorgens—your sweet old Uncle Sam—won't change his socks without Boss Tully's permission."

"I don't believe it!"

"Check it. Ask some of the newspaper boys. Sniff around."

"I shall."

"Good. You'll learn about the birds and the bees." I stood up. "I've worn out my welcome. See you at the barricades, comrade."

I was halfway to the street when she called me back. "Jack!"

"Yes, Frances?" I went back up on the porch.

"I'm going to find out what connection, if any, Tully has with Uncle Sam, but, nevertheless and notwithstanding, I'm an independent. If I've been led around by the nose, I won't be for long."

"Good girl!"

"That's not all. I'm going to give you the fight of your life, whip the pants off you, and wipe that know-it-all look off your face!"

"Bravo! That's the spirit, kid. We'll have fun."

"Thanks. Well, goodnight."

"Just a second." I put an arm around her shoulders. She leaned away from me warily. "Tell me, darling: who writes your speeches?"

I got kicked in the shins, then the screen door was between us. "Goodnight, Mr. Ross!"

"One more thing—your middle name, it can't be 'Xavier.' What *does* the X stand for?"

"Xanthippe—want to make something of it?" The door slammed.

I was too busy the following month to worry about Frances Nelson. Ever been a candidate? It is like getting married and having your appendix out, while going over Niagara Falls in a barrel. One or more meetings every evening, breakfast clubs on Saturdays and Sundays, a Kiwanis, Rotary, or Lions, or Chamber of Commerce lunch to hit at noon, an occasional appearance in court, endless correspondence, phone calls, conferences, and, to top it off, as many hours of doorbell pushing as I could force into each day.

It was a grassroots campaign, the best sort, but strenuous. Mrs. Holmes, by scraping the barrel, rounded up volunteers to cover three-quarters of the precincts; the rest were my problem. I couldn't cover them all, but I could durn well try.

And every day there was the problem of money. Even with a volunteer, unpaid organization, politics costs money—printing, postage, hall rental, telephone bills, and there is gasoline and lunch money for people who can't carry their own expenses. A dollar here and a dollar there and soon you are three thousand bucks in the red.

It is hard to tell how a campaign is going; you tend to kid each other. We made a midstream spot check—phone calls, a reply postcard poll, and a doorbell sampling. And Tom and I and Mrs. Holmes got out and sniffed the air. All one day I bought gasoline here, a cola there, and a pack of cigarettes somewhere else, talking politics as I did so, and never offering my name. By the time I met Tom and Mrs. Holmes at her home I felt that I knew my chances.

We got our estimates together and looked them over. Mine read: "Ross 45%; Nelson 55%; McNye a trace." Tom's was: "fifty-fifty, against us." Mrs. Holmes had written, "A dull campaign, a light vote, and a trend against us." The computed results of the formal polls read; Ross 43%, Nelson 52%, McNye 5%—probable error plus-or-minus 9%.

I looked around. "Shall we cut our losses, or go on gallantly to defeat?"

"We aren't licked yet," Tom pointed out.

"No, but we're going to be. All we offer is the assumption that I'm better qualified than the little girl with the big eyes—a notion in which Joe Public is colossally uninterested. How about it, Mrs. Holmes? Can you make it up in the precincts?"

She faced me. "Jack, to be frank, it's all uphill. I'm working the old faithfuls too hard and I can't seem to stir out any new blood."

"We need excitement," Tom complained. "Let's throw some mud."

"At what?" I asked. "Want to accuse her of passing notes in school, or shall we say she sneaked out after taps when she was a WAC? She's got no record."

"Well, tackle her on housing. You've let her hog the best issue."

I shook my head. "If I knew the answers, I wouldn't be living in a trailer. I won't make phony promises. I've drawn up three bills, one to support the Federal Act, one to revise the building code, and one for a bond election for housing projects—that last one is a hot potato. None of them are much good. This housing shortage will be with us for years."

Tom said, "Jack, you shouldn't run for office. You don't have the fine, free optimism that makes a good public figure."

I grunted. "That's what I told you birds. I'm the manager type. A candidate who manages himself gets a split personality."

Mrs. Holmes knit her brows. "Jack—you know more about housing than she does. Let's hold a rally and debate it."

"Okay with me—I just work here. I once threatened to make her debate everything from streetcars to taxes. How about it, Tom?"

"Anything to make some noise."

I phoned at once. "Is this the Stooge with the Light Brown Hair?"

"That must be Jack Ross. Hello, Nasty. How's the baby-kissing?"

"Sticky. Remember I promised to debate the issues with you? How about 8 p.m. Wednesday the 15th?"

She said, "Hold the line—" I could hear a muffled rumble, then she said, "Jack? You tend to your campaign; I'll tend to mine."

"Better accept, kid. We'll challenge you publicly. Is Miss Nelson afraid to face the issues, quote and unquote."

"Goodbye, Jack."

"Uncle Sam won't let you, will he?" The phone clicked in my ear.

We went ahead anyway. I sold some war bonds and ordered a special edition of the Civic League News, with a Ross-for-Councilman front page, as a throw-away to announce the rally—prizes, entertainment, movies, and a supercolossal, gigantic debate between Ross in this corner and Nelson in that. We piled the bundles of papers in Mrs. Holmes' garage late Sunday night. Mrs. Holmes phoned about seven-thirty the next morning—"Jack," she yipped, "come over right away!"

"On my way. What's wrong?"

"Everything. Wait till you get here." When I did, she led me out to her garage; someone had broken in and had slit open our precious bundles—then had poured dirty motor oil on them.

Tom showed up while we were looking at the mess. "Pixies everywhere," he observed. "I'll call the Commercial Press."

"Don't bother," I said bitterly. "We can't pay for another run." But he went in anyhow. The kids who were to do the distributing started to show up; we paid them and sent them home. Tom came out. "Too late," he announced. "We would have to start from scratch—no time and too expensive."

I nodded and went in the house. I had a call to make myself. "Hello," I snapped, "is this Miss Nelson, the Independent Candidate?"

"This is Frances Nelson. Is this Jack Ross?"

"Yes. You were expecting me to call, I see."

"No, I knew your sweet voice. To what do I owe the honor?"

"I'd like to show you how well your boys have been campaigning."

"Just a moment— I've an appointment at ten; I can spare the time until then. What do you mean; how my boys have been campaigning?"

"You'll find out." I hung up.

I refused to talk until she had seen the sabotage. She stared. "It's a filthy, nasty trick, Jack—but why show it to me?"

"Who else?"

"But— Look, Jack, I don't know who did this, but it has nothing to do with me." She looked around at us. "You've got to believe me!" Suddenly she looked relieved. "I know! It wasn't me, so it must have been McNye."

Tom grunted. I said gently, "Look, darling, McNye is nobody. He's a seventeenth-rater who files to get his name in print. He wouldn't use sabotage because he's not out to win. It *has* to be you—wait!—not you personally, but the machine. This is what you get into when you accept the backing of wrong 'uns."

"But you're wrong! You're wrong! I'm not backed by the machine."

"So? Who runs your campaign? Who pays your bills?"

She shook her head. "A committee takes care of those things. My job is to show up at meetings and speak."

"Where did the committee come from? Did the stork bring it?"

"Don't be ridiculous. It's the Third District Home-Owners' League. They endorsed me and set up a campaign committee for me."

I'm no judge of character, but she was telling the truth, as she saw it. "Ever hear of a dummy organization, kid? Your only connection with this Home-Owners' League is Sam Jorgens . . . isn't it?"

"Why, no—that is— Yes, I suppose so."

"And I told you Jorgens was a tame dog for Boss Tully."

"Yes, but I checked on that, Jack. Uncle Sam explained the whole thing. Tully used to support him, but they broke because Uncle Sam wouldn't take the machine's orders. It's not his fault that the machine used to back him."

"And you believed him."

"No, I made him prove it. You said to check with the newspapers—Uncle Sam had me talk with the editor of the *Herald*." Tom snorted.

"He means," I told her, "that the *Herald* is part of the machine. I meant talk to reporters. Most of them are honest and all of them know the score. But I can't see how you could be so green. I know you've been away, but didn't you read the papers before the War?"

It developed that, what with school and the War, she hadn't been around town much since she was fifteen. Mrs. Holmes broke in, "Why, she's not eligible, Jack! She doesn't have the residence requirements."

I shook my head. "As a lawyer, I assure you she does. Those things don't break residence—particularly as she enlisted here. How about making us all some coffee, Mrs. Holmes?"

Mrs. Holmes bristled; I could see that she did not want to fraternize with the enemy, but I took her arm and led her into the house, whispering as I went. "Don't be hard on the kid, Molly. You and I made mistakes while we were learning the ropes. Remember Smythe?"

Smythe was as fine a stuffed shirt as ever took a bribe—we had given him our hearts' blood. Mrs. Holmes looked sheepish and relaxed. We chatted about the heat and presidential possibilities, then Frances said, "I'm conceding nothing, Jack—but I'm going to pay for those papers."

"Skip it," I said. "I'd rather bang Tully's heads together. But see here—you've got an hour yet; I want to show you something."

"Want me along, Jack?" Tom suggested, looking at Frances.

"If you like. Thanks for the coffee, Mrs. Holmes—I'll be back to clean up the mess." We drove to Dr. Potter's office and got the photostats we had on Jorgens out of his safe. We didn't say anything; I just arranged the exhibits in logical order. Frances didn't talk either, but her face got whiter and whiter. At last she said, "Will you take me home now, Mr. Ross?"

We bumped along for the next three weeks, chasing votes all day, licking stamps and stenciling auto-bumper signs late at night and never getting enough sleep. Presently we noticed a curious fact—McNye was coming up. First it was billboards and throw-aways, next was publicity—and then we began to get reports from the field of precinct work for McNye.

We couldn't have been more puzzled if the Republican Party had nominated Norman Thomas. We made another spot check. Mrs. Holmes and Dr. Potter and I went over the results. Ross and Nelson, neck and neck—a loss for Nelson; McNye a strong third and coming up fast. "What do you think, Mrs. Holmes?"

"The same you do. Tully has dumped Nelson and bought up McNye."

Potter agreed. "It'll be you and McNye in the runoff. Nelson is coasting on early support from the machine. She'll fizzle."

Tom had come in while we were talking. "I'm not sure," he said. "Tully needs a win in the primary, or, if that fails, a run-off between the girl and McNye. We've got an organization, she hasn't."

"Tully can't count on me running third. In fact, I'll beat out Frances for second place at the very worst."

Tom looked quizzical. "Seen tonight's *Herald,* Jack?"

"No. Have they discovered I'm a secret drinker?"

"Worse than that." He chucked us the paper. "CLAIM ROSS INELIGIBLE COUNCILMANIC RACE" it read; there was a 3-col cut of my trailer, with me in the door. The story pointed out that a city father must have lived two years in the city and six months in his district. The trailer camp was outside the city limits.

Dr. Potter looked worried. "Can they disqualify you, Jack?"

"They won't take it to court," I told him. "I'm legal as baseball. Residence isn't geographical location; it's a matter of intent—your home is where you intend to return when you're away. I'm registered at the flat I had before the War, but I turned it over to my partner when I went to Washington. My junk is still in it, but he's got a wife and twins. Hence the trailer, a temporary exigency of no legal effect."

"Hmmm . . . how about the political effect?"

"That's another matter."

"You betcha it is," agreed Tom. "How about it, Mrs. Holmes?"

She looked worried. "Tom is right. It's tailormade for a word-of-mouth campaign combined with unfavorable publicity. Why vote for a man who doesn't even live in your district?—that sort of thing."

I nodded. "Well, it's too late to back out, but, let's face it, folks—We've wasted our nickel."

For once they did not argue. Instead Potter said, "What sort of person is Miss Nelson? Could we possibly back her in the finals?"

"She's a good kid," I assured him. "She got taken in and hated to admit it, but she's better than McNye."

"I'll say she is," agreed Tom.

"She's a lady," stated Mrs. Holmes.

"But," I objected, "we can't elect her in the finals. We can't pin anything on McNye and she's too green to stand up to what the machine can do to her in a long campaign. Tully knows what he's doing."

"I'm afraid you're right," Potter agreed.

"Jack," said Tom, "I take it you think we're licked now."

"Ask Mrs. Holmes."

Mrs. Holmes said, "I hate to say so, and I'm not quitting, but it would take a miracle to put Jack on the final ballot."

"Okay," said Tom, "let's quit being boy scouts and have some fun the rest of the campaign. I don't like the way Boss Tully campaigns. We've played fair; what we've gotten in return is shenanigans."

"What do you want to do?"

He explained. Presently I nodded and said, "I'm all for it—and a wrinkle of my own. It'll be fun, and it just might work."

"Well, call her up then!"

I got Frances Nelson on the phone. "Jack Ross, Frances. Haven't seen you around much, sweetheart. How's the campaign?"

She sounded tired. "Oh, that— What campaign, Jack?"

"Did you withdraw? I haven't seen any announcement."

"It wasn't necessary. I had a showdown with Jorgens and after that my campaign just disappeared. The committee vanished away. Look, Jack, I'd like to see you—to apologize."

"Forget it, I want to see you, too. I'll pick you up."

We laid it on the line. "I'm dropping out of the race, Frances. We want to throw our organizational support to you—provided."

She stared. "But you can't, Jack. I'm going to vote for you."

"Huh? Never mind, you won't get a chance to." I showed her the *Herald* story. "It's a phony, but it licks me anyhow. I should have played up my homeless condition but, like a dope, I let them do it. It's too late now—when a candidate has to explain things he's back on his heels and ready for the knockout. I was a fifty-fifty squeeze at best; this tips the balance."

She was staring at the picture, bug-eyed, knuckles pressed to her mouth. "Jack— Oh, dear! I've gone and done it again."

"Done what?"

"Got you into this mess. I told Sam Jorgens all about our first talk, including how you had to camp out in a trailer. I—"

I brushed it aside. "No matter. They would have stumbled on it anyhow. See here—we're going to take you on. We might even elect you."

"But I don't want the job, Jack. I want you to have it."

"Too late, Frances. But we want to beat that spare tire, McNye. The machine is still using you, to beat me in the primary by splitting the non-machine vote; then they'll settle your hash. I've got a gimmick for that. But first—you call yourself an independent. Well, you aren't now."

"What do you mean? I won't be anything else."

"They gave women the vote! Look, darling, a candidate can be unbossed, but not independent. Independence is an adolescent notion. To merit support you have to commit yourself—and there goes your independence."

"But I— Oh, politics is a rotten business!"

"You make me tired! Politics is just as clean—or as dirty—as the people who practice it. The people who say it's dirty are too lazy to do their part in it." She dropped her face into her hands. I took her by the shoulders, and shook her. "Now you listen to me. I'm going over our program, point by point. If you agree with it and commit yourself, you're our candidate. Right?"

"Yes, Jack." It was just a whisper.

We ran through it. There was no trouble, it was sane and sensible, likely to appeal to anyone with no ax to grind. The points she did not understand we let lay over. She liked especially my housing bills and began to perk up and sound like a candidate.

"Okay," I said finally. "Here's the gimmick. I'll get my name off the ballot so that the race will be over in the primary. It's too late to do it myself, but they've played into my hands. It'll be a court order, for ineligibility through nonresidence."

Dr. Potter looked up sharply. "Come again, son? I thought you said your legal position was secure."

I grinned. "It is—if I fight. But I won't. Here's the gag—we bring a citizen's suit through a couple of dummies. The court orders me to show cause. I default. Court has no option but to order my name stricken from the ballot. One, two, three."

Tom cheered. I bowed. "Now Dr. Potter is your new campaign chairman. You go on as before, going where you are sent and speaking your piece. Oh, yes—I'm going to give you some homework on other issues than housing. As for Tom and me—we're the special effects department. Just forget us."

Three days later I was off the ballot. Tom handled it so that it looked like McNye and Tully. Mrs. Holmes had the delicate job of convincing our precinct workers that Frances was our new white hope. Dr. Potter and Dick Blair got Frances endorsed by the Civic League—the League would endorse a giant panda against a Tully man.

And Dick Blair worked up a veterans' division.

Leaving Tom and me free for fun and games.

First we got a glamor pic of Frances, one that made her look like Liberty Enlightening the World, with great sorrowful eyes and a noble forehead, and had it blown up for billboards—6-sheets; 24-sheets look like too much dough.

We got a "good" picture of McNye, too—good for us. Like this—you send two photographers to a meeting where your man is to speak. One hits him with a flash bulb; the second does also, right away, before the victim can recover from his reflex. Then you throw the first pic away. We got a picture which showed McNye as pop-eyed, open-mouthed, and idiotic—a Kallikak studying to be a Jukes. It was so good we had to tone it down. Then I went up state and got some printing done, very privately.

We waited until the last few days, then got busy. First we put snipe sheets on our own billboards, right across Frances' beautiful puss so that those eyes looked appealingly at you over the paster. "VOTE FOR McNYE" they read. Two nights later it was quarter cards, this time with his lovely picture: VOTE FOR McNYE—A WOMAN'S PLACE IS IN THE HOME. We stuck them up on private property, too.

Tom and I drove around the next day admiring our handiwork, "It's beautiful," Tom said dreamily. "Jack, do you suppose there is any way we could get the Communist Party to endorse McNye?"

"I don't see how," I admitted, "but if it doesn't cost too much I've still got a couple of war bonds."

He shook his head. "It can't work, but it's a lovely thought."

We saved our double whammy for the day before election. It was expensive—but wait. We hired some skid-row characters on Saturday, through connections Tom has, and specified that they must show up with two-day beards on Monday. We fed each one a sandwich loaded with garlic, gave him literature and instructions—ring the doorbell, blow his breath in the victim's face, and hand her a handbill, saying abruptly, "Here's how you vote, lady!" The handbill said, "VOTE FOR McNYE" and had his special picture. It had the rest of Tully's slate too, and some choice quotes of McNye's best double talk. Around the edge it said "100% American—100% American."

We pushed the stumblebums through an average of four precincts apiece, concentrating on the better neighborhoods.

That night there was an old-fashioned torchlight parade—Mrs. Holmes' show, and the wind-up of the proper campaign. It started off with an elephant and donkey (Heaven knows where she borrowed the elephant!) The elephant carried signs: I'M FOR FRANCES; the donkey, SO AM I. There was a kid's band, flambeaux carried by our weary volunteers, and a platoon of WAC and WAVE veterans marching ahead of the car that carried Frances. She looked scared and lovely.

Tom and I watched it, then got to work. No sleep that night—

More pasters. Windshield size this time, 3"x10", with glue on the printed side. I suppose half the cars in town have no garages, housing being what it is. We covered every block in the district before dawn, Tom driving and me on the right with a pail of water, a sponge, and stickers. He would pull alongside a car; I would slap a sticker on the windshield where it would stare the driver in the face—and have to be scraped off. They read: VOTE FOR McNYE—KEEP AMERICA PURE.

We figured it would help to remind people to vote.

I voted myself when the polls opened, then fell into bed.

I pulled myself together in time to get to the party at the headquarters—an empty building we had borrowed for the last month of the campaign. I hadn't given a thought to poll watchers or an honest count—that was Mrs. Holmes' baby—but I didn't want to miss the returns.

One election party is like another—the same friendly drunks, the same silent huddle around the radio, the same taut feeling. I helped myself to some beer and potato chips and joined the huddle.

"Anything yet," I asked Mrs. Holmes. "Where's Frances?"

"Not yet. I made her lie down."

"Better get her out here. The candidate has to be seen. When people work for a pat on the back, you've got to give 'em the pat."

But Frances showed up about then, and went through the candidate routine—friendly, gracious, thanking people, *etc.* I began to think about running her for Congress.

Tom showed up, bleary-eyed, as the first returns came in. All McNye. Frances heard them and her smile slipped. Dr. Potter went over to her and said, "It's not important—the machine's precincts are usually first to report." She plastered her smile back on.

McNye piled up a big lead. Then our efforts began to show—Nelson was pulling up. By 10:30 it was neck and neck. After a while it began to look as if we had elected a councilman.

Around midnight McNye got on the air and conceded.

So I'm a councilman's field secretary now. I sit outside the rail when the council meets; when I scratch my right ear, Councilman Nelson votes "yes"; if I scratch my left ear, she votes "no"—usually.

Marry her? *Me?* Tom married her. They're building a house, one bedroom and *two* bathrooms. When they can get the fixtures, that is.

ON THE SLOPES OF VESUVIUS

"Paddy, shake hands with the guy who built the atom bomb," Professor Warner said to the bartender. "He and Einstein rigged it up in their own kitchen one evening."

"With the help of about four hundred other guys," amended the stranger, raising his voice slightly to cut through the rumble of the subway.

"Don't quibble over details. Paddy, this is Doctor Mansfield. Jerry, meet Paddy— Say, Paddy, what *is* your last name?"

"Francis X. Hughes," answered the barkeep as he wiped his hand and stuck it out. "I'm pleased to meet any friend of Professor Warner."

"I'm pleased to meet you, Mr. Hughes."

"Call me Paddy, they all do. You really are one of the scientists who built the atom bomb?"

"I'm afraid so."

"May the Lord forgive you. Are you at N.Y.U., too?"

"No, I'm out at the new Brookhaven Laboratory."

"Oh, yes."

"You've been there?"

Hughes shook his head. "About the only place I go is home to Brooklyn. But I read the papers."

"Paddy's in a well-padded rut," explained Warner. "Paddy, what are you going to do when they blow up New York? It'll break up your routine."

He set their drinks before them and poured himself a short beer. "If that's all I've got to worry about I guess I'll die of old age and still in my rut, Professor."

Warner's face lost its cheerful expression for a moment; he stared at his drink as if it had suddenly become bitter. "I wish I had your optimism, Paddy, but I haven't. Sooner or later, we're in for it."

"You shouldn't joke about such things, Professor."

"I'm not joking."

"You can't be serious."

"I wish I weren't. Ask him. After all, he built the damned thing."

Hughes raised his brows at Mansfield who replied, "I'm forced to agree with Professor Warner. They will be able to do it—atom-bomb New York I mean. I *know* that; it's not a guess—it's a certainty. Being able to do it, I'm strongly of the opinion that they *will* do it."

"Who do you mean by 'they'?" demanded the bartender. "The Russians?"

"Not necessarily. It might be anybody who first worked up the power to smash us."

"Sure," said Warner. "Everybody wants to kick the fat boy. We're envied and hated. The only reason we haven't been smeared is that no one has had what it takes to do it—up to now, that is!"

"Just a minute, gentlemen—" put in Hughes. "I don't get it. You're talking about somebody—anybody—atom-bombing New York. How can they do it? Didn't we decide to hang on to the secret? Do you think some dirty spy has gotten away with it while we weren't watching?"

Mansfield looked at Warner, then back at Hughes and said gently, "I hate to disturb your peace of mind, Mr. Hughes—Paddy—but there is no secret. Any nation that is willing to go to the trouble and expense can build an atom bomb."

"And that's official," added Warner, "and it's a lead-pipe cinch that, power politics being what it is, a dozen different nations are working on the problem right now."

Hughes had been looking perturbed; his face cleared. "Oh, I see what you mean. In time, they can dig it out for themselves. In that case, gentlemen, let's have a round on the house and drink to their frustration. I can't be worrying about what might happen twenty years from now. We might none of us be spared that long what with taxicabs and the like."

Mansfield's brows shot up. "Why do you say twenty years, Paddy?"

"Eh? Oh, I seem to remember reading it in the papers. That general, wasn't it? The one who was in charge of the atom-bomb business."

Mansfield brushed the general aside. "Poppycock! That estimate is based on entirely unwarranted national conceit. The time will be much shorter."

"How much shorter?" demanded Hughes. Mansfield shrugged.

"What would you do, Paddy," Warner asked curiously, "if you thought some nation—let's say some nation that didn't like us—had already managed to manufacture atom bombs?"

The saloon cat came strolling along the top of the bar. Hughes stopped to feed it a slice of cheese before replying. "I do not have your learning, gentlemen, but Paddy Hughes is no fool. If someone is loose in the world with those devil's contraptions, New York is a doomed city. America is the champion and must be beaten before any new bully boy can hope to win—and New York is one of the spots he would shoot at first. Even Sad Sack—" He jerked a thumb at the cat. "—is bright enough to flee from a burning building."

"Well, what do you think you would do?"

"I don't 'think' what I'd do, I *know* what I'd do; I've done it before. When I was a young man and the Black-and-Tans were breathing down the back o' my neck, I climbed on a ship with never a thought of looking back—and any man who wanted them could have my pigs and welcome to them."

Warner chuckled. "You must have been quite the lad, Paddy. But I don't believe you would do it—not now. You're firmly rooted in your rut and you like it—like me and six million others in this town. That's why decentralization is a fantasy."

Hughes nodded. "It would be hard." That it would be hard he understood. Like leaving home it would be to quit Schreiber's Bar-Grill after all these years—Schreiber couldn't run it without him; he'd chase all the customers away. It would be hard to leave his friends in the parish, hard to leave his home—what with Molly's grave being just around the corner and all. And if the cities were to be blown up a man would have to go back to farming. He'd promised himself when he hit the new country that he'd never, never, never tackle the heartbreaking load of tilling the soil again. Well, perhaps there would be no landlords when the cities were gone. If a man must farm, at least he might be spared that. Still, it would be hard—and Molly's grave off somewhere in the rubble. "But I'd do it."

"You think you would."

"I wouldn't even go back to Brooklyn to pick up my other shirt. I've my week's pay envelope right here." He patted his vest. "I'd grab my hat and start walking." The bartender turned to Mansfield. "Tell me the truth, Doctor—if it's not twenty years, how long will it be?"

Mansfield took out an envelope and started figuring on the back of it. Warner started to speak, but Hughes cut him off. "Quiet while he's working it out!" he said sharply.

"Don't let him kid you, Paddy," Warner said wryly. "He's been lying awake nights working out this problem ever since Hiroshima."

Mansfield looked up. "That's true. But I keep hoping I'll come out with a different answer. I never do."

"Well, what *is* the answer?" Hughes insisted.

Mansfield hesitated. "Paddy, you understand that there are a lot of factors involved, not all of them too clear. Right? In the first place, it took us about four years. But we were lavish with money and lavish with men, more so maybe than any other nation could be, except possibly Russia. Figured on that alone it might take several times four years for another country to make a bomb. But that's not the whole picture; it's not even the important part. There was a report the War Department put out, the Smyth Report—you've heard of it?—which gives anyone who can read everything but the final answers. With that report, with competent people, uranium ore, and a good deal less money than it cost us, a nation ought to be able to develop a bomb in a good deal less time than it took us."

Hughes shook his head. "I don't expect you to explain, Doctor; I just want to know your answer. How long?"

"I was just explaining that the answer had to be indefinite. I make it not less than two and not more than four years."

The bartender whistled softly. "Two years. Two years to get away and start a new life."

"No, no, no! Mr. Hughes," Mansfield objected. "Not two years from now—two years from the time the first bomb was dropped."

Hughes' face showed a struggle to comprehend. "But, gentlemen," he protested, "it's been *more* than two years since the first bomb was dropped."

"That's right."

"Don't blow your top, Paddy," Warner cautioned him. "The bomb isn't everything. It might be ten years before anybody develops the sort of robot carrier that can go over the north pole or the ocean and seek out a particular city with an atom bomb. In the meantime we don't have too much to fear from an ordinary airplane attack."

Mansfield looked annoyed. "You started this, Dick. Why try to hand out soothing syrup now? With a country as wide open as this one you don't need anything as fancy as guided missiles to pull a Pearl Harbor on it. The bombs would be assembled secretly and set off by remote control. Why, there might be a tramp steamer lying out there in the East River right now—"

Warner let his shoulders slump. "You're right, of course."

Hughes threw down his bar towel. "You're telling me that New York is as likely to be blown up right now as at any other time."

Mansfield nodded. "That's the size of it," he said soberly.

Hughes looked from one to the other. The cat jumped down and commenced rubbing up against his ankle, purring. He pushed it away with his foot. "It's not true! I know it's not true!"

"Why not?"

"Because! If it was true would you be sitting here, drinking quietly? You've been having a bit of fun with me, pulling my leg. Oh, I can't pick the flaw in your argument, but you don't believe it yourselves."

"I wish I didn't believe it," said Mansfield.

"Oh, we believe it, Paddy," Warner told him. "To tell you the truth, I'm planning to get out. I've got letters out to half a dozen cow colleges; I'm just waiting until my contract expires. As for Doc Mansfield, he can't leave. This is where his lab is located."

Hughes considered this, then shook his head. "No, it won't wash. No man in his right mind will hang on to a job when it means sitting on the hot squat, waiting for the Warden to throw the switch. You're pulling my leg."

Mansfield acted as if Hughes had not spoken. "Anyhow," he said to Warner, "the political factors might delay the blowoff indefinitely."

Warner shook his head angrily. "Now who's handing out soothing syrup? The political factors speed up the event, not delay it. If a country intends to defeat us someday, it's imperative that she do it as quickly as possible, before we catch wind of her plans and strike first. Or before we work out a real counter weapon—if that's possible."

Mansfield looked tired, as if he had been tired for a long time. "Oh, you're right. I was just whistling to keep my courage up. But we won't develop a counter weapon, not a real one. The only possible defense against atomic explosion is not to be there when it goes off." He turned to the barman. "Let's have another round, Paddy."

"Make mine a Manhattan," added Warner.

"Just a minute. Professor Warner. Doctor Mansfield. You were not fooling with me? Every word you had to say is God's own truth?"

"As you're standing there, Paddy."

"And Doctor Mansfield—Professor Warner, do you trust Doctor Mansfield's figuring?"

"There's no man in the United States better qualified to make such an estimate. That's the truth, Paddy."

"Well, then—" Hughes turned toward where his employer sat nodding over the cash register on the restaurant side of the room and whistled loudly between his teeth. "Schreiber! Come take the bar." He started stripping off his apron.

"Hey!" said Warner, "where you going? I ordered a Manhattan."

"Mix it yourself," said Hughes. "I've quit." He reached for his hat with one hand, his coat with the other, and then he was out the door.

Forty seconds later he was on an uptown express; he got off at 34th Street and three minutes thereafter he was buying a ticket, west. It was ten minutes later that he felt the train start to roll under him, headed out of the city.

But it was less than an hour later when his misgivings set in. Had he been too hasty? Professor Warner was a fine man, to be sure, but given to his little jokes, now and again. Had he been taken in by a carefully contrived hoax? Had Warner said to his friend, we'll have some fun and scare the living daylights out of the old Irishman?

Nor had he made any arrangements for someone to feed Sad Sack. The cat had a weak stomach, he was certain, and no one else gave the matter any attention at all. And Molly's grave—Wednesday was his day to do his gardening there. Of course Father Nelson would see that it was watered, just for kindness' sake, but still—

When the train paused at Princeton Junction he slipped off and sought out a telephone. He had in mind what he meant to say if he was able to reach Professor Warner—a good chance, he thought, for considering the hour the gentlemen probably stayed on for a steak. Professor Warner, he would say, you've had your fun and a fine joke it was as I would be the first to say and to buy a drink on it, but tell me —man to man—was there anything to what you and your friend was telling me? That would settle it, he thought.

The call went through promptly and he heard Schreiber's irritated voice. "Hello," he said.

The line went dead. He jiggled the hook. The operator answered, "One moment, please—" then, "This is the Princeton operator. Is this the party with the call to New York?"

"Yes. I—"

"There has been a temporary interruption in service. Will you hang up and try again in a few minutes, please?"

"But I was just talking—"

"Will you hang up and try again in a few minutes, puh*lease?*"

He heard the shouting as he left the booth. As he got outdoors he could see the great, gloriously beautiful, gold and purple mushroom still mounting over where had been the City of New York.

My Object All Sublime

Those traffic violators were a stink to say the least; that was certain. But suddenly came the day when that expression was—no longer figurative—they stank literally!

The City Editor tells me to go to Seventh and spring.

“There’s a story there, he says.”Go down and check it.”

“What kind?”

“They say it smells.”

“Why shouldn’t it?” I told him. “Columbia Bank on one corner, Fidelity First National on the other, and the City Hall and the Daily Tide building just down the street.”

“Wise guy; he answers.”I mean it real smell—like yourself.”

Dobbs is all right—with him it’s stomach ulcers and matrimony. “What’s the sketch?” I asked, ignoring the crack.

Seems like it ain’t safe to drive a car through that intersection, he answered seriously. “You come out smelling like a telephone booth. Find out why.

I EASED down there and looked the situation over. Nothing I could put my finger on, but a general air of nervousness and uncertainty. Now and then I’d catch a whiff of something, some ancient rottenness. It put me in mind of the morgue, again it was more like a Chinese river boat When something happened that gave me a lead—

A truck came charging through as the lights were changing. He had time to stop, but didn’t—and just missed a feeble old gal in the crosswalk. There was a sharp “*fssss*”; the truck driver got a look of agonized surprise, and wipes at his eyes. As he passed me I smelled it.

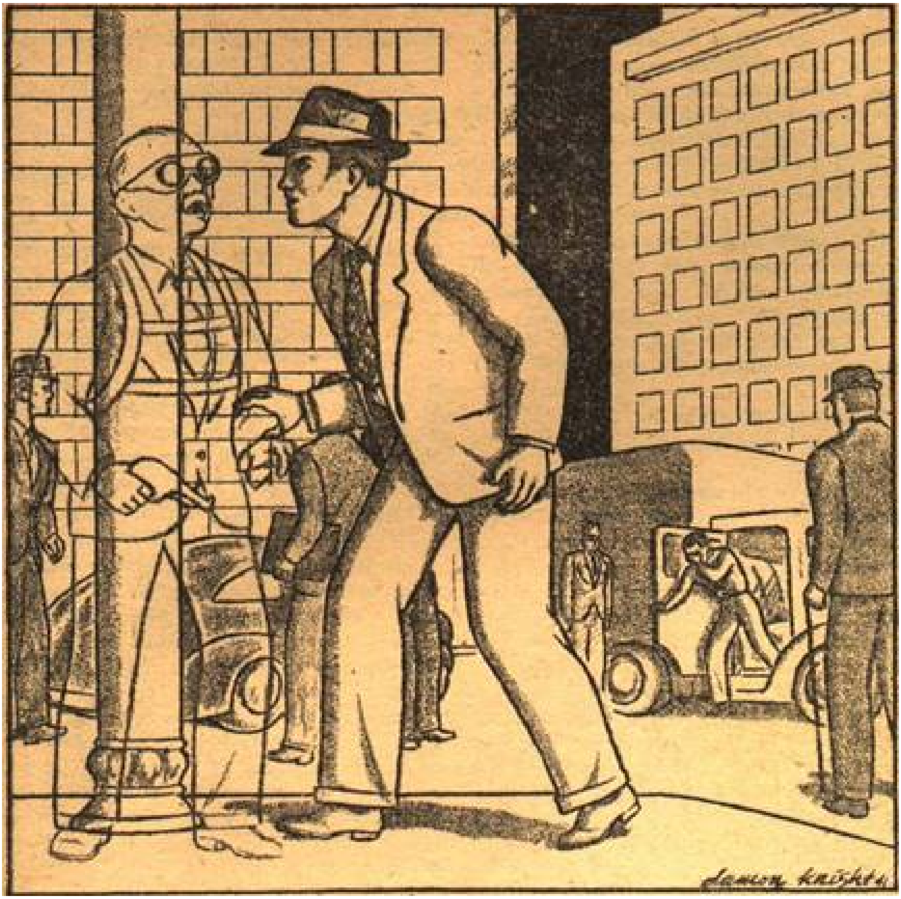
No mistake this time—it stunk like a convention of pole kitties, with prizes for range and distance.

The truck wobbled along for a few yards, then double-parked on the car tracks. I came alongside. “What happened, Buddy?” I asked the driver, but he is too far gone with choking and gasping, I left, not wanting the perfume to soak into my clothes.

I went back to the corner, having an idea and wanting to check it. In the next thirty minutes seventeen drivers did things I didn’t like, bulling their way through left turns, jumping signals, ignoring pedestrians, and the like. And every one of them gets dosed with *eau de Cologne*. Usually with the sound of a hiss just before it happened.

I was beginning to plot a curve, as it were, when I leaned up against a postal storage box on the corner. “Oh, excuse me!” comes this polite voice in my ear.

“No harm done, chum,” I answered, and looked around. Nobody near me, nobody at all.



"Oh, excuse me", comes this polite voice in my ear.

The stuff a leg-man drinks has to be cheap, but I was sure I hadn't gotten any quite that green. I considered it, then moved my hand toward the box. I encountered something solid in the air about a foot over the box, and grabbed. There was a smothered gasp, then silence.

I waited, then said very soft, “Well, Cagliostro, it seems to be your move.” No answer. I clamped down on the chunk of breeze and twisted it. “Well?

“Oh, dear!” comes this same mild little voice. “You seem to have captured me. What shall I do?”

I thought. “We can't stand here playing statues. People would talk. There's a beer joint just around the comer. If I let you go , will you meet me there?”

“Oh, yes indeed,” I'm answered, “anything to get out of this predicament.”

“No tricks now,” I warned. “Fail to show up and I'll have them search for you with paint spray gun. That'll put a stop to your fun games.”

"Oh, no ! empty air assure me, and I let go.

I HAD killed a bottle of suds in the joint in question when this mousy little bird shows up. He glanced nervously around, came up to my booth and gulped at me.

"Are you," I asked incredulously, "Cagliostro?"

He gulped again and nodded.

"Well, I'll he a—skip it. Draw up a chair. Beer?"

He fidgeted. "Uh, might I have a little Bourbon whiskey?"

"You know best Pop." I fingered the waiter. "Joe, bring this gentleman some eight-year-old Kentucky." When Joe got back Casper Milquetoast took a tumbler, poured four fingers in it, and drank it, swallowing steadily. Then he sighed.

"I feel better," he announced. "My heart, you know."

"Yes, I know," I agreed. "I hated to upset you, but it's in the interest of science."

His face lit up. "You are a student of science, too?

"Mob psychology," I told him. "I'm a reporter for the *Graphic*."

He seemed upset at once, so I calmed him. "Take it easy. We'll make it off the record for the moment and talk about a story later." He relaxed a little and I continued, "Right now I'm curious on my own account. I figure you had something to do with that gymkhana around the corner Spring – not to mention finding you holed up in a slice of air. Come clean, professor."

"But I am not a professor," he protests in that same diffident voice, after tucking away another four fingers of corn. "I am a private research student in spectroscopy. My name is Cuthbert Higgins."

"Okay, Cuthbert. Mine's Carter. Call me Cleve. Let's get to it. What is it? Mirrors?"

"Not precisely. It may be hard to explain to a layman. Are you versed in advanced mathematics? The use of tensors, for example?"

"I was doing all right," I said, "up to improper fractions. Do they come after that?"

"I am, uh, afraid so."

"Okay," I told him. "I'll hang on where I can"

"Very well," he agreed, "you arc familiar with the gross phenomena associated with seeing. Light strikes an object, is reflected or refracted by it to the eye, where it is interpreted as sight. The only ordinary substance which reflects or refracts so little as to he invisible is air."

"Sure."

"For a number of reasons it is difficult to change the optical characteristics of the human body to the point where it would match air and be invisible. But there remain two possibilities: To bend the light rays around the body is one way. The other is psychological invisibility.

Huh ?" I demanded. "Come again. Do you mean hypnosis?"

"Not at all," he told me. "invisibility by suggestion is a common phenomenon ... a stock in trade of stage magicians. They suggest that an object in plain sight is not in plain sight, and surely enough, it is not."

I nodded. "I catch. Thurston used to do that in his levitation stunt. The frame that supports the gal is in plain sight, but the Audience never sees it. I never saw it until it was pointed out to me, then I couldn't we why in the hell I hadn't seen it."

HIGGINS nodded happily, "Exactly. The eye ignores what is actually there and the brain fills in the background. Lots of people have that quality. Good detectives, Pickpockets. I have it myself—that is what got me interested in the problem of invisibility."

"Slow up! I said. "Don't sit there and tell me that I didn't see you a while ago simply because you are inconspicuous. Dammit, I looked *through* you."

"Not quite," he corrected, "you looked *around* me."

"How?"

"By application of the laws of optics."

"Listen," I said, slightly irked, "I'm not quite as ignorant as I made out. I never heard of any optical laws that would fit."

"It *does,*" he conceded, "involve certain advances of my own. The principle is similar to total reflection. I throw a prolate ellipsoid field about my body. Light strikes the screen at any point, runs on the surface of the field for a hundred and eighty degrees, and departs at the antipodal point with its direction and intensity unchanged. In effect, it makes a detour around me."

"It sounds simple," I commented, "but I don't think I could build one."

"It is hard to make it clearer without recourse to higher mathematics," he apologized, "but perhaps I can give a somewhat analogous example with prisms and mirrors. When a ray of light strikes a surface, it may be reflected through twice the angle of incidence, or refracted through the angle of refraction, thusly—" and he started to sketch on the menu. "When an optical system is arranged in *this* fashion—" He sketched a sort of daisy chain of mirrors and prisms. "—a beam of light striking the system at any point 'A' and at any angle 'theta,' will be reflected and refracted around the system to point 'A Prime,'and exit at angle theta. So you see—"

"Skip it," I cut in. "I can see that it gallops half way around and heads out in the same direction; the rest is over my head. All right, that clears up half the mystery, but how about that reign of terror in the traffic?"

"Oh, *that."* He gives me a silly grin and hauls out a gat as long as my foot.

I DON'T like the look in his eye. "Put that thing down!" I yelled.

He does so reluctantly. "I don't see why you should make such a fuss, he protests. "It's not dangerous—not very. It's just a squirt gun."

"Huh?" I looked at it more closely "Pardon my I.Q., Cuthbert. I begin to see the sketch. What's it got in it?"

His face lit up. "Synthetic essence *mephitis*—skunk juice!"

"Mmm ... Cuthbert, is that nice?"

He grinned guiltily. "Perhaps not—but it's awfully good fun."

"Hmmm!"

"It was a byproduct of an attempt to find a synthetic base for perfume," he explained. "No real use, but I had made up quite a supply for experimental purposes—"

"And squirting it on traffic is your idea of a joke."

"Oh, no! For years I have been incensed—as who hasn't?—at the reckless drivers that infest our city. It would never have occurred to me that I might do anything about it myself, had I not heard a less inhibited victim refer to one of these loutish persons as 'stinking'—along with less repeatable things. It brought a whimsical thought to mind—would it not be a capital jest to make dangerous drivers smell physically the way they already smelled spiritually. At first the project seemed impractical; then I recalled the invisibility apparatus which had been gathering dust in my laboratory for ten years."

"What!" I demanded. "You mean to say you've had this gadget for years and have not used it?"

He gave me a big-eyed stare. "Why, certainly. Obviously there was no use for it. In the hands of an irresponsible person it could be the source of much wrong doing."

"But—Hell, you could turn it over to the government"

He shook his head.

"All right, then," I persisted. "You could use it yourself. Think of the things you could do. You could start out by cleaning up that mess down at the City Hall. Sit in on the crooked deals and expose them."

He shook his head again. "I am forced to regard your viewpoint as naive. Good government grows out of the people; it can not be handed to them."

"Oh, well," I shrugged. "You're probably right. Still, think of the fun you could have—" I was thinking about back stage at the Follies.

But he shook his head again. "Uses for amusement only would almost certainly involve some violation of the right of privacy."

I gave up. “Go on with your story, Cuthbert.”

“Having determined to try the jest, I made my preparations. They were simple. A water gun suggested itself as an applicator and a hot water bottle served as a source of supply. Earlier today I sought an outlying intersection and experimented. The results exceeded my fondest hopes—there are at least a dozen drivers who regret having jumped the light.

“Then I came down here where the hunting is better. I was just warming up when you apprehended me.”

I stood up. “Cuthbert Higgins,” I said, “you are a public benefactor. Long may you squirt!”

He was pleased as a kid. “Would you like to try it?”

“Would I! Half a sec while I phone in my story,”

His face fell. “Oh dear!” he moaned. “I had forgotten you were connected with the press.”

“‘Chained’ is the word, Cuthbert. But don’t give it a thought. I’ll cover you like a grave.”

Dobbs was difficult as usual, but I convinced him, gave my story to a rewrite man, along with the license numbers of the cars I had seen sprayed, and rang off.

CUTHBERT’S car was a couple of streets away. I wanted to drive, but be managed to convince me that he was sober, in spite of the $6.40 worth of liquor in him, by balancing a pencil by its point. Besides, I really wanted to try the invisibility gadget.

It fit like a knapsack between the shoulders, with a switch on the straps in front. I threw the switch.

It was as dark as the inside of a dog. “Get me out of here, Cuthbert!” I demanded.

He flipped the switch, and came the dawn. “Naturally you were in darkness,” he said. “Try these.”

“These” were a trick pair of spectacles. “Rectifiers.” he explained. “The shield bypasses visible light but not ultraviolet. With these you can see by ultraviolet.”

“I get it,” I announced, feeling smug. “‘Black light.’ I’ve read about it.”

“Not exactly,” he said, “but that will do. Try them.”

I did. They worked. No color, black and white like a movie peep show, but I could set with the shield up.

From then on it was “Tallyho!” and “Yoicks! Yoicks!” More fun than a Legion Convention. We penalized everything from cutting in and out to jaywalking. But a guy had to be doing some thing actually stupid and dangerous before we courtmartialed him.

All but one. We got a horn-tooter behind us at a signal change.

One of those lugs who wants the driver ahead to jump the lights so he can hurry on about his all-important business. You've met 'em.

Well, when this item pulled in behind us and started his serenade, I glanced at Cuthbert. "It's a moot point," he said, "but I think there is justification."

I slipped out of the car and sprayed him just as he was leaning out to cuss Cuthbert. So I sprayed the upholstery too, just to teach him not to use naughty words.

But the high point of the day was a motorcycle cop. He had a meek little citizen backed up to the curb and was bawling the bejasus out of him for a little technicality not actually dangerous—failing to signal a righthand turn on a clear street.

I gave the overgrown ape a liberal dose, not neglecting his pretty uniform and his shiny motorcycle.

THE *Graphic* played it big: "STENCH STALKS STREETS; POLICE PUZZLED" and "WAR WAGED ON DANGEROUS DRIVERS." The other papers copied in the later editions—all except the *Tide*. The *Tide* waited to the final, then let forth a blast that would curl your teeth, demanding immediate apprehension of "the lawless terror prowling the city streets." Poor old Cuthbert was made out to be something between Jack the Ripper and Dracula, with a dash of Nero.

When I looked over the list of victims in the *Graphic,* I understood. On it was Felix Harris, owner-publisher of the *Tide.*

Felix Harris arrived in this town riding the rods. He got a job on the *Tide,* married the boss's daughter, and has looked down on the common peepul ever since. He owns a pew in the right church, chairmans all the stuffed-shirt committees, and takes his cut on every racket in town. And he and his fatheaded son are notoriously bad drivers.

But Heaven help the cop silly enough to give one of them a ticket!

I COULD smell trouble, but saw no way for Cuthbert to be nabbed, if we were cautious. Dobbs kept me on the story; Cuthbert and I spent four colossal days, taking turns driving and squirting the stinkum.

Then I get a call from the jailhouse; Cuthbert is on ice.

They had gotten onto him through me—seems I had been tailed for three days. They had nothing against him but suspicion, but a dick had snooped around his house and had smelled him cooking up a fresh batch of the skunk juice. They nabbed him.

I ducked out to see a lawyer pal of mine. He thought it was a cinch for habeas corpus, but he was mistaken. There wasn't a judge in town who would issue a writ—we knew the squeeze was on. And Cuthbert was booked for everything from malicious mischief to criminal syndicalism. Maximum bail on each offence, total *seventy thousand dollars!*

The paper would go bail for a story, I knew—but not that much.

CUTHBERT was unperturbed, though I did my best to explain what a jam he was in. "I know I have a loyal friend in you," he said, talking soft so the turnkey would not hear. "Can you go to my home and get the invisibility apparatus?"

"What?" I almost shouted. Then I lowered my voice in a hurry. "Didn't they grab it?"

"I think not, else they would have questioned me about it."

It was there when I looked for it, right where we always hid it. I locked it into the trunk of my car and started back down town, thinking that I would have Cuthbert out of clink with its help in less time than it takes to buy a hat. When it suddenly occurs to me that I have no way to use it.

Here was the hitch: If I carried it down to the jail, they would never let me hand it to him. If I wore it in, invisible myself how would I get to his cell with if? Supposing I managed to take advantage of doors as they were opened to get into the cell blocks, and managed to find his cell—another unlikely point—how would I get out after slipping him the gear? I'd be left in the cell myself. I was already connected with the case; I had a dirty suspicion that they would throw away the key and pipe me fresh air and sunlight on alternate Wednesdays.

I pulled up to the curb.

A half hour later I had a headache and a plan, but it called for an accomplice. The plan, I mean. The headache I could manage alone.

There is a little actress, name o' Dorothy Bardou, with whom I've had many a swell tune. There isn't a mean streak in her—however, she would blow up the County Courthouse if it appealed to her imagination. I phoned her, found she was in, told her to stay that way, and drove over.

I brought her up to date and then broke my plan. "You see, Dotty," I told her, trying to make it both reasonable and intriguing, "all you do is wear the shield and follow me. I do all the explaining. When we get to his cell, you slip him the shield, and out he walks, a free man."

"Leaving Dorothy in the Bastille," she adds, coldly. "Had you thought of that, Cleve—or didn't it seem to matter?"

"Yes, darling," I said, "but that is the whole point in you doing it, instead of me. You aren't connected with the case, they've got no excuse to hold you, they don't dare sweat you, and the whole thing is a mystery. Think of the publicity."

She did not answer right away; I could see the idea had taken hold. I relaxed.

Presently she said, "I'd better dress my smartest for this. The nearer I come to looking Junior League, the better I can put over the part."

WE GOT her fur coat out of hock, which I charged to expense account, and I showed her how to use the gear. It all worked per plan, except that Dorothy sneezed in the elevator going up to the cell blocks and I had to cover with some fast pantomime.

Cuthbert was stuffy about it, but I convinced him that no other caper would work, and he gave in. I left them to work it out.

I had to get the details from Cuthbert later. "She is an intelligent and charming young lady," he opined, "as well as courageous."

"You're cookin' with gas, Cuthbert."

"Assuredly. We bad a most interesting conversation during the two hours we allowed for you to establish an alibi. At the end of that time, she took off the pack, permitted me to assume it, and gave vent to the most startling outcry it has ever has been my privilege to hear. The turnkey came most immediately. When he found my cubicle occupied by a beautiful young lady, his face was a study in conflicting emotions. He felt unequal to the situation and hurriedly fetched the jailer.

"Miss Bardou gave that worthy no time to think. She demanded to be released at once, and met his request for an explanation by demanding one of him. When the jailer, sweating copiously, opened the door for her, I slipped out in the confusion.

"She was not content to let well enough alone, but demanded to be taken to the Chief of Police at once. Having no choice in the matter of doors, I, perforce, followed along. There were gentlemen of the press there—"

"My work," I stuck in.

"Excellent. She distressed the Chief very much by propounding the theory that she had been drugged and kidnapped by his own men."

"Good girl! Did the boys get pictures ?"

"In quantity."

WE HID Cuthbert, for the time being, with an aunt of mine, since he obviously could not stay at his place nor mine. The *Tide* was still howling for his blood. I wrote an opus for the *Graphic* which suggested, in a nice way of course, that he had been done away with in jail, and that the Dotty incident had been framed up to cover it.

I told Cuthbert to keep indoors, and in particular not to play with his squirt gun, as it would queer my "foul play" story. This irked him.

He wanted especially to draw a bead on the judge of the traffic court, as I had inadvertently let him in on how the old fraud fixed tickets for the "right" people. Cuthbert's indignation you wouldn't believe. How a man could reach his age and still be that naive I don t see.

He sputtered about "equality before the law" and such matters. I had to calm him down and exact promises.

HE DIDN'T keep the promises very well. I have to piece this part of the yarn together as I did not see all of it. It seems he was taking a walk, in the shield of course which wasn't so bad, but carrying his squirt gun which was strictly against contract.

He has just crossed the intersection of two boulevards, when a big sedan, doing about sixty goes through against the signals. It just misses two cars going with the lights, and one of them climbs the curb and clashes into a store window.

This is too much for Cuthbert. He steps off the curb, takes careful aim, and gets the driver of the sedan right in the eye. Then he jumps back, for they almost run him down. He is tripped by the curbstone, and falls over a fireplug which dislodges the invisibility gear and it fall into the gutter, but he is much too busy to notice.

When he got to his feet he saw that the sedan had climbed the curb and skidded into a terrace a little further down. Filled with remorse, he went down to see if he could help. As he does, four men pile out of the car. One of them is wiping his eyes, two of them are carrying guns, and one is lugging a small child.

"I felt instinctively," Cuthbert tells me later, "that they were malefactors of some sort. So I shouted for them to put up their hands, meanwhile brandishing my water pistol."

I arrived on the scene right after this, in a police squad car. I had been at the station when the call came in and went along to cover it. For it's a kidnapping and a big one—old Felix Harris's grandson and probably the only person in the world he really cares about.

We find a curious scene. One of the kidnappers is down, shot in the leg by Cuthbert with one of their own gats, two of them are wiping their eyes and moaning, and one is very quiet. The kid is sitting on the grass, brying.

When Cuthbert sees us, he crumples up at the knees.

Cuthbert is not only a hero; the charges against him are quietly dropped. The secret of the shield is still safe, as the police car ran over it there in the gutter, and crushed it beyond recognition. The boys are puzzled as to how he can have spread so much skunk juice with the entire town looking for him, and question him not a little before they let him go, but he has an answer ready. "I'm naturally inconspicuous, “he told them . “Nobody ever notices me. You just didn’t see me.”

Which was true, as far as it went.

I groaned so much over the destruction of the shield that Cuthbert promised to build me a new one for my birthday. I’m looking forward to it. I’ve got some plans of my own.

Pied Piper

THE Prime Minister—and Field Marshal Yler! Doctor Groot's secretary was obviously excited.

Doctor Groot did not lift his eyes from the laboratory bench. With a gentle, steady grip he held a tiny furry animal while he shaved an area on its thigh.

"So? Have them wait."

"But Doctor, it's the—"

"Are they more important than this?" He reached for a hypodermic needle, loaded and waiting. His little specimen, a field mouse, did not resist the needle.

The secretary started to speak, bit her lip, and withdrew.

The statesman endured the wait somewhat better than the soldier. "I don't like this, Excellency," the field marshal grumbled. "Why should we be kept waiting while our host fiddles around among his stinks and bottles? Mind you, I'm not complaining on my own account; I learned to wait when I was a cadet; but you represent the state."

The Prime Minister twisted around in his chair to face Yler. "Patience, John. What does it matter if we are treated like job-seekers? We must have him to win the war, but does he need us? I doubt it from his viewpoint. Would you and I be here at all—if we were not already beaten."

The general turned a darker red. "With all due respect to you, sir, our armies are not yet beaten."

"True. True," the statesman conceded testily, "but they will be in the end. You told me so."

The soldier muttered to himself.

"What," asked his companion, "did you say?"

"I said I would rather go down in honorable defeat."

"Oh, that! Of course you would. All your training is to fight. My anxiety is to win. That is the difference between politicians and soldiers—we know when to give way in order to win. Resign yourself to it; we must have the services of Doctor Groot in order to win this war!"

The soldier's answer was cut short by the secretary appearing to announce that Doctor Groot could now see them. She led the way; the politician followed; the soldier brought up the rear, still fuming. As they entered Groot's study, the doctor was entering it also, from the laboratory door on the far side.

His visitors saw a vigorous elderly man, a little below middle height, stocky and a bit full about the equator. Live, merry eyes peered out of a face appropriate to an old bull ape. This was surmounted by a pink, hairless dome of startling size. He was dressed in dirty linen pajamas and a rubber apron.

"Sit down," he said, waving them to big leather armchairs and seating himself in one, after pushing several books and assorted oddments to the floor to clear the chair. "I'm sorry to have kept you waiting, but I was up to my eyes in some research that couldn't wait. But I found the answer to the problem."

The field marshal leaned forward eagerly. "You've found the weapon, Doctor?"

"The weapon? What weapon? I've found why field mice have herpies. Odd business—hysteric, just as in humans. I induced a neurosis; they responded by developing herpies. Quite interesting."

The soldier did not conceal his annoyance. "Field mice! Wasting time with such trifles! Man, don't you know there's a war?"

Groot lifted his shoulders a fraction of an inch. "Field mice; or field marshals, who shall say what is important? To me, all life is important, and interesting,"

The Prime Minister interrupted suavely, "No doubt you are right, Doctor, but Field Marshal Yler and I are faced with another problem of paramount importance to us. The sound of battle hardly reaches the quiet of your laboratory, but for us who are charged with the public responsibility of prosecuting the war, there is no escaping it. We have come to you because we are at our wit's end and need the help of your genius. Will you give us that help?"

Groot pushed out his lips. "How can I help? You have hundreds of able research men in your laboratories. Why do you think that one old man can help you win a war."

"I am no expert in these things," replied the politician, "but I know your reputation. Everywhere among our experts and technical men I hear the same thing: `If only Groot were here, he could do it.' . . . `Why isn't Doctor Groot called in on this?' They all seemed convinced that you can solve any problem you put your mind to."

"And what do you wish me to do?"

The Prime Minister turned to the soldier. "Tell him, John.”

RAPIDLY Yler sketched out the progress of the war; the statistics of men and materials involved, the factors of supply and distribution, the techniques employed in fighting, the types of weapons; the strategical principles.

"So you see that even though we started practically equal in manpower and technical equipment, because of the enemy's greater reserves of capital goods, the tide has swung against us. Under the law of decrements, each battle leaves us worse off than before; the ratio against us has increased."

Groot considered this, then answered.

"And the second differential is even worse, is it not so? The rate of increase of your losses climbs even more rapidly than the losses themselves. And it would seem from your figures that the third differential, the speed with which the rate is increasing spells disaster —you cannot even hold out until winter."

The field marshal admitted that such was true. "However," he added, "we have dug in and are holding the strategic situation practically static while we try to decide what to do about it. That is where you come in, Doctor; we need some radically new weapon or technique to change the ratio of losses to our favor, or the end is in sight. I can hold this situation together with very little change for six weeks or so. If you can go into your laboratory and produce some new and powerful weapon of offense in that length of time, you can save the country."

Groot looked at him quizzically. "So? What would you like? An incendiary ray from a portable projector, perhaps? Or how about a bomb that would not cease to explode, but would continue to destroy for days or weeks? Or perhaps you would like a means of disabling their aircraft in midair?"

The soldier nodded eagerly. "That's the idea, Doctor, any of those things. If you can do even one of them, you will be the greatest hero in the history of our country. But can you really give us such weapons?"

Groot nodded casually. "But certainly. Any of those things are obvious possibilities. You provide me with the money and help and I can deliver such weapons, or better ones, in fairly short order."

The politician intervened. "Anything you like, Doctor, anything at all. I shall direct the Secretary of the Exchequer to provide you with an unlimited drawing account. Any personnel you require will be ordered to report to you forthwith. Now suppose I leave you two to confer as to the most immediately important work to be done."

He arose and reached for his gloves and hat. "I may say, Doctor, that the reward will be commensurate with your service. Your country will not forget."

Groot motioned him back to his chair. "Don't be hasty, my friend. I did not say I would do these things. I said I could."

"Do you mean you might not—"

"In fact, I will not. I see no reason for helping you destroy our neighbor:"

The field marshal was on his feet at once.

"This is treason," he raged. "Excellency, permit me to arrest him at once. I'll make him produce—or kill him in the process!"

Groot's tones were soft, mild. "Do you really think a man my age fears death? And let me tell you, my friend, a man with your blood pressure should not get into rages—it is quite likely to bring on a thrombosis, and result in your demise."

The politician's years of practice in controlling his temper and concealing his feelings stood him in good stead. He placed a hand on the marshal's shoulder. "Sit down, John, and be quiet. You know as well as I that we can't make Dr. Groot work, if he refuses. To talk of revenge on him is silly." He turned to Groot. "Doctor, when your fellow countrymen are dying to accomplish a particular end, don't you think you owe them some explanation if you refuse to help them in any way you can?"

Groot had watched the little by-play with amusement. He replied courteously, "Certainly, Your Excellency. I will not assist in this mass killing because I see no reason why either side should win. The cultures are similar; the racial stocks are the same in about the same proportions. What difference will it make which side wins?"

"Don't you feel any obligation of patriotism, or loyalty?"

"Only," Groot shrugged, "to the race itself. Not to a particular gang."

"I don't suppose it would do any good to discuss with you the question of which side is morally justified?"

Groot shook his head. "None at all, I'm afraid."

"I thought not. We are realists, you and I—" He gathered up his gloves again. "I shall do what I can, Doctor, to protect you from the results of your decision, but political necessities may force my hand. You will understand."

"Stay." Groot stopped him again. "I refused to help you win this war. Suppose I undertook to keep you from losing?"

"But that is the same thing," exploded the field marshal.

The Prime Minister simply raised his brows.

Groot proceeded. "I will not help you to win. But if you wish it, I will show you how to stop this war with no victory on either side, provided—" He paused—" provided you agree now to my kind of peace."

He stopped and waited for the effect of his words. The Prime Minister nodded. "Go ahead. We will at least listen."

"If the war is finished with no victor and no vanquished, if the terms of the peace set up a new government which Welds the two countries into one nation, indistinguishable, free, and equal, I shall be satisfied. If you can assure me of that, I will help you—otherwise not."

The politician withdrew to the far end of the room, and stood staring out the window. He traced a triangle with his forefinger on his right cheek, and repeated it, endlessly; his brows furrowed in thought.

The old soldier got up and joined him and expostulated in whispers, "—utopian! . . . impractical! . . . different languages, different traditions . . :"

The politician left the soldier abruptly and faced the scientist. "I agree to your terms, Doctor: What do you, plan to do?"

"First you answer a question for me. Why are men willing to fight and die in a war?

"Why? For their country, for patriotic reasons. Oh, I suppose a few regard it as an adventure."

"No reason is necessary for the men themselves," put in the field marshal, "under compulsory service. They *have* to."

"But even under compulsory service," said Groot, "there must be good morale, a willingness to die fighting, else you would be faced with chronic mutiny. Not so?"

"Mmmm-well, yes. You're right."

"Doctor, why do you think men are willing to die in war?" inquired the Prime Minister.

Groot answered solemnly, "To be willing to die in war has nothing to do with personal self-preservation. To go to war is suicide—for the individual. Men are willing to be killed in war for one reason only—that their tribe may live after them. That is to say, they fight for their children. To a nation without children, war is meaningless, not worth fighting. That is a primary datum of mass psychology!"

"Go on."

"I propose that we kidnap their children!"

"It's an infamous scheme. I will not agree to it."

“It is humane.”

“It is contrary to international law.”

“Naturally. International law defines the legal ways to kill men. This proposes an illegal way to avoid killing them.”

"It violates every rule of civilized warfare!"

"Quiet, John! You'll do as you are told."

DEEP behind the enemy's lines in a moderate-sized city, life flowed quietly along. True, there were few men on the streets, and those few usually showed the marks of battle. The motor busses were driven by women; the clerks were women; even the street sweepers and rubbish collectors were women. On a hill at the outskirts of town, there stood a large boarding school, an orphanage for the children of the war dead. Here matriarchy was the natural thing.

It was recess time. The pleasant, gardened grounds swarmed and boiled with young life. Their high young voices were raised in shouts and calls that attend the age-old games of childhood; tag, ball games and the like.

In her private office, Madame Curan, superintendent, pored over her reports. The voices of the children outside reached her as a wordless, tuneless obligato, which she heard subconsciously and responded to by relaxing the tired wrinkles between her eyes.

She pushed a stack of papers to one side, and pressed a button. The outer office door opened almost at once, and she glanced up to find, not the stenographer she had rung for, but her second-in-command. The woman was plainly excited.

"Madame! Air raid!"

Madame Curare's finger was at once on another button. A siren mourned, and the shouts of the children were snuffed out.

"Are you sure?" she asked her assistant as they hurried out. "I don't understand it. They've never raided schoolhouses before."

Out on the grounds the children had formed into four queues and were being hurried down four covered ramps which led underground. The playground supervisors, young widows, most of them with a too bitter knowledge of war, were urging them on.

Madame Curan glanced up. Settling out of the sky was a huge helicopter of bombing type. It was attended by a dancing, swooping swarm of little fighting planes. Three little white clouds appeared suddenly among the planes; then a few seconds later the breeze brought three short dry coughs. The antiaircraft batteries had opened up.

Her assistant clutched at her arm.

“Where are our planes?”

"There they come.”

Three tiny specks, higher than the enemy, burst out of the glare of the sun from the southwest. They dropped their *V* formation, shifted into open column, and dived at full throttle, disregarding the convoying fighting planes in their eagerness to reach the big bomber. The bomber jerked away to the east, like a humming bird shifting to another blossom. But the column followed. It was plain that the lead pilot intended to suicide by diving into the bomber.

One of the fast little fighters of the convoy beat him to it. The two planes, defend and convoy, collided a short distance over the helicopter. They seemed to disintegrate noiselessly into disorganized rubbish.

The other two planes in the column ducked, one under, one over the floating rubbish. And passed harmlessly beyond the bomber. A few seconds later came the sound of the collision—the noise of a giant tearing a thousand yards of muslin.

The helicopter landed on the play ground.

From the control cabin on the port side forward, a small door opened, a light metal ladder swung down, and two men debarked. They approached the woman. The younger of two men addressed them.

“Madame Curan is it not? I am Lieutenant Bunes. Allow me to present Flight Commander Dansic. I will translate for him.”

“It is not necessary. I know your language. What is the meaning of this cowardly attack?”

The commander saluted smartly, and made a slight bow from the waist. “Please Madame. I am so happy that you speak our language our language. It will make everything so much simpler. I regret to inform you that you are my prisoner.”

“Obviously.”

He smiled as if she had been exceptionally witty. “Yes, of course. You and your assistants I am forced to require a certain service of you.”

“I shall not help you!”

“Please, Madame.” It will not be anything you do not wish to do. You will simply continue with your present duties of caring for children back to my country. You will be needed to care for them.”

“I will not! I shall tell them to resist. You cannot possibly control three thousand children.”

He shrugged his shoulders, “As you like, Madame. Did I not promise that you would not be required to do anything that you do not wish to do?”

While they were talking, a great door opened from the fat body of the aircraft, swung down like a drawbridge, and a dozen men trotted out at double time. They broke into two single file columns and deployed rapidly around the buildings until they completely surrounded the school at fifty-yard intervals. Each carried a large tripod and had a pack slung on his back.

Once at their posts, they set up the tripods, unslung the packs, clamped them hastily on the tripods, and stripped and stripped the covers from the packs. Then each one grasped the end of a reel of wire which was slung on his tripod, trotted away a counter-clockwise direction toward next adjacent tripod, paying out the wire as he ran. Each man clamped the end his wire to the tripod of his left-hand neighbor, and ran quickly back to his post.

A non-commissioned officer standing at the helicopter door bellowed, "Report!”

"One!" "Two!" "Three!" "Four!' "Five!" "Six!" "Seven!" "Eight!” "Nine!" "Ten!" "Eleven!" "Twelve!'

The non-commissioned officer brought his right hand down smartly.

Nothing much happened. The trees and buildings beyond the line of tripods shimmered slightly as if seen through a soap bubble film. But a motorcycle squad of civic guards came charging up the boulevard from the city a moment later, and crashed into this iridescent phantom. They piled up in a tangled, sickening heap.

Inside the helicopter a young technician sat before a complex control board, his bony, nervous hands busy with knurled levers, a triple bank of numbered keys, and numerous switches. His eyes followed the responses on the instrument panel back of the control board, noting the readings shown by quivering needles, watched the wandering of the little lighted "bugs" in the zero readers, saw the ready lights flash on.

A green light flashed near the top of the panel. He pulled a screen down in front of his face and threw a switch. A picture rapidly built up on the screen of another pale-faced nervous man. The picture spoke;

"Hi, Jan. Ready on your side?"

"Yeah. I'll give you a stand-by warning."

"I don't like this, Jan."

"Neither do I. I'll run any machine that they put in front of me, but I prefer to take 'em apart first and see what makes 'em tick."

"Right. How the hell do I know what goes on back of that board? I'm just punching keys in the dark. Besides, how do we know those kids won't be hurt? Nobody has ever seen this gadget in operation."

A shadow fell across the board. The technician looked up and saw the noncommissioned officer gesturing to him. He spoke again to the panel.

"Stand by! We're starting the music." He pressed three buttons in rapid succession.

The music reached the four standing on the grounds; Madame Curan, nervous and defiant; her assistant, frightened and looking for guidance; the commander and his aide, urbane and alert. It tinkled in their ears like a child's song. It sang to them of a child's cosmos, a child's heaven, wonderful, free from care.

Dansic smiled at Madame Curan. "Is it not silly to be at war when there is music like that in the world?"

In spite of herself she smiled back.

The music swelled and developed a throbbing almost below the audible range. Then a thin reedy piping was distinguishable. It wove in and out of the melody, embroidered it, and took it over. Come away, it said. *Come away with me.* It was piercing, but not painful—it seemed to vibrate in the very brain itself.

The children boiled up out of the underground ramps like so many puppies. They laughed and shouted and ran in circles. They rushed out of the ground and danced towards the helicopter. Up the incline they jostled, pushing and giggling.

The technician took a quick look over his shoulder, and barked, "Here they come!"

He threw a switch, and an empty frame beside the control board, six feet high, suddenly filled with opaque, velvet blackness.

The first of the children skipped up to the frame, jumped into it and disappeared.

Commander Dansic led Madame Curan into the helicopter as the last of the children were entering. She suppressed a scream when she saw what was happening to her charges, and turned furiously at the commander. But he silenced her with a wave of his hand.

"Regard, please."

Following the direction of his pointing finger, she saw, framed in the television panel, a screen similar to the one in which she stood, except that in the picture the children were popping out of a frame of blackness.

"Where are they? What have you done with them?"

"They are in my country—safe."

The last of the staff of the school was persuaded or coerced into passing through the blackness; the helicopter crew followed, two at a time. Finally the commander was left alone, save for the technician, with Madame Curan. He turned to her and bowed.

"And now, Madame, will you come with me and resume your duties to your wards?" He offered her the crook of his right elbow.

She bit her lip, then grasped the proffered arm. They marched steadily into the black.

The technician pulled off his earphones, made some last adjustments, and faced the framed darkness. He entered it with the air of a man about to take a cold shower.

Fifteen seconds later the packs on the circle of tripods blew up in a series of overlapping little pops. Ten seconds after, that the helicopter blossomed into a giant mushroom, with a dull *whooo-hooom* that shook the ground.

The two technicians need not have worried about the safety of the children. Back deep in the territory of their home country, Doctor Groot sprawled in a chair and watched the arrival of one consignment of children.

A small, warm smile lightened his ugly face, induced by the sound of the unearthly music perhaps, or possibly by the sight of so many happy children. The Prime Minister stood near him, too nervous to sit down.

Groot crooked a finger at an elderly gray-haired female in the white uniform of a chief nurse.

"Come here, Elda."

“Yes, Doctor."

"You must see to the music yourself. Reduce the volume now to the least that will keep them quiet, free from tears. Put them to sleep with it tonight. But no music—this sort of music—tomorrow, unless absolutely necessary. It is not good for them, to be happy as angels too long. They have still to be men and women."

"I understand, Doctor."

"See that they all understand." He turned to the Prime Minister, who pulled at his lip and looked distrait. "What is worrying you, my friend?"

"Well—Are you sure no harm can come to these children?"

"Do you not see?" Groot waved a hand at the frolicsome children, being herded in little groups to the quarters prepared for them.

"Yes—but suppose two of your receiving stations were tuned in the same fashion. What would happen to the children?"

Groot smiled. "You are confusing this with radio. My fault, perhaps. I called it mass-radio when speaking of it. But it is nothing of the sort. It is—how are you in mathematics?"

The Prime Minister made a grimace.

"Very well, then," continued Groot, "I cannot answer you properly. But I can tell you this: Those children were not broadcast like radio waves. They simply stepped through a door. It is as if I took that door—" He pointed to one in the end of the hall—"and twisted this building so that it fitted up against the door." He pointed to another on the other end of the hall. "I have tampered a little, oh, such a very little, with world lines, and pinned a piece of space to another piece of space with which it was not normally in contact." He pointed to the mass-radio receiver present with them in the room. "That is one end of my pin. You understand?"

"Well—not entirely."

Groot nodded. "I did not expect you to. I did not truly explain it. Without the language of tensor calculus it cannot be explained; I can only tell you an allegory."

An orderly trotted up and handed Groot a sheaf of reports. Groot glanced at them "Two more stations and we shall be ready for the shield. Have you wondered how that worked, too?"

The statesman admitted that he had.

"It is the same thing and yet different," said Groot. "This time we lock the door, very softly. The world lines are given a gentle twist and mass will not pass along them. But pshaw! Those are monkey tricks, mere gadgets, complex as they seem to the layman. But the music now that is another matter. There we tamper with the powers of heaven itself, which is why I am so careful with it."

The Prime Minister was surprised and said so. He had been impressed by the engineering miracles. The use of music he regarded as a harmless crotchet of Groot's.

"Oh, no," said Groot. "No. No indeed. Have you ever thought about music? Why is music? What is it? Can you define it?"

"Why-uh-music is certain rhythmical arrangements of sounds which produce emotional responses—"

Groot held up a hand. "Yes, but what arrangements? And what emotions? And why? Never mind. I have analyzed the matter. And now I hold the secret of Orpheus' lute, the magic of the Pied Piper."

He lowered his voice. “It is a serious matter, friend—a dangerous matter. These other toys will go to state, but this one secret I keep always to myself—and try to forget."

The orderly hurried up again, and handed him another report. Groot looked at it and passed it over to the Prime Minister.

"Time," he said. "They are all back. We will set the shield."

A few minutes later the lead wires of some thousands of tripods, spaced equally along four hundred and seventy miles of battle front, were joined. Telephonic reports were relayed to GHQ, two switches were thrown, and a shimmering intangible screen separated the opposing armies.

The war was *over-de facto*.

OFFICIAL PRIORITY MESSAGE
FROM: PRIME MINISTER
TO: CHANCELLOR
VIA: NEUTRAL LIAISON

EXCELLENCY, YOU ARE AWARE THAT HOSTILITIES HAVE CEASED BECAUSE OF OUR DEFENSIVE SCREEN. WE HOLD THREE HUNDRED FIFTY-SEVEN THOUSAND AND TWELVE OF YOUR CHILDREN AS HOSTAGES. PLEASE SEND OBSERVERS UNDER FLAG OF TRUCE TO ASSURE YOU OF THEIR WELL-BEING. WE ARE PREPARED TO MAINTAIN STATUS QUO INDEFINITELY. WE ARE READY TO TREAT WITH YOU FOR AN EQUITABLE PEACE WITHOUT VICTORY TO REPLACE PRESENT DE FACTO ARMISTSCE.

SIGNED AND SEALED BY THE
PRIME MINISTER

ON THE eleventh day of the peace conference, the chancellor asked for a recapitulation of the points agreed on. The chief clerk complied.

"First consideration: It is agreed that henceforth the two subscribing nations are one nation. Dependent considerations:" The clerk droned on. The two parliaments were to meet together, pending a census and a constitutional convention. The currencies were to be joined, and so forth, and so forth. It was provided that the war orphans in each territory were to be reared in the land of the former enemy; and that subsidies were to be provided to encourage marriages which would mingle the blood of the former two countries.

The armies were to be demobilized and a corps of technical experts were to be trained in the use of the new defensive weapons developed by Doctor Groot.

Doctor Groot himself lolled in a chair near the middle of the horseshoe of desks. When the clerk had concluded, the Prime Minister and the chancellor looked at Groot.

"Well," he said testily, when the pause had grown, "let's sign it and go home. The rest is routine."

"Had you considered," observed the chancellor, "that this new nation we have created must have a head; a chief executive?"

"What of it?"

"I cannot be it, nor can it be—" he bowed to the Prime Minister —"my honorable friend."

"Well! Pick one!"

"We have. There is only one man universally trusted here. He and no other will do, if this agreement is to be more than a scrap of paper. And that one is yourself, Doctor."

At this, the field marshal arose at his place at the head of his nation's table of military officials.

"Stop!" he shouted. "There is no need to go further with this fool's play. I shall not stand by while my country is dishonored and prostituted." He clapped his hands together. As if prearranged, two officers left the table, ran to the horseshoe and grasped Groot on each side.

"You are relieved of office, Mr. Prime Minister. I shall conduct the affairs of our country until the war is over. Safe conduct will be provided for the representatives of the enemy. Hostilities will be resumed at once. And that—" he pointed at Dr. Groot and bristled in rage—"that meddler must be removed—completely."

GROOT sat quietly, making no attempt to resist his captors. But under the table, his shoe pressed down on a button concealed in the rug. In another room some relays clicked.

And the music started.

Not children's music this time. No, rather the *Ride of the Valkyrie,* the *Marseillaise.* Not these exactly, but rather that quality of each, and of every martial song, that promises men Valhalla after battle.

The field marshal heard it and stopped in his tracks; his fine old head reared up, listening. The two officers grasping Groot heard it, and dropped his arms. One by one almost every one of the uniformed men stood up and quested for the sound. Here and there an occasional 4 rock-coated dignitary joined them. Almost immediately they formed a column of fours and swung away down the great hall, their heels pounding to two-four time.

At the end of the hall a tapestry swung aside and revealed . . . nothingness . . . nothingness, in a large frame.

The column marched into the blackness. When the last man had disappeared, Grout released the pressure from the button. The blackness vanished, leaving an empty frame, with the wall just beyond it. A murmur of expelled breath filled the room.

The Prime Minister turned to Grout and dabbed at his brow with a fine linen handkerchief. "Good God, man, where have you sent them?"

Grout shook his head. "I am sorry. I do not know."

"You don't know?"

"No. You see, I anticipated some trouble, but did not have time to fasten the other end of my `pin'."

The Prime Minister was horror stricken.

"Poor old John," he muttered.

Grout nodded soberly. "Yes. I am sorry I had to do it. Poor old John. He was such a good man—I liked him so very much."

NO BANDS PLAYING, NO FLAGS FLYING—

"The bravest man I ever saw in my life!" Jones said, being rather shrill about it.

We—Jones and Arkwright and I—were walking toward the parking lot at the close of visiting hours out at the veterans hospital. Wars come and wars go, but the wounded we have always with us—and damned little attention they get between wars. If you bother to look (few do), you can find some broken human remnants dating clear back to World War One in some of our wards.

So our post always sends out a visiting committee every Sunday, every holiday. I'm usually on it, have been for thirty years—if you can't pay a debt, you can at least try to meet the interest. And you do get so that you can stand it.

But Jones was a young fellow making his first visit. Quite upset, he was. Well, surely, I would have despised him if he hadn't been—this crop was fresh in from Southeast Asia. Jones had held it in, then burst out with that remark once we were outside.

"What do you mean by 'bravery'?" I asked him. (Not but what Jones had plenty to back up his opinion—this lad he was talking about was shy both legs and his eyesight, yet he was chin-up and merry.)

"Well, what do *you* mean by 'bravery'?" Jones demanded, then added, "sir." Respect for my white hair rather than my opinions, I think; there was an edge in his voice.

"Keep your shirt on, son," I answered. "What that lad back there has I'd call 'fortitude,' the ability to endure adversity without losing your morale. I'm not disparaging it; it may be a higher virtue than bravery—but I define 'bravery' as the capacity to *choose* to face danger when you are frightened by it."

"Why do you say 'choose'?"

"Because nine men out of ten meet the test when it's forced on them. But it takes something extra to face up to danger when it scares the crap out of you and there's an easy way to bug out." I glanced at my watch. "Give me three minutes and I'll tell you about the bravest man I've ever met."

I was a young fellow myself back between War One and War Two and had been in a hospital much like this one Arkwright and Jones and I had visited—picked up a spot on my lung in the Canal Zone and had been sent there for the cure. Mind you, this was years ago when lung therapy was primitive. No antibiotics, no specific drugs. The first thing they would try was a phrenectomy—cut the nerve that controls the diaphragm to immobilize the lung and let it get well. If that didn't work, they used artificial pneumothorax. If that failed, they did a "backdoor job"—chop out some ribs and fit you with a corset.

All these were just expedients to hold a lung still so it could get well. In artificial pneumothorax they shove a hollow needle between your ribs so that the end is between rib wall and lung wall, then pump the space in between full of air; this compresses the lung like a squeezed sponge.

But the air would be absorbed after a while and you had to get pumped up again. Every Friday morning those of us on pneumo would gather in the ward surgeon's office for the needle. It wasn't grim—lungers are funny people; they are almost always cheerful. This was an officers' ward and we treated it like a club. Instead of queuing up outside the surgeon's office we would swarm in, loll in his chair, sit on his desk, smoke his cigarettes, and swap lies while he took care of us. Four of us that morning and I was the first.

Taking the air needle isn't bad—just a slight prick as it goes in and you can even avoid that if you want to bother with skin anesthesia. It's over in a few minutes; you put your bathrobe back on and go back to bed. I hung around after I was through because the second patient, chap named Saunders, was telling a dirty story that was new to me.

He broke off in the middle of it to climb up on the table when I got off. Our number-one ward surgeon was on leave and his assistant was taking care of us—a young chap not long out of school. We all liked him and felt he had the makings of a great surgeon.

Getting pumped up is not dangerous in any reasonable sense of the word. You can break your neck falling off a step ladder, choke to death on a chicken bone. You can slip on a rainy day, knock yourself out, and drown in three inches of rain water. And there is just as unlikely a way to hit the jackpot in taking artificial pneumothorax. If the needle goes a little too far, penetrates the lung, and if an air bubble then happens to be forced into a blood vessel and manages to travel all the way back to the heart without being absorbed, it is possible though extremely unlikely to get a sort of vapor lock in the valves of your heart—air embolism, the doctors call it. Given all these improbable events, you can die.

We never heard the end of Saunders' dirty joke. He konked out on the table.

The young doc did everything possible for him and sent for help while he was doing it. They tried this and that, used all the tricks, but the upshot was that they brought in the meat basket and carted him off to the morgue.

Three of us were still standing there, not saying a word—me, reswallowing my breakfast and thanking my stars that I was through with it, an ex-field-clerk named Josephs who was next up, and Colonel Hostetter who was last in line. The surgeon turned and looked at us. He was sweating and looked bad—may have been the first patient he had ever lost; he was still a kid. Then he turned to Dr. Armand who had come in from the next ward. I don't know whether he was going to ask the older man to finish it for him or whether he was going to put it off for a day, but it was clear from his face that he did not intend to go ahead right then.

Whatever it was, he didn't get a chance to say it. Josephs stood up, threw off his bathrobe and climbed up on the table. He had just lighted a cigarette; he passed it to a hospital orderly and said, "Hold this for me, Jack, while Doctor"—he named our own surgeon—"pumps me up." With that he peels up his pajama coat.

You know the old business about sending a student pilot right back up after his first crack-up. That was the shape our young doctor was in—he had to get right back to it and prove to himself that it was just bad luck and not because he was a butcher. But he couldn't send himself back in; Josephs had to do it for him. Josephs could have ruined him professionally that moment, by backing out and giving him time to work up a real case of nerves—but instead Josephs forced his hand, made him do it.

Josephs died on the table.

The needle went in and everything seemed all right, then Josephs gave a little sigh and died. Dr. Armand was on hand this time and took charge, but it did no good. It was like seeing the same horror movie twice. The same four men arrived to move the body over to the morgue—probably the same basket.

Our doctor now looked like a corpse himself. Dr. Armand took over. "You two get back to bed," he said to Colonel Hostetter and me. "Colonel, come over to my ward this afternoon; I'll take care of your treatment."

But Hostetter shook his head. "No, thank you," he said crisply, "My ward surgeon takes care of my needs." He took off his robe. The young fellow didn't move. The Colonel went up to him and shook his arm. "Come, now Doctor—you'll make us both late for lunch." With that he climbed up on the table and exposed his ribs.

A few moments later he climbed off again, the job done, and our ward surgeon was looking human again, although still covered with sweat.

I stopped to catch my breath. Jones nodded soberly and said, "I see what you mean. To do what Colonel Hostetter did takes a kind of cold courage way beyond the courage needed to fight."

"He doesn't mean anything of the sort," Arkwright objected. "He wasn't talking about Hostetter; he meant the intern. The doctor had to steady down and do a job—not once but twice. Hostetter just had to hold still and let him do it."

I felt tired and old. "Just a moment," I said. "You're both wrong. Remember I defined 'bravery' as requiring that a man had to have a choice . . . and chooses to be brave in spite of his own fear. The ward surgeon had the decisions forced on him, so he is not in the running. Colonel Hostetter was an old man and blooded in battle—and he had Josephs' example to live up to. So he doesn't get first prize."

"But that's silly," Jones protested. "Josephs was brave, sure—but, if it was hard for Josephs to offer himself, it was four times as hard for Hostetter. It would begin to look like a jinx—like a man didn't stand a chance of coming off that table alive."

"Yes, yes!" I agreed. "I know, that's the way *I* felt at the time. But you didn't let me finish. I know for *certain* that it took more bravery to do what Josephs did.

"The autopsy didn't show an air embolism in Josephs, or anything else. Josephs died of fright."

SIXTH COLUMN

CHAPTER ONE

"What the hell goes on here?" Whitey Ardmore demanded.

They ignored his remark as they had ignored his arrival. The man at the television receiver said, "Shut up. We're listening," and turned up the volume. The announcer's voice blared out: "—Washington destroyed completely before the government could escape. With Manhattan in ruins, that leaves no—"

There was a click as the receiver was turned off. "That's that," said the man near it. "The United States is washed up." Then he added, "Anybody got a cigarette?"

Getting no answer, he pushed his way out of the small circle gathered around the receiver and felt through the pockets of a dozen figures collapsed by a table. It was not too easy, as rigor mortis had set in, but he finally located a half-empty pack, from which he removed a cigarette and lighted it.

"Somebody answer me!" commanded Ardmore. "What's happened here?"

The man with the cigarette looked him over for the first time. "Who are you?"

"Ardmore, major, intelligence. Who are you?"

"Calhoun, colonel in research."

"Very well, Colonel—I have an urgent message for your commanding officer. Will you please have someone tell him that I am here and see to it that I am taken to him?" He spoke with poorly controlled exasperation.

Calhoun shook his head. "Can't do it. He's dead." He seemed to derive some sort of twisted pleasure from the announcement.

"Huh?"

"That's right—dead. They're all dead, all the rest. You see before you, my dear Major, all that are left of the personnel of the Citadel—perhaps I should say of the emergency research laboratory, department of defense, this being in the nature of an official report." He smiled with half his face, while his eye took in the handful of living men in the room.

Ardmore took a moment to comprehend the statement, then inquired, "The PanAsians?"

"No. No, not the PanAsians. So far as I know, the enemy does not suspect the existence of the Citadel. No, we did it ourselves—an experiment that worked too well. Dr. Ledbetter was engaged in research in an attempt to discover a means of—"

"Never mind that, Colonel. Whom does command revert to? I've got to carry out my orders."

"Command? Military command? Good Lord, man, we haven't had time to think about that yet. Wait a moment."

His eye roved around the room, counting noses. "Hm-m-m—I'm senior to everyone here—and they are all here. I suppose that makes me commanding officer."

"No line officers present?"

"No. All special commissions. That leaves me it. Go ahead with your report."

Ardmore looked about at the faces of the half a dozen men in the room. They were following the conversation with apathetic interest. Ardmore worried to himself before replying over how to phrase the message. The situation had changed; perhaps he should not deliver it at all.

"I was ordered," he said, picking his words, "to inform your general that he was released from superior command. He was to operate independently and prosecute the war against the invader according to his own judgment. You see," he went on, "when I left Washington twelve hours ago we knew they had us. This concentration of brain power in the Citadel was about the only remaining possible military asset."

Calhoun nodded. "I see. A defunct government sends orders to a defunct laboratory. Zero plus zero equals zero. It's all very funny if one only knew when to laugh."

"Colonel!"

"Yes?"

"They are your orders now. What do you propose to do with them?"

"Do with them? What the hell is there to do? Six men against four hundred million. I suppose," he added "to make everything nice and tidy for the military mind I should write out a discharge from the United States army for everybody left and kiss 'em good-by. I don't know where that leaves me—hara-kiri, perhaps. Maybe you don't get it. This is all the United States there is left. And it's left because the PanAsians haven't found it."

Ardmore wet his lips. "Apparently I did not clearly convey the order. The order was to take charge, and prosecute the war!"

"With what?"

He measured Calhoun before answering. "It is not actually your responsibility. Under the changed situation, in accordance with the articles of war, as senior line officer present I am assuming command of this detachment of the United States army!"

It hung in the balance for twenty heartbeats. At last Calhoun stood up and attempted to square his stooped shoulders. "You are perfectly correct, sir. What are your orders?"

"What are your orders?" he asked himself. Think fast, Ardmore, you big Junk, you've shot off your face—now where are you? Calhoun was right when he asked "With what?" Yet he could not stand still and see the remnant of military organization fall to pieces.

You've got to tell 'em something, and it's got to be good; at least good enough to hold 'em until you think of something better. Stall, brother, stall! "I think we had best examine the new situation here, first. Colonel, will you oblige me by having the remaining personnel gather around—say around that big table? That will be convenient."

"Certainly, sir." The others, having heard the order, moved toward the table. "Graham! And you, what's your name? Thomas, isn't it? You two remove Captain MacAllister's body to some other place. Put him in the corridor for now."

The commotion of getting one of the ubiquitous corpses out of the way and getting the living settled around a table broke the air of unreality and brought things into focus. Ardmore felt more self-confidence when he turned again to Calhoun. "You had better introduce me to those here present. I want to know what they do and something about them, as well as their names."

It was a corporal's guard, a forlorn remnant. He had expected to find, hidden here safely and secretly away under an unmarked spot in the Rocky Mountains, the most magnificent aggregation of research brains ever gathered together for one purpose. Even in the face of complete military disaster to the regular forces of the United States, there remained a reasonable outside chance that two hundred-odd keen scientific brains, secreted in a hideaway whose very existence was unsuspected by the enemy and equipped with every modern facility for research, might conceivably perfect and operate some weapon that would eventually drive out the PanAsians.

For that purpose he had been sent to tell the commanding general that he was on his own, no longer responsible to higher authority. But what could half a dozen men do in any case?

For it was a scant half a dozen. There was Dr. Lowell Calhoun, mathematician, jerked out of university life by the exigencies of war and called a colonel. There was Dr. Randall Brooks, biologist and biochemist, with a special commission of major. Ardmore liked his looks; he was quiet and mild, but gave the impression of an untroubled strength of character superior to that of a more extroverted man—he would do, and his advice would be useful.

Ardmore mentally dubbed Robert Wilkie a "punk kid." He was young and looked younger, having an overgrown collie-dog clumsiness, and hair that would not stay in place. His field, it developed, was radiation, and the attendant branches of physics too esoteric for a layman to understand. Ardmore had not the slightest way of judging whether or not he was any good in his specialty. He might be a genius, but his appearance did not encourage the idea.

No other scientist remained. There were three enlisted men: Herman Scheer, technical sergeant. He had been a mechanic, a die maker, a tool maker. When the army picked him up he had been making precision instruments for the laboratories of the Edison Trust. His brown, square hands and lean fingers backed up his account of himself. His lined, set face and heavy jaw muscles made Ardmore judge him to be a good man to have at his back in a tight place. He would do.

There remained Edward Graham, private first-class, specialist rating officers' cook. Total war had turned him from his profession as an artist and interior decorator to his one other talent, cooking. Ardmore was unable to see how he could fit into the job, except, of course, that somebody had to cook.

The last man was Graham's helper, Jeff Thomas, private—background: none. "He wandered in here one day," explained Calhoun. "We had to enlist him and keep him here to protect the secret of the place."

Acquainting Ardmore with the individuals of his "command" had used up several minutes during which he had thought furiously with half his mind about what he should say next. He knew what he had to accomplish, some sort of a shot in the arm that would restore the morale of this badly demoralized group, some of the old hokum that men live by. He believed in hokum, being a publicity man by trade and an army man only by necessity. That brought to mind another worry—should he let them know that he was no more a professional than they, even though he happened to hold a line commission? No, that would not be very bright; they needed just now to regard him with the faith that the layman usually holds for the professional.

Thomas was the end of the list: Calhoun had stopped talking. Here's your chance, son, better not muff it!

Then he had it fortunately it would take only a short buildup. "It will be necessary for us to continue our task assignment independently for an indefinite period. I want to remind you that we derive our obligations not from our superior officers who were killed in Washington, but from the people of the United States, through their Constitution. That Constitution is neither captured nor destroyed—it cannot, for it is not a piece of paper, but the joint contract of the American people. Only the American people can release us from it."

Was he right? He was no lawyer, and he didn't know—but he did know that they needed to believe it. He turned to Calhoun. "Colonel Calhoun, will you now swear me in as commanding officer of this detachment of the United States army?" Then he added, as an apparent afterthought, "I think it would be well for us all to renew our oaths at the same time."

It was a chanted chorus that echoed through the nearly empty room. "'I do solemnly swear—to carry out the duties of my office—and to uphold and defend the Constitution of the United States—against all of its enemies, domestic and foreign!'

"So help me God."

"'So help me God!'"

Ardmore was surprised to discover that the show he had staged brought tears to his own cheeks. Then he noticed them in Calhoun's eyes. Maybe there was more to it than he had thought.

"Colonel Calhoun, you, of course, become director of research. You are second in command, but I will carry out the duties of executive officer myself in order to leave you free to pursue your scientific inquiries. Major Brooks and Captain Wilkie are assigned to you. Scheer!"

"Yes, sir!"

"You work for Colonel Calhoun. If he does not need all of your service, I will assign additional duties later. Graham!"

"Yes, sir."

"You will continue your present duties. You are also mess sergeant, mess officer, supply officer—in fact, you are the whole commissary department. Bring me a report later today estimating the number of rations available and the condition of perishables. Thomas works for you, but is subject to call by any member of the scientific staff any time they want him. That may delay meals, but it can't be helped."

"Yes, sir."

"You and I and Thomas will perform all duties among us that do not directly apply to research, and will assist the scientists in any way and at any time that they need us. That specifically includes myself. Colonel," he emphasized, turning to Calhoun, "if another pair of untrained hands is useful at any point, you are directed to call on me."

"Very well, Major."

"Graham, you and Thomas will have to clear out the bodies around the place before they get too high—say by tomorrow night. Put them in an unused room and hermetically seal it. Scheer will show you how." He glanced at his wrist. "Two o'clock. When did you have lunch?"

"There . . . uh . . . was none today."

"Very well. Graham, serve coffee and sandwiches here in twenty minutes."

"Very good, sir. Come along, Jeff."

"Coming."

As they left, Ardmore turned back to Calhoun. "In the meantime, Colonel, let's go to the laboratory where the catastrophe originated. I still want to find out what happened here!"

The other two scientists and Scheer hesitated; he picked them up with a nod, and the little party filed out.

"You say nothing in particular happened, no explosion, no gas—yet they died?" They were standing around Dr. Ledbetter's last set-up. The martyred scientist's body still lay where it had fallen, a helpless, disorganized heap. Ardmore took his eyes from it and tried to make out the meaning of the set-up apparatus. It looked simple, but called no familiar picture to mind.

"No, nothing but a little blue flame that persisted momentarily. Ledbetter had just closed this switch." Calhoun pointed to it without touching it. It was open now, a self-opening, springloaded type. "I felt suddenly dizzy. When my head cleared, I saw that Ledbetter had fallen and went to him, but there was nothing that I could do for him. He was dead—without a mark on him."

"It knocked me out," offered Wilkie. "I might not have made it if Scheer hadn't given me artificial respiration."

"You were here?" Ardmore asked.

"No, I was in the radiation laboratory over at the other end of the plant. It killed my chief."

Ardmore frowned and pulled a chair out from the wall. As he started to sit down there was a scurrying sound, a small gray shape flashed across the floor and out the open door. A rat, he thought, and dismissed the matter. But Dr. Brooks stared at it in amazement, and ran out the door himself, calling out behind him: "Wait a minute—right back!"

"I wonder what's gotten into him?" Ardmore inquired of no one in particular. The thought flashed through his mind that the strain of events had finally been too much for the mild little biologist.

They had less than a minute to wait in order to find out. Brooks returned as precipitately as he had left. The exertion caused him to pant and interfered with articulation. "Major Ardmore! Dr. Calhoun! Gentlemen!" He paused and caught his breath. "My white mice are alive!"

"Huh? What of it?"

"Don't you see? It's an important datum, perhaps a crucially important datum. None of the animals in the biological laboratory was hurt! Don't you see?"

"Yes, but—Oh! Perhaps I do—the rat was alive and your mice weren't killed, yet men were killed all around them."

"Of course! Of course!" Brooks beamed at Ardmore.

"Hm-m-m. An action that kills a couple of hundred men through rock walls and metal, with no fuss and no excitement, yet passes by mice and the like. I've never before heard of anything that would kill a man but not a mouse." He nodded toward the apparatus. "It looks as if we had big medicine in that little gadget, Calhoun."

"So it does," Calhoun agreed, "if we can learn to control it."

"Any doubt in your mind?"

"Well—we don't know why it killed, and we don't know why it spared six of us, and we don't know why it doesn't harm animals."

"So—Well, that seems to be the problem." He stared again at the simple-appearing enigma. "Doctor, I don't like to interfere with your work right from scratch, but I would rather you did not close that switch without notifying me in advance." His gaze dropped to Ledbetter's still figure and hurriedly shifted.

Over the coffee and sandwiches he pried further into the situation. "Then no one really knows what Ledbetter was up to?"

"You could put it that way," agreed Calhoun. "I helped him with the mathematical considerations, but he was a genius and somewhat impatient with lesser minds. If Einstein were alive, they might have talked as equals, but with the rest of us he discussed only the portions he wanted assistance on, or details he wished to turn over to assistants."

"Then you don't know what he was getting at?"

"Well, yes and no. Are you familiar with general field theory?"

"Criminy, no!"

"Well—that makes it rather hard to talk, Major Ardmore. Dr. Ledbetter was investigating the theoretically possible additional spectra—"

"Additional spectra?"

"Yes. You see, most of the progress in physics in the last century and a half has been in dealing with the electromagnetic spectrum, light, radio, X-ray—"

"Yes, yes, I know that, but how about these additional spectra?"

"That's what I am trying to tell you," answered Calhoun with a slight note of annoyance. "General field theory predicts the possibility of at least three more entire spectra. You see, there are three types of energy fields known to exist in space: electric, magnetic, and gravitic or gravitational. Light, X-rays, all such radiations, are part of the electromagnetic spectrum. Theory indicates the possibility of analogous spectra between magnetic and gravitic, between electric and gravitic, and finally, a three-phase type between electric-magnetio-gravitic fields. Each type would constitute a complete new spectrum, a total of three new fields of learning.

"If there are such, they would presumably have properties quite as remarkable as the electromagnetic spectrum and quite different. But we have no instruments with which to detect such spectra, nor do we even know that such spectra exist."

"You know," commented Ardmore, frowning a little, "I'm just a layman in these matters and don't wish to set my opinion up against yours, but this seems like a search for the little man who wasn't there. I had supposed that this laboratory was engaged in the single purpose of finding a military weapon to combat the vortex beams and A-bomb rockets of the PanAsians. I am a bit surprised to find the man whom you seem to regard as having been your ace researcher engaged in an attempt to discover things that he was not sure existed and whose properties were totally unknown. It doesn't seem reasonable."

Calhoun did not answer; he simply looked supercilious and smiled irritatingly. Ardmore felt put in the wrong and was conscious of a warm flush spreading up toward his face. "Yes, yes," he said hastily, "I know I'm wrong—whatever it was that Ledbetter found, it killed a couple of hundred men. Therefore it is a potential military weapon—but wasn't he just mugging around in the dark?"

"Not entirely," Calhoun replied, with a words-of-one-syllable air. "The very theoretical considerations that predict additional spectra allow of some reasonable probability as to the general nature of their properties. I know that Ledbetter had originally been engaged in a search for a means of setting up tractor and pressor beams—that would be in the magnetogravitic spectrum—but the last couple of weeks he appeared to be in a condition of intense excitement and radically changed the direction of his experimentation. He was close-mouthed; I got no more than a few hints from the transformations and developments which he had me perform for him. However—" Calhoun drew a bulky looseleaf notebook from an inner pocket "he kept complete notes of his experiments. We should be able to follow his work and perhaps infer his hypotheses."

Young Wilkie, who was seated beside Calhoun, bent toward him. "Where did you find these, doctor?" he asked excitedly.

"On a bench in his laboratory. If you had looked you would have seen them."

Wilkie ignored the thrust; he was already eating up the symbols set down in the opened book. "But that is a radiation formula—"

"Of course it is—d'you think I'm a fool?"

"But it's all wrong!"

"It may be from your standpoint; you may be sure that it was not to Dr. Ledbetter."

They branched off into argument that was totally meaningless to Ardmore; after some minutes he took advantage of a pause to say, "Gentlemen! Gentlemen! just a moment. I can see that I am simply keeping you from your work; I've learned all that I can just now. As I understand it, your immediate task is to catch up with Dr. Ledbetter and to discover what it is that his apparatus does—without killing yourselves in the process. Is that right?"

"I would say that is a fair statement," Calhoun agreed cautiously.

"Very well, then—carry on, and keep me advised at your convenience." He got up; the others followed his example. "Oh just one more thing."

"Yes?"

"I happened to think of something else. I don't know whether it is important or not, but it came to mind because of the importance that Dr. Brooks attached to the matter of the rats and mice." He ticked points off on his fingers.

"Many men were killed; Dr. Wilkie was knocked out and very nearly died; Dr. Calhoun experienced only a momentary discomfort; the rest of those who lived apparently didn't suffer any effects of any sort weren't aware that anything had happened except that their companions mysteriously died. Now, isn't that data of some sort?"

He awaited a reply anxiously, being subconsciously afraid that the scientists would consider his remarks silly, or obvious.

Calhoun started to reply, but Dr. Brooks cut in ahead of him. "Of course, it is! Now why didn't I think of that? Dear me, I must be confused today. That establishes a gradient, an ordered relationship in the effect of the unknown action." He stopped and thought, then went on almost at once. "I really must have your permission, Major, to examine the cadavers of our late colleagues, then by examining for differences between them and those alive, especially those hard hit by the unknown action—" He broke off short and eyed Wilkie speculatively.

"No, you don't!" protested Wilkie. "You won't make a guinea pig out of me. Not while I know it!" Ardmore was unable to tell whether the man's apprehension was real or facetious. He cut it short.

"The details will have to be up to you gentlemen. But remember—no chances to your lives without notifying me."

"You hear that, Brooksie?" Wilkie persisted.

Ardmore went to bed that night from sheer sense of duty, not because he felt ready to sleep. His immediate job was accomplished; he had picked up the pieces of the organization known as the Citadel and had thrown it together into some sort of a going concern—whether or not it was going any place he was too tired to judge, but at least it was going. He had given them a pattern to live by, and, by assuming leadership and responsibility, had enabled them to unload their basic worries on him and thereby acquire some measure of emotional security. That should keep them from going crazy in a world which had gone crazy.

What would it be like, this crazy new world—a world in which the superiority of western culture was not a casually accepted "Of course," a world in which the Stars and Stripes did not fly, along with the pigeons, over every public building?

Which brought to mind a new worry: if he was to maintain any pretense of military purpose, he would have to have some sort of a service of information.

He had been too busy in getting them all back to work to think about it, but he would have to think about it tomorrow, he told himself, then continued to worry about it.

An intelligence service was as important as a new secret weapon—more important; no matter how fantastic and powerful a weapon might be developed from Dr. Ledbetter's researches, it would be no help until they knew just where and how to use it against the enemy's weak points. A ridiculously inadequate military intelligence had been the prime characteristic of the United States as a power all through its history. The most powerful nation the globe had ever seen—but it had stumbled into wars like a blind giant. Take this present mess: the atom bombs of PanAsia weren't any more powerful than our own but we had been caught flatfooted and had never gotten to use a one.

We had had how many stockpiled? A thousand, he had heard. Ardmore didn't know, but certainly the PanAsians had known, just how many, just where they were. Military intelligence had won the war for them, not secret weapons. Not that the secret weapons of the PanAsians were anything to sneer at particularly when it was all too evident that they really were "secret." Our own so-called intelligence services had fallen down on the job.

O. K., Whitey Ardmore, it's all yours now! You can build any sort of an intelligence service your heart desires—using three nearsighted laboratory scientists, an elderly master sergeant, two kitchen privates, and the bright boy in person. So you are good at criticizing—"If you're so smart, why ain't you rich?"

He got up, wished passionately for just one dose of barbiturate to give him a night's sleep, drank a glass of hot water instead, and went back to bed.

Suppose they did dig up a really powerful and new weapon? That gadget of Ledbetter's certainly looked good, if they could learn to handle it but what then? One man couldn't run a battle cruiser—he couldn't even get it off the ground—and six men couldn't whip an empire, not even with seven-league boots and a death ray. What was that old crack of Archimedes? "If I had a lever long enough and a fulcrum on which to rest it, I could move the Earth." How about the fulcrum? No weapon was a weapon without an army to use it.

He dropped into a light sleep and dreamed that he was flopping around on the end of the longest lever conceivable, a useless lever, for it rested on nothing. Part of the time he was Archimedes, and part of the time Archimedes stood beside him, jeering and leering at him with a strongly Asiatic countenance.

CHAPTER TWO

Ardmore was too busy for the next couple of weeks to worry much about anything but the job at hand. The underlying postulate of their existence pattern—that they were, in fact, a military organization which must some day render an accounting to civil authority—required that he should comply with, or closely simulate compliance with, the regulations concerning paperwork, reports, records, pay accounts, inventories, and the like. In his heart he felt it to be waste motion, senseless, yet as a publicity man, he was enough of a jackleg psychologist to realize intuitively that man is a creature that lives by symbols. At the moment these symbols of government were all important.

So he dug into the regulation manual of the deceased paymaster and carefully closed out the accounts of the dead, noting in each case the amounts due each man's dependents "in lawful money of the United States," even while wondering despondently if that neat phrase would ever mean anything again. But he did it, and he assigned minor administrative jobs to each of the others in order that they might realize indirectly that the customs were being maintained.

It was too much clerical work for one man to keep up. He discovered that Jeff Thomas, the cook's helper, could use a typewriter with facility and had a fair head for figures. He impressed him into the job. It threw more work on Graham, who complained, but that was good for him, he thought—a dog needs fleas. He wanted every member of his command to go to bed tired every night.

Thomas served another purpose. Ardmore's highstrung disposition required someone to talk to. Thomas turned out to be intelligent and passively sympathetic, and he found himself speaking with more and more freedom to the man. It was not in character for the commanding officer to confide in a private, but he felt instinctively that Thomas would not abuse his trust—and he needed nervous release.

Calhoun brought up the matter which forced Ardmore to drop his preoccupation with routine and turn his attention to more difficult matters. Calhoun had called to ask permission to activate Ledbetter's apparatus, as modified to suit their current hypotheses, but he added another and embarrassing question.

"Major Ardmore, can you give me some idea as to how you intend to make use of the 'Ledbetter effect'?"

Ardmore did not know; he answered with another question. "Are you near enough to results to make that question urgent? If so, can you give me some idea of what you have discovered so far?"

"That will be difficult," Calhoun replied in an academic and faintly patronizing manner, "since I am constrained not to speak in the mathematical language which, of necessity, is the only way of expressing such things—"

"Now, Colonel, please," Ardmore broke in, irritated more than he would admit to himself and inhibited by the presence of Private Thomas, "you can kill a man with it or you can't and you can control whom you kill or you can't."

"That's an oversimplification," Calhoun argued. "However, we think that the new set-up will be directional in its effect. Dr. Brook's investigations caused him to hypothecate an asymmetrical relationship between the action and organic life it is applied to, such that an inherent characteristic of the life form determines the effect of the action as well as the inherent characteristics of the action itself. That is to say, the effect is a function of the total factors of the process, including the life form involved, as well as the original action—"

"Easy, easy, Colonel. What does that mean as a weapon?"

"It means that you could turn it on two men and decide which one it is to kill—with proper controls," Calhoun answered testily. "At least, we think so. Wilkie has volunteered to act as a control on it, with mice as the object."

Ardmore granted permission for the experiment to take place, subject to precautions and restrictions.

When Calhoun had gone, his mind returned at once to the problem of what he was going to do with the weapon—if any. And that required data that he did not have. Damn it! He had to have a service of information; he had to know what was going on outside.

The scientists were out, of course. And Scheer, for the scientific staff needed his skill. Graham? No, Graham was a good cook, but nervous and irritable, emotionally not stable, the very last man to pick for a piece of dangerous espionage. It left only himself. He was trained for such things; he would have to go.

"But you can't do that, sir," Thomas reminded him.

"Huh? What's that?" He had been unconsciously expressing his thoughts aloud, a habit he had gotten into when he was alone, or with Thomas only. The man's manner encouraged using him for a sounding board.

"You can't leave your command, sir. Not only is it against regulations, but, if you will let me express an opinion, everything you have done so far will fall to pieces."

"Why should it? I'll be back in a few days."

"Well, sir, maybe it would hold together for a few days—though I'm not sure of that. Who would be in charge in your absence?"

"Colonel Calhoun—of course."

"Of course." Thomas expressed by raised eyebrows and ready agreement an opinion which military courtesy did not permit him to say aloud. Ardmore knew that Thomas was right. Outside of his specialty, Calhoun was a bad-tempered, supercilious, conceited old fool, in Ardmore's opinion. Ardmore had had to intercede already to patch up trouble which Calhoun's arrogance had caused. Scheer worked for Calhoun only because Ardmore had talked with him, calmed him down, and worked on his strong sense of duty.

The situation reminded him of the time when he had worked as press agent for a famous and successful female evangelist. He had signed on as director of public relations, but he had spent two-thirds of his time straightening out the messes caused by the vicious temper of the holy harridan.

"But you have no way of being sure that you will be back in a few days," Thomas persisted. "This is a very dangerous assignment; if you get killed on it, there is no one here who can take over your job."

"Oh, now, that's not true, Thomas. No man is irreplaceable."

"This is no time for false modesty, sir. That may be true in general, but you know that it is not true in this case. There is a strictly limited number to draw from, and you are the only one from whom all of us will take direction. In particular, you are the only one from whom Dr. Calhoun will take direction. That is because you know how to handle him. None of the others would be able to, nor would he be able to handle them."

"That's a pretty strong statement, Thomas."

Thomas said nothing. At length Ardmore went on.

"All right, all right suppose you are right. I've got to have military information. How am I going to get it if I don't go myself?"

Thomas was a little slow in replying. Finally, he said quietly, "I could try it."

"You?" Ardmore looked him over and wondered why he had not considered Thomas. Perhaps because there was nothing about the man to suggest his potential ability to handle such a job—that, combined with the fact that he was a private, and one did not assign privates to jobs requiring dangerous independent action. Yet perhaps—

"Have you ever done any work of that sort?"

"No, but my experience may be specially adapted in a way to such work."

"Oh, yes! Scheer told me something about you. You were a tramp, weren't you, before the army caught up with you?"

"Not a tramp," Thomas corrected gently, "a hobo."

"Sorry—what's the distinction?"

"A tramp is a bum, a parasite, a man that won't work. A hobo is an itinerant laborer who prefers casual freedom to security. He works for his living, but he won't be tied down to one environment."

"Oh, I see. Hm-m-m—yes, and I begin to see why you might be especially well adapted to an intelligence job. I suppose it must require a good deal of adaptability and resourcefulness to stay alive as a hobo. But wait a minute, Thomas—I guess I've more or less taken you for granted; I need to know a great deal more about you, if you are to be entrusted with this job. You know, you don't act like a hobo."

"How does a hobo act?"

"Eh? Oh, well, skip it. But tell me something about your background. How did you happen to take up hoboing?"

Ardmore realized that he had, for the first time, pierced the man's natural reticence. Thomas fumbled for an answer, finally replying, "I suppose it was that I did not like being a lawyer."

"What?"

"Yes. You see, it was like this: I went from the law into social administration. In the course of my work I got an idea that I wanted to write a thesis on migratory labor and decided that in order to understand the subject I would have to experience the conditions under which such people lived."

"I see. And it was while you were doing your laboratory work, as it were, that the army snagged you."

"Oh, no," Thomas corrected him. "I've been on the road more than ten years. I never went back. You see, I found I liked being a hobo."

The details were rapidly arranged. Thomas wanted nothing in the way of equipment but the clothes he had been wearing when he had stumbled into the Citadel. Ardmore had suggested a bedding roll, but Thomas would have none of it. "It would not be in character," he explained. "I was never a bindlestiff. Bindlestiffs are dirty, and a self-respecting hobo doesn't associate with them. All I want is a good meal in my belly and a small amount of money on my person."

Ardmore's instructions to him were very general. "Almost anything you hear or see will be data for me," he told him. "Cover as much territory as you ran, and try to be back here within a week. If you are gone much longer than that, I will assume that you are dead or imprisoned, and will have to try some other plan.

"Keep your eyes open for some means by which we can establish a permanent service of information. I can't suggest what it is you are to look for in that connection, but keep it in mind. Now as to details: anything and everything about the PanAsians, how they are armed, how they police occupied territory, where they have set up headquarters, particularly their continental headquarters, and, if you can make any sort of estimate, how many of them there are and how they're distributed. That would keep you busy for a year, at least; just the same, be back in a week."

Ardmore showed Thomas how to operate one of the outer doors of the Citadel; two bars of "Yankee Doodle," breaking off short, and a door appeared in what seemed to be a wall of country rock—simple, and yet foreign to the Asiatic mind. Then he shook hands with him and wished him good luck.

Ardmore found that Thomas had still one mare surprise for him; when he shook hands, he did so with the grip of the Dekes, Ardmore's own fraternity! Ardmore stood staring at the closed portal, busy arranging his preconceptions.

When he turned around, Calhoun was behind him. He felt somewhat as if he had been caught stealing jam. "Oh, hello, Doctor," he said quickly.

"How do you do, Major," Calhoun replied with deliberation. "May I inquire as to what is going on?"

"Certainly. I've sent Lieutenant Thomas out to reconnoiter."

"Lieutenant?"

"Brevet lieutenant. I was forced to use him for work far beyond his rank; I found it expedient to assign him the rank and pay of his new duties."

Calhoun pursued that point no further, but answered with another, in the same faintly critical tone of voice. "I suppose you realize that it jeopardizes all of us to send anyone outside? I am a little surprised that you should act in such a matter without consulting with others."

"I am sorry you feel that way about it, Colonel," Ardmore replied, in a conscious attempt to conciliate the older man, "but I am required to make the final decision in any case, and it is of prime importance to our task that nothing be permitted to distract your attention from your all-important job of research. Have you completed your experiment?" he went on quickly.

"Yes."

"Well?"

"The results were positive. The mice died."

"How about Wilkie?"

"Oh, Wilkie was unhurt, naturally. That is in accordance with my predictions."

Jefferson Thomas. Bachelor of Arts magna cum laude, University of California, Bachelor of Law, Harvard Law School, professional hobo, private and cook's helper, and now a brevet lieutenant, intelligence, United States army, spent his first night outside shivering on pine needles where dark had overtaken him. Early the next morning he located a ranchhouse.

They fed him, but they were anxious for him to move along. "You never can tell when one of those heathens is going to come snooping around," apologized his host, "and I can't afford to be arrested for harboring refugees. I got the wife and kids to think about." But he followed Thomas out to the road, still talking, his natural garrulity prevailing over his caution. He seemed to take a grim pleasure in bewailing the catastrophe.

"God knows what I'm raising those kids up to. Some nights it seems like the only reasonable thing to do is to put them all out of their sorrow. But Jessie—that's my wife—says it's a scandal and a sin to talk that way, that the Lord will take care of things all in His own good time. Maybe so—but I know it's no favor to a child to raise it up to be bossed around and lorded over by those monkeys." He spat. "It's not American."

"What's this about penalties for harboring refugees?"

The rancher stared at him. "Where've you been, friend?"

"Up in the hills. I haven't laid eyes on one of the so-and-so's yet."

"You will. But then you haven't got a number, have you? You'd better get one. No, that won't do you any good; you'd just land in a labor camp if you tried to get one."

"Number?

"Registration number. Like this." He pulled a glassine-covered card out of his pocket and displayed it. It had attached to it a poor but recognizable picture of the rancher, his fingerprints, and pertinent data as to his occupation, marital status, address, etcetera. There was a long, hyphenated number running across the top. The rancher indicated it with a work-stained finger. "That first part is my number. It means I have permission from the emperor to stay alive and enjoy the air and sunshine," he added bitterly. "The second part is my serial classification. It tells where I live and what I do. If I want to cross the county line, I have to have that changed. If I want to go to any other town than the one I'm assigned to do my marketing in, I've got to get a day's special permit. Now I ask you—is that any way for a man to live?"

"Not for me," agreed Thomas. "Well, I guess I had better be on my way before I get you in trouble. Thanks for the breakfast."

"Don't mention it. It's a pleasure to do a favor for a fellow American these days."

He started off down the road at once, not wishing the kindly rancher to see how thoroughly he had been moved by the picture of his degradation. The implications of that registration card had shaken his free soul in a fashion that the simple, intellectual knowledge of the defeat of the United States had been unable to do.

He moved slowly for the first two or three days, avoiding the towns until he had gathered sufficient knowledge of the enforced new customs to be able to conduct himself without arousing suspicion. It was urgently desirable that he be able to enter at least one big city in order to snoop around, read the bulletin boards, and find a chance to talk with persons whose occupations permitted them to travel. From a standpoint of personal safety he was quite willing to chance it without an identification card but he remembered clearly a repeated injunction of Ardmore's "Your paramount duty is to return! Don't go making a hero of yourself. Don't take any chance you can avoid and come back!"

Cities would have to wait.

Thomas skirted around towns at night, avoiding patrols as he used to avoid railroad cops. The second night out he found the first of his objectives, a hobos' jungle. It was just where he had expected to find it, from his recollection of previous trips through the territory. Nevertheless, he almost missed it, for the inevitable fire was concealed by a jury-rigged oil-can stove, and shielded from chance observation.

He slipped into the circle and sat down without comment, as custom required, and waited for them to look him over.

Presently a voice said plaintively: "It's Gentleman Jeff. Cripes, Jeff, you gave me a turn. I thought you was a flatface. Whatcha been doin' with yourself, Jeff?"

"Oh, one thing and another. On the dodge."

"Who isn't these days?" the voice returned. "Everywhere you try, those slant-eyes—" He broke into a string of attributions concerning the progenitors and personal habits of the PanAsians about which he could not possibly have had positive knowledge.

"Stow it, Moe," another voice commanded. "Tell us the news, Jeff."

"Sorry," Thomas refused affably, "but I've been up in the hills, kinda keeping out of the army and doing a little fishing."

"You should have stayed there. Things are bad everywhere. Nobody dares give an unregistered man a day's work and it takes everything you've got just to keep out of the labor camps. It makes the big Red hunt look like a picnic."

"Tell me about the labor camps," Thomas suggested. "I might get hungry enough, to try one for a while." .

"You don't know. Nobody could get that hungry." The voice paused, as if the owner were turning the unpleasant subject over in his mind. "Did you know the Seattle Kid?"

"Seem to recall. Little squint-eyed guy, handy with his hands?"

"That's him. Well, he was in one, maybe a week, and got out. Couldn't tell us how; his mind was gone. I saw him the night he died. His body was a mass of sores, blood poisoning, I guess." He paused. then added reflectively: "The smell was pretty bad."

Thomas wanted to drop the subject but he needed to know more. "Who gets sent to these camps?"

"Any man that isn't already working at an approved job. Boys from fourteen on up. All that was left alive of the army after we folded up. Anybody that's caught without a registration card."

"That ain't the half of it," added Moe. "You should see what they do with unassigned women. Why, a woman was telling me just the other day—a nice old gel; gimme a handout. She was telling me about her niece used to be a schoolteacher, and the flatfaces don't want any American schools or teachers. When they registered her they—"

"Shut up, Moe. You talk too much."

It was disconnected, fragmentary, the more so as he was rarely able to ask direct questions concerning the things he really wanted to know. Nevertheless he gradually built up a picture of a people being systematically and thoroughly enslaved, a picture of a nation as helpless as a man completely paralyzed, its defenses destroyed, its communications entirely in the hands of the invaders.

Everywhere he found boiling resentment, a fierce willingness to fight against the tyranny, but it was undirected, uncoordinated, and, in any modern sense, unarmed. Sporadic rebellion was as futile as the scurrying of ants whose hill has been violated. PanAsians could be killed, yes, and there were men willing to shoot on sight, even in the face of the certainty of their own deaths. But their hands were bound by the greater certainty of brutal multiple retaliation against their own kind. As with the Jews in Germany before the final blackout in Europe, bravery was not enough, for one act of violence against the tyrants would be paid for by other men, women, and children at unspeakable compound interest.

Even more distressing than the miseries he saw and heard about were the reports of the planned elimination of the American culture as such. The schools were closed. No word might be printed in English. There was a suggestion of a time, one generation away, when English would be an illiterate language, used orally alone by helpless peons who would never be able to revolt for sheer lack of a means of communication on any wide scale.

It was impossible to form any rational estimate of the numbers of Asiatics now in the United States.

Transports, it was rumored, arrived daily on the West coast, bringing thousands of administrative civil servants, most of whom were veterans of the amalgamation of India. Whether or not they could be considered as augmenting the armed forces who had conquered and now policed the country it was difficult to say, but it was evident that they would replace the white minor officials who now assisted in civil administration at pistol point. When those white officials were "eliminated" it would be still more difficult to organize resistance.

Thomas found the means to enter the cities in one of the hobo jungles.

Finny—surname unknown—was not, properly speaking, a knight of the road, but one who had sought shelter among them and who paid his way by practicing his talent. He was an old anarchist comrade who had served his concept of freedom by engraving really quite excellent Federal Reserve notes without complying with the formality of obtaining permission from the treasury department. Some said that his name had been Phineas; others connected his moniker with his preference for manufacturing five-dollar bills—"big enough to be useful; not big enough to arouse suspicion."

He made a registration card for Thomas at the request of one of the 'bos. He talked while Thomas watched him work. "It's only the registration number that we really have to worry about, son. Practically none of the Asiatics you will run into can read English, so it really doesn't matter a lot we say about you. 'Mary had a little lamb—' would probably do. Same for the photograph. To them, all white men look alike." He picked up a handful of assorted photographs from his kit and peered at them nearsightedly through thick spectacles. "Here—pick out one of these that looks not unlike you and we will use it. Now for the number—"

The old man's hands were shaky, almost palsied, yet they steadied down to a deft sureness as he transferred India ink to cardboard in amazing simulation of machine printing. And this he did without proper equipment, without precision tools, under primitive conditions. Thomas understood why the old artist's masterpieces caused headaches for bank clerks. "There!" he announced. "I've given you a serial number which states that you were registered shortly after the change, and a classification number which permits you to travel. It also says that you are physically unfit for manual labor, and are permitted to peddle or beg. It's the same thing to their minds."

"Thanks, awfully," said Thomas. "Now. . . uh . . . what do I owe you for this?"

Finny's reaction made him feel as if he had uttered some indecency. "Don't mention payment, my son! Money is wrong—it's the means whereby man enslaves his brother."

"I beg your pardon, sir," Thomas apologized sincerely. "Nevertheless, I wish there were some way for me to do something for you."

"That is another matter. Help your brother when you can, and help will come to you when you need it."

Thomas found the old anarchist's philosophy confused, confusing, and impractical, but he spent considerable time drawing him out, as he seemed to know more about the PanAsians than anyone else he had met. Finny seemed unafraid of them and completely confident of his own ability to cope with them when necessary. Of all the persons Thomas had met since the change, Finny seemed the least disturbed by it—in fact, disturbed not at all, and completely lacking in any emotion of hate or bitterness. This was hard for him to understand at first in a person as obviously warmhearted as Finny, but he came to realize that, since the anarchist believed that all government was wrong and that all men were to him in fact brothers, the difference to him was one of degree only. Looking at the PanAsians through Finny's eyes there was nothing to hate; they were simply more misguided souls whose excesses were deplorable.

Thomas did not see it from such Olympian detachment. The PanAsians were murdering and oppressing a once-free people. A good PanAsian was a dead PanAsian, he told himself, until the last one was driven back across the Pacific. If Asia was overpopulated, let them limit their birth rate.

Nevertheless, Finny's detachment and freedom from animus enabled Thomas more nearly to appreciate the nature of the problem. "Don't make the mistake of thinking of the PanAsians as bad—they're not, but they are different. Behind their arrogance is a racial inferiority complex, a mass paranoia, that makes it necessary for them to prove to themselves by proving to us that a yellow man is just as good as a white man, and a damned sight better. Remember that, son, they want the outward signs of respect more than they want anything else in the world."

"But why should they have an inferiority complex about us? We've been completely out of touch with them for more than two generations—ever since the Nonintercourse Act."

"Do you think racial memory is that short-lived? The seeds of this are way back in the nineteenth century. Do you recall that two high Japanese officials had to commit honorable suicide to wipe out a slight that was done Commodore Perry when he opened up Japan? Now those two deaths are being paid for by the deaths of thousands of American officials."

"But the PanAsians aren't Japanese."

"No, and they are not Chinese. They are a mixed race, strong, proud, and prolific. From the American standpoint they have the vices of both and the virtues of neither. But from my standpoint they are simply human beings, who have been duped into the old fallacy of the State as a super-entity. 'Ich habe einen Kameraden.' Once you understand the nature of—" He went off into a long dissertation, a mixture of Rousseau, Rocker, Thoreau, and others. Thomas found it inspirational, but unconvincing.

But the discussion with Finny was of real use to Thomas in comprehending what they were up against. The Nonintercourse Act had kept the American people from knowing anything important about their enemy. Thomas wrinkled his brow, trying to recall what he knew about the history of it.

At the time it had been passed, the Act had been no more than a de jure recognition of a de facto condition. The sovietizing of Asia had excluded westerners, particularly Americans, from Asia more effectively than could any Act of Congress. The obscure reasons that had led the Congress of that period to think that the United States gained in dignity by passing a law confirming what the commissars had already done to us baffled Thomas; it smacked of Sergeant Dogberry's policy toward thieves. He supposed that it had simply seemed cheaper to wish Red Asia out of existence than to fight a war.

The policy behind the Act had certainly seemed to justify itself for better than half a century; there had been no war. The proponents of the measure had maintained that China was a big bite even for Soviet Russia to digest and that the United States need fear no war while the digesting was taking place. They had been correct as far as they went but as a result of the Nonintercourse Act we had our backs turned when China digested Russia . . . leaving America to face a system even stranger to western ways of thinking than had been the Soviet system it displaced.

On the strength of the forged registration card and Finny's coaching as to the etiquette of being a serf, Thomas ventured into a medium-sized city. The cleverness of Finny's work was put to test almost immediately.

He had stopped at a street corner to read a posted notice. It was a general order to all Americans to be present at a television receiver at eight each evening in order to note any instructions that their rulers might have for them. It was not news; the order had been in effect for some days and he had heard of it. He was about to turn away when he felt a sharp, stinging blow across his shoulder blades. He whirled around and found himself facing a PanAsian wearing the green uniform of a civil administrator and carrying a swagger cane.

"Keep out of the way, boy!" He spoke in English, but in a light, singing tone which lacked the customary American accentuation.

Thomas jumped into the gutter—"They like to look down, not up"—and clasped his hands together in the form required. He ducked his head and replied, "The master speaks; the servant obeys."

"That's better," acknowledged the Asiatic, apparently somewhat mollified. "Your ticket."

The man's accent was not bad, but Thomas did not comprehend immediately, possibly because the emotional impact of his experience in the role of slave was all out of proportion to what he had expected. To say that he raged inwardly is meaninglessly inadequate.

The swagger cane cut across his face. "Your ticket!"

Thomas produced his registration card. The time the Oriental spent in examining it gave Thomas an opportunity to pull himself together to some extent. At the moment he did not care greatly whether the card passed muster or not; if it came to trouble, he would take this one apart with his bare hands.

But it passed. The Asiatic grudgingly handed it back and strutted away, unaware that death had brushed his elbow.

It turned out that there was little to be picked up in town that he had not already acquired secondhand in the hobo jungles. He had a chance to estimate for himself the proportion of rulers to ruled, and saw for himself that the schools were closed and the newspapers had vanished. He noted with interest that church services were still held, although any other gathering together of white men in assembly was strictly forbidden.

But it was the dead, wooden faces of the people, the quiet children, that got under his skin and made him decide to sleep in the jungles rather than in town.

Thomas ran across an old friend at one of the hobo hideouts. Frank Roosevelt Mitsui was as American as Will Rogers, and much more American than that English aristocrat, George Washington. His grandfather had brought his grandmother, half Chinese and half wahini, from Honolulu to Los Angeles, where he opened a nursery and raised flowers, plants, and little yellow children, children that knew neither Chinese nor Japanese, nor cared.

Frank's father met his mother, Thelma Wang, part Chinese but mostly Caucasian, at the International Club at the University of Southern California. He took her to the Imperial Valley and installed her on a nice ranch with a nice mortgage. By the time Frank was raised, so was the mortgage.

Jet Thomas had cropped lettuce and honeydew melon for Frank Mitsui three seasons and knew him as a good boss. He had become almost intimate with his employer because of his liking for the swarm of brown kids that were Frank's most important crop. But the sight of a flat, yellow face in a hobo jungle made Thomas' hackles rise and almost interfered with his recognizing his old acquaintance.

It was an awkward meeting. Well as he knew Frank, Thomas was in no mood to trust an Oriental. It was Frank's eyes that convinced him; they held a tortured look that was even more intense than that found in the eyes of white men, a look that did not lessen even while he smiled and shook hands.

"Well, Frank," Jeff improvised inanely, "who'd expect to find you here? I should think you'd find it easy to get along with the new regime."

Frank Mitsui looked still more unhappy and seemed to be fumbling for words. One of the other hobos cut in. "Don't be a fool, Jeff. Don't you know what they've done to people like Frank?"

"No, I don't."

"Well, you're on the dodge. If they catch you, it's the labor camp. So is Frank. But if they catch him, it's curtains—right now. They'll shoot him on sight—"

"So? What did you do, Frank?"

Mitsui shook his head miserably.

"He didn't do anything," the other continued. "The empire has no use for American Asiatics. They're liquidating them."

It was quite simple. The Pacific coast Japanese, Chinese, and the like did not fit into the pattern of serfs and overlords—particularly the half-breeds. They were a danger to the stability of the pattern. With cold logic they were being hunted down and killed.

Thomas listened to Frank's story. "When I got home they were dead—all of them. My little Shirley, Junior, Jimmy, the baby—and Alice." He put his face in his hands and wept. Alice was his wife. Thomas remembered her as a brown, stocky woman in overalls and straw hat, who talked very little but smiled a lot.

"At first I thought I would kill myself," Mitsui went on when he had sufficient control of himself, "then I knew better. I hid in an irrigation ditch for two days, and then I got away over the mountains. Then some whites almost killed me before I could convince them I was on their side."

Thomas could understand how that would happen, and could think of nothing to say. Frank was damned two ways; there was no hope for him. "What do you intend to do now, Frank?"

He saw a sudden return of the will to live in the man's face. "That is why I will not let myself die! Ten for each one"—he counted them off on his brown fingers—"ten of those devils for each one of my babies—and twenty for Alice. Then maybe ten more for myself, and I can die."

"Hm-m-m. Any luck?"

"Thirteen, so far. It is slow, for I have to be very sure, so that they won't kill me before I finish."

Thomas pondered it in his mind, trying to fit this new knowledge into his own purpose. Such fixed determination should be useful, if directed. But it was some hours later before he approached Mitsui again.

"How would you," he asked gently, "like to raise your quota from ten to a thousand each—two thousand for Alice?"

CHAPTER THREE

The exterior alarms brought Ardmore to the portal long before Thomas whistled the tune that activated the door. Ardmore watched the door by televisor from the guard room, his thumb resting on a control, ready to burn out of existence any unexpected visitor. When he saw Thomas enter his thumb relaxed, but at the sight of his companion it tightened again. A PanAsiani He almost blasted them in sheer reflex before he checked himself. It was possible, barely possible, that Thomas had brought a prisoner to question..

"Major! Major Ardmore! It's Thomas."

"Stand where you are. Both of you."

"It's all right, Major. He's an American. I vouch for him."

"Maybe." The voice that reached Thomas over the announcing phone was still grimly suspicious. "Just the same—peel off all of your clothes, both of you." They did so, Thomas biting his lip in humiliation, Mitsui trembling in agitation. He did not understand it and he felt trapped. "Now turn around slowly and let me look you over," the voice commanded.

Having satisfied himself that they were unarmed, Ardmore told them to stand still and wait, then called Graham on the intercommunication circuit. "Graham!"

"Yes, sir."

"Report to me at once in the guard room."

"But, Major, I can't. Dinner will be—"

"Never mind dinner! Move!"

"Yes, sir!"

Ardmore pointed out the situation to him in the screen. "You go down there and handcuff both of them from behind. Secure the Asiatic first. Make him back up to you, and watch yourself. If he tries to jump you, I may have to wing you, too."

"I don't like this, Major," Graham protested. "Thomas is all right. He wouldn't be up to any hankypanky."

"Sure, man, I know he's all right, too. But he may be drugged and under control. This set-up could be a Trojan Horse gag. Now get down and do as you are told."

While Graham was gingerly carrying out his unwelcome assignment and making himself, in fact, eligible for a Congressional Medal which he would never receive, for his artist's imagination perceived too clearly the potential danger and forced him to call up courage for the task.

Ardmore phoned Brooks. "Doctor, can you drop what you are doing?"

"Why, perhaps I can. Yes, I may say so. What is it you wish?"

"Then come to my office. Thomas is back. I want to know whether or not he is under the influence of drugs."

"But I am not a medical man—"

"I know that, but you are the nearest thing we've got to one."

"Very well, sir."

Dr. Brooks examined Thomas' pupils, tried his knee jerks, and checked his pulse and respiration. "I should say that he was perfectly normal, though exhausted and laboring under excitement. Naturally, this is not a positive diagnosis. If I had more time—"

"It will do for now. Thomas, I trust you won't hold it against me if we leave you locked up until we have examined your Asiatic pal."

"Certainly not, Major," Thomas told him with a wry grin, "since you're going to, anyhow."

Frank Mitsui's flesh quivered and sweat dripped from his face when Brooks stuck the hypodermic into him, but he did not draw away. Presently he relaxed under the influence of the drug that releases inhibitions, and strips from the speech centers the protection of cortical censorship. His face became peaceful.

But it was not peaceful a few minutes later when they began to question him, nor was there peace in any of their faces. This was truth, too raw and too brutal for any man to stand. Deep lines carved themselves from nose to jaw in Ardmore's face as he listened to the little man's pitiful story. No matter what line they started him on, he always came back to the scene of his dead children, his broken household. Finally Ardmore put a stop to it.

"Give him the antidote, doc. I can't stand any more of this. I've found out all I need to know."

Ardmore shook hands with him solemnly after he had returned to full awareness. "We are glad to have you with us, Mr. Mitsui. And we'll put you to some work that will give you a chance to get some of your own back. Right now I want Dr. Brooks to give you a soporific that will let you get about sixteen hours' sleep; then we can think about swearing you in and what kind of work you can be most useful doing."

"I don't need any sleep, Mister . . . Major."

"Just the same, you are going to get some. And so is Thomas, as soon as he has reported. In fact—" He broke off and studied the apparently impassive face. "In fact, I want you to take a sleeping pill every night. Those are orders. You'll draw them from me and take them in my presence every night before you go to bed." There are certain bonus advantages to military absolutism. Ardmore could not tolerate the idea of the little yellow man lying awake and staring at the ceiling.

Brooks and Graham would quite plainly have liked to stay and hear Thomas' report, but Ardmore refused to notice the evident fact and dismissed them. He wished first to evaluate the data himself.

"Well, Lieutenant, I'm damn glad you're back."

"I'm glad to be back. Did you say 'lieutenant'? I assume that my rank reverts."

"Why should it? As a matter of fact, I am trying to figure out a plausible reason for commissioning Graham and Scheer. It would simplify things around here to eliminate social differences. But that is a side issue. Let's hear what you've done. I suppose you've come back with all our problems solved and tied up with string?"

"Not likely." Thomas grinned and relaxed.

"I didn't expect it. But seriously, between ourselves, I've got to pull something out of the hat, and it's got to be good. The scientific staff is beginning to crowd me, particularly Colonel Calhoun. There's no damn sense in their making miracles in the laboratory unless I can dope out some way to apply those miracles in strategy and tactics."

"Have they really gone so far?"

"You'd be surprised. They've taken that so-called 'Ledbetter effect' and shaken it the way a terrier shakes a rat. They can do anything with it but peel the potatoes and put out the cat."

"Really?"

"Really."

"What sort of things can they do?"

"Well—" Ardmore took a deep breath. "Honestly, I don't know where to begin. Wilkie has tried to keep me posted with simplified explanations, but, between ourselves, I didn't understand more than every other word. One way of putting it is to say that they've discovered atomic control—oh, I don't mean atom-splitting, or artificial radioactivity. Look—we speak of space, and time, and matter, don't we?"

"Yes. There's Einstein's spacetime concept, of course."

"Of course. Spacetime is standard stuff in high school these days. But these men really mean it. They really mean that space and time and mass and energy and radiation and gravity are all simply different ways of thinking about the same thing. And if you once catch on to how just one of them works, you have the key to all of them. According to Wilkie, physicists up to now, even after the A-bomb was developed, were just fooling around the edges of the subject; they had the beginnings of a unified field theory, but they didn't really believe it themselves; they usually acted as if these were all as different as the names for them.

"Apparently Ledbetter hit on the real meaning of radiation, and that has given Calhoun and Wilkie the key to everything else in physics. Is that clear?" he added with a grin.

"Not very," Thomas admitted. "Can you give me some idea of what they can do with it?"

"Well, to begin with, the original Ledbetter effect, the thing that killed most of the personnel here, Wilkie calls an accidental side issue. Brooks says that the basic radiation affected the colloidal dispersal of living tissue; those that were killed were coagulated by it. It might just as well have been set to release surface tension—in fact, they did that the other day, exploded a half of beefsteak like so much dynamite."

"Huh?"

"Don't ask me how; I'm just repeating the explanation given me. But the point is, they seem to have found out what makes matter tick. They can explode it—sometimes—and use it for a source of power. They can transmute it into any element they want. They seem to be confident that they know what to do to find out how gravity works, so that they will be able to handle gravity the way we now handle electricity."

"I thought gravity was not considered a force in the modern concepts."

"So it isn't but, then, 'force' isn't force, either, in unified field theory. Hell's bells, you've got me bogged down in

language difficulties. Wilkie says that mathematics is the only available language for these ideas."

"Well, I guess I'll just have to get along without understanding it. But, frankly, I don't see how they managed to come so far so fast. That changes just about everything we thought we knew. Honestly, how is it that it took a hundred fifty years to go from Newton to Edison, yet these boys can knock out results like that in a few weeks?"

"I don't know myself. The same point occurred to me, and I asked Calhoun about it. He informed me in that schoolmaster way of his that it was because those pioneers did not have the tensor calculus, vector analysis, and matrix algebra."

"Well, I wouldn't know," observed Thomas. "They don't teach that stuff in law school."

"Nor me," admitted Ardmore. "I tried looking over some of their work sheets. I can do simple algebra, and I've had some calculus, though I haven't used it for years, but I couldn't make sense out of this stuff. It looked like Sanskrit; most of the signs were different, and even the old ones didn't seem to mean the same things. Look—I thought that a times b always equaled b times a."

"Doesn't it?"

"Not when these boys get through kicking it around. But we are getting way off the subject. Bring me up to date."

"Yes, sir." Jeff Thomas talked steadily for a long time, trying very hard to paint a detailed picture of everything he had seen and heard and felt. Ardmore did not interrupt him except with questions intended to clarify points. There was a short silence when he had concluded. Finally Ardmore said:

"I think I must have had a subconscious belief that you would come back with some piece of information that would fall right into place and tell me what to do. But I don't see much hope in what you have told me. How to win back a country that is as completely paralyzed and as carefully guarded as you describe the United States to be is beyond me."

"Of course, I didn't see the whole country. About two hundred miles from here is as far as I got."

"Yes, but you got reports from the other hobos that covered the whole country, didn't you?"

"Yes."

"And it was all about the same. I think we can safely assume that what you heard, confirmed by what you saw, gives a fairly true picture. How recent do you suppose was the dope you got by the grapevine telegraph?"

"Well—maybe three or four days old news from the East coast—no more than that."

"That seems reasonable. News always travels by the fastest available route. It's certainly not very encouraging. And yet—" He paused and scowled in evident puzzlement. "And yet I have a feeling that you said something that was the key to the whole matter. I can't put my finger on it. I began to get an idea while you were talking, then some other point came up and diverted my mind, and I lost it."

"Maybe it would help if I started in again at the beginning," suggested Thomas.

"No need to. I'll play the recording back piece by piece sometime tomorrow, if I don't think of it in the meantime."

They were interrupted by peremptory knocking at the door. Ardmore called out, "Come in!" Colonel Calhoun entered.

"Major Ardmore, what's this about a PanAsiatic prisoner?"

"Not quite that, Colonel, but we do have an Asiatic here now. He's American-born."

Calhoun brushed aside the distinction. "Why wasn't I informed? I have notified you that I urgently require a man of Mongolian blood for test experimentation."

"Doctor, with the skeleton staff we have, it is difficult to comply with all the formalities of military etiquette. You were bound to learn of it in the ordinary course of events—in fact, it seems that you were informed in some fashion."

Calhoun snorted. "Through the casual gossip of subordinates!"

"I'm sorry, Colonel, but it couldn't be helped. Just at the moment I am trying to receive Thomas' reconnaissance report."

"Very well, sir." Calhoun was icily formal. "Will you be good enough to have the Asiatic report to me at once?"

"I can't do that. He is asleep, drugged, and there is no way to produce him for you before tomorrow. Besides, while I am quite sure that he will be entirely cooperative in any useful experimentation, he is an American citizen and a civilian under our protection—not a prisoner. We'll have to take it up with him."

Calhoun left as abruptly as he had come. "Jeff," mused Ardmore, glancing after him, "speaking strictly off the record—oh, strictly!—if there ever comes a time when we are no longer bound down by military necessity, I'm going to paste that old beezer right in the puss!"

"Why don't you clamp down on him?"

"I can't, and he knows it. He's invaluable, indispensable. We've absolutely got to have his brains for research, and you can't conscript brains just by handing out orders. Y'know, though, in spite of his brilliance, I sometimes think he's just a little bit cracked."

"Shouldn't be surprised. What does he want Frank Mitsui so bad for?"

"Well, that's somewhat involved. They've proved that the original Ledbetter effect depends on a characteristic of the life form involved—you might call it a natural frequency. It seems that everybody has his own wavelength, or wavelengths. The notion seemed like so much astrology to me, but Dr. Brooks says that it is not only the straight dope; it isn't even new. He showed me a paper by a chap named Fox, at the University of London, 'way back in 1945—Fox showed that each individual rabbit had hemoglobin with its own individual wavelength; it absorbed that wavelength in spectroscopic analysis, that one wavelength and no other. You could tell two rabbits apart with it, or you could tell a rabbit from a dog, simply by the spectra of their hemoglobins.

"This Dr. Fox tried to do the same thing with humans, but it didn't work—no distinguishable difference in wavelengths. But Calhoun and Wilkie have rigged a spectroscope for the spectrum Ledbetter was playing with, and it shows clearly separate wavelengths for each sample of human blood. Conversely, if they set up a tuned Ledbetter projector and start running down or up the scale, when they come to your individual, unique frequency, your red blood cells start absorbing energy, the hemoglobins protein breaks down and—Spung!—you're dead. I'm standing right beside you and I'm not even hurt; they haven't come to my frequency. Now Brooks has an idea that these frequencies come by groups according to races. He thinks they can tune it to discriminate by races, to knock over all the Asiatics in a group and not touch the white men, and vice versa."

Thomas shivered. "Whew! That would be a weapon."

"Yes, it would. It's just on paper so far, but they want to test it on Mitsui. As I gather what they intended to do, they don't intend to kill him, but it's bound to be dangerous as all hell to Mitsui."

"Frank won't mind chancing it," Thomas commented.

"No, I don't suppose he would." It seemed to Ardmore that it would probably be a favor to Mitsui to give him a clean, painless death in the laboratory. "Now about another matter. It seems to me we ought to be able to work up a sort of permanent secret service, using your hobo pals and their sources of information. Let's talk about it."

Ardmore gained a few days' respite in which to consider further the problem of military use of the weapons at his disposal while the research staff tested their theories concerning the interrelation between racial types and the improved Ledbetter effect. The respite did him no good. He had a powerful weapon, yes; in fact, many powerful weapons, for it seemed that the new principles they had tapped had fully as protean possibilities as electricity. It seemed extremely likely that if the United States defense forces had had, one year earlier, the tools now available in the Citadel, the United States would never have fallen.

But six men cannot whip an empire—not by brute force. The emperor could, if necessary, expend six million men to defeat six. The hordes of the empire could come at them barehanded and win, move over them as an avalanche moves, until they were buried under a mountain of dead flesh. Ardmore had to have an army to fight with his wonderful new weapons.

The question was: how to recruit and train such an army?

Certain it was that the PanAsians would not hold still while he went into the highways and byways and got his forces together. The thoroughness with which they had organized police surveillance of the entire population made it evident that they were acutely aware of the danger of revolution and would stamp out any such activity before it could possibly reach proportions dangerous to them.

There remained one clandestine group, the hobos.

He consulted with Thomas as to the possibility of organizing them for military purposes. Thomas shook his head at the idea.

"You can't understand the hobo temperament, Chief. There is not one in a hundred who could be depended on to observe the strict self-discipline necessary for such an enterprise. Suppose you were able to arm all of them with projectors—I don't say that is possible, but suppose you could—you still would not have an army; you would simply have an undisciplined rabble."

"Wouldn't they fight?"

"Oh, sure, they'd fight. They'd fight as individuals, and they would do quite a bit of slaughter until some flatface caught them off guard and winged them."

"I wonder if we can depend on them as sources of information."

"That's another matter. Most of the road kids won't have any idea that they are being used to obtain military information. I'll handpick not over a dozen to act as reporters to me, and I won't tell them anything they don't have to know."

Any way he looked at it, simple, straightforward military use of the new weapons was not expedient. Brutal frontal attack was for the commander who had men to expend. General U. S. Grant could afford to say, "I will fight it out on this line if it takes all summer," because he could lose three men to the enemy's one and still win. Those tactics were not for the commander who could not afford to lose any men. For him it must be deception, misdirection—feint and slash and run away—"and live to fight another day." The nursery rhyme finished itself in his mind. That was it. It had to be something totally unexpected, something that the PanAsians would not realize was warfare until they were overwhelmed by it.

It would have to be something like the "fifth columns" that destroyed the European democracies from within in the tragic days that led to the final blackout of European civilization. But this would not be a fifth column of traitors, bent on paralyzing a free country; but the antithesis of that, a sixth column of patriots whose privilege it would be to destroy the morale of invaders, make them afraid, unsure of themselves.

And misdirection was the key to it, the art of fooling!

Ardmore felt a little better when he had reached that conclusion. It was something he could understand, a job suited to an advertising man. He had been trying to crack it as a military problem, but he was not a field marshal and it had been silly of him to try to make a noise like one. His mind did not work that way. This was primarily a job in publicity, a matter of mob psychology. A former boss of his, under whom he had learned the racket, used to tell him, "I can sell dead cats to the board of health with a proper budget and a free hand."

Well, he had a free hand, all right, and the budget was no problem. Of course, he could not use the newspapers and the old channels of advertising, but there would be a way. The problem now was to figure out the weak points of the PanAsians and decide how Calhoun's little gadgets could be used to

play on those weak points until the PanAsians were sick of the whole deal and anxious to go home.

He did not have a plan as yet. When a man is at a loss for a course of action, he usually calls for a conference. Ardmore did.

He sketched out to them the situation up to date, including all that Thomas had learned and all that had come in by television through the conquerors' "educational" broadcasts. Then he discussed the powers that were made available to them by the research staff, and the various obvious ways in which they could be applied as military weapons, emphasizing the personnel necessary to use each type of weapon effectively. Having done so, he asked for suggestions.

"Do I understand, Major," Calhoun began, "that after rather pointedly telling us that you would make all military decisions you are now asking us to make up your mind for you?"

"Not at all, Colonel. I have still the responsibility for any decision, but this is a new sort of military situation. A suggestion from any source may prove valuable. I don't flatter myself that I have a monopoly on common sense, nor on originality. I would like for every one of us to tackle this problem and let the others criticize it."

"Do you yourself have any plan to offer us?"

"I am reserving my opinions until the rest of you have spoken."

"Very well, sir"—Dr. Calhoun straightened himself up—"since you have asked for it, I will tell you what I think should be done in this situation—what, in fact, is the only thing that can be done.

"You are aware of the tremendous power of the forces I have made available." Ardmore noticed Wilkie's mouth tighten at this allocation of credit, but neither of them interrupted. "In your resume, you underestimated them, if anything. We have a dozen fast scout cars housed here in the Citadel. By refitting them with power units of the Calhoun type they can be made faster than anything the enemy can put into the air. We will mount on them the heaviest projectors and attack. With overwhelmingly superior weapons it is only a matter of time until we will have the PanAsiatic empire beaten to its knees!"

Ardmore wondered how any man could be so blind. He did not himself wish to argue against Calhoun; he said, "Thank you, Colonel. I'll ask you to submit that plan written up in more detail. In the meantime does anyone wish to amplify or criticize the colonel's suggestion?" He waited hopefully, then added, "Come now, no plan is perfect. You must have some details to add, at least."

Graham took the, plunge. "How often do you expect to come down to eat?"

Calhoun cut in before Ardmore could call on him. "Well, I'm damned! I must say that I consider this no time for facetiousness."

"Wait a minute," protested Graham, "I didn't mean to be funny. I'm quite serious. That's my department. Those scout cars are not equipped to keep the air very long, and it seems to me that it will take quite a long time to reconquer the United States with a dozen scout cars, even if we located enough men to keep them in the air all the time. That means you have to come back to base to eat."

"Yes, and that means the base will have to be held against attack," Scheer put in suddenly.

"The base can be defended with other projectors." Calhoun's tone was scornful. "Major, I really must ask that the discussion be confined to sensible issues."

Ardmore rubbed his chin and said nothing.

Randall Brooks, who had been listening thoughtfully, pulled a piece of paper out of his pocket and began to sketch. "I think Scheer has something, Dr. Calhoun. If you will look here for a moment here, at this point, is your base. The PanAsians can encircle the base with ships at a distance greater than the range of the base projectors. The greater speed of your scout cars will be unimportant, for the enemy can well afford to use as many ships as necessary to insure our craft not getting past the blockade. It's sure that the scout cars will have the projectors with which to fight, but they can't fight a hundred ships at once, and the enemies' weapons are powerful, too—we mustn't forget that."

"You're right they're powerful!" added Wilkie. "We can't afford to have a known base. With their bombardment rockets they could stand back a thousand miles and blow this whole mountain out of the ground, if they knew we were under it."

Calhoun stood up. "I'm not going to remain here and listen to misgivings of pusillanimous fools. My plan assumed that men would execute it." He walked stiffly out of the room.

Ardmore ignored his departure and went hurriedly on, "The objections made to Colonel Calhoun's scheme seem to me to apply to every plan for open, direct combat at this time. I have considered several and rejected them for approximately those reasons, at least for reasons of logistics—that is to say, the problem of military supply. However, I may not have thought of some perfectly feasible solution. Does anyone have a direct warfare method to suggest, a method which will not risk personnel?"

No one answered. "Very well, bring it up later if you think of one. It seems to me that we must necessarily work by misdirection. If we can't fight the enemy directly at this time, we must fool 'em until we can."

"I see," agreed Dr. Brooks, "the bull wears himself out on the cape and never sees the sword."

"Exactly. Exactly. I only wish it were as easy as that. Now do any of you have any ideas as to how we can use what we've got without letting them know who we are, where we are, or how many we are? And now I'm going to take time out for a cigarette while you think about it."

Presently, he added, "You might bear in mind that we have two real advantages: the enemy apparently has not the slightest idea that we even exist, and our weapons are strange to them, even mysterious. Wilkie, didn't you compare the Ledbetter effect to magic?"

"I should hope to shout, Chief! It's safe to say that, aside from the instruments in our laboratories, there just isn't any way in existence to detect the forces we are working with now. You don't even know they're there. It's like trying to hear radio with your bare ears."

"That's what I mean. Mysterious. Like the Indians when they first met up with the white man's fire arms, they died and they didn't know why. Think about it. I'll shut up and let you."

Graham produced the first suggestion. "Major?"

"Yes?"

"Why couldn't we kidnap 'em?"

"How do you mean?"

"Well, your idea is to throw a scare into 'em, isn't it? How about a surprise raiding party, using the Ledbetter effect. We could go in one of the scout cars at night and pick out some really big shot, maybe the prince royal himself. We knock out everybody we come in contact with the projectors, and we walk right in and snatch him."

"Any opinions about that, gentlemen?" Ardmore said, reserving his own.

"It seems to have something to it," commented Brooks. "I would suggest that the projectors be set to render unconscious for a number of hours rather than to kill. It seems to me that the psychological effect would be heightened if they simply awoke and found their big man gone. One has no recollection of what has happened under such circumstances, as Wilkie and Mitsui can testify."

"Why stop at the prince royal?" Wilkie wanted to know. "We could set up four raiding parties, two to a car, and make maybe twelve raids in a single night. That way we could knock over enough of their number-one men to really cause some disorganization."

"That seems like a good idea," Ardmore agreed. "We may not be able to pull off these raids more than once. If we could do enough damage right at the top in one blow, we might both demoralize them and set off a general uprising. What's the matter, Mitsui?"

He had noticed the Oriental looking unhappy as the plan was developed. Mitsui spoke reluctantly, "It will not work, I am afraid."

"You mean we can't kidnap them that way? Do you know something we don't about their guard methods?"

"No, no. With a force that reaches through walls and knocks a man down before he knows you are there I believe you can capture them, all right: But the results will not be as you foresee them."

"Why not?"

"Because you will gain no advantage. They will not assume that you are holding their chief men as prisoners; they will assume that each one has committed suicide. The results will be horrible."

It was purely a psychological point, with room for difference of opinion. But the white men could not believe that the PanAsians would dare to retaliate if it were made unmistakably plain to them that their sacred leaders were not dead, but at the mercy of captors. Besides, it was a plan that offered immediate action, which they were spoiling for. Ardmore finally agreed to its adoption for want of something better, although he had a feeling of misgiving which he suppressed.

For the next few days all effort was bent toward preparing the scout cars for the projected task. Scheer performed Herculean mechanical jobs, working eighteen and twenty hours a day, with the others working joyfully under his supervision. Calhoun even came off his high horse and agreed to take part in the raid, although he did not help with the "menial" work. Thomas went out on a quick scouting trip and made certain of the location of twelve well-scattered PanAsian seats of government.

In the buoyancy of spirit which resulted from a plan of campaign, any plan of campaign, Ardmore failed to remember his own decision that what was required was a sixth column, an underground, or at least, unsuspected organization which would demoralize the enemy from within. This present plan was not such a one, but an essentially military plan. He began to think of himself as, if not Napoleon, at least as a modern Swamp Rat, or Sandino, striking through the night at the professional soldiers and fading away.

But Mitsui was right.

The television receiver was used regularly, with full recording, to pick up anything that the overlords had to broadcast to their slaves. It had become something of a custom to meet in the common room at eight in the evening to listen to the regular broadcast in which new orders were announced to the population. Ardmore encouraged it; the "hate session" it inspired was, he believed, good for morale.

Two nights before the projected raid they were gathered as usual. The ugly, broad face of the usual propaganda artist was quickly replaced by another and older PanAsian whom he introduced as the "heavenly custodian of peace and order." The older man came quickly to the point. The American servants of a provincial government had committed the hideous sin of rebelling against their wise rulers and had captured the sacred person of the governor and held him prisoner in his own palace. The soldiers of the heavenly emperor had brushed aside the insane profaners in the course of which the governor had most regrettably gone to his ancestors.

A period of mourning was announced, commencing at once, which would be inaugurated by permitting the people of the province to expiate the sins of their cousins. The television scene cut from the room from which he spoke.

It came to rest on great masses of humanity, men, women, children, huddled, jammed, behind barbed wire. The pick-up came down close enough to permit the personnel of the Citadel to see the blind misery on the faces of the crowd, the wept-out children, the mothers carrying babies, the helpless fathers.

They did not have to watch those faces long. The pick-up panned over the packed mob, acre on acre of helpless human animals, then returned to a steady closeup of one section.

They used the epileptigenic ray on them. Now they no longer resembled anything human. It was, instead, as if tens of thousands of monstrous chickens had had their necks wrung all at once and had been thrown into the same pen to jerk out their death spasms. Bodies bounded into the air in bonebreaking, spine-smashing fits. Mothers threw their infants from them, or crushed them in uncontrollable, viselike squeeze.

The scene cut back to the placid face of the Asiatic dignitary. He announced with what seemed to be regret in his voice that penance for sins was not sufficient, it was necessary also to be educational, in this case to the extent of one in every thousand.

Ardmore did a quick calculation in his head. A hundred fifty thousand people! It was unbelievable.

But it was soon believed. The pick-up cut again, this time to a residential street in an American city. It followed a squad of PanAsian soldiers into the living room of a family. They were gathered about a television receiver, plainly stunned by what they had just seen. The mother was huddling a young girl child to her shoulder, trying to quiet her hysteria. They seemed stupefied, rather than frightened, when the soldiers burst into their home. The father produced his card without argument; the squad leader compared it with a list, and the soldiers attended to him.

They had evidently been instructed to use a method of killing that was not pretty.

Ardmore shut off the receiver. "The raid is off," he announced. "Go to bed, all of you. And each of you take a sleeping pill tonight. That's an order!"

They left at once. No one said anything. After they were gone, Ardmore turned the receiver back on and watched it through to the end. Then he sat alone for a long time, trying to get his thoughts back into coherence. Those who order sleeping drafts won't take them.

CHAPTER FOUR

Ardmore kept very much to himself for the next two days, taking his meals in his quarters, and refusing anything but the briefest interviews. He saw his error plainly enough now; it was small solace to him that it had been another's mistake which had resulted in the massacres—he felt symbolically guilty.

But the problem remained with him. He knew now that he had been right when he had decided on a sixth column. A sixth column! Something which would conform in every superficial way to the pattern set up by the rulers, yet which would have in it the means of their eventual downfall. It might take years, but there must be no repetition of the ghastly mistake of direct action.

He knew intuitively that somewhere in Thomas' report was the idea he needed. He played it back again and again, but still he couldn't get it, even though he now knew it by heart. "They are systematically stamping out everything that is typically American in culture. The schools are gone, so are the newspapers. It is a capital offense to print anything in English. They have announced the early establishment of a system of translators for all business correspondence into their language; in the meantime all mail must be approved as necessary. All meetings are forbidden except religious meetings."

"I suppose that is a result of their experience in India. Keeps the slaves quiet." That was his own voice, sounding strange in reproduction.

"I suppose so, sir. Isn't it an historical fact that all successful empires have tolerated the local religions, no matter what else they suppressed?"

"I suppose so. Go ahead."

"The real strength of their system, I believe, is in their method of registration. They apparently were all set to put it into force, and pressed forward on that to the exclusion of other matters. It's turned the United States into one big prison camp in which it is almost impossible to move or communicate without permission from the jailers."

Words, words, and more words! He had played them over so many times that the significance was almost lost. Perhaps there was nothing in the report, after all—nothing but his imagination.

He responded to a knock at the door. It was Thomas. "They asked me to speak to you, sir," he said diffidently.

"What about?"

"Well—they are all gathered in the common room. They'd like to talk with you."

Another conference—and not of his choosing, this time. Well, he would have to go. "Tell them I will be in shortly."

"Yes, sir."

After Thomas had gone, he sat for a moment, then went to a drawer and took out his service side arm. He could smell mutiny in the very fact that someone had dared to call a general meeting without his permission. He buckled it on, then tried the slide and the change, and stood looking at it. Presently he unbuckled it and put it back into the drawer. It wouldn't help him in this mess.

He entered, sat down in his chair at the head of the table, and waited.

"Well?"

Brooks glanced around to see if anyone else wished to answer, cleared his throat, and said, "Uh—we wanted to ask you if you had any plan for us to follow."

"I do not have—as yet."

"Then we do have!" It was Calhoun.

"Yes, Colonel?"

"There is no sense in hanging around here with our hands tied. We have the strongest weapons the world has ever seen, but they need men to operate them."

"Well?"

"We are going to evacuate and go to South America! There we can find a government which will be interested in superior weapons."

"What good will that do the United States?"

"It's obvious. The empire undoubtedly intends to extend its sway over this entire hemisphere. We can interest them in a preventive war. Or perhaps we can raise up an army of refugees."

"No!"

"I am afraid you can't help yourself, Major." The tone held malicious satisfaction.

He turned to Thomas. "Are you with them on this?"

Thomas looked unhappy. "I had hoped that you would have a better plan, sir."

"And you, Dr. Brooks?"

"Well—it seems feasible. I feel much as Thomas does."

"Graham?"

The man gave him answer by silence. Wilkie looked up and then away again.

"Mitsui?"

"I'll go back outside, sir. I have things to finish."

"Scheer?"

Scheer's jaw muscles quivered. "I'll stick if you do, sir."

"Thanks." He turned to the rest. "I said, 'No!' and I mean it. If any of you leave here, it will be in direct violation of your oaths. That goes for you, Thomas! I'm not being arbitrary about this. The thing you propose to do is on all fours with the raid I canceled. So long as the people of the United States are hostages at the mercy of the PanAsians we can not take direct military action! It doesn't make any difference whether the attack comes from inside or outside, thousands, maybe millions, of innocent people will pay for it with their lives!"

He was very much wrought up, but not too much so to look around and see what effect his words were having. He had them back—or would have them in a few minutes. All but Calhoun. They were looking disturbed.

"Supposing you are right, sir"—it was Brooks speaking very gravely—"supposing you are right, is there anything we can do?"

"I explained that once before. We have to form what I called a 'sixth column,' lie low, study out their weak points, and work on them."

"I see. Perhaps you are right. Perhaps it is necessary. But it calls for a sort of patience more suited to gods than to men."

He almost had it then. What was it?

"So 'There'll be pie in the sky by and by,' " quoted Calhoun. "You should have been a preacher, Major Ardmore. We prefer action."

That was it! That was it!

"You're almost right," Ardmore answered. "Have you listened to Thomas' report?"

"I listened to the playback."

"Do you recall the one respect in which white men are still permitted to organize?"

"Why, no, I don't recall that there was one."

"None? Nowhere that they were permitted to assemble?"

"I know!" Thomas burst in. "Churches!"

Ardmore waited a moment for it to sink in, then he said very softly, "Has it ever occurred to any of you to think of the possibilities in founding a new religion?"

There was a short and startled silence. Calhoun broke it.

"The man's gone mad!"

"Take it easy, Colonel," Ardmore said mildly. "I don't blame you for thinking that I've gone crazy. It does sound crazy to talk about founding a new religion when what we want is military action against the PanAsians. But consider—what we need is an organization that can be trained and armed to fight. That and a communication system which will enable us to coordinate the whole activity. And we have to do the whole thing under the eyes of the PanAsians without arousing their suspicions. If we were a religious sect instead of a military organization, all that would be possible."

"It's preposterous! I'll have nothing to do with it."

"Please, Colonel. We need you badly. On that matter of a communication system now—Imagine temples in every city in the country hooking together with a communication system and the whole thing hooked in here at the Citadel."

Calhoun snorted. "Yes, and the Asiatics listening in to everything you say!"

"That's why we need you, Colonel. Couldn't you devise a system that they couldn't trap? Something like a radio, maybe, but operating in one of the additional spectra so that their instruments could not detect it? Or couldn't you?"

Calhoun snorted again but with a different intonation. "Why, certainly I could. The problem is elementary."

"That's exactly why we have to have you, Colonel—to solve problems that are elementary to a man of your genius," Ardmore felt slightly nauseated inside: this was worse than writing advertising copy, "but which are miracles for the rest of us. That's what a religion needs—miracles! You'll be called on to produce effects that will strain even your genius, things that the PanAsians cannot possibly understand, and will think supernatural." Seeing Calhoun still hesitate, he added, "You can do it, can't you?"

"Certainly, I can, my dear Major."

"Fine. How soon can you let me have a communication method which can't be compromised or detected?"

"Impossible to say, but it won't take long. I still don't see the sense to your scheme, Major, but I will turn my attention to the research you say you require." He got up and went out, a procession of one.

"Major?" Wilkie asked for attention.

"What? Oh, yes, Wilkie."

"I can design such a communication system for you."

"I don't doubt it a damn bit, but we are going to need all the talent we can stir up for this job. There will be plenty for you to do, too. Now as to the rest of the scheme, here's what I have in mind—just a rough idea, and I want you all to kick it around as much as possible until we get it as nearly foolproof as possible.

"We'll go through all the motions of setting up an evangelical religion, and try to get people to come to our services. Once we get 'em in where we can talk to 'em, we can pick out the ones that can be trusted and enlist them in the army. We'll make them deacons, or something, in the church. Our big angle will be charity—you come in on that, Wilkie with the transmutation process. You will turn out a lot of precious metal, gold mostly, so that we will have ready cash to work with. We feed the poor and the hungry—the PanAsians have provided us with plenty of those! and pretty soon we'll have 'em coming to us in droves.

"But that isn't the half of it. We really will go in for miracles in a big way. Not only to impress the white population—that's secondary—but to confuse our lords and masters. We'll do things they can't understand, make them uneasy, uncertain of themselves. Never anything against them, you understand. We'll be loyal subjects of the Empire in every possible way, but we'll be able to do things that they can't. That will upset them and make them nervous."

It was taking shape in his mind like a well-thought-out advertising campaign. "By the time we are ready to strike in force, we should have them demoralized, afraid of us, half hysterical."

They were beginning to be infected with some of his enthusiasm; but the scheme was conceived from a viewpoint more or less foreign to their habits of thought. "Maybe this will work, Chief," objected Thomas, "I don't say that it won't, but how do you propose to get it underway? Won't the Asiatic administrators smell a rat in the sudden appearance of a new religion?"

"Maybe so, but I don't think it likely. All Western religions look equally screwy to them. They know we have dozens of religions and they don't know anything about most of them. That's one respect in which the Era of Nonintercourse will be useful to us. They don't know much about our institutions since the Nonintercourse Act. This will just look like any one of half a dozen cockeyed cults of the sort that spring up overnight in Southern California."

"But about that springing-up business, Chief—How do we start out? We can't just walk out of the Citadel, buttonhole one of the yellow boys, and say, 'I'm John the Baptist.'"

"No, we can't. That's a point that has to be worked out. Has anybody any ideas?"

The silence that followed was thick with intense concentration. Finally Graham proposed, "Why not just set up in business, and wait to be noticed?"

"How do you mean?"

"Well, we've got enough people right here to operate on a small scale. If we had a temple somewhere, one of us could be the priest, and the others could be disciples or something. Then just wait to be noticed."

"H-m-m-m. You've got something there, Graham. But we'll open up on the biggest scale we can manage. We'll all be priests and altar attendants and so forth, and I'll send Thomas out to stir up a congregation for us among his pals. No, wait. Let 'em come in as pilgrims. We'll start this off with a whispering campaign among the hobos, send it over the grapevine. We'll have 'em say, 'The Disciple is coming!'"

"What does that mean?" Scheer inquired.

"Nothing, yet. But it will, when the time comes. Now look—Graham, you're an artist. You're going to have to get dinner with your left hand for a few days. Your right will be busy sketching out ideas for robes and altars and props in general—sacerdotal stuff. Guess the interior and exterior of the temple will be mostly up to you, too."

"Where will the temple be located?"

"Well, now, that's a question. It shouldn't be too far from here unless we abandon the Citadel entirely. That doesn't seem expedient; we need it for a base and a laboratory. But the temple can't be too close, for we can't afford to attract special attention to this mountainside." Ardmore drummed on the table. "It's a difficult matter."

"Why not," offered Dr. Brooks, "make this the temple?"

"Huh?"

"I don't mean this room, of course, but why not put the first temple right on top of the Citadel? It would be very convenient."

"So it would, doctor, but it would certainly draw a lot of unhealthy attention to—Wait a minute! I think I see what you mean." He turned to Wilkie. "Bob, how could you use the Ledbetter effect to conceal the existence of the Citadel, if the Mother Temple sat right on top of it? Could it be done?"

Wilkie looked more puzzled and collie-doggish than ever. "The Ledbetter effect wouldn't do it. Do you especially want to use the Ledbetter effect? Because if you don't it wouldn't be hard to rig a type-seven screen in the magnetogravitic spectrum so that electromagnetic type instruments would be completely blanked out. You see—"

"Of course I don't care what you use! I don't even know the names of the stuff you laboratory boys use—all I want is the results. O. K.—you take care of that. We'll completely design the temple here, get all the materials laid out and ready to assemble down below, then break through to the surface and run the thing up as fast as possible. Anyone have any idea how long that will take? I'm afraid my own experience doesn't run to building construction."

Wilkie and Scheer engaged in a whispered consultation. Presently Wilkie broke off and said, "Don't worry too much about that, Chief. It will be a power job."

"What sort?"

"You've got a memorandum on your desk about the stuff. The traction and pressure control we developed from the earlier Ledbetter experiments."

"Yes, Major," Scheer added, "you can forget it; I'll take care of the job. With tractors and pressors in an aggravitic field, it won't take any longer than assembling a cardboard model. Matter of fact, I'll practice on a cardboard model before we run up the main job."

"O.K., troops," Ardmore smilingly agreed, with the lightheartedness that comes from the prospect of plenty of hard work, "that's the way I like to hear you talk. The powwow is adjourned for now. Get going! Thomas, come with me."

"Just a second, Chief," Brooks added as he got up to follow him, "couldn't we—" They went out the door, still talking.

Despite Scheer's optimism the task of building a temple on the mountain top above the Citadel developed unexpected headaches. None of the little band had had any real experience with large construction jobs. Ardmore, Graham, and Thomas knew nothing at all of such things, although Thomas had done plenty of work with his hands, some of it carpentry. Calhoun was a mathematician and by temperament undisposed to trouble himself with such menial pursuits in any case. Brooks was willing enough but he was a biologist, not an engineer. Wilkie was a brilliant physicist and, along lines related to his specialty, a competent engineer; he could design a piece of new apparatus necessary to his work quite handily.

However, Wilkie had built no bridges, designed no dams, bossed no gangs of sweating men. Nevertheless the job devolved on him by Hobson's choice. Scheer was not competent to build a large building; he thought that he was, but he thought in terms of small things, tools, patterns, and other items that fitted into a machine shop. He could build a scale model of a large building, but he simply did not understand heavy construction.

It was up to Wilkie.

He showed up in Ardmore's office a few days later with a roll of drawings under his arm. "Uh, Chief?"

"Eh? Oh, come in, Bob. Sit down. What's eating on you? When do we start building the temple? See here—I've been thinking about other ways to conceal the fact that the Citadel will be under the temple. Do you suppose you could arrange the altar so that—"

"Excuse me, Chief."

"Eh?

"We can incorporate most any dodge you want into the design, but I've got to know something more about the design first."

"That's your problem—yours and Graham's."

"Yes, sir. But how big do you want it to be?"

"How big? Oh, I don't know, exactly. It has to be big." Ardmore made a sweeping motion with both hands that took in floor, walls, and ceiling. "It has to be impressive."

"How about thirty feet in the largest dimension?"

"Thirty feet? Why, that's ridiculous! You aren't building a soft-drinks stand; you're building the mother temple of a great religion—of course you aren't, but you've got to think of it that way. It's got to knock their eyes out. What's the trouble? Materials?"

Wilkie shook his head. "No, with Ledbetter-type transmutation materials are not a problem. We can use the mountain itself for materials."

"That's what I thought you intended to do. Carve out big chunks of granite and use your tractor and pressor beams to lay them up like giant bricks."

"Oh, no!"

"No? Why not?"

"Well, we could, but when we got through it wouldn't look like much—and I don't know how we would roof it over. What I intended to do was to use the Ledbetter effect not just for cutting or quarrying, but to make—transmute—the materials I want. You see, granite is principally oxides of silicon. That complicates things a little because both elements are fairly near the lower end of the periodic table. Unless we go to a lot of trouble and get rid of a lot of excess energy—a tremendous amount; darn near as much as the Memphis power pile develops—as I say, unless we arrange to bleed off all that power, and right now I don't see just how we could do it, then—"

"Get to the point, man!"

"I was getting to the point, sir," Wilkie answered in hurt tones. "Transmutations from the top or the bottom of the periodic scale toward the middle give off power; contrariwise, they absorb energy. Way back in the middle of the last century they found out how to do the first sort; that's what atom bombs are based on. But to handle transmutations for building materials, you don't want to give off energy like an atom bomb or a power pile. It would be embarrassing."

"I should think so!"

"So I'll use the second sort, the energy-absorbing sort. As a matter of fact I'll balance them. Take magnesium for instance. It lies between silicon and oxygen. The binding energies involved—"

"Wilkie!"

"Yes, Sir?"

"Just assume that I never got through third grade. Now can you make the materials you need, or can't you?"

"Oh, yes, sir, I can make them."

"Then how can I be of help to you?"

"Well, sir, it's the matter of putting the roof on and the size. You say a thirty-foot overall dimension is no good—"

"No good at all. Did you see the North American Exposition? Remember the General Atomics Exhibit?"

"I've seen pictures of it."

"I want something as gaudy and impressive as that, only bigger. Now why are you limited to thirty feet?"

"Well, sir, a panel six by thirty is the biggest I can squeeze out through the door, allowing for the turn in the passage."

"Take 'em up through the scout-car lift."

"I thought of that. It will take a panel thirteen feet wide, which is good, but the maximum length is then only twenty-seven feet. There's a corner to turn between the hangar and the lift."

"Hmm—Look, can you weld with that magic gimmick? I thought you could build the temple in sections, down below here, then assemble it above ground?"

"That was the idea. Yes, I suppose we could weld walls as big as you want. But look, major, how big a building do you want?"

"As big as you can manage."

"But how big do you want?"

Ardmore told him. Wilkie whistled. "I suppose it's possible to give you walls that big, but I don't see any way to roof it over."

"Seems to me I've seen buildings with that much clear span."

"Yes, of course. You give me the services of construction engineers and architects and heavy industry to build the trusses needed to take that span and I'll build you as big a temple as you want. But Scheer and I can't do it alone, even with pressors and tractors to do all the heavy work. I'm sorry, sir, but I don't see an answer."

Ardmore stood up and put a hand on Wilkie's arm. "You mean you don't see an answer yet. Don't get upset, Bob. I'll take whatever you build. But just remember—This is going to be our first public display. A lot depends on it. We can't expect to make much impression on our overlords with a hotdog stand. Make it as big as you can. I'd like something about as impressive as the Great Pyramid—but don't take that long to build it."

Wilkie looked worried. "I'll try, sir. I'll go back and think about it."

"Fine!"

When Wilkie had gone Ardmore turned to Thomas. "What do you think about it, Jeff? Am I asking too much?"

"I was just wondering," Thomas said slowly, "why you set so much store by this temple?"

"Well, in the first place it gives a perfect cover up for the Citadel. If we are going to do anything more than sit here and die of old age, the time will come when a lot of people will have to be going in and out of here. We can't keep the location secret under those circumstances so we will have to have a reason, a cover up. People are always going in and out of a church building—worship and so forth. I want to cover up the 'and so forth.'"

"I understand that. But a building with thirty-foot maximum dimensions can cover up a secret stairway quite as well as the sort of convention-hall job you are asking young Wilkie to throw up."

Ardmore squirmed. Damn it—couldn't anyone but himself see the value of advertising? "Look, Jeff, this whole deal depends on making the right impression at the start. If Columbus had come in asking for a dime, he would have been thrown out of the palace on his ear. As it was, he got the crown jewels. We've got to have an impressive front."

"I suppose so," Thomas answered without conviction.

Several days later Wilkie asked permission for Scheer and himself to go outside. Finding that they did not intend to go far, Ardmore gave permission, after impressing on them the need for extreme caution.

He encountered them some time later proceeding down the main passage toward the laboratories. They had an enormous granite boulder. Scheer was supporting it clear of walls and floor by means of tractors and pressors generated by a portable Ledbetter projector strapped as a pack on his shoulders. Wilkie had tied a line around the great chunk of rock and was leading it as if it were a cow. "Great Scott!" said Ardmore. "What y' got there?"

"Uh, a piece of mountain, sir."

"So I see. But why?"

Wilkie looked mysterious. "Major, could you spare some time later in the day? We might have something to show you."

"If you won't talk, you won't talk. Very well."

Wilkie phoned him later, much later, asked him to come and suggested that Thomas come, too. When they arrived in the designated shop room everyone was present except Calhoun. Wilkie greeted them and said, "With your permission, we'll start, Major."

"Don't be so formal. Aren't you going to wait for Colonel Calhoun?"

"I invited him, but he declined."

"Go ahead then."

"Yes, sir." Wilkie turned to the rest. "This piece of granite represents the mountain top above us. Go ahead, Scheer."

Wilkie took position at a Ledbetter projector. Scheer was already at one; it had been specially fitted with sights and some other gadgetry that Ardmore could not identify. Scheer pressed a couple of studs; a pencil beam of light sprang out.

Using it as if it were a saw he sliced the top off the boulder. Wilkie caught the separated portion with a tractor-pressor combination and moved it aside. He set his controls and it hung in air; where it had been the stone was flat and of mirror polish. "That's the temple's base," said Wilkie.

Scheer continued carving with his pencil beam, trucking his projector around as necessary. The flat top had now been squared off; the square was the summit of a four-sided truncated pyramid. That done, he started carving steps down one side of the figure. "That's enough, Scheer," Wilkie commanded. "Let's make a wall. Prepare the surface."

Scheer did something with his projector. No beam could be seen, but the flat upper surface turned black. "Carbon," announced Wilkie. "Industrial diamonds probably. That's our work bench. O. K., Scheer. " Wilkie moved the detached chunk back over the "bench"; Scheer carved off a piece; it turned molten, dripped down on the flat surface, spread to the edges and stopped. It now had a white metallic sheen. As it cooled Scheer nipped each corner, then, using one pressor as a vise to hold it firmly to the boulder and another as a moving wedge, he turned each corner up. It was now a shallow, open box, two feet square and an inch deep. Wilkie whisked it aside and hung it in air.

The process was repeated, but this time a single sheet rather than a box was formed. Wilkie put it out of the way and put the box back on the pedestal. "Let's stuff the turkey," announced Wilkie.

He transferred the chopped-off chunk back to a position over the open box. Scheer carved off a piece and lowered it into the box, then played a beam on it. It melted down and spread over the bottom. "Granite is practically glass," lectured Wilkie, "and what we want is foamed glass, so we use no transmutation in this step—except the least, little bit to make the gases to foam it. Let's have a shot of nitrogen, Scheer." The master sergeant nodded and irradiated the mess for a split second; it foamed up like boiling fudge, filling the shallow box to the rim, and froze.

Wilkie snagged the simple sheet out of the air and caused it to hover over the filled box, then to settle so that it lay, somewhat unevenly, as a cover. "Iron it down, Scheer."

The sheet glowed red and settled in place, pressed flat by an invisible hand. Scheer walked his projector around, welding the cover of the box to the box proper. When he had finished Wilkie set the filled box up on edge at one edge of the pedestal. Leaving the controls of his projector set to hold it there, he walked over to the far side of the room where a tarpaulin covered a pile of something on a bench.

"To save your time and for practice we made four others earlier," he explained and whipped off the tarpaulin. Disclosed were a stack of sandwich panels exactly like that one just created. He did not touch them; instead Scheer lifted them off by projector one at a time and built a cube, using the newly made panel as the first face and the pedestal as the bottom of the cube. Wilkie returned to his projector and held the structure rigid while Scheer welded each seam. "Scheer is much more accurate than I am," he explained. "I give him all the tough parts. O. K., Scheer—how about a door?"

"How big?" grunted the sergeant, speaking for the first time.

"Use your judgment. Eight inches high would be all right."

Scheer grunted again and carved a rectangular opening in the side facing the slope on which he had begun earlier to carve steps. When he finished Wilkie announced, "There's your temple, boss."

No human hand had touched the boulder nor anything made from it, from start to finish.

The applause sounded like considerably more than five people. Wilkie turned pink; Scheer worked his jaw muscles: They crowded around it. "Is it 'hot'?" inquired Brooks.

"No," answered Mitsui, "I touched it."

"I didn't mean that."

"No, it's not 'hot'," Wilkie reassured him, "not with the Ledbetter process. Stable isotopes, all of them."

Ardmore straightened up from a close inspection. "I take it you intend to do the whole thing outdoors?"

"Is that all right, Major? Of course we could work down below and assemble it up above, from small panels—but I'm sure that would take just as long as to work from scratch with big panels. And I'm not sure about assembling the roof from small units. Sandwich panels like these are the lightest, strongest, stiffest structure we can use. It was the problem of that big roof span you want that caused us to work out this system."

"Do it your way. I'm sure you know what you're doing."

"Of course," admitted Wilkie, "we can't finish it in this short a time. This is just the shell. I don't know how long it will take to dress it up."

"Dress it up?" inquired Graham. "When you've got a fine, great simple shape why belittle it with decoration? The cube is one of the purest and most beautiful shapes possible."

"I agree with Graham," Ardmore commented. "That's your temple, right there. Nothing makes a more effective display than great, unbroken masses. When you've got something simple and effective, don't louse it up."

Wilkie shrugged. "I wouldn't know. I thought you wanted something fancy."

"This is fancy. But see here, Bob, one thing puzzles me. Mind you, I'm not criticizing—I'd as soon think of criticizing the Days of Creation—but tell me this: why did you take a chance on going outside? Why didn't you just go into one of the unoccupied rooms, peel off the wall coating and use that magic knife to carve a chunk of granite right out of the heart of the mountain?"

Wilkie looked thunderstruck. "I never thought of that."

CHAPTER FIVE

A patrol helicopter cruised slowly south from Denver. The PanAsian lieutenant commanding it consulted a recently constructed aerial mosaic map and indicated to the pilot that he was to hover. Yes, there it was, a great cubical building rising from the shoulder of a mountain. It had been picked up by the cartographical survey of the Heavenly Emperor's new Western Realm and he had been sent to investigate.

The lieutenant regarded the job as a simple routine matter. Although the building did not appear in the records of the administrative district in which it was located there was nothing surprising in that. The newly conquered territory was enormous in extent, the aborigines, with their loose undisciplined ways—so characteristic of all the inferior races—kept no proper records of anything. It might be years before everything in this wild new country was properly indexed and cross-filed, particularly as this pale anemic people was almost childishly resistant to the benefits of civilization.

Yes, it would be a long job, perhaps longer than the Amalgamation of India. He sighed to himself. He had received a letter that morning from his principal wife informing him that his second wife had presented him with a manchild. Should he request that he be reclassified as a permanent colonist in order that his family might join him here, or should he pray for leave, long overdue?

Those were no thoughts for a man on the Heavenly Emperor's duty! He recited over to himself the Seven Principles of the Warrior Race and indicated to the pilot an alp in which to land.

The building was more impressive from the ground, a great square featureless mass, fully two hundred yards across in every dimension. The face toward him shone with a clear monochromatic emerald green, although it faced away from the afternoon sun. He could see a little of the wall to the right; it was golden.

His task group of one squad filed out of the helicopter after him and were followed by the mountain guide who had been impressed for this service. He spoke to the white man in English. "Have you seen this building before?"

"No, Master."

"Why not?"

"This part of the mountains is new to me."

The man was probably lying, but it was useless to punish him. He dropped the matter. "Lead on."

They trudged steadily up the slope toward the immense cube to where a broad flight of steps, wider still than the cube itself, led to its nearer face. The lieutenant hesitated momentarily before starting to mount them. He was aware of a general feeling of unease, a sense of mild disquietude, as if a voice were warning him of unnamed danger.

He set foot on the first step. A single deep clear note rolled across the canyon; the feeling of uneasiness swelled to an irrational dread. He could see that his men were infected with it. Resolutely he mounted the second step. Another and different tone echoed through the hills.

He marched steadily up the long flight, his men following reluctantly. A slow, ponderous and infinitely tragic largo kept time to his labored steps, labored because the treads were just too broad and the lifts just too high for comfort. The feeling of impending disaster, of inescapable doom, grew steadily greater as he approached the building.

Two doors of heroic size swung slowly open as the lieutenant ascended. In the archway thus created stood a human figure, a man, dressed in emerald robes that brushed the floor. White hair and flowing beard framed a face of benign dignity. He moved majestically forward from the doorway, reaching the top of the flight of steps just as the lieutenant attained it. The lieutenant noted with amazement that a halo flickered unsubstantially around the old man's head. But he had little time to consider it; the old man raised his right hand in benediction and spoke:

"Peace be unto you!"

And it was so! The feeling of dread, of irrational fright, dropped away from the PanAsian as if someone had turned a switch. In his relief he found himself regarding this member of an inferior race—so evidently a priest—with a warmth reserved for equals. He recalled the Admonitions for dealing with inferior religions.

"What is this place, Holy One?"

"You stand at the threshold of the Temple of Mota, Lord of Lords and Lord of All!"

"Mota-h-m-m-m." He could not recall such a god, but it did not matter. These sallow creatures had a thousand strange gods. Three things only do slaves require, food, work, and their gods, and of the three their gods must never be touched, else they grow troublesome. So said the Precepts for Ruling. "Who are you?"

"I am an humble priest, First Server of Shaam, Lord of Peace."

"Shaam? I thought you said Mota was your god?"

"We serve the Lord Mota in six of his thousand attributes. You serve him in your way. Even the Heavenly Emperor serves him in his. My duty is to the Lord of Peace."

This was perilously close to treason, the lieutenant thought, if not to blasphemy. Still, it may be that the gods have many names, and the native did not seem disposed to make trouble. "Very well, old Holy One, the Heavenly Emperor permits you to serve your god as you see him, but I must inspect for the Empire. Stand aside."

The old man did not move, but answered regretfully, "I am sorry, Master. It cannot be."

"It must be. Stand aside!"

"Please, Master, I beg of you! It is not possible for you to enter here. In these attributes Mota is Lord of the white men. You must go to your own temple; you cannot enter this one. It is death to any but his followers."

"You threaten me?"

"No, Master, no—we serve the Emperor, as our faith requires. But this thing the Lord Mota Himself forbids. I cannot save you if you offend."

"On the Heavenly Emperor's service—stand aside!" He strode steadily across the broad terrace toward the door, his squad clomping stolidly after him. The panic dread clutched at him as he marched and increased in intensity as he approached the great door. His heart seemed constricted, and a mad longing to flee clamored through him senselessly. Only the fatalistic courage of his training made him go on. Through the door he saw a vast empty hall and on the far side an altar, large in itself, but dwarfed by the mammoth proportions of the room. The inner walls shone, each with its own light, red, blue, green, golden. The ceiling was a perfect, flawless white, the floor an equally perfect black.

There was nothing to be afraid of here, he told himself, this illogical but horribly real dread was a sickness, unworthy of a warrior. He stepped across the threshold. A momentary dizziness, a flash of terrifying insecurity and he collapsed.

His squad, close at his heels, had no more warning.

Ardmore came trotting out of concealment. "Nice work, Jeff," he called out, "you should be on the stage!"

The old priest relaxed. "Thanks, Chief. What happens next?"

"We'll have time to figure that out." He turned toward the altar and shouted, "Scheer!"

"Yes, sir!"

"Turn off the fourteen-cycle note!" He added to Thomas, "Those damned subsonics give me the creeping horrors even when I know what's going on. I wonder what effect it had on our pal here?"

"He was cracking up, I believe. I never thought he'd make it to the doorway."

"I don't blame him. It made me want to howl like a dog, and I ordered it turned on. There's nothing like the fear of something you can't understand to break a man down. Well, we got a bear by the tail.

Now to figure out a way to turn loose—"

"How about him?" Thomas jerked his head toward the mountaineer, who still stood near the head of the great flight of steps.

"Oh, yes." Ardmore whistled at him and shouted, "Hey you—come here!"

The man hesitated, and Ardmore added, "Damn it—we're white men! Can't you see that?"

The man answered, "I see it, but I don't like it." Nevertheless he slowly approached.

Ardmore said, "This is a piece of razzle-dazzle for the benefit of our yellow brethren. Now that you're in it, you're in it! Are you game?"

The other members of the personnel of the Citadel had gathered around by this time. The mountain guide glanced around at their faces. "It doesn't look as if I had much choice."

"Maybe not, but we would rather have a volunteer than a prisoner."

The mountaineer shifted tobacco from left cheek to right, glanced around the immaculate pavement for a place to spit, decided not to, and answered. "What's the game?"

"It's a frameup on our Asiatic bosses. We plan to give them the run-around—with the help of God and the great Lord Mota."

The guide looked them over again, then suddenly stuck out his hand and said, "I'm in."

"Fine," agreed Ardmore, taking his hand. "What's your name?"

"Howe. Alexander Hamilton Howe. Friends call me Alec."

"O.K., Alec. Now what can you do? Can you cook?" he added.

"Some."

"Good." He turned away. "Graham, he's your man for now. I'll talk with him later. Now—Jeff, did it seem to you that one of those monkeys went down a little slowly?"

"Maybe. Why?"

"This one; wasn't it?" He touched one of the quiet, sprawled figures with his shoe.

"I think so."

"All right, I want to check up on him before we bring them to. If he's a Mongolian he should have keeled over quicker. Dr. Brooks, will you give this laddie's reflexes a workout? And don't be too gentle about it."

Brooks managed to produce some jerks in short order. Seeing this, Ardmore reached down and set his thumb firmly on the exposed nerve under the ear. The soldier came to his knees, writhing. "All right, bud—explain yourself." The soldier stared impassively. Ardmore studied his face for a moment, then made a quick gesture, which was protected from the gaze of the others by his body.

"Why didn't you say so?" asked the PanAsian soldier.

"I must say it's a good make-up job," commented Ardmore admiringly. "What's your name and rank?"

"Tattoo and plastic surgery," the other returned. "Name's Downer, captain, United States army."

"Mine's Ardmore. Major Ardmore."

"Glad to know you, Major." They shook hands. "Very glad, I should say. I've been hanging on for months, wondering who to report to and how."

"Well, we can certainly use you. It's a scratch organization. I've got to get busy now—we'll talk later." He turned away. "Places, gentlemen. Second act. Check each other's make-up. Wilkie, see to it that Howe and Downer are out of sight. We are going to bring our drowsy guests back to consciousness."

They started to comply. Downer touched Ardmore's sleeve.

"Just a moment, Major. I don't know your layout, but before we go any further, are you sure you don't want me to stay on my present assignment?"

"Eh? H-m-m-m—you've got something there. Are you willing to do it?"

"I'm willing to do it, if it's useful," Downer replied soberly.

"It would be useful. Thomas, come here." The three of them went into a short conference and arranged a way for Downer to report through the grapevine, and Ardmore told him as much about the set-up as he needed to know. "Well, good luck, old man," he concluded. "Get back down there and play dead, and we'll reanimate your messmates."

Thomas, Ardmore, and Calhoun attended the Asiatic lieutenant as his eyes flickered open. "Praise be!" intoned Thomas. "The Master lives!"

The lieutenant stared around him, shook his head, then reached for his sidearm. Ardmore, impressive in the red robes of Dis, Lord of Destruction, held up a hand. "Careful, Master, please! I have beseeched my Lord Dis to return you to us. Do not offend him again."

The Asiatic hesitated, then asked, "What happened?"

"The Lord Mota, acting through Dis, the Destroyer, took you for his own. We prayed and wept and beseeched Tamar, Lady of Mercy, to intercede for us." He swept an arm toward the open door. Wilkie, Graham, and Brooks, appropriately clad, were still busily genuflecting before the altar. "Graciously, our prayer was answered. Go in peace!"

Scheer, at the control board, picked this moment to increase the volume on the fourteen-cycle note. With nameless fear pressing his heart, confused, baffled, the lieutenant took the easy way out. He gathered his men about him and marched back down the broad flight of stairs, colossal organ music still following him in awful, inescapable accompaniment.

"Well, that's that," Ardmore commented as the little group disappeared in the distance. "First round to God's chilluns. Thomas, I want you to start into town at once."

"So?"

"In your robes and full paraphernalia. Seek out the district boss and register formal complaint that Lieutenant Stinkyface did wrongfully profane our sacred places to the great indignation of our gods, and pray for assurance that it will not happen again. You want to be on your high horse about the whole matter—righteous indignation, you know—but, oh, very respectful to temporal authority."

"I appreciate the confidence you place in me," Thomas said with sardonic grimness. Ardmore grinned at him.

"I know it's a tough assignment, fella, but a lot depends on it. If we can make use of their own customs and rules to establish a precedent right now which sets us up as a legitimate religion, entitled to all the usual immunities, we've got half the battle won."

"Suppose they ask for my identification card?"

"If you carry yourself with sufficient arrogance they will never get around to asking for it. Just think about the typical clubwoman and try to show that much bulge. I want 'em to get used to the idea that anyone with the staff and the robes and the halo carries his identification just in his appearance. It will save us trouble later."

"I'll try—but I'm not promising anything."

"I think you can do it. Anyhow, you are going out equipped with enough stuff to keep you safe. Keep your shield turned on whenever you are around any of 'em. Don't try to account for it in any way; just let 'em bounce off it, if they close in on you. It's a miracle—no need to explain."

"O. K."

The lieutenant's report was not satisfactory to his superiors. As for that, it was not satisfactory to himself. He felt an acute sense of loss of personal honor, of face, which the words of his immediate superior did nothing to lessen. "You, an officer in the army of the Heavenly Emperor, have permitted yourself to look small in the eyes of a subject race. What have you to say?"

"Your forgiveness, sire!"

"Not for me—it is a matter for you to settle with your ancestors."

"I hear, sire!" He caressed the short sword which hung at his side.

"Let there be no haste; I intend for you to tell your tale in person to the Imperial Hand."

The local Hand of the Emperor, military governor of that region which included Denver and the Citadel, was no more pleased than his junior. "What possessed you to enter their holy place? These people are childlike, excitable. Your action could be the regrettable cause of assassinations of many more valuable than yourself. We cannot be forever wasting slaves to teach them lessons."

"I am unworthy, sire."

"I do not dispute that. You may go." The lieutenant departed, to join, not his family, but his ancestors.

The Imperial Hand turned to his adjutant. "We will probably be petitioned by this cult. See that the petitioners are pacified and assured that their gods will not be disturbed. Note the characteristics of the sect and send out a general warning to deal gently with it." He sighed. "These savages and their false gods! I grow weary of them. Yet they are necessary; the priests and the gods of slaves always fight on the side of the Masters. It is a rule of nature."

"You have spoken, sire."

Ardmore was glad to see Thomas return to the Citadel. In spite of his confidence in Jeff's ability to handle himself in a tight place, in spite of the assurance that Calhoun had given him that the protective shield, properly handled, would protect the wearer from anything that the PanAsian could bring on it, he had been in a state of nerves ever since Thomas had set out to register a complaint with the Asiatic authorities. After all, the attitude of the PanAsians toward local religions might be one of bare toleration rather than special encouragement.

"Welcome home, old boy!" he shouted, pounding him on the back. "I'm glad to see your ugly face—tell me what happened?"

"Give me time to get out of this bloody bathrobe, and I'll tell you. Got a cigarette? That's a bad point about being a holy man; they don't smoke."

"Sure. Here. Had anything to eat?"

"Not recently."

Ardmore flipped the intercommunicator to Kitchen. "Alec, rustle up some groceries for Lieutenant Thomas. And tell the troops they can hear his story if they come around to my office."

"Ask him if he has any avocados."

Ardmore did so. "He says they're still in quick freeze, but he'll thaw one out. Now let's have your story. What did Little Red Riding Hood say to the wolf?"

"Well—you'll hardly believe it, Chief, but I didn't have any trouble at all. When I got into town, I marched right straight up to the first PanAsian policeman I found, stepped off the curb, and struck the old benediction pose—staff in my left hand, right hand pawing the air; none of this hands folded and head down stuff that white men are supposed to use. Then I said, 'Peace be unto you! Will the Master direct his servant to the seat of the Heavenly Emperor's government?'

"I don't think he understood much English. He seemed startled at my manner, and got hold of another flatface to help him. This one knew more English and I repeated my request. They palavered in that damned singsong tongue of theirs, then conducted me to the palace of the Emperor's Hand. We made quite a procession—one on each side and me walking fast so that I kept about even or a little in front of them."

"Good advertising," Ardmore approved.

"That's what I thought. Anyway, they got me there and I told my story to some underofficial. The results astounded me. I was whisked right straight up to the Hand himself."

"The hell you say!"

"Wait a minute—here's the pay-off: I'll admit I was scared, but I said to myself 'Jeff, old boy, if you start to crawl now, you'll never get out of here alive.' I knew a white man is expected to drop to his knees before an official of that rank. I didn't; I gave him the same standing benediction I had given his flunkies. And he let me get away with it! He looked me over and said, 'I thank you for your blessing, Holy One. You may approach.' He speaks excellent English, by the way.

"Well, I gave him a reasonably accurate version of what happened here—the official version, you understand—and he asked me a few questions."

"What sort of questions?"

"In the first place he wanted to know if my religion recognized the authority of the Emperor. I assured him that it did, that our followers were absolutely bound to obey temporal authority in all temporal matters, but that our creed commanded us to worship the true gods in our own fashion. Then I gave him a long theological spiel. I told him that all men worshipped God, but that God had a thousand attributes, each one a mystery. God in his wisdom had seen fit to appear to different races in different attributes because it was not seemly for servant and master to worship in the same fashion. Because of that, the six attributes of Mota, of Shaam, of Mens, of Tamar, of Barmac, and of Dis had been set aside for the white men, just as the Heavenly Emperor was an attribute reserved for the race of Master."

"How did he take it?"

"I gathered that he thought it was very sound doctrine—for slaves. He asked me what my church did besides holding services, and I told him that our principal desire is to minister to the poor and sick. He seemed pleased at that. I have an impression that our gracious overlords are finding relief a very serious problem."

"Relief? Do they give any relief?"

"Not exactly. But if you load prisoners into concentration camps you have to feed them something. The internal economy has largely broken down and they haven't got it straightened out yet. I think they would welcome a movement which would relieve them from worrying too much over how to feed the slaves."

"H-m-m-m. Anything else?"

"Nothing much. I assured him again that we, as spiritual leaders, were forbidden by our doctrines to have anything to do with politics, and he told me that we would not be molested in the future. Then he dismissed me. I repeated my benediction, turned my back on him, and stomped out."

"It seems to me," said Ardmore, "that you pretty thoroughly sold him a bill of goods."

"I wouldn't be too sure, Chief. That old scoundrel is shrewd and Machiavellian. I shouldn't call him a scoundrel, because he's not by his standards. He's a statesman. I've got to admit he impressed me. Look—these PanAsians can't be stupid; they've conquered and held half a world, hundreds of millions of people. If they tolerate local religions, it's because they have found it to be smart politics. We've got to keep them thinking so in our case, in the face of smart and experienced administrators."

"No doubt you're right. We certainly must be careful not to underestimate them."

"I hadn't quite finished. Another escort picked me up on the way out of the palace and stayed with me. I walked along, paying no attention to them. My route out of town took me through the central market. There were hundreds of whites there, lined up in queues, waiting for a chance to buy food on their ration cards. I got an idea and decided to find out just how far my immunity extended. I stopped and climbed up on a box and started to preach to them."

Ardmore whistled. "Cripes, Jeff, you shouldn't have taken a chance like that!"

"But, Major, we needed to know, and I was fairly certain that the worst that could happen would be that they would make me stop."

"Well . . . yes, I suppose so. Anyhow the job requires that we take chances and you have to use your own judgment. Boldness may be the safest policy. Sorry I spoke—what happened?"

"My escort seemed dumbfounded at first, and not certain what to do. I went right ahead, watching them out of the corner of my eye. Pretty soon they were joined by a chappie who seemed to be senior to them. They held a confab, and the senior cop went away. He came back in about five minutes, and just stood there, watching me. I gathered that he had phoned in and had received instructions to let me alone."

"How did the crowd take it?"

"I think they were most impressed by the apparent fact that a white man was breaking one of the rules of the overlords and getting away with it. I didn't try to tell them much. I took as my text, The Disciple is coming!' and embroidered it with a lot of glittering generalities. I told them to be good boys and girls and not to be afraid, for the Disciple was coming to feed the hungry and heal the sick and console the bereaved."

"H-m-m-m. Now that you've started making promises, we had better get set to deliver."

"I was coming to that. Chief, I think that we had better set up a branch church in Denver right away."

"We've hardly got the personnel yet to start branching out."

"Are you sure? I don't like to set my opinion up against yours, but I don't see how we can gain many recruits unless we go where the recruits are. They're all set for it now; you may be sure that every white man in Denver is talking about the old beezer in the halo—in a halo, mind you!—who preached in the market place and the Asiatics didn't dare stop him. We'll pack 'em in!"

"Well . . . maybe you're right—"

I think I am. Admitting that you can't spare the regular personnel from the Citadel, here's how we can work it; I'll go down to the city with Alec, locate a building that we can turn into a temple and start holding services. We can get along with the power units in the staffs at first, and Scheer can follow along and rebuild the interior of the temple and set up a proper unit in the altar. Once things are rolling I can turn the routine over to Alec. He'll be the local priest for Denver."

The others had drifted in one by one while Ardmore and Thomas were talking. Ardmore turned now to Alec Howe.

"How about it, Alec? Do you think you can make a noise like a priest, preach 'em sermons, organize charities, and that sort of thing?"

The mountain guide was slow to answer. "I think, Major, that I would rather stay on the job I have now."

"It won't be so hard," Ardmore reassured him. "Thomas or I can write your sermons for you. The rest of it would consist largely in keeping your mouth shut and your eyes open, and in shooing likely prospects up here to be enlisted."

"It's not the sermons, Major. I can preach a sermon—I used to be a lay preacher in my youth. It's just that I can't reconcile this false religion with my conscience. I know you are working toward a worthy purpose and I've agreed to serve, but I'd rather stay in the kitchen."

Ardmore considered his words before replying. "Alec," he said at length, in a grave voice, "I think I can appreciate your viewpoint. I wouldn't want to ask any man to do anything against his own conscience. As a matter of fact, we would not have adopted the cloak of a religion had we seen any other practical way to fight for the United States. Does your faith forbid you to fight for your country?"

"No, it does not."

"Most of your work as a priest of this church would be to help the helpless. Doesn't that fit into your creed?"

"Naturally it does. That is exactly why I cannot do it in the name of a false God."

"But is it a false God? Do you believe that God cares very much what name you call Him as long as the work you perform is acceptable to Him? Now mind you," he added hastily, "I don't say that this so-called temple we have erected here is necessarily a House of the Lord, but isn't the worship of God a matter of how you feel in your heart rather than the verbal forms and the ceremonials used?"

"That's true, Major, every word you've said is gospel—but I just don't feel right about it."

Ardmore could see that Calhoun had been listening to this discussion with poorly concealed impatience. He decided to terminate it. "Alec, I want you to go now and think this over by yourself. Come see me tomorrow. If you can't reconcile this work to your conscience, I'll give you an unprejudiced discharge as a conscientious objector. It won't even be necessary for you to serve in the kitchen."

"I wouldn't want to go that far, Major. It seems to me—"

"No, really. If one is wrong, so is the other. I don't want to be responsible for requiring a man to do anything that might be a sin against his faith. Now you get along and think about it."

Ardmore hustled him out without giving him a chance to talk further.

Calhoun could contain himself no longer. "Well, really, Major, I must say! Is it your policy to compromise with superstition in the face of military necessity?"

"No, Colonel, it is not—but that superstition, as you call it, is in this case a military fact. Howe's case is the first example of something we are going to have to deal with—the attitude of the orthodox religions to the one we have trumped up."

"Maybe," suggested Wilkie, "we should have imitated the more usual religions."

"Perhaps. Perhaps. I thought of that, but somehow I couldn't see it. I can't picture one of us standing up and pretending to be a minister, say, of one of the regular protestant churches. I'm not much of a churchgoer, but I didn't think I could stomach it. Maybe when it comes right down to it, I'm bothered by the same thing that bothers Howe. But we've got to deal with it. We've got to consider the attitude of the other churches. We mustn't tread on their toes in any way we can help."

"Maybe this would help," Thomas suggested. "It could be one of the tenets of our church that we included and tolerated, even encouraged, any other form of worship that a man might favor. Besides that, every church, especially these days, has more social work than it can afford. We'll give the others financial assistance with no strings attached."

"Both of those things will help," Ardmore decided, "but it will be ticklish business. Whenever possible, we'll enlist the regular ministers and priests themselves. You can bet that every American will be for us, if he understands what we are aiming toward. The problem will be to decide which ones can be trusted with the whole secret. Now about Denver, Jeff, do you want to start back right away, tomorrow, maybe?"

"How about Howe?"

"He'll come around, I think."

"Just a moment, Major." It was Dr. Brooks, who had been sitting quietly, as usual, while the others talked. " I think it would be a good idea if we waited a day or two, until Scheer can make certain changes in the power units of the staffs."

"What sort of changes?"

"You will remember that we established experimentally that the Ledbetter effect could be used as a sterilizing agent?"

"Yes, of course."

"That is why we felt safe in predicting that we would help the sick. As a matter of fact we underestimated the potentialities of the method. I infected myself with anthrax earlier this week—"

"Anthrax! For God's sake, Doctor, what in the world do you mean by taking a chance like that?"

Brooks turned his mild eyes on Ardmore. "But it was obviously necessary," he explained patiently. "The guinea pig tests were positive, it is true, but human experimentation was necessary to establish the method. As I was saying, I infected myself with anthrax and permitted the disease to establish itself, then exposed myself to the Ledbetter effect in all wave lengths except that band of frequencies fatal to warm-blooded vertebrates. The disease disappeared. In less than an hour the natural balance of anabolism over catabolism had cleared up the residue of pathological symptoms. I was well."

"I'll be a crosseyed intern! Do you think it will work on other diseases just as quickly?"

"I feel sure of it. Not only has such been the result with other diseases in the animal experimentation that I have conducted, but because of another unanticipated, though experimentally predictable, result. I've suffered from a rather severe cold in the head lately, as some of you may have noticed. The exposure not only cured the anthrax, it completely cleared up my cold. The cold virus involves a dozen or more known pathogenic organisms, and probably as many more unknown ones. The exposure killed them all, indiscriminately."

"I'm delighted to get this report, Doctor," Ardmore answered. "In the long run this one development may be of more importance to the human race than any military use we may make of it now. But how does it affect the matter of establishing the branch church in Denver?"

"Well, sir, perhaps it doesn't. But I took the liberty of having Scheer modify one of the portable power units in order that healing might be conveniently carried on by any one of our agents even though equipped only with the staff. I thought you might prefer to wait until Scheer could add the same modification to the staffs designed to be used by Thomas and Howe."

"I think you are right, if it does not take too long. May I see the modification?"

Scheer demonstrated the staff he had worked over. Superficially it looked no different from the others. A six-foot rod was surmounted by a capital in the form of an ornate cube about four inches through. The faces of the cube were colored to correspond with the sides of the great temple. The base of the cube and the staff itself were covered with intricate designs in golden scroll-work, formal arabesques, and delicate bas-relief—all of which effectively concealed the controls of the power unit and projector located in the cubical capital.

Scheer had not changed the superficial appearance of the staff; he had simply added an additional circuit internally to the power unit in the cube which constrained it to oscillate only outside the band of frequencies fatal to vertebrate life. This circuit controlled the action of the power unit and projector whenever a certain leaf in the decorative design of the staff was pressed.

Scheer and Graham had labored together to create the staff's designing and redesigning to achieve an integrated whole in which mechanical action would be concealed in artistic camouflage. They made a good team. As a matter of fact their talents were not too far apart; the artist is two-thirds artisan and the artisan has essentially the same creative urge as the artist.

"I would suggest," added Brooks, when the new control had been explained and demonstrated, "that this new effect be attributed to Tamar, Lady of Mercy, and that her light be turned on when it is used."

"That's right. That's the idea," Ardmore approved. "Never use the staff for any purpose without turning on the color light associated with the particular god whose help you are supposed to be invoking. That's an invariable rule. Let 'em break their hearts trying to figure out how a simple monochromatic light can perform miracles."

"Why bother with the rigamarole?" inquired Calhoun. "The PanAsians can't possibly detect the effects we use in any case."

"There is a double reason, Colonel. By giving them a false lead to follow we hope to insure that they will bend their scientific efforts in the wrong direction. We can't afford to underestimate their ability. But even more important is the psychological effect on nonscientific minds, both white and yellow. People think things are wonderful that look wonderful. The average American is completely unimpressed by scientific wonders; he expects them, takes them as a matter of course with an attitude of 'So what? That's what you guys are paid for.'

"But add a certain amount of flubdub and hokum and don't label it 'scientific' and he will be impressed. It's wonderful advertising."

"Well," said Calhoun, dismissing the matter, "no doubt you know best—you have evidently had a great deal of experience in fooling the public. I've never turned my attention to such matters; my concern is with pure science. If you no longer need me here, Major, I have work to do."

"Certainly, Colonel, certainly! Go right ahead, your work is of prime importance . . .

"Still," he added meditatively, when Calhoun had gone, "I don't see why mass psychology shouldn't be a scientific field. If some of the scientists had taken the trouble to formulate some of the things that salesmen and politicians know already, we might never have gotten into the mess we're in."

"I think I can answer that," Dr. Brooks said diffidently.

"Huh? Oh, yes, Doctor—what were you going to say?"

"Psychology is not a science because it is too difficult. The scientific mind is usually orderly, with a natural love for order. It resents and tends to ignore fields in which order is not readily apparent. It gravitates to fields in which order is easily found such as the physical sciences, and leaves the more complex fields to those who play by ear, as it were. Thus we have a rigorous science of thermodynamics but are not likely to have a science of psychodynamics for many years yet to come."

Wilkie swung around so that he faced Brooks. "Do you really believe that, Brooksie?"

"Certainly, my dear Bob."

Ardmore rapped on his desk, "It's an interesting subject, and I wish we could continue the discussion, but it looks like rain, and the crops still to get in. Now about this matter of founding a church in Denver—anybody got any ideas?"

CHAPTER SIX

Wilkie said, "I'm glad I don't have to tackle it. I wouldn't have the slightest idea where to start."

"Ah, but you may have to tackle it, Bob," Ardmore countered. "We may all have to tackle it. Damn it—if we only had a few hundred that we could depend on! But we haven't; there are only nine of us." He sat still for a moment, drumming the table. "Just nine."

"You'll never get Colonel Calhoun to make noises like a preacher," commented Brooks.

"Okay, then—eight. Jeff, how many cities and towns are there in the United States?"

"And you can't use Frank Mitsui," persisted Brooks. "For that matter, while I'm willing enough I don't see how you can use me. I haven't any more idea of how to go about setting up a fake church than I have about how to teach ballet dancing."

"Don't fret about it, Doctor, neither have I. We'll play by ear. Fortunately there aren't any rules. We can cook it up to suit ourselves."

"But how are you going to be convincing?"

"We don't have to be convincing—not in the sense of getting converts. Real converts might prove to be a nuisance. We just have to be convincing enough to look like a legitimate religion to our overlords. And that doesn't have to be very convincing. All religions look equally silly from the outside. Take the—" Ardmore caught a look on Scheer's face and said, "Sorry! I don't mean to tread on anybody's toes. But it's a fact just the same and one that we will make military use of. Take any religious mystery, any theological proposition: expressed in ordinary terms it will read like sheer nonsense to the outsider, from the ritualistic, symbolic eating of human flesh and blood practiced by all the Christian sects to the outright cannibalism practiced by some savages."

"Wait a minute, now!" he went on. "Don't throw anything at me. I'm not passing judgments on any religious beliefs or practices; I'm just pointing out that we are free to do anything at all, so long as we call it a religious practice and so long as we don't tread on the toes of the monkey men. But we have to decide what it is we are going to do and what it is we are going to say."

"It's not the doubletalk that worries me," said Thomas. "I just stuck to saying nothing in big words and it worked out all right. It's the matter of getting an actual toe hold in the cities. We just haven't got enough people to do it. Was that what you were thinking about when you asked me how many cities and towns there are in the country?"

"Mmm, yes. We can't act, we don't dare act, until we cover the

United States like a blanket. We'll have to make up our minds to a long war."

"Major, why do you want to cover every city and town?"

Ardmore looked interested. "Keep talking."

"Well," Thomas went on diffidently, "from what we've already learned the PanAsians don't maintain real military force in every hamlet. There are between sixty and seventy-five places that they have garrisoned. Most towns just have a sort of combination tax collector, mayor, and chief of police to see that the orders of the Hand are carried out. The local panjandrum isn't even a soldier, properly speaking, even though he goes armed and wears a uniform. He's sort of an M. P., a civil servant acting as a military governor. I think we can afford to ignore him; his power wouldn't last five minutes if he weren't backed up by the troops and weapons in the garrisoned cities."

Ardmore nodded. "I see your point. You feel that we should concentrate on the garrisoned towns and cities and ignore the rest. But look, Jeff, we mustn't underestimate the enemy. If the Great God Mota shows up nowhere but in the garrisoned spots it's going to look mighty funny to some intelligence officer among the PanAsians when he gets to fiddling with the statistics of the occupied country. I think we've got to show up elsewhere and. anywhere."

"And I respectfully suggest that we can't, sir. We haven't men enough to pull it off. We'll have trouble enough recruiting and training enough men to set up a temple in each of the garrisoned cities."

Ardmore chewed a thumbnail and looked frustrated. "You're probably right. Well, confound it, we won't get anywhere at all if we sit here worrying about the difficulties. I said we'd have to play by ear and that's what we'll do. The first job is to get a headquarters set up in Denver. Jeff, what are you going to need?"

Thomas frowned. "I don't know. Money, I suppose."

"No trouble about that," said Wilkie. "How much? I can make you half a ton of gold as easily as half a pound."

"I don't think I can carry more than about fifty pounds."

"I don't think he can spend bullion very easily," Ardmore commented. "It should be in coin."

"I can use bullion," Thomas insisted. "All I have to do is to take it to the Imperial bank. Panning gold is encouraged; our gracious masters charge one hell of a stiff seigniorage."

Ardmore shook his head. "You're missing the propaganda aspect. A priest in long robes and a flowing beard doesn't whip out a check book and a fountain pen; it's out of character. I don't want you to have a bank account anyhow; it will give the enemy detailed records of just what you are doing. I want you to pay for things with beautiful, shiny golden coins, stacks of them. It will make a tremendous impression.

Scheer, are you any good at counterfeiting?"

"I've never tried it, sir."

"No time like the present. Every man needs an alternative profession. Jeff, you didn't have any chance to pick up an Imperial gold coin, did you? We need a model."

"No, I didn't. But I suppose I could get one, if I sent word out among the hobos that I needed one."

"I hate to wait. But you've got to have money to tackle Denver."

"Does it have to be Imperial money?" asked Doctor Brooks.

"Eh?"

The biologist hauled a five dollar gold piece from his pocket. "Here's a lucky piece I've carried since I was a kid. I guess this is a lucky time to let it go."

"Hmm . . . How about it, Jeff? Can you pass American money?"

"Well, American paper money is no good, but gold coin—My guess is that those leeches probably won't object, so long as it's gold—at the bullion price, at least. I'm sure that Americans will take it."

"We don't care how much they discount it." Ardmore took the coin and chucked it to Scheer. "How long will it take you to make forty or fifty pounds of those?"

The master sergeant studied it. "Not long if I pour them rather than stamp them. You want them all just alike, sir?"

"Why not?"

"Well, sir, there's the matter of the date."

"Oh! I get you. Well, that's the only pattern we have; I guess we'll just have to hope that they either won't notice or won't care."

"If you can allow me just a little more time I think I could fix it, sir. I make about twenty or so with this as a pattern, then I'll do a little hand work and put a different date on each one. That will give me twenty different patterns instead of one."

"Scheer, you have the soul of an artist. Do it that way. While you are about it, you had better vary the scratches and wear marks on each."

"I had thought of that, sir."

Ardmore grinned. "This team is going to be a headache to His Imperial Nastiness yet. Well, how about it, Jeff? Any more points to settle before we adjourn the meeting?"

"Just one, boss. How do I get to Denver? Or how do we get there, assuming that Howe comes along?"

"I thought you would bring that up. It's a sticky question; we can't expect the Hand to provide you with a helicopter. How are your feet? Any broken arches? Corns and bunions?"

"I'll be switched if I want to walk. It's a long way."

"Don't blame you. And the devil of it is that it's a problem we're going to have with us from now on, if we are going to organize all over the country."

"I don't understand the difficulty," put in Brooks. "I thought citizens were still allowed to ride anything but aircraft?"

"Sure—with travel permits and endless red tape. Never mind," Ardmore continued, "the day will come when the costume of a priest of Mota will be all the travel permit we'll need. If we work this right, we'll be teacher's pet with all sorts of special privileges. In the meantime the trick is to get Jeff into Denver without attracting undue attention and without wearing out his feet. Say, Jeff, you never did tell me how you traveled. Somehow we missed that."

"I hitchhiked. Quite a chore, too. Most of the truckers are too scared of the security police to risk it."

"You did? You shouldn't have, Jeff: The priests of Mota do not hitchhike. It doesn't fit in with miracle working."

"Well, what do they do? Dawggone it, Major, if I had walked I would still be on the way—or more likely arrested by some flunky who hadn't gotten the news yet." Thomas' face showed irritation most unusual in him.

"Sorry. I shouldn't second-guess you. But we will have to figure out a better way."

"Why don't I just run him down in one of the scout cars?" asked Wilkie. "At night, of course."

"Night doesn't mean anything to radar, Bob. They would shoot you out of the sky."

"I don't think so. We have an almost unlimited amount of power at our disposal—sometimes it scares me when I try to think how much. I believe I can rig a radar beacon effect that will burn out any radar set that is turned on us."

"Giving notice to the enemy that there is still someone around capable of hankypanky with electronics? We mustn't tip our hand so soon, Bob."

Wilkie shut up, crestfallen. Ardmore thought it over. "And yet we've got to take chances. You rig your rig, Bob—then plan on hedgehopping all the way. We'll do it about three or four o'clock in the morning and there's a chance that you won't be noticed at all. Use your rig if you have to but if you do then everyone is to return to base. The incident must not be connected with the priests of Mota, even in the matter of timing. The same applies after Wilkie sets you down, Jeff. If by any chance you are surprised, use the Ledbetter effect to kill off all the enemy anywhere close to you—then go underground. Jungle up. Under no circumstances is any PanAsian to be permitted to suspect that the priests of Mota are anything but what they seem. Kill off your witnesses and escape."

"Right, boss."

The little scout car hovered over Lookout Mountain a few feet away from Buffalo Bill's grave. The door opened and a robed priest dropped to the ground, stumbling because of the heavy money belt slung from his shoulders and waist. A similar figure followed him and landed a bit more surefootedly. "You all right, Jeff"

"Sure."

Wilkie left the car on automatic long enough to lean out and say, "Good luck!"

"Thanks. But shut up and get going."

"Okay." The door closed and the car disappeared into the night.

It was growing light by the time Thomas and Howe reached the foot of the mountain and started into Denver. So far as they knew they had not been detected—although once they had crouched in bushes for several minutes, afraid to breathe, while a patrol passed. Jeff had kept his staff ready, a thumb resting lightly on a golden leaf in the decorations below the cube of Mota. But the patrol passed on, unaware of the curbed lightnings trained on them.

Once in the city and in daylight they made no further attempt to avoid attention. Few PanAsians were about so early; members of the slave race scurried along the streets, on their way to their labors, but the master race still slept. The Americans who saw them stared briefly but did not stop them nor speak to them; native Americans had already learned the first law of police states: mind your own business; don't be nosy!

Jeff deliberately sought out an encounter with a PanAsian policeman. He and Alec stepped down from the curb, switched on their shields and waited. No Americans were nearby; the presence of occupation police caused them to melt into walls. Jeff wet his lips and said "I'll do the talking, Alec."

"Suits me."

"Here he comes. Oh, my god, Alec, switch on your halo!"

"Huh?" Howe reached a finger up under his turban behind his right ear; the halo, shimmering iridescent light, sprang into being over his head. It was a mere ionization effect, a parlor trick of the additional spectra, less mysterious than natural aurora, but it looked good.

"That's better," Jeff acknowledged, from the side of his mouth. "What's the matter with your beard?"

"It keeps coming unstuck. I sweat."

"Don't let it come unstuck now! Here he comes—" Thomas struck the benediction pose; Howe followed suit. Jeff intoned, "Peace be unto you, Master!"

The Asiatic cop stopped. His knowledge of English was limited to halt, come along, and show your card; he depended on his club to keep the dogs in line. On the other hand he recognized the get up; it matched a picture on a notice newly posted in the barracks, this was one of the many silly things the slaves were allowed to do.

Still, a slave was a slave and must be kept in line. All slaves must bow; these slaves were not bowing. He cracked his club at the midriff of the nearer slave.

The nightstick bounced off before it reached the robed figure; the cop's fingers tingled as if he swung on something quite hard. "Peace be unto you!" Jeff rumbled again and watched him narrowly. The fellow was armed with a vortex pistol; Jeff was not afraid of it but it was no part of his plan to let the creature discover that he was immune to the Emperor's weapons. He was sorry that he had to use the shield against a blow from a stick and hoped that the PanAsian would not be able to believe the evidence of his own senses.

Certainly the man was startled. He looked at his stick, started to draw it back as if to swing again, then appeared to change his mind. He resorted to his meager supply of English. "Come along!"

Jeff raised his hand again. "Peace be unto you! It is not meet that the farjon should ripsnipe the cuskapads in the sight of the great lord Mota! Franchope!" He pointed to Howe.

The cop looked doubtful, then moved a few feet away to the street corner, glanced up and down and blew his whistle. Alec whispered, "What did you point to me for?"

"I don't know. It seemed like a good idea. Watch it!"

Another cop came trotting up; the pair approached Howe and Thomas. The new one seemed to be in authority over the first; they held a short discussion in meaningless singsong, then the later arrival came close, drawing his pistol as he did so. "You fellow boys, come along now quick!"

"Come, Alec." Thomas fell in with the policemen, switching off his shield as he did so. He hoped that Alec would notice that he had done so and conform; it seemed a good notion not to advertise the existence of the shields—not yet, at least.

The PanAsian conducted them to the nearest police station. Jeff walked briskly along, giving unctuous blessings to one and all. As they neared the station the senior cop sent the other trotting on ahead. When the party arrived they found the officer in charge waiting in the doorway, apparently curious to see these queer fish his men had hooked.

He was both curious and very much on his toes; the officer knew the circumstances under which the unfortunate lieutenant who had first turned up these strange holy men had gone to his ancestors. He was determined not to make a mistake which would cause him to lose face.

Jeff marched up to him, struck his pose and said, "Peace be unto you! Master, I have a complaint to make about your servants. They have stopped us from carrying out our holy work, work which is blessed by His Serene Highness himself, the Imperial Hand!"

The officer fingered his swagger stick, then spoke in his own language to his subordinates. He turned back to Jeff. "Who are you?"

"A priest of the great god Mota."

The PanAsian asked the same question of Alec; Jeff interceded. "Master," he said hastily, "he is a most holy man who has taken a vow of silence. If you force him to break it the sin will be on your head."

The officer hesitated. The bulletin concerning these crazy savages had been most pointed, but it had given no clear precedents for dealing with them. He hated to establish precedents; those who did so were sometimes promoted, more frequently they joined their ancestors. "He need not break his holy vow. But show me your cards, both of you."

Jeff looked amazed. "We are humble, nameless holy men, serving the great god Mota. What have we to do with such?"

"Hurry up!"

Jeff tried to look sad rather than nervous. He had rehearsed this speech in his mind; much depended on it getting across. "I am sorry for you, young Master. I will pray to Mota on your behalf. But now I must insist that you take me before the Hand of the Emperor—at once!"

"That's impossible."

"His Highness has seen me before; he will see me again. The Hand of the Emperor is always ready to see the servers of the great god Mota."

The officer looked at him, turned and went back into the station house. They waited.

"Do you suppose he'll actually have us taken before the prince?" Howe whispered.

"I hope not. I don't think so."

"Well, what will you do if he does?"

"Whatever I have to. Shut up—you're supposed to be under a vow of silence."

The officer came back after several minutes and said curtly, "You are free to go."

"To the Imperial Hand?" Jeff inquired maliciously.

"No, no! Just go. Get out of my district.,"

Jeff stepped back one pace and delivered a last benediction. The two "priests" turned away. From the corner of his eye Jeff saw the officer lift his swagger stick and cut savagely at the senior of the two policemen; he pretended not to see. He walked about a block before he spoke to Howe. "There! We should have no more trouble for a while."

"How do you figure? You sure got him sore at us."

"That's not the point. We can't afford to have him or any other cop thinking he can push us around like the others. By the time we have gone three blocks the word will be all over town that I'm back and to lay off. That's the way we've got to have it."

"Maybe so. I still think it's dangerous to have the cops on the alert for us."

"You don't understand," Jeff said impatiently. "There isn't any other safe way to do it. Cops are cops, no matter what is the color of their skin. They deal in fear and they understand fear. Once they understand we can't be touched, that it is very bad medicine to bother us, they'll be as polite to us as they are to their superiors. You'll see."

"I hope you're right."

"I'm right. Cops are cops. Pretty soon we'll have them on our payroll. Oh, oh! Watch it, Alec—here comes another one." A PanAsian policeman was dogtrotting up behind them. However, instead of overtaking them or calling to them to halt, he crossed over and kept abreast with them on the other side of the street. He ignored them determinedly.

"What's up, d'you think, Jeff?"

"We're being chaperoned. A good thing; Alec, the rest of the monkeys won't bother us now. We'll just get on with our job. You know this town pretty well, don't you? Where do you think we ought to locate the temple?"

"I guess that depends on what you are looking for."

"I don't know exactly." He stopped and wiped sweat from his face; the robes were hot and the money belt made it worse. "Now that I'm here, this whole deal seems silly. I guess I wasn't meant to be a secret agent. How about out in the west end, in the expensive neighborhood? We want to make a big impression.

"No, I don't think so, Jeff. There are just two kinds of people out in the rich neighborhoods now."

"Yes?"

"PanAsians and traitors—black market dealers and other sorts of collaborationists."

Thomas looked shocked. "I guess I've been out of circulation too long. Alec, until this very minute it never occurred to me that an American—any American—would go along with the invaders."

"Well, I wouldn't have believed it either, if I hadn't seen it. I guess some people will do anything, born pimps."

They settled on an empty warehouse downtown near the river in a populous, poor neighborhood. The area had long been rundown; now it was depressed. Three out of four shops were boarded up; trade had stagnated. The building was one of many empty warehouses; Thomas picked it because of its almost cubical shape, matching that of the mother temple and the cube on his staff, and the fact that it was detached from other buildings by an alley on one side and a vacant lot on the other.

The main door was broken. They peered in, entered and snooped around. The place was a mess but the plumbing was intact and the walls were sound. The ground floor was a single room with a twenty foot ceiling and few pillars; it would do for "worship."

"I think it will do," Jeff decided. A rat jumped out of a pile of rubbish heaped against one wall. Almost absentmindedly he trained his staff on it; the animal leaped high and dropped dead. "How do we go about buying it?"

"Americans can't own real estate. We'll have to find out what official holds the squeeze on it."

"That oughtn't to be hard." They went outside; their police chaperone waited across the street. He looked the other way.

The streets were fairly well filled by now, even in this neighborhood. Thomas reached out and snagged a passing boy—a child of not more than twelve but with the bitter, knowing eyes of a cynical man. "Peace be unto you, son. Who rents this building?"

"Hey, you let go of me!"

"I mean you no harm." He handed the boy one of Scheer's best five dollar gold pieces.

The boy looked at it, let his eyes slide past them to the Asiatic guard across the street. The PanAsian did not seem to be watching; the lad caused the coin to disappear. "Better see Konsky. He has all the angles on things like that."

"Who is Konsky?"

"Everybody knows Konsky. Say, grandpa, what's the idea of the funny clothes? The slanties'll make trouble for you."

"I am a priest of the great god Mota. The Lord Mota takes care of his own. Take us to this Konsky."

"Nothing doing. I don't want to tangle with the slanties." The boy tried to wriggle away; Jeff held his arm firmly and produced another coin. He did not hand it over.

"Fear not. The Lord Mota will protect you, too."

The youngster looked at it, glanced around, and said, "Okay. Come along."

He led them around a corner and to a walk-up office building located over a saloon. "He's up there if he's in." Jeff gave the boy the second coin and told him to come see him again, at the warehouse, as the Lord Mota had gifts for him. Alec questioned the wisdom of this as they climbed the stairs.

"The kid's all right," said Jeff. "Sure, the things that have happened to him have turned him into a guttersnipe. But he's on our side. He'll advertise us—and not to the PanAsians."

Konsky turned out to be a blandly suspicious man. It was soon evident that he "had connections," but he was slow to talk until he saw the red gold color of money. After that he was not in the least put off by the odd dress and odd manners of his clients (Thomas gave him the full treatment, with benedictions thrown in, aware that Konsky would discount it but for the purpose of staying in character). He made sure of the building Thomas meant, dickered over the rental and the bribe—he called it "charges for special services"—and left them.

Thomas and Howe were glad to be left alone. Being a "holy man" had disadvantages; they had had nothing to eat since leaving the Citadel. Jeff dug sandwiches out from under his robes; they munched them. Best of all, there was a washroom adjoining Konsky's office.

Three hours later they were in possession of a document, the English translation of which stated that the Heavenly Emperor was graciously pleased to grant to his faithful subjects etc., etc.—a lease paid up on the warehouse. In exchange for another unreasonable amount of money Konsky agreed to stir up enough labor to clean the place at once, that very day, and to provide certain repairs and materials. Jeff thanked him and with a straight face invited him to attend the first services to be held in the new temple.

They trudged back to the warehouse. Once out of Konsky's earshot Jeff said, "Y' know, Alec, we're going to make lots of use of that character—but when the day comes, well, I've got a little list and he's at the top of it. I mean to take care of him myself."

"Split him with me," was Howe's only comment.

The street urchin popped up from nowhere when they reached the warehouse. "Any more errands, grandpa?"

"Bless you, son. Yes, several." After another financial transaction the boy left to find cots and bedding for them. Jeff watched his departure and said, " I think I'll make an altar boy out of that kid. He can go places and do things that we can't—and the cops aren't so likely to stop a person that age."

"I don't think you should trust him."

"I won't. So far as he will ever know we are a couple of crackpots, firmly convinced that we are priests of the great god Mota. We can't afford to trust anybody, Alec, until we are sure of them. Come on let's kill all the rats in this place before the cleaners get here. Want me to check the setting on your staff?"

By nightfall the First Temple of Denver of the Lord Mota was a going concern, even though it still looked like a warehouse and had no congregation. The place reeked of disinfectant, the rubbish was gone, and the front door would lock. There were two beds of sorts and groceries enough to last two men a fortnight.

Their chaperone from the police force was still across the street.

The police guard stayed with them for four days. Twice squads of police came and searched through the place. Thomas let them; as yet there was nothing to hide. Their staffs were still their only source of power and the only Ledbetter communicator they had with them gave Howe a slightly hunch-backed appearance in the day time; he wore it while Thomas wore the money belt.

In the meantime, through Konsky they acquired a fast and powerful ground car—and permission to drive it, or have it driven, anywhere in the jurisdiction of the Hand. The "charge for special services" was quite high. The driver they hired for it was not acquired through Konsky, but indirectly through Peewee Jenkins, the boy who had helped them on the first day.

The watch was withdrawn from them around noon on the fourth day. That afternoon Jeff left Howe to hold the place and went back to the Citadel by car. He returned with Scheer, who looked vastly uncomfortable and out of character in priestly vestments and beard but who bore with him a cubical chest enameled in the six sacred colors of Mota. Once inside the warehouse with the door locked Scheer opened the chest with great care and in a particular fashion which prevented it from exploding and taking them and the building with it. He got very busy on the newly constructed "altar." He finished shortly after midnight; there was more work to do outside, with Thomas and Howe standing guard, ready to stun or kill if necessary to prevent the sergeant being interrupted.

The morning sun fell on a front wall of emerald green, the other walls were red and golden and deep sky blue. The temple of Mota was ready for converts—and for others.

Most important, none but a Caucasian could now pass through its door with impunity.

An hour before daylight Jeff posted himself at the door and waited nervously. The sudden transformation was sure to stir up another search squad; if necessary he must stop them, stun, or even kill—but no search could be permitted. He hoped to dissuade; the temple must be established as an enclave used only by the slave race. But a slight excess of zeal on the part of an underling could force him to violent means, and thereby destroy the hope of peaceful penetration.

Howe came up behind him and made him jump. "Uh? Oh! Alec! Don't do that. I'm nervous as a cat already."

"Sorry. Major Ardmore is on the circuit. He wants to know how you are making out."

"You'll have to talk to him. I can't leave the door."

"He wants to know when Scheer will be back, too."

"Tell him I'll send him back just as soon as I know it's safe to step outside this door and not a minute sooner."

"O. K. " Howe turned away. Jeff looked back at the street and felt the hair on his neck stand up. A PanAsian in uniform was staring curiously at the building. The foreigner stood for a moment, then went away at the dog trot they all affected when moving on duty.

"Mota, old boy," Jeff said to himself. "It's time to do your stuff."

Less than ten minutes later a squad arrived commanded by the same officer who had searched the building before. "Stand aside, Holy One."

"No, Master," Jeff said firmly, "the temple is now consecrated. None may enter but worshipers of the Lord Mota."

"We will not harm your temple, Holy One. Stand aside."

"Master, if you enter I cannot save you from the wrath of the Lord Mota. Nor can I save you from the wrath of the Imperial Hand." Before the officer had time to turn this over in his mind Jeff went quickly on, "The Lord Mota expected this visit from you and greets you. He bids me, his humble servant, to make you three gifts."

"Gifts?

"For yourself—" Jeff laid a heavy purse in his hand. "For your superior officer, may his name be blessed—" A second purse followed. "—and for your men." A third purse was added; the PanAsian was forced to use both hands.

He stood there for a moment. There could be no doubt in his mind, from the weight alone, as to what the purses contained. It was more gold than he had ever handled in his life. Shortly he turned, barked an order at his men, and strode away.

Howe came up again. "You made it, Jeff?"

"This round, at least." Thomas watched the squad move up the street. "Cops are all alike, the world over. Reminds me of a railroad dick I once knew."

"Do you think he'll share it out the way you suggested?"

"The men won't get any, that's sure. He may split with his boss, to keep him quiet. He'll probably find some way to hide the third lot of loot before he gets back to the station. What I'm wondering is: is he an honest politician?"

"Huh?"

"'An honest politician is one that stays bought.' Come on, let's get ready for customers."

They held their first services that evening. As church services they were nothing much, since Jeff was still feeling out the art. They conformed to the good old skid-road mission principle: sing a hymn and eat a meal. But the meal was good red meat and white bread—and the recipients had not eaten that well in many months.

CHAPTER SEVEN

"Hello? Hello? Jeff, are you there? Can you hear me?"

"Sure I can hear. you. Don't shout, Major."

"I wish these damn rigs were regular telephones. I like to see a man I'm talking to."

"If they were ordinary phones our Asiatic pals could listen in on us. Why don't you ask Bob and the colonel to whip up a vision circuit? I'll bet they could do it."

"Bob has already done so, Jeff, but Scheer is so busy machining parts for altar installations that I don't like to ask him to make it. Do you suppose you could recruit some assistants for Scheer? A machinist or two, maybe, and a radio technician? The manufacturing end of this enterprise is getting out of hand and Scheer is going to crack up from overwork. Every night I have to go around and order him to go to bed."

Thomas thought about it. "I have one man in mind. Used to be a watchmaker."

"A watchmaker! That's swell!"

"I don't know. He's a little bit balmy; his whole family was wiped out. A sad case, almost as sad as Frank Mitsui. Say, how. is Frank? Is he feeling any better?"

"Seems to be. Not down inside of course, but he seems happy enough at his work. He's taken over the kitchen and the clerical work you used to do for me, both."

"Give him my best."

"I will. Now about this watchmaker—you don't have to be as careful in recruiting personnel for the Citadel as you have to be in picking field workers, since once they are inside they can't get out."

"I know that, boss. I didn't use any special tests when I sent you Estelle Devens. Of course I wouldn't have sent her if she hadn't been about to be shipped out as a pleasure girl."

"You did all right. Estelle is a fine woman. She helps Frank in the kitchen, she helps Graham sew the robes, and Bob Wilkie is training her as a pararadio operator." Ardmore chuckled. "Sex is rearing its interesting head. I think Bob is sweet on her."

Thomas's voice was suddenly grave. "How about that, boss? Is it likely to louse things up?"

"I don't think so. Bob is a gentleman and Estelle is a nice girl if I ever saw one. If biology starts getting in the way of their work, I'll just up and marry them, in my capacity as high priest of the supercolossal god Mota."

"Bob won't go for that. He's a bit of a puritan, if you ask me."

"All right then, in my capacity as chief magistrate of this thriving little village. Don't be stuffy. Or send me up a real preacher."

"How about sending up more women, Major? I sent Estelle on impulse, more or less, but there are many more young women just as badly in need of help as she was."

There was a long wait before Ardmore replied, "Captain, that is a very difficult question. Most reluctantly I am forced to say that this is a military organization at war, not a personal rescue mission. Unless a female is being recruited for a military function to which she is adapted, you are not to recruit her, even to save her from the PanAsians' pleasure cities."

"Yes, sir. I will comply. I shouldn't have sent Estelle."

"What's done is done. She's working out all right. Don't hesitate to recruit suitable women. This is going to be a long war and I think we can maintain morale better with a mixed organization than with a strictly stag setup. Men without women go to pieces; they lose purpose. But try to make the next one an older woman, something between a mother superior and a chaperone. An elderly trained nurse would be the type. She could be lab assistant to Brooks and house mother to the babes, both."

"I'll see what I can find."

"And send up that watchmaker. We really need him."

"I'll give him a hypo test tonight."

"Is that necessary, Jeff? If the PanAsians killed his family you can be sure of his sentiments."

"That's his story. I'll feel a lot safer if I hear him tell it when he's doped. He might be a ringer you know."

"O.K., you're right, as usual. You run your show; I'll run mine. When are you going to be able to turn the temple over to Alec, Jeff? I need you here."

"Alec could take it now, just to run it. But as I understand it, my prime duty is to locate and recruit more 'priests,' ones capable of going out in the field and starting a new cell alone."

"That's true, but can't Alec do that? After all, the final tests will be given here. We agreed that never, under any circumstances, would the true nature of what we are doing be revealed to anyone except after we got him inside the Citadel and under our thumbs. If Alec makes a mistake in picking a man it won't be fatal."

Jeff turned over in his mind what he wanted to say. "Look, boss, it may seem simple from where you sit; it doesn't look simple from here. I—" He paused.

"What's the matter, Jeff? Got the jitters?"

"I guess so."

"Why? It seems to me the operation is proceeding according to plan."

"Well, yes—maybe. Major, you said this would be a long war."

"Yes?"

"Well, it can't be. If it's a long war, we'll lose it."

"But it's got to be. We don't dare move until we have enough trusted people to strike all over the country at once."

"Yes, yes, but that's got to be the shortest possible time. What would you say was the greatest danger that faces us?"

"Huh? Why the chance that someone might give us away, either accidentally or on purpose."

"I don't agree, sir—not at all. That's your opinion because you see it from the Citadel. From here I see an entirely different danger—and it worries me all the time."

"Well, what is it, Jeff? Give."

"The worst danger—and it hangs like a sword over our heads all the time—is that the PanAsian authorities may grow suspicious of us. They may decide that we can't be what we pretend to be—just another phony western religion, good to keep the slaves quiet. If they once get that idea before we are ready, we're finished."

"Don't let it get you nervy, Jeff: In a pinch, you've got enough stuff to fight your way back to base. They can't use an atom bomb on you in one of their own capitals—and Calhoun says that the new shield on the Citadel will stop even an atom bomb."

"I doubt it. But what good would it do us if it did? Suppose we could hole up there until we died of old age: if we don't dare stick our noses out we can't win back the country!"

"Mmm . . . no—but it might give us time to think of something else."

"Don't kid yourself, Major. If they catch on, we're licked—and the American people lose their last chance this generation, at least. There are still too few of us, no matter what weapons Calhoun and Wilkie can cook up."

"Suppose I concede your point: you knew all this when you went out. Why the panic? Battle fatigue?"

"You can call it that. But I want to discuss the dangers as I see them here in the field. If we really were a religious sect, with no military power, they'd leave us alone till hell froze. Right?"

"Check."

"Then the danger lies in the things we have to do to cover up the fact that we've got a lot of stuff we aren't supposed to have. Those dangers are all out here in the field. First—" Thomas ticked them off on his fingers, oblivious to the fact that his commanding officer could not see him. "—is the shield of the temple. We've got to have it; this place can't stand a search. But it would be almost as bad if we had to use it. If any senior PanAsian gets the notion to inspect in spite of our immunity, school is out for sure; I don't dare kill him and I don't dare let him come in. So far, by the grace of God, a lot of doubletalk, and the liberal use of bribes, I've been able to turn them away."

"They already know that we've got the temple shields, Jeff; they've known it from the first day we made contact here."

"Do they, now? I don't think so. Thinking back over my interview with the Hand I'm convinced that that officer who tried to force his way into the mother temple wasn't believed when he made his report. And you can bet your last cookie he is dead now; that's the way they work. The common soldiers that were there don't count. The second hazard is the personal shield that we 'priests' carry. I've used mine just once and I'm sorry I did. Fortunately he was just a common soldier, too. He wouldn't report it; he wouldn't be believed and he would lose face."

"But, Jeff, the 'priests' have got to wear shields; we can't let a staff fall into enemy hands—not to mention the fact that the monkeys might be able to drug an unshielded 'priest' before he could suicide."

"You're telling me! We've got to have them; we don't dare use them—and that calls for some fast doubletalk in a pinch. The next hazard is the halo; the halo was a mistake, boss."

"Why do you say that?"

"O. K., it impresses the superstitious. But the bigshot PanAsians are no more superstitious than you are. Take the Hand—I wore it in his presence. He wasn't impressed; it was my great good luck that he apparently regarded it as nothing important, just a gadget to impress my followers. But suppose he had really thought about it and decided to find out how I did it?"

"Maybe," said Ardmore, "we had better omit the halo effect in the next city we penetrate."

"Too late. Our official designation here is 'holy men who wear halos.' It's our trademark."

"So? Jeff, I think you've done a wonderfully good job of covering up."

"There is one more hazard. It's a slow one, a time bomb."

"Eh?"

"Money. We've got too much money. That's a suspicious circumstance."

"But you had to have money to operate."

"How well I know it. It has been the only thing that enabled us to get away with it so far. These people are even more corruptible than Americans, Chief; with us it is a frowned-upon dereliction; with them it's an essential part of their culture. A good thing, too—we now have the respected position of the goose that lays the golden eggs."

"But why do you call it a time bomb? Why is it a hazard at all?"

"Remember what happened to the goose in the story? Some day some smart laddie is going to wonder where the goose gets all that gold and take him apart to find out. In the meantime all the recipients of our cumshaw are closing their eyes to the suspicious circumstances and getting as much as they can while the getting is good. I'm betting that each one will keep his mouth shut about his take, as long as he can get away with it. I doubt if the Hand knows that we seem to have an unlimited supply of American gold coins. But some day he will find out; that's the time bomb element. Unless he can be bribed, too—in a polite way, of course—he will start some very embarrassing investigations. Somewhere up the line we'll run into an official more interested in knowing the facts than in sticking out his palm. Before that day rolls around we had better be set to move!"

"Hmm . . . I suppose so. Well, Jeff, do the best you can and get us some 'priest' recruits up here as fast as you can. If we had one hundred dependable men, as talented in handling people as you are, we could set 'D' Day a month from now. But it may take years and, as you say, events may trip us up before we can move."

"You can see why I have trouble finding 'priest' recruits? Loyalty isn't enough; a special aptitude for kidding the public is necessary. I learned it as a hobo. Alec really hasn't got it; he's too honest. However I may have one recruit now—a chap named Johnson."

"Yes? What about him?"

"He used to be a real estate salesman and he has a very convincing manner. The PanAsians put him out of business, of course, and he's anxious to avoid the labor camps. I've been feeling him out."

"Well, if you think he'll do, send him up. Perhaps I can look him over there."

"Huh?"

"I've been thinking while I listened. Jeff, I don't know enough about the field situation; I've got to come see for myself. If I am going to direct this show, I've got to understand it. I can't do it from a hole in the ground; I'm falling out of touch."

"I thought that was settled a long time ago, boss."

"What do you mean?"

"Are you going to leave Calhoun as acting C.O.?"

Ardmore remained silent for several moments, then said, "Damn you, Jeff."

"Well, are you?"

"Oh, very well! Let's drop the matter!"

"Don't get sore, boss. I've been trying to give you the whole picture; that's why I've talked so long."

"I'm glad you did. I want you to repeat it, in much more detail. I'll put Estelle on and have her make a recording of everything you've got to say. We'll work up an instruction manual for student 'priests' from your lecture."

"O. K., but let me call you back. I've got a service in ten minutes."

"Can't Alec even run a service?" '

"He does and he's O. K. He preaches a better sermon than I do. But it's my best recruiting time, Major; I study the crowd and talk to them individually afterwards."

"O. K., O. K. I'm switching off."

"Bye."

Services were crowded by now. Thomas did not fool himself that the creed of the great god Mota was the drawing card; even while the service proceeded, at the sides of the hall tables were being piled high with food, purchased with Scheer's fine gold. But Alec put on a good show. It seemed to Jeff, as he listened to him preach, that the old mountain man had somehow reconciled his strange new job with his conscience so thoroughly that he actually believed that he was preaching his own religion, in symbols of course and with odd ritual—but his voice carried conviction.

"If he keeps that up," Jeff told himself, "we'll have women fainting in the aisles. Maybe I should tell him to soft-pedal it."

But without untoward incident Alec reached the final hymn. The congregation sang with verve, then trooped toward the tables. Sacred music had at first been a problem until Jeff had hit on the dodge of putting new words to the commonest American patriotic music. It served a double purpose; anyone who listened closely could hear the old words, the true words, being sung by the bolder spirits present.

Jeff circulated around among his flock while they ate, patting the heads of children, pronouncing blessings—and listening. As he passed a man got up from his place and stopped him. It was Johnson, the former real estate salesman. "A word with you, Holy One?"

"What is it, my son?"

Johnson indicated that he wanted to speak privately; they drew away from the crowd over into the shadow of the altar. "Holy One, I don't dare go back to my room tonight."

"Why not, my son?"

"I still haven't been able to get my work card validated. Today was my last day of grace. If I go home it's the camps for me."

Jeff looked grave. "You know that the servers of Mota do not preach resistance to mundane authority."

"You wouldn't turn me out to be arrested?"

"We do not refuse sanctuary. Perhaps it is not as bad as you think it is, my son; perhaps if you stay here tonight, tomorrow you may find someone to hire you and validate your card."

"I can stay, then?"

"You may stay." Thomas decided that Johnson might as well stay from then on; if he measured up, he would be sent to the Citadel for final test. If not, Johnson could stay as an unenlightened helper around the temple—the temple needed more help every day, especially in the kitchen.

When the crowd had gone Jeff locked the door, then checked through the building personally to make sure that none but the resident help and those who had been granted overnight sanctuary were still inside. There were more than a dozen of these refugees; Jeff was studying some of them as prospective recruits.

Inspection completed and the place tidied up, Jeff shooed everyone but Alec upstairs to the second-floor dormitory rooms; he locked the door to the staircase after them. This was a nightly routine; the altar with its many marvelous gadgets was safe from snoopers, as it had a shield of its own, controlled by a switch in the basement—nonetheless Jeff did not want anyone attempting to get at it. The avowed reason for the nightly lock up was, of course, a piece of holy mumbo jumbo having to do with the "sacredness" of the lower floor.

Alec and Jeff went down into the basement, locking after them a heavy, steel-sheathed door. Their apartment was a large room, housing the power unit for the altar, the communicator back to the base, and the same two cots Peewee Jenkins had gotten for them on their first day in Denver. Alec undressed, went into the adjoining bath, and got ready for bed. Jeff peeled off his robes and turban, but not his beard; it was now homegrown. He put on overalls, stuck a cigar in his mouth, and called the base.

For the next three hours he dictated, over Alec's snores. Then he, too, went to bed.

Jeff woke up with a feeling of unease. The lights had not switched on; therefore it was not the morning alarm that had wakened him. He lay very still for a moment, then reached down beside him on the floor and recovered his staff.

Someone was in the room, other than Alec, still snoring on the other cot. He knew it, although at the moment he could hear no sound. Working by touch alone he carefully set his shield to cover both cots. He switched on the lights.

Johnson was standing in front of the communicator. Some sort of complicated goggles covered his eyes; in his hand was a blacklight projector.

"Stand where you are," Jeff said quietly.

The man whirled around, then shoved the goggles up on his forehead. He stood for a moment, blinking at the light.

Quite suddenly a vortex pistol appeared in his other hand. "Don't make any sudden moves, Pop," he snapped. "This is no toy."

"Alec!" Jeff called out. "Alec! Wake up."

Alec sat up, at once alert. He glanced around and dived for his staff. "I've got us both screened," Jeff said rapidly. "Now you grab him but don't kill him."

"Make a move and you get it," warned Johnson.

"Don't be foolish, my son," Jeff answered. "The great god Mota protects his own. Put down that gun.

Without wasting time on speech Alec was setting the controls on his staff. It took him some time; he had had only practice drills in the use of the tractor and pressor beams. Johnson watched him fumbling, looked uncertain, then fired at him point blank.

Nothing happened; Jeff's shield soaked up the energy.

Johnson looked amazed; he looked still more amazed and rubbed his hand a moment later when Alec snatched the gun from his hand with a tractor beam. "Now," said Jeff, "tell us, my son, why you saw fit to violate the mysteries of Mota?"

Johnson looked around at him, his eyes showing apprehension but still defiant. "Stow that Mota stuff. I wasn't kidded.."

"The Lord Mota is not mocked."

"Stow it, I tell you. How do you explain that stuff?" He hooked a thumb at the communicator.

"The Lord Mota need not explain. Sit down, my son, and make your peace with him."

"Sit down, my eye. I'm walking straight out of here. If you birds don't want this place swarming with slanties, you won't try to stop me. I wouldn't turn in a white man unless he made trouble for me."

"You are implying that you are a common thief?"

"Watch what you call me. You guys have been throwing gold around; anybody is bound to take an interest in it."

"Sit down."

"I'm leaving."

He turned away. Jeff said, "Nail him, Alec!—but don't hurt him."

The injunction slowed Alec down. Johnson was halfway up the stairs before Alec snatched his feet from under him. Johnson fell heavily, striking his head.

Unhurriedly Jeff got up and put on his robes. "Sit on him, Alec, with your staff. I'll reconnoiter." He went upstairs, was gone a few minutes, and returned. Johnson was stretched on Alec's cot, dormant. "Not much damage," Jeff reported. "The upper door's lock was merely picked. No one was awake; I relocked it. The lower door's lock will have to be replaced; he used something or other that melted it. That door really should have a shield; I must speak to Bob about that." He glanced at the figure. "Still out?"

"Not really. He was coming to; I gave him sodium pentothal."

"Good! I want to question him."

"So I figured."

"Anesthesia?"

"No, just a babble dose."

Thomas nipped one of Johnson's earlobes with a thumbnail and twisted viciously. The victim stirred. "Darn near anesthesia—must be the knock on his head. Johnson! Can you hear me?"

"Mmm, Yes."

Thomas questioned him patiently for many minutes. Finally Alec stopped him. "Jeff, do we have to listen to any more of this? It's like staring down into a cesspool."

"It makes me want to vomit, too, but we've got to get the dope." He went on. Who paid him? What did the PanAsians expect to find out? How did he report back? When was he due to report next? Who else was in the organization? What did the PanAsians think of the temple of Mota? Did his boss know that he was here tonight?

And finally: what had induced him to go against his own people?

The drug was wearing off now. Johnson was almost aware of his surroundings, but his censors were still down and he spoke with a savage disregard of what his hearers might think of him. "A man's got to look out for himself, doesn't he? If you're smart you can get along anywhere."

"I guess we just aren't smart, Alec," Thomas commented. He sat still for several minutes, then said, "I think he's told us everything he knows. I'm trying to decide just what to do with him."

"If I give him another shot he may talk some more."

Johnson said, "You can't make me talk!" He seemed unaware that he already had talked.

Thomas struck him across the face with the back of his hand. "Shut up, you. You'll talk whenever we give you the needle. Right now you'll keep quiet." He went on to Alec, "There is a bare chance that they might get more out of him if we shipped him back to base. But I don't think so and it would be difficult and dangerous. If we got caught with him or if he escaped, the jig would be up. I think we had best dispose of him here and now."

Johnson looked stunned and tried to sit up, but Alec's staff kept him pinned to the cot. "Hey! What are you talking about? That's murder!"

"Give him another shot, Alec. We can't have him raising Cain while we work."

Howe said nothing, but quickly made the injection. Johnson tried to squirm away from it, then struggled a little before he gave in to the drug. Howe straightened up. His face was almost as disturbed as

Johnson's had been. "Did you mean that the way it sounded, Jeff? If so, I didn't sign up for murder, either."

"It's not murder, Alec. We are executing a spy."

Howe chewed his lip. "It wouldn't bother me a bit, I guess, to kill a man in a fair fight. But to tie him down and butcher him, like he was a hog, turns my stomach."

"Executions are always like that, Alec. Ever see a man die in a gas chamber?"

"But it is murder, Jeff. We don't have the authority to execute him."

"I have the authority, Alec. I am a commanding officer, acting independently, in war time."

"But consarn it, Jeff, you didn't even give him a drumhead courtmartial."

"A trial is for the purpose of establishing guilt or innocence. Is he guilty?"

"Oh, he's guilty all right. But a man's entitled to a trial."

Jeff took a long breath. "Alec, I used to be a lawyer. The whole purpose of the complicated structure of western jurisprudence in criminal matters, as built up over the centuries, has been to keep the innocent from being convicted and punished through error. It sometimes lets the guilty go free in the process, but that's not the purpose. I don't have the personnel nor the time to form a military court and give this man a formal trial—but his guilt has been established with much more certainty than a court could possibly establish it and I don't propose to endanger my command and risk the ultimate outcome of the war by extending to him the protections that were devised to protect the innocent.

"If I could cut out his memory and turn him loose to report back that all he found was a screwy church and a lot of hungry people eating, I would do it, not to avoid the chore of killing him, but because it would confuse the enemy. I can't possibly turn him loose—"

"I didn't want you to do that, Jeff!"

"Shut up, soldier, and listen. If I turn him loose with the knowledge he has gained, the PanAsians will get it, the same way we made him talk, even if he tried to hold it back. We haven't the facilities to keep him here; it is dangerous to ship him back to base. I intend to execute him now." He paused.

Alec said diffidently, "Captain Thomas?"

"Yes?"

"Why don't you call up Major Ardmore and see what he thinks?"

"Because there is no reason to. If I have to ask him to make up my mind for me I'm no good on this job. I've just one thing more to add: you are too soft and mush-headed for this job. You apparently think that the United States can win this war without anyone getting hurt you don't even have the guts to watch a traitor die. I had hoped to turn this command over to you shortly; instead I am shipping you back to the Citadel tomorrow with a report to the commander-in-chief that you are utterly unfit to be trusted with work in the face of the enemy. In the meantime you will carry out orders. Help me lug that hulk into the bathroom."

Howe's mouth quivered, but he said nothing. The two carried the unconscious man into the adjoining room. Before the temple was "consecrated" Thomas had had a partition knocked out between the janitor's toilet and the space adjoining and in that space had had an old-fashioned bath tub installed. They dumped him in the tub.

Howe wet his lips. "Why in the tub?"

"Because it will be a bloody mess."

"You aren't going to use your staff?"

"No, it would take me an hour to disassemble it and take out the suppressor circuit for the white-man band of frequencies. And I'm not sure I could get it back together right. Give me that straight razor of yours and get out."

Howe got the razor and came back. He did not hand it over. "You ever butchered a hog?" he inquired.

"No."

"Then I know more about how to do it." Stooping, he lifted Johnson's chin. The man breathed heavily and grunted. Howe made one quick slash and the man's throat was cut. He dropped the head, stood up and stared at the spreading red stream. He spat in it, then stepped to the wash stand and cleaned his razor.

Jeff said, "I guess I spoke too hastily, Alec."

Alec did not look up. "No," he said slowly, "not a bit too hastily. I guess it takes some time to get used to the notion of war."

"Yeah, I guess so. Well, let's dispose of this thing."

Despite a very short night Jeff Thomas was up unusually early as he wanted to report to Ardmore before the morning service. Ardmore listened carefully to the account, then said, "I'll send Scheer down to install a shield on the basement door. Some such rig will be standard for ail temple installations from now on. How about Howe? Do you want to send him back?"

"No," Thomas decided, "I think he's over the hump now. He's squeamish by nature, but he's got plenty of moral courage. Damn it, boss, we've got to trust somebody."

"Are you willing to turn the temple over to him?"

"Well . . . yes, I am—now. Why?"

"Because I want you to move on to Salt Lake City practically at once. I lay awake most of the night thinking over what you told me yesterday. You stirred me up, Jeff; I had been getting fat and sloppy in my thinking. How many potential recruits have you got now?"

"Thirteen, now that Johnson is out of it. Not all of them candidates for 'priesthood,' of course."

"I want you to send them all here, at once."

"But, boss, I haven't examined them."

"I'm making a radical revision in procedure. We'll cut out examination under drugs except at the Citadel. You haven't the facilities to do it gracefully. I'm assigning Brooks to it; he will do all of it from now on and I will pass on the ones who get by his elimination. From now on the 'priests' will have the prime duty of locating likely candidates and sending them in to the mother temple."

Thomas thought about it. "How about characters like Johnson? We sure don't want his type penetrating into the Citadel."

"I've anticipated that—and that's why the examinations will be held here. A candidate will be doped before he goes to bed, but he won't know it. He will be given a hypo, roused, and examined during the night. If he passes, well and good. If he doesn't then he never will know he has been examined under drugs but he will be allowed to think that he has passed."

"That's the beauty of it. He will be accepted into the service of the great god Mota, sworn in as a lay brother—and then we will work the tail off him! He'll sleep in a bare cell, scrub floors, eat poor food and damn little of it, and spend hours each day on his knees at his devotions. He'll be regimented so thoroughly that he will never have a chance to suspect that there is anything under this mountain but country rock. When he's got his bellyful, he will be sorrowfully allowed to give up his vows, then he can trot back and tell his Masters anything he jolly well pleases."

Thomas looked pleased. "It sounds swell, Major. It sounds like fun—and it sounds as if it would work."

"I think it will and it will turn their agents to our advantage. After the war is over we'll round them up and shoot 'em—the actual spies, I mean, not the soft heads. But that's a sideshow; let's talk about the candidates that pass. I want recruits and I want them fast. I want several hundred right away. Out of that several hundred I want to get at least sixty satisfactory candidates for 'priesthood'; I want to train them simultaneously and send them all out into the field at once. You've thoroughly sold me on the dangers of waiting, Jeff; I want to penetrate every major PanAsian center at the same time. You've convinced me that this is our only chance to pull off this masquerade."

Thomas whistled. "You don't want much, do you, loss?"

"It can be done. Here is the new doctrine for recruiting. Turn on your recorder."

"It's on."

"Good. Send in only such candidates as have lost immediate members of their families as a result of the PanAsian invasion, or have other superficial, prima facia evidences that they are likely to be loyal under stress. Eliminate obviously unstable persons but leave any other psychological elimination to the staff at the Citadel. Send in candidates from the following categories only: for the 'priesthood'—salesmen, advertising men, publicity men, newspapermen, preachers, politicians, psychologists, carnival pitch men or talkers, personnel managers, psychiatrists, trial lawyers, theatrical managers; for work not in contact with the public nor the enemy—skilled metal workers of all sorts, electronics technicians, jewelers, watchmakers, skilled precision workers in any engineering art, cooks, stenographers, laboratory technicians, physicists, seamstresses. Any of the latter group may be female."

"No female priests?"

"What do you think?"

"I'm against it. These babies rate women as zero or even minus. I don't think a female 'priest' could possibly operate in contact with them."

"I feel the same way. Now, can Alec take over the recruiting under this doctrine?"

"Hmm . . . boss, I hate, to throw him on his own just yet."

"He wouldn't make a slip and give us away, would he?"

"No, but he might not get much in the way of results, either."

"Well, you'll just have to push him in, sink or swim. From here on we force the moves, Jeff. Turn the temple over to Alec and report here. You and Scheer will leave for Salt Lake City at once, publicly. Buy another car and use the driver you have now. Alec can recruit another driver. I want Scheer back here in fortyeight hours and I want your first recruits headed this way a couple of days thereafter. Two weeks from now I'll send someone out to relieve you, either Graham or Brooks—"

"Huh? Neither one of them has the temperament for it."

"They can pinch hit after you've broken the ground. We'll relieve the one I send as soon as possible with the proper type. You'll come back here and start a school for 'priests'—or, rather, continue it and improve it. I'm starting it now, with the people at hand. That's your job; I don't expect to send you into the field again, except possibly as a trouble shooter."

Thomas sighed. "I sure talked myself into a job, didn't I?"

"You did indeed. Get moving."

"Just a minute. Why Salt Lake City?"

"Because I think it's a good spot for recruiting. Those Mormons are shrewd, practical people and I don't think you'll find a traitor among them. If you work at it, I think you can convince their Elders that the great god Mota is a good thing to have around and no menace to their own faith. We haven't made half enough use of the legitimate churches; they should be the backbone of the movement. Take the Mormons—they run to lay missionaries; if you work it right you can recruit a number of them with such experience, courageous, used to organizing in hostile territory, good talkers, smart. Get it?"

"I get you. Well, I'll sure try."

"You can do it. As soon as possible we'll send someone to relieve Alec and let him try his hand alone in Cheyenne. It's not a big place; if he flops it won't matter too much. But I'm betting he can take Cheyenne. Now you go take Salt Lake City."

CHAPTER EIGHT

Denver, Cheyenne, Salt Lake City, Portland, Seattle, San Francisco. Kansas City, Chicago, Little Rock. New Orleans, Detroit, Jersey City. Riverside, Five Points, Butler, Hackettstown, Natick, Long Beach, Yuma, Fresno, Amarillo, Grants, Parktown, Bremerton, Coronado, Worcester, Wickenberg, Santa Ana, Vicksburg, LaSalle, Morganfield, Blaisville, Barstow, Wallkyll, Boise, Yakima, St. Augustine, Walla Walla, Abilene, Chattahoochee, Leeds, Laramie, Globe, South Norwalk, Corpus Christi.

"Peace be unto you! Peace, it's wonderful! Come, all you sick and heavy laden! Come! Bring your troubles to the temple of the Lord Mota. Enter the sanctuary where the Masters dare not follow. Hold up your heads as white men, for 'The Disciple is Coming!'

"Your baby daughter is dying from typhoid? Bring her in! Bring her in! Let the golden rays of Tamar make her well again. Your job is gone and you face the labor camps? Come in! Come in! Sleep on the benches and eat at the table that is never bare. There will be work aplenty for you to do; you can be a pilgrim and carry the word to others. You need only profit by instruction.

"Who pays for it all? Why, Lord love you, man, gold is the gift of Mota! Hurry! 'The Disciple is coming!'"

They poured in. At first they came through curiosity, because this new and startling and cockeyed religion was a welcome diversion from painful and monotonous facts of their slavelike existences. Ardmore's instinctive belief in flamboyant advertising justified itself in results; a more conventional, a more dignified cult would never have received the "house" that this one did.

Having come to be entertained, they came back for other reasons. Free food, and no questions asked—who minded singing a few innocuous hymns when they could stay for supper? Why, those priests could afford to buy luxuries that Americans rarely saw on their own tables, butter, oranges, good lean meat, paying for them at the Imperial storehouses with hard gold coin that brought smiles to the faces of the Asiatic bursars.

Besides that, the local priest was always good for a touch if a man was really hard up for the necessary. Why be fussy about creeds? Here was a church that did not ask a man to subscribe to its creeds; you could come and enjoy all the benefits and never be asked to give up your oldtime religion—or even be asked if you had a religion. Sure, the priests and their acolytes appeared to take their god-with-six-attributes pretty seriously, but what of it? That was their business. Haven't we always believed in religious freedom? Besides, you had to admit they did good work.

Take Tamar, Lady of Mercy, now—maybe there was something to it. If you've seen a child choking to death with diphtheria, and seen it put to sleep by the server of Shaam, then washed in the golden rays of Tamar, and then seen it walk out an hour later, perfectly sound and whole, you begin to wonder. With half the doctors dead, with the army and a lot of the rest sent to concentration camps, anyone who could cure disease had to be taken seriously. What if it did look like superstitious mumbo jumbo? Aren't we a practical people? It's results that count.

But cutting more deeply than the material advantages, were the psychological benefits. The temple of Mota was a place where a man could hold up his head and not be afraid, something he could not do even in his own home. "Haven't you heard? Why, they say that no flatface has ever set foot in one of their temples, even to inspect. They can't even get in by disguising themselves as white men; something knocks them out cold, right at the door. Personally, I think those apes are scared to death of Mota. I don't know what it is they've got, but you can breathe easy in the temple. Come along with me—you'll see!"

The Rev. Dr. David Wood called on his friend the equally reverend Father Doyle. The older man let him in himself. "Come in, David, come in," he greeted him. "You're a pleasant sight. It's been too many days since I've seen you." He brought him into his little study and sat him down and offered tobacco. Wood refused it in a preoccupied manner.

Their conversation drifted in a desultory way from one unimportant subject to another. Doyle could see that Wood had something on his mind, but the old priest was accustomed to being patient. When it became evident that the younger man could not, or would not, open the subject, he steered him to it. "You seem like a man with something preying on his mind, David. Should I ask what it is?"

David Wood took the plunge. "Father, what do you think of this outfit that call themselves the priests of Mota?"

"Think of it? What should I think of it?"

"Don't evade me, Francis. Doesn't it matter to you when a heathen heresy sets up in business right under your nose?"

"Well, now, it seems to me that you have raised some points for discussion there, David. just what is a heathen religion?"

Wood snorted. "You know what I mean! False gods! Robes, and bizarre temple, and—mummeries!"

Doyle smiled gently. "You were about to say 'papist mummeries,' were you not, David? No, I can't say that I am greatly concerned over odd paraphernalia. But as to the definition of the word 'heathen'—

from a strict standpoint of theology I am forced to consider any sect that does not admit authority of the Vicar on Earth—"

"Don't play with me, man! I'm in no mood for it."

"I am not playing with you, David. I was about to add that in spite of the strict logic of theology, God in His mercy and infinite wisdom will find some way to let even one like yourself into the Holy City. Now as for these priests of Mota, I have not searched their creed for flaws, but it seems to me that they are doing useful work; work that I have not been able to accomplish."

"That is exactly what worries me, Francis. There was a woman in my congregation who was suffering from an incurable cancer. I knew of cases like hers that had apparently been helped by . . . by those charlatans! What was I to do? I prayed and found no answer."

"What did you do?"

"In a moment of weakness I sent her to them."

"Well?"

"They cured her."

"Then I wouldn't worry about it too much. God has more vessels than you and me."

"Wait a moment. She came back to my church just once. Then she went away again. She entered the sanctuary, if you can call it that, that they have set up for women. She's gone, lost entirely to those idolaters! It has tortured me, Francis. What does it avail to heal her mortal body if it jeopardizes her soul?"

"Was she a good woman?"

"One of the best."

"Then I think God will look out for her soul, without your assistance, or mine. Besides, David," he continued, refilling his pipe, "those so-called priests. They are not above seeking your help, or mine, in spiritual matters. They don't perform weddings, you know. If you should wish to use their buildings, I am sure you would find it easy—"

"I can't imagine it!"

"Perhaps, perhaps, but I found a listening device concealed in my confessional—" The priest's mouth became momentarily a thin angry line. "Since then I've been borrowing a corner of the temple to listen to anything which might possibly be of interest to our Asiatic masters."

"Francis, you haven't!" Then, more moderately, "Does your bishop know of this?"

"Well, now, the bishop is a very busy man—"

"Really, Francis—"

"Now, now—I did write him a letter, explaining the situation as clearly as possible. One of these days I will find someone who is traveling in that direction and can carry it to him. I dislike to turn church business over to a public translator; it might be garbled."

"Then you haven't told him?"

"Didn't I just say that I had written him a letter? God has seen that letter; it won't harm the bishop to wait to read it."

It was nearly two months later that David Wood was sworn into the Secret Service of the United States Army. He was only mildly surprised when he found that his old friend, Father Doyle, was able to exchange recognition signals with him.

It grew and it grew. Organization—and communication—underneath each gaudy temple, shielded from any possible detection by orthodox science, operators stood watch and watch, heel and toe, at the pararadio equipment operating in one band of additional spectra—operators who never saw the light of day, who never saw anyone but the priest of their own temple; men marked as missing in the fields of the Asiatic warlords; men who accepted their arduous routine philosophically as the necessary exigency of war. Their morale was high, they were free men again, free and fighting, and they looked forward to the day when their efforts would free all men, from coast to coast.

Back in the Citadel women in headphones neatly typed everything that the pararadio operators had to report; typed it, classified it, condensed it, cross-indexed it. Twice a day the communication watch officer laid a brief of the preceding twelve hours on Major Ardmore's desk. Constantly throughout the day dispatches directed to Ardmore himself poured in from a dozen and a half dioceses and piled up on his desk. In addition to these myriad sheets of flimsy paper, each requiring his personal attention, reports piled up from the laboratories, for Calhoun now had enough assistants to fill every one of those ghost crowded rooms and he worked them sixteen hours a day.

The personnel office crowded more reports on him, temperament classifications, requests for authorization, notifications that this department or that required such and such additional personnel; would the recruiting service kindly locate them? Personnel there was a headache! How many men can keep a secret? There were three major divisions of personnel, inferiors in routine jobs such as the female secretaries and clerks who were kept completely insulated from any contact with the outside world; local temple personnel in contact with the public who were told only what they needed to know and were never told that they were serving in the army, and the "priests" themselves who of necessity had to be in the know.

These latter were sworn to secrecy, commissioned in the United States army, and allowed to know the real significance of the entire set-up. But even they were not trusted with the underlying secret, the scientific principles behind the miracles they performed. They were drilled in the use of the apparatus entrusted to them, drilled with care, with meticulous care, in order that they might handle their deadly symbols of office without error. But, save for the rare sorties of the original seven, no person having knowledge of the Ledbetter effect and its corollaries ever left the Citadel.

Candidates for priesthood were sent in as pilgrims from temples everywhere to the Mother Temple near Denver. There they sojourned in the monastery, located underground on a level between the temple building and the Citadel. There they were subjected to every test of temperament that could be devised. Those who failed were sent back to their local temples to serve as lay brothers, no wiser than when they had left home.

Those who passed, those who survived tests intended to make them angry, to make them loquacious, to strain their loyalty, to crack their nerve, were interviewed by Ardmore in his persona as High Priest of Mota, Lord of All. Over half of them he turned down for no reason at all, hunch alone, some vague uneasiness that. this was not the man.

In spite of these precautions he never once commissioned a new officer and sent him forth to preach without a deep misgiving that here perhaps was the weak link that would bring ruin to them all.

The strain was getting him. It was too much responsibility for one man, too many details, too many decisions. He found it increasingly difficult to concentrate on the matter at hand, hard to make even simple decisions. He became uncertain of himself and correspondingly irritable. His mood infected those in contact with him and spread throughout the organization.

Something had to be done.

Ardmore was sufficiently honest with himself to recognize, if not to diagnose, his own weakness. He called Thomas into his office, and unburdened his soul. Concluding, he asked, "What do you think I should do about it, Jeff? Has the job got too big for me? Should I try to pick out somebody else to take over?"

Thomas shook his head slowly. "I don't think you ought to do that, Chief. Nobody could work any harder than you do—there are just twenty-four hours in a day. Besides, whoever relieved you would have the same problems without your intimate knowledge of the background and your imaginative grasp of what we are trying to accomplish."

"Well, I've got to do something. We're about to move into the second phase of this show, when we start in systematically trying to break the nerve of the PanAsians. When that reaches a crisis, we've got to have the congregation of every temple ready to act as a military unit. That means more work, not less. And I'm not ready to handle it! Good grief, man you'd think that somebody somewhere would have worked out a science of executive organization so that a big organization could be handled without driving the man at the top crazy! For the past two hundred years the damned scientists have kept hauling gadget after gadget out of their laboratories, gadgets that simply demand big organizations to use them—but never a word about how to make those organizations run." He struck a match savagely. "It's not rational!"

"Wait a minute, Chief, wait a minute." Thomas wrinkled his brow in an intense effort to remember. "Maybe there has been such work done—I seem to recall something I read once, something about Napoleon being the last of the generals."

"Huh?"

"It's pertinent. This chap's idea was that Napoleon was the last of the great generals to exercise direct command, because the job got too big. A few years later the Germans invented the principle of staff command, and, according to this guy, generals were through: as generals. He thought that Napoleon wouldn't have stood a chance against an army headed by a general staff. Probably what you need is a staff:"

"For Pete's sake, I've got a staff! A dozen secretaries and twice that many messengers and clerks—I fall over 'em."

"I don't think it was that kind of a staff he was talking about. Napoleon must have had that kind of a staff."

"Well, what did he mean?"

"I don't know exactly, but apparently it was a standard notion in modern military organization. You're not a graduate of the War College?"

"You know damn well I'm not." It was true. Thomas had guessed from very early in their association that Ardmore was a layman, improvising as he went along, and Ardmore knew that he knew; yet each had kept his mouth closed.

"Well, it seems to me that a graduate of the War College might be able to give us some hints about organization."

"Fat chance. They either died in battle, or were liquidated after the collapse. If any escaped, they are lying very low and doing their best to conceal their identity—for which you can't blame them."

"No, you can't. Well, forget it—I guess it wasn't such a good idea after all."

"Don't be hasty. It was a good idea. Look—armies aren't the only big organizations. Take the big corporations, like Standard Oil and U. S. Steel and General Motors—they must have worked out the same principles."

"Maybe. Some of them, anyhow—although some of them burn their executives out pretty young. Generals have to be killed with an ax, it seems to me."

"Still, some of them must know something. Will you see if you can stir out a few?"

Fifteen minutes later a punched-card selector was rapidly rifling through the personnel files of every man and woman who had been reported on by the organization. It turned out that several men of business executive experience were actually then working in the Citadel in jobs of greater or lesser administrative importance. Those were called in, and dispatches were sent out summoning about a dozen more to "make a pilgrimage" to the Mother Temple.

The first trouble shooter turned out sour. He was a high-pressure man, who had run his own business much along the lines of personal supervision which Ardmore had been using up to then. His suggestions had to do with routing and forms and personal labor savers—rather than any basic change in principles. But in time several placid unhurried men were located who knew instinctively and through practice the principle of doctrinal administration.

One of them, formerly general manager of the communications trust, was actually a student and an admirer of modern military organizational methods. Ardmore made him Chief of Staff. With his help, Ardmore selected several others: the former personnel manager of Sears, Roebuck; a man who had been permanent undersecretary of the department of public works in one of the Eastern states; executive secretary of an insurance company. Others were added as the method was developed.

It worked. Ardmore had a little trouble getting used to it at first; he had been a one-man show all his life and it was disconcerting to find himself split up into several alter egos, each one speaking with his authority, and signing his name "by direction." But in time he realized that these men actually were able to apply his own policy to a situation and arrive at a decision that he might have made himself. Those who could not he got rid of, at the suggestion of his Chief of Staff: But it was strange to be having time enough to watch other men doing HIS work HIS way under the simple but powerful scientific principle of general staff command.

He was free at last to give his attention to perfecting that policy and to deal thoroughly with the occasional really new situation which his staff referred to him for solution and development of new policy. And he slept soundly, sure that one, or more, of his "other brains" was alert and dealing with the job. He knew now that, even if he should be killed, his extended brain would continue until the task was completed.

It would be a mistake to assume that the PanAsian authorities had watched the growth and spread of the new religion with entire satisfaction, but at the critical early stage of its development they simply had not realized that they were dealing with anything dangerous. The warning of the experience of the deceased lieutenant who first made contact with the cult of Mota went unheeded, the simple facts of his tale unbelieved.

Having once established their right to travel and operate, Ardmore and Thomas impressed on each missionary the importance of being tactful and humble and of establishing friendly relations with the local authorities. The gold of the priests was very welcome to the Asiatics, involved as they were in making a depressed and recalcitrant country pay dividends, and this caused them to be more lenient with the priests of Mota than they otherwise would have been. They felt, not unreasonably, that a slave who helps to make the books balance must be a good slave. The word went around at first to encourage the priests of Mota, as they were aiding in consolidating the country.

True, some of the PanAsian police and an occasional minor official had very disconcerting experiences in dealing with priests, but, since these incidents involved loss of face to the PanAsians concerned, they were strongly disposed not to speak of them.

It took some time for enough unquestioned data to accumulate to convince the higher authorities that the priests of Mota, all of them, had several annoying—yes, even intolerable characteristics. They could not be touched. One could not even get very close to one of them—it was as if they were surrounded by a frictionless pellucid wall of glass. Vortex pistols had no effect on them. They would submit passively to arrest but somehow they never stayed in jail. Worst of all, it had become certain that a temple of Mota could not, under any circumstances, be inspected by a PanAsian.

It was not to be tolerated.

CHAPTER NINE

It was not tolerated. The Prince Royal himself ordered the arrest of Ardmore.

It was not done as crudely as that. Word was sent to the Mother Temple that the Grandson of Heaven desired the High Priest of the Lord of Mota to attend him. The message reached Ardmore in his office in the Citadel, delivered to him by his Chief of Staff, Kendig, who for the first time in their relationship showed signs of agitation. "Chief," he burst out, "a battle cruiser has landed in front of the temple, and the commanding officer says he has orders to take you along!"

Ardmore put down the papers he had been studying. "Hmm-m-m," he said, "it looks like we're getting down to the slugging. A little bit earlier than I had counted on." He frowned.

"What are you going to do about it?"

"You know my methods. What do you think I'll do about it?"

"Well—I guess you'll probably go along with him, but it worries me. I wish you wouldn't."

"What else can I do? We aren't ready yet for an open breach; a refusal would be out of character. Orderly!"

"Yes, sir!"

"Send my striker in. Tell him full robes and paraphernalia. Then present my compliments to Captain Thomas and ask him to come here at once."

"Yes, sir." The orderly was already busy with the viewphone.

Ardmore talked with Kendig and Thomas as his striker robed him. "Jeff, here's the sack—you're holding it."

"Huh?"

"If anything happens so that I lose communication with headquarters, you are commanding officer. You'll find your appointment in, my desk, signed and sealed."

"But Chief."

"Don't 'But Chief' me. I made my decision on this a long time ago. Kendig knows about it; so does the rest of the staff. I'd have had you in the staff before this if I hadn't needed you as Chief of Intelligence." Ardmore glanced in a mirror and brushed at his curly blond beard. They had all grown beards, all those who appeared in public as priests. It tended to give the comparatively hairless Asiatics a feeling of womanly inferiority while at the same time arousing a vague unallocated repugnance. "You may have noticed that no one holding a line commission has ever been made senior to you. I had this eventuality in mind."

"How about Calhoun?"

"Oh, yes—Calhoun. Your commission as a line officer automatically makes you senior to him, of course. But I'm afraid that won't cut much ice in handling him. You just have to deal with him as best you can. You've got force majeure at your disposal, but go easy. But I don't have to tell you that."

A messenger, dressed as an acolyte, hurried in and saluted. "Sir, the temple officer of the watch says that the PanAsian Commander is getting very impatient."

"Good. I want him to be. Are the subsonics turned on?"

"Yes, sir, they make us all very nervous."

"You can stand it; you know what it is. Tell the watch officer to have the engineer on duty vary the volume erratically with occasional complete let-ups. I want those Asiatics to be fit to be tied by the time I get there."

"Yes, sir. Any word to the cruiser commander?"

"Not directly. Have the watch officer tell him that I am at my devotions and can't be disturbed."

"Very good, sir." The messenger trotted away. This was something like! He would hang around where he could see the face of that skunk when he heard that one!

"I'm glad we got these new headsets fitted out in time," Ardmore observed as his striker fitted his turban to his head.

The turbans had originally been intended simply to conceal the mechanism which produced the shining halo which floated above the heads of all priests of Mota. The turban and the halo together made a priest look about seven feet tall with consequent unfavorable effect on the psyche of the Asiatics. But Scheer had seen the possibility of concealing a short range transmitter and receiver under the turban as well; they were now standard equipment.

He settled the turban with his hands, made sure that the bone conduction receiver was firm against his mastoid, and spoke in natural low tones, apparently to no one, "Commanding officer—testing."

Apparently inside his head, a voice, muffled but distinct, answered him, "Communication watch officer—test check."

"Good," he approved. "Have direction finders crossed on me until further notice. Arrange your circuits to hook me in through the nearest temple to headquarters here. I may want Circuit A at any moment."

Circuit A was a general broadcast to every temple in the country. "Any news from Captain Downer?"

"One just this moment came in, sir; I've just sent it to your office," the inner voice informed him.

"So? Yes, I see." Ardmore stepped to his desk, flipped a switch which turned off a shining red transparency reading Priority, and tore a sheet of paper from the facsimile recorder.

"Tell the Chief," the message ran, "that something is about to bust. I can't find out what it is, but all the brass hats are looking very cocky. Watch everything and be careful." That was all, and that little possibly garbled in word of mouth relay.

Ardmore frowned and pursed his mouth, then signaled his orderly. "Send for Mr. Mitsui."

When Mitsui came in, Ardmore handed him the message. "I suppose you've heard that I am to be arrested?"

"It's all over the place," Mitsui acknowledged soberly, and handed the message back.

"Frank, if you were Prince Royal, what would you be trying to accomplish by arresting me?"

"Chief," protested Mitsui, distress in his eyes, "you act as if I were one of those . . . those murdering—"

"Sorry—but I still want your advice."

"Well—I guess I'd be intending to put you on ice, then clamp down on your church."

"Anything else?"

"I don't know. I don't guess I'd be doing it unless I was fairly sure that I had some way to get around your protections."

"No, I suppose so." He spoke again to the air. "Communication office, priority for Circuit A."

"Direct, or relay?"

"You send it out. I want every priest to return to his temple, if he is now out of it, and I want him to do it fast. Priority, urgent, acknowledge and report." He turned back to those with him.

"Now for a bite to eat, and I'll go. Our yellow friend upstairs ought to be about done to a turn by then. Anything else we should take up before I leave?"

Ardmore entered the main hall of the temple from the door in the rear of the altar. His approach to the great doors, now standing open, was a stately progress. He knew that the Asiatic commander could see him coming; he covered the two hundred yards with leisured dignity, attended by a throng of servers clad in robes of red, of green, of blue, and golden. His own vestments were immaculate white. His attendants fanned out as they neared the great archway; he marched out and up to the fuming Asiatic alone. "Your master wishes to see me?"

The PanAsian had difficulty in composing himself sufficiently to speak in English. Finally he managed to get out, "You were ordered to report to me. How dare you—"

Ardmore cut him short. "Does your master wish to see me?"

"Decidedly! Why didn't you—"

"Then you may escort me to him." He moved on past the officer and marched down the steps, giving the Asiatics the alternatives of running to catch up with him, or trailing after. The commander of the cruiser obeyed his first impulse to hurry, nearly fell on the broad steps, and concluded by bringing up ignominiously in the rear, his guard attending him.

Ardmore had been in the city chosen by the Prince Royal as his capital before, but not since the Asiatics had moved in. When they debarked on the municipal landing platform he looked about him with concealed eagerness to see what changes had been made. The skyways seemed to be running—probably because of the much higher percentage of Asiatic population here. Otherwise there was little apparent change. The dome of the State capitol was visible away to the right; he knew it to be the palace of the warlord. They had done something to its exterior; he could not put his finger on the change but it no longer looked like Western architecture.

He was too busy for the next few minutes to look at the city. His guard, now caught up with him and surrounding him, marched him to the escalator and down into the burrows of the city. They passed through many doors, each with its guard of soldiers. Each guard presented arms to Ardmore's captor as the party passed. Ardmore solemnly returned each salute with a gesture of benediction, acting as if the salute had been intended for him and him alone. His custodian was indignant but helpless; it soon developed into a race to see which could acknowledge a salute first. The commander won, but at the cost of saluting his startled juniors first.

Ardmore took advantage of a long unbroken passageway to check his communications. "Great Lord Mota," he said, "dost thou hear thy servant?" The commander glanced at him, but said nothing.

The muffled inner voice answered at once, "Got you, Chief. You are hooked in through the temple in the capitol." It was Thomas' voice.

"The Lord Mota speaks, the servant hears. Truly it is written that little pitchers have long ears."

"You mean the monkeys can overhear you?"

"Yea, verily, now and forever. The Lord Mota will understand igpay atinlay?"

"Sure, Chief—pig latin. Take it slow if you can."

"At-thay is oodgay. Ore-may aterlay." Satisfied, he desisted. Perhaps the PanAsians had a mike and a recorder on him even now. He hoped so, for he thought it would give them a useless headache. A man has to grow up in a language to be able to understand it scrambled.

The Prince Royal had been impelled by curiosity as much as by concern when he ordered the apprehension of the High Priest of Mota. It was true that affairs were not entirely to his liking, but he felt that his advisers were hysterical old women. When had a slave religion proved anything but an aid to the conqueror? Slaves needed a wailing wall; they went into their temples, prayed to their gods to deliver them from oppression, and came out to work in the fields and factories, relaxed and made harmless by the emotional catharsis of prayer.

"But," one of his advisers had pointed out, "it is always assumed that the gods do nothing to answer those prayers."

That was true; no one expected a god to climb down off his pedestal and actually perform. "What, if anything, has this god Mota done? Has anyone seen him?"

"No, Serene One, but—"

"Then what has he done?"

"It is difficult to say. It is impossible to enter their temples—"

"Did I not give orders not to disturb the slaves in their worship?" The Prince's tones were perilously sweet.

"True. Serene One, true," he was hastily assured, "nor have they been, but your secret police have been totally unable to enter in order to check up for you, no matter how cleverly they were disguised."

"So? Perhaps they were clumsy. What stopped them?"

The adviser shook his head. "That is the point, Serene One. None can remember what happened."

"What is that you say?—but that is ridiculous. Fetch me one to question."

The adviser spread his hands. "I regret, sire—"

"So? Of course, of course—peace be to their spirits." He smoothed an embroidered silken panel that streamed down his chest. While he thought, his eye was caught by ornately and amusingly carved chessmen set up on a table at his elbow. Idly he tried a pawn in a different square. No, that was not the solution; white to move and checkmate in four moves—that took five. He turned back. "It might be well to tax them."

"We have already tried—"

"Without my permission?" The Prince's voice was gentler than before. Sweat showed on the face of the other.

"If it were an error, Serene One, we wished the error to be ours."

"You think me capable of error?" The Prince was the author of the standard text on the administration of subject races, written while a young provincial governor in India. "Very well, we will pass it. You taxed them, heavily I presume—what then?"

"They paid it, sire."

"Triple it."

"I am sure they would pay it, for—"

"Make it tenfold. Set it so high they can not pay it."

"But Serene One, that is the point. The gold with which they pay is chemically pure. Our doctors of temporal wisdom tell us that this gold is made, transmuted. There is no limit to the tax they can pay. In fact," he went on hurriedly, "it is our opinion, subject always to the correction of superior wisdom"—he bowed quickly—"that this is not a religion at all, but scientific forces of an unknown sort!"

"You are suggesting that these barbarians have greater scientific attainments than the Chosen Race?"

"Please, sire, they have something, and that something is demoralizing your people. The incidence of honorable suicide has climbed to an alarming high, and there have been far too many petitions to return to the land of our fathers.

"No doubt you have found means to discourage such requests?"

"Yes, Serene One, but it has only resulted in a greater number of honorable suicides among those thrown in contact with the priests of Mota. I fear to say it, but such contact seems to weaken the spirit of your children."

"Hm-m-m. I think, yes, I think that I will see this High Priest of Mota."

"When will the Serene One see him?"

"That I will tell you. In the meantime, let it be said that my learned doctors, if they have not lived too many years and passed their usefulness, will be able to duplicate and counteract any science the barbarians may have."

"The Serene One has spoken."

The Prince Royal watched with great interest as Ardmore approached him. The man walked without fear. And, the Prince was forced to admit, the man had a certain dignity about him, for a barbarian. This would be interesting. What was that shining thing around his head?—an amusing conceit, that.

Ardmore stopped before him and pronounced a benediction, hand raised high. Then—"You asked that I visit you, Master."

"So I did." Was the man unaware that he should kneel?

Ardmore glanced around. "Will the Master cause his servants to fetch me a chair?"

Really, the man was delightful—regrettable that he must die. Or would it be possible to keep him around the palace for diversion? Of course, that would entail the deaths of all who had watched this scene and perhaps more such expedient deaths later, if his delicious vagaries continued. The Prince concluded that it was not the initial cost, but the upkeep.

He raised a hand. Two scandalized menials hastened up with a stool. Ardmore sat down. His eye rested on the chess table by the Prince. The Prince followed his glance and inquired, "Do you play the Battle Game?"

"A little, Master."

"How would you solve this problem?"

Ardmore got up and stood over the board. He studied it for a few moments, while the Oriental watched him. The courtiers were as silent as the pieces on the board—waiting.

"I would move this pawn—so," Ardmore announced at last.

"In such a fashion? That is a most unorthodox move."

"But necessary. From there it is mate in three moves—but, of course, the Master sees that.",

"Of course. Yes, of course. But I did not fetch you here for chess," he added, turning away. "We must speak of other matters. I learn with sorrow that there have been complaints about your followers."

"The Master's sorrow is my sorrow. May the servant ask in what manner his children have erred?"

But the Prince was again studying the chessboard. He raised a finger; a servant was kneeling beside him with writing board. He dipped a brush in ink and quickly executed a group of ideographs, sealing. the letter with his ring. The servant bowed himself away, while a messenger sped out with the dispatch.

"What was that? Oh, yes—it is reported that they lack in grace. Their manner is unseemly in dealing with the Chosen Ones."

"Will the Master help an humble priest by telling him which of his children have been guilty of lapses from propriety and in what respects that he may correct them?"

This request, the Prince admitted to himself, was awkward. In some manner this uncouth creature had managed to put him on the defensive. He was not used to being asked for details; it was improper. Furthermore there was no answer; the conduct of the priests of Mota had been impeccable, flawless, in every fashion that could be cited.

Yet his court stood there, waiting, to hear what answer he would make to this crude indecency. How went the ancient lines? " . . . Kung F'tze confounded by the question of a dolt!"

"It is not meet that the servant should question the master. At this moment you err in the fashion of your followers."

"Your pardon, Master. Though the slave may not question, is it not written that he may pray for mercy and help? We are simple servants, possessing not the wisdom of the Sun and of the Moon. Are you not our father and our mother? Will you not, from your heights, instruct us?"

The Prince refrained from biting his lip. How had this happened? By some twist of words this barbarian had put him in the wrong again. It was not safe to let the man open his mouth! Still—this must be met; when a slave cries for mercy, honor requires an answer.

"We consent to instruct you in one particular; learn the lesson well and other aspects of wisdom will come to you of themselves." He paused and considered his words. "The manner of address used by you and your lesser priests in greeting the Chosen Ones is not seemly. This afront corrupts the character of all who see it."

"Am I to believe that the Chosen Race disdains the blessing of the Lord Mota?"

He had twisted it—again! Sound policy required that the ruler assume that the gods of the slaves were authentic. "The blessing is not refused, but the form of greeting must be that of servant to master."

Ardmore was suddenly aware that he was being called with urgency. Ringing in his head was the voice of Thomas: "Chief! Chief! Can you hear me? There's a squad of police at every temple, demanding the surrender of the priests—we're getting reports in from all over the country!"

"The Lord Mota hears!" It was addressed to the Prince; would Jeff understand also?

Jeff again—"Was that to me, Chief?"

"See to it that his followers understand." The Prince had answered too quickly for Ardmore to devise another double meaning in which to speak to Thomas. But he knew something that the Prince did not know he knew. Now to use it.

"How can I instruct my priests when you are even now arresting them?" Ardmore's manner changed suddenly from humble to accusatory.

The face of the Prince was impassive, his eyes alone gave away his astonishment. Had the man guessed the nature of that dispatch? "You speak wildly."

"I do not! Even while you have been instructing me in the way that I must instruct my priests, your soldiers have been knocking at the gates of all the temples of Mota. Wait! I have a message to you from the Lord Mota: His priests do not fear worldly power. You have not succeeded in arresting them, nor would you, did not the Lord Mota bid them to surrender. In thirty minutes, after the priests have cleansed themselves spiritually and girded themselves for the ordeal, each will surrender himself at the threshold of his temple. Until then, woe to the soldier who attempts to violate the House of Mota!"

"'At's telling 'em Chief! 'At's telling 'em! You mean for each temple priest to hold off thirty more minutes, then surrender—is that right? And for them to be loaded for bear, power units, communicators, and all the latest gadgets. Acknowledge, if you can."

"In the groove, Jeff." He had to chance it four meaningless syllables to the Prince, but Jeff would understand.

"O. K., Chief. I don't know what you're up to, but we'll go along a thousand percent!"

The face of the Prince was a frozen mask. "Take him away."

For some minutes after Ardmore was gone the Serene One sat staring at the chessboard and pulling at his underlip.

They placed Ardmore in a room underground, a room with metal walls and massive locks on the door. Not content with that, he was hardly inside when he heard a soft hissing noise and saw a point at the edge of the door turn cherry red. Welding! They evidently intended to make sure that no possible human weakness of his guards could result in escape. He called the Citadel.

"Lord Mota, hear thy servant!"

"Yes, Chief."

"A wink is as good as a nod."

"Got you, Chief. You are still where you can be overheard. Slang it up. I'll get your drift!"

"The headman witch doctor hankers to chew the rag with the rest of the sky pilots."

"You want Circuit A?"

"Most bodaciously."

There was a brief pause, then Thomas answered. "O. K., Chief, you've got it. I'll stay cut in to interpret; it probably won't be necessary, since the boys have practiced this kind of double talk. Go ahead—you've got five minutes, if they are to surrender on time."

Any cipher can be broken, any code can be compromised. But the most exact academic knowledge of a language gives no clue to its slang, its colloquial allusions, its half statements, over statements, and inverted meanings. Ardmore felt logically certain that the PanAsians had planted a microphone in his cell. Very well, since they were bound to listen to his end of the conversation, let them be confused and baffled by it, uncertain whether he spoke in gibberish to his god, or had possibly lost his mind.

"Look, cherubs—mamma wants baby to go to the nice man. It's all hunkydory as long as baby-bunting carries his nice new rattle. Yea, verily, rattle is the watchword—you don't and they do. Deal this cold deck the way it's stacked and the chopstick laddies are stonkered and discombobulated. The stiff upper lip does it."

"Check me if I'm wrong, Chief. You want the priests to give themselves up, and to rattle the PanAsians by their apparent unconcern. You want them to carry it off the way you did, cool as a cucumber, and bold as brass. I also take it that you want them to hang on to their staffs, but not to use them unless you tell them to. Is that right?"

"Elementary, my dear Watson!"

"What happens after that?"

"No thirty."

"What's that? Oh, 'No thirty'—more to come on this story; you'll tell us later. All right, Chief—it's time!"

"Okey-dokey!"

Ardmore waited until he was reasonably certain that all the PanAsians not immediately concerned with guarding the prisoners would be asleep, or at least in their quarters. What he proposed to do would be effective fully only in the event that no one knew just what had happened. The chances were better at night.

He called Thomas by whistling a couple of bars of "Anchors Aweigh." He responded at once—he had not gone off duty, but had remained at the pararadio, giving the prisoners an occasional fight talk and playing records of martial music. "Yes, Chief?"

"The time has come to take a powder. Allee-allee out's in free!"

"Jailbreak?"

"In the manner of the proverbial Arab—the exact manner."

They had discussed this technique before; Thomas gave itemized instructions and then said, "Say when, Chief."

"When!"

He could almost see Thomas nod. "Right-oh! O. K., troops, get going!"

Ardmore stood up and stretched his cramped limbs. He walked over to one wall of his prison and stood so that the single light cast a shadow on the wall. That would be about right there! He set the controls of his staff for maximum range in the primary Ledbetter effect, checked to see that the frequency band covered the Mongolian race, and adjusted it to stun rather than kill. Then he turned on power.

A few moments later he turned it off, and again regarded his shadow on the wall. This required an entirely different setting, directional and with fine discrimination. He turned on the red ray of Dis to guide him in his work, completed his set-up, and again turned on power.

Quietly and without fuss, atoms of metal rearranged themselves and appeared as nitrogen, to mix harmlessly with the air. Where there had been a solid wall was now an opening the size and shape of a tall man dressed in priestly robes. He looked at it, and, as an after thought, he meticulously traced an ellipse over the head of the representation, an ellipse the size and shape of his halo. That done, he reset the controls of his staff to what he had used before, turned on power, and stepped through the opening. It was a close fit; he had to wriggle through sideways.

Outside it was necessary to step over the piled-up bodies of a dozen or more PanAsian soldiers. This was not the side of the welded-up entrance; he guessed that he would have found guards outside each and any of the four walls, probably floor and ceiling as well.

There were more doors to pass, more bodies to clamber over before he found himself outside. When he did, he was completely unoriented. "Jeff," he called, "where am I?"

"Just a second, Chief. You're—No, we can't get a fix on you, but you are on a line of bearing almost due south of the nearest temple. Are you still near the palace?"

"Just outside it."

"Then head north—it's about nine squares."

"Which way is north? I'm all turned around. No wait a minute—I just located the Big Dipper, I'm all right."

"Hurry, Chief."

"I will." He set out at a quick dogtrot, kept it up for a couple of hundred yards, then dropped into a fast walk. Damn it, he thought, a man gets out of condition with all this desk work.

Ardmore encountered several Asiatic police, but they were in no condition to notice him; he had kept the primary effect turned on. There were no whites about—the curfew was strict with the exception of a pair of startled street cleaners. It occurred to him that he should induce them to go with him to the temple, but he decided against it; they were in no more danger than a hundred fifty million others.

There was the temple!—its four walls glowing with the colors of attributes. He broke into a run and burst inside. The local priest was almost at his heels, arriving from the other direction.

He greeted the priest heartily, suddenly realizing the strain he had been under in finding how good it was to speak to a man of his own kind—a comrade. The two of them ducked around back of the altar and went down below to the control and communication room, where the pararadio operator and his opposite number were almost hysterically glad to see them. They offered him black coffee, which he accepted gratefully. Then he told the operator to cut out of Circuit A and establish direct two-way connection with headquarters with vision converted into the circuit.

Thomas appeared to be about to jump out of the screen. "Whitey!" he yelled. It was the first time since the Collapse that anyone had called Ardmore by his nickname. He was not even aware that Thomas knew it. But he felt warmed by the slip.

"Hi, Jeff," he called to the image, "good to see you. Any reports in yet?"

"Some. They are coming in all the time."

"Shift to relay through the diocese offices; Circuit A is too clumsy. I want a quick report."

It was forthcoming. Within less than twenty minutes the last diocese had reported in. Every priest was back in his own temple. "Good," he told Thomas. "Now I want the proprietor in each temple set for counteraction, and wake all those monkeys up. They ought to be able to use a directional concentration down the line each priest returned on, and reach clear back to the local jailhouse."

"O.K., if you say so, Chief. May I ask why you don't simply let 'em wake up when the effect wears off?'

"Because," he explained, "if they simply come to before anybody finds them the effect will be much more mysterious than if they are found apparently dead. The object of the whole caper was to break the morale of the Asiatics. This increases the effect."

"Right—as usual, Chief. The word is going out."

"Fine. When that's done, have them check the shielding of their temples, turn on the fourteen-cycle note, and go to bed—all that aren't on duty. I imagine we'll have a busy day tomorrow."

"Yes, sir. Aren't you coming back here, Chief?"

Ardmore shook his head. "It's an unnecessary risk. I can supervise just as effectively through television as I could if I were standing right beside you."

"Scheer is all set to fly over and pick you up. "He could set her down right on the temple roof."

"Tell him thanks, but to forget it. Now you turn it over to the staff duty officer and get some sleep."

"Just as you say, Chief."

He had a midnight lunch with the local priest and some conversation, then let the priest show him to a stateroom down underground.

CHAPTER TEN

Ardmore was awakened by the off duty pararadio operator shaking him vigorously. "Major Ardmore! Major! Wake up!"

"Unnh . . . . M-m-m-m . . . . Wassa matter?"

"Wake up—the Citadel is calling you—urgently!"

"What time is it?"

"About eight. Hurry, sir!"

He was reasonably wide awake by the time he reached the phone. Thomas was there, on the other end, and started to talk as soon as he saw Ardmore. "A new development, Chief—and a bad one. The PanAsian police are rounding up every member of our congregations—systematically."

"H-m-m-m—it was an obvious next move, I guess. How far along are they?"

"I don't know. I called you when the first report came in; they are coming in steadily now from all over the country."

"Well, I reckon we had better get busy." It was one thing for a priest, armed and protected, to risk arrest; these people were absolutely helpless.

"Chief—you remember what they did after the first uprising? This looks bad, Chief—I'm scared!"

Ardmore understood Thomas' fear; he felt it himself. But he did not permit his expression to show it.

"Take it easy, old son," he said in a gentle voice.

"Nothing has happened to our people yet and I don't think we'll let anything happen."

"But, Chief, what are you going to do about it? There aren't enough of us to stop them before they kill a lot of people."

"Not enough to do it directly, perhaps, but there is a way. You stick to collecting data and warn everybody not to go off halfcocked. I'll call you back in about fifteen minutes." He flipped the disconnect switch before Thomas could answer.

It required some thought. If he could equip each man with a staff, it would be simple. The shielding effect from a staff could theoretically protect a man against almost anything; except, perhaps, an A-bomb or the infiltration of poison gas. But the construction and repair department had been hard pushed to provide enough staffs to equip each new priest; one for each man was out of the question, since they lacked factory mass production. Anyhow, he needed them now—this morning.

A priest could extend his shield to include any given area or number of people, but in great extension the field became so tenuous that a well-thrown snowball would break through it. Nuts!

He realized suddenly that he was thinking of the problem in direct terms again, in spite of his conscious knowledge that such an approach was futile. What he wanted was psychological jiu-jitsu—some way to turn their own strength against them. Misdirection—that was the idea! Whatever it was they expected him to do, don't do it! Do something else.

But what else? When he thought he had found an answer to that question he called Thomas to the screen. "Jeff," he said at once, "give me Circuit A."

He spoke for some minutes to his priests, slowly and in detail, and emphasizing certain points. "Any questions?" he then asked, and spent several more minutes in dealing with such as they were relayed in from the diocese stations.

Ardmore and the local priest left the temple together. The priest attempted to persuade him to stay behind, but he brushed the objections aside. The priest was right; he knew in his heart that he should not take personal risks that could be avoided, but it was a luxury to be out from under Jeff Thomas' restraining influence.

"How do you plan to find out where they have taken our people?" asked the priest. He was a former real-estate operator named Ward, a man of considerable native intelligence. Ardmore liked him.

"Well, what would you do if I weren't along?"

"I don't know. I suppose I would walk into a police station and try to scare the information out of the flatface in charge."

"That's sound enough. Where is one?"

The central police station of the PanAsian police lay in the shadow of the palace, between eight and nine blocks to the south. They encountered many PanAsians en route, but were not interfered with. The Asiatics seemed dumbfounded to see two priests of Mota striding along in apparent unconcern. Even those garbed as police appeared uncertain what to do, as if their instructions had not covered the circumstance.

However, someone had phoned ahead; they were met on the steps by a nervous Asiatic officer who demanded of them, "Surrender! You are under arrest!"

They walked straight toward him. Ward lifted one, hand in blessing and intoned, "Peace! Take me to my people."

"Don't you understand my language?" snapped the PanAsian, his voice becoming shrill. "You are under arrest!" His hand crept nervously toward his holster.

"Your earthly weapons avail you not," said Ardmore calmly, "in dealing with the great Lord Mota. He commands you to lead me to my people. Be warned!" He continued to advance until his personal screen pushed against the man's body.

It—the disembodied pressure of the invisible screen—was more than the PanAsian could stand. He fell back a pace, jerked his sidearm clear and fired point-blank. The vortex ring struck harmlessly against the screen, was absorbed by it.

"Lord Mota is impatient," remarked Ardmore in a mild tone. "Lead his servant, before the Lord Mota sucks the soul from your body." He shifted to another effect, never before used in dealing with the PanAsians.

The principle involved was very simple; a cylindrical tractor-pressor stasis was projected, forming in effect a tube. Ardmore let it rest over the man's face, then applied a tractor beam down the tube. The unfortunate PanAsian gasped for air where there was no air and pawed at his face. When his nose began to bleed, Ardmore let up on him. "Where are my children?" he inquired again as softly as before.

The police officer, probably in sheer reflex, tried to run. Ardmore nailed him with a pressor beam against the door and again applied momentarily the suction tube, this time to the fellow's midriff. "Where are they?"

"In the park," the man gasped, and regurgitated violently.

They turned with leisured dignity, and headed back down the steps, sweeping those who had pressed too close casually out of the way with the pressor beam.

The park surrounded the erstwhile State capitol building. They found the congregation herded into a hastily erected bull pen which was surrounded by ranks of Asiatic soldiers. On a platform nearby, technicians were installing television pick-up. It was easy to infer that another public "lesson" was to be given the serfs. Ardmore saw no evidence of the rather bulky apparatus used to produce the epileptogenetic ray; either it had not been brought up, or some other method of execution was to be used—perhaps the soldiers present were an enormous firing squad.

Momentarily he was tempted to use the staff to knock out all the soldiers present, they were standing at ease with arms stacked, and it was conceivably possible that he might be able to do so before they could harm, not Ardmore, but the helpless members of the congregation. But he decided against it; he had been right when he gave his orders to his priests—this was a game of bluff; he could not combat all of the soldiers that the PanAsian authorities could bring to bear, yet he must get this crowd safely inside the temple.

The massed people in the bull pen recognized Ward, and perhaps the high priest as well, at least by reputation. He could see sudden hope wipe despair from their faces—they surged expectantly. But he passed on by them with the briefest of blessing, Ward in his train, and hope gave way to doubt and bewilderment as they saw him stride up to the PanAsian commander and offer him the same blessing.

"Peace!" cried Ardmore. "I come to help you."

The PanAsian barked an order in his own tongue. Two PanAsians ran up to Ardmore and attempted to seize him. They slithered off the screen, tried again, and then stood looking to their superior officer for instructions, like a dog bewildered by an impossible command.

Ardmore ignored them and continued his progress until he stood immediately in front of the commander. "I am told that my people have sinned," he announced. "The Lord Mota will deal with them."

Without waiting for an answer, he turned his back on the perplexed official and shouted, "In the name of Shaam, Lord of Peace!" and turned on the green ray from his staff.

He played it over the imprisoned congregation. Down they went, as if the ray were a strong gale striking a stand of wheat. In seconds' time, every man, woman and child lay limp on the ground, to all appearance dead. Ardmore turned back to the PanAsian officer and bowed low. "The servant asks this penance be accepted."

To say that the Oriental was disconcerted is to expose the inadequacy of language. He knew how to deal with opposition, but this wholehearted cooperation left him without a plan; it was not in the rules.

Ardmore left him no time to think of a plan. "The Lord Mota is not content," he informed him, "and directs that I give you and your men presents, presents of gold!"

With that he switched on a dazzling white light and played it over the stacked arms of the soldiers to his right. Ward followed his motions, giving his attention to the left flank. The stacked small arms glowed and scintillated under the ray. Wherever it touched, the metal shone with a new luster, rich and ruddy. Gold! Raw gold!

The PanAsian common soldier was paid no better than common soldiers usually are. Their lines shifted uneasily, like race horses at the barrier. A sergeant stepped up to the weapons, examined one and held it up. He called out something in his own tongue, his voice showing high excitement.

The soldiers broke ranks.

They shouted and swarmed and danced. They fought each other for possession of the useless, precious weapons. They paid no attention to their officers; nor were their officers free of the gold fever.

Ardmore looked at Ward and nodded. "Let 'em have it!" he commanded, and turned his knockout ray on the PanAsian commander.

The Asiatic toppled over without learning what had hit him, for his agonized attention was on his demoralized command. Ward had gone to work on the staff officers.

Ardmore gave the American prisoners the counteracting effect while Ward disintegrated a large gate in the bull pen. There developed the most unexpectedly difficult part of the task—to persuade three hundred-odd, dazed and disorganized people to listen and to move all in one direction. But two loud voices and a fixed determination accomplished it. It was necessary to clear a path through the struggling, wealth-mad Orientals with the aid of the tractor and pressor beams. This gave Ardmore an idea; he used the beams an his own followers much as a goose girl touches up a flock of geese with her switch.

They made the nine blocks to the temple in ten minutes, moving at a dogtrot that left many gasping and protesting. But they made it, made it without interruption by major force, although both Ward and Ardmore found it necessary to knock out an occasional PanAsian en route.

Ardmore wiped sweat from his face when he finally stumbled in the temple door, sweat that was not due entirely to precipitate progress. "Ward," he asked with a sigh, "have you got a drink in the place?"

Thomas was calling him again before he had had time to finish a cigarette. "Chief," he said, "we are beginning to get some reports in. I thought you would like to know."

"Go ahead."

"It looks successful—so far. Maybe twenty percent of the priests have reported so far through their bishops that they are back with their congregations."

"Any casualties?"

"Yes. We lost the entire congregation in Charleston, South Carolina. They were dead before the priest got there. He tore into the PanAsians with his staff at full power and killed maybe two or three times as many of the apes as they had killed of us before he beat his way to his temple and reported."

Ardmore shook his head at this. "Too bad. I'm sorry about his congregation, but I'm sorrier that he cut loose and killed a bunch of PanAsians. It tips my hand before I'm ready."

"But, Chief, you can't blame him—his wife was in that crowd!"

"I'm not blaming him. Anyhow, it's done—the gloves had to come off sooner or later; this just means that we will have to work a little faster. Any other trouble?"

"Not much. Several places they fought a sort of rear-guard action getting back to the temples and lost some people." Ardmore saw a messenger in the screen hand a sheaf of flimsies to Thomas. Thomas glanced at them and continued. "A bunch more reports, Chief. Want to hear 'em?"

"No. Give me a consolidated report when they are all in. Or when most of them are in, not later than an hour from now. I'm cutting off."

The consolidated report showed that over ninety-seven percent of the members of the cult of Mota had been safely gathered into the temples. Ardmore called a staff meeting and outlined his immediate plans. The meeting was, in effect, face to face, as Ardmore's place at the conference table was taken by the pick-up and the screen of the receiver. "We've had our hands forced," he told them. "As you know, we had not expected to start action of our own volition for another two weeks, perhaps three. But we have no choice now. As I see it, we have to act and act so fast that we will always have the jump on them."

He threw the situation open to general discussion; there was agreement that immediate action was necessary, but some disagreement as to methods. After listening to their several opinions Ardmore selected Disorganization Plan IV and told them to go ahead with preparations. "Remember," he cautioned, "once we start, it's too late to turn back. This thing moves fast and accelerates. How many basic weapons have been provided?"

The "basic weapon" was the simplest Ledbetter projector that had been designed. It looked very much like a pistol and was intended to be used in similar fashion. It projected a directional beam of the primary Ledbetter effect in the frequency band fatal in those of Mongolian blood and none other. It could be used by a layman after three minutes' instruction, since all that was required was to point it and press a trigger, but it was practically foolproof—the user literally could not harm a fly with it, much less a Caucasian man. But it was sudden death to Asiatics.

The problem of manufacturing and distributing quantities of weapons to be used in the deciding conflict had been difficult. The staffs used by the priests were out of the question; each was a precision instrument comparable to a fine Swiss watch. Scheer himself had laboriously fashioned by hand the most delicate parts of each staff, and, nevertheless, required the assistance of many other skilled metalsmiths and toolmakers to keep pace with the demand. It was all handwork; mass production was impossible until Americans once more controlled their own factories.

Furthermore, detailed instruction and arduous supervised practice were indispensable in order for a priest to become even moderately skillful in the use of the remarkable powers of his staff.

The basic weapon was the pragmatic answer. It was simple and rugged and contained no moving parts other than the activating switch, or trigger. Even so, it could not be manufactured in quantity at the Citadel, as there would have been no way to distribute the weapons to widely separated parts of the country without attracting unhealthy attention from the PanAsian authorities. Each priest carried to his own temple one sample of the basic weapon; it was then his responsibility to locate and enlist in his own community, workmen with the necessary skill in metalwork for producing the comparatively simple device.

In the secret places down underneath each temple, workmen had been busy for weeks at the task grinding, polishing, shaping, reproducing by hand row on row of the lethal little gadgets.

The supply staff officer gave Ardmore the information he had requested. "Very well," Ardmore acknowledged, "that's fewer weapons than we have members of our congregations, but it will have to do. There will be a lot of dead wood, anyway. This damned cult business has attracted every screwball and crackpot in the country—all the longhaired men and short-haired women. By the time we count them out we may have a few basic weapons left over. Which reminds me—if we do have any left over, there ought to be some women in every congregation who are young and strong and toughminded enough to be useful in a fight. We'll arm them. About the crackpots you'll find a note in the general indoctrination plan as to how each priest is to break the news to his flock that the whole thing is really a hoax for military purposes. I want to add to it. Nine people out of ten will be overjoyed to hear the truth and strongly cooperative. That tenth one may cause trouble, get hysterical, maybe try to do a bunk out of the temple. Caution each priest, for God's sake, to be careful; break the news to them in small numbers at a time, and be ready to turn the sleepy ray on anybody that looks like a source of trouble. Then lock 'em up until the fun is over—we haven't time to try to reorient the soft-minded.

"Now get on with it. The priests will need the rest of the day to indoctrinate their congregations and to get them organized into something resembling military lines. Thomas, I want the scout car assigned tonight to the job involving the Prince Royal to stop here first and pick me up. Have Wilkie and Scheer man it."

"Very well, sir. But I had planned to be in that car myself. Do you object to that slight change?"

"I do," Ardmore said dryly. "If you will look at Disorganization Plan IV you will see that it calls for the commanding officer to remain in the Citadel. Since I am already here, outside the Citadel, you will remain in my place."

"But, Chief—"

"We are not going to risk both of us, not at this stage of the game. Now pipe down."

"Yes, sir."

Ardmore was called back to the communicator later that morning. The face of the headquarters communication watch officer peered out of the screen at him. "Oh! Major Ardmore, Salt Lake City is trying to reach you with a priority routing."

"Put them on."

The face gave way to that of the priest at Salt Lake City.

"Chief," he began, "we've got a most extrordinary prisoner. I'm of the opinion you'd better question him yourself."

"I'm short of time. Why?"

"Well, he's a PanAsian, but claims he is a white man and that you will know him. The funny thing about it is that he got past our screen. I thought that was impossible."

"So it is. Let me see him."

It was Downer, as Ardmore had begun to suspect. Ardmore introduced him to the local priest and assured that official that his screens had not failed him. "Now, Captain, out with it."

"Sir, I decided to come in and report to you in detail because things are coming to a head."

"I know it. Give me all the details you can."

"I will, sir. I wonder if you have any idea how much damage you've done the enemy already?—their morale is cracking up like rotten ice in a thaw. They act all nervous, uncertain of themselves. What happened?"

Ardmore sketched out briefly the events of the past twenty-four hours, his own arrest, the arrest of the priests, the arrest of the entire cult of Mota, and the subsequent delivery. Downer nodded. "That explains it. I couldn't really tell what had happened; they never tell a common soldier anything—but I could see them going to pieces, and I thought you had better know."

"What happened?"

"Well—I guess I had better just tell you what I saw, and let you make your own inferences. The second battalion of the Dragon Regiment at Salt Lake City is under arrest. I heard a rumor that every officer in it had committed suicide. I suppose that is the outfit that let the local congregation escape, but I don't know."

"Probably. Go ahead."

"All I know is what I saw. They were marched in about the middle of the morning with their banners reversed and confined to their barracks, with a heavy guard around the buildings. But that's not all. It affects more than the one outfit under arrest. Chief, you know how an entire regiment will go to pieces if the colonel starts losing his grip?"

"I do. Is that the way they act?"

"Yes—at least the command stationed at Salt Lake City. I'm damned well certain that the big shot there is afraid of something he can't understand, and his fear has infected his troops, right down to the ordinary soldiers. Suicides, lots of 'em, even among the common soldiers. A man will get moody for about a day, then sit down facing toward the Pacific and rip out his guts.

"But here is the tip-off, the thing that proves that morale is bad all over the country. There has been a general order issued by the Prince Royal, in the name of the Heavenly Emperor, forbidding any more honorable suicides."

"What effect did that have?"

"Too soon to tell—it just came out today. But you don't appreciate what that means, Chief. You have to live among these people, as I have, to appreciate it. With the PanAsians, everything is face—everything. They care more for appearances than an American can possibly understand. To tell a man who has lost face that he can't balance the books and get square with his ancestors by committing suicide is to take the heart right out of him. It jeopardizes his most precious possession.

"You can count on it that the Prince Royal is scared, too, or he would never have resorted to any such measures. He must have lost an incredible number of his officers lately ever to have thought of such a thing."

"That is reassuring. Before this night is out, I think we will have damaged their morale at least as much more as we have already. So you think we've got them on the run?"

"I didn't say that, Major—don't ever think so. These damned yellow baboons"—he spoke quite earnestly, evidently forgetting his own exact physical resemblance to the Asiatics—"are just about four times as deadly and dangerous in their present frames of mine as they were when they were cock o' the walk. They are likely to run amuck with just a slight push and start slaughtering right and left—babies, women—indiscriminately!"

"H-m-m. Any recommendations?"

"Yes, Chief, I have. Hit 'em with everything you've got just as soon as possible, and before they start in on a general massacre. You've got 'em softened up now—sock it to 'em! before they have time to think about the general population. Otherwise you'll have a blood letting that will make the Collapse look like a tea party.

"That's the other reason I came in," he added. "I didn't want to find myself ordered out to butcher my own kind."

Downer's report left Ardmore plenty to worry about. He conceded that Downer was probably right in his judgment of the workings of the Oriental mind. The thing that Downer warned against—retaliation against the civilian population—always had been the key to the whole problem—that was why the religion of Mota had been founded; because they dare not strike directly for fear of systematic retaliation against the helpless. Now—if Downer was a judge—in attacking indirectly, Ardmore had rendered an hysterical retaliation almost as probable.

Should he call off Plan IV and attack today?

No—it simply was not practicable. The priests had to have a few hours at least in which to organize the men of their flocks into guerrilla warriors. That being the case, one might as well go ahead with Plan IV and soften up the war lords still further. Once it was under way, the PanAsians would be much too busy to plan massacres.

A small, neat scout car dropped from a great height and settled softly and noiselessly on the roof of the temple in the capital city of the Prince Royal. Ardmore stepped up to it as the wide door in its side opened and Wilkie climbed out. He saluted. "Howdy, Chief!"

"H'lo, Bob. Right on time, I see—just midnight. Think you were spotted?"

"I don't think so; at least, no one turned a spot on us. And we cruised high and fast; this gravitic control is great stuff." As they climbed in, Scheer gave his C.O. a brief nod accompanied by, "Evening, sir," with his hands still on the controls. As soon as the safety belts were buckled he shot the car vertically into the air.

"Orders, sir?"

"Roof of the palace—and be careful."

Without lights, at great speed, with no power source the enemy could detect, the little car plummeted to the roof designated. Wilkie started to open the door. Ardmore checked him. "Look around first."

An Asiatic cruiser, on routine patrol over the residance of the viceroyal, changed course and stabbed out with a searchlight. The radar-guided beam settled on the scout car.

"Can you hit him at this range?" inquired Ardmore, whispering unnecessarily.

"Easiest thing in the world, Chief." Cross hairs matched on the target; Wilkie depressed his thumb. Nothing seemed to happen, but the beam of the searchlight swept on past them.

"Are you sure you hit him?" Ardmore inquired doubtfully.

"Certain. That ship'll go ahead on automatic control till her fuel gives out. But it's a dead hand at the helm."

"O. K. , Scheer, you take Wilkie's place at the projector. Don't let fly unless you are spotted. If we aren't back in thirty minutes, return to the Citadel. Come on, Wilkie—now for a little hocus-pocus."

Scheer acknowledged the order, but it was evident from the way his powerful jaw muscles worked that he did not like it. Ardmore and

Wilkie, each attired in the full regalia of a priest, moved out across the roof in search of a way down. Ardmore kept his staff set and projecting in the wave band to which Mongolians were sensitive, but at a power-level anesthetic rather than lethal in its effect. The entire palace had been radiated with a cone of these frequencies before they had landed, using the much more powerful projector mounted in the scout car. Presumably every Asiatic in the building was unconscious—Ardmore was not taking unnecessary chances.

They found an access door to the roof, which saved them cutting a hole, and crept down a steep iron stairway intended only for janitors and repair men. Once inside, Ardmore had trouble orienting himself and feared that he would be forced to find a PanAsian, resuscitate him, and wring the location of the Prince's private chambers out of him by most ungentle methods. But luck favored them; he happened on the right floor and correctly inferred the portal of the Prince's apartment by the size and nature of the guard collapsed outside of it.

The door was not locked; the Prince depended on a military watch being kept rather than keys and bolts—he had never turned a key in his life. They found him lying in his bed, a book fallen from his limp fingers. A personal attendant lay crumpled in each of the four corners of the spacious room.

Wilkie eyed the Prince with interest. "So that's his nibs. What do we do now, Major?"

"You get on one side of the bed; I'll get on the other. I want him to be forced to divide his attention two ways. And stand up close so that he will have to look up at you. I'll talk all the business, but you throw in a remark or two every now and then to force him to split his attention."

"What sort of a remark?"

"Just priestly mumbo-jumbo. Impressive and no real meaning. Can you do it?"

"I think so—I used to sell magazine subscriptions."

"O. K. This guy is a tough nut really tough. I am going to try to get at him with the two basic congenital fears common to everybody; fear of constriction and fear of falling. I could handle it with my staff but it will be simpler if you do it with yours. Do you think you can follow my motions and catch what I want done?"

"Can you make it a little clearer than that?"

Ardmore explained in detail, then added, "All right let's get busy. Take your place." He turned on the four colored lights of his staff. Wilkie did likewise. Ardmore stepped across the room and switched out the lights of the room.

When the PanAsian Prince Royal, Grandson of the Heavenly One and ruler in his name of the Imperial Western Realm, came to his senses, he saw standing over him in the darkness two impressive figures. The taller was garbed in robes of shimmering, milky luminescence. His turban, too, glowed with a soft white fire—a halo.

The staff in his left hand streamed light from all four faces of its cubical capital—ruby, golden, emerald, and sapphire.

The second figure was like the first, save that his robes glowed ruddy like iron on an anvil. The face of each was partially illuminated by the rays from their wands.

The figure in shining white raised his right hand in a gesture not benign, but imperious. "We meet again, O unhappy Prince!"

The Prince had been trained truly and well; fear was not natural to him. He started to sit up, but an impalpable force shoved against his chest and thrust him back against the bed. He started to speak.

The air was sucked from his throat. "Be silent, child of iniquity! The Lord Mota speaks through me. You will listen in peace."

Wilkie judged it to be about time to divert the Asiatic's attention. He intoned, "Great is the Lord Mota!"

Ardmore continued, "Your hands are wet with the blood of innocence. There must be an end to it!"

"Just is the Lord Mota!"

"You have oppressed his people. You have left the land of your fathers, bringing with you fire and sword. You must return!"

"Patient is the Lord Mota!"

"But you have tried his patience," agreed Ardmore. "Now he is angry with you. I bring you warning; see that you heed it!"

"Merciful is the Lord Mota!"

"Go back to the place whence you came—go back at once, taking with you all your people—and return not again!" Ardmore thrust out a hand and closed it slowly. "Heed not this warning—the breath will be crushed from your body!" The pressure across the chest of the Oriental increased intolerably, his eyes bulged out, he gasped for air.

"Heed not this warning—you will be cast down from your high place!" The Prince felt himself suddenly become light; he was cast into the air, pressed hard against the high ceiling. Just as suddenly his support left him; he fell heavily back to the bed.

"So speaks my Lord Mota!"

"Wise is the man who heeds him!" Wilkie was running short of choruses.

Ardmore was ready to conclude. His eye swept around the room and noted something he had seen before—the Prince's ubiquitous chess table. It was set up by the head of the bed, as if the Prince amused himself with it on sleepless nights. Apparently the man set much store by the game. Ardmore added a postscript. "My Lord Mota is done—but heed the advice of an old man: men and women are not pieces in a game!" An invisible hand swept the costly, beautiful chessmen to the floor. In spite of his rough handling, the Prince had sufficient spirit left in him to glare.

"And now my Lord Shaam bids you sleep." The green light flared up to greater brilliance; the Prince went limp.

"Whew!" sighed Ardmore. "I'm glad that's over. Nice cooperation, Wilkie—I was never cut out to be an actor." He hoisted up one side of his robes and dug a package of cigarettes out of his pants pocket. "Better have one," he offered. "We've got a really dirty job ahead of us."

"Thanks," said Wilkie, accepting the offer. "Look, Chief—is it really necessary to kill everybody here? I don't relish it."

"Don't get chicken, son," admonished Ardmore with an edge in his voice. "This is war—and war is no joke. There is no such thing as humane war. This is a military fortress we are in; it is necessary to our plans that it be reduced completely. We couldn't do it from the air because the plan requires keeping the Prince alive."

"Why wouldn't it do just as well to leave them unconscious?"

"You argue too much. Part of the disorganization plan is to leave the Prince still alive and in command, but cut off from all his usual assistants. That will create a turmoil of inefficiency much greater than if we had simply killed him and let their command devolve to their number-two man. You know that. Get on with your job."

With the lethal ray from their staffs turned to maximum power, they swept the walls and floor and ceiling, carrying death to Asiatics for hundreds of feet—through rock and metal, plaster and wood. Wilkie did his job with white-lipped efficiency.

Five minutes later they were carving the stratosphere for home—the Citadel.

Eleven other scout cars were hurrying through the night. In Cincinnati, in Chicago, in Dallas, in major cities across the breadth of the continent they dove out of the darkness, silencing opposition where they found it, and landed little squads of intent and resolute men. In they went, past sleeping guards, and dragged out local senior officials of the PanAsians' provincial governors, military commanders, the men on horseback. They dumped each unconscious kidnapped Oriental on the roof of the local temple of Mota, there to be received and dragged down below by the arms of a robed and bearded priest.

Then to the next city to repeat it again, as long as the night lasted.

CHAPTER ELEVEN

Calhoun buttonholed Ardmore almost as soon as he was back in the Citadel. "Major Ardmore," he announced, clearing his throat, "I have waited up to discuss a matter of import with you."

This man, Ardmore thought, can pick the damnedest times for a conference. "Yes?"

"I believe you expect a rapid culmination of events?"

"Things are coming to a head, yes."

"I presume the issue will be decided very presently. I have not been able to get the details I want from your man Thomas—he is not very cooperative; I fail to see why you have thrust him up to the position of speaking for you in your absence—but that is beside the point," Calhoun conceded with a magnanimous gesture. "What I wanted to say is this: Have you given any thought to the form of government after we drive out the Asiatic invader?"

What the devil was the man getting at? "Not particularly—why should I? Of course, there will have to be a sort of provisional interim period, military government of sorts, while we locate all the old officials left alive and get them back on the job and arrange for a national election. But that ought not to be too hard—we'll have the local priests to work through."

Calhoun's eyebrows shot up. "Do you really mean to tell me, my dear man, that you are seriously contemplating returning to the outmoded inefficiencies of elections and all that sort of thing?"

Ardmore stared at him. "What else are you suggesting?"

"It seems obvious. We have here a unique opportunity to break with the stupidities of the past and substitute a truly scientific rule, headed by a man chosen for his intelligence and scientific training rather than for his skill in catering to the prejudices of the mob."

"Dictatorship, eh? And where would I find such a man?" Ardmore's voice was disarmingly, dangerously gentle.

Calhoun did not speak, but indicated by the slightest of smug self-deprecatory gestures that Ardmore would not have far to look to find the right man.

Ardmore chose not to notice Calhoun's implied willingness to serve. "Never mind," he said, and his voice was no longer gentle, but sharp. "Colonel Calhoun, I dislike to have to remind you of your duty—but understand this: you and I are military men. It is not the business of military men to monkey with politics. You and I hold our commissions by grace of a constitution, and our sole duty is to that constitution. If the people of the United States want to streamline their government, they will let us know!

"In the meantime, you have military duties, and so do I. Go ahead with yours."

Calhoun seemed about to burst into speech. Ardmore cut him short. "That is all. Carry out your orders, sir!"

Calhoun turned abruptly and left.

Ardmore called his Chief of Intelligence to him. "Thomas," he said, "I want a close, but discreet, check kept on Colonel Calhoun's movements."

"Yes, sir."

"The last of the scout cars are in, sir."

"Good. How does the tally stand now?" Ardmore asked.

"Just a moment, sir. It was running about six raids to a ship—with this last one that makes a total of . . . uh . . . nine and two makes eleven-seventy-one prisoners in sixty-eight raids. Some of them doubled up...

"Any casualties?"

"Only to the PanAsians—"

"Damn it, that's what I meant! No, I mean to our men, of course."

"None, Major. One man got a broken arm when he fell down a staircase in the dark."

"I guess we can stand that. We should get some reports on the local demonstrations—at least from the East coast cities—before long. Let me know."

"I will."

"Would you mind telling my orderly to step in as you leave? I want to send for some caffeine tablets, better have one yourself; this is going to be a big day."

"A good notion, Major." The communications aide went out.

In sixty-eight cities throughout the land, preparations were in progress for the demonstrations that constituted Phase 2 of Disorganization Plan IV. The priest of the temple in Oklahoma City had delegated part of his local task to two men, Patrick Minkowski, taxi driver, and John W. (Jack) Smyth, retail merchant. They were engaged in fitting leg irons to the ankles of the Voice of the Hand, PanAsian administrator of Oklahoma City. The limp, naked body of the Oriental lay on a long table in a workshop down under the temple.

"There," announced Minkowski, "that's the best job of riveting I can do without heating tools. It'll take him a while to get it off, anyway. Where's that stencil?"

"By your elbow. Captain Isaacs said he'd weld those joints with his staff after we finished; I wouldn't worry about them. Say, it seems odd to call the priest Captain Isaacs, doesn't it? Do you think we're really in the army—legally, I mean?"

"I wouldn't know about that—and as long as it gives me a chance to take a crack at those flatfaced apes, I don't care. I suppose we are, though—if you admit that Isaacs is an army officer, I guess he can take recruits. Look—do we put this stencil on his back or on his stomach?"

"I'd say to put it on both sides. It does seem funny, though, about this army business, I mean. One day you're going to church; the next you're told it's a military outfit, and they swear you in."

"Personally, I like it," commented Minkowski. "Sergeant Minkowski—it sounds good. They wouldn't take me before on account o' my heart. As for the church part, I never took any stock in this great God Mota business, anyhow; I came for the free food and the chance to breathe in peace." He removed the stencil from the back of the Asiatic; Smyth commenced filling in the traced design of an ideograph with quick-drying indelible paint. "I wonder what that heathen writing means?"

"Didn't you hear?" asked Smyth, and told him.

A delighted grin came over Minkowski's face. "Well, I'll be damned," he said. "If anybody called me that, it wouldn't do him no good to smile when he said it. You wouldn't kid me?"

"No, indeed. I was in the communications office when they were getting the design from the Mother Temple—I mean general headquarters. Here's another funny thing, too. I saw the chap in the screen who was passing out the design, and he was Asiatic as this monkey"—Smyth indicated the unconscious voice of the Hand—"but they called him Captain Downer and treated him like one of us. What do you make of that?"

"Couldn't say. He must be on our side, or else he wouldn't be loose in headquarters. What'll we do with the rest of the paint?"

Between them they found something to do with it, which Captain Isaacs noticed at once when he came in to see how they were progressing. He suppressed a smile. "I see you have elaborated on your instructions a bit," he commented, trying to keep his voice soberly official.

"It seemed a pity to waste the paint," Minkowski explained ingenuously. "Besides, he looked so naked the way he was."

"That's a matter of opinion. Personally, I would say that he looks nakeder now. We'll drop the point; hurry up and get his head shaved. I want to leave any time now."

Minkowski and Smyth waited at the door of the temple five minutes later, the Voice of the Hand rolled in a blanket on the floor between them. They saw a sleek duocycle station wagon come shooting up to the curb in front of the temple and brake to a sudden stop. Its bell sounded, and Captain Isaacs' face appeared in the window of the driver's compartment. Minkowski threw down the butt of a cigarette and grabbed the shoulders of the muffled figure at their feet; Smyth took the legs and they trotted clumsily and heavily out to the car.

"Dump him in the back," ordered Captain Isaacs.

That done, Minkowski took the wheel while Isaacs and Smyth crouched in the back with the subject of the pending demonstration.

"I want you to find a considerable gathering of PanAsians almost anywhere," directed the captain. "If there are Americans present, too, so much the better. Drive fast and pay no attention to anyone. I'll take care of any difficulties with my staff." He settled himself to watch the street over Minkowski's shoulder.

"Right, Captain! Say, this is a sweet little buggy," he added as the car shot forward. "How did you pick it up so fast?"

"I knocked out a few of our Oriental friends;" answered Isaacs briefly. "Watch that signal!"

"Got it!" The car dewed around and dodged under the nose of oncoming cross traffic. A PanAsian policeman was left futilely waving at them.

A few seconds later Minkowski demanded, "How about that spot up ahead, Captain?" and hooked his chin in the indicated direction. It was the square of the civic center.

"O. K. " He bent over the silent figure on the floor of the car, busy with his staff.

The Asiatic began to struggle. Smyth fell on him and pinned the blanket more firmly about the head and shoulders of their victim. "Pick your spot. When you stop, we'll be ready."

The car lurched to a stomach-twisting halt. Smyth slammed open the rear door; he and Isaacs grabbed corners of the blanket and rolled the now-conscious official into the street. "Take it away, pal."

The car jumped forward, leaving startled and scandalized Asiatics to deal with an utterly disgraceful situation as best they might. Twenty minutes later a brief but explicit account of their exploit was handed to Ardmore in his office at the Citadel. He glanced over it and passed it to Thomas. "Here's a crew with imagination, Jeff."

Thomas took the report and read it, then nodded agreement. "I hope they all do as well. Perhaps we should have given more detailed instructions."

"I don't think so. Detailed instructions are the death of initiative. This way we have them all striving to think up some particularly annoying way to get under the skins of our slant-eyed lords. I expect some very amusing and ingenious results."

By nine a.m., headquarters time, each one of the seventy-odd PanAsian major officials had been returned alive, but permanently, unbearably disgraced, to his racial brethren. In all cases, so far as the data at hand went, there had been no cause given to the Asiatics to associate their latest trouble directly with the cult of Mota. It was simply catastrophe, psychological catastrophe of the worst sort, which had struck in the night without warning and without trace.

"You have not set the time for Phase 3 as yet, Major," Thomas reminded Ardmore when all reports were in.

"I know it. I don't expect it to be more than two hours from now at the outside. We've got to give them a little time to appreciate what has happened to them. The force of demoralization will be many times as great when they have had time to compare notes around the country and realize that all of their top men have been publicly humiliated. That, combined with the fact that we crippled their continental headquarters almost to the limit, should produce as sweet a case of mass hysteria as one could wish: But we'll have to give it time to spread. Is Downer on deck?"

"He's standing by in the communications watch office."

"Tell them to cut in a relay circuit from him to my office. I want to listen to what he picks up here."

Thomas dialed with the interoffice communicator and spoke briefly. Very shortly Downer's pseudo-Asiatic countenance showed on the screen above Ardmore's desk. Ardmore spoke to him. Downer slipped an earphone off one ear and gave him an inquiring look.

"I said, 'Are you getting anything yet?'" repeated Ardmore.

"Some. They're in quite an uproar. What I've been able to translate is being canned." He flicked a thumb toward the microphone which hung in front of his face. A preoccupied, listening look came into his eyes, and he added, "San Francisco is trying to raise the palace—"

"Don't let me interrupt you," said Ardmore, and closed his own transmitter.

"—the Emperor's Hand there is reported dead. San Francisco wants some sort of authorization. Wait a minute; the comm office wants me to try another wavelength. There it comes—they're using the Prince Royal's signal, but it's in the provincial governor's frequency. I can't get what they're saying; it's either coded or in a dialect I don't know. Watch officer, try another wave band—I'm just wasting time on that one . . . . That's better." Downer's face became intent, then suddenly lit up. "Chief, get this: Somebody is saying that the Governor of the gulf province has lost his mind and asks permission to supersede him! Here's another—wants to know what's wrong with the palace circuits and how to reach the palace, wants to report an uprising—"

Ardmore cut back in. "Where?"

"Couldn't catch it. Every frequency is jammed with traffic, and about half of it is incoherent. They don't give each other time to clear —send right through another message."

There was a gentle knock at the outer door of Ardmore's office. It opened a few inches and Dr. Brooks' head appeared. "May I come in?"

"Oh—certainly, Doctor. Come in. We are listening to what Captain Downer can pick up from the radio."

"Too bad we haven't a dozen of him—translators, I mean."

"Yes, but there doesn't seem to be much to pick up but a general impression." They listened to what Downer could pick up for the better part of an hour, mostly disjointed or partial messages, but it was made increasingly evident that the sabotage of the palace organization, plus the terrific emotional impact of the disgrace of key administrators, had played hob with the normal, smooth functioning of the PanAsian government. Finally Downer said, "Here's a general order going out. Wait a minute—It orders a radio silence on all clear-speech messages; everything has to be coded."

Ardmore glanced at Thomas. "I guess that is about the right point, Jeff. Somebody with horse sense and poise is trying to whip them back into shape—probably our old pal, the Prince. Time to stymie him." He rang the communications office. "O.K., Steeves," he said to the face of the watch officer, "give them power!"

"Jam 'em?

"That's right. Warn all temples through Circuit A, and let them all do it at once."

"They are standing by now, sir. Execute?"

"Very well—execute!"

Wilkie had developed a simple little device whereby the tremendous power of the temple projectors could be rectified, if desired, to undifferentiated electromagnetic radiation in the radio frequencies—static. Now they cut loose like sunspots, electrical storms, and aurora, all hooked up together.

Downer was seen to snatch the headphones from his ears. "For the love o'—Why didn't somebody warn me?" He reapproached one receiver cautiously to an ear, and shook his head. "Dead. I'll bet we've burned out every receiver in the country."

"Maybe so," observed Ardmore to those in his office, "but we'll keep jamming them just the same. " At that moment, in all the United States, there remained no general communication system but the pararadio of the cult of Mota. The Asiatic rulers could not even fall back on wired telephony; the obsolete ground lines had long since been salvaged for their copper.

"How much longer, Chief?" asked Thomas.

"Not very long. We let 'em talk long enough for them to know something hellacious is happening all over the country. Now we've cut 'em off. That should produce a feeling of panic. I want to let that panic have time to ripen and spread to every PanAsian in the country. When

I figure they are ripe, we'll sock it to 'em!"

"How will you tell?"

"I can't. It will be on hunch, between ourselves. We'll let the little darlings run around in circles for a while, not over an hour, then give 'em the works."

Dr. Brooks nervously attempted to make conversation. "It certainly will be a relief to have this entire matter settled once and for always. It's been very trying at times—" His voice trailed off.

Ardmore turned on him. "Don't ever think we can settle things 'once and for always.'"

"But surely—if we defeat the PanAsians decisively—"

"That's where you are wrong about it." The nervous strain he was under showed in his brusque manner. "We got into this jam by thinking we could settle things once and for always. We met the Asiatic threat by the Nonintercourse Act and by big West Coast defenses—so they came at us over the north pole!

"We should have known better; there were plenty of lessons in history. The old French Republic tried to freeze events to one pattern with the Versailles Treaty. When that didn't work they built the Maginot Line and went to sleep behind it. What did it get them? Final blackout!

"Life is a dynamic process and can't be made static. '—and they all lived happily ever after' is fairytale stu—" He was interrupted by the jangling of a bell and the red flashing of the emergency transparency.

The face of the communications watch officer snapped into view on the reflectophone screen. "Major Ardmore!"

It was gone and replaced by the features of Frank Mitsui, contorted .with apprehension. "Major!" he burst out. "Colonel Calhoun—he's gone crazy!"

"Easy, man, easy! What's happened?"

"He gave me the slip—he's gone up the temple. He thinks he's the god Mota!"

CHAPTER TWELVE

Ardmore cut Frank off by switching to the communications watch officer. "Get me the control board in the great altar—move!"

He got it, but it was not the operator on watch that Ardmore saw. Instead it was Calhoun, bending over the console of controls. The operator was collapsed in his chair, head lolled to the right. Ardmore cut the connection at once and dived for the door.

Thomas and Brooks competed for second place, leaving the orderly a hopelessly outdistanced fourth. The three swept up the gravity chute to the temple level at maximum acceleration, and slammed out onto the temple floor. The altar lay before them, a hundred feet away.

"I assigned Frank to watch him," Thomas was trying to say when Calhoun stuck his head over the upper rail of the altar.

"Stand fast!"

They stood. Brooks whispered, "He's got the heavy projector trained on us. Careful, Major!"

"I know it," Ardmore acknowledged, letting the words slip out of one side of his mouth. He cleared his throat. "Colonel Calhoun!"

"I am the great Lord Mota. Careful how you speak to me!"

"Yes, certainly, Lord Mota. But tell thy servant something—isn't Colonel Calhoun one of your attributes?"

Calhoun considered this. "Sometimes," he finally answered, "sometimes I think that he is. Yes, he is."

"Then I wish to speak to Colonel Calhoun." Ardmore eased forward a few steps.

"Stand still!" Calhoun crouched rigid over the projector. "My lightnings are set for white men—take care!"

"Watch it, Chief," whispered Thomas, "he can blast the whole damn place with that thing."

"Don't I know it!" Ardmore answered voicelessly, and started to resume the verbal tightrope walk. But something had diverted Calhoun's attention. They saw him turn his head, then hastily swing the heavy projector around and depress its controls with both hands. He raised his head almost immediately, seemed to make some readjustment of the projector, and depressed the controls again. Almost simultaneously some heavy body struck him; he fell from sight behind the rail.

On the floor of the altar platform they found Calhoun struggling. But his arms were held, his legs pinioned by the limbs of a short stocky brown man—Frank Mitsui. Frank's eyes were lifeless china, his muscles rigid.

It took four men to force Calhoun into an improvised straitjacket and to carry him down to sick bay. "As I figure it," said Thomas, watching the work party remove their psychotic burden, "Dr. Calhoun had the projector set to kill white men. The first blast didn't harm Frank, and he had to stop to reset the controls. That saved us."

"Yes—but not Frank."

"Well—you know his story. That second blast must have hit him while he was actually in the air—full power. Did you feel his arms? Coagulated instantaneously—like a hard-boiled egg."

But they had no time to dwell on the end of little Mitsui's tragic life; more minutes had passed. Ardmore and company hurried back to his office, where he found Kendig, his Chief of Staff, calmly handling the traffic of dispatches. Ardmore demanded a quick verbal resume.

"One change, Major—they tried to A-bomb the temple in Nashville. A near miss, but it wrecked the city district south of it. Have you set the zero hour? Several dioceses have inquired."

"Not yet, but very soon. Unless you have some more data for me, I'll give them their final instructions right away on Circuit A."

"No, sir, you might as well go ahead."

When Circuit A was reported back as ready, Ardmore cleared his throat. He felt suddenly nervous. "Action in twenty minutes, gentlemen," he started in. "I want to review the main points of the plan.'

He ran over it; the twelve scout cars were assigned one each to the twelve largest cities, or, rather, what was almost the same list, the twelve heaviest concentrations of PanAsian military power. The attack of the scout cars would be the signal to attack on the ground in those areas.

The scout cars, with one exception, were poised even as he spoke, in the stratosphere over their objectives.

The heavy projectors mounted in the scout cars were to inflict as much quick damage as possible on military objectives on the ground, especially barracks and air fields. Priests, being nearly invulnerable, would supplement them on the ground, as would the projectors in the temples. The "troops" made up from the congregations would harry and hunt. "Tell them when in doubt to shoot, and shoot first. Don't wait to see the whites of their eyes. The basic weapons are good for thousands of activations without recharging, and they can't possibly hurt a white man with them. Shoot anything that moves!

"Also," he added, "tell them not to be alarmed at anything strange. If it looks impossible, one of our boys is responsible; we specialize in miracles!

"That's all—good hunting!"

His last precaution referred to a special task assignment for Wilkie, Graham, Scheer, and Downer. Wilkie had been working on some special effects, with Graham's artistic collaboration. The task in battle required a team of four, but was not a part of the regular plan. Wilkie himself did not know just how well it would work, but Ardmore had assigned a scout car to them and had given them their head in the matter.

His striker had been dressing him in his robes as he spoke. He settled his turban in place, checked his personal pararadio hook-up with the communications office, and turned to say good-by to Kendig and Thomas. He noticed a queer look in Thomas' eyes, and felt his neck turn red. "You want to go, don't you, Jeff?"

Thomas did not say anything. Ardmore added, "Sure—I'm a heel. I know that. But only one of us can go to this party, and it's going to be me!"

"You've got me wrong, Chief—I don't like killing."

"So? I don't know that I do, either. Just the same I'm going out and finish Frank Mitsui's bookkeeping for him." He shook hands with both of them.

Thomas gave the signal of execution before Ardmore reached the PanAsian capital city. His pilot set him down on the roof of the temple there after the fighting in the capital had commenced, then gunned his craft away to take up his own task assignment.

Ardmore looked around. It was quiet in the immediate neighborhood of the temple; the big projector in the temple would have seen to that. He had seen one PanAsian cruiser crash while they were landing, but the speedy little scout car assigned to that task he had not been able to notice. He went down inside the temple.

It seemed deserted. A man was standing near a duocycle car parked garagelike on the temple floor. He came up and announced, "Sergeant Bryan, sir. The priest—I mean Lieutenant Rogers—told me to wait for you."

"Very well, then—let's go." He climbed into the car. Bryan put his little fingers to his lips and whistled piercingly.

"Joel" he shouted. A man stuck his head over the top of the altar. "Going out, Joe." The head disappeared; the great doors of the temple opened. Bryan climbed in beside Ardmore and asked, "Where to?"

"Find me the heaviest fighting—or, rather, PanAsians, lots of them."

"It's the same thing." The car trundled down the wide temple steps, turned right and picked up speed.

The street ran into a little circular parkway set with bushes. There were four or five figures crouched behind those bushes, and one sprawled prone on the ground. As the car slowed, Ardmore heard the sharp ping! of a vortex rifle or pistol—he could not tell which—and one of the crouching figures jerked and fell.

"They're in that office building," yelled Bryan in his ear.

He set his staff to radiate a narrow, thin wedge and fanned the beam up and down the building. The pinging noise stopped. An Asiatic dashed out a door that he had not yet touched and fled up the street. Ardmore cut the beam and used another setting, aiming at the figure by means of a thin bright beam of light. The light touched the man; there was a dull, heavy boom and the man disappeared. In his place was a great oily cloud which swelled and dispersed.

"Jumping Judas! What was that?" Bryan demanded.

"Colloidal explosion. I released the surface tension of his body cells. We've been saving it for this day."

"But what made him explode?"

"The pressure in his cells. They can run as high as several hundred pounds. But let's go."

The next few blocks were deserted of all but bodies; however, Ardmore kept his projector turned on and swept the buildings they passed as systematically as the speed would allow. He took advantage of the lull to call headquarters. "Any reports yet, Jeff?"

"Nothing much yet, Chief. It's too soon."

They shot out into the open before Ardmore realized where Bryan was taking him. It was the State university campus on the edge of the city, now used as barracks by the imperial army. The athletic fields and golf course adjoining had been turned into an airport.

Here for the first time he realized clearly how pitifully few were the Americans whom he had armed to destroy the PanAsians. There appeared to be a skirmish line of sorts in position off to the right: he could see the toll they were taking of the Asiatics. But there were thousands of them, enough to engulf the Americans by sheer multitude. Damn it, why hadn't the scout car assigned reduced this place? Had it met with a mishap?

He decided that the crew of the scout car had been kept busy with aircraft, too busy to clean out the barracks. He thought now that he should have fought city by city, using all available scout cars as a unit, and trusting to the jamming of the radio to permit him to do it that way. Was it too late now to change? Yes—the gage was thrown, the battle was on all over the country. Now it must be fought.

He was already busy with his staff in an attempt to swing the issue. He cut into the lines of Asiatics with the primary effect set at full power, doing a satisfying amount of slaughter. Then he decided on a change in tactics—colloidal explosion. It was slower and clumsy, but the effect on morale should be advantageous.

He omitted the guide ray to make it more mysterious and sighted through a deep hole in the cube of the staff. There! One of the rats was smoke! He had them ranged now—two! Three! Four! Again and again—a dozen or more.

It was too much for the Orientals. They were brave and seasoned soldiers, but they could not fight what they did not understand. They broke and ran, back toward their barracks. Ardmore heard cheers from the scattered Americans, dominated by an authentic rebel yell. Figures rose up from cover and took out after the disorganized Asiatics.

Ardmore called headquarters again. "Circuit A1."

A few seconds' delay and he was answered, "You've got it."

"All officers, attention! Use the organic explosion as much as possible. It scares the hell out of 'em!" He repeated the message and released the circuit.

He directed Bryan to go closer to the buildings. Bryan bumped the car over a curb and complied, weaving in and out between trees. They were conscious of a terrific explosion; the car rose a few feet in the air and came lurching down on its side. Ardmore pulled himself together and attempted to get up. It was then that he realized that somehow he had held his staff clear.

The door above him was jammed. He burned his way clear with the staff and clambered out. He looked back in to Bryan. "Are you hurt?"

"Not much." Bryan shook himself. "Cracked my left collarbone, maybe."

"Here—grab my hand. Can you make it? I've got to hang on to my staff." Between them they got him out. "I'll have to leave you. Got your basic weapon?"

"Yes, sir."

"All right. Good luck." He glanced at the crater as he moved away. It was well, he thought, that he had had his shield turned on.

A few dozen Americans were moving cautiously among the buildings, shooting as they went. Twice Ardmore was fired on by men who had been told to shoot first. Good boys! Shoot anything that moves!

A PanAsian aircraft, flying low, cut slowly across the edge of the campus. It trailed a plume of heavy yellow fog. Gas! They were gassing their own troops in order to kill a handful of Americans. The bank of mist settled slowly toward the ground and rolled in his direction. He suddenly realized that this was serious, for him as well as for others. His shield was little protection against gas, for it was necessary to let air filter through it.

But he was attempting to get a line on the aircraft even as he decided that his own turn had come. The craft wavered and crashed before he could line up on it. So the scout car was on the job after all —good!

The gas came on. Could he run around the edge of it? No. Perhaps he could hold his breath and run through it, trusting to his shield for all other matters. Not likely.

Some unconscious recess of his brain gave him the answer—transmutation. A few seconds later, his staff set to radiate in a wide cone, he was blasting a hole in the deadly cloud. Back and forth he swept the cone, as if playing a stream of water with a hose, and the foggy particles changed to harmless, lifegiving oxygen.

"Jeff!"

"Yes, Chief?"

"Any trouble with gas?"

"Quite a bit. In—"

"Never mind. Broadcast this on Circuit A: Set staff to—" He went on to describe how to fight that most intangible weapon.

The scout car came screaming down out of heaven, hovered, and began cruising back and forth over the dormitory barracks. The campus became suddenly very silent. That was better; apparently the pilot had just had too much to do at one time. Ardmore felt suddenly alone, the fight had moved past him while he was dealing with the gas threat. He looked around for transportation to commandeer in order to scout around and check up on the fighting in the rest of the city. The trouble with this damn battle, he thought to himself, is that it hasn't any coherence; it's every place at once. No help for it; it was in the nature of the problem.

"Chief?" It was Thomas calling.

"Go ahead, Jeff."

"Wilkie is heading your way."

"Good. Has he had any luck?"

"Yes, but just wait till you see! I caught a glimpse of it in the screen, transmitted from Kansas City. That's all now."

"O.K." He looked around again for transportation. He wanted to be around some PanAsians, some live PanAsians, when Wilkie arrived. There was a monocycle standing at the curb, abandoned, about a block from the campus. He appropriated it.

There were PanAsians, he discovered, in plenty near the palace—and the battle was not going too well for the Americans. He added the effort of his staff and was very busy picking out individuals and exploding them when Wilkie arrived.

Enormous, incredible, a Gargantuan manlike figure of perfect black—more than a thousand feet high, it came striding across the buildings, its feet filling the streets. It was as if the Empire State Building had gone for a stroll—a giant, three-dimensional shadow of a priest of Mota, complete with robes and staff.

It had a voice.

It had a voice that rolled with thunder, audible and distinct for miles. "Americans, arise! The day is at hand! The Disciple has come! Rise up and smite your masters!"

Ardmore wondered how the men in the car, could stand the noise, wondered also if they were flying inside the projection, or somewhere above it.

The voice changed to the PanAsian tongue. Ardmore could not understand the words, but he knew the general line it would take. Downer was telling the war lords that vengeance was upon them, and that any who wished to save their yellow skins would be wise to flee at once. He was telling them that, but with a great deal more emphasis and attention to detail and with an acute knowledge of their psychological weaknesses.

The gross and horrifying pseudo-creature stopped in the park before the palace, and, leaning over, touched a massive finger to a fleeing Asiatic. The man disappeared. He straightened up and again addressed the world in PanAsian—but the square no longer contained PanAsians.

The fighting continued sporadically for hours, but it was no longer a battle; it was more in the nature of vermin extermination. Some of the Orientals surrendered; more died by their own hand; most died purposefully at the hands of their late serfs. A consolidated report from Thomas to Ardmore concerning the degree of progress in mopping up throughout the country was interrupted by the communications officer. "Urgent call from the priest in the capital city, sir."

"Put him on."

A second voice continued, "Major Ardmore?"

"Yes. Go ahead."

"We have captured the Prince Royal—"

"The hell you say!"

"Yes, sir. I request your permission to execute him."

"What was that, sir?"

"No! You heard me. I'll see him at your headquarters. Mind you don't let anything happen to him!"

Ardmore took time to shave off his beard and to change into uniform before he had the Prince Royal brought before him. When at last the PanAsian ruler stood before him he looked up and said without ceremony, "Any of your people I can save will be loaded up and shipped back where they came from."

"You are gracious."

"I suppose you know by now that you were tricked, hoaxed, by science that your culture can't match. You could have wiped us out any time, almost up to the last."

The Oriental remained impassive. Ardmore hoped fervently that the calm was superficial. He continued, "What I said about your people does not apply to you. I shall hold you as a common criminal."

The Prince's brows shot up. "For making war?"

"No—you might argue your way out of that. For the mass murder you ordered in the territory of the United States—your 'educational' lesson. You will be tried by a jury, like any other common criminal, and, I strongly suspect hanged by the neck until you are dead!

"That's all. Take him away."

"One moment, please."

"What is it?"

"You recall the chess problem you saw in my palace?"

"What of it?"

"Could you give me the four-move solution?"

"Oh, that." Ardmore laughed heartily. "You'll believe anything, won't you? I had no solution; I was simply bluffing."

It was clear for an instant that something at last had cracked the Prince's cold self-control.

He never came to trial. They found him the next morning, his head collapsed across the chessboard he had asked for.

BEYOND THIS HORIZON (revised version)

For Cal, Mickey and Both J's.

CHAPTER ONE

"All of them should have been very happy—"

THEIR problems were solved: the poor they no longer had with them; the sick, the lame, the halt, and the blind were historic memories; the ancient causes of war no longer obtained; they had more freedom than Man has ever enjoyed. All of them should have been happy—

Hamilton Felix let himself off at the thirteenth level of the Department of Finance, mounted a slideway to the left, and stepped off the strip at a door marked:

BUREAU OF ECONOMIC STATISTICS
Office of Analysis and Prediction
Director
PRIVATE

He punched the door with a code combination, and awaited face check. It came promptly; the door dilated, and a voice inside said, "Come in, Felix."

He stepped inside, glanced at his host and remarked, "You make ninety-eight."

"Ninety-eight what?"

"Ninety-eight sourpusses in the last twenty minutes. It's a game. I just made it up."

Monroe-Alpha Clifford looked baffled, an expression not uncommon in his dealings with his friend Felix. "But what is the point? Surely you counted the opposites, too?"

"Of course. Ninety-eight mugs who'd lost their last friends, seven who looked happy. But," he added, "to make it seven I had to count one dog."

Monroe-Alpha gave Hamilton a quick look in an effort to determine whether or not he was joking. But he could not be sure-he rarely could be sure. Hamilton's remarks often did not appear serious, frequently even seemed technically sense-free. Nor did they appear to follow the six principles of humor-Monroe-Alpha prided himself on his sense of humor, had been known to pontificate to his subordinates on the necessity of maintaining a sense of humor. But Hamilton's mind seemed to follow some weird illogic of its own, self consistent perhaps, but apparently unrelated to the existent world.

"But what is the purpose of your survey?" he asked.

"Does it need a purpose? I tell you, I just made it up."

"But your numbers are too few to be significant. You can't fair a curve with so little data. Besides, your conditions are uncontrolled.

Your results don't mean anything."

Hamilton rolled his eyes up. "Elder Brother, hear me," he said softly. "Living Spirit of Reason attend Thy servant. In Your greatest and most prosperous city I find vinegar phizzes to grins in a ratio of fourteen to one-and *he* says it's not significant!"

Monroe-Alpha looked annoyed. "Don't be irreverent, " he advised. "And the proper ratio is sixteen and a third to one; you should not have counted the dog."

"Oh, forget it!" his friend answered. "How goes the tail chasing?" He wandered around the room, picking things up and putting them down under Monroe-Alpha's watchful eye, and finally stopped in front of the huge integrating accumulator. "It's about time for your quarterly prediction, isn't it?"

"Not 'about time'—it *is* time. I had just completed the first inclusive run when you arrived. Want to see it?" He stepped to the machine, pressed a stud. A photostat popped out. Monroe Alpha undipped it and handed it to Hamilton without looking at it. He had no need to-the proper data had been fed into the computer; he knew with quiet certainty that the correct answer would come out. Tomorrow he would work the problem again, using a different procedure. If the two answers did not then agree within the limits of error of the machine, he would become interested in the figures themselves. But, of course, that would not happen. The figures would interest his superiors; the procedure alone was of interest to him.

Hamilton eyed the answer from a nonprofessional viewpoint. He appreciated, in part at least, the huge mass of detail which had gone into this simple answer. Up and down two continents human beings had gone about their lawful occasions-buying, selling, making, consuming, saving, spending, giving receiving. A group of men in Altoona, Pennsylvania, had issued unsecured aspirant stock to subsidize further research into a new method of recovering iron from low grade ores. The issue had been well received down in New Bolivar where there was a superabundance of credit because of the extreme success of the tropical garden cities along the Orinoco ("Buy a Slice of Paradise"). Perhaps that was the canny Dutch influence in the mixed culture of that region. It might have been the Latin influence which caused an unprecedented tourist travel away from the Orinoco during the same period-to Lake Louise, and Patagonia, and Sitka.

No matter. All of the complex of transactions appeared in the answer in Hamilton's hand. A child in Walla Walla broke its piggy bank (secretly, with one eye on the door), gathered up the slowly accumulated slugs and bought a perfectly delightful gadget, which not only *did* things, but made the appropriate noises as well. Some place down in the innards of the auto-clerk which handled the sale for the

Gadget Shoppe four holes were punched in a continuous roll of paper; the item appeared in the owner's cost accounting, and was reflected in the accounting of the endless chain of middle distributors, transporters, processors, original producers, service companies, doctors, lawyers, merchants, chiefs-world without end.

The child (a bad-tempered little blond brat, bound to prove a disappointment to his planners and developers) had a few slugs left over which he exchanged for a diet-negative confection ("Father Christmas' Psuedo-Sweets-Not a tummy ache in a tankful"); the sale was lumped with many others like it in the accounts of the Seattle Vending Machine Corporation.

The broken piggy bank and its concatenations appeared in the figures in Hamilton's hand, as a sliver of a fragment of a super-microscopic datum, invisible even in the fifth decimal place. Monroe-Alpha had not heard of this particular piggy bank when he set up the problem-nor would he, ever-but there are tens of thousands of piggy banks, a large but countable number of entrepreneurs, lucky, and unlucky, shrewd and stupid, millions of producers, millions of consumers, each with his draft book, each with printed symbols in his pouch, potent symbols-the stuff, the ready, the youknow-what, jack, kale, rocket juice, wampum, the shekels, the sugar, the dough.

All of these symbols, the kind that jingle and the kind that fold and, most certainly, the kind that are only abstractions from the signed promise of an honest man, all of these symbols, or more correctly, their reflected shadows, passed through the bottle neck formed by Monroe-Alpha's computer, and appeared there in terms of angular speeds, settings of three-dimensional cams, electronic flow, voltage biases, et complex cetera. The manifold constituted a dynamic abstracted structural picture of the economic flow of a hemisphere.

Hamilton examined the photostat. The reinvestment of accumulated capital called for an increase in the subsidy on retail transfers of consumption goods of three point one percent and an increase in monthly citizens' allowance of twelve credits-unless the Council of Policy decided on another means of distributing the social increment.

"'Day by day, in every way, I'm getting richer and richer, '" Hamilton said. "Say, Cliff, this money machine of yours is a wonderful little gadget. It's the goose that lays the golden egg."

"I understand your classical allusion, " Monroe-Alpha conceded, "but the accumulator is in no sense a production machine. It is merely an accounting machine, combined with an integrating predictor."

"I know that, " Hamilton answered absently. "Look, Cliff—what would happen if I took an ax and just beat the bejasus out of your little toy?"

"You would be examined for motive."

"Don't be obtuse. What about the economic system?"

"I suppose, " Monroe-Alpha told him, "that you want me to assume that no other machine was available for replacement. Any of the regional accumulators could—"

"Sure. Bust the hell out of all of them."

"Then we would have to use tedious methods of actuarial computation. A few weeks delay would result, with accumulated errors which would have to be smoothed out in the next prediction. No important result."

"Not that. What I want to know is this. If nobody computed the amount of new credit necessary to make the production-consumption cycle come out even-what would happen?"

"Your hypothetical question is too farfetched to be very meaningful," Monroe-Alpha stated, "but it would result in a series of panics and booms of the post-nineteenth century type. Carried to extreme, it could even result in warfare. But of course it would not be-the structural nature of finance is too deeply imbedded in our culture for pseudo-capitalism to return. Any child understands the fundamentals of production accounting before he leaves his primary development center."

"I didn't."

Monroe-Alpha smiled tolerantly. "I find that difficult to believe. You know the Law of Stable Money."

"'In a stable economy, debt-free new currency must be equated to the net reinvestment,'" Hamilton quoted.

"Correct enough. But that is Reiser's formulation. Reiser was sound enough, but he had a positive talent for stating simple things obscurely. There is a much simpler way to look at it. The processes of economic system are so multitudinous in detail and involve so many promises to be performed at later dates that it is a psychological impossibility for human beings to deal with the processes without the use of a symbol system. We call the system 'finance' and the symbols 'money. ' The symbolic structure should bear a one-to-one relationship to the physical structure of production and consumption. It's my business to keep track of the actual growth of the physical processes and recommend to the policy board changes in the symbol structure to match those in the physical structure."

"I'm damned if you've made it any simpler, " Hamilton complained. "Never mind-I didn't say I didn't understand it; I said I didn't understand it as a kid. But honestly-wouldn't it be simpler to set up a collective system and be done with it?"

Monroe-Alpha shook his head. "Finance structure is a general theory and applies equally to any type of state. A complete socialism would have as much need for structural appropriateness in its cost accounting as do free entrepreneurs. The degree of public ownership as compared with the degree of free enterprise is a cultural matter. For example, food is, of course, free, but—"

"Freeze it, pal. You've just reminded me of one of the two reasons I had for looking in on you. Busy for dinner tonight?"

"Not precisely. I've a tentative date with my orthowife for twenty-one hundred, but I'm free until then."

"Good. I've located a new pay-restaurant in Meridian Tower that will be a surprise to your gastro tract. Guaranteed to give you indigestion, or you have to fight the chef."

Monroe-Alpha looked dubious. He had had previous experience with Hamilton's gastronomic adventures. "Let's go to the refectory here. Why pay out hard cash for bad food when good food is included in your basic dividend?"

"Because one more balanced ration would unbalance me. Come on."

Monroe-Alpha shook his head. "I don't want to contend with the crowds. Honestly, I don't."

"You don't really like people, do you?"

"I don't dislike them-not individually."

"But you don't like 'em. Me, I like 'em. People are funnier than anybody. Bless their silly little hearts. They do the craziest things."

Monroe-Alpha looked morose. "I suppose you are the only sane one in the lot."

"Me? Shucks, no. I'm one long joke on myself. Remind me to tell you about it sometime. But look-the other thing I came to see you about. Notice my new sidearm?"

Monroe-Alpha glanced at Hamilton's holster. In fact, he had not noticed that his friend was bearing anything new in the way of weapons-had he arrived unarmed Monroe-Alpha would have noticed it, naturally, but he was not particularly observant about such matters, and could easily have spent two hours with a man and never noticed whether he was wearing a Stokes coagulator or a common needlebeam.

But, now that his attention was directed to the matter, he saw at once that Hamilton was armed with something novel...and deucedly odd and uncouth. "What is it?" he asked.

"Ah!" Hamilton drew the sidearm clear and handed it to his host. "Woops! Wait a moment. You don't know how to handle it-you'll blow your head off. " He pressed a stud on the side of the grip, and let a long flat container slide out into his palm. "There-I've pulled its teeth. Ever see anything like it?"

Monroe-Alpha examined the machine. "Why, yes, I believe so. It's a museum piece, isn't it? An explosive-type hand weapon?"

"Right and wrong. It's mill new, but it's a facsimile of one in the Smithsonian Institution collection. It's called a point fortyfive Colt automatic pistol."

"Point fortyfive what?"

"Inches."

"Inches...let me see, what is that in centimeters?"

"Huh? Let's see-three inches make a yard and a yard is about one meter. No, that can't be right. Never mind, it means the size of the slug it throws. Here...look at one." He slid one free of the clip. "Damn near as big as my thumb, isn't it?"

"Explodes on impact, I suppose."

"No. It just drills its way in."

"That doesn't sound very efficient."

"Brother, you'd be amazed. It'll blast a hole in a man big enough to throw a dog through."

Monroe-Alpha handed it back. "And in the meantime your opponent has ended your troubles with a beam that acts a thousand times as fast. Chemical processes are slow, Felix."

"Not that slow. The real loss of time is in the operator. Half the gunfighters running around loose chop into their target with the beam already hot. They haven't the skill to make a fast sight. You can stop 'em with this, if you've a fast wrist. I'll show you. Got something around here we can shoot at?"

"Mmm...this is hardly the place for target practice."

"Relax. I want something I can knock out of the way with the slug, while you try to burn it. How about this?" Hamilton picked up a large ornamental plastic paperweight from Monroe-Alpha's desk.

"Well...I guess so."

"Fine." Hamilton took it, removed a vase of flowers from a stand on the far side of the room, and set the target in its place. "We'll face it, standing about the same distance away. I'll watch for you to start to draw, as if we really meant action. Then I'll try to knock it off the stand before you can burn it."

Monroe-Alpha took his place with lively interest. He fancied himself as a gunman, although he realized that his friend was faster. This might be, he thought, the split second advantage he needed. "I'm ready."

"Okay."

Monroe-Alpha started his draw.

There followed a single CRACK! so violent that it could be felt through the skin and in the nostrils, as well as heard. Piled on top of it came the burbling Sring-aw-ow! as the bullet ricocheted around the room, and then a ringing silence.

"Hell and breakfast, " remarked Hamilton. "Sorry, Cliff-I never fired it indoors before." He stepped forward to where the target had been. "Let's see how we made out. "

The plastic was all over the room. It was difficult to find a shard large enough to show the outer polish. "It's going to be hard to tell whether you burned it, or not."

"I didn't."

"Huh?"

"That noise-it startled me. I never fired."

"Really? Say, that's great. I see I hadn't half realized the advantages of this gadget. It's a psychological weapon, Cliff."

"It's noisy."

"It's more than that. It's a terror weapon. You wouldn't even have to hit with your first shot. Your man would be so startled you'd have time to get him with the second shot. And that isn't all. Think...the braves around town are used to putting a man to sleep with a bolt that doesn't even muss his hair. This thing's bloody. You saw what happened to that piece of vitrolith. Think what a man's face will look like after it stops one of those slugs. Why a necrocosmetician would have to use a stereosculp to produce a reasonable facsimile for his friends to admire. Who wants to stand up to that kind of fire?"

"Maybe you're right. I still say it's noisy. Let's go to dinner."

"Good idea. Say-you've got a new nail tint. I like it."

Monroe-Alpha spread his fingers. "It is smart, isn't it? Mauve Iridescent it's called. Care to try some?"

"No, thank you. I'm too dark for it, I'm afraid. But it goes well with your skin."

They ate in the pay-restaurant Hamilton had discovered. Monroe-Alpha automatically asked for a private room when they entered; Hamilton, at the same moment, demanded a table in the ring. They compromised on a balcony booth, semi-private, from which Hamilton could amuse himself by staring down at the crowd in the ring.

Hamilton had ordered the meal earlier in the day, which was the point which had caused his friend to consent to venture out. It was served promptly. "What is it?" Monroe-Alpha demanded suspiciously.

"Bouillabaisse. It's halfway between a soup and a stew. More than a dozen kinds of fish, white wine, and the Great Egg alone knows how many sorts of herbs and spices. All natural foods."

"It must be terribly expensive."

"It's a creative art and it's a pleasure to pay for it. Don't worry about it. You know I can't help making money." "Yes, I know. I never could understand why you take so much interest in games. Of course, it pays well."

"You don't understand me. I'm not interested in games. Have you ever seen me waste a slug or a credit on one of my own gadgets-or any other? I haven't played a game since I was a boy. For me, it is already well established that one horse can run faster than mother, that the ball falls either on red or on black, and that three of a kind beats two pair. It's that I can't see the silly toys that people play with without thinking of one a little more complicated and mysterious. If I am bored with nothing better to do, I may sketch one and dispatch it to my agent. Presently in comes some more money." He shrugged.

"What are you interested in?" "People. Eat your soup."

Monroe-Alpha tasted the mess cautiously, looked surprised, and really went to work on it. Hamilton looked pleased, and undertook to catch up. "Felix—"

"Yes, Cliff."

"Why did you group me in the ninety-eight?"

"The ninety-eight? Oh, you mean the sourpuss survey. Shucks, pal, you rated it. If you are gay and merry-merry be-behind that death mask, you conceal it well."

"I've nothing to be unhappy about." "No, not to my knowledge. But you don't look happy." They ate in silence for a few minutes more. Monroe-Alpha spoke again. 'It's true, you know. I'm not."

"Not what?"

"Not happy."

"So? Mmmm...why not?"

"I don't know. If I did I could do something about it. My family psychiatrist doesn't seem to be able to find the reason."

"You're on the wrong frequency. A psychiatrist is the last man to see about a thing like that. They know everything about a man, except what he is and what makes him tick. Besides, did you ever see a worry-doctor that was sane himself? There aren't two in the country who can count their own fingers and get the same answer twice running."

"It's true that he hasn't been able to help me much."

"Of course not. Why? Because he will start with the assumption that there is something wrong with you. He can't find it, so he's stuck. It doesn't occur to him that there might be nothing wrong with you and that might be what was wrong."

The other man looked weary. "I don't understand you. But he does claim to be following a clue."

"What sort?"

"Well...I'm a deviant, you know."

"Yes, I know, " Hamilton answered shortly. He was reasonably familiar with his friend's genetic background, but disliked to hear him mention it. Some contrary strain in Hamilton rebelled against the idea that a man was necessarily and irrevocably the gene pattern handed to him by his genetic planners. Furthermore he was not convinced that Monroe-Alpha should be considered a deviant.

"Deviant" is a question-begging term. When the human zygote resulting from the combination of two carefully selected gametes is different from what the geneticists had predicted but not so different as to be classified with certainty as a mutation that zygote is termed a deviant. It is not, as is generally believed, a specific term for a recognized phenomenon, but a catch-all to cover a lack of complete knowledge.

Monroe-Alpha (this particular Monroe-Alpha-Clifford, 32-847-106 B62) had been an attempt to converge two lines of the original Monroe-Alpha to recapture and reinforce the mathematical genius of his famous ancestor. But mathematical genius is not one gene, nor does it appear to be anything as simple as a particular group of genes. Rather, it is thought to be a complex of genes arranged in a particular order.

Unfortunately this gene complex appears to be close-linked in the Monroe-Alpha line to a neurotic contrasurvival characteristic, exact nature undetermined and not assigned to any set of genes. That it is not necessarily so linked appears to be established, and the genetic technicians who had selected the particular gametes which were to produce Monroe-Alpha Clifford believed that they had eliminated the undesired strain.

Monroe-Alpha Clifford did not think so.

Hamilton fixed him with a finger. "The trouble with you, my fine foolish friend, is that you are bothering your head with things you don't understand. Your planners told you that they had done their level best to eliminate from you the thing which caused your great grandfather Whiffenpoof to raise garter snakes in his hat. There is a long chance that they failed, but why assume that they did?"

"My great grandfathers did nothing of the sort. A slight strain of anhedonism, a tendency to—"

"Then why act like they had to be walked on a leash? You make me tired. You've got a cleaner pedigree than ninetynine out of a hundred, and a chromosome chart that's as neat and orderly as a checker board. Yet you're yiping about it. How would you like to be a control natural? How would you like to have to wear lenses against your eyeballs? How would you like to be subject to a dozen filthy diseases? Or have your teeth fall out, and have to chew your meals with false choppers?"

"Of course, nobody would want to be a control natural, " Monroe-Alpha said reflectively, 'but the ones I've known seemed to be happy enough."

"All the more reason for you to snap out of your funk. What do you know of pain and sickness? You can't appreciate it any more than a fish appreciates water. You have three times the income you can spend, a respected position, and work of your own choosing. What more do you want out of life?"

"I don't know, Felix. I don't know, but I know I'm not getting it. Don't ride me about it."

"Sorry. Eat your dinner."

The fish stew contained several large crab legs; Hamilton ladled one into his guest's trencher. Monroe-Alpha stared at it uneasily. "Don't be so suspicious, " Hamilton advised. "Go ahead. Eat it."

"How?"

"Pick it up in your fingers, and crack the shell." Monroe-Alpha attempted to comply, somewhat clumsily, but the greasy, hard surface skidded between his fingers. He attempted to recover and knocked it over the edge of the balcony rail at his elbow.

He started to rise; Hamilton put a hand on his forearm. "My fault, " he said. "I will repair it." He stood up and looked down at the table directly beneath their booth.

He did not see the stray bit of seafood at once, but he had no difficulty in telling approximately where it had landed. Seated at the table was a party of eight. Two of them were elderly men who wore the brassards-of-peace. Four women alternated with the males around the table. One of them, quite young and pretty, was dabbing at something which seemed to have stained her gown. The wayward crab leg was floating in a crystal bell of purple liquid directly in front of her; cause and effect were easy to infer.

The two remaining men were both armed, both standing, and staring up at the balcony. The younger, a slender youth in bright scarlet promenade dress, resting his right hand on the grip of his sidearm, seemed about to speak. The older man turned coldly dangerous eyes from Hamilton to his youthful companion. "My privilege, Cyril, " he said quietly, "if you please."

The young brave was clearly annoyed and reluctant to comply; nevertheless he bowed stiffly and sat down. His elder returned the bow punctiliously and turned back to Hamilton. The lace of his cuff brushed his holster, but he had not touched his weapon-as yet.

Hamilton leaned over the balcony, both his hands spread and plainly visible on the rail. "Sir, my clumsiness has disturbed the pleasure of your meal and invaded your privacy. I am deeply sorry."

"I have your assurance that it was accidental, sir?" The man's eyes were still frosty, but he made no move to draw. But he did not sit down.

"You have indeed, sir, and with it my humble apology. Will you graciously permit me to make reparation?"

The other glanced down, not at the youth, but at the girl whose gown had been splashed. She shrugged. He answered Hamilton, "The thought is taken for the deed, sir."

"Sir, you leave me indebted."

"Not at all, sir."

They were exchanging bows and were about to resume their seats, when a shouted remark from the balcony booth directly opposite interrupted them. "Where's your brassard?"

They both looked toward the source of the disturbance; one of a party of men-armed citizens all apparently, for no brassards were to be seen-was leaning out of the booth and staring with deliberate rudeness. Hamilton spoke to the man at the table below. "My privilege, is it not, sir?"

"Your privilege. I wish you well." He sat down and turned his attention back to his guests.

"You spoke to me?" asked Hamilton of the man across the ring.

"I did. You were let off lightly. You should eat at home—if you have a home. Not in the presence of gentlefolk."

Monroe-Alpha touched Hamilton's arm. "He's drunk, " he whispered. "Take it easy."

"I know, " his friend answered in a barely audible aside, "but he gives me no choice."

"Perhaps his friends will take care of him."

"We'll see."

Indeed his friends were attempting to. One of them placed a restraining hand on his weapon arm, but he shook him off. He was playing to a gallery-the entire restaurant was quiet now, the diners ostentatiously paying no attention, a pose contrary to fact. "Answer me!" he demanded.

"I will, " Hamilton stated quietly. "You have been drinking and are not responsible. Your friends should disarm you and place a brassard on you. Else some short-tempered gentleman may fail to note that your manners were poured from a bottle."

There was a stir and a whispered consultation in the party behind the other man, as if some agreed with Hamilton's estimate of the situation. One of them spoke urgently to the belligerent one, but he ignored it.

"What's that about my manners, you misplanned mistake?"

"Your manners, " Hamilton stated, "are as thick as your tongue. You are a disgrace to the gun you wear."

The other man drew too fast, but he drew high, apparently with the intention of chopping down.

The terrific explosion of the Colt fortyfive brought every armed man in the place to his feet, sidearm clear, eyes wary, ready for action. But the action was all over. A woman laughed, shortly and shrilly. The sound broke the tension for everyone. Men relaxed, weapons went back to belts, seats were resumed with apologetic shrugs. The diners went back to their own affairs with the careful indifference to other people's business of the urbane sophisticate.

Hamilton's antagonist was half supported by the arms of his friends. He seemed utterly surprised and completely sobered. There was a hole in his chemise near his right shoulder from which a wet dark stain was spreading. One of the men holding him up waved to Hamilton with his free arm, palm out. Hamilton acknowledged the capitulation with the same gesture. Someone drew the curtains of the booth opposite.

Hamilton sank back into the cushions with a relieved sigh. "We lose more crabs that way, " he observed. "Have some more, Cliff?"

"Thanks, no, " Monroe-Alpha answered. "I'll stick to spoon foods. I hate interruptions at meals. He might have cooled you."

"And left you to pay the check. Such slug pinching ill becomes you, Cliff."

Monroe-Alpha looked annoyed. "You know it's not that. I have few enough friends not to wish to lose them in casual brawls. You should have taken a private room, as I requested." He touched a stud under the railing; the curtains waved across the arch, shutting them off from the public room.

Hamilton laughed. "A little excitement peps up the appetite."

In the booth opposite the man who had waved capitulation spoke savagely to the one who had been wounded. "You fool! You clumsy fool! You muffed it."

"I couldn't help it," the injured man protested. "After he waived privilege, there was nothing to do but play drunk and pretend I meant the other one." He dabbed futilely at his freely bleeding shoulder, "In the Name of the Egg, what did he burn me with?"

"No matter."

"Maybe not to you, but it is to me. I'll look him up."

"You will not. One mistake is too many."

"But I thought he was one of us. I thought it was part of the set-up."

"Hummph! Had it been, you would have been told."

After Monroe-Alpha left to keep his date, Hamilton found himself at loose ends. The night life of the capital offered plenty of opportunity for a man to divest himself of surplus credit, but it was not new to him. He tried, in a desultory fashion, to find professional entertainment, then gave up and let the city itself amuse him. The corridors were thronged as always, the lifts packed; the Great Square under the port surged with people. Where were they all going? What was the hurry? What did they expect to find when they got there?

The presence of some types held obvious explanations. The occasional man with a brassard was almost certainly out at this hour because his business required him to be. The same rule applied without exception to the few armed men who also wore brassards-proclaiming thereby their unique status as police monitors, armed but immune to attack.

But the others, the armed and richly costumed men and their almost as gaudy women-why did they stir about so? Why not remain quietly at home with their wenches? He realized, consciously and sardonically, that he himself was part of the throng, present because it amused him. He knew he had no reason to feel that his own sense of detached amusement was unique. Perhaps they all came to keep from being bored with themselves, to observe their mutual folly and to laugh.

He found himself, later, the last customer in a small bar. The collection of empty cups at his elbow was impressive. "Herbert, " he said at last, to the owner back of the bar, "why do you run this joint?"

Herbert paused in his tidying up. "To make money."

"That's a good answer, Herbert. Money and children—what other objectives are there? I've too much of one and none of the other. Set 'em up, Herbert. Let's drink to your kids."

Herbert set out two cups, but shook his head. "Make it something else. I've no kids."

"Sorry-none of my business. We'll drink to the kids I haven't got instead." Herbert poured the drinks, from separate bottles.

"What's that private stock of yours, Herbert? Let me try it."

"You wouldn't like it."

"Why not?"

"Well, to tell the truth, it's flavored water."

"You'd drink a toast in that? Why, Herbert!"

"You don't understand. My kidneys..."

Hamilton looked at him in sharp surprise. His host looked pleased. "You wouldn't guess, would you? Yes, I'm a natural. But it's my own hair I'm wearing. And my own teeth...mostly. Keep myself fit. Good a man as the next." He dumped the liquid from his own cup, and refilled it from the bottle he had used for Hamilton's drink. "Shucks! One won't hurt me." He raised his drink. "Long life!"

"And children, " Hamilton added mechanically.

They tossed them down. Herbert filled them up again. "Take children, " he began. "Any man wants to see his kids do better than he did. Now I've been married for twenty-five years to the same woman. My wife and I are both First Truthers and we don't hold with these modern arrangements. But children...we settled that a long time ago.

'Martha, ' I said to her, 'it don't matter what the brethren think. What's right is right. Our kids are going to have every advantage that other kids have. ' And after a while she came around to my way of thinking. So we went to the Eugenics Board—"

Hamilton tried to think of a way to stop his confidences.

"I must say that they were very kind and polite. First they told us to think it over. 'If you practice gene selection, ' they said, 'your children won't receive the control benefit. ' As if we didn't know that: Money wasn't the object. We wanted our kids to grow up fine and strong and smarter than we were. So we insisted and they made a chromosome chart on each of us.

"It was two, three weeks before they called us back. 'Well, Doc, ' I said, soon as we were inside, "what's the answer? What had we better select for?' 'Are you sure you want to do this?' he says. 'You're both good sound types and the state needs controls like you. I'm willing to recommend an increase in benefit, if you'll drop it. ' 'No, ' I said, 'I know my rights. Any citizen, even a control natural, can practice gene selection if he wants to. ' Then he let me have it, full charge."

"Well?"

"There wasn't anything to select for in either of us."

"Huh?"

"'S truth. Little things, maybe. We could have arranged to leave out my wife's hay fever, but that was about all. But as for planning a child that could compete on even terms with the general run of planned children, it just wasn't in the cards. The material wasn't there. They had made up an ideal chart of the best that could be combined from my genes and my wife's and it still wasn't good enough. It showed a maximum of a little over four percent over me and my wife in the general rating scale. 'Furthermore, ' he told us, 'you couldn't plan on that score. We might search your germ plasm throughout your entire fertile period and never come across two gametes that could be combined in this combination. ' 'How about mutations?' I asked him. He just shrugged it off. 'In the first place, ' he said, 'it's damned hard to pick out a mutation in the gene pattern of a gamete itself. You generally have to wait for the new characteristic to show up in the adult zygote, then try to locate the variation in the gene pattern. And you need at least thirty mutations, all at once, to get the child you want. It's not mathematically possible. '"

"So you gave up the idea of planned children?"

"So we gave up the idea of children period. Martha offered to be hostmother to any child I could get, but I said 'No, if it ain't for us, it ain't for us. '"

"Hmmm. I suppose so. Look-if you and your wife are both naturals, why do you bother to run this place? The citizen's allowances plus two control benefits add up to quite a tidy income. You don't look like a man with extravagant tastes."

"I'm not. To tell you the truth we tried it, after our disappointment. But it didn't work out. We got uneasy and fretful. Martha comes to me and says 'Herbert, please yourself, but I'm going to start my hairdressing studio again.' And I agreed with her. So here we are."

"Yes, so we are, " Hamilton concurred. "It's a queer world. Let's have another drink."

Herbert polished the bar before replying. "Mister, I wouldn't feel right about selling you another unless you checked that gun with me and let me loan you a brassard."

"So? Well, in that case I guess I've had enough. Good night."

"G'night."

CHAPTER TWO

"Rich Man, Poor Man, Beggar Man, Thief—"

HIS TELEPHONE started to yammer as soon as he was home. "Nuts to you," said Hamilton. "I'm going to get some sleep." The first three words were the code cut-off to which he had set the instrument; it stopped mournfully in the middle of its demand.

Hamilton swallowed eight hundred units of thiamin as a precautionary measure, set his bed for an ample five hours of sleep, threw his clothes in the general direction of the service valet, and settled down on the sheet. The water rose gently under the skin of the mattress until he floated, dry and warm and snug. The lullaby softened as his breathing became regular. When his respiration and heart action gave positive proof of deep sleep, the music faded out unobtrusively, shut off without so much as a click.

"It's like this," Monroe-Alpha was telling him,"we're faced with a surplusage of genes. Next quarter every citizen gets ninety-six chromosomes—"

"But I don't like it," Hamilton protested. Monroe-Alpha grinned gleefully.

"You have to like it," he proclaimed. "Figures don't lie. Everything comes out even. I'll show you." He stepped to his master accumulator and started it. The music swelled up, got louder. "See?" he said. "That proves it." The music got louder.

And louder.

Hamilton became aware that the water had drained out of his bed, and that he lay with nothing between him and the spongy bottom but the sheet and the waterproof skin. He reached up and toned down the reveille whereupon the insistent voice of his telephone cut through to him. "Better look at me, Boss. I got troubles. Better look at me Boss. I got troubles. Better look at me, Boss. I got troubles—"

"So have I. Thirty minutes!" The instrument shut off obediently. He punched for breakfast and stepped into the shower, eyed the dial, and decided against the luxury of a long workout. Besides, he wanted breakfast. Four minutes would do.

Warm soapy emulsion sprayed over his body, was scrubbed in by air blast, was replaced at the end of the first minute by water of the same temperature in needle jets. The temperature dropped, the needle jets persisted for a few seconds, then changed to a gentle full stream which left him cool and tingling. The combination was his own; he did not care what the physiotherapists thought of it.

The air blast dried him with a full minute to spare for massage. He rolled and stretched against the insistent yielding pressure of a thousand mechanical fingers and decided that it was worthwhile to get up, after all. The pseudo-dactyls retreated from him. He pushed his face for a moment into the capillotomer. Shave completed, the booth sprayed him with scent and dusted him off. He was beginning to feel himself again.

He tucked away a quarter litre of sweet-lemon juice and went to work seriously on the coffee before turning on the news roundup.

The news contained nothing fit to be recorded permanently. No news, he thought, makes a happy country but a dull breakfast. The machine called out the plugs for a dozen stories while the accompanying flash pictures zipped past without Hamilton's disturbing the setting When he did so, it was not because the story was important but because it concerned him. The announcer proclaimed "Diana's Playground Opened to the Public!"; the flash panned from a crescent moon down to the brutal mountain surface and below to a gaily lighted artificial dream of paradise. Hamilton slapped the tell-me-more.

"Leyburg, Luna. Diana's Playground, long touted by its promoters as the greatest amusement enterprise ever undertaken off earth or on, was invaded fry the first shipload of tourists at exactly twelve thirty-two, Earth Prime, These old eyes have seen many a pleasure city, but I was surprised! Biographers relate that Ley himself was fond of the gay spots-I'm going to keep one eye on his tomb while I'm here; he might show up—" Hamilton gave half an ear to the discourse, half an eye to the accompanying stories, most of his attention to half a kilo of steak, rare.

"—bewilderingly beautiful, weirdly sensuous low-gravity dancing.

"The gaming rooms are thronged; the management may have to open annexes. Particularly popular are the machines offered by Lady Luck, Incorporated-Hamilton's Hazards they are called by the trade. In fact—" The picture that went with the spiel did not show a throng in Hamilton's estimation; he could almost feel the trouble the pick-up man had gone to in order to shoot favorable angles.

"—round trip excursion tickets which entitle the holder to visit every place of amusement in the Playground, with three days hotel accommodations, strictly high-gravity, every room centrifuged."

He switched it off: and turned to the telephone. "Connection-one one one zero."

"Special service," a husky contralto answered him presently.

"Gimme the Moon, please."

"Certainly. To whom do you wish to speak, Mr.-- uh, Hamilton?"

"Hamilton is correct. I would like to talk to Blumenthal Peter. Try the manager's office at Diana's Playground."

There was a delay of several seconds before an image appeared on the screen. "Blumenthal speaking. That you, Felix? The image at this end is lousy. Ail streaked up with incidentals."

"Yeah, it's me. I called to ask about the play, Pete...what's the matter? Can't you hear me?"

The face of the image remained quiet for a long three seconds, then said suddenly, "Of course I can hear you. Don't forget the lag."

Hamilton looked sheepish. He had forgotten the lag-he always did. He found it difficult to remember, when staring right into a man's live features, that there would be a second and a half delay before that man-if on the Moon-could hear, another second and a half for his voice to travel back, three seconds lag in all. Three seconds lag seems inconsiderable but it is long enough to stride six paces, or fall forty-one metres.

He was glad there was no phone service to the minor planets; it would be maddening to wait ten minutes or so between sentences-easier to stat a letter. "Sorry," he said. "My mistake. How was the play? The crowds didn't look so good."

"Naturally the crowd was light. One shipload isn't Noah's Ark. But the play was okay. They had plenty of scrip and were anxious to spend. We reported to your agent."

"Sure. I'll get the report, but I wanted to know what gadgets were popular."

"Lost Comet went strong. And so did Eclipses."

"How about Claiming Race and Who's Your Baby?"

"Okay, but not too heavy. Astronomy is the angle for this dive. I told you that."

"Yes, I should have listened to you. Well, I'll figure out a revamp. You could change Claiming Race right now. Call it High Trajectory and rename the mobiles after some of the asteroids. Get it?"

"Right. We'll redecorate it in midnight blue and silver."

"That's right. I'll send a stat to confirm. That's all, I guess. I'm clearing."

"Wait a minute. I took a whirl at Lost Comet myself, Felix. That's a great game."

"How much did you drop?"

Blumenthal looked suspicious. "Why about eight hundred and fifty, if you must know. Why do you assume I lost? Isn't the game level?"

"Certainly it's level. But I designed that game myself, Pete. Don't forget that. It's strictly for suckers. You stay away from it."

"But look-I've figured out a way to beat it. I thought you ought to know."

"That's what you think. I know. There is no way to beat the game."

"Well-okay."

"Okay. Long life!"

"And kids."

As soon as the circuit was clear the phone resumed its ubiquitous demand. "Thirty minutes. Better look at me, Boss. I got troubles. Better —"

He removed a stat from the receiver; it shut up. "To Citizen Hamilton Felix 305-243 B47," it read, "Greetings. The District Moderator for Genetics presents his compliments and requests that Citizen Hamilton visit him at his office at ten hundred tomorrow." It was dated the previous evening and had an added notation requesting him to notify the moderator's office if it were not convenient to keep the appointment, refer to number such-and-so.

It lacked thirty minutes of ten hundred. He decided to comply with the request.

The Moderator's suite struck Hamilton as being rather less mechanized than most places of business, or perhaps more subtly so. It was staffed with humans where one expects auto-gadgets-the receptionist, for example. The staff was mostly female, some grave, some merry, but all were beautiful, very much alive, and obviously intelligent.

"The Moderator will see you now."

Hamilton stood up, chucked his cigaret into the nearest oubliette, and looked at her. "Do I disarm?"

"Not unless you wish. Come with me, please."

She ushered him as far as the door to the Moderator's private office, dilated it, and left him as he stepped through. "Good morning, sir!" a pleasant voice called out.

Hamilton found himself staring at the Moderator. "Good morning to you," he answered mechanically, then, "For the love o'—!" His right hand slid of its own volition toward his sidearm, hesitated, changed its mind, and stopped.

The Moderator was the gentleman whose dinner party had been disturbed by the incident of the wayward crab leg.

Hamilton recovered some of his poise. "Sir," he said stiffly, "this is not proper procedure. If you were not satisfied, you should have sent your next friend to wait on me."

The Moderator stared at. him, then laughed in a fashion that would have been rude in another man-but from him it was simply Jovian. "Believe me, sir, this is as much of a surprise to me as it is to you. I had no idea that the gentleman who exchanged courtesies with me yesterday evening was the one I wished to see this morning. As for the little contretemps in the restaurant-frankly, I would not have made an issue of the matter, unless you had forced me to the limit. I have not drawn my tickler in public for many years. But I am forgetting my manners-sit down, sir. Make yourself comfortable. Will you smoke?

May I pour you a drink?"

Hamilton settled himself. "If the Moderator pleases."

"My name is Mordan"—which Hamilton knew—"my friends call me Claude. And I would speak with you in friendship."

"You are most gentle-Claude."

"Not at all, Felix. Perhaps I have an ulterior motive. But tell me: what was that devil's toy you used on the cocky young brave? It amazed me."

Hamilton looked pleased and displayed his new weapon. Mordan looked it over. "Oh, yes," he said, "a simple heat engine burning a nitrate fuel. I think I have seen its pattern, have I not, on display at the Institution?"

Felix acknowledged the fact, a little crestfallen that Mordan was so little surprised at his toy. But Mordan made up for it by discussing in detail with, apparently, lively interest the characteristics and mechanism of the machine. "If I were a fighting man, I would like to have one like it," he concluded.

"I'll have one fashioned for you."

"No, no. You are kind, but I would have no use for it."

Hamilton chewed his lip. "I say...you'll pardon me...but isn't it indiscreet for a man who does no fighting to appear in public armed?"

Mordan smiled. "You misconstrue. Watch." He indicated the far wall. It was partly covered with a geometrical pattern, consisting of small circles, all the same size and set close together. Each circle had a small dot exactly in the center.

Mordan drew his weapon with easy swiftness, coming up, not down, on his target. His gun seemed simply to check itself at the top of its swing, before he returned it to his holster.

A light puff of smoke drifted up the face of the wall. There were three new circles, arranged in tangent trefoil. In the center of each was a small dot.

Hamilton said nothing. "Well?" inquired Mordan.

"I was thinking," Hamilton answered slowly, "that it is well for me that I was polite to you yesterday evening."

Mordan chuckled.

"Although we have never met," Mordan said, "you and the gene pattern you carry have naturally been of interest to me."

"I suppose so. I fall within the jurisdiction of your office."

"You misunderstand me. I cannot possibly take a personal interest in every one of the myriad "zygotes in this district. But it is my duty to conserve the best strains. I have been hoping for the past ten years that you would show up at the clinic, and ask for help in planning children."

Hamilton's face became completely expressionless. Mordan ignored it and went on. "Since you did not come in voluntarily for advice, I was forced to ask you to visit me. I want to ask you a question: Do you intend to have children any time soon?"

Hamilton stood up. "This subject is distasteful to me. May I have your leave, sir?"

Mordan came to him and placed a hand on his arm. "Please, Felix. No harm can be done by listening to me. Believe me, I do not wish to invade your private sphere-but I am no casual busybody. I am your moderator, representing the interests of all of your own kind. Yours among them."

Hamilton sat down without relaxing. "I will listen."

"Thank you. Felix, the responsibility of improving the race under the doctrines of our republic is not a simple one. We can advise but not coerce. The private life and free action of every individual must be scrupulously respected. We have no weapon but cool reason and the appeal to every man's wish that the next generation be better than the last. Even with cooperation there is little enough we can do-in most cases, the elimination of one or two bad characteristics, the preservation of the good ones present. But your case is different."

"How?"

"You know how. You represent the careful knitting together of favorable lines over four generations. Literally tens of thousands of gametes were examined and rejected before the thirty gametes were picked which constitute the linkage of your ancestral zygotes. It would be a shame to waste all that painstaking work."

"Why pick on me? I am not the only result of that selection. There must be at least a hundred citizens descended from my great gross grandparents. You don't want me-I'm a cull. I'm the plan that didn't pan out. I'm a disappointment."

"No," Mordan said softly, "no, Felix, you are not a cull. You are the star line."

"Huh?"

"I mean it. It is contrary to public policy to discuss these things, but rules were made to be broken. Step by step, back to the beginning of the experiment, your line has the highest general rating. You are the only zygote in the line which combines every one of the favorable mutations with which my predecessors started. Three other favorable mutations showed up after the original combinations; all of them are conserved in you."

Hamilton smiled wryly. "That must make me still more of a disappointment to you. I haven't done very much with the talents you attribute to me, have I?"

Mordan shook his head. "I have no criticism to make of your record."

"But you don't think much of it, do you? I've frittered away my time, done nothing more important than design silly games for idle people. Perhaps you geneticists are mistaken in what you call 'favorable characteristics.'"

"Possibly. I think not."

"What do you call a favorable characteristic?"

"A survival factor, considered in a broad sense. This inventiveness of yours, which you disparage, is a very strong survival factor. In you it lies almost latent, or applied to matters of no importance. You don't need it, because you find yourself in a social matrix in which you do not need to exert yourself to stay alive. But that quality of inventiveness can be of crucial importance to your descendants. It can mean the difference between life and death."

"But—"

"I mean it. Easy tunes for individuals are bad times for the race. Adversity is a strainer which refuses to pass the ill equipped. But we have no adversity nowadays. To keep the race as strong as it is and to make it stronger requires careful planning. The genetic technician eliminates in the laboratory the strains which formerly were eliminated by simple natural selection."

"But how do you know that the things you select for are survival factors? I've had my doubts about a lot of them."

"Ah! There's the rub. You know the history of the First Genetic War."

"I know the usual things about it, I suppose."

"It won't do any harm to recapitulate. The problem those early planners were up against is typical—"

The problems of the earliest experiments are typical of all planned genetics. Natural selection automatically preserves survival values in a race simply by killing off those strains poor in survival characteristics. But natural selection is slow, a statistical process. A weak strain may persist-for a time-under favorable conditions. A desirable mutation may be lost-for a time-because of exceptionally unfavorable conditions. Or it may be lost through the blind wastefulness of the reproductive method. Each individual animal represents exactly half of the characteristics potential in his parents.

The half which is thrown away may be more desirable than the half which is perpetuated. Sheer chance.

Natural selection is slow-it took eight hundred thousand generations to produce a new genus of horse. But artificial selection is fast, if we have the wisdom to know what to select for.

But we do not have the wisdom. It would take a superman to plan a superman. The race acquired the techniques of artificial selection without knowing what to select.

Perhaps it was a bad break for mankind that the basic techniques for gene selection were developed immediately after the last of the neo-nationalistic wars. It would be interesting to speculate whether or not the institution of modern finance structure after the downfall of the Madagascar System would have been sufficient to maintain peace if no genetic experiments had been undertaken. But pacifist reaction was at its highest point at this time; the technique of para-ectogenesis was seized on as a God-given opportunity to get rid of war by stamping it out of the human spirit.

After the Atomic War of 1970, the survivors instituted drastic genetic regulations intended for one purpose alone-to conserve the Parmalee-Hitchcock recessive of the ninth chromosome and to eliminate the dominant which usually masks it-to breed sheep rather than wolves.

It is wryly amusing that most of the "wolves" of the period-the Paramlee-Hitchcock island is recessive; there are few natural "sheep"—were caught by the hysteria and cooperated in the attempt to eliminate themselves. But some refused. The Northwest Colony eventually resulted.

That the Northwest Union should eventually fight the rest of the world was a biological necessity. The outcome was equally a necessity and the details are unimportant. The "wolves" ate the "sheep."

Not physically in the sense of complete extermination, but, genetically speaking, we are descended from "wolves," not "sheep."

"They tried to breed the fighting spirit out of men," Mordan went on, "without any conception of its biological usefulness. The rationalization involved the concept of Original Sin. Violence was 'bad'; nonviolence was 'good.'"

"But why," protested Hamilton, "do you assume that combativeness is a survival characteristic? Sure-I've got it; you've got it; we've all got it. But bravery is no use against nuclear weapons. What real use is it?"

Mordan smiled. "The fighters survived. That is the final test. Natural selection goes on always, regardless of conscious selection."

"Wait a minute," demanded Hamilton. "That doesn't check. According to that, we should have lost the Second Genetic War. Their 'mules' were certainly willing to fight."

"Yes, yes," Mordan agreed, "but I did not say that combativeness was the only survival characteristic. If it were, the Pekingese dog would rule the earth. The fighting instinct should be dominated by cool self-interest. Why didn't you shoot it out with me last night?"

"Because there was nothing worth fighting about."

"Exactly. The geneticists of the Great Khan made essentially the same mistake that was made three hundred years earlier; they thought they could monkey with the balance of human characteristics resulting from a billion years of natural selection and produce a race of supermen. They had a formula for it-efficient specialization. But they neglected the most obvious of human characteristics.

"Man is an unspecialized animal. His body, except for its enormous brain case, is primitive. He can't dig; he can't run very fast; he can't fly. But he can eat anything and he can stay alive where a goat would starve, a lizard would fry, a bird freeze. Instead of special adaptations he has general adaptability—"

The Empire of the Great Khans was a reversion to an obsolete form-totalitarianism. Only under absolutism could the genetic experiments which bred homo proteus have been performed, for they required a total indifference to the welfare of individuals.

Gene selection was simply an adjunct to the practices of the imperial geneticists. They made use also of artificial mutation, by radiation and through gene-selective dyes, and they practiced endocrine therapy and surgery on the immature zygote. They tailored human beings-if you could call them that-as casually as we construct buildings. At their height, just before the Second Genetic War, they bred over three thousand types including the hyperbrains (thirteen sorts), the almost brainless matrons, the clever and repulsively beautiful pseudo-feminine freemartins, and the neuter "mules."

We tend to identify the term mule with fighters, since we knew them best, but in fact, there was a type of mule for every sort of routine job in the Empire. The fighters were simply those specialized for fighting.

And what fighters! They needed no sleep. They had three times the strength of ordinary men. There is no way to compare their endurance since they simply kept on going, like well designed machines, until disabled. Each one carried fuel—"fuel" seems more appropriate than "food"—to last it for a couple of weeks, and could function beyond that time for at least another week.

Nor were they stupid. In their specialization their minds were keen. Even their officers were mules, and their grasp of strategy and tactics and the use of scientific weapons was masterly. Their only weakness lay in military psychology; they did not understand their opponents-but men did not understand them; it worked both ways.

The basic nature of their motivation has been termed a "substitute for sex sublimation," but the tag does not explain it, nor did we ever understand it. It is best described negatively by saying that captured mules became insane and suicided in not over ten days time, even though fed on captured rations. Before insanity set in they would ask for something called vepratoga in their tongue, but our semanticists could discover no process referent for the term.

They needed some spark that their masters could give them, and which we could not. Without it they died.

The mules fought us-yet the true men won. Won because they fought and continued to fight, as individuals and guerilla groups. The Empire had one vulnerable point, its coordinators, the Khan, his satraps and administrators. Biologically the Empire was a single organism and could be killed at the top, like a hive with a single queen bee. At the end, a few score assassinations accomplished a collapse which could not be achieved in battle.

No need to dwell on the terror that followed the collapse. Let it suffice that no representative of homo proteus is believed to be alive today. He joined the great dinosaurs and the sabre-toothed cats.

He lacked adaptability.

"The Genetic Wars were brutal lessons," Mordan added, "but they taught us not to tamper casually with human characteristics. If a characteristic is not already present in the germ plasm of the race we don't attempt to put it in. When natural mutations show up, we leave them on trial for a long time before we attempt to spread them around through the race. Most mutations are either worthless, or definitely harmful, in the long run. We eliminate obvious disadvantages, conserve obvious advantages; that is about all. I note that the backs of your hands are rather hairy, whereas mine are smooth. Does that suggest anything to you?"

"No."

"Nor to me. There appears to be no advantage, one way or the other, to the wide variations in hair patterns of the human race. Therefore we leave them alone. On the other hand-have you ever had a toothache?"

"Of course not."

"Of course not. But do you know why?" He waited, indicating that the question was not rhetorical.

"Well...it's a matter of selection. My ancestors had sound teeth."

"Not all of your ancestors. Theoretically it would have been enough for one of your ancestors to have naturally sound teeth, provided his dominant characteristics were conserved in each generation. But each gamete of that ancestor contains only half of his chromosomes; if he inherited his sound teeth from just one of his ancestors, the dominant will be present in only half of his gametes.

"We selected-our predecessors, I mean-for sound teeth. Today, it would be hard to find a citizen who does not have that dominant from both his parents. We no longer have to select for sound teeth. It's the same with color blindness, with cancer, with hemophilia, with a great many other heritable defects-we selected and eliminated them, without disturbing in any way the ordinary, normal, biologically commendable tendency for human beings to fall in love with other human beings and produce children. We simply enabled each couple to have the best children of which they were potentially capable by combining their gametes through selection instead of blind chance."

"You didn't do that in my case," Hamilton said bitterly. "I'm a breeding experiment."

"That's true. But yours is a special case, Felix. Yours is a star line. Every one of your last thirty ancestors entered voluntarily into the creation of your line, not because Cupid had been out with his bow and arrow, but because they had a vision of a race better than they were. Every cell in your body contains in its chromosomes the blueprint of a stronger, sounder, more adaptable, more resistant race. I'm asking you not to waste it."

Hamilton squirmed uncomfortably. "What do you expect me to do? Play Adam to a whole new race?"

"Not at all. I want you to perpetuate your line."

Hamilton leaned forward. "Gotcha!" he said. "You're trying to do what the Great Khans did. You're trying to separate out one line and make it different from the rest...as different as we are from the control naturals. It's no good. I won't have it. "

Mordan shook his head slowly. "Wrong on both counts. We intend to follow a process similar to that used to get sound teeth. Have you ever heard of Deaf Smith County?"

"No."

"Deaf Smith County, Texas, was a political subdivision of the old United States. Its natives had sound teeth, not by inheritance, but because of the soil. It gave them a diet rich in phosphates and fluorides. You can hardly appreciate the curse of dental caries in those days. Teeth actually rotted in the head, and were the cause of a large part of the continual sicknesses of the time. There were nearly a hundred thousand technicians in North America alone who did nothing but remove and repair diseased teeth-even at that, four fifths of the population had no such help. They simply suffered and died, with their rotten teeth poisoning their whole bodies."

"What has this to do with me?"

"It will have. The data from Deaf Smith County was seized on by the contemporary technicians-medicine men, they called them-as a solution for the problem. Duplicate the diet of the Deaf Smithians-no more caries. They were perfectly right and biologically quite wrong, for an advantage is no good to a race unless it can be inherited. The clue was there, but they used it the wrong way. What we looked for finally were men and women who had perfect teeth despite poor diet and lack of attention. In time it was proved that all such cases had a group of three genes, previously uncharted. Call it a favorable mutation. Or call the susceptibility to tooth decay an unfavorable mutation which didn't quite kill off the race.

"My predecessors conserved this particular gene group. You know how inheritance fans out; go back enough generations and all of us are descended from the whole population. But, genetically, our teeth are descended from one small group-because we selected to preserve that dominant. What we want to do with you; Felix, is to conserve the favorable variations present in you until the whole race has your advantages. You won't be the only ancestor of coming generations-oh, no!—but you will be, genetically, the ancestor of them all in the respects in which you are superior to the majority."

"You've picked the wrong man. I'm a failure."

"Don't tell me that, Felix. I know your chart. I know you better than you know yourself. You are a survivor type. I could set you down on an island peopled by howling savages and dangerous animals-in two weeks you would own the place."

Hamilton grudged a smile. "Maybe so. I'd like to try it."

"We don't need to try it. I know! You've got the physique and the mentality and the temperament. What's your sleep ration?"

"Around four hours."

"Fatigue index?"

"It runs around a hundred and twenty-five hours, maybe more."

"Reflex?"

Hamilton shrugged.. Mordan suddenly whipped his sidearm clear, aimed it at Hamilton. Hamilton had his own out and had Mordan covered at appreciably the same instant. He returned it at once. Mordan laughed and replaced his own. "I was in no danger," he declared. "I knew that you could draw, evaluate the situation, and decide not to fire, before a slower man would see that anything was going on."

"You took a long chance," Hamilton complained.

"Not at all. I know your chart. I counted not only on your motor reactions, but your intelligence. Felix, your intelligence rating entitles you to the term genius even in these days."

There followed a long silence. Mordan broke it. "Well?"

"You've said all you have to say?"

"For the moment."

"Very well, then, I'll speak my piece. You haven't said anything that convinces me. I wasn't aware that you planners took such an interest in my germ plasm, but you didn't tell me anything else that I did not already know. My answer is 'No'—"

"But—"

"My turn-Claude. I'll tell you why. Conceding that I am a superior survival type-I don't argue that; it's true. I'm smart and I'm able and I know it. Even so, I know of no reason why the human race should survive...other than the fact that their make-up insures that they will. But there's no sense to the whole bloody show. There's no point to being alive at all. I'm damned if I'll contribute to continuing the comedy."

He paused. Mordan waited, then said slowly, "Don't you enjoy life, Felix?"

"I certainly do," Hamilton answered emphatically. "I've got a twisted sense of humor, and everything amuses me."

"Then isn't life worth living for itself alone?"

"It is for me. I intend to live as long as I can and I expect to enjoy most of it. But do most people enjoy life? I doubt it. As near as I can tell from outward appearances it's about fourteen to one against it."

"Outward appearances may be deceiving. I am inclined to think that most people are happy."

"Prove it!"

Mordan smiled. "You've got me. We can measure most things about the make-up of a man, but we've never been able to measure that. However-don't you expect your own descendants to inherit your zest for living?"

"Is it inheritable?" Hamilton asked suspiciously.

"Well, truthfully, we don't know. I can't point to a particular spot on a particular chromosome and say, 'There lies happiness. ' It's more subtle than blue eyes versus brown eyes. But I want to delve into this more deeply. Felix, when did you begin to suspect that life was not worth living?" Hamilton stood up and paced nervously, feeling in himself such agitation as he had not felt since adolescence. He knew the answer to that question. He knew it well. But did he wish to bare it to this stranger?

No one speaks to a little child of chromosome charts. There was nothing to mark Hamilton Felix out from other infants in the first development center he could remember. He was a nobody, kindly and intelligently treated, but of importance to no one but himself. It had dawned on him slowly that his abilities were superior. A bright child is dominated in its early years by other, duller children, simply because they are older, larger, better informed. And there are always those remote omniscient creatures, the grown ups.

He was ten-or was it eleven?—when he began to realize that in competition he usually excelled. After that he tried to excel, to be conspicuously superior, cock-o'—the-walk. He began to feel the strongest of social motivations, the desire to be appreciated. He knew now what he wanted to be when he "grew up."

The other fellows talked about what they wanted to do. ("I'm going to be a rocket pilot when I grow up." "So am I." "I'm not. My father says a business man can hire all the rocket pilots he wants." "He couldn't hire me." "He could so.")

Let them talk. Young Felix knew what he wanted to do. He would be an encyclopedic synthesist. All the really great men were synthesists. The whole world was their oyster. Who stood a chance of being elected to the Board of Policy but a synthesis? What specialist was there who did not, in the long run, take his orders from a synthesist? They were the leaders, the men who knew everything, the philosopher-kings of whom the ancients had dreamed.

He kept his dream to himself. He appeared to be pulling out of his pre-adolescent narcissist period and to be undergoing the social integration of adolescence with no marked trouble. His developers were unaware that he was headed for an insuperable obstacle. Youths seldom plan to generalize their talents; it takes more subtle imagination than they usually possess to see romance in being a policy former.

Hamilton looked at Mordan. The man's face invited confidence. "You're a synthesist, aren't you? You aren't a geneticist."

"Naturally. I couldn't specialize in the actual techniques. That takes a lifetime."

"The best geneticist on your staff can't hope to sit where you are sitting."

"Of course not. They wouldn't wish to."

"Could I become your successor? Go ahead-answer me. You know my chart."

"No, you couldn't."

"Why not?"

"You know why. You have an excellent memory, more than adequate for any other purpose, but it's not an eidetic memory. A synthesist must have complete memory in order to be able to cover the ground he must cover."

"And without it," Hamilton added, "a man can never be recognized as a synthesist. He just isn't one, any more than a man can claim to be an engineer who can't solve fourth degree equations in his head. I wanted to be a synthesist and I wasn't equipped for it. When it was finally pounded into my head that I couldn't take first prize, I wasn't interested in second prize."

"Your son could be a synthesist."

Hamilton shook his head. "It doesn't matter any more. I still have the encyclopedic viewpoint, but I wouldn't want to trade places with you. You asked me when and how it was that I first came to the conclusion that life doesn't mean anything. I've told you how I first began to have my doubts, but the point is: I still have 'em."

"Wait," Mordan put in. "You still have not heard the whole story. It was planned that eidetic memory would be incorporated in your line either in your generation, or in your father's. Your children will have it, if you cooperate. There is still something lacking which needs to be added and will be added. I said you were a survival type. You are-except for one thing. You don't want children. From a biological standpoint that is as contrasurvival as a compulsion to suicide. You got that tendency from your dexter greatgrandfather. The tendency had to be accepted at the time as he Was dead before his germ plasm was used and we hadn't much supply in the bank to choose from. But it will be corrected at this linkage. Your children will be anxious to have children-I can assure you of that."

"What's that to me?" Hamilton demanded. "Oh, I don't doubt that you can do it. You can wind 'em up and make 'em run. You can probably eliminate my misgivings and produce a line that will go on happily breeding for the next ten million years. That still doesn't make it make sense. Survival! What for? Until you can give me some convincing explanation why the human race should go on at all, my answer is 'no.'" He stood up.

"Leaving?" asked Mordan.

"If you will excuse me."

"Aren't you interested in knowing something about the woman whom we believe is suitable for your line?"

"Not particularly."

"I choose to interpret that as permission," Mordan answered affably. "Look over there." He touched a control on his desk; Hamilton looked where he had been directed to. A section of the wall faded away and gave place to a stereo scene. It was as if they were looking out through an open window. Before them lay a garden swimming pool, its surface freshly agitated...by diving, apparently, for a head broke the surface of the water. The swimmer took three easy strokes toward the pick-up, and climbed out on the bank with effortless graceful strength. She rolled to her knees, stood up bare and lovely. She stretched and laughed, apparently from sheer animal spirits, and glided out of the picture. "Well?" asked Mordan.

"She's comely, but I've seen others."

"It's not necessary that you ever lay eyes on her," the Moderator added hastily. "She's your fifth cousin, by the way. The combination of your charts will be simple." He snapped off the scene, replaced it with a static picture. "Your chart is on the right; hers is on the left." Two additional diagrams then appeared, one under his, one under hers. "Those are the optimum haploid charts for your respective gametes. They combine so—" He touched another control; a fifth chart formed itself in the center of the square formed by the four others.

The charts were not pictures of chromosomes, but were made up of the shorthand used by genetic technicians to represent the extremely microscopic bits of living matter which are the arbiters of human make-up. Each chromosome was represented by a pattern which more nearly resembled a spectogram than any other familiar structure. But the language was a language of experts; to a layman the charts were meaningless.

Even Mordan could not read the charts unassisted. He depended on his technicians to explain them to him when necessary. Thereafter his unfailing memory enabled him to recall the significance of the details.

One thing alone was evident to the uninstructed eye: the two upper charts, Hamilton's and the girl's, contained twice as many chromosome patterns-forty-eight to be exactas the charts of the gametes underneath them. But the chart of the proposed offspring contained fortyeight representations of chromosomes-twenty-four from each of its parents.

Hamilton ran his eye over the charts with interest, an interest he carefully repressed. "Intriguing, I'm sure," he said indifferently. "Of course I don't understand it."

"I'd be glad to explain it to you."

"Don't bother. It's hardly worth while, is it?"

"I suppose not." Mordan cleared the controls; the pictures snapped off. "I must ask you to excuse me, Felix. Perhaps we can talk another day."

"Certainly, if you wish." He glanced at his host in surprise, but Mordan was as friendly and as smilingly urbane as ever. Hamilton found himself in the outer office a few moments later. They had exchanged goodbyes with all the appropriate intimate formality of name-friends; nevertheless Hamilton felt a vague dissatisfaction, a feeling of incompleteness, as if the interview had terminated before it was over. To be sure, he had said no, but he had not said it in all the detail he had wished to.

Mordan went back to his desk and switched the charts on again. He studied them, recalling all that he had been taught about them and dwelling with interest on the middle one.

A chime played the phrase announcing his chief technical assistant. "Come in, Martha," he invited without looking around.

"I'm in, Chief," she replied almost at once.

"Ah-so you are," he answered, turning to her.

"Got a cigaret?"

"Help yourself." She did so from the jeweled container on his desk, inhaled it into life, and settled down comfortably. She was older than he, iron grey, and looked as competent as she was. Her somber laboratory coveralls were in marked contrast to the dignified dandyism of his costume, but they fitted her character.

"Hamilton just left, didn't he?"

"Yes."

"When do we start?"

"Mmmm...How would the second Tuesday of next week do?"

She raised her brows. "As bad as that?"

"I'm afraid so. He said so. I kicked him out-gently-before he had time to rationalize himself into a position from which he would not care to back down later."

"Why did he refuse? Is he in love?"

"No."

"Then what's the catch?" She got up, went to the screen and stared at Hamilton's chart, as if she might detect the answer there.

"Mmmm...He posed me a question which I must answer correctly-else he will not cooperate."

"Huh? What was the question?"

"I'll ask you. Martha, what is the meaning of life?"

"What! Why, what a stupid question!"

"He did not ask it stupidly."

"It's a psychopathic question, unlimited, unanswerable, and, in all probability, sense free."

"I'm not so sure, Martha."

"But-well, I won't attempt to argue with you outside my own field. But it seems to me that 'meaning' is a purely anthropomorphic conception. Life simply is. It exists."

"He used the idea anthropomorphically. What does life mean to men, and why should he, Hamilton, assist in its continuance? Of course I couldn't answer him. He had me. And he proposed to play Sphinx and not let us proceed until I solve his riddle."

"Fiddlesticks!" She snapped the cigaret away savagely. "What does he think this clinic is-a place to play word games? A man should not be allowed to stand in the way of racial progress. He doesn't own the life in his body. It belongs to all of us-to the race. He's a fool."

"You know he's not, Martha." He pointed to the chart.

"No," she admitted, "he's not a fool. Nevertheless, he should be required to cooperate. It's not as if it would hurt him or inconvenience him in any way."

"Tut, tut, Martha. There's a little matter of constitutional law."

"I know. I know. I abide by it, but I don't have to worship it. Granted, it's a wise law, but this is a special case."

"They are all special cases."

She did not answer him but turned back to the charts. "My oh my," she said half to herself, "what a chart! What a beautiful chart, chief."

CHAPTER THREE

"This we covenant in the Name of Life Immortal

To THIS we pledge our lives and sacred honor:

"To destroy no fertile life,

"To hold as solemn secret that which may be divulged to us, directly, or indirectly through the techniques of our art, concerning the private matters of our clients,

"To practice our art only with the full and uninfluenced consent of our client zygotes,

"To hold ourselves, moreover, guardian in full trust for the future welfare of infant zygotes and to do only that which we soberly and earnestly believe to be in their best interests,

"To respect meticulously the laws and customs of the group social in which we practice,

"This we covenant in the Name of Life Immortal."

Extract from the Mendelian Oath Circa 2075 A. D. (Old Style)

Sweet peas, the evening primrose, the ugly little fruit fly Drosophila-back in the XIXth and XXth centuries the Monk Gregor Mendel and Doctor Morgan of the ancient University of Columbia used these humble tools to establish the basic laws of genetics. Simple laws, but subtle.

In the nucleus of every cell of every zygote, whether man or fruit fly, sweet pea or race horse, is a group of threadlike bodies-chromosomes. Along the threads are incredibly tiny somethings, on the order of ten times the size of the largest protein molecules. They are the genes, each one of which controls some aspect of the entire structure, man, animal, or plant, in which the cell is lodged. Every living cell contains within it the plan for the entire organism.

Each man's cells contain fortyeight chromosomes—twenty-four pairs. Half of them he derived from his mother, half from his father. In each one of a pair of chromosomes, there are genes, thousands of them, in one-to-one correspondence with the genes from the chromosomes of the other parent. Thus each parent "casts a vote" on each characteristic. But some "votes" carry more weight than others. Such "votes" are called dominant, the weaker, recessive. If one parent supplies the gene for brown eyes, while the other parent supplies the gene for blue eyes, the child will have brown eyes-brown is "dominant." If both parents supply the gene for brown eyes, the vote is unanimous, but the result is the same-for that generation. But it always requires "unanimous vote" to produce blue eyes.

Nevertheless, the gene for blue eyes may be passed on from generation to generation, unnoticed but unchanged. The potentialities of a race are passed on unchanged-except for mutation-from parent to child. They may be shuffled and dealt and shuffled again, producing an inconceivable number of unique individuals, but the genes are unchanged.

Chess men may be arranged on the board in many combinations, but the unit men do not vary. Fiftytwo playing cards may be dealt to produce an enormous number of different hands, but the cards are the original fiftytwo. One hand may be full of high cards; another may be worthless—pure chance.

But suppose you were permitted to make up the best hand of five cards possible out of the first ten cards dealt? The chance of getting the best possible hand has been increased two hundred and fiftytwo times! (Check it.)

Such is the method of racial improvement by gene selection.

A life-producing cell in the gonads of a male is ready to divide to form gametes. The fortyeight chromosomes intertwine frantically, each with its opposite number. So close is this conjugation that genes or groups of genes may even trade places with their opposites from the other chromosomes. Presently this dance ceases. Each member of a pair of chromosomes withdraws from its partner as far as possible, until there is a cluster of twenty-four chromosomes at each end of the cell. The cell splits, forming two new cells, each with only twenty-four chromosomes, each containing exactly half of the potentialities of the parent cell and parent zygote.

One of these cells contains a chromosome-the X-chromosome-which declares that any zygote formed with its help will be female.

The two cells divide again. But in this fission the chromosomes themselves divide, endwise, thereby conserving every gene and every one of the twenty-four chromosomes. The end product is four wigglers-male gametes, spermatozoa-half of whom can produce females; half, males. The male producers are exactly alike in their gene assortments and are exact complements of the female producers. This is the key point in the technique of gene selection.

The heads of the male producers average four microns in length; the heads of the female producers average five microns in length-another key point.

In the female gonad the evolution of the gamete, or ovum, is like that described for the male gametes, with two exceptions. After the reduction-division in which the number of chromosomes per cell is reduced from fortyeight to twenty-four the result is not two ova, but one ovum and one "polar body." The polar body is a pseudo egg, containing a chromosome pattern complementary to that of the true gamete, but it is sterile. It's a nobody that never will be anybody.

The ovum divides again, throwing off another polar body which has the same pattern as the ovum. The original polar body divides again, producing two more polar bodies of complementary pattern. Thus the polar bodies of pattern complementary to the ovum always exceed in number those of identical pattern. This is a key fact. All ova may become either male or female. Sex of the infant zygote is determined by the cell provided by the father; the mother has no part in it.

The above is a very rough picture. It is necessary to compress, to exaggerate, to omit detail, to use oversimplified analogy. For example, the terms "dominant" and "recessive" are relative terms; and characteristics are rarely determined by one gene alone. Furthermore, mutations-spontaneous changes in the genes themselves-occur with greater frequency than this account has emphasized. But, the picture is reasonably correct in its broad outlines.

How can these facts be used to produce the sort of man or woman one wishes to produce? Offhand, the question appears simple. An adult male produces hundreds of billions of gametes. Ova are produced on no such wholesale scale, but in quite adequate numbers. It would appear to be a simple matter to determine what combination you want and then wait for it to show up...or at least to wait for a combination near enough to be satisfactory.

But it is necessary to recognize the combination wanted when it shows up. And that can be done only by examining the gene patterns in the chromosomes.

Well? We can keep gametes alive outside the body...and genes, while infinitesimally small, are large enough to be recognized under our ultramicroscopes. Go ahead. Take a look. Is it the gamete we want, or is it one of its lesser brothers? If the latter, then reject it, and look again.

Wait a moment! Genes are such tiny things that to examine one is to disturb it. The radiations used to see a gamete closely enough to tell anything about its chromosomes will produce a storm of mutations. Sorry, what you were looking for isn't there any more. You've changed it-more probably killed it. So we fall back on the most subtle and powerful tool of research...inference. You will remember that a single male gonad cell produces two groups of gametes, complementary in their chromosome patterns. The female producers have the larger heads; the males are more agile. We can separate them. If, in a given small constellation of male gametes, enough members are examined to determine that they all stem from the same parent cell, then we may examine in minute detail the group producing the sex we do not want. From the chromosome-gene pattern of the group examined we can infer the complementary pattern of the group kept free of the perils of examination.

With female gametes the problem is similar. The ovum need not leave its natural environment in the body of the female. The polar bodies, worthless and non-viable in themselves, are examined. Their patterns are either identical with that of their sister cell, or complementary. Those that are complementary are more numerous than those identical. The pattern of the ovum may be inferred with exactness.

Half the cards are face up. Therefore we know the value of the cards face down. We can bet-or wait for a better hand. Romantic writers of the first days of genetics dreamed of many fantastic possibilities-test-tube babies, monsters formed by artificial mutation, fatherless babies, babies assembled piece by bit from a hundred different parents. All these horrors are possible, as the geneticists of the Great Khans proved, but we citizens of this Republic have rejected such tampering with our life stream. Infants born with the assistance of the neo-Ortega-Martin gene selection technique are normal babies, stemming from normal germ plasm, born of normal women, in the usual fashion.

They differ in one respect only from their racial predecessors: they are the best babies their parents can produce!

CHAPTER FOUR

Boy Meets Girl

MONROE-ALPHA called for his orthowife again the next evening. She looked up and smiled as he came into her apartment. "Two nights running," she said. "Clifford, you'll have me thinking you are courting me."

"I thought you wanted to go to this party," he said woodenly.

"I do, my dear. And I appreciate your taking me. Half a minute, while I gown." She got up and slipped out of the room with a slow-seeming, easy glide. Larsen Hazel had been a popular dancing star in her day, both record and beamcast. She had wisely decided to retire rather than fight it out with younger women. She was now just thirty, two years younger than her spouse.

"All ready," she announced after an interval hardly longer than her promise mentioned.

He should have commented on her costume; it deserved comment. Not only did it do things with respect to her laudable figure, but its color, a live Mermaid green, harmonized with her hair and with her sandals, her hair ornaments, and her costume clips. They all were of the same dull gold as the skintight metallic habit he had chosen.

He should at least have noticed that she had considered what he was wearing in selecting her own apparel. Instead he answered, "Fine. We'll be right on tune."

"It's a new gown, Clifford."

"It's very pretty," he answered agreeably. "Shall we go?"

"Yes, surely."

He said very little during the ride, but watched the traffic as if the little car were not capable of finding its way through the swarming traffic without his supervision. When the car finally growled to a stop at the top floor of an outlying residence warren he started to raise the shell, but she put a hand on his arm. "Let it be, for a moment, Clifford. Can we talk for a little before we get lost in a swarm of people?"

"Why surely. Is something the matter?"

"Nothing-and everything. Clifford, my dear-there's no need for us to go on as we have been going."

"Huh? What do you mean?"

"You know what I mean if you stop to think about it. I'm not necessary to you any more-am I?"

"Why, uh-Hazel, I don't know why you should say a thing like that. You've been swell. You're a swell girl, Hazel. Nobody could ask for anything more."

"Mmmm...that's as may be. I don't have any secret vices and I've never done you any harm that I know of. But that's not what I mean. You don't get any pleasure out of my company any more-any lift."

"Uh...that's not so. I couldn't ask for any better pal than you've been. We've never had an argu—"

She checked him with her hand. "You still don't understand me. It might be better if we did quarrel a little. I'd have a better idea of what goes on behind those big solemn eyes of yours. You don't dislike me. In fact, I think you like me as well as you like anybody. You even like to be with me, sometimes, if you're tired and I happen to fit your mood. But that isn't enough. And I'm fond enough of you to be concerned about you, darling. You need something more than I've been able to give you."

"I don't know how any woman could do any more than you've done for me."

"I do. I do, because I was once able to do it. Do you remember when we first registered? I gave you a lift then. You were happy. It made me happy, too. You were so pathetically pleased with me and with everything about me that sometimes I could cry, just to look at you."

"I haven't stopped being pleased with you."

"Not consciously. But I think I know what happened."

"What?"

"I was still dancing then. I was the great Hazel, premiere danseuse, I was everything you had never been. Glamour and bright lights and music. I remember how you used to call for me after a performance, looking so proud and so glad to see me. And I was so impressed by your intellect (I still am, dear) and I was so flattered that you paid attention to me."

"Why you could have had your pick of all the braves in the country."

"They didn't look at me the way you did. But that isn't the point. I'm not really glamorous and never was. I was just a working girl, doing the job she could do best. Now the lights are out and the music has stopped and I'm no longer any help to you."

"Don't say that, kid."

She placed a hand on his arm. "Be honest with yourself, Cliff. My feelings aren't hurt. I'm not a romantic person. ' My feelings have always been maternal, rather than anything else. You're my baby. You aren't happy and I want you to be happy."

He shrugged helplessly. "What is there to do about it? Even if everything you say is true, what is there to do?"

"I could make a guess. Somewhere there is a girl who is everything you thought I was. Someone who can do for you what I once did by just being herself."

"Hunnh! I don't know where I'd find her. There isn't any such person. No, kid, the trouble is with me, not with you. I'm a skeleton at the feast. I'm morose by nature. That's what."

"Hummph right back at you. You haven't found her because you haven't been looking for her. You've fallen into a rut, Cliff. Tuesdays and Fridays, dinner with Hazel. Mondays and Thursdays, work out at the gymnasium. Weekends, go to the country and soak up some natural vitamin D. You need to be shaken out of that. I'm going down tomorrow and register a consent."

"You wouldn't really!"

"I certainly shall. Then, if you find someone who pleases your fancy, you can confirm it without any delay."

"But Hazel, I don't want you to turn me loose."

"I'm not turning you loose. I'm just trying to encourage you to have a roving eye. You can come to see me whenever you like, even if you remarry. But no more of this Tuesday-and-Friday stuff. That's out. Try phoning me in the middle of the night, or duck out of your sacred office during working hours."

"Hazel, you don't really want me to go chasing after other women, do you?"

She took his chin in her hand. "Clifford, you are a big sweet dope. You know all there is to know about figures, but what you don't know about women would fill reels." She kissed him. "Relax. Mamma knows best."

"But—"

"The party waits."

He raised the shell of the car. They got out and went on in.

The town house of the Johnson-Smith Estaire occupied the entire top platform of the warren. It was a conspicuous example of conspicuous waste. The living quarters (that great pile of curiously assembled building materials could hardly be called a home) occupied perhaps a third of the space, the rest was given over to gardens, both open and covered. Her husband's ridiculously large income was derived from automatic furniture; it was her fancy to have her house display no apparent evidence of machine domination.

So it was that real live servants offered to take their wraps-they had none-and escorted them to the foot of the broad flight of stairs at the top of which the hostess was greeting her guests. She extended both arms as Clifford and Hazel approached. "My dear!" she bubbled to Hazel. "So gentle of you to come! And your brilliant husband." She turned to her guest of honor, standing at her side. "Doctor Thorgsen, these are two of my dearest friends. Larsen Hazel-such a clever little person, really. And Master Monroe-Alpha Clifford. He does things about money at the Department of Finance. Dreadfully intricate. I'm sure you would understand it-I don't."

Thorgsen managed to frown and smile simultaneously. "The Larsen Hazel? But you are-I recognize you. Will you be dancing for us tonight?"

"I no longer dance."

"What a pity! That is the first unfavorable change I've found on earth. I've been away ten years."

"You've been on Pluto. How fares it there, Doctor?"

"Chilly." He repeated his somewhat frightening mixed expression. Clifford caught his eye and bowed deeply. "I am honored, learned sir."

"Don't let it-I mean, not at all. Or something like that. Damn it sir, I'm not used to all this fancy politeness. Forgotten how to do it. We have a communal colony, you know. No weapons.

Monroe Alpha had noticed with surprise that Thorgsen was unarmed and brassarded, yet he carried himself with the easy arrogance of an armed citizen, sure of his position. "The life must be quite different," he offered.

"It is. It is. Nothing like this. Work, a little gossip, bed, and back to work again. You're in finance, eh? What sort of thing?"

"I compute the reinvestment problem."

"That? Now I know who you are. We heard of your refinement of the general solution-even out on Pluto. High computation that. Makes our little stereo-parallax puzzles look fiddlin'."

"I would hardly say so."

"I would. Perhaps we can find a chance to talk later. You could give me some advice."

"I would be honored."

Several latecomers were waiting in line. Hazel could see that their hostess was becoming impatient. They moved on. "Enjoy yourselves, my dears," she invited them. "There are, well, things—" She waved vaguely.

There were indeed "things." Two theaters were available, one of which was giving a continuous performance of all the latest and smartest stereo-reels, the other provided the current spot news for anyone who could not relax without knowing what was going on out of his sight. There were gaming rooms, of course, and dozens of little snuggeries where small groups, or couples could enjoy each other's company tete-a-tete. A currently popular deceiver circulated through the crowd, displaying his jests and deceptions and sophisticated legerdemain to any who cared to watch. Food and drink in lavish variety, quality, and quantity were available everywhere.

The sweeping tesselated ballroom floor was lightly filled. Pattern dancing would come later. The huge room faced, with no wall intervening, into one of the covered gardens, unlighted save for lights below the surface of numerous rocky little pools. The other side of the ballroom was limited by the transparent wall of the swimming bath, the surface of which was on the floor above. In addition to ornate decoration and moving colored lights on the water side of the crystal wall, the swimmers themselves, with the inescapable gracefulness of underwater movement, gave life and harmony to that side of the room.

Clifford and Hazel seated themselves at that wall and leaned against the glass. "Shall we dance?" he asked.

"No, not just yet." A girl, swimming on the other side of the wall, glided down toward them and blew bubbles against the glass. Hazel followed the girl's nose with her forefinger, tracing against the glass. The swimmer grinned, she smiled back. "I think I'd like a dip, if you don't mind."

"Not at all."

"Join me?"

"No, thanks."

After she had gone he wandered around aimlessly for a few minutes. The recreations at hand left him cold; he was searching halfheartedly for a niche in which he could be alone to nurse his own melancholy and, perhaps, a drink as well. But couples-not melancholy! —had had the same idea; the smaller hideaways were populated. He gave up and entered a medium-sized lounge, already occupied by a stag group of half a dozen or so. They were engaged in the ancient sport of liquidating world problems in liquid.

He hesitated at the door, elevated his brows in query, received casual gracious consent from one who caught his eye, came on in and found a seat. The hot-air session went on.

"Suppose they do release the field?" one of the men present was saying. "What will it amount to? What will it contain? Some artifacts possibly, perhaps some records of the period in which it was set up. But nothing more than that. The notion that life could be preserved in it, unchanged, in absolute stasis, for several centuries is preposterous."

"How do you know? It's certain that they thought they had found a way of suspending, uh, shall we say freezing entropy. The instructions with the field are perfectly plain."

Monroe-Alpha began to understand what they were talking about. It was the so-called Adirondack stasis field. It had been a three-day wonder when it was discovered, a generation earlier, in a remote part of the mountain from which it got its name. Not that the field itself was spectacular-it was simply an impenetrable area of total reflection, a cubical mirror. Perhaps not impenetrable, for no real effort had been made to penetrate it-because of the plaque of instructions found with it. The plaque stated quite simply that the field contained living specimens of the year 1926 (old style, of course) which could be released by the means given below-but there was nothing below.

Since the field had not been passed down in the custody of recognized institutions there was a strong tendency to regard the whole matter as a hoax. Nevertheless, attempts had been made to guess the secret of that blank plaque.

Monroe-Alpha had heard that it had at last been read, but he had not paid much attention. The newscasts were always full of wonders which amounted to little in the long run. He did not even recall how the inscription had been read-a reflected image, using polarized light, or something equally trivial.

"That isn't the matter of real interest," spoke up a third man. "Let us consider the purely intellectual problem of the hypothetical man who might thus be passed down to us, out of the Dark Ages." He was a slender, youngish man-in his late twenties, Clifford judged-and was dressed in a turquoise blue satin which brought out the pallor of his face. He spoke with slow intensity. "What would he think of this world in which he suddenly finds himself? What have we to offer him in exchange for that which he has left behind?"

"What have we to offer him! Everything! Look around you."

The young man answered with a superior smile. "Yes-look around you. Gadgets-but what need has he for gadgets? He comes from an earlier, braver world. A world of independence and dignity. Each man tilled his own plot of ground with his woman by his side. He raised his own children, straight and strong, and taught them to wrest their food from Mother Earth. He had no artificial lights, but he had no need for them. He was up with the dawn and busy with his serious, fundamental affairs. At sundown he was tired and welcomed the rest of night. If his body was sweaty and dusty with honest labor, he took a dip in his own brook. He needed no fancy swimming baths. He was based, rock solid, on primitive essentials."

"And you think he actually liked that better than modern comforts?"

"I certainly do. Those men were happy. They lived naturally, as the Great Egg intended they should."

Monroe-Alpha turned the idea over in his mind. There was something devilishly appealing about it. He felt, quite sincerely, that he cared nothing for gadgets. Not even for his master accumulator. It was not the machine he cared about but the mathematical principles involved. And since when did a mathematician need any tools but his own head? Pythagoras had done well enough with a stick and a stretch of sand. As for other matters, if he and Hazel were partners in the old, old, fight to win a living from the eternal soil, would they have drifted apart?

He closed his eyes and visualized himself back in the simple, golden days of 1926. He was dressed in homespun, woven by his wife's capable hands-or even in the skins of animals, cured on their cabin door. There would be children somewhere about-three, he thought. When the day's work was over, he would walk to the top of the hill with his oldest son, and show him the beauty of the sunset. When the stars came out he would explain to him the intricate wonders of astronomy. Wisdom would be passed down from father to son, as it had been.

There would be neighbors-strong, silent men, whose curt nod and hard handclasp meant more than the casual associations of modern "civilization."

There were others present who did not accept the thesis as readily as Monroe-Alpha. The argument was batted back and forth until it grew somewhat acrimonious. The young man who had started it-Gerald seemed to be his name-got up and asked the company to excuse him. He seemed slightly miffed at the reception his ideas had gotten.

Monroe-Alpha arose quickly and followed him out of the room. "Excuse me, gentle sir."

Gerald paused. "Yes?"

"Your ideas interest me. Will you grant me the boon of further conversation?"

"Gladly. You do me honor, sir."

"The benefit is mine. Shall we find a spot and sit?"

"With pleasure."

Hamilton Felix showed up at the party somewhat late. His credit account was such that he rated an invitation to any of Johnson-Smith Estaire's grand levees, although she did not like him-his remarks confused her; she half suspected the amused contempt he had for her.

Hamilton was troubled by no gentlemanly scruples which might have kept him from accepting hospitality under the circumstances. Estaire's parties swarmed with people in amusing combinations. Possessing no special talents of her own, she nevertheless had the knack of inducing brilliant and interesting persons to come to her functions. Hamilton liked that.

In any case there were always swarms of people present. People were always funny-the more, the merrier!

He ran across his friend Monroe-Alpha almost at once, walking in company with a young fellow dressed in a blue which did not suit his skin. He touched his shoulder. "Hi, Cliff."

"Oh-hello, Felix."

"Busy?"

"At the moment, yes. A little later?"

"Spare me a second. Do you see that bucko leaning against a pillar over there. Now-he's looking this way." "What about him?"

"I think I should recognize him, but I don't."

"I do. Unless I am misled by a close resemblance, he was in the party of the man you burned, night before last."

"Sooo! Now that's interesting."

"Try to stay out of trouble, Felix." "Don't worry. Thanks, Cliff."

"Not at all."

They moved on, left Hamilton watching the chap he had inquired about. The man evidently became aware that he was being watched, for he left his place and came directly to Hamilton. He paused a ceremonious three paces away and said, "I come in friendship, gentle sir."

"The House of Hospitality encloses none but friends, '" Hamilton quoted formally.

"You are kind, sir. My name is McFee Norbert."

"Thank you. I hight Hamilton Felix." "Yes, I know."

Hamilton suddenly changed his manner. "Ah! Did your friend know that when he chopped at me?"

McFee glanced quickly to the right and left, as if to see whether or not the remark had been overheard. It was obvious that he did not like the tack. "Softly, sir. Softly," he protested. "I tell you I come in friendship. That was a mistake, a regrettable mistake. His quarrel was with another."

"So? Then why did he challenge me?" "It was a mistake, I tell you. I am deeply sorry."

"See here," said Hamilton. "Is this procedure? If he made an honest error, why does he not come to me like a man? I'll receive him in peace." "He is not able to."

"Why? I did no more than wing him." "Nevertheless, he is not able to. I assure you he has been disciplined."

Hamilton looked at him sharply. "You say 'disciplined'—and he is not able to meet with me. Is he-perhaps-so 'disciplined' that he must tryst with a mortician instead?"

The other hesitated a moment. "May we speak privately-under the rose?"

"There is more here than shows above water. I don't like the rose, my friend Norbert." McFee shrugged. "I am sorry."

Hamilton considered the matter. After all, why not? The set-up looked amusing. He hooked an arm in McFee's. "Let it be under the rose, then. Where shall we talk?"

McFee filled the glass again. "You have admitted, Friend Felix, that you are not wholly in sympathy with the ridiculous genetic policy of our so-called culture. We knew that."

"How?"

"Does it matter? We have our ways. I know you are a man of courage and ability, ready for anything. Would you like to put your resources to work on a really worthwhile project?"

"I would need to know what the project is."

"Naturally. Let me say-no, perhaps it is just as well not to say anything. Why should I burden you with secrets?"

Hamilton refused the gambit. He just sat. McFee waited, then added, "Can I trust you, my friend?"

"If you can't, then what is my assurance worth?"

The intensity of McFee's deep-set eyes relaxed a little for the first time. He almost smiled. "You have me. Well...I fancy myself a good judge of men. I choose to trust you. Remember, this is still under the rose. Can you conceive of a program, scientifically planned to give us the utmost from the knowledge we have, which would not be inhibited by the silly rules under which our official geneticists work?"

"I can conceive of such a program, yes."

"Backed by toughminded men, men capable of thinking for themselves?"

Hamilton nodded. He still wondered what this brave was driving at, but he had decided to see the game through.

"There isn't much more I can say...here," McFee concluded. "You know where the Hall of the Wolf is?"

"Certainly."

"You are a member?"

Hamilton nodded. Everybody, or almost everybody, belonged to the Ancient Benevolent and Fraternal Order of the Wolf. He did not enter its portals once in six months, but it was convenient to have a place to rendezvous in a strange city. The order was about as exclusive as a rain storm.

"Good. Can you meet me there, later tonight?"

"I could."

"There is a room there where some of my friends sometimes gather. Don't bother to inquire at the desk-it's in the Hall of Romulus and Remus, directly opposite the escalator. Shall we say at two hundred?"

"Make it half past two."

"As you wish."

Monroe-Alpha Clifford saw her first during the grand promenade. He could not have told truthfully why she caught his eye. She was beautiful, no doubt, but beauty alone is, of course, no special mark of distinction among girls. They cannot help being beautiful, any more than can a Persian cat, or a luna moth, or a fine race horse.

What she did possess is less easy to tag. Perhaps it will do to say that, when Monroe-Alpha caught sight of her, he forgot about the delightful and intriguing conversation he had been having with Gerald, he forgot that he did not care much for dancing and had been roped into taking part in the promenade only through his inadvertent presence in the ballroom when the figure was announced, he forgot his own consuming melancholy.

He was not fully aware of all this. He was only aware that he had taken a second look and that he thereafter spent the entire dance trying to keep track of her. As a result of which he danced even worse than usual. He was forced to apologize to his temporary partners more than once for his awkwardness.

But he continued to be clumsy, for he was trying to work out in his head the problem of whether or not the figures of the dance would bring them together, make them partners for an interval. If he had been confronted with the question as an abstract problem-Given: the choreographic score of the dance. Required: will unit A and unit B ever come in contact?—had it been stated thus, he could have found the answer almost intuitively, had he considered it worthy of his talents.

To attempt to solve it after the dynamics had commenced, when he himself was one of the variables, was another matter. Had he been in the second couple? Or the ninth?

He had decided that the dance would not bring them together, and was trying to figure out some way to fudge-to change positions with another male dancer-when the dance did bring them together.

He felt her finger tips in his. Then her weight was cradled against his hand as he swung her by the waist. He was dancing lightly, beautifully, ecstatically. He was outdoing himself—he could feel it.

Fortunately, she landed on top.

Because of that he could not even help her to her feet. She scrambled up and attempted to help him. He started laboriously to frame his apology in the most abjectly formal terms he could manage when he realized that she was laughing.

"Forget it," she interrupted him. "It was fun. We'll practice that step on the quiet. It will be a sensation."

"Most gracious madame—" he began again.

"The dance—" she said. "We'll be lost!" She slipped away through the crowd, found her place.

Monroe-Alpha was too demoralized by the incident to attempt to find his proper place. He slunk away, too concerned with his own thalamic whirlwind to worry over the gaucherie he was commiting in leaving a figure dance before the finale.

He located her again, after the dance, but she was in the midst of a group of people, all strangers to him. A dextrous young gallant could have improvised a dozen dodges on the spot whereby the lady could have been approached. He had no such talent. He wished fervently that his friend Hamilton would show up-Hamilton would know what to do. Hamilton was resourceful in such matters. People never scared him.

She was laughing about something. Two or three of the braves around her laughed too. One of them glanced his way. Damn it-were they laughing at him?

Then she looked his way. Her eyes were warm and friendly. No, she was not laughing at him. He felt for an instant that he knew her, that he had known her for a long time, and that she was inviting him, as plain as speech, to come join her. There was nothing coquettish about her gaze. Nor was it tomboyish. It was easy, honest, and entirely feminine.

He might have screwed up his courage to approach her then, had not a hand been placed on his arm. "I've been looking everywhere for you, young fellow."

It was Doctor Thorgsen. Monroe-Alpha managed to stammer, "Uh...How do you fare, learned sir?"

"As usual. You aren't busy, are you? Can we have a gab?"

Monroe-Alpha glanced back at the girl. She was no longer looking at him, was instead giving rapt attention to something one of her companions was saying. Oh well, he thought, you can't expect a girl to regard being tumbled on a dance floor as the equivalent of a formal introduction. He would look up his hostess later and get her to introduce them. "I'm not busy," he acknowledged. "Where shall we go?"

"Let's find some place where we can distribute the strain equally on all parts," Thorgsen boomed. "I'll snag a pitcher of drinks. I see by this morning's news that your department announces another increase in the dividend, " he began.

"Yes," Monroe-Alpha said, a little mystified. There was nothing startling in an increase in the productivity of the culture. The reverse would have been news; an increase was routine.

"I suppose there is an undistributed surplus?"

"Of course. There always is." It was a truism that the principal routine activity of the Board of Policy was to find suitable means to distribute new currency made necessary by the ever-increasing productive capital investment. The simplest way was by the direct issue of debt-free credit-flat money-to the citizens directly, or indirectly in the form of a subsidized discount on retail sales. The indirect method permitted a noncoercive control against inflation of price symbols. The direct method raised wages by decreasing the incentive to work for wages. Both methods helped to insure that goods produced would be bought and consumed and thereby help to balance the books of every businessman in the hemisphere.

But man is a working animal. He likes to work. And his work is infernally productive. Even if he is bribed to stay out of the labor market and out of production by a fat monthly dividend, he is quite likely to spend his spare time working out some gadget which will displace labor and increase productivity.

Very few people have the imagination and the temperament to spend a lifetime in leisure. The itch to work overtakes them. It behooved the planners to find as many means as possible to distribute purchasing power through wages in spheres in which the work done would not add to the flood of consumption goods. But there is a reasonably, if not an actual, limit to the construction, for example, of nonproductive public works. Subsidizing scientific research is an obvious way to use up credit, but one, however, which only postpones the problem, for scientific research, no matter how "pure" and useless it may seem, has an annoying habit of paying for itself many times, in the long run, in the form of greatly increased productivity.

"The surplus," Thorgsen went on, "have they figured out what they intend to do with it?"

"Not entirely, I am reasonably sure," Monroe-Alpha told him. "I haven't given it much heed. I'm a computer, you know, not a planner."

"Yes, I know. But you're in closer touch with these planning chappies than I am. Now I've got a little project in my mind which I'd like the Policy Board to pay for. If you'll listen, I'll tell you about and, I hope, get your help in putting it over."

"Why don't you take it up with the Board directly?" Monroe-Alpha suggested. "I have no vote in the matter."

"No, but you know the ins-and-outs of the Board and I don't. Besides I think you can appreciate the beauty of the project. Offhand, it's pretty expensive and quite useless."

"That's no handicap."

"Huh? I thought a project had to be useful?"

"Not at all. It has to be worthwhile and that generally means that it has to be of benefit to the whole population. But it should not be useful in an economic sense."

"Hmmm...I'm afraid this one won't benefit anybody."

"That is not necessarily a drawback. 'Worthwhile' is an elastic term. But what is it?"

Thorgsen hesitated a moment before replying. "You've seen the ballistic planetarium at Buenos Aires?"

"No, I haven't. I know about it, of course."

"It's a beautiful thing! Think of it, man-a machine to calculate the position of any body in the solar system, at any time, past or future, and give results accurate to seven places."

"It's nice," Monroe-Alpha agreed. "The basic problem is elementary, of course. " It was-to him. To a man who dealt in the maddeningly erratic variables of socio-economic problems, in which an unpredictable whim of fashion could upset a carefully estimated prediction, a little problem involving a primary, nine planets, a couple of dozen satellites, and a few hundred major planetoids, all operating under a single invariable rule, was just that-elementary. It might be a little complex to set up, but it involved no real mental labor.

"Elementary!" Thorgsen seemed almost offended. "Oh, well, have it your own way. But what would you think of a machine to do the same thing for the entire physical universe?"

"Eh? I'd think it was fantastic."

"So it would be-now. But suppose we attempted to do it for this galactic island only."

"Still fantastic. The variables would be of the order of three times ten to the tenth, would they not?"

"Yes. But why not? If we had time enough-and money enough. Here is all I propose," he said earnestly. "Suppose we start with a few thousand masses on which we now have accurate vector values. We would assume straight-line motion for the original set up. With the stations we now have on Pluto, Neptune, and Titan, we could start checking at once. Later on, as the machine was revised, we could include some sort of empirical treatment of the edge effect-the limit of our field, I mean. The field would be approximately an oblate ellipsoid."

"Double oblation, wouldn't it be, including parallax shown by our own stellar drift?"

"Yes, yes. That would become important."

"I suppose you will include the Solar Phoenix devolution?"

"Huh?"

"Why, I should think that was obvious. You'll type the stars, won't you? The progression of the hydrogen-helium transformation in each body is certainly a key datum."

"Brother, you're way ahead of me. I was thinking only of a master ballistic solution."

"Why stop with that? When setting up a structural analogue why not make the symbolic mechanism as similar to the process as possible?"

"Sure, sure. You're right. I just wasn't that ambitious. I was willing to sell out for less. Tell me-d'you think the Board would go for it?"

"Why not? It's worthwhile, it's very expensive, it will run on for years, and it doesn't show any prospect of being economically productive. I would say it was tailormade for subsidy."

"It does me good to hear you say so."

They made a date for the following day.

As soon as he could gracefully do so, Monroe-Alpha excused himself from Thorgsen and went back to where he had last seen the girl. She was no longer there. He spent more than an hour looking for her, and was finally forced to the conclusion that she had left the party, or had hidden herself very cleverly. She was not in the swimming bath, or, if she were, she was capable of remaining under water longer than ten minutes. She was not in any of the accessible rooms-he had risked his life quite unconsciously, so thoroughly had he searched the dark corners.

He intended to tell Hazel of the incident on the way to her home, but he could not find the words. What was there to tell, really? He had seen an attractive girl, and had managed to trip her by his clumsiness. What was there in that? He did not even know her name. And it did not, somehow, seem like just the evening to speak to Hazel of other women. Good old Hazel!

She noticed his preoccupation, noticed that it differed in character from his earlier glumness. "Enjoy yourself, Clifford?"

"I think so. Yes."

"Meet any attractive girls?"

"Why, uh, yes. Several."

"That's nice."

"See here, Hazel-you don't intend to go through with this silly divorce business, do you?"

"I do."

One might think that he lay awake that night, filled with romantic thoughts of the nameless beauty. One would be wrong. He did think of her, but only for long enough to work out a suitable face-rehabilitating day dream, one in which he made killingly witty remarks anent his own awkwardness to which she responded with proper appreciation. It had not even been necessary to bulldoze any of the braves who surrounded her. They, too, had applauded his wit.

Nor did he think long of Hazel. If she saw fit to break the contract, it was her business. Not that there was any sense to it; it did not occur to him that anything could greatly change their relations. But he would stop this twice-a-week dine-and-visit. A woman appreciated a few surprises, he supposed.

All this was simply to clear the circuits for the serious getting-to-sleep thoughts. Thorgsen's proposal. A really pretty problem, that. A nice problem --

Hamilton Felix had a much busier night. So busy, that he had much on his mind at breakfast the next morning. Decisions to make, matters to evaluate. He did not even turn on the news, and, when the annunciator informed him that a visitor waited outside his door, he punched the "welcome" key absentmindedly, without stopping to consider whether he really wished to see anyone. Some woman, he had noticed, from the mug plate. His thoughts went no further.

She came in and perched herself on the arm of a chair, one leg swinging. "Well," she said, "good morning, Hamilton Felix!"

He looked at her in puzzlement. "Do we know each other?"

"Noooo," she said calmly, "but we will. I thought it was about time I looked you over."

"I know!" He stabbed the air with a forefinger. "You are the woman Mordan picked for me!"

"That's right. Of course."

"Why, damn your impudence! What the devil do you mean by invading my privacy like this?"

"Tut! Tut! Tut! Mamma spank. Is that any way to talk to the future mother of your children?"

"Mother of my fiddlesticks! If I needed anything to convince me that I want to have nothing to do with the scheme, you have given it to me. If I ever do have children, it won't be by you!"

She had on shorts and a boyish corselet. In defiance of usual custom for her sex she wore, belted to her side, a hand weapon, small but deadly. She stood up at his words, resting her hands on her hips. "What's wrong with me?" she said slowly.

"Hunh! What's wrong with you! What isn't wrong with you? I know your type. You're one of these 'independent' women, anxious to claim all the privileges of men but none of the responsibilities. I can just see you, swaggering around town with that damned little spit gun at your side, demanding all the rights of an armed citizen, picking fights in the serene knowledge that no brave will call your bluff. Arrgh! You make me sick."

She remained still, but her face was cold. "You are a shrewd judge of character, aren't you? Now you listen to me for a while. I haven't drawn this gun, except in practice, for years. I don't go around insisting on privileges and I am just as punctiliously polite as the next brave."

"Then why do you wear it?"

"Is there anything wrong with a woman preferring the dignity of an armed citizen? I don't like to be coddled and I don't like to be treated like a minor child. So I waive immunity and claim my right-I go armed. What's wrong with that?"

"Nothing-if that were really the case. Which it isn't. You give the lie to your own words by the fashion in which you broke in on me. A man couldn't get away with it."

"So! So? Let me remind you, you ill-mannered oaf, that you signalled 'welcome' and let me in. You did not have to. Once inside, before I could say yes, no, or maybe, you started to snarl at me."

"But—"

"Never mind! You think you have a grievance. I said I hadn't drawn this gun in years-that doesn't mean I'm not ready to! I'm going to give you a chance, my fine bucko boy, to work out that grievance. Belt on your gun."

"Don't be silly."

"Strap on your gun! Or, so help me, I'll take it away from you and hang it in the Square."

Instead of answering he moved toward her. She gripped her weapon, half drew it. "Stand back! Stand back, or I'll burn you."

He checked himself and looked at her face. "Great Egg!" he said delightedly. "I believe you would. I honestly believe you would."

"Of course I would."

"That," he admitted, "puts a different face on things, doesn't it?" He eased back a step, as if to parley. She relaxed a trifle, and removed her fist from the grip of the weapon.

He lunged forward, low, tackling her around the knees. They rolled on the floor, tussled briefly. When events slowed down a little, it could be seen that he had her right wrist grasped firmly, as firmly, indeed, as her right hand gripped her gun.

He banged her knuckles hard against the polished floor, grabbed the shank of the weapon with his other hand and broke it out of her grasp. Still grasping her wrist, he struggled to his knees and moved away from the spot, half dragging her behind him. He ignored the minor violences that were happening to his person in the process. When he was within reach he chucked her gun in the oubliette and turned his attention back to her.

Heedless of her struggles he picked her up and carried her to a large chair where he seated himself with her on his lap. He pinned her legs between his knees, forced her arms behind her back until he managed to get both her wrists in one of his fists. She bit him in the process.

With her thus effectively immobilized, he settled back, holding her away from him, and looked at her face. "Now we can talk," he said cheerily. He measured her face with his eye, and slapped her once, not too hard but with plenty of sting in it. "That's for biting. Don't do it again."

"Let me go."

"Be reasonable. If you look closely you will see that I am nearly forty kilos heavier than you are, and a lot taller. You are tough and strong-I've got to hand it to you-but I'm a hell of a sight stronger and tougher. What you want doesn't matter."

"What do you intend to do with me?"

"Talk to you. Yes, and I think I'll kiss you."

She answered this by giving a brief but entirely futile imitation of a small cyclone, with wildcat overtones. When it was over he said, "Put your face up."

She did not. He took a handful of hair and snapped her head back. "No biting," he warned, "or I'll beat holy hell out of you."

She did not bite him, but she did not help with the kiss either. "That," he observed conversationally, "was practically a waste of time. You 'independent' girls don't know anything about the art."

"What's wrong with the way I kiss?" she said darkly.

"Everything. I'd as lief kiss a twelve-year-old."

"I can kiss all right if I want to."

"I doubt it. I doubt if you've ever been kissed before. Men seldom make passes at girls that wear guns."

"That's not true."

"Caught you on the raw, didn't I? But it is true and you know it. See here-I'll give you a chance to prove that I'm wrong, and then we'll talk about letting you go."

"You're hurting my arm."

"Well—"

This kiss was longer than the first one, about eight times as long. Hamilton released her, drew his breath, and said nothing.

"Well?"

"Young lady," he said slowly, "I've misjudged you. Twice, I've misjudged you."

"Will you let me go now?"

"Let you go? That last deserves an encore."

"That's not fair."

"My lady," he said quite seriously, "'fair' is a purely abstract concept By the way, what is your name?"

"Longcourt Phyllis. You're changing the subject."

"How about the encore?"

"Oh, well!" He relaxed his hold on her completely. Nonetheless, it was as long and as breath-consuming as the last. At its conclusion she ran a hand through his hair, mussing it. "You heel," she said. "You dirty heel!"

"From you, Phyllis, that's a compliment. Have a drink?",

"I could use one."

He made a ceremony of selecting the liquor, fetching glasses, and pouring. He paused with his glass in the air. "Shall we pledge peace?"

She checked her own glass before it reached her mouth. "At this point? I think not. I want to catch you armed."

"Oh, come now. You fought valiantly and were licked with honor.

To be sure I slapped you, but you bit me. It's even."

"How about the kisses?"

He grinned. "That was an even exchange. Don't be stuffy. I don't want you hunting me down. Come on. Peace, and let bygones be bygones." He raised his glass a trifle.

He caught her eye and she smiled in spite of herself. "All right-peace."

"Have another drink?"

"No, thanks. I've got to go."

"What's the hurry?"

"I really must go. May I have my blazer now?"

He opened the oubliette, reached in, recovered it, and dusted it off. "It's mine, you know. I won it."

"You wouldn't keep it, would you?"

"That's what I mean," he said, "about you armed women just pretending to take a man's part. A man would never ask for his gun back. He would wear a brassard first."

"Are you going to keep it?"

"No, but I wish you wouldn't wear it."

"Why not?"

"Because I want to take you to dinner tonight. I'd feel a fool, escorting an armed woman."

She looked at him. "You're an odd one, Hamilton Felix. Slap a girl around, then ask her to dinner."

"You'll come?"

"Yes, I'll come." She unsnapped her gun belt and tossed it to him. "Tube them back to me. The address is on the name-plate."

"Twenty hundred?"

"Or a few minutes after."

"Do you know, Phyllis," he said as he dilated the door for her, "I have a feeling that you and I are going to have lots and lots of fun."

She gave him a slow, sidelong look. "You'll find out!"

CHAPTER FIVE

"I myself am but indifferent honest"

HAMILTON turned away from the door purposefully. There were things to be done, urgent things. He stepped to his phone and called Monroe-Alpha. "Cliff? In your office, I see. Stay there." He clicked off without offering explanation.

"Good morning, Felix," Monroe-Alpha said with his usual formality as he ushered him in. "You seemed perturbed. Anything wrong?"

"Not exactly. I want you to do me a favor. Say-what's gotten into you?"

"Me? What do you mean?"

"Yesterday you looked like a six-day corpse. Today you sparkle, you glow. There's a song on your lips and a hey, nonny, nonny. How come?"

"I didn't know that it showed in my face, but it is true that I am feeling somewhat elated."

"Why? Did the money machine declare another dividend?"

"Didn't you see the news this morning?"

"As a matter of fact, no. Why?"

"They opened the Adirondack Stasis!"

"Well?"

"It had a man in it, a live man."

Hamilton's eyebrows crawled up. "That's interesting, if true. But do you mean to tell me that the discovery of this human fossil is the cause of your childlike glee?"

"But don't you see it, Felix? Don't you feel the significance of it? He's an actual representative out of the golden days when the race was young-back when life was simple and good, before we messed up with a lot of meaningless complications. Think what he can tell us!"

"Maybe. What year is he from?"

"Uh...1926, on the old scale."

"1926...let's see...I'm no historian but I didn't know that that period was such glowing Utopia. I had a notion it was pretty primitive."

"That's just what I mean-simple and beautiful. I'm not a historian either, but I met a chap last night who told me a lot about it. He's made quite a study of it. " He launched into an enthusiastic description of Frisby Gerald's concept of life in the early XXth century.

Hamilton waited for him to run out of breath, then said, "I don't know. I wouldn't know, but it seems to me your gears don't mesh."

"Why?"

"Well, I don't think this present day is everything it might be, but I will say I think it is probably the best set-up the human race has ever managed. No, Cliff, this 'Back-to-theGood-Old-Days' stuff is the bunk. We get more for less, with less trouble, nowadays, than ever before in history."

"Well, of course, " Monroe-Alpha answered tartly, "if you have to have an automaton to rock you to sleep at night—"

"Save it. I can sleep on a pile of rock, if necessary, but I think it foolish to go out of your way to seek discomforts."

Monroe-Alpha did not answer. Hamilton saw that his words had rankled and added, "That was strictly a personal opinion. Maybe you're right. Let's forget it."

"What was the favor you wanted?"

"Oh, yes! Cliff, you know Mordan?"

"The district moderator?"

"The same. I want you to call him up and make a date for him to meet me-I mean, to meet you."

"Why should I want to see him?"

"You don't. I'll keep the date."

"Why all the fancy business?"

"Cliff, don't ask me questions. Do it for me."

Monroe-Alpha still hesitated. "You ask me to do this blind. Is it...everything it should be?"

"Cliff!"

Monroe-Alpha flushed. "Sorry, Felix. I know it's all right if you want it. How shall I get him to agree?"

"Make it insistent enough and he'll be there."

"Where, by the way?"

"At my-no, that won't do. Let me use your flat."

"Certainly. What time?"

"Noon."

Mordan came into the flat looking slightly puzzled. He looked still more puzzled and surprised when he saw Hamilton. "Felix! What brings you here?"

"To see you, uh, Claude."

"So? Where is our host?"

"He won't be here. Claude, I arranged this. I had to see you and I couldn't do it openly."

"Really? Why not?"

"Because, " Hamilton said, "there is a spy in your office."

Mordan simply waited.

"Before we go into that, " Hamilton went on, "I want to ask you one question: Did you sic Longcourt Phyllis on me?"

Mordan looked apprehensive. "Decidedly not. Have you seen her?"

"Decidedly yes. A sweet little hell cat you picked for me."

"Don't be too hasty in your judgment, Felix. I admit she is a bit startling, but she is absolutely sound. Her chart is admirable."

"Okay, okay. To tell the truth, I rather enjoyed the encounter. But I wanted to make sure you had not been trying to maneuver me."

"Not at all, Felix."

"Fine. I didn't get you up here just to ask you that. I said there was a spy in your office. I know that because our private conversation the other day leaked and leaked badly." He plunged into an account of his encounter with McFee Norbert, and his subsequent visit to the Hall of the Wolf. "They call themselves the 'Survivors Club,'" he went on. "Superficially it's a drinking club within the lodge. As a matter of fact, it's the front for a revolutionary clique."

"Go on."

"They picked me as likely material, and I played along with them, more out of curiosity, at first. Presently I found myself in too deep to back out." He paused.

"Yes?"

"I joined up. It seemed healthy to do so. I don't know for sure, but I suspect that I wouldn't have lived very long if I hadn't taken their oath. They are playing for keeps, Claude." He paused for a moment, then continued, "You know that little shooting scrape I got into the other night?"

"Yes, surely."

"I can't prove this, but it's the only explanation that makes sense. They weren't gunning for me; they were gunning for you. You are the one of the persons they have to rub out in order to put over their plans."

"What are their plans?"

"I don't know in detail...yet. But the sense of it is this: they've got no use at all for the present genetic policy. Nor for democratic freedom. They want to set up what they call a 'scientific' state, with the 'natural' leaders running things. They are the 'natural' leaders, self appointed. They have a great contempt for guys like you-synthesists-who help to maintain this present 'backward' state. When they are in control they intend to go all out for biological experimentation. They say that a culture should be an organic whole, with the parts specialized according to function. True men-supermen-sitting on top (that's themselves) and the rest of the population bred to fit requirements."

Mordan smiled slowly. "I seem to have seen all this before."

"Yeah, I know what you mean. The Empire of the Great Khans. They've got an answer for that one. The Khans were fools and did not know what they were up to. These boys know how. This is strictly 100% homegrown and any resemblance between it and the policies of the Khans is purely due to your lack of appreciation."

"So..." Mordan said nothing more for a long time. Hamilton became impatient.

"Well?"

"Felix, why do you tell me this?"

"Why? So you can do something about it!"

"But why should you want anything done about it? Wait a moment...please. You told me the other day that life is not worth living, as it is. If you go along with these people, you could make of life anything you want it to be. You could redesign the world to a pattern of your own choosing."

"Hm! I'd have some opposition. They have their own plans."

"You could change them. I know you, Felix. In any group, it's a foregone conclusion that you will dominate if you choose to. Not in the first ten minutes, but in the course of time. You must have known that. Why didn't you seize the opportunity?"

"What makes you think I could do anything of the sort?"

"Now, Felix!"

"All right! All right! Suppose I could. But I didn't. Call it patriotism. Call it anything you like."

"As a matter of fact it's because you approve of our culture as it is. Isn't that true?"

"Maybe. In a way. I never did say that I disliked the way things were being run. I just said that I couldn't see any sense to any manner of life, in any final absolute terms." Hamilton was feeling slightly bewildered. He had approached this interview feeling romantically heroic and expecting to be patted on the back for having unmasked the villains. But Mordan failed to get excited at the proper places, and insisted on discussing purely philosophical matters. It threw him off stride. "In any case, I don't want to see those conceited young punks running things. I can't see them building a Utopia."

"I see. Have you any more to tell me? Very well, then—" Mordan began to stir in the fashion of one about to leave.

"Hey, wait a minute!"

"Yes?"

"Look, I—The fact is, since I am already on the inside, I thought I might do a little amateur sleuthing. We could arrange some way for me to report to you, or to someone."

"Oh, so that's it. No, Felix, I could not approve that."

"Why not?"

"Too dangerous for you."

"I don't mind."

"I do. Your life is very valuable, from my professional point of view."

"That? Hell's delightI thought I made it clear that there is no chance, simply none at all, of me cooperating in the genetic program."

"You did. But so long as you are alive and fertile, I am bound to take into account the possibility that you might change your mind. I can't let you risk your life, therefore."

"Well! How are you going to stop me? You can't coerce me-I know the law."

"No...no, it's true that I can't prevent you from risking your valuable life, but I can remove the danger, and shall. The members of the Survivors Club will be picked up at once."

"But, but-look, Claude. If you do that today, you haven't a full case against them. The proper thing to do is to wait until we know all about them. Arresting this one group might mean that a hundred or a thousand others would simply take cover more thoroughly."

"I know that. It's the chance the government will have to take. But we won't risk your germ plasm."

Hamilton threw out his hands. "Damn it, Claude. This is blackmail. That's what it is-blackmail! It's sheer coercion."

"Not at all. I do not plan to do a thing...to you."

"But it is, just the same."

"Suppose we compromise."

"How?"

"Your life is your own. If you want to lose it, playing Fearless Frank, you may. My interest is in your potentialities as an ancestor. My professional interest, that is. Personally, I like you and prefer that you live a long and happy life. But that's beside the point. If you would deposit in the plasm bank a few million of your gametes, I would be willing not to interfere."

"But that's just what I was saying! You are trying to blackmail me into cooperating."

"Not so hasty. The life cells you leave with me would not be stirred into being without your consent. They would remain in escrow and you could break the escrow at will-unless you are killed in this adventure. In that case, I will use them to continue the genetic policy."

Hamilton sat down again. "Let's get this straight. You wouldn't touch them, if I don't get knocked over. No tricks?"

"No tricks."

"When it's over, I can withdraw them. Still no tricks?"

"Still no tricks."

"You wouldn't frame me into a position where I would be darned near certain to be killed, I suppose? No, you wouldn't do that. All right, I agree! I'll bet my ability to stay alive when the shooting starts against your chance to use my deposit."

When Mordan returned to his office, he sent for his chief technician. He caused her to leave the building with him, found a suitable bit of neutral ground where there was no chance of being overheard-a bench in a deserted corner of North roofpark-and told her of his talk with Hamilton.

"I suppose you told him that all this about the Survivors Club was no news to us."

"No, " Mordan said judiciously, "no, I can't say that I did. He didn't ask me."

"Mmmm...You know, chief, you are as crooked as a random incidence curve. A sophist."

"Why, Martha!" Nevertheless his eyes twinkled.

"Oh, I'm not criticizing. You've talked him into a position whereby we stand a much better chance of getting on with the work. Just the same, you did it by letting him think that we didn't already know all about this pipsqueak conspiracy."

"We don't know 'all about it,' Martha. He'll be useful. He has already dug up one significant fact. There is a leak in our own office."

"Um, yes. That's why you dragged me away from the clinic. Well, there'll be some changes made."

"Not too hastily. We'll assume that you can trust any of the women. This scheme, by its nature, is masculine. Women are not a part of it and their interests aren't considered. But be wary of the men on the staff. I think you had better handle the deposit of Hamilton's plasm yourself-today. Better keep an eye on the women, though."

"I shall. Honest, chief, don't you think you should have told him what he was getting into?"

"You forget that it's not my secret."

"No, I suppose not. Just the same, he's much too good stock to risk in such games. Why do you think they recruited him?"

"He thinks it's because he's a handy man with a gun and rich as well. But I think you have answered your own question-he's starline stock. He's good breeding material. The 'Survivors' aren't entirely fools."

"Oh ho! I hadn't thought of that. Well, I still say it's a damn shame to risk him in such business."

"Public custodians must not permit themselves the luxury of personal sentimentality, Martha. They have to take the long view."

"Hmmm...There is something a little terrifying about a man with too long a view."

CHAPTER SIX

"We don't speak the same lingo"

HAMILTON FELIX discovered that a conspirator can be a busy person, especially if he is also engaged in counter-conspiracy. He tried to present a convincing picture to McFee Norbert and his other associates in the Survivors Club of an enthusiastic neophyte, anxious in every way to promote the cause. Indoctrination classes, dull in themselves but required before advancement in the organization could be expected, took a good deal of time. He endured these patiently, trying his best to maintain actually the frame of mind of romantic acceptance during instruction, in order that his questions and reactions in general would arouse no suspicion.

In addition to lessons in the principles of the New Order new members were assigned tasks to perform. Since the organization was ruled with an absolute fromthe-top-down discipline, the reasons for the tasks were never explained nor were questions permitted. The assigned job might actually have significance to the conspiracy, or it might simply be a test, with every person concerned in the matter actually a brother clubmember. The recruit had no way of knowing.

Hamilton saw what happened to one candidate who neglected to take the instruction seriously.

He was tried in the presence of the chapter. Attendance on the part of junior members was compulsory. McFee Norbert acted as prosecutor and judge. The accused was not represented by spokesman, but was permitted to explain his actions.

He had been directed to deliver in person a specific message to a specific person. This he had done, but recognizing the man to whom he had been sent as one he had seen at the club, he had revealed himself. "You had not been told that this man was one in whom you could confide?" McFee persisted.

"No, but he—"

"Answer me."

"No, I had not been told that."

McFee turned to the company present and smiled thinly. "You will note, " he stated, "that the accused had no means whatsoever of knowing the exact status of the man he was to contact. He might have been a brother we suspected and wished to test; he might have been a government operative we had unmasked; the accused might have been misled by a chance resemblance. The accused had no way of knowing. Fortunately the other man was none of these things, but was a loyal brother of superior rank."

He turned back to the accused. "Brother Hornby Willem, stand up." The accused did so. He was unarmed.

"What is the first principle of our doctrines?"

"The Whole is greater than the parts."

"Correct. You will understand, then, why I find it necessary to dispense with you."

"But I didn't—" He got no further. McFee burned him down where he stood.

Hamilton was part of the task group which took the body and spirited it to a deserted corridor, then disposed it so that it would appear to have become deceased in an ordinary private duel, a matter of only statistical interest to police monitors. McFee commanded the group himself and earned Hamilton's reluctant admiration for the skill with which he handled the ticklish matter. Hamilton won McFee's approval by the intelligent alacrity which he showed in carrying out his orders.

"You are getting ahead fast, Hamilton," he said to him when they had returned to the clubroom. "You'll be up with me soon. By the way, what did you think of the object lesson?"

"I don't see what else you could have done, " Hamilton declared. "You can't make an omelet without breaking eggs."

"'You can't make an—' Say, that's a good one!" McFee laughed and dug him in the ribs. "Did you make it up, or hear it somewhere?"

Hamilton shrugged. He promised himself that he would cut off McFee's ears for that dig in the ribs-after all this was over.

He reported the matter in detail, through devious channels, to Mordan, including his own part as an accessory before and after the fact. Getting his reports to Mordan occupied a good portion of his time and thoughts. Neither of his secret lives could be permitted to show above water. His daily conduct had to conform, superficially, with his public persona; it was necessary to continue his social life as usual, see his agent when his affairs required it, be seen in public in his habitual manner. It is not necessary to enumerate the varied means by which he found safe channels of communication to Mordan in the midst of this pattern; the methods of intrigue have varied little through the millennia. One example will suffice; Mordan had provided him with a tube address to which (he maintained) messages might be safely sent. He dare not assume that it was safe to stat a letter over his own telephone, but he could and did assume that a public phone picked at random could be used for dictation recording. The spool containing his report would then be consigned at once to the anonymity of the postal system.

Longcourt Phyllis took up much of his free time. He freely admitted that the woman intrigued him; he did not admit even to himself that she represented anything more than diversion to him. Nevertheless he was quite likely to be found waiting for her at the end of her working day. For she was a working woman-four hours a day, seven days a week, forty weeks a year, as a practical psychopediatrician in the Wallingford Infant Development Center.

Her occupation disturbed him a little. Why anyone should voluntarily associate day after day with a mob of yelling sticky little brats was beyond him. She seemed normal otherwise-normal but stimulating.

He was too preoccupied to take much interest in the news of the world these days, which was why he did not follow the career of J. Darlington Smith, the "Man from the Past, " very closely. He was aware that Smith had been a news sensation for a few days, until crowded out by lunar field trials, and a report (erroneous) of intelligent life on Ganymede. The public soon filed him away with the duckbill platypus and the mummy of Rameses II-interesting relics of the past no doubt, but nothing to get excited about. It might have been different if his advent had been by means of the often discussed and theoretically impossible time travel, but it was nothing of the sort-simply an odd case of suspended animation. A sight-sound record from the same period was just as interesting-if one were interested.

Hamilton had seen him once, for a few minutes, in a newscast. He spoke with a barbarous accent and was dressed in his ancient costume, baggy pantaloons described by the interlocutor as "plus fours" and a shapeless knitted garment which covered his chest and arms. None of which prepared Hamilton for the reception of a stat relating to J. Darlington Smith.

"Greetings," it began, *etc. etc.* The gist of it was that the interlocutor appointed by the Institution as temporary guardian for Smith desired that Hamilton grant the favor of an hour of his no-doubt valuable time to Smith. No explanation.

In his bemused frame of mind his first impulse was to ignore it. Then he recalled that such an act would not have fitted his former, pre-intrigue, conduct. He would have seen the barbarian, from sheer curiosity.

Now was as good a time as any. He called the Institution, got hold of the interlocutor, and arranged for Smith to come to his apartment at once. As an afterthought he called Monroe-Alpha, he having remembered his friend's romantic interest in Smith. He explained what was about to take place. "I thought you might like to meet your primitive hero."

"My hero? What do you mean?"

"I thought you were telling me what a bucolic paradise he came from?"

"Oh, that! Slight mistake in dates. Smith is from 1926. It seems that gadgeting was beginning to spoil the culture, even then."

"Then you wouldn't be interested in seeing him?"

"Oh, I think I would. It was a transition period. He may have seen something of the old culture with his own eyes. I'll be over, but I may be a little late."

"Fine. Long life." He cleared without waiting for a reply. Smith showed up promptly, alone. He was dressed, rather badly, in modern clothes, but was unarmed.

"I'm John Darlington Smith, " he began.

Hamilton hesitated for a moment at the sight of the brassard, then decided to treat him as an equal. Discrimination, he felt, under the circumstances would be sheer unkindness. "I am honored that you visit me, sir."

"Not at all. Awfully good of you, and so forth."

"I had expected that there would be someone with you."

"Oh, you mean my nursemaid." He grinned boyishly. He was, Hamilton decided, perhaps ten years younger than Hamilton himself-discounting the years he had spent in stasis. "I'm beginning to manage the lingo all right, well enough to get around."

"I suppose so, " Hamilton agreed. "Both lingos are basically Anglic."

"It's not so difficult. I wish lingo were the only trouble I had."

Hamilton was a little at a loss as to how to handle him. It was utterly inurbane to display interest in a stranger's personal affairs, dangerous, if the stranger were an armed citizen. But this lad seemed to invite friendly interest. "What is troubling you, sir?"

"Well, lots of things, hard to define. Everything is different."

"Didn't you expect things to be different?"

"I didn't expect anything. I didn't expect to come to...to now."

"Eh? I understand that-never mind. Do you mean that you did not know that you were entering the 'stasis'?"

"I did and I didn't."

"What do you mean?"

"Well...Listen, do you think you could stand a long story? I've told this story about forty-eleven times, and I know it doesn't do any good to try to shorten it. They just don't understand."

"Go ahead."

"Well, I'd better go back a little. I graduated from Eastern U in the spring of '26 and—"

"You what?"

"Oh, dear! You see in those days the schools—"

"Sorry. Just tell it your own way. Anything I can't pick up I'll ask you about later."

"Maybe that would be better. I had a pretty good job offered to me, selling bonds-one of the best houses on the Street. I was pretty well known-All-American back two seasons." Hamilton restrained himself, and made about four mental notes.

"That's an athletic honor, " Smith explained hastily. "You'll understand. I don't want you to think I was a football bum, though. To be sure the fraternity helped me a little, but I worked for every cent I got. Worked summers, too. And I studied. My major was Efficiency Engineering. I had a pretty thorough education in business, finance, economics, salesmanship. It's true that I got my job because Grantland Rice picked me-I mean football helped a lot to make me well known-but I was prepared to be an asset to any firm that hired me. You see that, don't you?"

"Oh, most certainly!"

"It's important, because it has a bearing on what happened afterwards. I wasn't working on my second million but I was getting along. Things were slick enough. The night it happened I was celebrating a little-with reason. I had unloaded an allotment of South American Republics—"

"Eh?"

"Bonds. It seemed like a good time to throw a party. It was a Saturday night, so everybody started out with the dinner-dance at the country club. It was the usual thing. I looked over the flappers for a while, didn't see one I wanted to dance with, and wandered into the locker room, looking for a drink. The attendant used to sell it to people he could trust."

"Which reminds me, " said Hamilton, and returned a moment later with glasses and refreshment.

"Thanks. His gin was pure bathtub, but usually reliable. Maybe it wasn't, that night. Or maybe I should have eaten dinner. Anyhow, I found myself listening to an argument that was going on in one end of the room. One of these parlor bolsheviks was holding forth-maybe you still have the type? Attack anything, just so long as it was respectable and decent."

Hamilton smiled.

"You do, eh? He was one of 'em. Read nothing but the American Mercury and Jurgen and then knew it all. I'm not narrow-minded. I read those things, too, but I didn't have to believe 'em. I read the Literary Digest, too, and the Times, something they would never do. To get on, he was panning the Administration and predicting that the whole country was about to go to the bow-wows...go to pieces. He didn't like the Gold Standard, he didn't like Wall Street, he thought we ought to write off the War Debts.

"I could see that some of our better members were getting pretty sick of it, so I jumped in. "They hired the money, didn't they, ' I told

him.

"He grinned at me-sneered I should say. 'I suppose you voted for him.'

"'I certainly did, ' I answered, which was not strictly true; I hadn't gotten around to registering, such things coming in the middle of the football season. But I wasn't going to let him get away with sneering at Mr. Coolidge. 'I suppose you voted for Davis.'

"'Not likely, ' he says. 'I voted for Norman Thomas. '

"Well, that burned me up. 'See here, ' I said, 'the proper place for people like you is in Red Russia. You're probably an atheist, to boot. You have the advantage of living in the greater period in the history of the greatest country in history. We've got an Administration in Washington that understands business. We're back to normalcy and we're going to stay that way. We don't need you rocking the boat. We are levelled off on a plateau of permanent prosperity. Take it from me-Don't Sell America Short!'" I got quite a burst of applause.

"'You seem pretty sure of that,' he says, weakly.

"'I ought to be,' I told him. 'I'm in the Street. '

"'Then there is no point in me arguing,' he said, and just walked out.

"Somebody poured me another drink, and we got to talking. He was a pleasant, portly chap, looking like a banker or a broker. I didn't recognize him, but I believe in establishing contacts. 'Let me introduce myself, ' he said. 'My name is Thadeus Johnson.'

"I told him mine."

"'Well, Mr. Smith, ' he said, 'you seem to have confidence in the future of our country.'

"I told him I certainly did.

"'Confident enough to bet on it?'

"'At any odds you want to name, money, marbles, or chalk.'

"'Then I have a proposition that might interest you. '

"I pricked up my ears. 'What is it?' I said.

"'Could you take a little joyride with me?' he said. 'Between the saxophones and those Charleston-crazy kids, a man can't hear himself think.' I didn't mind-those things don't break up until 3 A. M.; I knew I could stand a spell of fresh air. He had a long, low wicked-looking Hispano-Suiza. Class.

"I must have dozed off. I woke up when we stopped at his place. He took me in and fixed me a drink and told me about the stasis-only he called it a 'level-entropy field. ' And he showed it to me. He did a lot of stunts with it, put a cat in it, left it in while we killed a drink. It was all right.

"'But that isn't the half of it, ' he said. 'Watch. ' He took the cat and threw it, right through where the field would be if it was turned on.

When the cat was right spang in the center of the area, he threw the switch. We waited again, a little longer this time. Then he released the switch. The cat came sailing out, just the way it was heading when we saw it last. It landed, spitting and swearing.

"'That was just to convince you, ' he said, 'that inside that field, time doesn't exist-no increase of entropy. The cat never knew the field was turned on. '

"Then he changed his tack. "Jack, " he says, 'what will the country be like in twenty-five years?'

"I thought about it. 'The same-only more so,' I decided.

"'Think A. T. & T. will still be a good investment?'

"'Certainly!'

"'Jack, ' he says softly, "would you enter that field for ten shares of A. T. & T. ?',

"'For how long?'

"'Twenty-five years, Jack.'

"Naturally, it takes a little time to decide a thing like that. Ten of A.T. & T. didn't tempt me; he added ten of U. S. Steel. And he laid 'em out on the table. I was as sure as I'm standing here that the stock would be worth a lot more in a quarter of a century, and a kid fresh out of college doesn't get blue chips to play with very easily. But a quarter of a century! It was like dying. When he added ten of National City, I said, 'Look Mr. Johnson, let me try it for five minutes. If it didn't kill the cat, I ought to be able to hold my breath that long.'

"He had been filling out the assignments in my name, just to tempt me. He said, 'Surely, Jack.' I stepped to the proper spot on the floor while I still had my courage up. I saw him reach for the switch.

"That's all I know."

Hamilton Felix sat up suddenly. "Huh? How's that?"

"That's all I know," repeated Smith. "I started to tell him to go ahead, when I realized he wasn't there any more. The room was filled with strangers, it was a different room. I was here. I was now."

"That," said Hamilton, "deserves another drink."

They drank it in silence.

"My real trouble is this," said Smith. "I don't understand this world at all. I'm a business man, I'd like to go into business here. (Mind you, I've got nothing against this world, this period. It seems okay, but I don't understand it.) I can't go into business. Damn it, nothing works the same. All they taught me in school, all I learned on the Street, seems utterly foreign to the way they do business now."

"I should think that business would be much the same in any age-fabrication, buying, selling."

"Yes and no. I'm a finance man-and, damn it, finance is cockeyed nowadays!"

"I admit that the details are a little involved," Hamilton answered, "but the basic principles are evident enough. Say-I've a friend coming over who is the chief mathematician for the department of finance. He'll straighten you out."

Smith shook his head decisively. "I've been experted to death. They don't speak my lingo."

"Well," said Hamilton, "I might tackle the problem myself."

"Would you? Please?"

Hamilton thought about it. It was one thing to kid sobersided Clifford about his "money-machine"; another matter entirely to explain the workings of finance economics to...to the hypothetical Man from Arcturus. "Suppose we start this way," he said. "It's basically a matter of costs and prices. A business man manufactures something. That costs him money-materials, wages, housing, and so forth. In order to stay in business he has to get his costs back in prices. Understand me?"

"That's obvious."

"Fine. He has put into circulation an amount of money exactly equal to his costs."

"Say that again."

"Eh? It's a simple identity. The money he has had to spend, put into circulation, is his costs."

"Oh...but how about his profit?"

"His profit is part of his cost. You don't expect him to work for nothing."

"But profits aren't costs. They're...they're profits."

Hamilton felt a little baffled. "Have it your own way. Costs-what you rail 'costs'—plus profit must equal price. Costs and profits are available as purchasing power to buy the product at a price exactly equal to them. That's how purchasing power comes into existence."

"But...but he doesn't buy from himself."

"He's a consumer, too. He uses his profits to pay for his own and other producers' products."

"But he owns his own products."

"Now you've got me mixed up. Forget about him buying his own products. Suppose he buys what he needs for himself from other business men. It comes out the same in the long run. Let's get on. Production puts into circulation the amount of money-exactly-needed to buy the product. But some of that money put into circulation is saved and invested in new production. There it is a cost charge against the new production, leaving a net shortage in necessary purchasing power. The government makes up that shortage by issuing new money."

"That's the point that bothers me," said Smith. "It's all right for the government to issue money, but it ought to be backed by something-gold, or government bonds."

"Why, in the Name of the Egg, should a symbol represent anything but the thing it is supposed to accomplish?"

"But you talk as if money was simply an abstract symbol."

"What else is it?"

Smith did not answer at once. They had reached an impasse of different concepts, totally different orientations. When he did speak it was to another point. "But the government simply gives away all this new money. That's rank charity. It's demoralizing. A man should work for what he gets. But forgetting that aspect for a moment, you can't run a government that way. A government is just like a business. It can't be all outgo and no income."

"Why can't it?' There's no parallel between a government and a business. They are for entirely different purposes."

"But it's not sound. It leads to bankruptcy. Read Adam Smith."

"I don't know this Adam Smith. Relative of yours?"

"No, he's a—Oh, Lord!"

"Crave pardon?"

"It's no use," Smith said. "We don't speak the same lingo."

"I am afraid that is the trouble, really. I think perhaps you should go to see a corrective semantician."

"Anyhow," Smith said, one drink later, "I didn't come here to ask you to explain finance to me. I came for another purpose."

"Yes?"

"Well, you see I had already decided that I couldn't go into finance. But I want to get to work, make some money. Everybody here is rich-except me."

"Rich?"

"They look rich to me. Everybody is expensively dressed. Everybody eats well-Hell! They give food away-it's preposterous."

"Why don't you live on the dividend? Why worry about money?"

"I could, of course, but, shucks, I'm a working man. There are business chances all around. It drives me nuts not to do something about them. But I can't-I don't know the ropes. Look-there is just one thing else besides finance that I know well. I thought you might be able to show me how to capitalize on it."

"What is it?"

"Football."

"Football?"

"Football. I'm told that you are the big man in games. Games 'tycoon' they called you." Hamilton conceded it wordlessly. "Now football is a game. There ought to be money in it, handled right."

"What sort of a game? Tell me about it."

Smith went into a long description of the sport. He drew diagrams of plays, describing tackling, blocking, forward passing. He described the crowds and spoke of gate receipts. "It sounds very colorful," Hamilton admitted. "How many men get killed in an engagement?"

"Killed? You don't hurt anybody-barring a broken collar bone, or so."

"We can change that. Wouldn't it be better if the men defending the ball handlers were armored? Otherwise we would have to replace them with every maneuver."

"No, you don't understand. It's-well..."

"I suppose I don't," Hamilton agreed, "I've never seen the game played. It's a little out of my line. My games are usually mechanicals-wagering machines."

"Then you aren't interested?"

Hamilton was not, very. But he looked at the youth's disappointed face and decided to stretch a point. "I'm interested, but it isn't my line. I'll put you in touch with my agent. I think he could work something out of it. I'll talk with him first."

"Say, that's white of you!"

"I take it that means approval. It's no trouble to me, really."

The annunciator warned of a visitor-Monroe-Alpha. Hamilton let him in, and warned him, sotto voce, to treat Smith as an armed equal. Some time was consumed in polite formalities, before Monroe-Alpha got around to his enthusiasm. "I understand that your background is urban industrial, sir."

"I was mostly a city boy, if that's what you, mean."

"Yes, that was the implication. I was hoping that you would be able to tell me something of the brave simple life that was just dying out in your period."

"What do you mean? Country life?"

Monroe-Alpha sketched a short glowing account of his notion of rustic paradise. Smith looked exceedingly puzzled. "Mr. Monroe," he said, "somebody has been feeding you a lot of cock-and-bull, or else I'm very much mistaken. I don't recognize anything familiar in the picture."

Monroe-Alpha's smile was just a little patronizing. "But you were an urban dweller. Naturally the life is unfamiliar to you."

"What you describe may be unfamiliar, but the circumstances aren't. I followed the harvest two summers, I've done a certain amount of camping, and I used to spend my summers and Christmases on a farm when I was a kid. If you think there is anything romantic, or desirable per se, in getting along without civilized comforts, well, you just ought to try tackling a two-holer on a frosty morning. Or try cooking a meal on a wood-burning range."

"Surely those things would simply stimulate a man. It's the primitive, basic struggle with nature."

"Did you ever have a mule step on your foot?"

"No, but—"

"Try it some time. Honest-I don't wish to seem impertinent, but you have your wires crossed. The simple life is all right for a few days vacation, but day in and day out it's just so much dirty backbreaking drudgery. Romantic? Hell, man, there's no time to be romantic about it, and damned little incentive."

Monroe-Alpha's smile was a little bit forced. "Perhaps we aren't talking about the same thing. After all, you came from a period when the natural life had already been sullied by overemphasis on machines. Your evaluations were already distorted."

Smith himself was beginning to get a little heated. "I hate to tell you, but you don't know what you're talking about. Country life in my day, miserable as it was, was tolerable in direct proportion to the extent to which it was backed by industrialization. They may not have had electric light and running water, but they had Sears Roebuck, and everything that implies."

"Had what?" asked Hamilton.

Smith took time out to explain mail-order shopping. "But what you're talking about means giving up all that-just the noble primitive, simple and self-sufficient. He's going to chop down a tree-who sold him the ax? He wants to shoot a deer-who made his gun? No, mister, I know what I'm talking about-I've studied economics." (That to Monroe-Alpha, thought Hamilton, with a repressed grin.) "There never was and there never could be a noble simple creature such as you described. He'd be an ignorant savage, with dirt on his skin and lice in his hair. He would work sixteen hours a day to stay alive at all. He'd sleep in a filthy hut on a dirt floor. And his point of view and his mental processes would be just two jumps above an animal."

Hamilton was relieved when the discussion was broken into by another chime from the annunciator. It was just as well-Cliff was getting a little white around the lips. He couldn't take it. But, damn it, he had it coming to him. He wondered how a man could be as brilliant as Monroe-Alpha undoubtedly was-about figures-and be such a fool about human affairs.

The plate showed McFee Norbert. Hamilton would have liked not to have admitted him, but it was not politic. The worm had the annoying habit of dropping in on his underlings, which Hamilton resented, but was helpless to do anything about-as yet.

McFee behaved well enough, for McFee. He was visibly impressed by Monroe-Alpha, whose name and position he knew, but tried not to show it. Toward Smith he was patronizingly supercilious. "So you're the man from out of the past? Well, well-how amusing! You did not time it very well."

"What do you mean?"

"Ah, that would be telling! But ten years from now might have been a better time-eh, Hamilton?" He laughed.

"Perhaps," Hamilton answered shortly, and tried to turn attention away from Smith. "You might talk to Monroe-Alpha about it. He thinks we could improve things." He regretted the remark at once, for McFee turned to Monroe-Alpha with immediate interest.

"Interested in social matters, sir?"

"Yes-in a way."

"So am I. Perhaps we can get together and talk."

"It would be a pleasure, I'm sure, Felix, I must leave you now."

"So must I," McFee said promptly. "May I drop you off?"

"Don't trouble."

Hamilton broke in. "Did you wish to see me, McFee?"

"Nothing important. I hope to see you at the Club tonight."

Hamilton understood the circumlocution. It was a direct order to reportat McFee's convenience. McFee turned back to Monroe-Alpha, adding, "No trouble at all. Right on my way."

Hamilton watched them leave together with vague discomfort.

CHAPTER SEVEN

"Burn him down at once—"

LONGCOURT PHYLLIS showed up for a moment in the waiting room of the development center and spoke to Hamilton. "Hello, Filthy."

"H'lo, Phil."

"Be with you in a moment. I've got to change." She was dressed in complete coveralls, with helmet. An inhaler dangled loose about her neck.

"Okay."

She returned promptly, dressed in more conventional and entirely feminine clothes. She was unarmed. He looked her over approvingly. "That's better," he said. "What was the masquerade?"

"Hmm? Oh, you mean the aseptic uniform. I'm on a new assignment-control naturals. You have to be terrifically careful in handling them. Poor little beggars!"

"Why?"

"You know why. They're subject to infections. We don't dare let them roll around in the dirt with the others. One little scratch, and anything can happen. We even have to sterilize their food."

"Why bother? Why not let the weak ones die out?"

She looked annoyed. "I could answer that conventionally by saying that the control naturals are an invaluable reference plane for genetics-but I won't. The real point is that they are human beings. They are just as precious to their parents as you were to yours, Filthy."

"Sorry. I didn't know my parents."

She looked suddenly regretful. "Oh-Felix, I forgot!"

"No matter. I never could see," he continued, "why you want to bury yourself in that cage of monkeys. It must be deadly."

"Huh uh. Babies are fun. And they're not much trouble. Feed 'em occasionally, help them when they need it, and love them a lot. That's all there is to it."

"I've always favored the bunghole theory myself."

"The what?"

"You take the child at an early age and place it in a barrel. You feed it through the bunghole. At the age of seventeen, you drive in the bung."

She grinned at him. "Filthy, for a nice man you have a nasty sense of humor. Seriously, your method leaves out the most essential part of a child's rearing-the petting he gets from his nurses."

"I don't seem to recall much of it. I thought the basic idea was to take care of its physical needs and otherwise leave it strictly alone."

"You're way out of date. They used to have a notion of that sort, but it was silly-contra-biological." It occurred to her that Hamilton's faulty orientation might have its origin in the injudicious application of that outmoded, unfounded theory. The natural urges of mothers had prevented it ever being applied thoroughly in most cases, but his case was different. He had been what was, to her, the most tragic thing on earth-a baby that never left the development center. When she found one of these exceptions among her own charges she lavished on it extra affection and a little over. But she said nothing of this to him.

"Why," she continued, "do you think animals lick their young?"

"To cleanse them, I suppose."

"Nonsense! You can't expect an animal to appreciate cleanliness. It's a caress, an expression of instinctive affection. So-called instincts are instructive, Felix. They point to survival values."

He shrugged. "We're here."

They entered the restaurant-a pay-restaurant-he had chosen, and went to a private room reserved for them. They started the meal in silence. His usual sardonic humor was dampened by the thing in the back of his mind. This business of the Survivors Club-he had entered into it lightheartedly, but now it was developing ominous overtones which worried him. He wished that Mordan-the government, rather—would act.

He had not gotten ahead as fast in the organization as he had hoped. They were anxious to use him, willing to accept, to demand, his money, but he still had not obtained a clear picture of the whole network. He still did not know who was senior to McFee Norbert, nor did he know the numbers of the whole organization.

Meantime, daily the tightrope became more difficult to walk.

He had been permitted to see one thing which tended to show that the organization was older and larger than he had guessed. McFee Norbert had escorted him personally, as one of the final lessons in his education in the New Order, to a place in the country, location carefully concealed from Hamilton, where he was permitted to see the results of clandestine experiments in genetics.

Beastly little horrors!

He had viewed, through one-way glass, "human" children whose embryonic gills had been retained and stimulated. They were at home in air or water, but required a humid atmosphere at all times. "Useful on Venus, don't you think?" McFee had commented.

"We assumed too readily," he continued, "that the other planets in this system were not useful. Naturally the leaders will live here, most of the time, but with special adaptation, quite useful supporting types could remain permanently on any of the planets. Remind me to show you the antiradiation and low-gravity types."

"I'd be interested," Hamilton stated truthfully but incompletely. "By the way, where do we get our breeding stock?"

"That's an impertinent and irrelevant question, Hamilton, but I'll answer you. You are a leader type-you'll need to know eventually. The male plasm we supply ourselves. The females were captured among the barbarians-usually."

"Doesn't that mean rather inferior stock?"

"Yes, surely. These are simple experiments. None of them will be retained. After the Change, it will be another story. We'll have superior stock to start with-you, for example."

"Yes, of course." He did not care to pursue that line. "No one has ever told me just what our plans are for the barbarians."

"No need for juniors to discuss it. We'll save some of them for experimentation. In time, the rest will be liquidated."

A neat but sweeping plan, Hamilton had thought. The scattered tribes of Eurasia and Africa, fighting their way back up to civilization after the disasters of the Second War, consigned without their consent or knowledge to the oblivion of the laboratory or death. He decided to cut off McFee's ears a bit at a time.

"This is possibly the most stimulating exhibit," McFee had continued, moving on. Hamilton had looked where he was directed. The exhibit appeared to be a hydrocephalic idiot, but Hamilton had never seen one. His eyes saw an obviously sick child with a head much too big for it. "A tetroid type," McFee stated. "Ninety-six chromosomes. We once thought that was the secret of the hyperbrain, but we were mistaken. The staff geneticists are now on the right track."

"Why don't you kill it?"

"We will, presently. There is still something to be learned from it."

There were other things-things that Hamilton preferred not to think about. He felt now that, if he managed to get through that test without displaying his true feelings, he had been damned lucky!

The proposed extermination of the barbarians reminded him of another matter. Most curiously, the strange advent of John Darlington Smith had had an indirect effect on the plans of the Survivors Club. The compelling logic of the plans for the New Order called automatically for the deaths of the inefficient and sickly control naturals, as well as the deaths of synthesists, recalcitrant geneticists, counterrevolutionaries in general.

The plans for the latter aroused no opposition to speak of, but many of the club members had a sentimental fondness for control naturals. They regarded them with the kindly paternal contempt that members of a ruling class frequently feel for subject "inferior" races. Just what to do about this psychological problem had delayed the zero hour of the Change.

The Adirondack stasis gave a means. McFee had announced the tactical change the evening of the very day that Smith had called on Hamilton. Control naturals were to be placed in stasis for an indefinite period. It was an entirely humane procedure; the prisoners would be unhurt by their stay and would emerge in the distant future. McFee had asked Hamilton what he thought of the scheme, after the meeting.

"It should be popular," Hamilton had admitted. "But what happens after they are let out?"

McFee had looked surprised, then laughed. "We are practical men, you and I," he had said in a low voice.

"You mean..."

"Surely. But keep your mouth shut." Phyllis decided that it was time to interrupt his morose preoccupation. "What's eating you, Filthy?" she inquired. "You haven't said two words since we sat down."

He returned to his surroundings with a start. "Nothing important," he lied-wishing that he could unburden himself to her. "You haven't been chatty yourself. Anything on your mind?"

"Yes," she admitted, "I've just selected the name for our son."

"Great jumping balls of fire! Aren't you being just a little premature? You know damned well we aren't ever going to have children."

"That remains to be seen."

"Hummph! What name have you picked for this hypothetical offspring?"

"Theobald—'Bold for the People,'" she answered dreamily --

"'Bold for the—' better make it Jabez."

"Jabez? What does it mean?"

"'He will bring sorrow.'"

"'He will bring sorrow!' Filthy, you're filthy!"

"I know it. Why don't you forget all this business, give that noisy nursery a miss, and team up with me?"

"Say that slowly."

"I'm suggesting matrimony."

She appeared to consider it. "Just what do you have in mind?"

"You write the ticket. Ortho-spouse, registered companion, legal mate-any contract you want."

"To what," she said slowly, "am I to attribute this sudden change of mind?"

"It isn't sudden. I've been thinking about it ever since...ever since you tried to shoot me."

"Something's wrong here. Two minutes ago you were declaring that Theobald was impossibly hypothetical."

"Wait a minute," he said hastily. "I didn't say a word about children. That's another subject. I was talking about us."

"So? Well, understand this, Master Hamilton. When I get married, it will not be to a man who regards it as sort of a super-recreation." She turned her attention back to her dinner.

A thick silence followed for several minutes. He broke it.

"Sore at me?"

"No. Filthy, you're such a rat."

"Yeah, I know that, top. Finished?"

"Yes. Coming home with me?"

"I'd like to, but I can't tonight."

After he left her he went straight to the Hall of the Wolf. A full roundup had been ordered for that evening, no reason given but no excuses accepted. It happened also to be his first meeting since he had been promoted to the minor dignity of section leader.

The door of the clubroom stood open. A few members assembled inside were being moderately noisy and convivial, in accordance with doctrine. It was even possible that a stranger, or two, was present. Such presence was desired when nothing was going on. Later, they would be gently dismissed.

Hamilton wandered in, said hello to a couple of people, drew himself a stein of beer, and settled down to watch a dart game taking place in one end of the lounge.

Some time later, McFee bustled in, checked over the company by sight, picked up two section leaders by eye, and signalled them with a jerk of his head to get rid of the one remaining outsider. The stranger had been well lubricated; he was reluctant to leave, but presented no real problem. When he was gone and the doorway had relaxed, he said, "To business, brothers." To Hamilton he added, "You attend conference tonight, you know."

Hamilton started to acknowledge the order, when he felt a touch on his shoulder and a voice behind him. "Felix. Oh, Felix!"

He turned around, half recognizing the voice. Nevertheless, it was only his animal quickness which enabled him to cover up in time. It was Monroe-Alpha.

"I knew you were one of us," his friend said happily. "I have been wondering when—"

"Get to your section room," McFee said sternly.

"Yes, sir! See you later, Felix."

"Sure thing, Cliff," Hamilton responded heartily. He followed McFee into the council room, glad of the brief chance to get his raging thoughts in order. Cliff! Great Egg-Cliff! What in the Name of Life was he doing in this nest of vermin? Why hadn't he seen him? He knew why, of course-a member of one section was extremely unlikely to meet a member of another. Different instruction nights and so on. He cursed the whole system. But why Cliff? Cliff was the gentlest, kindest man who ever packed a gun. Why would he fall for this rot?

He considered the idea that Monroe-Alpha might be an agent provocateur, like himself-and amazed to find him there. Or perhaps not amazed-he might know Hamilton's status even though Hamilton did not know his. No, that did not make sense. Cliff didn't have the talent for the deception required. His emotions showed on his sleeve. He was as pellucid as air. He couldn't act worth a damn.

McFee was speaking. "Leaders, I have been ordered to transmit to you great news!" He paused. "The Change is upon us."

They stirred, alert, attentive. Hamilton sat up. Hell's delight! he thought, the ship about to raise and I have to be saddled with that holy fool Cliff. "Bournby!"

"Yes, sir."

"You and your section-prime communications. Here's your spool. Memorize it at once. You'll cooperate with the chief of propaganda." "Right."

"Steinwitz, your section is assigned to Power Center. Take your spool. Harrickson!"

"Yes, sir."

It went on and on, Hamilton listened with half his mind, face impassive, while he tried to think himself out of his predicament. Mordan had to be warned-that was primary!—at the earliest possible moment at which he could break clear. After that, if there was some way to save the fool from his folly, he would try it. "Hamilton!" "Yes, sir."

"Special assignment. You will—"

"Just a moment, Chief. Something has come to my attention that constitutes a danger to the movement."

"Yes?" McFee's manner was impatient and frosty. "Junior member Monroe-Alpha. I want him assigned to me."

"Impossible. Attend your orders."

"I am not being undisciplined," Hamilton stated evenly. "I happen to know this man better than any of you. He is erratic and inclined to be hysterical. He's a deviant type, but personally devoted to me. I want him where I can keep an eye on him."

McFee tapped the table impatiently. "Utterly impossible. Your zeal exceeds your sense of subordination. Don't repeat the error. Furthermore, if what you say is true, he is better off where he is-you couldn't use him. Mosely-you're his section leader. Watch him. If necessary, burn him down."

"Yes, sir."

"Now, Hamilton—" Hamilton realized with sinking heart that his attempt to find a way out for Monroe-Alpha had simply placed his friend in greater jeopardy. He was snapped to attention by McFee's succeeding words. "At the time of action, you will get yourself admitted to the Moderator for Genetics-Mordan. Burn him down at once, being particularly careful not to give him a chance to draw."

"I know his speed," Hamilton said dryly.

McFee relaxed a trifle. "You need no help on the assignment, as you are one man who can get in to see him easily-as you and I know."

"That's correct."

"So it's just as well that you haven't been assigned a section. I imagine you'll enjoy this assignment; you have a personal interest, I think." He favored Hamilton with a sly smile.

Very, very small pieces, thought Hamilton. But he managed an appropriately grim smile and answered, "There's something in what you say."

"Ah, yes! That's all, gentlemen. No one is to leave until I give the word-then by ones and twos. To your sections!"

"When do we start?" someone ventured.

"Read your spools."

Hamilton stopped McFee on the way to the lounge. "I have no spool. When is the zero time?"

"Oh, yes. As a matter of fact, it hasn't been assigned yet. Be ready from now on. Stay where you can be reached."

"Here?"

"No. At your apartment."

"I'll leave, then."

"No, don't. Leave when the rest do. Come have a drink with me and help me relax. What was that song about the Rocket Pilot's Children? It tickled me."

Hamilton spent the next hour helping The Great Man relax.

Monroe-Alpha's section was dismissed shortly before McFee released them. Hamilton used his new seniority to see to it that he and his friend were among the first groups to filter out. Once outside Monroe-Alpha, tense and excited by the prospect of action, started to babble. "Shut up," Hamilton snapped.

"Why, Felix!"

"Do as you're told," he said savagely. "To your apartment."

Monroe-Alpha continued in sulky silence, which was just as well. Hamilton wanted no talk with him until he had him alone. In the meantime he had his eye open for a telephone. The distance was short-a few flights and a short slide-away. They passed two booths. The first was occupied, the second showed a glowing transparency: OUT OF SERVICE. He swore to himself and continued.

They passed a monitor, but he despaired of getting his message across to a routine-indoctrinated mind. They hurried on to Monroe-Alpha's home. Once inside and the door sealed behind them, Hamilton stepped quickly to his friend's side and relieved him of his weapon before Monroe-Alpha had time to realize what he was up to.

Monroe-Alpha stepped back in surprise. "What did you do that for, Felix?" he cried. "What's up? Don't you trust me?"

Hamilton looked him up and down. "You fool," he said bitterly. "You utter, stupid, hysterical fool!"

CHAPTER EIGHT

"Thou, beside me, in the wilderness"

"FELIX! What do you mean? What's come over you?" His expression was so completely surprised, so utterly innocent of wrongdoing, that Hamilton was momentarily disconcerted. Was it possible that Monroe-Alpha, like himself, was in it as an agent of the government and knew that Hamilton was one also?

"Wait a minute," he said grimly. "What's your status here? Are you loyal to the Survivors Club, or are you in it as a spy?"

"A spy? Did you think I was a spy? Was that why you grabbed my gun?"

"No," Hamilton answered savagely, "I was afraid you weren't a spy."

"But—"

"Get this. I am a spy. I'm in this thing to bust it up. And, damn it, if I were a good one, I'd blow your head off and get on with my work. You bloody fool, you've gummed the whole thing up!"

"But...but Felix, I knew you were in it. That was one of the things that persuaded me. I knew you wouldn't—"

"Well, I'm not! Where does that put you? Where do you stand? Are you with me, or against me?"

Monroe-Alpha looked from Hamilton's face to the gun in his fist, then back to his face. "Go ahead and shoot," he said.

"Don't be a fool!"

"Go ahead. I may be a fool-I'm not a traitor."

"Not a traitor-you! You've already sold out the rest of us."

Monroe-Alpha shook his head. "I was born into this culture. I had no choice and I owe it no loyalty. Now I've had a vision of a worthwhile society. I won't sacrifice it to save my own skin."

Hamilton swore. "'God deliver us from an idealist.' Would you let that gang of rats run the country?"

The telephone said softly but insistently, "Someone's calling. Someone's calling. Someone's—" They ignored it.

"They aren't rats. They propose a truly scientific society and I'm for it. Maybe the change will be a little harsh but that can't be helped. It's for the best—"

"Shut up. I haven't time to argue ideologies with you." He stepped toward Monroe-Alpha, who drew back a little, watching him.

Hamilton suddenly, without taking his eyes off Monroe-Alpha's face, kicked him in the groin. "Someone's calling. Someone's calling." Hamilton bolstered his gun-fast-bent over the disabled man and punched him in the pit of the stomach, not with-his fist but with stiffened fingers. It was nicely calculated to paralyse the diaphragm-and did. He dragged Monroe-Alpha to a point under the telephone, placed a knee in the small of his back, and seized his throat with the left hand.

"One move is all you'll get," he warned. With his right hand he cut in the phone. His face was close to the pick-up; nothing else would be transmitted.

McFee Norbert's face appeared in the frame. "Hamilton!" he said. "What in the hell are you doing there?"

"I went home with Monroe-Alpha."

"That's direct disobedience. You'll answer for it-later. Where's Monroe-Alpha?"

Hamilton gave a brief, false, but plausible, explanation.

"A fine time to have to do that," McFee commented. "Give him these orders: he is relieved from duty. Tell him to get far away and stay away for fortyeight hours. I've decided to take no chances with him."

"Right," said Hamilton.

"And you-do you realize how near you came to missing your orders? You should be in action ten minutes before the section group moves in. Get going."

"Now?"

"Now."

Hamilton cleared the circuit. Monroe-Alpha had started to struggle the second the phone came to life. Hamilton had ground his knee into his spine and clamped down hard on his throat, but it was a situation which could mot be maintained indefinitely.

He eased up on Monroe-Alpha a little. "You heard those orders?"

"Yes," Monroe-Alpha acknowledged hoarsely.

"You are going to carry them out. Where's your runabout?"

No answer. Hamilton dug in viciously. "Answer me. On the roof?"

"Yes."

Hamilton did not bother to answer. He took his heavy automatic from its holster and struck Monroe-Alpha behind his right ear. The man's head jerked once, then sagged limply. Hamilton turned to the phone and signalled Mordan's personal number. He waited apprehensively while distant machinery hunted, fearful that the report would come back, "NOWHERE AVAILABLE." He was relieved when the instrument reported instead, "Signalling."

After an interminable time-all of three or four seconds—Mordan's face lighted up the frame. "Oh-hello, Felix."

"Claude-the time's come! This is it."

"Yes, I know. That's why I'm here." The background behind him showed his office.

"You-knew?"

"Yes, Felix."

"But...Never mind. I'm coming over."

"Yes, certainly." He cut off.

Hamilton reflected grimly that one more surprise would be just enough to cause him to start picking shadows off the wall. But he had no time to worry about it. He rushed into his friend's bedchamber, found what he wanted immediately-small pink capsules, Monroe-Alpha's habitual relief from the peril of sleepless worry. He returned then and examined Monroe-Alpha briefly. He was still out cold.

He picked him up in his arms, went out into the corridor, and sought the lift. He passed one startled citizen on the way. Hamilton looked at him, said, "Sssh-you'll waken him. Open the lift for me, will you please?"

The citizen looked dubious, shrugged, and did as he was requested.

He found Monroe-Alpha's little skycar without trouble, removed the key from his friend's pocket, and opened it. He dumped his burden inside, set the pilot for the roof of the Clinic, and depressed the impeller bar. He had done all he could for the moment; in overcity traffic automatic operation was faster than manual. It would be five minutes, or more, before he reached Mordan, but, even at that, he had saved at least ten minutes over what it would have taken by tube and slideway.

It consoled him somewhat for the time he had wasted on Monroe-Alpha.

The man was beginning to stir. Hamilton took a cup from the cooler, filled it with water, dissolved three of the capsules in it, and went to his side. He slapped him.

Monroe-Alpha sat up. "Whassa matter?" he said. "Stop it. What's happened?"

"Drink this." Hamilton put the cup to his lips.

"What happened? My head hurts."

"It ought to-you had quite a fall. Drink it. You'll feel better."

Monroe-Alpha complied docilely. When he had finished, Hamilton watched him narrowly, wondering if he would have to slug him again before the hypnotic took hold. But Monroe-Alpha said nothing more, seemed still dazed, and shortly was sleeping soundly.

The car grounded gently.

Hamilton raised the panel of the communicator, shoved his foot inside, and pushed. There was a satisfying sound of breaking crystal and snapping wires. He set the pilot on due South, without destination, opened the door, and stepped out. He turned, reached inside, sought the impeller bar-but hesitated without depressing it. He stepped back inside and removed the selector key from the pilot. He stepped out again, depressed the impeller-and ducked. As the door slammed shut, the little runabout angled straight up, seeking cruising altitude.

He did not wait for it to go out of sight, but turned and started below.

Monroe-Alpha awoke with a dry mouth, an excruciatingly throbbing head, a nauseous feeling at his midriff, and a sense of impending disaster. He became aware of things in that order.

He knew that he was in the air, in a skycar, and alone, but how had he gotten there, why he was there, escaped him. He had had some dreadful nightmares-they seemed to have some bearing on it. There was something he should be doing.

This was the Day, the Day of the Change! That was it!

But why was he here? He should be with his section. No. No, McFee had said --

What was it he had said? And where was Hamilton? Hamilton was a spy! Hamilton was about to betray them all!

He must inform McFee at once. Where was he? No matter-call him!

It was then that he found the wrecked communicator. And the bright sunlight outside told him it was too late, too late. Whatever had come of Hamilton's treachery had already happened. Too late.

The pieces were beginning to fall into place. He recalled the ugly interview with Hamilton, the message from McFee, the fight. Apparently he had been knocked out. There was nothing left to do but to go back, turn himself in to his leader, and confess his failure.

No. McFee had given him orders to stay out, to stay away for two days. He must obey. The Whole is greater than the parts.

But those orders did not apply-McFee had not known about Hamilton.

He knew now. That was certain. Therefore, the orders did apply. What was it McFee had said? "I've decided to take no chances on him."

They didn't trust him. Even McFee knew him for what he was-a thumb-fingered idiot who could be depended on to do the wrong thing at the wrong time.

He never had been any good. All he was fit for was to do fiddling things with numbers. He knew it. Everybody knew it. Hazel knew it. If he met a girl he liked, the best he could do was to knock her off her feet. Hamilton knew it. Hamilton hadn't even bothered to kill him-he wasn't worth killing. They hadn't really wanted him in the Survivors Club-not in a pinch. They just wanted him available to set up the accounting for the New Order. McFee had spoken to him about that, asked him if he could do it. Naturally, he could. That's all he was-a clerk.

Well, if they wanted him for that, he'd do it. He wasn't proud. All he asked was to serve. It would be a fairly simple matter to set up foolproof accounting for a collective-type state. It would not take him long; after that, his usefulness ended, he would be justified in taking the long sleep.

He got up, having found some comfort in complete self-abnegation. He rinsed out his mouth, drank more than a litre of water, and felt a little better. He rummaged in the larder, opened a seal of tomato juice, drank it, and felt almost human, in a deeply melancholy way.

He then investigated his location. The car was hovering; it had reached the extreme limit of its automatic radius. The ground was concealed by clouds, though it was bright sunlight where he was. The pilot showed him the latitude and longitude; a reference to the charts placed him somewhere over the Sierra Nevada Mountains-almost precisely over the Park of the Giant Redwoods, he noticed.

He derived a flicker of interest from that. The Survivors Club, in their public, social guise, claimed the Generalsherman Tree as president emeritus. It was a nice jest, he thought-the unkillable, perfectly adapted Oldest Living Thing on Earth. The sabotaged pilot put wrinkles between his eyes. He could fly it manually, but he could not enter the traffic of the Capital until it was repaired. He would have to seek some small town --

- No, McFee had said to go away and stay away-and McFee meant what he said. If he went to any town, he would be mixed up in the fighting.

He did not admit to himself that he no longer had any stomach for it-that Hamilton's words had left him with unadmitted doubts.

Still, it must be repaired. There might be a repair station at the Park-must be, in fact, in view of the tourist traffic. And surely the Change would not cause any fighting there. He cut in the fog eyes and felt his way down. When he grounded a single figure approached. "You can't stay," the man said, when he was in earshot. "The Park's closed."

"I've got to have a repair," said Monroe-Alpha. "Why is the Park closed?"

"Can't say. Some trouble down below. The rangers were called on special duty hours ago, and we sent the tourists out. There's nobody here but me."

"Can you repair?"

"Could...maybe. What's the trouble?" Monroe-Alpha showed him. "Can you fix it?"

"Not the talkie box. Might scare up some parts for the pilot. What happened? Looks like you smashed it yourself."

"I didn't." He opened a locker, located his car gun, and stuck it in his holster. The caretaker was brassarded; he shut up at once. "I think I'll take a walk while you fix it."

"Yes sir. It won't take long."

Monroe-Alpha took out his credit folder, tore out a twenty credit note, and handed it to the man. "Here. Leave it in the hangar." He wanted to be alone, to talk to no one at all, least of all this inquisitive stranger. He turned and walked away. He had seen very little of the Big Trees in landing; he had kept his eyes glued to the fog eyes and had been quite busy with the problem of landing. Nor had he ever been in the Park before. True, he had seen pictures-who has not?—but pictures are not the trees. He started out, more intent on his inner turmoil than on the giants around him. But the place got him.

There was no sun, no sky. The trees lost themselves in a ceiling of mist, a remote distance overhead. There was no sound. His own footsteps lost themselves in a carpet of evergreen needles. There was no limiting horizon; endless succession only of stately columns, slim green columns of sugar pine, a mere meter in thickness, massive red-brown columns of the great ones themselves. They receded from him on all sides, the eye could see nothing but trees-trees, the mist overhead, and the carpet of their debris, touched in spots by stubborn patches of old snow.

An occasional drop of purely local rain fell, dripping from the branches far above.

There was no time there. This had been, was and would be. Time was not. There was no need for time here; the trees negated it, ignored it. Seasons they might recognize, lightly, as one notes and dismisses a passing minute. He had a feeling that he moved too frantically for them to notice, that he was too small for them to see.

He stopped, and approached one of the elders, cautiously, as befits a junior in dealing with age. He touched its coat, timidly at first, then with palm-flat pressure, as he gained confidence. It was not cool, as bark is, but warm and live in spite of the moisture that clung to it. He drew from the tree, through its warm shaggy pelt, a mood of tranquil strength. He felt sure, on a level of being just below that of word-shaped thoughts, that the tree was serene and sure of itself, and, in some earth-slow somber fashion, happy.

He was no longer capable of worrying over the remote problems of his own ant hill. His scales had changed, and the frenetic struggles of that world had faded both in time and distance until he no longer discerned their details.

He came upon the Old One unexpectedly. He had been moving through the forest, feeling it rather than thinking about it. If there were signs warning him of what lay ahead he had not seen them. But he needed no signs to tell him what he saw. The other giants had been huge and old; this one dwarfed them as they dwarfed the sugar pines.

Four thousand years it had stood there, maintaining, surviving, building its giant thews of living wood. Egypt and Babylon were young with it-it was still young. David had sung and died. Great Caesar stained the Senate floor with his ambitious blood. Mohamet fled. Colon Christopher importuned a queen, and the white men found the tree, still standing, still green. They named him for a man known only through that fact-Generalsherman. The Generalsherman Tree.

It had no need of names. It was itself, the eldest citizen, quiet, untroubled, alive and unworried.

He did not stay near it long. It helped him, but its presence was overpowering to him, as it has been to every man who has ever seen it. He went back through the woods, finding the company of those lesser immortals almost jovial by contrast. When he got back near the underground hangar in front of which he had left his runabout, he skirted around it, not wishing to see anyone as yet. He continued on.

Presently he found his way blocked by a solid grey mass of granite which labored on up out of sight in the mist. A series of flights of steps, cleverly shaped to blend into the natural rock, wound up through its folds. There was a small sign at the foot of these stairs: MORO ROCK. He recognized it, both from pictures and a brief glimpse he had had of it through the fog in landing. It was a great grey solid mass of stone, peak-high and mountain-wide, a fit place for a Sabbat.

He started to climb. Presently the trees were gone. There was nothing but himself, the grey mist, and the grey rock. His feeling for up-and-down grew shaky, he had to watch his feet and the steps to hang on to it.

Once he shouted. The sound was lost and nothing came back.

The way led along a knife edge, on the left a sheer flat slide of rock, on the right bottomless empty grey nothingness. The wind cut cold across it. Then the path climbed the face of the rock again.

He began to hurry; he had reached a decision. He could not hope to emulate the serene, eternal certainty of the old tree-he was not built for it. Nor was he built, he felt sure, for the life he knew. No need to go back to it, no need to face it out with Hamilton nor McFee, whichever won their deadly game. Here was a good place, a place to die with clean dignity.

There was a clear drop of a thousand meters down the face of the rock.

He reached the top at last and paused, a little breathless from his final exertion. He was ready and the place was ready-when he saw that he was not alone. There was another figure, prone, resting on elbows, looking out at the emptiness.

He turned, and was about to leave. His resolution was shaken by another's presence. He felt nakedly embarrassed.

Then he turned and looked at him. Her gaze was friendly and unsurprised. He recognized her-without surprise, and was surprised that he had not been. He saw that she recognized him.

"Oh, hello," he said stupidly.

"Come sit down," she answered.

He accepted silently, and squatted beside her. She said nothing more at the time, but remained resting on one elbow, watching him-not narrowly, but with easy quietness. He liked it. She gave out warmth, as the redwoods did.

Presently she spoke. "I intended to speak to you after the dance. You were unhappy."

"Yes. Yes, that is true."

"You are not unhappy now."

"No," he found himself saying and realized with a small shock that it was true. "No, I am happy now."

They were silent again. She seemed to have no need for small speech, nor for restless movement. He felt calmed by her manner himself, but his own calm was not as deep. "What were you doing here?" he asked.

"Nothing. Waiting for you, perhaps." The answer was not logical, but it pleased him.

Presently the wind became more chill and the fog a deeper grey. They started down. The way seemed shorter this time. He made a show of helping her, and she accepted it, although she was more surefooted than he and they both knew it. Then they were on the floor of the forest and there was no further excuse to touch her hand or arm.

They encountered a group of mule deer-a five-point-buck who glanced at them and returned to the serious business of eating, his dignity undisturbed; two does who accepted them with the calm assurance of innocence long protected; and three fawns. The does were passively friendly, but enjoyed being scratched, especially behind their ears.

The fawns were skittishly curious. They crowded around, stepping on their feet and nuzzling their clothes, then would skitter away in sudden alarm at an unexpected movement, their great soft ears flopping foolishly.

The girl offered them leaves plucked from a shrub, and laughed when her fingers were nibbled. Monroe-Alpha tried it and smiled broadly-the nibbling tickled. He would have liked to have wiped his fingers, but noticed that she did not, and refrained.

He felt a compulsion to unburden himself to her, as they walked along, and tried to, stumbling. He stopped long before he had made himself clear, and looked at her, half expecting to see disgusted disapproval in her eyes. There was none. "I don't know what it is you have done," she said, "but you haven't been bad. Foolish, perhaps, but not bad." She stopped, looked a little puzzled, and added reflectively, "I've never met any bad people."

He tried to describe some of the ideals of the Survivors Club. He spoke of the plans for dealing with the control naturals as being the easiest and clearest to explain. No inhumanity, a bare minimum of necessary coercion, a free choice between a simple sterilizing operation and a trip to the future-all this in the greater interest of the race. He spoke of these things as something that might be done if the people were wise enough to accept it.

She shook her head. "I don't think I would care for it," she said gently, but with clear finality. He dropped the subject.

He was surprised when it became dark. "I suppose we should hurry on to the lodge," he said.

"The lodge is closed." That was true, he remembered. The Park was closed; they were not supposed to be there. He started to ask her if she had a skycar there, or had she come up through the tunnel, but checked himself. Either way, she would be leaving him. He did not want that; he himself was not pressed for time-his fortyeight hours would not be up until the morrow. "I saw some cabins as I came this way," he suggested.

They found them, nestling half hidden in a hollow. They were unfurnished and, quite evidently out of service, but strong and weather-tight. He rummaged around in the cupboards and found a little glow-heater with more than enough charge showing on its dial for their needs. Water there was, but no food. It did not matter.

There were not even cushion beds available, but the floor was warm and clean. She lay down, seemed to nestle out a bed in the floor as an animal might, said, "Good night," and closed her eyes. He believed that she went to sleep at once.

He expected to find it hard to get to sleep, but he fell asleep before he had time to worry about it.

When he awoke it was with a sense of wellbeing such as he had not enjoyed in many days-months. He did not attempt to analyze it at once, but simply savored it, wallowed in it, stretching luxuriously while his soul fitted itself, catlike, back into its leasehold.

Then he caught sight of her face, across the cabin floor, and knew why he felt cheerful. She was still asleep, her head cradled on the curve of her arm. Bright sun flooded in through the window and illuminated her face. It was, he decided, not necessarily a beautiful face, although he could find no fault with it. Its charm lay more in a childlike quality, a look of fresh wonder, as if she greeted each new experience as truly new and wholly delightful-so different, he thought, from the jaundiced melancholy he had suffered from.

Had suffered from. For he realized that her enthusiasm was infectious, that he had caught it, and that he owed his present warm elation to her presence.

He decided not to wake her. He had much to think of, anyhow, before he was ready to talk with another. He saw now that his troubles of yesterday had been sheer funk. McFee was a careful commander; if McFee saw fit to leave him off the firing line, he should not complain or question. The Whole was greater than the parts. McFee's decision was probably inspired by Felix, anyhow-from the best of intentions.

Good old Felix! Misguided, but a good sort anyhow. He would have to see if he couldn't intercede for Hamilton, in the reconstruction. They could not afford to hold grudges-the New Order had no place for small personal emotions. Logic and science.

There would be much to be done and he could still be useful. The next phase started today-rounding up control naturals, giving them their choice of two humane alternatives. Questioning public officials of every sort and determining whether or not they were temperamentally suited to continue to serve under the New Order. Oh, there was much to be done-he wondered why he had felt yesterday that there was no place for him.

Had he been as skilled in psychologies as he was in mathematics he might possibly have recognized his own pattern for what it was-religious enthusiasm, the desire to be a part of a greater whole and to surrender one's own little worries to the keeping of an overbeing. He had been told, no doubt, in his early instruction, that revolutionary political movements and crusading religions were the same type-form process, differing only in verbal tags and creeds, but he had never experienced either one before. In consequence, he failed to recognize what had happened to him. Religious frenzy? What nonsense-he believed himself to be an extremely hardheaded agnostic.

She opened her eyes, saw him and smiled, without moving. "Good morning," she said.

"Good morning, good morning," he agreed. "I neglected to ask your name yesterday."

"My name is Marion," she answered. "What is yours?"

"I am Monroe-Alpha Clifford."

"'Monroe-Alpha,'" she mused. "That's a good line, Clifford. I suppose you—" She got no further with her remark; her expression was suddenly surprised; she made two gasping quick intakes of breath, buried her face in her hands, and sneezed convulsively.

Monroe-Alpha sat up abruptly, at once alert and no longer happy.

She? Impossible!

But he faced the first test of his new-found resolution firmly. It was going to be damned unpleasant, he realized, but he had to do it. The Whole is greater than the parts.

He even derived unadmitted melancholy satisfaction from the realization that he could do his duty, no matter how painful. "You sneezed," he said accusingly.

"It was nothing," she said hastily. "Dust-dust and the sunshine."

"Your voice is thick. Your nose is stopped up. Tell me the truth. You're a 'natural'—aren't you?"

"You don't understand," she protested. "I'm a-oh, dear!" She sneezed twice in rapid succession, then left her head bowed.

Monroe-Alpha bit his lip. "I hate this as much as you do," he said, "but I'm bound to assume that you are a control natural until you prove the contrary."

"Why?"

"I tried to explain to you yesterday. I've got to take you in to the Provisional Committee-what I was talking about is already an established fact."

She did not answer him. She just looked. It made him still more uncomfortable. "Come now," he said. "No need to be tragic about it. You won't have to enter the stasis. A simple, painless operation that leaves you unchanged-no disturbance of your endocrine balance at all. Besides, there may be no need for it. Let me see your tattoo."

Still she did not answer. He drew his gun and levelled it at her. "Don't trifle with me. I mean it." He lowered his sights and pinged the floor just in front of her. She flinched back from the burnt wood and the little puff of smoke. "If you force me, I'll burn you. I'm not joking. Let me see your tattoo."

When still she made no move, he got up, went to her, grabbed her roughly by the arm, dragging her to her feet. "Let's see your tattoo."

She hesitated, then shrugged her shoulders. "All right...but you'll be sorry." She lifted her left arm. As he lowered his head to read the figures tattooed near the arm pit she brought her hand down sharply near the wrist joint of his right hand. At the same instant her right fist made a painful surprise in the pit of his stomach.

He dropped his gun.

He dived after the gun before it had clattered to a stop and was up after her. But she was already gone. The cabin door stood open, framing a picture of sugar pines and redwoods, but no human figure. A bluejay cursed and made a flicker of blue; nothing else moved.

Monroe-Alpha leaped to the door and looked both ways, covering the same arc with his weapon, but the Giant Forest had swallowed her. She was somewhere close at hand, of course; her flight had disturbed the jay. But where? Behind which of fifty trees? Had there been snow on the ground he would have known, but the snow had vanished, except for bedraggled hollows, and the pine needles carpet of an evergreen forest left no tracks perceptible to his untrained eye-nor was it cluttered with undergrowth to impede and disclose her flight.

He cast around uncertainly like a puzzled hound. He caught a movement from the corner of his eye, turned, saw a flash of white, and fired instantly.

He had hit-that was sure. His target had fallen behind a baby pine which blocked his view, thrashed once, and was quiet. He went toward the little tree with reluctant steps, intending to finish her off mercifully, if, by chance, his first bolt had merely mutilated her.

It was not she, but a mule deer fawn. His charge had burnt away half the rump and penetrated far up into the vitals. The movement he had seen and heard could have been no more than dying reflex. Its eyes were wide open, deer soft, and seemed to him to be filled with gentle reproach. He turned away at once, feeling a little sick. It was the first nonhuman animal he had ever killed.

He spent only a few minutes more searching for her. His sense of duty he quieted by telling himself that she stood no chance of getting away here in a mountain forest anyhow, infected, as he knew her to be, with a respiratory ailment. She would have to give up and turn herself in.

Monroe-Alpha did not return to the cabin. He had left nothing there, and he assumed that the little glow-heater which had kept them warm through the night was equipped with automatic cut-off. If not, no matter-it did not occur to him to weigh his personal convenience against the waste involved. He went at once to the parking lot underground where he found his runabout, climbed in, and started its impeller. There was an immediate automatic response from the Park's traffic signal system, evidenced by glowing letters on the runabout's annunciator: NO CRUISING OVER GIANT FOREST-ANGLE THREE THOUSAND AND SCRAMBLE. He obeyed without realizing it; his mind was not on the conning of the little car.

His mind was not on anything in particular. The lethargy, the bitter melancholy, which had enervated him before the beginning of the Readjustment, descended on him with renewed force. For what good? To what purpose was this blind senseless struggle to stay alive, to breed, to fight? He drove the little capsule as fast as its impeller would shove it straight for the face of Mount Whitney, with an unreasoned half-conscious intention of making an ending there and then.

But the runabout was not built to crash. With the increase in speed the copilot extended the range of its feelers; the klystrons informed the tracker; solenoids chattered briefly and the car angled over the peak.

CHAPTER NINE

"When we die, do we die all over?"

AS HE turned his back on the lifting runabout into which he had shanghaied Monroe-Alpha, Hamilton dismissed his friend from his mind-much to do and damned little time. Hurry!

He was surprised and not pleased to find that the door giving down into the building from the roof responded at once to the code used by the Clinic staff-a combination Mordan had given him. Nor were there guards beyond that door. Why, the place might as well be wide open! He burst into Mordan's office with the fact on his mind. "This place is as unprotected as a church," he snapped. "What's the idea?" He looked around. In addition to Mordan the room contained Bainbridge Martha, his chief of technical staff, and Longcourt Phyllis. His surprise at her presence was reinforced by annoyance at seeing she was armed.

"Good evening, Felix," Mordan answered mildly. "Why should it be protected?"

"Good grief! Aren't you going to resist attack?"

"But," Mordan pointed out, "there is no reason to expect attack. This is not a strategic point. No doubt they plan to take the Clinic over later but the fighting will be elsewhere."

"That's what you think. I know better."

"Yes?"

"I was assigned to come here to kill you. A section follows me to seize the Clinic."

Mordan made no comment. He sat still, face impassive. Hamilton started to speak; Mordan checked him with a raised hand and said, "There are only three other men in the building. None of them are gunmen. How much time have we?"

"Ten minutes-or less."

"I'll inform the central peace station. They may be able to divert a few reserve monitors. Martha, send the staff home." He turned to the telephone.

The lighting flickered sharply, was replaced at once by a lesser illumination. The emergency lighting had cut in. No one needed to be told that Power Central was out. Mordan continued to the phone-it was dead.

"The building cannot be held by two guns," he observed, as if thinking aloud. "Nor is it necessary. But there is just one point necessary to protect-the plasm bank. Our friends are not completely stupid. But it is still bad strategy. They forget that a trapped animal will gnaw off a leg. Come, Felix. We must attempt it."

The significance of the attack on the Clinic raced through Hamilton's mind. The plasm bank. The one here in the Capital's clinic was repository of the plasm of genius for the past two centuries. If the rebels captured it, even if they did not win, they would have a unique and irreplaceable hostage. At the worst they could exchange it for their lives.

"What do you mean, 'two guns'?" demanded Longcourt Phyllis. "What about this?" She slapped her belt.

"I daren't risk you." Mordan answered. "You know why."

Their eyes locked for a moment. She answered with two words. "Fleming Marjorie."

"Hmm...I see your point. Very well."

"What is she doing here, anyhow?" demanded Hamilton. "And who is Fleming Marjorie?"

"She came here to talk with me-about you. Fleming Marjorie is another fifth cousin of yours. Quite a good chart. Come!" He started away briskly.

Hamilton hurried after him, thinking furiously. The significance of Mordan's last remarks broke on him with a slightly delayed action. When he understood he was considerably annoyed, but there was no time to talk about it. He avoided looking at Phyllis.

Bainbridge Martha joined them as they were leaving the room. "One of the girls is passing the word," she informed Mordan.

"Good," he answered without pausing.

The plasm bank stood by itself in the middle of a large room, a room three stories high and broad in proportion. The bank itself was arranged in library-like tiers. A platform divided it halfway up, from which technicians could reach the cells in the upper level.

Mordan went directly to the flight of stairs in the center of the mass and climbed to the platform. "Phyllis and I will cover the two front doors," he directed. "Felix, you will cover the rear door."

"What about me?" asked his chief of staff.

"You, Martha? You're not a gunman."

"There's another gun," she declared pointing at Hamilton's belt. Hamilton glanced down, puzzled. She was right. He had stuffed the gun he had taken from Monroe-Alpha under his belt. He handed it to her.

"Do you know how to use it?" asked Mordan.

"It will burn where I point it, won't it?" "Yes."

"That's all I want to know."

"Very well. Phyllis, you and Martha cover the back door. Felix and I will take a front door apiece."

The balcony platform was surrounded by a railing waist high and not quite one solid piece, for it was pierced here and there with small openings-part of an ornamental design. The plan was quite simple-crouch behind the railing, spy out the doors through the openings and use them as loopholes through which to fire.

They waited.

Hamilton got out a cigaret, stuck it in his mouth and inhaled it into burning, without taking his eyes off the lefthand door. He offered the case to Mordan, who pushed it away.

"Claude, there's one thing I can't figure out..."

"So?"

"Why in the world didn't the government bust this up before it had gone so far? I gather that I wasn't the only stoolie in the set-up. Why didn't you smear it?"

"I am not the government," Mordan answered carefully, "nor am I on the Board of Policy. I might venture an opinion."

"Let's have it."

"The only certain way to get all of the conspirators was to wait until they showed themselves. Nor will it be necessary to try them-an unsatisfactory process at best. This way they will be exterminated to the last man."

Hamilton thought about it. "It does not seem to me that the policy makers are justified in risking the whole state by delaying."

"Policy makers take a long view of things. Biologically it is better to make sure that the purge is clean. But the issue was never in doubt, Felix."

"How can you be sure? We're in a sweet spot now, as a result of waiting."

"You and I are in jeopardy, to be sure. But the society will live. It may take a little time for the monitors to recruit enough militia to subdue them in any key points they may have seized, but the outcome is certain."

"Damnation," complained Hamilton. "It shouldn't be necessary to wait to stir up volunteers among the citizens. The police force should be large enough."

"No," said Mordan. "No, I don't think so. The police of a state should never be stronger or better armed than the citizenry. An armed citizenry, willing to fight, is the foundation of civil freedom. That's a personal evaluation, of course."

"But suppose they don't? Suppose these rats win? It's the Policy Board's fault."

Mordan shrugged. "If the rebellion is successful, notwithstanding an armed citizenry, then it has justified itself biologically. By the way, be a little slow in shooting, if the first man comes through your door."

"Why?"

"Your weapon is noisy. If he is alone, we'll gain a short delay."

They waited. Hamilton was beginning to think that his timepiece had stopped, until he realized that his first cigaret was still burning. He glanced quickly back to his door, and said, "Psst!" to Mordan, and shifted his watching to the other door.

The man entered cautiously, weapon high. Mordan led him with his gunsight until he was well inside and had stepped out of direct line of sight of the door. Then he let him have it, neatly, in the head. Felix glanced at him, and noticed that it was a man he had had a drink with earlier in the evening.

The next two came in a pair. Mordan motioned for him not to shoot. He was not able to wait so long this time; they saw the body as soon as they were in the doorway. Hamilton noted with admiration that he was unable to tell which one had been shot first. They seemed to drop simultaneously.

"You need not honor my fire the next time," Mordan remarked. "The element of surprise will be lacking." Over his shoulder he called, "First blood, ladies. Anything doing there?"

"Not yet."

"Here they come!" Ba-bang! Bang! Hamilton had fired three times, winged three men. One of them stirred, attempted to raise himself and return the fire. He let him have one more bullet, which quieted him. "Thank you," said Mordan.

"For what?"

"That was my file secretary. But I would rather have killed him myself."

Hamilton cocked an eyebrow at him. "I think you once told me that a public official should try to keep his personal feeling out of his work?"

"That's true...but there is no rule saying I can't enjoy my work. I wish he had come in my door. I liked him."

Hamilton noted that Mordan had accounted for four more, silently, while Hamilton was so noisily stopping the rush at his own door. That made five at his door, one in between, and four at Mordan's. "If they keep this up, they'll have a barricade of living flesh," he commented.

"Formerly living," Mordan corrected. "Haven't you been at that same loophole a bit too long?"

"I stand corrected on both counts." He shifted to another spot, then called back, "How is it coming, girls?"

"Martha got one," Phyllis sang out.

"Good for her! What's the matter with you?"

"I'm doing all right."

"Fine. Burn 'em so they don't wiggle."

"They don't," she stated briefly.

There were no more rushes. A portion of a head would peek out cautiously, its owner would blast once quickly without proper aim, the man would duck back. They returned the fire, but with little expectation of hitting anything. The targets never appeared twice in the same spot, and for split seconds only. They crept back and forth along the balcony, trying to enfilade the rooms beyond, but their antagonists had become cagy.

"Claude...I just thought of something funny."

"So?"

"Suppose I get killed in this. You get your own way in our argument, don't you?"

"Yes. What's the joke?"

"But if I get knocked over, you'll probably be dead too. You told me my deposit was listed only in your mind. You win and you lose."

"Not exactly. I said it was not on file. But it's identified in my will-my professional executor will carry out the plan."

"Oh, ho. So I'm a papa anyhow." He fired once at a shape that suddenly appeared in his door. There was a yelp of anguish, and the shape drew back. "Lousy," he deplored. "I must be losing my eyesight." He banked a slug off the floor in front of his door, letting it thereby ricochet loosely in the room beyond. He did the same through Mordan's door. "That's to teach 'em to keep their heads down. Look, Claude-if you had your choice, which would you prefer: for both of us to be knocked over and thereby insure your own way about my hypothetical offspring, or for both of us to get through it and be back where we started?"

Mordan considered the question. "I think I would rather try to argue around to my viewpoint. I'm afraid there isn't much of the martyr spirit in me."

"That's what I thought."

Somewhat later Mordan said, "Felix, I think they have taken to drawing our fire. I don't think that was a face I shot at last time."

"I believe you're right. I couldn't have missed a couple of times lately."

"How many shots have you left?"

Hamilton did not need to count; he knew-and it had been worrying him. He had had four clips when he left for the Hall of the Wolf-three in his belt, one in his gun, twentyeight shots in all. The last clip was in his gun; he had fired two shots from it. He held up one hand, fingers spread. "How about you?"

"About the same. I could use half charge for this sparring." He thought a moment. "Cover both doors." He crawled rapidly away through the stacks to where the two women kept guard on the rear door.

Martha heard him and turned. "Look at this, chief," she insisted, holding out her left hand. He looked-the first two joints of the forefinger were burned away and the tip of the thumb-cleanly cauterized. "Isn't that a mess?" she complained. "I'll never be able to operate again. No manipulation."

"Your assistants can operate. It's your brain that counts."

"A lot you know about it. They're clumsy-every blessed one of them. It's a miracle they can dress themselves."

"I'm sorry. How many charges have you left?"

The picture was no better here. Phyllis's lady's weapon had been only a twenty-gun to start with. Both Mordan's and Monroe-Alpha's were fifty-guns, but the gun expropriated from Monroe-Alpha had started the evening even more depleted than Mordan's. Phyllis had withdrawn Martha from anything more than standby when she had been wounded, planning to use the gun herself when her own was exhausted.

Mordan cautioned them to be still more economical with their shooting and returned to his post. "Anything happened?" he asked.

"No. What's the situation?"

Mordan told him.

Hamilton whistled tunelessly, his eye on his target. "Claude?"

"Yes, Felix."

"Do you think we are going to get out of this?"

"No, Felix."

"Hmmm...Well, it's been a nice party." A little later he added, "Damn it-I don't want to die. Not just yet...Claude, I've thought of another joke."

"Let's have it."

"What's the one thing that could give life point to it-real point?"

"That," Mordan pointed out, "is the question I've been trying to answer for you all along."

"No, no. The question itself."

"You state it," Mordan parried cautiously.

"I will. The one thing that could give us some real basis for our living is to know for sure whether or not anything happens after we die. When we die, do we die all over-or don't we?"

"Hmm...granting your point, what's the joke?"

"The joke is on me. Or rather on my kid. In a few minutes I'll probably know the answer. But he won't. He's sitting back there right now-in a way-sleeping in one of those freezers. And there is no way on earth for me to let him know the answer. But he's the one that will need to know. Isn't that funny?"

"Hmm...If that's your idea of a joke, Felix, I suggest that you stick to parlor tricks."

Hamilton shrugged jauntily. "I'm considered quite a wit-in some circles," he bragged. "Sometimes I wow myself."

"Here they come!" It was an organized rush this time, spreading fanwise from both doors. They were both very busy for perhaps two seconds, then it was over. "Any get through?"

"Two, I think," Mordan answered. "You cover the stairs. I'll stay here." It was not personal caution, but tactics. Mordan's eye and hand were fast, but Hamilton was the younger, abler man.

He watched the stairs on his belly, most of his body shielded by the stacks. He was lucky on the first shot-his man stuck his head up facing the other way. Hamilton sent him down with a hole in the back of his skull and his forehead blown away. He then shifted quickly to the far side of the stair well. But his gun was empty.

The second man came up fast. Hamilton slugged him with the empty weapon and grappled, trying to get inside his range. The man almost fought free, dragging them both part way into the staircase, but Hamilton jerked back on his head, hard. There was a crunch of bone; he went limp.

Hamilton reported back to Mordan.

"Good. Where's your gun?" Hamilton shrugged and spread his palms. "There ought to be two at the foot of the stairs," he suggested.

"You wouldn't last long enough to stoop over for them. You stay up here. Go back and get Martha's."

"Yes, sir."

He crawled back, explained what he wanted, and told Martha to hide in the stacks. She protested. "Chief's orders," he lied. Then to Phyllis, "How are you doing, kid?"

"All right."

"Keep your chin up and your head down." He glanced at the meters on both guns. They had the same charge. He bolstered Monroe-Alpha's gun, shot a quick look at the door Phyllis was covering, then grabbed her chin, turned her face around, and kissed her quickly.

"That's for keeps," he said, and turned away at once.

Mordan reported no activity. "But there will be," he added. "We don't dare waste shots on casual targets and they will soon realize it."

It seemed an interminable wait. They grimly forbore accepting the targets they were offered. "I think," said Mordan at last, "that we had better expend one charge on the next thing that appears. It might cause a worthwhile delay."

"You don't have any silly notion that we are going to get out of this now, do you? I've begun to suspect that the monitors don't even know this point was attacked."

"You may be right. But we'll keep on."

"Oh, of course."

They had a target soon-plain enough to be sure that it was a man, and not a decoy. Mordan stung him. He fell in sight, but shots were scarce-he was allowed to crawl painfully back.

Hamilton looked up for a moment. "See here, Claude-it would be worthwhile, you know-to know what happens after the lights go out. Why hadn't anyone tackled it seriously?"

"Religions do. Philosophies do."

"That isn't what I mean. It ought to be tackled the same as any other—" He stopped. "Do you smell anything?"

Mordan sniffed. "I'm not sure. What does it smell like?"

"Sweetish. It—" He felt suddenly dizzy, a strange sensation for him. He saw two of Mordan. "Gas. They've got us. So long, pal." He tried to crawl to the passageway down which Phyllis was on duty, but he achieved only a couple of clumsy, crawling steps, fell on his face, and lay still.

CHAPTER TEN

"—the only game in town"

IT WAS pleasant to be dead. Pleasant and peaceful, not monotonous. But a little bit lonely. He missed those others—serene Mordan, the dauntless gallantry of Phyllis, Cliff and his frozen face. And there was that funny little man, pathetic little man who ran the Milky Way Bar-what had he named him? He could see his face, but what had he named him? Herbie, Herbert, something like that-names didn't taste the same when words were gone. Why had he named him Herbert?

Never mind. The next time he would not choose to be a mathematician. Dull, tasteless stuff, mathematics-quite likely to give the game away before it was played out. No fun in the game if you knew the outcome. He had designed a game like that once, and called it Futility-no matter how you played, you had to win. No, that wasn't himself, that was a player called Hamilton. Himself wasn't Hamilton-not this game. He was a geneticist-that was a good one!—a game within a game. Change the rules as you go along. Move the players around. Play tricks on yourself.

"Don't you peek and close your eyes, And I'll give you something to make a s'prise!"

That was the essence of the game-surprise. You locked up your memory, and promised not to look, then played through the part you had picked with just the rules assigned to that player. Sometimes the surprises were pretty ghastly, though-he didn't like having his fingers burned off.

No! He hadn't played that position at all. That piece was an automatic, some of the pieces had to be. Himself had burned off that piece's lingers, though it seemed real at the time.

It was always like this on first waking up. It was always a little hard to remember which position Himself had played, forgetting that he had played all of the parts. Well, that was the game; it was the only game in town, and there was nothing else to do. Could he help it if the game was crooked? Even if he had made it up and played all the parts. But he would think up another game the next time. Next time...

His eyes didn't work right. They were open but he couldn't see anything. A hell of a way to run things-some mistake.

"Hey! What's going on here?"

It was his own voice. He sat up, the cloth fell from his eyes. Everything was too bright; his eyes smarted.

"What's the trouble, Felix?" He turned in the direction of the voice and strove to focus his aching eyes. It was Mordan, lying a few feet away from him. There was something he wanted to ask Mordan, but it escaped him.

"Oh. Claude. I don't feel right. How long have we been dead?"

"We aren't dead. You're just a bit sick. You'll get over it."

"Sick? Is that what it is?"

"Yes. I was sick once, about thirty years ago. It was much like this."

"Oh—" There was still something he wanted to ask Mordan, but he couldn't for the life of him recall what it was. It was important, too, and Claude would know. Claude knew everything-he made the rules.

That was silly. Still, Claude would know.

"Do you want to know what happened?" Mordan asked.

Maybe that was it. "They gassed us, didn't they? I don't remember anything after that." That wasn't quite right—there was something else. He couldn't recall.

"We were gassed, but it was done by our own monitors. Through the conditioning system. We were lucky. No one knew we were under siege inside, but they could not be sure that all of the staff were out of the building-else they would have used a lethal gas."

His head was clearing now. He remembered the fight in detail. "So? How many were left? How many did we fail to get?"

"I don't know exactly, and it's probably too late to find out. They are probably all dead."

"Dead? Why? They didn't burn them after they were down, did they?"

"No...But this gas we took is lethal without an immediate antidote-and I'm afraid that the therapists were a little bit overworked. Our own people came first."

Hamilton grinned. "You old hypocrite. Say! How about Phyllis?"

"She's all right, and so is Martha. I ascertained that when I woke up. By the way, do you know that you snore?"

"Do I really?"

"Outrageously. I listened to your music for more than an hour. You must have had a heavier dose of gas than I had. Perhaps you struggled."

"Maybe. I wouldn't know. Say, where are we?" He swung his legs out of bed, and attempted to stand. It was a foolish attempt; he just missed falling on his face.

"Lie down," ordered Mordan. "You won't be fit for several hours yet."

"I guess you're right," Hamilton admitted, sinking back on the cushion. "Say, that's a funny feeling. I thought I was going to fly."

"We're next door to the Carstairs Infirmary, in a temporary annex," Mordan continued. "Naturally, things are a bit crowded today."

"Is the party all over? Did we win?"

"Of course we won. I told you the issue was never in doubt."

"I know, but I've never understood your confidence." Mordan considered how to reply to this. "Perhaps," he said, "it would be simplest to state that they never did have what it takes. The leaders were, in most cases, genetically poor types, with conceit far exceeding their abilities. I doubt if any one of them had sufficient imagination to conceive logically the complexities of running a society, even the cut-to-measure society they dreamed of."

"They talked as if they did."

Mordan nodded. "No doubt. It's a common failing, and it's been with the race as long as it has had social organization. A little businessman thinks his tiny business is as complex and difficult as the whole government. By inversion, he conceives himself as competent to plan the government as the chief executive. Going further back in history, I've no doubt that many a peasant thought the job of the king was a simple one and that he could do it better if he only had a chance. What it boils down to is lack of imagination and overwhelming conceit."

"I would never have thought them lacking in imagination."

"There is a difference between constructive imagination and wild, uncontrolled daydreams. One is psychopathic-megalomania-unable to distinguish between fact and fancy. The other is hardheaded. In any case, the fact remains that they did not have a single competent scientist, nor a synthesist of any sort, in their whole organization. I venture to predict that, when we get around to reviewing their records, we will find that the rebels were almost all-all, perhaps-men who had never been outstandingly successful at anything. Their only prominence was among themselves."

Hamilton thought this over to himself. He had noticed something of the sort. They had seemed like thwarted men. He had not recognized a face among them as being anyone in particular outside the Survivors Club. But inside the club they were swollen with self-importance, planning this, deciding that, talking about what they would do when they "took over." Pipsqueaks, the lot of 'em.

But dangerous pipsqueaks, no matter what Mordan said. You were just as dead, burned by a childish man, as you would be if another killed you. "Felix, are you still awake?"

"Yes."

"Do you recall the conversations we were having during the fight?"

"Why, um-yes-yes, I think I do."

"You were about to say something when the gas hit us." Hamilton was slow in replying. He recalled what had been on his mind but it was difficult to fit it into adequate words. "It's like this, Claude. It seems to me that scientists tackle every problem but the important ones. What a man wants to know is 'Why?'—all that science tells him is 'What.'"

"'Why' isn't the business of science. Scientists observe, describe, hypothecate, and predict. 'What' and 'How' are their whole field; 'Why' doesn't enter into it."

"Why shouldn't 'Why' enter into it? I don't want to know how far it is from here to the Sun; I want to know why the Sun is there-and why I am standing here looking at it. I ask what life is for, and they show me a way to make better bread."

"Food is important. Try going without it."

"Food isn't important after you've solved that problem."

"Were you ever hungry?"

"Once-when I was studying basic socio-economics. But It was just instructional. I never expect to be hungry again—and neither does anybody else. That's a solved problem and it answers nothing. I want to know What next? Where to? Why?"

"I had been thinking about these matters," Mordan said slowly, "while you were sleeping. The problems of philosophy seem to be unlimited, and it is not too healthy to dwell on unlimited questions. But last night you seemed to feel that the key problem, for you, was the old, old question as to whether a man was anything more than his hundred years here on earth? Do you still feel that way?"

"Yes...I think I do. If there was anything, anything more at all, after this crazy mix-up we call living, I could feel that there might be some point to the whole frantic business, even if I did not know and could not know the full answer while I was alive."

"And suppose there was not? Suppose that when a man's body disintegrates, he himself disappears absolutely. I'm bound to say I find it a probable hypothesis."

"Well—It wouldn't be cheerful knowledge, but it would be better than not knowing. You could plan your life rationally, at least. A man might even be able to get a certain amount of satisfaction in planning things better for the future, after he's gone. A vicarious pleasure in the anticipation."

"I assure you he can," Mordan stated, from his own inner knowledge. "But, I take it, either way, you would feel that the question you posed to me in our first interview was fairly answered."
"Mmm, yes."

"Whereupon you would be willing to cooperate in the genetics program planned for you?"

"Yes, if."

"I don't propose to give you an answer here and now," Mordan answered equably. "Would you be willing to cooperate if you knew that a serious attempt was being made to answer your question?"

"Easy there! Wait a minute. You-win-and-I-lose. I ought to be entitled to look at the answer. Suppose you do assign someone to look into the matter and he comes back with a negative report-after I've fulfilled my part of the bargain?"

"It would be necessary for you to place credence in me. Such a research might not be completed in years, or in our lifetimes. But suppose I declare to you that such a research were to be attempted, seriously, hard headedly, all out, and no trouble spared, would you then consent to cooperate?"

Hamilton covered his face with his hands. There were myriad factors revolving in his brain-some of which he was not fully aware of, none of which he wished to talk about. "If you did-if you did-I think perhaps—"

"Here, here," a voice boomed in the room. "What's going on in here? Mustn't excite yourselves yet."

"Hello, Joseph," Mordan greeted the newcomer.

"Morning, Claude. Feel better?"

"Much."

"You still need sleep. Put yourself to sleep."

"Very well." Mordan closed his eyes.

The man called Joseph stepped up to Felix, felt his wrist, peeled back his eyelid, and examined the eye. "You'll do."

"I want to get up."

"Not yet. I want you to sleep for a few hours first. Look at me. You feel sleepy. You—"

Felix tore his gaze away from the man's eyes, and said, "Claude!"

"He's asleep. You can't possibly wake him."

"Oh. See here, you're a therapist, aren't you?"

"Certainly."

"Is there anything that can be done to cure snoring?"

The man chuckled. "All I can suggest is that you sleep through it. Which is what I want you to do now. You are sleepy. You are falling asleep. Sleep..."

When they let him go he tried to look up Phyllis, It was difficult to find her, to begin with, since the meager hospital accommodations of the city were overcrowded and she had been ministered to, as he had been, in temporary quarters. When he did find her, they wouldn't let him in-she was sleeping, they said. Nor were they inclined to give him any information as to her condition; he could show no claim on such knowledge and it was clearly in the private sphere.

He made such a nuisance of himself that he was finally told that she was entirely well, save for a slight indisposition pursuant to gas poisoning. He had to be contented with that.

He might have gotten himself into serious trouble had he been dealing with a man, but his argument was with a grimly inflexible matron, who was about twice as tough as he was.

He had the faculty of dismissing from mind that which could not be helped. Phyllis was not on his mind once he had turned away. He started for his apartment automatically, then recalled, for the first time in a good many hours, Monroe-Alpha.

The fool, the silly fool! He wondered what had happened to him. He was reluctant to inquire since to do so might give away his connection with the conspiracy. It seemed likely that he had already found some means to do that himself.

It did not occur to him then, or at any other time, to "do the honorable thing" by reporting Monroe-Alpha. His morals were strictly pragmatic, and conformed to accepted code as closely as they did only through a shrewd and imaginative self-interest.

He called Monroe-Alpha's office-no, he was not there. He called his apartment. No answer. Temporarily blocked, he decided to go to his friend's apartment on the assumption that he might show up there first.

He got no response at the door. He knew the combination but ordinarily would not think of using it. This seemed to him an extraordinary occasion.

Monroe-Alpha was sitting in his lounging room. He looked up when Hamilton entered, but did not rise and said nothing. Hamilton walked over and planted himself in front of him. "So you're back."

"Yes."

"How long have you been back?"

"I don't know. Hours."

"You have? I signalled your phone."

"Oh, was that you?"

"Certainly it was. Why didn't you answer?"

Monroe-Alpha said nothing, looked at him dully, and looked away. "Snap out of it, man," Hamilton snapped, by now exasperated. "Come to life. The putsch failed. You know that, don't you?"

"Yes." Then he added, "I'm ready."

"Ready for what?"

"You've come to arrest me, haven't you?"

"Me? Great Egg! I'm no monitor."

"It's all right. I don't mind."

"Look here, Cliff," Hamilton said seriously. "What's gotten into you? Are you still filled up with the guff McFee dished out? Are you determined to be a martyr? You've been a fool-there's no need to be a damned fool. I've reported that you were an agent of mine." (In this he anticipated a decision he had made at the moment; he would carry it out later-if necessary.) "You're all in the clear. Well, speak up. You didn't get in on the fighting, did you?"

"No."

"I didn't think you would, after the hypno pills I stuffed down you. One more and you would have listened to the birdies. What's the trouble, then? Are you still fanatical about this damned Survivors Club tommyrot?"

"No. That was a mistake. I was crazy."

"I'll say you were crazy! But see here-you don't rate it, but you're getting away with it, cold. You don't have to worry. Just slide back in where you were and no one's the wiser."

"It's no good, Felix. Nothing's any good. Thanks, just the same." He smiled briefly and wanly.

"Well, for the love o'—I've a good mind to paste you right in the puss, just to get a rise out of you." Monroe-Alpha did not answer. His face he had let sink down into his hands; he showed in no way that he had even heard. Hamilton shook his shoulder.

"What's the matter? Did something else happen? Something I don't know about."

"Yes." It was barely a whisper.

"Do you want to tell me about it?"

"It doesn't matter." But he did start to tell of it; once started he went on steadily, in a low voice and without raising his head. He seemed to be talking only to himself, as if he were repeating over something he wished to learn by heart.

Hamilton listened uneasily, wondering whether or not he should stop him. He had never heard a man bare his secret thoughts as Monroe-Alpha was doing. It seemed indecent.

But he went on and on, until the whole pitiful, silly picture was mercilessly sharp. "And so I came back here," he concluded. He said nothing further, nor did he look up.

Hamilton looked amazed. "Is that all?"

"Yes."

"You're sure you haven't left anything out?"

"No, of course not."

"Then what, in the Name of the Egg, are you doing here?"

"Nothing. There wasn't anyplace else to go."

"Cliff, you'll be the death of me, yet. Get going. Get started. Get up off that fat thing you're sitting on and get a move on."

"Huh? Where?"

"After her, you bubble-brained idiot! Go find her."

Monroe-Alpha shook his head wearily. "You must not have listened. I tell you I tried to burn her."

Hamilton took a deep breath, let it out, then said, "Listen to me. I don't know much about women, and sometimes it seems like I didn't know anything about them. But I'm sure of this-she won't let a little thing like you taking a pot shot at her stand in the way if you ever had any chance with her at all. She'll forgive you."

"You don't really mean that, do you?" Monroe-Alpha's face was still tragic, but he clutched at the hope.

"Certainly I do. Women will forgive anything." With a flash of insight he added, "Otherwise the race would have died out long ago."

CHAPTER ELEVEN

"—then a man is something more than his genes!"

"I CANNOT say," remarked the Honorable Member from Great Lakes Central, "that I place high evaluation on Brother Mordan's argument that this project be taken up to get young Hamilton's consent to propagate. It is true that I am not entirely familiar with the details of the genetic sequence involved—"

"You should be," Mordan cut in somewhat acidly, "I supplied full transcript two days ago."

"I beg your pardon, brother. In those fortyeight hours I have held hearings steadily. The Mississippi Valley matter, you know. It's rather urgent."

"I'm sorry," Mordan apologized. "It's easy for a layman to forget the demands on a Planner's time."

"Never mind. No need for finicky courtesy among ourselves. I scanned the brief and the first sixty pages while we were assembling; that, with such previous knowledge of the case as I had, gives me a rough idea of your problem. But tell me, am I correct in thinking that Hamilton holds nothing exclusively in his chart? You have alternative choices?"

"Yes."

"You expected to finish with his descendent generation—how many generations would be required, using alternative choices?"

"Three additional generations."

"That is what I thought, and that is my reason for disagreeing with your argument. The genetic purpose of the sequence is, I think, of greater importance to the race, but a delay of a hundred years, more or less, is not important-not sufficiently important to justify an undertaking as major as a full effort to investigate the question of survival after death."

"I take it," put in the Speaker for the Day, "that you wish to be recorded as opposing Brother Mordan's proposal?"

"No, Hubert, no. You anticipate me-incorrectly. I am supporting his proposition. Notwithstanding the fact that I consider his reasons, though good, to be insufficient, I evaluate the proposal as worthwhile in itself. I think we should support it fully."

The Member from the Antilles looked up from the book he was reading (not rudeness; everyone present knew that he had parallel mental processes and no one expected him to waste half the use of his time out of politeness) and said, "I think George should amplify his reason."

"I will. We policy men are like a pilot who is attempting to do a careful job of conning his ship without having any idea of his destination. Hamilton has put his finger on the weak point in our whole culture-he should be a planner himself. Every decision that we make, although it is based on data, is shaped by our personal philosophies. The data is examined in the light of these philosophies. How many of you have an opinion about survival-after-death? I ask for a show of hands. Come now, be honest with yourselves." Somewhat hesitantly they put their hands up-men and women alike, every one of them. "Now," the Great Lakes member continued, "the hands of those who are sure that their opinions are correct."

All of the hands went down, save that of the Member from Patagonia. "Bravo!" Rembert of the Lakes called out. "I should have guessed that you would be sure."

She took the cigar out of her mouth, said rather sharply, "Any fool knows that one," and went back to her needlework. She was over a hundred years old, and the only control natural in the Board. Her district had confirmed her tenure regularly for more than fifty years. Her eyesight was thought to be failing, but she had all of her own yellow teeth. Her wrinkled, mahogany features showed more evidence of Indian blood than Caucasian. They all claimed to be a little afraid of her.

"Garvala," Rembert said to her, "perhaps you can cut the matter short by giving us the answer?"

"I can't tell you the answer-and you wouldn't believe me if I did." She was silent for a moment, then added, "Let the boy do as he pleases. He will anyway."

"Do you support or oppose Mordan's proposition?"

"Support. Not that you're likely to go at it right." There was a short silence. Every member in the chamber was hastily trying to recall when, if ever, Carvala had been proven to be on the wrong side of a questionin the long run.

"It would seem obvious to me," Rembert continued, "that the only rational personal philosophy based on a conviction that we die dead, never to rise again, is a philosophy of complete hedonism. Such a hedonist might seek his pleasure in life in very subtle, indirect, and sublimated fashions; nevertheless pleasure must be his only rational purpose-no matter how lofty his conduct may appear to be. On the other hand, the possibility of something more to life than the short span we see opens up an unlimited possibility of evaluations other than hedonistic. It seems to me a fit subject to investigate."

"Granting your point," commented the woman representing the Northwest Union, "is it our business to do so? Our functions and our authority are limited; we are forbidden by constitution to meddle in spiritual matters. How about it, Johann?"

The member addressed was the only priest persona among them, he being the Most Reverend Mediator to some millions of his coreligionists south of the Rio Grande. His political prominence was the more exceptional in that the great majority of his constituents were not of his faith. "I do not see, Geraldine," he replied, "that the constitutional restriction applies. What Brother Mordan proposes is a coldly scientific investigation. Its consequences may have spiritual implications, if there are positive results, but an unbiased investigation is no violation of religious freedom."

"Johann is right," said Rembert. "There is no subject inappropriate for scientific research. Johann, we've let you fellows have a monopoly of such matters for too long. The most serious questions in the world have been left to faith or speculation. It is time for scientists to cope with them, or admit that science is no more than pebble counting."

"Go ahead. I shall be interested in seeing what you can make of them-in laboratories."

Hoskins Geraldine looked at him. "I wonder, Johann, what your attitude will be if this research should turn up facts which controvert some one of your articles of faith?"

"That," he answered imperturbably, "is a matter for me to settle with myself. It need not affect this board."

"I think," observed the Speaker for the Day, "that we might now seek a preliminary expression of opinion. Some support the proposal-are any opposed?" There was no response. "Are any undecided?" There was still no response, but one member stirred slightly. "You wished to speak, Richard?"

"Not yet. I support the proposal, but I will speak to it later."

"Very well. It appears to be unanimous...It is so ordered. I will co-opt an instigator later. Now, Richard?"

The member-at-large for transient citizens indicated that he was ready. "The research does not cover enough territory."

"Yes?"

"When proposed as a means of persuading Hamilton Felix to accede to the wishes of the State geneticists, it was sufficient. But we are now undertaking it for itself. Is that not true?"

The Speaker glanced around the room, picking up nods from all but ancient Carvala-she seemed uninterested in the whole matter. "Yes, that is true."

"Then we should undertake not just one of the problems of philosophy, but all of them. The same reasons apply."

"We are under no necessity of being consistent, you know."

"Yes, I know, am I not trammeled by the meshes of verbal logic. I am interested. I am stimulated by the vista. I want us to extend the research."

"Very well. I am interested, too. I think we might well spend the next several days discussing it. I will postpone co-opting the instigator until we determine just how far we will go."

Mordan had been intending to ask to be excused, his mission accomplished, but at this new twist, fire and earthquake, garnished with pretty girls, could not have tempted him to leave. As a citizen, he was entitled to listen if he chose; as a distinguished synthesist himself, no one would think of objecting to his physical presence in the circle of discussion.

The member for transients went on. "We should enumerate and investigate all of the problems of philosophy, especially the problems of metaphysics and epistemology."

"I had thought," the Speaker said mildly, "that epistemology had been pretty well settled."

"Certainly, certainly-in the limited sense of agreeing on the semantic nature of symbolic communication. Speech and other communication symbols necessarily refer back to agreed-upon, pointed-to referent physical facts, no matter how high the level of abstraction, for communication to take place. Beyond that we cannot communicate. That's why Brother Johann and I can't argue about religion. He carries his around inside of him and can't point to what he means-as I carry mine. We can't even be sure that we disagree. Our notions about religion may be identical, but we can't talk about it meaningfully-so we keep quiet."

Johann smiled with untroubled good nature, but said nothing. Carvala looked up from her fancywork and said sharply, "Is this a development center lecture?"

"Sorry, Carvala. We agree on the method of symbol communication-the symbol is not the referent, the map is not the territory, the speech-sound is not the physical process. We go further and admit that the symbol never abstracts all of the details of the process it refers to. And we concede that symbols can be used to manipulate symbols...dangerously but usefully. And we agree that symbols should be structurally as similar as possible to the referents for communication purposes. To that extent epistemology is settled; but the key problem of epistemology-how we know what we know and what that knowledge means, we have settled by agreeing to ignore-like Johann and myself in re theology."

"Do you seriously propose that we investigate it?"

"I do. It's a key problem in the general problem of the personality. There is a strong interconnection between it and the object of Mordan's proposal. Consider-if a man 'lives' after his body is dead or before that body was conceived, then a man is something more than his genes and his subsequent environment. The doctrine of no-personal-responsibility for personal acts has become popular through the contrary assumption. I won't go into the implications-they must be evident to all of you-in ethics, in politics, in every field. But note the parallel between map-territory and gene-chart-and-man. These basic problems are all interrelated and the solution to any of them might be the key to all the others."

"You did not mention the possibility of direct communication without symbols."

"I implied it. That is one of the things we agreed to forget when we accepted the semantic negative statements as the final word on epistemology. But it ought to be looked into again. There is something to telepathy, even if we can't measure it and manipulate it. Any man who has ever been happily married knows that, even if he's afraid to talk about it. Infants and animals and primitives have some use of it. Maybe we've been too smart. But the question ought to be reopened."

"Speaking of philosophical questions in general," put in the member from New Bolivar, "we have already agreed to subsidize one. Doctor Thorgsen's project-the ballistic stellarium-eidouraniun, I should call it. The origin and destination of the universe is certainly a classic problem of metaphysics."

"You are right," said the Speaker. "If we follow Richard's proposal, Doctor Thorgsen's project should be included."

"I suggest we did not allot Doctor Thorgsen enough credit."

"The subsidy could be increased, but he has not spent much of it. He seems to have little talent for spending money."

"Perhaps he needs abler assistants. There is Hargrave Caleb, and, of course, Monroe-Alpha Clifford. Monroe-Alpha is wasted in the department of finance."

"Thorgsen knows Monroe-Alpha. Perhaps Monroe-Alpha doesn't want to work on it."

"Nonsense! Any man likes a job that stretches his muscles."

"Then perhaps Thorgsen hesitated to ask him to help. Thorgsen is an essentially modest man, as is Monroe-Alpha."

"That seems more likely."

"In any case," the Speaker finished, "such details are for the instigator to consider, not the whole board. Are you ready for opinion? The question is Brother Richard's proposal in the broadest sense-I suggest that we postpone elaboration of the details of projects and methods until tomorrow and other morrows. In the meantime-does any member oppose?"

There was no opposition; there was full consent.

"So be it," said the Speaker. He smiled. "It seems we are about to attempt to walk where Socrates stumbled."

"Crawl, not 'walk,'" Johann corrected. "We have limited ourselves to the experimental methods of science."

"True, true. Well, 'he who crawls cannot stumble.' Now to other matters-we still have a state to govern!"

CHAPTER TWELVE

'Whither thou goest—"

"HOW WOULD you like," Felix asked Phyllis, "to have a half interest in a gladiator?"

"What in the world are you talking about?"

"This undertaking of Smith Darlington's feetball. We are going to incorporate each employee's contract and sell it. Our agent thinks it will be a good investment, and, truthfully, I think he's right."

"Feetball," repeated Phyllis meditatively. "You did say something about it, but I never understood it."

"It's a silly business, at best. Twentytwo men get out on a large open place and battle with their bare hands."

"Why?"

"The excuse is to move a little plastic spheroid from one end of the place to the other."

"What difference does it make which end it's on?"

"None, really-but it's as reasonable as any other game."

"I don't get it," Phyllis decided. "Why should anyone fight unless he wants to kill someone?"

"You have to see it to understand it. It's exciting. I even found myself shouting."

"You!'"

"Uh huh. Me. Old calm-as-a-cat Felix. It's going to take hold, I tell you. It's going to be popular. We'll sell permissions to view it physically and then all sorts of lesser rights-direct pick-up, recording, and so forth. Smith has a lot of ideas about identifying various combinations with cities and organizations and attaching color symbols to them and songs and things. He's full of ideas-an amazing young man, for a barbarian."

"He must be."

"Better let me buy you a piece of it. It's a pure spec proposition and you can get in cheap-now. It'll make you rich."

"What use have I for any more money?"

"I don't know. You might spend it on me."

"That's pretty silly. You're bloated with credit now."

"Well, that brings me around to another subject. When we're married you can really put your mind on helping me spend it."

"Are you on that subject again?"

"Why not? Times have changed. There is no obstacle anymore. I've come around to Mordan's way of thinking."

"So Mordan told me."

"He did? Egg's Name-everything goes on behind my back! Never mind. When do we stat the contract?"

"What makes you think we are going to?"

"Huh? Wait a minute-I thought that all that stood between us was a difference of opinion about children?"

"You thought too much. What I said was that I would never marry a man who didn't want children."

"But I understood you to say—" He got up and moved nervously around the room. "Say, Phil-don't you like me?"

"You're nice enough-in your own horrid way."

"Then what's the trouble?"

She did not answer.

Presently he said, "I don't know whether it makes any difference since you feel that way about it, but I love you-you know that, don't you?"

"Come here." He came near to where she was sitting. She took him by the ears and pulled his head down.

"Filthy, you big dope-you should have said that ten minutes ago." She kissed him.

Sometime later she said dreamily, "Filthy—"

"Yes, darling?"

"After we have Theobald we'll have a little girl and then another little boy, and then maybe another little girl."

"Urn—"

She sat up. "What's the matter? Aren't you pleased at the prospect?" She looked at him closely.

"Sure, sure."

"Then why are you looking so glum?"

"I was thinking about Cliff. The poor lunk.

"Hasn't he found any trace of her yet?"

"Nary a trace."

"Oh, dear!" She put her arms around him and held him.

No sign of her in the Giant Forest, though he had cut the air back to the place. No woman had registered there with the given name of Marion. No one could he find who could identify her by his description. No ship had checked in there registered to such a person. Nor did the owners of the ships that had been there know such a person-several of them knew Marions, but not the Marion-although three of them had responded to the description closely enough to send him charging across country, with wildly beating heart, on errands which cruelly disappointed him.

There remained Johnson-Smith Estaire, at whose town house he had first seen her. He had consulted her at once, after his initial failure to find Marion still at the Park. No, she didn't recall such a person. "After all, my dear Master Monroe-Alpha, the place was simply mobbed."

Did she keep a guest list? Yes, of course; what land of a hostess did he think she was? Could he see it? She sent for her social secretary.

There was no Marion on the list.

He went back again. Could she have been mistaken? No, there was no mistake. But people sometimes brought others along to such a party as that-had he thought of that? In that case she would have no record of it. Did she recall any such? No, she couldn't-it was too much to ask. Would it be too much to ask to copy the guest list? Not at all-anything to oblige.

But first he must listen to her. "It's becoming simply impossible to get servants at any reasonable wage." Couldn't he do something about it. "Dear Master Monroe-Alpha." In what way? He was the man who handled the dividend, wasn't he? That was the trouble-with the dividend so high they simply would not enter service unless you simply bribed them, my dear.

He tried to explain to her that he had no control over the dividend, that he was simply the mathematical go-between for the facts of economics and the Board of Policy. He could see that she did not believe him.

He decided not to tell her, since he wanted a favor from her, that he himself would not choose to work as a personal servant for another unless driven to it by hunger. He tried to suggest that she make use of the excellent automaton furniture manufactured by her husband, supplemented by the help of the service companies. But she would have none of it. "So common, my dear. I tell you nothing replaces a well-trained servant. I should think people of that class would take pride in such a profession. I'm sure I would if I were called to such a station in life."

Impatiently, but with aching care, he plodded through the list. Some of the addresses were outside the Capital, some as far away as South America-Johnson-Smith Estaire was a fashionable hostess. Those he could not question himself, not fast enough to satisfy the lump of misery inside him. He must needs hire agents to track them down. He did so; it took all the credit he had-personal service comes high!—he borrowed against his salary to make up the deficit. Two of the guests had died in the meantime. He set more agents to work, investigating tactfully their backgrounds and acquaintances, trying, trying to locate a woman named Marion. He dare not even leave these two deceased to the last, for fear the trail might grow cold.

The others, those living in the Capital, he investigated himself. No, we took no one with us to that party-certainly no one named Marion. Estaire's party?—let me see, she gives so many. Oh, that one-no, I'm sorry. Now let me think-do you mean Selby Marion? No, Selby Marion is a little tiny woman with bright red hair. Sorry, my dear fellow-care for a drink. No? What's the hurry?

Yes, surely. My cousin, Faircoat Marion. There's a stereo of her over there, on the organ. Not the one you're looking for? Well, signal me and tell me how you made out. Always glad to do a favor for a friend of Estaire's. Fine woman, Estaire-always lots of fun at her place.

We did take someone to that party-who was it, dear? Oh, yes, Reynolds Hans. He had some strange girl with him. No, I can't remember her name-do you, dear?—Me, I just call them all Lollipops, if they're under thirty. But here's Reynolds' address; you might ask him.

Master Reynolds did not consider it an intrusion, no. Yes, he recalled the occasion-jolly brawl. Yes, he had escorted his cousin from Sanfrisco. Why, yes, her name was Marion—Hartnett Marion. How had he known her name?

Say, that's interesting-done something like that himself once. Thought he'd lost track of the girl, only she turned up the following week at another party. Married, though, and in love with her husband-fortunately.

No, he didn't mean that Marion was married, but this other girl-kid named Francine. Did he have a picture of his cousin? Well, now, let me see, he didn't think so. Wait now, he might have a flat pic, taken when they were kids, in a scrapbook somewhere. Where would that be? He was going to clean out this flat some day and throw away a lot of this junk-never could find anything when he wanted it. Here it is-that's Marion, in the "front row, second from the left. Was that the girl?

It was she! It was she!

How fast can a skyracer be pushed? How many corners can a man cut without being patrolled? Go...go...go!

He paused for a moment and tried to still his racing heart, before signalling at the door. The scanner investigated him and the door dilated.

He found her alone. He stopped when he saw her, unable to move, unable to speak, face white.

"Come in," she said.

"You...you'll receive me?"

"Of course. I've been waiting."

He searched her eyes. They were warm and tender still, albeit troubled. "I don't understand. I tried to burn you."

"You didn't mean to. You didn't want to."

"I—But...Oh, Marion, Marion!" He stumbled forward toward her, and half fell. His head was in her lap. He shook with the racking sobs of one who has not learned how to cry.

She patted his shoulder. "My dear. My dear."

He looked up at last and found that her face was wet, even though he had heard no sound of tears. "I love you," he said. He said it tragically, as if it were an irreparable harm.

"I know. I love you."

Much later, she said to him, "Come with me."

He followed her on out into another room, where she busied herself at her wardrobe. "What are you doing?"

"I've a few things to take care of first."

"First?"

"This time I'm coming with you."

On the way back he used the phrase "after we're married."

"You intend to marry me?"

"Of course. If you'll have me!"

"You would marry a control natural?"

"Why not?" He met the issue bravely, even casually.

Why not? Well, Roman citizens, proud of their patrician Latin blood, could have told him. The white aristocracy of the Old South could have, in their little day, explained to him in detail why not. "Aryan" race-myth apologists could have defined the reasons. Of course, in each case the persons giving the reasons would have had a different "race" in mind when explaining the obscene horror he contemplated committing, but their reasons would have been the same. Even Johnson-Smith Estaire could have explained to him "Why not"—and she would most certainly cut him off her list for stooping to such an alliance. After all, kings and emperors have lost their thrones for lesser miscegenations.

"That's all I wanted to know," she said. "Come here, Clifford."

He came, a little mystified. She raised her left arm; he read the little figures tattooed there. The registration number was-no matter. But the classification letter was neither the "B" of a basic type, such as he bore, nor the "C" of a control natural. It was X-experimental.

She told him about it a little later. Her hyper-dexter great-grandparents had both been control naturals. "Of course it shows a little," she said. "I do catch colds, if I don't take my pills. And sometimes I forget. I'm a sloppy person, Clifford." A child of these two, her dexter grandfather, had been identified, rather late in life, as a mutation, probably favorable-almost certainly favorable. His mutation was no gross matter, easily recognized, but was subtle and subliminal. It had to do with emotional stability. Perhaps it would be easiest to say that he was more civilized than any man can be expected to be. Naturally, an attempt was made to conserve the mutation. She was one of the conservators.

CHAPTER THIRTEEN

"No more privacy than a guppy in an aquarium"

PHYLLIS squealed at him as he got home. "Felix!"

He chucked aside the file case he had been carrying and kissed her. "What's the trouble, Flutterbrain?"

"This. Look. Read it." "It" was a stat of a handwritten message. He read aloud: "'Espartero Carvala presents her compliments to Madame Longcourt Phyllis and prays permission to call on the morrow at half after sixteen hundred.' Hummm...You're shooting high, darling."

"But whatever am I to do?"

"Do? Why, you put out your hand, say 'How do you fare?' and then serve her something-tea, I suppose, though they say she drinks like a fish."

"Filthy!"

"What's the matter?"

"Don't joke with me. What am I to do? I can't entertain her. She's a Policy Maker-I wouldn't know what to say to her."

"Suppose she is on the Policy Board. She's human, ain't she? Our home is all right, isn't it? Go down and buy yourself a new gown-then you'll feel fit for anything."

Instead of brightening up, she began to cry. He took her in his arms, and said, "There, there! What's the trouble? Did I say something wrong?"

She stopped and dabbed at her eyes. "No. Just nerves, I guess. I'm all right."

"You startled me. You never did anything like that before."

"No. But I never had a baby before, either."

"Yeah, that's right. Well, cry, if it makes you feel better. But don't let this old fossil get under your skin, kid. You don't have to receive her, you know. I'll call her and tell her you can't."

She seemed quite recovered from her unease. "No, don't do that. I'd really like to see her. I'm curious and I'm flattered."

They had discussed with each other the question as to whether Madame Espartero Carvala had intended to call on both of them, or Phyllis only. Felix was reluctant to be present if his presence was not expected; he was equally reluctant to fail to show proper urbanity by not being present to receive a distinguished visitor. As he pointed out to Phyllis, it was his home as well as hers. He telephoned Mordan, since he knew that Mordan was much closer to such mighty and remote people than himself. Mordan gave him no help. "She's a rule unto herself, Felix. She's quite capable of breaking every custom of polite conduct, if she chooses."

"Any idea why she's coming?"

"Not the slightest. Sorry." Mordan himself wondered, but was honest enough to admit that his guesses were unsound-no data; he simply did not understand the old girl, and knew it.

Madame Espartero Carvala settled the matter herself. She came stumping in, supporting herself with a heavy cane. Clutched in her left hand was a lighted cigar. Hamilton approached her, bowed, "Madame —" he began.

She peered at him. "You're Hamilton Felix. Where's your wife?"

"If Madame will come with me." He attempted to offer her bis arm for support.

"I can manage," she said rather ungraciously. Nevertheless she clamped the cigar in her teeth and took his arm. He was amazed to find how little she weighed, judging by the pressure on his arm-but the grip of her fingers was firm. Once in the lounging room, in the presence of Phyllis, she said, "Come here, child. Let me look at you."

Hamilton stood by foolishly, not knowing whether to seat himself or leave. The old lady turned, noticing that he was still there and said, "You were very gracious to escort me in to your wife. I thank you." The formal politeness of the words were oddly at variance with her first, brittle remarks, but they were not delivered in warm tones. Felix realised that he had been clearly and unmistakably dismissed. He got out.

He went to his retiring room, selected a scrollscript, fitted it into the reader, and prepared to kill time until Carvala should leave. But he found himself unable to fix his attention on the story he selected. He found that he had used the rewind button three times and still had no notion of how the story started.

Damn! He thought-I might as well have gone to the office.

For he had an office-now. The thought made him smile a little. He was the man who was never going to be tied down, who had split his profits with a man-of-affairs rather than be troubled with business worries. Yet here he was, married, an expectant father, actually living at the same address as his wife, and-possessing an office! True, the office had nothing to do with his business affairs.

He found himself actually engaged in the Great Research which Mordan had promised. Carruthers Alfred, former member of the Board of Policy until he had retired to pursue his studies, had been co-opted as instigator for the enlarged project. He in turn had co-opted Hamilton, who had protested, that he was no synthesist, nor scientist. Nevertheless Carruthers wanted him. "You have an erratic and unorthodox imagination," he had said. "This job calls for imagination, the more heterodox the better. You needn't do routine research, if you don't want to-plenty of patient technicians for that."

Felix suspected that Mordan had had something to do with his selection, but did not press him about it. Mordan, Hamilton knew, had an overrated opinion of his ability. He esteemed himself as a second-rater, a competent and high-powered man, but a second-rater nonetheless. That chart that Mordan talked about-you could not compress a man into a diagram and hang him on a wall. He was not that chart. And didn't he know more about himself, from sitting on the inside, than any genetic technician could learn by peering down the double barrel of a 'scope?

But he had to admit he was glad that he had been invited into the project-it interested him. He had realized quite early that the enlarged project had not been taken up just to circumvent his balkiness-the transcript of authorization had shown him that. But he did not feel cheated-Mordan had delivered everything that he had promised, and Felix had become interested in the project for its own sake-both projects. Both the great public project of the Great Research and the private matter of himself, Phyllis, and their child to come.

He wondered what the little tyke would be like.

Mordan seemed confident that he knew. He had shown them the diploid chromosome chart resulting from their carefully chosen gametes, expounding on how the characteristics of the two parents would be combined in the child. Felix was not so sure; in spite of his own reasonably thorough knowledge of genetic theory and technique he was not convinced that all of a human being's multifold complexity could be wrapped up in a little blob of protoplasm smaller than a pin point. It was not reasonable. There had to be more to a man than that.

Mordan had seemed to find it highly desirable that he and Phyllis possessed so many Mendelian characteristics in common. It not only, he pointed out, made the task of selection of gametes much simpler and shorter, but also insured reinforcement of those characteristics, genetically. Paired genes would be similar, instead of opposed.

On the other hand, Hamilton found that Mordan favored the alliance of Monroe-Alpha and Hartnett Marion, although they were as dissimilar as two persons could be. Hamilton pointed out the inconsistency in reasoning. Mordan had been unperturbed. "Each genetic case is a discrete individual. No rule in genetics is invariable. They complement each other."

It was certainly obvious that Marion had made Cliff happy, happier than Felix had ever seen him.

The big dope.

He had long been of the opinion that what Cliff needed was a keeper, to lead him around on a string, fetch him indoors when it rained, and tickle him when he pouted. (Not that the opinion subtracted from his very real devotion to his friend.)

Marion seemed to qualify on all counts. She hardly let him out of her sight. She worked with him, under the euphemistic title of "special secretary."

"'Special secretary'?" Hamilton said, when Monroe-Alpha told him about it. "What does she do? Is she a mathematician?"

"Not at all. She doesn't know a thing about mathematics-but she thinks I'm wonderful!" He grinned boyishly-Hamilton was startled to see how it changed his face. "Who am I to contradict her?"

"Cliff, if you keep that up, you'll have a sense of humor yet."

"She thinks I have one now."

"Perhaps you have. I knew a man who raised warthogs once. He said they made the flowers more beautiful."

"Why did he think that?" Monroe-Alpha was puzzled and interested.

"Never mind. Just what is it that Marion does?"

"Oh, a lot of little things. Keeps track of things I forget, brings me a cup of tea in the afternoon. Mostly she's just here when I want her. When a concept won't come straight and my head feels tired, I look up and there's Molly, just sitting there, looking at me. Maybe she's been reading, but when I look up I don't have to say anything-she's looking back at me. I tell you it helps, I never get tired anymore." He smiled again.

Hamilton realized with sudden insight that there never had been anything wrong with Monroe-Alpha except that the poor boob had never been happy. He had no defenses against the world-until now. Marion had enough for both of them.

He had wanted to ask Cliff what Hazel thought of the new arrangements, but hesitated to do so. despite their close friendship. Monroe-Alpha brought it up himself. "You know, Felix, I was a little worried about Hazel."

"So?"

"Yes. I know she had said she wanted to enter a divorce, but I hadn't quite believed her."

"Why not?" Felix had inquired blandly.

Monroe-Alpha had colored. "Now, Felix, you're just trying to get me mixed up. Anyhow, she seemed positively relieved when I told her about Marion and me. She wants to take up dancing again."

Felix thought with regret that it was a mistake for a retired artist to attempt a comeback. But Cliff's next words made him realize he had been hasty. "It was Thorgsen's idea—"

"Thorgsen? Your boss?"

"Yes. He had been telling her about the outstations, particularly the ones on Pluto, of course, but he mentioned Mars and the rest, I suppose. They don't get much recreation, other than canned shows and reading." Hamilton knew what he meant, although he had never thought much about it. With the exception of the tourist cities on Luna there was nothing to attract human beings to the other planets, save for exploration and research. The devoted few who put up with the unearthly hardships necessarily lived a monklike existence. Luna was a special case, naturally; being practically in Earth's front yard and an easy jump, it was as popular for romantic holidays as Southpole had once been.

"She got the idea, or Thorgsen suggested it to her, of getting together a diversified travelling troupe to play a circuit of all the outposts."

"It doesn't sound commercial."

"It doesn't have to be. Thorgsen took the matter up for subsidy. He argued that, if research and exploration were necessary, then morale of the personnel involved was a government matter, in spite of the longstanding policy against government participation in the entertainment business, luxury business, or fine arts."

Hamilton whistled. "Nice going! Why, that principle was almost as rock solid as civil rights."

"Yes, but it was a matter of constitution. And the Planners are no fools. They don't necessarily follow precedent. Look at this job we're on."

"Yes, surely. Matter of fact, that was what I dropped in to see you about. I wanted to see how you were getting along." At the time of this conversation Hamilton was feeling his way into the whole picture of the Great Research. Carruthers had given him no fixed instructions, but had told him to spend a few weeks sizing up the problem.

The phase of the research occupying Monroe-Alpha's attention-Thorgsen's project, the Grand Eidouraniun-was much further advanced than any other aspect of the whole project, since it had been conceived originally as a separate matter before the Great Research, which included it, had been thought of. Monroe-Alpha had come into it rather late, but Hamilton had assumed that his friend would be the dominant figure in it. This, Monroe-Alpha maintained, was not true.

"Hargrave is much more fitted for this sort of work than I am. I take my directions from him-myself, and about sixty others."

"How come? I thought you were tops in the numbers racket."

"I have my specialty and Hargrave knows how to make the best use of it. You apparently have no idea of how diversified and specialized mathematics is, Felix. I remember a congress I attended last year-more than a thousand present, but there weren't more than a dozen men there I could really talk to, or understand."

"Hmmm...What does Thorgsen do?"

"Well, naturally, he isn't much use in design-he's an astrophysicist, or, more properly, a cosmic metrician. But he keeps in touch and his suggestions are always practical."

"I see. Well-got everything you want?"

"Yes," admitted Monroe-Alpha, "unless you should happen to have concealed, somewhere about your person, a hyper-sphere, a hypersurface, and some four-dimensional liquid, suitable for fine lubrication."

"Thanks. You can hand me back my leg now. I see I've been wrong again-you are acquiring a sense of humor."

"I am quite serious about it," Cliff answered without cracking a smile, "even though I haven't the slightest idea where I could find such nor how I could manipulate it if I did."

"For why? Give."

"I would like to set up a four-dimensional integrator to integrate from the solid surface of a four-dimensional cam. It would greatly shorten our work if we could do such a thing. The irony of it is that I can describe the thing I want to build, in mathematical symbology, quite nicely. It would do work, which we now have to do with ordinary ball-and-plane integrators and ordinary three-dimensional cams, in one operation whereas the system we use calls for an endless series of operations. It's a little maddening-the theory is so neat and the results are so unsatisfactory."

"I grieve for you," Hamilton had answered, "but you had better take it up with Hargrave."

He had left soon after that. It was evident that those human calculating machines needed nothing from him, and that they knew what they were doing. The project was important-damned important, he thought it was-to investigate what the Universe had been and what it would become. But it was certainly a long-distance matter and he himself would never live to see the end of it. Cliff had told him with a perfectly straight face that they hoped to check their preliminary calculations in a matter of three or three-and-a-half centuries. After that they could hope to build a really worthwhile machine which might tell them things they did not already know.

So he dismissed the matter. He admired the sort of intellectual detachment which would permit men to work on such a scale, but it was not his horse.

The Great Research in its opening phases seemed to fall into half a dozen major projects, some of which interested him more than others because they gave some hope of producing results during his lifetime. Some, however, were almost as colossal as the building of the Grand Eidouraniun. The distribution of life through the physical universe, for example, and the possibility that other, nonhuman intelligences existed somewhere. If there were such, then it was possible, with an extremely high degree of mathematical probability, that some of them, at least, were more advanced than men. In which case they might give Man a "leg up" in his philosophical education. They might have discovered "Why" as well as "How."

It had been pointed out that it might be extremely dangerous, psychologically, for human beings to encounter such superior creatures. There had been the tragic case of the Australian Aborigines in not too remote historical times-demoralized and finally exterminated by their own sense of inferiority in the presence of the colonizing Anglish.

The investigators serenely accepted the danger; they were not so constituted as to be able to do otherwise.

Hamilton was not sure it was a danger. To some it might be, but he himself could not conceive of a man such as Mordan, for example, losing his morale under any circumstances. In any case it was a long-distance project. First they must reach the stars, which required inventing and building a starship. That would take a bit of doing. The great ships which plied the lonely reaches between the planets were simply not fast enough. Some new drive must be found, if the trips were not to take generations for each leg.

That they would find life elsewhere in the universe he was quite sure, although a millennia of exploration might intervene. After all, he considered, the universe was roomy! It had taken Europeans four centuries to spread throughout the two continents of the "New World"—what about a galaxy! But Life they would find. It was not only an inner conviction; it was just short of scientific fact, for it was a tight inference of only one stage from established fact. Arrhenius the Great had set forth the brilliant speculation, sometime around the beginning of the XXth century, that life-potent spores might be carried from planet to planet, from star to star, pushed along by light pressure. The optimum size for motes to be carried along by light pressure happens to be on the same order as the sizes of bacilli. And bacilli spores are practically unkillable-heat, cold, radiation, time-they sleep through it until lodged in a favorable environment. Arrhenius calculated that spores could drift to Alpha Centauri in around nine thousand years-a mere cosmic blink of the eye.

If Arrhenius were right, then the universe was populated, not just the earth. It mattered not whether life had originated first on earth, first elsewhere, or in many different neighborhoods, once started it had to spread. Millions of years before spaceships it had spread-if Arrhenius were right. For spores alone, lodging and multiplying, would infect an entire planet with whatever forms of life were suited to that planet. Protoplasm is protean; any simple protoplasm can become any complex form of life under mutation and selection.

Arrhenius had been spectacularly vindicated, in part, in the early days of interplanetary exploration. Life had been found on all the planets, save Mercury and Pluto; even on Pluto there were signs of feeble, primitive life in the past. Furthermore, protoplasm seemed to be much the same wherever found-incredibly varied but presumably related. It was disappointing not to have found recognizable intelligence in the solar system-it would have been nice to have had neighbors! (The poor degenerate starveling descendants of the once-mighty Builders of Mars can hardly be described as intelligent

-except in charity. A half-witted dog could cheat them at cards.)

But the most startling and satisfying vindication of Arrhenius lay in the fact that spores had been trapped out in space itself, in the supposedly-sterile raw vacuum of space!

Hamilton admitted that he did not expect the search for other living intelligences to bear fruit during his tenure on Terra, unless they got a hump on themselves in dreaming up that starship and then hit the jackpot on the first or second try. And again it was not his forte-he might cook up a few gadgets for them as auxiliary mechanicals in making the ship more livable, but for the key problem, motive power, he was about twenty years too late in specializing. No, keep in touch, kibitz a little, and report to Carruthers-that was all he could do.

But there were still several other research possibilities already underway, things that had to do with human beings, with men, in their more esoteric and little-studied aspects. Things that nobody knew anything about anyhow and which he could, therefore, tackle on an equal footing with others, catch-as-catch-can, and no holds barred. Where does a man go after he's dead? And, conversely, where does he come from? He made a mental note of that latter-it suddenly occurred to him that most of the attention had been given to the first half of the paired question. What is telepathy and how do you make it tick? How is it that a man can live another life in his dreams? There were dozens more, all questions science had refused to tackle because they were too slippery-had in fact walked away from like a disgruntled cat. All of them related to some troublesome characteristic of the human personality-whatever that was-and any of them might lead to an answer as to purpose-meaning.

He felt toward these questions the free and easy attitude of the man who was asked if he could pilot a rocket: "I don't know-I've never tried." Well, he would try. And he would help Carruthers see to it that many others tried, strongly, consistently, following out every approach that could be thought of, and keeping meticulous, full, scientific records. They would track down the Ego, trap it, and put a band on its leg.

What was an ego? He didn't know, but he knew he was one. By which he did not mean his body, nor, by damn, his genes. He could localize it-on the centerline, forward of his ears, back of his eyes, and about four centimetres down from the top of the skull-no, more like six. That was where he himself lived-when he was home-he would bet on it, to the nearest centimetre. He knew closer than that, but he couldn't get in and measure it. Of course, he wasn't home all the time.

Hamilton could not figure out just why Carruthers wanted him, but then, he had not been present at an exchange between Mordan and Carruthers. "How is my Problem Child getting along?" Mordan had inquired.

"Quite well, Claude. Quite well indeed."

"What are you using him for?"

"Well..." Carruthers pursed his lips. "I'm using him as a philosopher, only he does not know it."

Mordan chuckled. "Better not let him know. I. think he might be offended to be called a philosopher."

"I shan't. Really, he's quite useful to me. You know how impossible most specialists are, and how pedantic most of our brother synthesists."

"Tut, tut. Such heresy."

"Isn't it, though? But Felix is useful to me. He has an active, uninhibited mind. His mind prowls."

"I told you he was a star line."

"Yes, you did. Every now and then you genetics laddies come out with the right answer."

"May your bed spring a leak," Mordan answered. "We can't always be wrong. The Great Egg must love human beings, he made a lot of them."

"Same argument applies to oysters, only more so."

"That's different," said Mordan. "I'm the one who loves oysters. Have you had dinner?" Felix sat up with a start. The house phone at his elbow was chiming. He flipped the come-along tab and heard Phyllis's voice. "Felix, my dear, will you come in and say goodbye to Madame Espartero?" "Coming, dear."

He returned to the lounge, feeling vaguely unsettled. He had forgotten the presence of the ancient Planner. "Madame, will you graciously permit—" "Come here, lad!" she said sharply. "I want to see you in the light." He came forward and stood before her, feeling somewhat as he always had as a child when the development center therapists checked over his growth and physical development. Damnation, he thought, she looks at me as if I were a horse and she a buyer.

She stood up suddenly and grasped her stick. "You'll do," she stated, as if the knowledge somehow annoyed her. She extracted a fresh cigar from somewhere about her person, turned to Phyllis, and said, "Goodbye, child. And thank you." Whereupon she started for the door.

Felix had to hurry to catch up with her and let her out. Felix returned to Phyllis, and said savagely, "A man that'ud do that 'ud be challenged." "Why, Felix!"

"I detest," he stated, "these damned emphatic old women. I have never seen why politeness should be the obligation of the young and rudeness the privilege of age."

"Why, Felix, she's not like that at all. I think she's a dear."

"She doesn't act like it."

"Oh, she doesn't mean anything by that. I think she's just always in a hurry."

"Why should she be?"

"Wouldn't you be-at her age?"

He hadn't thought of it from that point of view. "Maybe you're right. Sands of time, and so forth. What did the two of you talk about?"

"Oh-lots of things. When I expected the baby and what we were going to name him and what plans we had for him and things."

"I'll bet she did most of the talking." "No, I did. Occasionally she put in a question."

"Do you know, Phyllis," he said soberly, "one of the things I like least about the whole business of you and me and him is the quivering interest that outsiders take in it. No more privacy than a guppy in an aquarium."

"I know what you mean, but I didn't feel that way with her. We talked women talk. It was nice."

"Hrummph!"

"Anyway, she didn't talk much about Theobald. I told her we intended to have a little sister for Theobald presently. She was very much interested. She wanted to know when, and what plans we had for her, and what we intended to name her. I hadn't thought about that. What do you think would be a nice name, Felix?"

"Egg knows-seems to me that's rushing matters a little. I hope you told her that it would be a long, long tune."

"I did, but she seemed a little disappointed. But I want to be myself for a while, after Theobald comes. How do you like the name 'Justina'?"

"Seems all right," he answered. "What about it?"

"She suggested it."

"She did? Whose baby does she think it's going to be?"

CHAPTER FOURTEEN

"—and beat him when he sneezes'"

"Now, Felix, don't get yourself excited."

"But dammit, Claude, she's been in there a long time!"

"Not very long. First babies are often a little slow arriving."

"But-Claude, you biologist johnnies should have worked out something better than this. Women shouldn't have to go through with this."

"Such as?"

"How should I know? Ectogenesis, maybe."

"We could practice ectogenesis," Mordan answered imperturbably, "if we wished. It has been done. But it would be a mistake."

"Egg's sake-why?"

"Contrasurvival in nature. The race would be dependent on complex mechanical assistance to reproduce. The time might come when it wasn't available. Survivor types are types that survive in difficult times as well as easy times. An ectogenetic race couldn't cope with really hard, primitive conditions. But ectogenesis isn't new-it's been in use for millions of years."

"No, I suppose it-Huh? How long did you say?"

"Millions of years. What is egg-laying but ectogenesis? It's not efficient; it risks the infant zygotes too hazardously. The great auk and the dodo might still be alive today, if they had not been ectogenetic. No, Felix, we mammals have a better method."

"That's all right for you to say," Felix replied glumly. "It's not your wife that's concerned."

Mordan forebore to answer this. He went on, making conversation. "The same applies to any technique which makes life easier at the expense of hardiness. Ever hear of a bottle-baby, Felix? No, you would not have-it's an obsolete term. But it has to do with why the barbarians nearly died out after the Second Genetic War. They weren't all killed, you know-there are always survivors, no matter how fierce the war. But they were mostly bottle-babies, and the infant-generation thinned out to almost nothing. Not enough bottles and not enough cows. Their mothers could not feed them."

Hamilton raised a hand irritably. Mordan's serene detachment-for such he assumed it to be-from the events at hand annoyed him.

"The deuce with that stuff. Got another cigaret?"

"You have one in your hand," Mordan pointed out.

"Eh? So I have!" Quite unconsciously he snuffed it out, and took another one from his own pouch. Mordan smiled and said nothing.

"What time is it?"

"Fifteen-forty."

"Is that all? It must be later."

"Wouldn't you be less jumpy if you were inside?"

"Phyllis won't let me. You know how she is, Claude-a whim of steel." He smiled, but there was no gayety in it.

"You are both rather dynamic and positive."

"Oh, we get along. She lets me have my own way, and later I find out I've done just what she wanted me to do."

Mordan had no difficulty in repressing his smile. He was beginning to wonder at the delay himself. He told himself that his interest was detached, impersonal, scientific. But he had to go on telling himself.

The door dilated; an attendant showed herself. "You may come in now," she announced with brisk cheeriness.

Mordan was closer to the door; he started to go in first. Hamilton made a long arm, grabbed him by the shoulder. "Hey! What goes on here? Who's the father in this deal, anyhow?" He pushed himself into the lead. "You wait your turn."

She looked a little pale. "Hello, Felix."

"Hello, Phil." He bent over her. "You all right?"

"Of course I'm all right-this is what I'm for." She looked at him. "And get that silly smirk off your face. After all, you didn't invent fatherhood."

"You're sure you're all right?"

"I'm fine. But I must look a fright."

"You look beautiful."

A voice at his ear said, "Don't you want to see your son?"

"Eh? Oh-sure!" He turned and looked. Mordan straightened up and stood out of the way. The attendant held the baby up, half inviting him to hold it, but he kept his arms down and looked it over gingerly. It seemed to have the usual number of arms and legs, he thought, but that bright orange color-well, he didn't know. Maybe it was normal.

"Don't you approve of him?" Phyllis asked sharply.

"Huh? Sure, sure. It's a beautiful baby. He looks like you."

"Babies," said Phyllis, "don't look like anyone, except other babies."

"Why, Master Hamilton," put in the attendant, "how you are sweating! Don't you feel well?" Transferring the baby with casual efficiency to her left arm, she picked up a pad and wiped his forehead. "Take it easy. Seventy years in this one location and we've never lost a father."

Hamilton started to tell her that the gag was ancient when the establishment was new, but he restrained himself. He felt a little inhibited, a rare thing for him. "We'll take the child out for a while," the attendant went on. "Don't stay too long."

Mordan excused himself cheerily and left.

"Felix," she said thoughtfully, "I've been thinking about something."

"So?"

"We've got to move."

"Why? I thought you liked our place."

"I do. But I want a place in the country."

He looked suddenly apprehensive. "Now, darling, you know I'm not the bucolic type."

"You don't have to move if you don't want to. But Theobald and I are going to. I want him to be able to get himself dirty and have a dog and things like that."

"But why be so drastic? All development centers run to the air, sunshine, and the good 'earth motif.'

"I don't want him spending all his time in development centers. They're necessary, but they're no substitute for family life."

"I was raised in development centers."

"Take a look at yourself in the mirror."

The child grew in no particularly spectacular fashion. He crawled at a reasonable age, tried to stand, burned his fingers a few times, tried to swallow the usual quota of unswallowable objects.

Mordan seemed satisfied. So did Phyllis. Felix had no criteria.

At nine months Theobald attempted a few words, then shut up for a long time. At fourteen months he began speaking in sentences, short and of his own structure, but sentences. The subjects of his conversation, or, rather, his statements, were consistently egocentric. Normal again-no one expects an infant to write essays on the beauties of altruism.

"That," remarked Hamilton to Mordan one day, hooking a thumb toward where Theobald sat naked in the grass, trying to remove the ears from an uncooperative and slightly indignant puppy, "is your superchild, is he not?"

"Mm, yes."

"When does he start doing his miracles?"

"He won't do miracles. He is not unique in any one respect; he is simply the best we can conceive in every respect. He is uniformly normal, in the best sense of the word-optimum, rather."

"Hmm. Well, I'm glad he doesn't have tentacles growing out of his ears, or a bulging forehead, or something like that. Come here, son."

Theobald ignored him. He could be deaf when he chose; he seemed to find it particularly difficult to hear the word "No." Hamilton got up, went over and picked him up. He had no useful purpose in mind; he just wanted to cuddle the child for a while for his own amusement. Theobald resisted being separated from the pup for a moment, then accepted the change. He could soak up a great deal of petting-when it suited him. If it really did not suit him he could be extremely uncooperative.

Even to the extent of biting. He and his father had put in a difficult and instructive half hour in his fifteenth month settling the matter, beyond cautioning Felix to be careful not to damage the brat Phyllis had let them have it out. Theobald did not bite anymore, but Felix had a permanent, small, ragged scar on his left thumb.

Hamilton was almost inordinately fond of the child, although he was belligerently offhand in his manner. It hurt him that the child did not really seem to care anything about him and would as readily accept petting and endearments from "Uncle Claude"—or a total stranger-if he happened to be in the mood to accept anything of the sort.

On Mordan's advice and by Phyllis's decision (Felix was not offered a vote in the matter-she was quite capable of reminding him that she, and not he, was a psycho-pediatrician) Theobald was not taught to read any earlier than the usual age of thirty months, although experimental testing showed that he could comprehend the basic idea of abstracted symbols a little earlier than that. She used the standard extensionalized technique of getting a child to comprehend symbolic grouping-by-abstracted-characteristics while emphasizing individual differences. Theobald was rather bored with the matter and appeared to make no progress-at all for the first three weeks. Then he seemed suddenly to get the idea that there might be something in it for him-apparently by recognising his own name on a stat which Felix had transmitted from his office, for shortly thereafter he took the lead in his own instruction and displayed the concentrated interest he was capable of.

Nine weeks after the instruction began it was finished. Reading was an acquired art: further instruction would merely have gotten in his way. Phyllis let him be and restricted her efforts in the matter to seeing to it that only such reading matter was left in his reach as she wished him to attempt. Otherwise he would have read anything he could lay hands on; as it was she had to steal scrolls from him when she wanted him to exercise or eat.

Felix worried about the child's obsession with printed matter. Phyllis told him not to. "It will wear off. We've suddenly extended his psycho field; he's got to explore it for a while."

"It didn't with me. I still read when I should be doing something else. It's a vice."

He read stumblingly and with much subvocalization and was, of course, forced to call for help frequently when he ran on to symbols new to him and not sufficiently defined by context. A home is not as well equipped for extensional instruction as a development center. In a center no words appear in a primer which are not represented by examples which can be pointed to, or, if the words are action symbols, the actions are such that they can be performed there and then.

But Theobald was through with primers before he should have been and their home, although comfortably large, would have needed to be of museum size to accommodate samples in groups of every referent he inquired about. Phyllis's resourcefulness and histrionic ability were stretched to the limit, but she stuck to the cardinal principle of semantic pedagogy: never define a new symbol in terms of symbols already known if it is possible to point to a referent instead.

The child's eidetic memory first became evident in connection with reading. He read rapidly if badly and remembered what he read. Not for him was the childish custom of cherishing and rereading favorite books. A once-read scroll was to him an empty sack; he wanted another.

"What does 'infatuated' mean, Mama?" He made this inquiry in the presence of his father and Mordan.

"Hmmm," she began guardedly, "tell me what words you found it sitting with."

"'It is not that I am merely infatuated with you, as that old goat Mordan seems to think—' I don't understand that either. Is Uncle Claude a goat? He doesn't look like one."

"What," said Felix, "has that child been reading now?" Mordan said nothing, but he cocked a brow at Felix.

"I think I recognize it," Phyllis said in an aside to Felix. Then, turning back to the child, she added, "Where did you find it? Tell Phyllis."

No answer.

"Was it in Phyllis's desk?" She knew that it had been; there was secreted in there a bundle of stats, mementos of the days before she and Felix had worked out then" differences. She had the habit of rereading them privately and secretly. "Tell Phyllis."

"Yes."

"That's out of bounds, you know."

"You didn't see me," he stated triumphantly.

"No, that is true." She thought rapidly. She wished to encourage his truthfulness, but to place a deterrent on disobedience. To be sure, disobedience was more often a virtue than a sin, but-Oh, well! She tabled the matter.

Felix muttered, "That child seems to have no moral sense whatsoever."

"Have you?" she asked him, and turned back to Theobald.

"There was lots more, Mama. Want to hear it?"

"Not just now. Let's answer your two questions first."

"But Phyllis," Felix interrupted.

"Wait, Felix. I've got to answer his questions."

"Suppose you and I step out into the garden for a smoke," Mordan suggested. "Phyllis is going to be fairly busy for a while."

Quite busy. "Infatuated" was, in itself, quite a hurdle, but how to explain to a child in his forty-second month the allegorical use of symbols? She was not entirely successful; Theobald referred to Mordan indiscriminately thereafter as "Uncle Claude" or "Old Goat."

Eidetic memory is a Mendelian recessive. Both Phyllis and Felix had the gene group for it from one ancestor; Theobald had it from both his parents, by selection. The potentiality, masked as recessive in each of his parents, was therefore effective in him. Both "recessive" and "dominant" are relative terms; dominants do not cancel recessives like symbols in an equation. Both Phyllis and Felix had excellent, unusual memories. Theobald's memory was well-nigh perfect.

Recessive Mendelian characteristics are usually undesirable ones. The reason is simple-dominant characteristics get picked over by natural selection every generation. Natural selection-the dying out of the poorly equipped-goes on day in and day out, inexorable and automatic. It is as tireless, as inescapable, as entropy. A really bad dominant will weed itself out of the race in a few generations. The worst dominants appear only as original mutations, since they either kill their bearers, or preclude reproduction. Embryo cancer is such a one-complete sterility is another. But a recessive may be passed on from generation to generation, masked and not subjected to natural selection. In time a generation may arrive in which a child receives the recessive from both parents-up it pops, strong as ever. That is why the earlier geneticists found it so hard to eliminate such recessives as hemophilia and deaf-mutism; it was impossible, until the genes in question were charted by extremely difficult indirect and inferential means, to tell whether or not an adult, himself in perfect health, was actually "clean." He might pass on something grisly to his children. Nobody knew.

Felix demanded of Mordan why, in view of the bad reputation of recessives, eidetic memory should happen to be recessive rather than dominant.

"I'll answer that twice," said Mordan. "In the first place the specialists still arguing as to why some things are recessives, and others dominants. In the second place, why call eidetic, memory a desirable trait?"

"But-for Egg's sake! You selected for it for Baldy!"

"To be sure we did-for Theobald. 'Desirable' is a relative term. Desirable for whom? Complete memory is an asset only if you have the mind to handle it; otherwise it's a curse. One used to find such cases occasionally, before your time and mine-poor simple souls who were bogged down in the complexities of their own experience; they knew every tree but could not find the forest. Besides that, forgetting is an anodyne and a blessing to most people. They don't need to remember much and they don't. It's different with Theobald."

They had been talking in Mordan's office. He took from his desk a file of memoranda, arranged systematically on perhaps a thousand small punched cards. "See this? I haven't looked it over yet-it's data the technicians supply me with. Its arrangement is quite as significant as its content-more so, perhaps." He took the file and dumped the cards out onto the floor. "The data are still all there, but what use is it now?" He pressed a stud on his desk; his new file secretary entered. "Albert, will you please have these fed into the sorter again? I'm afraid I've randomed them."

Albert looked surprised, but said, "Sure, chief," and took the pied cards away.

"Theobald has the brain power, to speak loosely, to arrange his data, to be able to find it when he wants it, and to use it. He will be able to see how what he knows is related to its various parts, and to abstract from the mass significantly related details. Eidetic memory is a desirable trait in him."

No doubt-but sometimes it did not seem so to Hamilton. As the child grew older he developed an annoying habit of correcting his elders about minutiae, in which he was always maddeningly accurate. "No, Mother, it was not last Wednesday; it was last Thursday. I remember because that was the day that Daddy took me walking up past the reservoir and we saw a pretty lady dressed in a green jumpsuit and Daddy smiled at her and she stopped and asked me what my name was and I told her my name was Theobald and that Daddy's name was Felix and that I was four years and one month old. And Daddy laughed and she laughed and then Daddy said—"

"That will do," said Felix. "You've made your point. It was Thursday. But it is not necessary to correct people on little things like that."

"But when they're wrong I have to tell them!"

Felix let it ride, but he reflected that Theobald might need to be inordinately fast with a gun when he was older.

Felix had developed a fondness for country life, little as he had wanted to undertake it. Had it not been for his continuous work on the Great Research he might have taken up horticulture seriously. There was something deeply satisfying, he found, in making a garden do what he wanted it to do.

He would have spent all his holidays fussing with his plants, if Phyllis had concurred. But her holidays were less frequent than his, since she had resumed putting in one shift a day at the nearest primary development center as soon as Theobald was old enough to need the knocking around he would get from other children. When she did have a holiday she liked to go somewhere-a flying picnic, usually.

They had to live near the Capital, because of Felix's work, but the Pacific was only a little over five hundred kilometres west of them. It was convenient to pack a lunch, get to the beach in time for a swim and a nice, long, lazy bake, then eat.

Felix wanted to see the boy's reaction the first time he saw the ocean. "Well, son, this is it. What do you think of it?"

Theobald scowled out at the breakers. "It's all right," he grudged.

"What's the matter?"

"The water looks sick. And the sun ought to be off that way, not there. And where's the big trees?"

"What big trees?"

"The high slim ones, with big bushes at the top."

"Hmmm...what's wrong with the water?"

"It ain't blue."

Hamilton walked back to where Phyllis lay on the sand. "Can you tell me," he said slowly, "whether or not Baldy has ever seen stereos of royal palms-on a beach, a tropical beach?"

"Not that I know of. Why?"

"Think back. Did you use such a picture to extensionalize for him?"

"No, I'm sure of that."

"You know what he's read-has he seen any flat-picture like that."

She checked back through her excellent and well-arranged memory. "No, I would have remembered it. I would never have put such a picture in his way without explaining it to him."

The incident occurred before Theobald had been entered at the development center; what he had seen, he had seen at home. Of course it was possible that he had seen it in a news or story cast in the receiver at home, but he could not start the machine himself and neither of them recalled such a scene. Nevertheless, it was damned funny.

"What did you start to say, dear?"

Hamilton gave a slight start. "Nothing, nothing at all."

"What kind of 'nothing'?"

He shook his head. "Too fantastic. My mind was wandering."

He went back to the boy and attempted to pump him for details in an effort to ferret out the mystery. But Theobald was not talking. In fact, he was not even listening. He said so.

On a similar occasion but much later an event occurred which was quite as disturbing, but a little more productive. Felix and the boy had been splashing in the surf, until they were quite tired. At least Felix was, which made a majority with only one dissent. They lay down on the sand and let the sun dry them. Presently the salt drying on the skin made them itch, as it has a habit of doing.

Felix scratched Theobald between the shoulder blades—that awkward spot-and reflected to himself how catlike the child was in many ways, even to the sybaritic way in which he accepted this small sensuous pleasure. Just now it suited him to be petted; a moment later he might be as haughty and distant as a Persian torn. Or he might decide to cuddle.

Then Felix lay on his stomach, Theobald straddled his back and returned the favor. Felix was beginning to feel rather catlike himself-it felt so good!—when he began to be aware of a curious and almost inexplicable phenomenon.

When one human monkey does another the great service of scratching him, delightful as it is, it never quite hits the spot. With infuriating obtuseness, despite the most careful coaching, the scratcher will scratch just above, just below, all around the right spot, but never, never, never quite on it, until, in sheer frustration, the scratchee will nearly dislocate his shoulder going after it for himself.

Felix was giving Theobald no instructions; in fact, he was nearly falling asleep under the warm relaxing ecstasy of his son's ministrations, when he suddenly snapped to attention.

Theobald was scratching where Felix itched.

The exact spot. An area of sensation had only to show up for him to pounce on it and scratch it out of existence.

This was another matter that had to be taken up with Phyllis. He got up and explained to her what had happened, attempting the meanwhile to keep it from the child's attention by suggesting that he go for a run down the beach—"But don't go in more than ankle deep."

"Just try him," he added, when he had told her of it. "He can do it. He really can."

"I'd like to," she said. "But I can't. I'm sorry to say that I am still fresh and clean and free from vulgar distresses."

"Phyllis—"

"Yes, Felix?"

"What kind of a person can scratch where another person itches?"

"An angel."

"No, seriously."

"You tell me."

"You know as well as I do. That kid's a telepath!"

They both looked down the beach at a small, skinny, busy silhouette. "I know how the hen felt that hatched the ducks," said Phyllis softly. She got quickly to her feet. "I'm going in and get some salt on me, and let it dry. I've got to find out about this."

CHAPTER FIFTEEN

"Probably a blind alley—"

HAMILTON FELIX took his son into the city the next day. There were men attached to the Great Research who knew much more about such things than either he or Phyllis; he wished them to examine the boy. He took Theobald to his office, supplied him with a scroll and a reader, a dodge that would tie him to one spot almost as effectively as if he were chained down, and called Jacobstein Ray by telephone. Jacobstein was in charge of a team investigating telepathy and related phenomena.

He explained to Jake that he was unable to leave his own office at the moment. Could Jake drop over, or was he tied up? Jake could and would; he arrived a few minutes later. The two men stepped into an adjoining room, out of earshot of the child. Felix explained what had taken place on the beach and suggested that Jake look into it.

Jake was willing and interested. "But don't expect too much from it," he cautioned. "We've demonstrated telepathy in young children time and again, under circumstances which made it a statistical certainty that they were receiving information by no known physical means. But there was never any control in the business, the child was never able to explain what was going on, and the ability faded away to nothing as the child grew up and became more coherent. It seems to shrivel away just like the thymus gland."

Hamilton looked alert. "Thymus gland? Any correlation?"

"Why, no. I just used that as a figure of speech."

"Mightn't there be?"

"It seems most unlikely."

"Everything about this business seems most unlikely. How about putting a crew on it? A good biostatician and one of your operators?"

"I will if you wish."

"Good. I'll stat an open voucher to your office. It's probably a blind alley, but you never know!"

Let us add that it was a blind alley. Nothing ever came of it, but a slight addition to the enormous mass of negative information constituting the main body of scientific knowledge.

Felix and Jake went back into the room where Theobald sat reading. They seated themselves first, in order to be on the same level as the child, and Felix performed the introduction with proper attention to the enormous and vulnerable dignity of a child. He then said:

"Look, sport, Dad wants you to go with Jake and help him with some things for an hour or so. How about it?"

"Why?"

That was a tough one. With less-than-adult minds it had been found to be optimum procedure to keep them from knowing the purpose of the experimentation. "Jake wants to find out some things about the way your mind works. He'll talk with you about it. Well...will you help him?"

Theobald thought about it.

"It will be a favor to Dad." Phyllis could have warned him against that approach. Theobald had been rather slow in reaching the degree of social integration necessary to appreciate the cool pleasure of conferring benefits on others.

"Will you do me a favor?" he countered.

"What do you want?"

"A flop-eared buck." The boy had been raising rabbits, with some adult assistance; but his grandiose plans, if unchecked, would have resulted in their entire home being given over to fat, furry rodents. Nevertheless, Hamilton was somewhat relieved to find the favor desired was no larger.

"Sure thing, sport. You could have had one anyhow."

Theobald made no answer, but stood up, signifying his willingness to get on with it.

After they had gone Hamilton considered the matter for a moment. A new buck rabbit was all right; he did not mind that as much as he would have minded a new doe. But something had to be done fairly soon, or else his garden would have to be abandoned.

Theobald seemed to be working out, with the busy and wholehearted collaboration of his rabbits, an interesting but entirely erroneous neo-Mendelian concept of inherited characteristics. Why, he wanted to know, did white bunnies sometimes have brown babies? Felix pointed out that a brown buck had figured in the matter, but soon bogged down, and turned the matter over to Mordan-accepting as inevitable the loss of face involved. Theobald, he knew, was quite capable now of being interested in the get of a flop-eared buck.

The boy had formulated an interesting, but decidedly specialized, arithmetic to keep his records of rabbits, based on the proposition that one plus one equals at least five. Hamilton had discovered it by finding symbols in the boy's rabbit note book with which he was unfamiliar. Theobald boredly interpreted them for him.

Hamilton showed the records to Monroe-Alpha the next time Monroe-Alpha and Marion showed up at his home. He had regarded it as an amusing and insignificant joke, but Clifford took it with his usual dead seriousness. "Isn't it about time you started him on arithmetic?"

"Why, I don't think so. He is a little young for it-he's hardly well into mathematical analysis." Theobald had been led into mathematical symbology by the conventional route of generalized geometry, analysis, and the calculi. Naturally, he had not been confronted with the tedious, inane, and specialized mnemonics of practical arithmetic-he was hardly more than a baby.

"I don't think he is too young for it. I had devised a substitute for positional notation when I was about his age. I imagine he can take it, if you don't ask him to memorize operation tables." Monroe-Alpha was unaware that the child had an eidetic memory and Hamilton passed the matter by. He had no intention of telling Monroe-Alpha anything about Theobald's genetic background. While custom did not actually forbid such discussion, good taste, he felt, did. Let the boy alone, let him keep his private life private. He and Phyllis knew, the geneticists involved had to know, the Planners had had to know since this was a star line. Even that he regretted, for it had brought such intrusions as the visit of that old hag Carvala.

Theobald himself would know nothing, or very little, of his ancestral background until he was a grown man. He might not inquire into it, or have it brought to his attention, until he reached something around the age Felix had been when Mordan called Felix's attention to his own racial significance.

It was better so. The pattern of a man's inherited characteristics was racially important and inescapable anyhow, but too much knowledge of it, too much thinking about it, could be suffocating to the individual. Look at Cliff-damned near went off the beam entirely just from thinking about his great-grandparents. Well, Marion had fixed that.

No, it was not good to talk too much about such things. He himself had talked too much a short time before, and had been sorry ever since. He had been telling Mordan his own point of view about Phyllis having any more children-after the baby girl to come, of course. Phyllis and he had not yet come to agreement about it; Mordan had backed up Phyllis. "I would like for you two to have at least four children, preferably six. More would be better but we probably would not have time enough to select properly for that many."

Hamilton almost exploded. "It seems to me that you make plans awfully easy-for other people. I haven't noticed you doing your bit. You are pretty much of a star line yourself—how come? Is this a one-way proposition?"

Mordan had kept his serenity. "I have not refrained. My plasm is on deposit, and available if wanted. Every moderator in the country saw my chart, in the usual course of routine."

"The fact remains that you haven't done much personally about children."

"No. No, that is true. Martha and I have so many, many children in our district, and so many yet to come, that we hardly have time to concentrate on one."

From the peculiar phraseology Hamilton gained a sudden bit of insight. "Say, you and Martha are married-aren't you?"

"Yes. For twentythree years."

"Well, then...but, why—"

"We can't," Mordan said flatly, with just a shade less than his usual calm. "She's a mutation...sterile."

Hamilton's ears still burned to think that his big mouth had maneuvered his friend into making such a naked disclosure. He had never guessed the relationship; Martha never called Claude anything but "chief"; they used no words of endearment, nor let it creep otherwise into their manner. Still, it explained a lot of things-the rapport-like cooperation between the technician and the synthesist, the fact that Mordan had shifted to genetics after starting a brilliant career in social administration, his intense and fatherly interest in his charges.

He realized with a slight shock that Claude and Martha were as much parents of Theobald as were Phyllis and himself-foster parents, godparents. Mediator parents might be the right term. They were mediator parents to hundreds of thousands, he didn't know how many.

But this wasn't getting his work done-and he would have to go home early today, because of Theobald. He turned to his desk. A memorandum caught his eye-from himself to himself. Hmmm...he would have to get after that. Better talk to Carruthers. He swung around toward the phone.

"Chief?"

"Yes, Felix."

"I was talking with Doctor Thorgsen the other day, and I got an idea-may not be much in it."

"Give." Way out on far Pluto, the weather is cold. The temperature rarely rises above eighteen degrees centigrade absolute even on the side toward the sun. And that refers to high noon in the open sunlight. Much of the machinery of the observatories is exposed to this intense cold. Machinery that will work on Terra will not work on Pluto, and vice versa. The laws of physics seem to be invariable but the characteristics of materials change with changes in temperature—consider ice and water, a mild example.

Lubricating oil is a dry powder at such temperatures. Steel isn't steel. The exploring scientists had to devise new technologies before Pluto could be conquered.

Not only for mobiles but for stabiles as well-such as electrical equipment. Electrical equipment depends on, among other factors, the resistance characteristics of conductors; extreme cold greatly lowers the electrical resistance of metals. At thirteen degrees centigrade absolute lead becomes a superconductor with no resistance whatsoever. An electric current induced in such lead seems to go on forever, without damping.

There are many other such peculiarities. Hamilton did not go into them-it was a sure thing that a brilliant synthesist such as his chief had all the gross facts about such matters. The main fact was this: Pluto was a natural laboratory for low temperature research, not only for the benefit of the observatories but for every other purpose.

One of the classic difficulties of science has to do with the fact that a research man can always think of things he wants to measure before instruments for the purpose have been devised. Genetics remained practically at a standstill for a century before ultramicroscopy reached the point where genes could really be seen. But the peculiar qualities of superconductors and near superconductors gave physicists an opportunity, using such chilled metals in new instruments, to build gadgets which would detect phenomena more subtle than ever before detected.

Thorgsen and his colleagues had stellar bolometers so accurate and so sensitive as to make the readings of earlier instruments look like a casual horseback guess. He claimed to be able to measure the heat from a flushed cheek at ten parsecs. The colony on Pluto even had an electromagnetic radiation receiver which would-sometimes-enable them to receive messages from Terra, if the Great Egg smiled and everyone kept their fingers crossed.

But telepathy, if it was anything physical at all-whatever "physical" may mean!—should be detectable by some sort of a gadget. That the gadget would need to be extremely sensitive seemed a foregone conclusion; therefore, Pluto seemed a likely place to develop one.

There was even some hope to go on. An instrument-Hamilton did not remember what it had been-had been perfected there, had worked satisfactorily, and then had performed very erratically indeed-when the two who had perfected it attempted to demonstrate it in the presence of a crowd of colleagues. It seemed sensitive to living people.

To living people. Equivalent masses, of blood temperature and similar radiating surfaces, did not upset it. But it grew querulous in the presence of human beings. It was dubbed a "Life Detector"; the director of the colony saw possibilities in it and instigated further research.

Hamilton's point to Carruthers was this: might not the so-called life detector be something that was sensitive to whatever it was they called telepathy? Carruthers thought it possible. Would it not then be advisable to instigate research along that line on Terra? Decidedly. Or would it be better to send a team out to Pluto, where low temperature research was so much more handy? Go ahead on both lines, of course.

Hamilton pointed out that it would be a year and a half until the next regular ship to Pluto. "Never mind that," Carruthers said. "Plan to send a special. The Board will stand for it."

Hamilton cleared the phone, turned it to recording, and spoke for several minutes, giving instructions to two of his bright young assistants. He referred to his next point of agenda.

In digging back into the literature of the race it had been noted that the borderline subjects of the human spirit with which he was now dealing had once occupied much more of the attention of the race than now was the case. Spiritism, apparitions, reports of the dead appearing in dreams with messages which checked out, "Ghosties, and Ghoulies, and things that go Flop in the Dark" had once obsessed the attention of many. Much of the mass of pseudo-data seemed to be psychopathic. But not all of it. This chap Flammarion, for example, a professional astronomer (or was he an astrologer?—there used to be such, he knew, before space flight was developed)—anyhow, a man with his head screwed on tight, a man with a basic appreciation for the scientific method even in those dark ages. Flammarion had collected an enormous amount of data, which, if even one per cent of it was true, proved survival of the ego after the physical death beyond any reasonable doubt.

It gave him a lift just to read about it.

Hamilton knew that the loose stories of bygone days did not constitute evidence of the first order, but some of it, after examination by psychiatric semanticians, could be used as evidence of the second order. In any case, the experience of the past might give many a valuable clue for further research. The hardest part of this aspect of the Great Research was to know where to start looking.

There were a couple of old books, for example, by a man named Doon, or Dunn, or something of the sort-the changes in speech symbols made the name uncertain-who had tediously collected records of forerunner dreams for more than a quarter of a century. But he had died, no one had followed up his work, and it had been forgotten. Never mind-Dunn's patience would be vindicated; over ten thousand careful men, in addition to their other activities, made a practice of recording their dreams immediately on wakening, before speaking to anyone or even getting out of bed. If dreams ever opened a window to the future, the matter would be settled, conclusively.

Hamilton himself tried to keep such records. Unfortunately, he rarely dreamed. No matter-others did, and he was in touch with them.

The old books Hamilton wished to have perused were mostly obscure and few translations had ever been made; idiom presented a hazard. There were scholars of comparative lingo, of course, but even for them the job was difficult. Fortunately, there was immediately at hand a man who could read Anglish of the year 1926 and for at least the century preceding that date-a particularly rich century for such research, as the scientific method was beginning to be appreciated by some but the interest in such matters was still high-Smith John Darlington-or J. Darlington Smith, as he preferred to be called. Hamilton had co-opted him. Smith did not want to do it. He was very busy with his feetball industry-he had three associations of ten battle groups each, and a fourth forming. His business was booming; he was in a fair way to becoming as rich as he wanted to be, and he disliked to spare the time.

But he would do it-if the man who gave him his start in business insisted. Felix insisted.

Felix telephoned him next. "Hello, Jack,"

"Howdy, Felix."

"Do you have any more for me?"

"I've a stock of spools shoulder high."

"Good. Tube them over, will you?"

"Sure. Say, Felix, this stuff is awful, most of it."

"I don't doubt it. But think how much ore must be refined to produce a gram of native radium. Well, I'll clear now."

"Wait a minute, Felix. I got into a jam last night. I wonder if you could give me some advice."

"Certainly. Give." It appeared that Smith, who, in spite of his financial success, was a brassarded man and technically a control natural, had inadvertently given offense to an armed citizen by refusing to give way automatically in a public place. The citizen had lectured Smith on etiquette. Smith had never fully adjusted himself to the customs of a different culture; he had done a most urbane thing-he had struck the citizen with his closed fist, knocking him down and bloodying his nose. Naturally, there was the deuce to pay, and all big bills.

The citizen's next friend had called the following morning and presented Smith with a formal challenge. Smith must either accept and shoot it out, apologize acceptably, or be evicted from the city bodily by the citizen and his friends, with monitors looking on to see that the customs were maintained.

"What ought I to do?"

"I would advise you to apologize." Hamilton saw no way out of it; to advise him to fight was to suggest suicide. Hamilton had no scruples about suicide, but he judged correctly that Smith preferred to live.

"But I can't do that-what do you think I am, a nigger?"

"I don't understand what you mean. What has your color to do with it?"

"Oh, never mind. But I can't apologize, Felix. I was ahead of him in line. Honest I was."

"But you were brassarded."

"But...Look, Felix, I want to shoot it out with him. Will you act for me?"

"I will if you request it. He'll kill you, you know."

"Maybe not. I might happen to beat him to the draw."

"Not in a set duel you won't. The guns are cross-connected. Your gun won't burn until the referee flashes the signal."

"I'm fairly fast."

"You're outclassed. You don't play feetball yourself you know. And you know why."

Smith knew. He had planned to play, as well as manage and coach, when the enterprise was started. A few encounters with the men he had hired soon convinced him that an athlete of his own period was below average in this present period. In particular his reflexes were late. He bit his lip and said nothing.

"You sit tight," said Felix, "and don't go out of your apartment. I'll do a little calling and see what can be worked out."

The next friend was polite but regretful. Awfully sorry not to oblige Master Hamilton but he was acting under instructions. Could Master Hamilton speak with his principal? Now, really, that was hardly procedure. But he admitted that the circumstances were unusual-give him a few minutes, then he would phone back.

Hamilton received permission to speak to the principal; called him. No, the challenge could not be lifted-and the conversation was strictly under the rose. Procedure, you know. He was willing to accept a formal apology; he did not really wish to kill the man.

Hamilton explained that Smith would not accept the humiliation-could not, because of his psychological background. He was a barbarian and simply could not see things from a gentleman's point of view. Hamilton identified Smith as the Man from the Past.

The principal nodded. "I know that now. Had I known that before, I would have ignored his rudeness-treated him as a child. But I didn't know. And now, in view of what he did-well, my dear sir, I can hardly ignore it, can I?"

Hamilton conceded that he was entitled to satisfaction, but suggested it would make him publicly unpopular to kill Smith. "He is rather a public darling, you know. I am inclined to think that many will regard it as murder to force him to fight."

The citizen had thought of that. Rather a dilemma, wasn't it?

"How would you like to combat him physically-punish him the way he damaged you, only more so?"

"Really, my dear sir!"

"Just an idea," said Hamilton. "You might think about it. May we have three days grace?"

"More, if you like. I told you I was not anxious to push it to a duel. I simply want to curb his manners. One might run into him anywhere."

Hamilton let it go, and called Mordan, a common thing when he was puzzled. "What do you think I ought to do, Claude?"

"Well, there is no real reason why you should not let him go ahead and get himself killed. Individually, it's his life; socially, he's no loss."

"You forget that I am using him as a translator. Besides, I rather like him. He is pathetically gallant in the face of a world he does not understand."

"Mmm...well, in that case, we'll try to find a solution."

"Do you know, Claude," Felix said seriously, "I am beginning to have my doubts about this whole custom. Maybe I'm getting old, but, while it's lots of fun for a bachelor to go swaggering around town, it looks a little different to me now. I've even thought of assuming the brassard."

"Oh, no, Felix, you mustn't do that!"

"Why not? A lot of people do."

"It's not for you. The brassard is an admission of defeat, an acknowledgement of inferiority."

"What of it? I'd still be myself. I don't care what people think."

"You're mistaken, son. To believe that you can live free of your cultural matrix is one of the easiest fallacies and has some of the worst consequences. You are part of your group whether you like it or not, and you are bound by its customs."

"But they're only customs!"

"Don't belittle customs. It is easier to change Mendelian characteristics than it is to change customs. If you try to ignore them, they bind you when you least expect it."

"But dammit! How can there be any progress if we don't break customs?"

"Don't break them-avoid them. Take them into your considerations, examine how they work, and make them serve you. You don't need to disarm yourself to stay out of fights. If you did you would get into fights-I know you!—the way Smith did. An armed man need not fight. I haven't drawn my gun for more years than I can remember."

"Come to think about it, I haven't pulled mine in four years or more."

"That's the idea. But don't assume that the custom of going armed is useless. Customs always have a reason behind them, sometimes good, sometimes bad. This is a good one."

"Why do you say that? I used to think so, but I have my doubts now."

"Well, in the first place an armed society is a polite society. Manners are good when one may have to back up his acts with his life. For me, politeness is a sine qua non of civilization. That's a personal evaluation only. But gunfighting has a strong biological use. We do not have enough things to kill off the weak and the stupid these days. But to stay alive as an armed citizen a man has to be either quick with his wits or with his hands, preferably both. It's a good thing.

"Of course," he continued, "our combativeness has to do with our ancestry and our history." Hamilton nodded; he knew that Mordan referred to the Second Genetic War. "But we have preserved that inheritance intentionally. The Planners would not stop the wearing of arms if they could."

"Maybe so," Felix answered slowly, "but it does seem like there ought to be a better way to do it. This way is pretty sloppy. Sometimes the bystanders get burned."

"The alert ones don't," Mordan pointed out. "But don't expect human institutions to be efficient. They never have been; it is a mistake to think that they can be made so-in this millennium or the next."

"Why not?"

"Because we are sloppy, individually-and therefore collectively. Look at a cageful of monkeys, at your next opportunity. Watch how they do things and listen to them chatter. You'll find it instructive. You'll understand humans better."

Felix grinned. "I think I see what you mean. But what am I to do about Smith?"

"If he gets out of this, I think he had better wear a gun after this. Perhaps you can impress on him then that his life will depend on the softness of his words. But for the presentI know this chap he challenged. Suppose you suggest me as referee."

"Are you going to let them fight?"

"In my own way. I think I can arrange for them to fight barehanded." Mordan had delved back into his encyclopedic memory and had come put with a fact that Hamilton would not fully appreciate. Smith had come from a decadent period in which handfighting had become stylized as fist fighting, No doubt he was adept in it. It was necessary for one not to use the gun with which he was adept; it was equitable that the other not use fists, were he adept in their use. So Mordan wished to referee that he might define the rules.

It is not necessary to give overmuch attention to that rather unimportant and uncolorful little man, J. Darlington Smith. Hamilton was forced to withdraw as next friend, since Carruthers needed him at the time, and did not therefore see the encounter. He learned of it first by discovering that Smith was immobilized in an infirmary, suffering from some rather unusual wounds. But he did not quite lose the sight of his left eye and his other damages were mostly gone in a couple of weeks.

All of which happened some days later than the conversation with Mordan.

Hamilton turned back to his work. There were various little matters to attend to. One team of researchers in particular belonged to him alone. He had noticed when he was a boy that a physical object, especially a metallic one, brought near to his forehead above the bridge of the nose seemed to produce some sort of a response inside the head, not connected, apparently, with the physiological senses. He had not thought of it for many years, until the Great Research had caused him to think of such things. Was it real, or was it imagination? It was a mere tightening of the nerves, an uneasy feeling, but distinct and different from any other sensation. Did other people have it? What caused it? Did it mean anything?

He mentioned it to Carruthers who had said, "Well, don't stand there speculating about it. Put a crew to work on it." He had. They had already discovered that the feeling was not uncommon but rarely talked about. It was such a little thing and hard to define. Subjects had been found who had it in a more marked degree than most-Hamilton ceased being a subject for experimentation himself.

He called the crew leader. "Anything new, George?"

"Yes and no. We have found a chap who can distinguish between different metals nearly eighty per cent of the time, and between wood and metal every time. But we are still no nearer finding out what makes it tick."

"Need anything?"

"No."

"Call me if you need me. Helpful Felix the Cheerful Cherub."

"Okay."

It must not be supposed that Hamilton Felix was very important to the Great Research. He was not the only idea man that Carruthers had, not by several offices. It is probable that the Great Research would have gone on in much the same fashion, even during his lifetime, even if he had not been co-opted. But it would not have gone in quite the same way.

But it is hard to evaluate the relative importance of individuals.

Who was the more important?—the First Tyrant of Madagascar, or the nameless peasant who assassinated him? Felix's work had some effect. So did that of each of the eight-thousand-odd other individuals who took part at one time or another in the Great Research.

Jacobstein Ray called back before he could turn his mind to other matters. "Felix? You can come over and take your young hopeful away, if you will."

"Fine. What sort of results?"

"Maddening. He started out with seven correct answers in a row, then he blew up completely. Results no better than random-until he stopped answering at all."

"Oh, he did, did he?" remarked Hamilton, thinking of a certain flop-eared buck.

"Yes indeed. Went limp on us. I'd as leave try to stuff a snake down a hole."

"Well, we'll try another day. Meanwhile I'll attend to him."

"I'd enjoy helping you," Jake said wistfully.

Theobald was just sitting, doing less than nothing, when Felix came in. "Hello, sport. Ready to go home?"

"Yes."

Felix waited until they were in the family car and the pilot set on home before bracing him. "Ray tells me you didn't help him very well."

Theobald twisted a string around his finger. He concentrated on it.

"Well, how about it? Did you, or didn't you?"

"He wanted me to play some stupid games," the child stated. "No sense to them."

"So you quit?"

"Yeah."

"I thought you told me you would help?"

"I didn't say I would."

Felix thought back. The child was probably right-he could not remember. But he had had a feeling of contract, the "meeting of minds."

"Seems to me there was mention of a flop-eared rabbit."

"But," Theobald pointed out, "you said I could have it anyhow. You told me so!"

The rest of the trip home was mostly silence.

CHAPTER SIXTEEN

The Quick and the Dead

MADAME ESPARTERO CARVALA called again, unexpectedly and with no ceremony. She simply called by telephone and announced that she was coming to see them. She had informed Phyllis on the previous occasion that she expected to come back and see the baby. But more than four years had passed with no word from her; Phyllis had given up expecting her. After all, one does not thrust oneself on a member of the cosmically remote Board of Policy!

They had seen references to her in the news: Madame Espartero re-confirmed without opposition. Madame Espartero offers her resignation. The Grand Old Lady of the Board in failing health. Madame Espartero's alternate selected by special election. Carvala rallies in her fight for life. Planners honor sixtieth year of service of the Oldest Member. Stereo stories and news bits-she had become an institution.

Felix had thought when he saw her last that she looked older than any human being could. He realized when he saw her this time that he had been mistaken. She was still more incredibly frail and shrunken and she seemed to move with great effort. She compressed her lips tightly with each movement.

But her eye was still bright, her voice was still firm. She dominated her surroundings.

Phyllis came forward. "We are delighted. I never expected to see you again."

"I told you I was coming back to see the boy."

"Yes, I remember, but it has been a long time and you did not come."

"No sense in looking a child over until he has shaped up and can speak for himself! Where is he? Fetch him in."

"Felix, will you find him?"

"Certainly, my dear." Felix departed, wondering how it was that he, a grown man and in full possession of his powers, could permit a little old woman, ripe for cremation, to get him so on edge. It was childish of him!

Theobald did not want to leave his rabbits. "I'm busy."

Felix considered the plan of returning to the lounge and announcing that Theobald would receive Madame Espartero, if at all, at the rabbit run. But he decided that he could not do such a thing to Phyllis. "Look, son, there is a lady in there who wants to see you."

No answer.

"Make up your mind," Felix announced cheerfully. "Will you walk or do you prefer to be dragged? It makes no difference to me."

Theobald looked slowly up his father's sheer two meters and, without further comment, started for the house.

"Madame Espartero, this is Theobald."

"So I see. Come to me, Theobald." Theobald stood fast.

"Go to her, Theobald." Phyllis spoke briskly; the boy complied at once. Felix wondered why it was that the child obeyed his mother so much more readily than his father. Damn it, he was good to the child and just with him. There must have been a thousand times when he had refrained from losing his temper with him.

Madame Carvala spoke to him in a low voice, too low for either Felix or Phyllis to catch. He glowered and tried to look away, but she insisted, caught his eye, and held it. She spoke again, and he answered, in the same low tones. They talked together for some minutes, quite earnestly. Finally she straightened up in her chair and said in a louder tone, "Thank you, Theobald. You may go now."

He fled out of the house. Felix looked longingly after him, but decided he had to stay. He selected a chair as far across the room as manners permitted, and waited.

Carvala selected another cigar, puffed until she was the center of a cloud of blue smoke, and turned her attention exclusively to Phyllis. "He's a sound child," she announced. "Sound. He'll do well."

"I'm happy that you think so."

"I don't think so, I know so." They talked for a while longer about the boy, small talk. Felix had a feeling that the old woman was improvising until she was ready with whatever was on her mind.

"When do you expect to have his sister?"

"I am ready any time," replied Phyllis. "I have been for months. They are selecting for her now."

"What are they selecting for? Anything different from the boy?"

"Not in any major respect-except one. Of course there will be plenty of variation from what Theobald is, because in so many, many of the alternatives no attempt will be made to make a choice."

"What is the one major respect you spoke of?"

Phyllis told her of it. Since the coming child was to be a girl, its chromosome pattern would contain two X-chromosomes, one from each of its parents. Now philoprogenitiveness is, of course, a sex-linked characteristic. Hamilton, be it remembered, lacked it to a moderate degree. Theobald derived his one X-chromosome from his mother; Mordan confidently expected that he would be normal in his desire to have children of his own when he became old enough for such things to matter to him.

But his projected little sister would inherit from both her parents in this respect. She might be rather cool to the matter of having children. However, if she did have, then her offspring need not be handicapped by any lack in this highly desirable survival trait; since she would pass on to her heirs but one of her two X-chromosomes, by selection, she could transmit only that of her mother. Hamilton's undesirable trait would be eliminated forever.

Carvala listened carefully to this explanation-or rather to that small portion of it Phyllis had found it necessary to relate-and nodded cheerfully. "Put your mind at rest, child. It won't matter a bit." She offered no elaboration of her words.

She talked of other matters for a while, then said suddenly, "Any time now, I take it?"

"Yes," Phyllis agreed.

Carvala stood up and took her departure as suddenly as she came. "I hope we will have the honor of your presence again, Madame," Felix said carefully.

She stopped, turned, and looked at him. She took her cigar from her mouth and grinned. "Oh, I'll be back! You can count on that."

Felix stood scowling at the door through which she had left. Phyllis sighed happily. "She makes me feel good, Felix."

"She doesn't me. She looks like a corpse."

"Now, Filthy!"

Felix went outside and looked up his son. "Hi, sport."

"H'lo."

"What did she have to say to you?"

Theobald muttered something in which Felix caught only the term "cuss boss!"

"Take it easy, son. What did she want?"

"She wanted me to promise her something."

"And did you?"

"No."

"What was it?"

But Theobald wasn't listening again.

After a late and pleasant supper in the cool of the garden Felix turned on the news, rather idly. He listened lackadaisically for a while, then suddenly called out, "Phyllis!"

"What is it?"

"Come here! Right away!"

She ran in; he indicated the spieling, flickering box:

"—dame Espartero Carvala. She appears to have died instantly. It is assumed that she stumbled near the top of the escalator, for she seemed to have fallen, or rolled, the entire flight. She will long be remembered, not only for her lengthy tenure on the Board, but for her pioneer work in—" Phyllis had switched it off. Felix saw that she had tears in her eyes, and refrained from the remark he had intended to make about her cockiness in saying that she would be sure to be back.

Hamilton did not think it advisable to take Theobald back to Jacobstein Ray again; he felt that an antipathy had already grown up. But there were others engaged in telepathy research; he selected a crew and introduced Theobald to them. But he had formed a theory about the former failure; the methods used then had been the simple methods considered appropriate for young children. This time they told Theobald what they were attempting to do and started him out with tests intended for adults.

He could do it. It was as simple as that. There had been other cases equally clear cut, and the research leader cautioned Felix not to expect too much, as telepathically sensitive children tended to fade out in the talent-which Felix knew. But he could do it. Theobald, at least within the limits of the conditions, could read minds.

So Felix called Mordan again, told him again of what was on his mind. Did Mordan think that Theobald was a mutation?

"Mutation? No, I have no data to go on."

"Why not?"

"'Mutation' is a technical term. It refers only to a new characteristic which can be inherited by Mendelian rules. I don't know what this is. Suppose you find out for me first what telepathy is-then I'll tell you whether or not Theobald can pass it on-say, about thirty years from now!"

Well, that could wait. It sufficed that Theobald was telepathic-at least for the present. The projected telepath gadget, which had derived from the Plutonian "Life Detector," was beginning to show promise. It had been duplicated in the auxiliary cold laboratory beneath the outskirts of Buenos Aires and had performed in the same fashion as on Pluto. It had been greatly refined, once the researchers knew the direction in which they were driving, but it had presented grave difficulties.

One of the difficulties had been straightened out in a somewhat odd fashion. The machine, while responsive to sentient beings (it would not respond to plants, nor to animal life of low form), did little else-it was not a true telepath. There was a cat, of doubtful origin, which had made itself the lab mascot-moved in and taken possession. While the gadget was sensitized the operator had stepped back without looking and stepped on pussy's tail. Pussy did not like it and said so.

But the technician acting as receiver had liked it even less; he had snatched off the headset, yelping. It had screamed at him, he alleged.

Further experimentation made it evident that the machine was especially sensitive to the thalamic storm aroused by any sudden violent emotion. Mere cool cerebration had much less effect on it. However, banging a man on the thumb did not count. The man expected it, and delayed his reaction, routing it through the "cooler" of the forebrain. The emotion had to be strong and authentic.

Many tails were stepped on thereafter; many cats sacrificed their temporary peace of mind to the cause of science.

Theobald developed a strange antipathy for his mother's company during the period when she was expecting the arrival of his sister. It upset Phyllis; Felix tried to reason him out of it. "See here, sport," he said, "hasn't mama been good to you?"

"Yeah. Sure."

"Then what's the trouble? Why don't you like her?"

"I like her all right...but I don't like her." He pointed and his meaning was unmistakable. Felix held a hurried whispered consultation with his wife. "How about it, Phil? I thought we hadn't let him in on the news yet?"

"I haven't"

"I didn't-that's sure. Do you suppose Claude-no, Claude wouldn't spill it. Hmmm...well, there's only one other way he could have found out...he found out for himself." He looked at his son with a deeply wrinkled brow; it might not be too convenient, he was thinking, to have a telepathic member of the household. Well, it might wear off-it frequently did.

"We'll have to play it as it lies. Theobald."

"Wha'cha want?"

"Is it your little sister whom you don't like?"

The boy scowled and indicated assent.

("It's probably nothing but natural jealousy. After all, he's been the big show around here all his life.") He turned again to his son. "Look here, sport-you don't think that little sister will make any difference in how mama and daddy feel about you, do you?"

"No. I guess not."

"A little sister will be a lot of fun for you. You'll be bigger than she will be, and you'll know a lot more, and you'll be able to show her things. You'll be the important one."

No answer.

"Don't you want a baby sister?"

"Not that one."

"Why not?"

He turned completely away. They heard him mutter, "Old cuss boss!" Then he added distinctly, "and her cigars stink."

The threesome was adjourned. Phyllis and Felix waited until the boy was asleep, and, presumably, with his telepathic ability out of gear. "It seems pretty evident," he told her, "that he has identified Carvala in his mind with Justina."

She agreed. "At least I'm relieved to know that it isn't me he has a down on. Just the same, it's serious. I think we had better call in a psychiatrist."

Felix agreed. "But I'm going to talk to Claude about it, too."

Claude refused to be upset by it. "After all," he said, "it's perfectly natural that blood relatives should dislike each other. That's a prime datum of psychology. If you can't condition him to put up with her, then you'll have to rear them apart. A nuisance, but that's all."

"But how about this fixation of his?"

"I'm not a psychiatrist. I wouldn't worry too much about it. Children frequently get some funny notions. If you ignore them, they generally get over them."

So the psychiatrist thought, too. But he was totally unable to shake Theobald's conviction in the matter. He had made his point, he stuck to it, and he refused to argue.

It was a matter of prime significance, aside from Theobald's fantastic delusion, that a telepathic person had been able to locate a person whom he had never seen and whose existence he had no reason to suspect. It was a fair-sized brick in the Great Research. Dutifully, Hamilton reported the affair to Carruthers.

Carruthers was intensely interested. He asked questions about it, took the matter home with him, and nursed it. The next day he called Felix to explain a plan he had conceived. "Mind you," he said, "I'm not urging you to do this. I'm not even asking you. It's your wife, and your baby, and your boy. But I think it's a unique opportunity to advance the Research."

Felix thought about it. "I'll let you know tomorrow."

"How would you like," he said to Phyllis, when they were alone that night, "to go to Buenos Aires to have Justina?"

"Buenos Aires? Why there?"

"Because there is the only telepath machine on Earth. And it can't be moved out of the cold laboratory."

CHAPTER SEVENTEEN

Da Capo

"I'VE GOT it again." The receiver for the telepath made the announcement grimly. The gadget was still cantankerous; during the past few days it had worked beautifully part of the time-about twenty minutes in all!—and had refused to come to life the rest of the time. It seemed to have soaked up some of the contrariness of the subtle life-force it tapped. "What are you getting?"

"Feels like a dream. Water, long stretches of water. Shore line in the back with mountain peaks." A recorder at his elbow took down everything he said, with the exact times. "Are you sure it's the baby?"

"Sure as I was yesterday. Everybody is different over it. They taste different. I don't know how else to express it. Hold on! Something else...a city, a damn big city, bigger than Buenos Aires."

"Theobald," said Mordan Claude gently, "can you still hear her?" Mordan had been brought because Felix conceded that Claude had a handier way with the child than Felix. The child could not hear the telepath receiver where they had spotted him, although Claude could cut in through an earphone. Phyllis, of course, was in another room, busy with her fundamental affairs...it made no difference to the gadget, nor to Theobald. Felix had a roving assignment, privileged to make a nervous nuisance out of himself to anyone.

The boy leaned back against Mordan's thigh. "She's not over the ocean any more," he said. "She's gone to Capital City."

"Are you sure it's Capital City?"

"Sure." His voice was scornful. "I've been there, ain't I? And there's the tower."

Beyond the partition someone was asking, "A modern city?"

"Yes. Might be the Capital. It's got a pylon like it."

"Any other details?"

"Don't ask me so many questions-it breaks into the revery...she's moving again. We're in a room...Lot of people, all adults. They're talking."

"What now, son?" Claude was saying. "Aw, she's gone to that party again."

Two observers, standing clear of the activity were whispering. "I don't like it," the short one said. "It's ghastly." "But it's happening."

"But don't you realize what this means, Malcolm? Where can an unborn child get such concepts?"

"Telepathically from its mother, perhaps. The brother is certainly a telepath."

"No, no, no! Not unless all our ideas of cerebration are mistaken. Conceptions are limited to experiences, or things similar to experiences. An unborn child has experienced nothing but warmth and darkness. It couldn't have such conceptions."

"Ummm."

"Well-answer me!"

"You've got me-I can't."

Someone was saying to the receiver, "Can you make out any of the people present?"

He raised his headset. "Quit bothering me! You drive it out with my own thoughts when you do that. No, I can't. It's like dream images...I think it is a dream. I can't feel anything unless she thinks about it."

A little later. "Something's happening...the dream's gone. Uneasy...it's very unpleasant...she's resisting it...it's...it's...Oh, Great-it's awful...it hurts! I can't stand it!" He tore off his headset, and stood up, white and shaking. At the same instant Theobald screamed.

It was a matter of minutes only when a woman came out the door of Phyllis' room and motioned to Hamilton.

"You can come in now," she said cheerfully.

Felix got up from where he was kneeling with Theobald. "Stay with Uncle Claude, Sport," he said, and went in to his wife.

CHAPTER EIGHTEEN

"Beyond This Horizon—"

IT WAS nice to be able to come to the beach again. It was swell that Phyllis felt up to such little expeditions. It was pleasant to lie in the sun with his family and soak up comfort.

Things had not turned out the way he had planned, but things rarely did. Certainly he would never have believed all this a few years back...Phyllis and Baldy, and now Justina. Once he had asked Claude to tell him the meaning of life-now he did not care. Life was good, whatever it was. And the prime question had been answered for him. Let the psychologicians argue it all they pleased-there was some kind of life after this one-where a man might find out the full answer.

For the main question: "Do we get another chance?" had been answered by the back door. There was something more to the ego of a newborn child than its gene pattern. Justina had answered that, whether she knew it or not. She had brought memory patterns with her; she had lived before. He was convinced of that. Therefore, it was a dead-sure cinch that the ego went somewhere after the body disintegrated. Where, he would worry about when the time came.

It did seem extremely likely that Justina did not know what she had proved (and of course there was no way of asking her). Her telepathic patterns after she was born were meaningless, confused, as one would expect of a baby. Shock amnesia the psychologicians had decided to call it. Being born must be something like being awakened out of a sound sleep by a dash of cold water in the face. That would shock anybody.

He had not made up his mind yet whether he wanted to continue active in the Great Research, or not. He might just be lazy and raise dahlia bulbs and kids. He didn't know. Most of it was pretty long distance stuff, and he personally was satisfied. Take that work Cliff was on-centuries and then some. Cliff had compared the job with that of trying to figure out the entire plot of a long stereostory from just one flash frame.

But they would finish it-some day. Theobald wouldn't see it, but he would see more of it than Felix, and his son would see still more. His sons would roam the stars-no limit.

It was nice that Theobald seemed to have gotten over that ridiculous fixation identifying Justina with Old Carvala. True, he did not seem actually fond of the baby, but that was expecting a lot. He seemed more puzzled by her, and interested. There he was, leaning over the baby's basket. He really did seem --

"Theobald!"

The boy stood up straight quickly.

"What were you doing?"

"Nothing." Maybe-but it looked as if he had pinched her.

"Well, I think you had better find another place to do it. The baby needs to sleep now."

The boy shot a quick glance at the infant and turned away. He walked slowly down toward the water.

Felix settled back, after glancing at Phyllis. Yes, she was still asleep. It was a good world, he assured himself again, filled with interesting things. Of which the most interesting were children. He glanced at Theobald. The boy was a lot of fun now, and would be more interesting as he grew up-if he could refrain from wringing his cussed little neck in the meantime!

Chapter 1 "LET THE ROCKET ROAR"

"EVERYBODY ALL SET?" Young Ross Jenkins glanced nervously at his two chums. "How about your camera, Art? You sure you got the lens cover off this time?"

The three boys were huddled against a thick concrete wall, higher than their heads and about ten feet long. It separated them from a steel stand, anchored to the ground, to which was bolted a black metal shape, a pointed projectile, venomous in appearance and an ugly rocket. There were fittings on each side to which stub wings might be attached, but the fittings were empty; the creature was chained down for scientific examination.

"How about it, Art?" Ross repeated. The boy addressed straightened up to his full five feet three and faced him.

"Look," Art Mueller answered, "of course I took the cover off, it's on my checkoff list. You worry about your rocket, last time it didn't fire at all and I wasted twenty feet of film."

"But you forgot it once, okay, how about your lights?"

For answer Art switched on his spot lights; the beams shot straight up, bounced against highly polished stainless-steel mirrors and brilliantly illuminated the model rocket and the framework which would keep it from taking off during the test.

A third boy, Maurice Abrams, peered at the scene through a periscope which allowed them to look over the reinforced concrete wall which shielded them from the rocket test stand.

"Pretty as a picture," he announced, excitement in his voice. "Ross, do you really think this fuel mix is what we're looking for?"

Ross shrugged, "I don't know. The lab tests looked good, we'll soon know. All right, places everybody! Checkoff lists, Art?"

"Complete."

"Morrie?"

"Complete."

"And mine's complete. Stand by! I'm going to start the clock. Here goes!" He started checking off the seconds until the rocket was fired. "Minus ten. . minus nine… minus eight… minus seven… minus six… minus five… minus four…"

Art wet his lips and started his camera.

"Minus three! Minus two! Minus one! Contact!"

"Let it roar!" Morrie yelled, his voice already drowned by the earsplitting noise of the escaping rocket gas.

A great plume of black smoke surged out the orifice of the thundering rocket when it was first fired, billowed against an earth ramp set twenty feet behind the rocket test stand and filled the little clearing with choking fumes. Ross shook his head in dissatisfaction at this and made an adjustment in the controls under his hand. The smoke cleared away; through the periscope in front of him he could see the rocket exhaust on the other side of the concrete barricade. The flame had cleared of the wasteful smoke and was almost transparent, save for occasional sparks. He could actually see trees and ground through the jet of flame. The images shimmered and shook but the exhaust gases were smoke-free.

"What does the dynamometer read?" he shouted to Morrie without taking his eyes away from the periscope. Morrie studied the instrument, rigged to the test stand itself, by means of a pair of opera glasses and his own periscope. "I can't read it!" he shouted. "Yes, I can — wait a minute. Fiftytwo — no, make it a hundred and fiftytwo; it's second time around. Hunderfiftytwo, fif'three, four. Ross, you've done it! You've done it! That's more than twice as much thrust as the best we've ever had."

Art looked up from where he was nursing his motion-picture camera. It was a commercial 8-millimeter job, modified by him to permit the use of more film so that every second of a test could be recorded. The modification worked, but was cantankerous and had to be nursed along. "How much more time?," he demanded.

"Seventeen seconds," Ross yelled at him. "Stand by, I'm going to give her the works." He twisted his throttle-monitor valve to the right, wide open. The rocket responded by raising its voice from a deepthroated roar to a higher pitch with an angry overtone almost out of the audible range. It spoke with snarling menace.

Ross looked up to see Morrie back away from his periscope and climb on a box, opera glasses in hand.

"Morrie-get your head down!" The boy did not hear him against the scream of the jet, intent as he was on getting a better view of the rocket. Ross jumped away from the controls and dived at him, tackling him around the waist and dragging him down behind the safety of the barricade. They hit the ground together rather heavily and struggled there. It was not a real fight; Ross was angry, though not fighting mad, while Morrie was merely surprised.

"What's the idea ?," he protested, when he caught his breath.

"You crazy idiot!," Ross grunted in his ear. "What were you trying to do? Get your head blown off?"

"But I wasn't-" But Ross was already clambering to his feet and returning to his place at the controls; Morrie's explanation, if any, was lost in the roar of the rocket.

"What goes on ?" Art yelled. He had not left his place by his beloved camera, not only from a sense of duty but at least partly from indecision as to which side of the battle he should join. Ross heard his shout and turned to speak. "This goon," he yelled bitterly, jerking a thumb at Morrie, "tried to-"

Ross's version of the incident was lost; the snarling voice of the rocket suddenly changed pitch, then lost itself in a boneshaking explosion. At the same time there was a dazzling flash which would have blinded the boys had they not been protected by the barricade, but which nevertheless picked out every detail of the clearing in the trees with brilliance that numbed the eyes.

They were still blinking at the memory of the ghastly light when billowing clouds of smoke welled up from beyond the barricade, surrounded them, and made them cough.

"Well," Ross said bitterly and looked directly at Morrie, "that's the last of the Starstrack V."

"Look, Ross," Morrie protested, his voice sounding shrill in the strange new stillness, "I didn't do it. I was only trying to- "

"I didn't say you did," Ross cut him short. "I know you didn't do it. I had already made my last adjustment. She was on her own and she couldn't take it. Forget it. But keep your head down after this-you darn near lost it. That's what the barricade is for."

"But I wasn't going to stick my head up. I was just going to try-"

"Both of you forget it," Art butted in. "So we blew up another one. So what? We'll build another one. Whatever happened, I got it right here in the can." He patted his camera. "Let's take a look at the wreck." He started to head around the end of the barricade.

"Wait a minute," Ross commanded. He took a careful look through his periscope, then announced: "Seems okay. Both fuel chambers are split. There can't be any real danger now. Don't burn yourselves. Come on."

They followed him around to the test stand.

The rocket itself was a complete wreck but the test stand was undamaged; it was built to take such punishment. Art turned his attention to the dynamometer which measured the thrust generated by the rocket. "I'll have to recalibrate this," he announced. "The loop isn't hurt, but the dial and the rack-and-pinion are shot."

The other two boys did not answer him; they were busy with the rocket itself. The combustion chamber was split wide open and it was evident that pieces were missing.

"How about it, Ross?" Morrie inquired. "Do you figure it was the metering pump going haywire, or was the soup just too hot for it?"

"Hard to tell," Ross mused absently. "I don't think it was the pump. The pump might jam and refuse to deliver fuel at all, but I don't see how it could deliver too much fuel unless it reared back and passed a miracle."

"Then it must have been the combustion chamber. The throat is all right. It isn't even pitted much," he added as he peered at it in the gathering twilight.

"Maybe. Well, let's throw a tarp over it and look it over tomorrow morning. Can't see anything now. Come on, Art."

"Okay. Just a sec while I get my camera." He detached his camera from its bracket and placed it in its carrying case, then helped the other two drag canvas tarpaulins over all the test gear-one for the test stand, one for the barricade with its controls, instruments, and periscopes. Then the three turned away and headed out of the clearing.

The clearing was surrounded by a barbed wire fence, placed there at the insistence of Ross's parents, to whom the land belonged, in order to keep creatures, both four-legged and two-legged, from wandering into the line of fire while the boys were experimenting. The gate in this fence was directly behind the barricade and about fifty feet from it.

They had had no occasion to glance in the direction of the gate since the beginning of the test run-indeed, their attentions had been so heavily on the rocket that anything less than an earthquake would hardly have disturbed them.

Ross and Morrie were a little in front with Art close at their heels, so close that, when they stopped suddenly, he stumbled over them and almost dropped his camera. "Hey, watch where you're going, can't you ?" he protested. "Pick up your big feet!"

They did not answer but stood still, staring ahead and at the ground. "What gives?," he went on. "Why the trance? Why do-oh!" He had seen it too.

"It" was the body of a large man, crumpled on the ground, half in and half out the gate. There was a bloody wound on his head and blood on the ground. They all rushed forward together, but it was Morrie who shoved them back and kept them from touching the prone figure. "Take it easy!," he ordered.

"Don't touch him. Remember your first aid. That's a head wound. If you touch him, you may kill him."

"But we've got to find out if he's alive," Ross objected.

"I'll find out. Here-give me those." He reached out and appropriated the data sheets of the rocket test run from where they stuck out of Ross's pocket. These he rolled into a tube about an inch in diameter, then cautiously placed it against the back of the still figure, on the left side over the heart. Placing his ear to the other end of the improvised stethoscope he listened. Ross and Art waited breathlessly. Presently his tense face relaxed into a grin. "His motor is turning over," he announced. "Good and strong. At least we didn't kill him."

"We?"

"Who do you think? How do you think he got this way? Take a look around and you'll probably find the piece of the rocket that konked him." He straightened up. "But never mind that now. Ross, you shag up to your house and call an ambulance. Make it fast! Art and I will wait here with… with, uh, him. He may come to and we'll have to keep him quiet."

"Okay." Ross was gone as he spoke. Art was staring at the unconscious man. Morrie touched him on the arm. "Sit down, kid. No use getting in a sweat. We'll have trouble enough later. Even if this guy isn't hurt much I suppose you realize this about winds up the activities the Galileo Marching-and-Chowder Society, at least the rocketry-and-loud-noises branch of it."

Art looked unhappy. "I suppose so."

"`Suppose' nothing. It's certain. Ross's father took a very dim view of the matter the time we blew all the windows out of his basement — not that I blame him. Now we hand him this. Loss of the use of the land is the least we can expect. We'll be lucky not to have handed him a suit for damages too. Art agreed miserably. "I guess it's back to stamp collecting for us," he assented, but his mind was elsewhere. Law suit. The use of the land did not matter. To be sure the use of the Old Ross Place on the edge of town had been swell for all three of them, what with him and his mother living in back of the store, and Morrie's folks living in a flat, but-law suit! Maybe Ross's parents could afford it; but the little store just about kept Art and his mother going, even with the afterschool jobs he had had ever since junior high — a law suit would take the store away from them.

His first feeling of frightened sympathy for the wounded man was beginning to be replaced by a feeling of injustice done him. What was the guy doing there anyhow? It wasn't just.

"Let me have a look at this guy," he said.

"Don't touch him," Morrie warned.

"I won't. Got your pocket flash?" It was becoming quite dark in the clearing.

"Sure. Here… catch." Art took the little flashlight and tried to examine the face of their victim-hard to do, as he was almost face down and the side of his face that was visible was smeared with blood.

Presently Art said in an odd tone of voice, "Morrie-would it hurt anything to wipe some of this blood away?"

"You're dern tootin' it would! You let him be till the doctor comes."

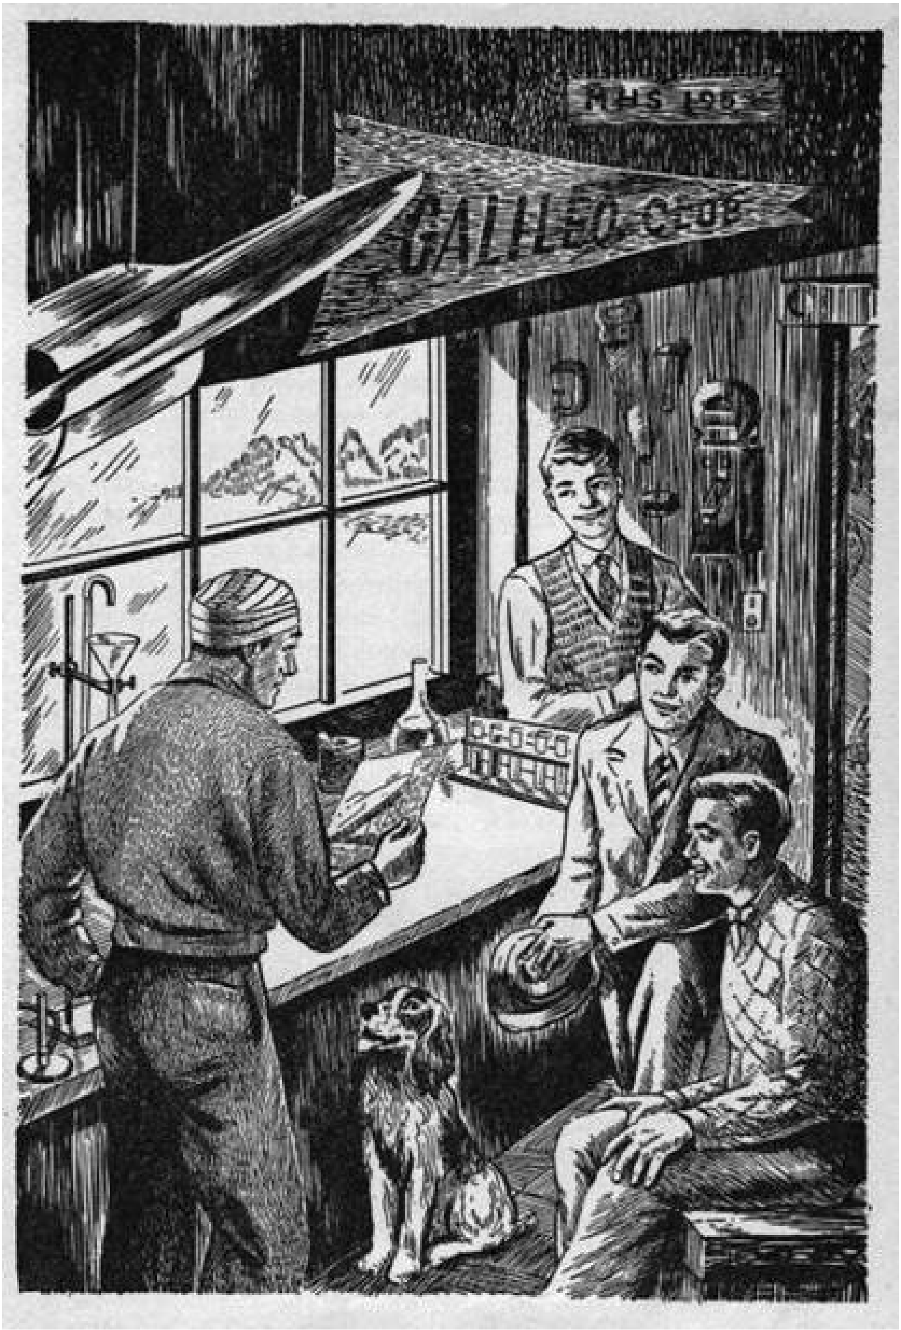
"All right, all right. Anyhow I don't need to — I'm sure anyhow. Morrie, I know who he is."

"You do? Who?"

"He's my uncle."

"Your uncle!"

"Yes, my uncle. You know-the one I've told you about. He's my Uncle Don. Doctor Donald Cargraves, my `Atomic Bomb' uncle."



MHS 195
GALILEO CLUB

Chapter 2 A MAN-SIZED CHALLENGE

"AT LEAST I'M PRETTY SURE it's my uncle," Art went on. "I could tell for certain if I could see his whole face."

"Don't you know whether or not he's your uncle? After all, a member of your own family-"

"Nope. I haven't seen him since he came through here to see Mother, just after the war. That's been a long time. I was just a kid then. But it looks like him."

"But he doesn't look old enough," Morrie said judiciously. "I should think-Here comes the ambulance!"

It was indeed, with Ross riding with the driver to show him the road and the driver cussing the fact that the road existed mostly in Ross's imagination. They were all too busy for a few minutes, worrying over the stranger as a patient, to be much concerned with his identity as an individual. "Doesn't look too bad," the interne who rode with the ambulance announced. "Nasty scalp wound. Maybe concussion, maybe not. Now over with him-easy! -while I hold his head." When turned face up and lifted into the stretcher, the patient's eyes flickered; he moaned and seemed to try to say something. The doctor leaned over him.

Art caught Morrie's eye and pressed a thumb and forefinger together. There was no longer any doubt as to the man's identity, now that Art had seen his face.

Ross started to climb back in the ambulance but the interne waved him away. "But all of you boys show up at the hospital. We'll have to make out an accident report on this."

As soon as the ambulance lumbered away Art told Ross about his discovery. Ross looked startled. "Your uncle, eh? Your own uncle. What was he doing here?"

"I don't know. I didn't know he was in town."

"Say, look-I hope he's not hurt bad, especially seeing as how he's your uncle — but is this the uncle, the one you were telling us about who has been mentioned for the Nobel Prize?"

"That's what I've been trying to tell you. He's my Uncle Donald Cargraves."

"Doctor Donald Cargraves!," Ross whistled. "Jeepers! When we start slugging people we certainly go after big game, don't we?"

"It's no laughing matter. Suppose he dies? What'll I tell my mother?"

"I wasn't laughing. Let's get over to the hospital and find out how bad he's hurt before you tell her anything. No use in worrying her unnecessarily." Ross sighed, "I guess we might as well break the news to my folks. Then I'll drive us over to the hospital."

"Didn't you tell them when you telephoned?," Morrie asked. "No. They were out in the garden, so I just phoned and then leaned out to the curb to wait for the ambulance. They may have seen it come in the drive but I didn't wait to find out."

"I'll bet you didn't."

Ross's father was waiting for them at the house. He answered their greetings, then said, "Ross-"

"Yes, sir?"

"I heard an explosion down toward your private stamping ground. Then I saw an ambulance drive in and drive away. What happened?"

"Well, Dad, it was like this: We were making a full-power captive run on the new rocket and-" He sketched out the events.

Mr. Jenkins nodded and said, "I see. Come along, boys." He started toward the converted stable which housed the family car. "Ross, run tell your mother where we are going. Tell her I said not to worry." He went on, leaning on his cane a bit as he walked. Mr. Jenkins was a retired electrical engineer, even-tempered and taciturn.

Art could not remember his own father; Morrie's father was still living but a very different personality. Mr. Abrams ruled a large and noisy, children-cluttered household by combining a loud voice with lavish affection.

When Ross returned, puffing, his father waved away his offer to drive. "No, thank you. I want us to get there."

The trip was made in silence. Mr. Jenkins left them in the foyer of the hospital with an injunction to wait.

"What do you think he will do?" Morrie asked nervously.

"I don't know. Dad'll be fair about it."

"That's what I'm afraid of," Morrie admitted. "Right now I don't want justice; I want charity."

"I hope Uncle Don is all right," Art put in.

"Huh? Oh, yes, indeed! Sorry, Art, I'm afraid we've kind of forgotten your feelings. The principal thing is for him to get well, of course."

"To tell the truth, before I knew it was Uncle Don, I was more worried over the chance that I might have gotten Mother into a law suit than I was over what we might have done to a stranger."

"Forget it," Ross advised. "A person can't help worrying over his own troubles. Dad says the test is in what you do, not in what you think. We all did what we could for him."

"Which was mostly not to touch him before the doctor came," Morrie pointed out.

"Which was what he needed."

"Yes," agreed Art, "but I don't check you, Ross, on it not mattering what you think as long as you act all right. It seems to me that wrong ideas can be just as bad as wrong ways to do things."

"Easy, now. If a guy does something brave when he's scared to death is he braver than the guy who does the same thing but isn't scared?"

"He's less… no, he's more… You've got me all mixed up. It's not the same thing."

"Not quite, maybe. Skip it."

They sat in silence for a long time. Then Morrie said, "Anyhow, I hope he's all right."

Mr. Jenkins came out with news. "Well, boys, this is your lucky day. Skull uninjured according to the X-ray. The patient woke when they sewed up his scalp. I talked with him and he has decided not to scalp any of you in return." He smiled.

"May I see him?" asked Art.

"Not tonight. They've given him a hypo and he is asleep. I telephoned your mother, Art."

"You did? Thank you, sir."

"She's expecting you. I'll drop you by."

Art's interview with his mother was not too difficult; Mr. Jenkins had laid a good foundation. In fact, Mrs. Mueller was incapable of believing that Art could be "bad." But she did worry about him and Mr. Jenkins had soothed her, not only about Art but also as to the welfare of her brother. Morrie had still less trouble with Mr. Abrams. After being assured that the innocent bystander was not badly hurt, he had shrugged. "So what? So we have lawyers in the family for such things. At fifty cents a week it'll take you about five hundred years to pay it off. Go to bed."

"Yes, Poppa."

The boys gathered at the rocket testing grounds the next morning, after being assured by a telephone call to the hospital that Doctor Cargraves had spent a good night. They planned to call on him that afternoon; at the moment they wanted to hold a post-mortem on the ill-starred Starstruck V.

The first job was to gather up the pieces, try to reassemble them, and then try to figure out what had happened. Art's film of the event would be necessary to complete the story, but it was not yet ready.

They were well along with the reassembling when they heard a whistle and a shout from the direction of the gate. "Hello there! Anybody home?"

"Coming!" Ross answered. They skirted the barricade to where they could see the gate. A tall, husky figure waited there — a man so young, strong, and dynamic in appearance that the bandage around his head seemed out of place, and still more so in contrast with his friendly grin.

"Uncle Don!" Art yelled as he ran up to meet him.

"Hi," said the newcomer. "You're Art. Well, you've grown a lot but you haven't changed much." He shook hands.

"What are you doing out of bed? You're sick."

"Not me," his uncle asserted. "I've got a release from the hospital to prove it. But introduce me — are these the rest of the assassins?"

"Oh-excuse me. Uncle Don, this is Maurice Abrams and this is Ross Jenkins… Doctor Cargraves."

"How do you do, sir?"

"Glad to know you, Doctor."

"Glad to know you, too." Cargraves started through the gate, then hesitated. "Sure this place isn't booby-trapped?"

Ross looked worried. "Say, Doctor-we're all sorry as can be. I still can't see how it happened. This gate is covered by the barricade."

"Ricochet shot probably. Forget it. I'm not hurt. A little skin and a little blood-that's all. If I had turned back at your first warning sign, it wouldn't have happened."

"How did you happen to be coming here?"

"A fair question. I hadn't been invited, had I?"

"Oh, I didn't mean that."

"But I owe you an explanation. When I breezed into town yesterday, I already knew of the Galileo Club; Art's mother had mentioned it in letters. When my sister told me where Art was and what he was up to, I decided to slide over in hope of getting here in time to watch your test run. Your hired girl told me how to find my way out here."

"You mean you hurried out here just to see this stuff we play around with?"

"Sure. Why not? I'm interested in rockets."

"Yes, but-we really haven't got anything to show you. These are just little models."

"A new model," Doctor Cargraves answered seriously, "of anything can be important, no matter who makes it nor how small it is. I wanted to see how you work. May I?"

"Oh, certainly, sir-we'd be honored." Ross showed their guest around, with Morrie helping out and Art chipping in. Art was pink-faced and happy — this was his uncle, one of the world's great, a pioneer of the Atomic Age. They inspected the test stand and the control panel. Cargraves looked properly impressed and tut-tutted over the loss of Starstruck V.

As a matter of fact he was impressed. It is common enough in the United States for boys to build and take apart almost anything mechanical, from alarm clocks to hiked-up jaloppies. It is not so common for them to understand the sort of controlled and recorded experimentation on which science is based.

Their equipment was crude and their facilities limited, but the approach was correct and the scientist recognized it.

The stainless steel mirrors used to bounce the spotlight beams over the barricade puzzled Doctor Cargravcs. "Why take so much trouble to protect light bulbs ?" he asked. "Bulbs are cheaper than stainless steel."

"We were able to get the mirror steel free," Ross explained. "The spotlight bulbs take cash money."

The scientist chuckled. "That reason appeals to me. Well, you fellows have certainly thrown together quite a set-up. I wish I had seen your rocket before it blew up."

"Of course the stuff we build," Ross said diffidently, "can't compare with a commercial unmanned rocket, say like a mailcarrier. But we would like to dope out something good enough to go after the junior prizes."

"Ever competed?"

"Not yet. Our physics class in high school entered one last year in the novice classification. It wasn't much — just a powder job, but that's what got us started, though we've all been crazy about rockets ever since I can remember."

"You've got some fancy control equipment. Where do you do your machine-shop work? Or do you have it done?"

"Oh, no. We do it in the highschool shop. If the shop instructor okays you, you can work after school on your own."

"It must be quite a high school," the physicist commented. "The one I went to didn't have a machine shop."

"I guess it is a pretty progressive school," Ross agreed. "It's a mechanical-arts-and-science high school and it has more courses in math and science and shop work than most. It's nice to be able to use the shops. That's where we built our telescope."

"Astronomers too, eh?"

"Well-Morrie is the astronomer of the three of us."

"Is that so?," Cargraves inquired, turning to Morrie.

Morrie shrugged. "Oh, not exactly. We all have our hobbies. Ross goes in for chemistry and rocket fuels. Art is a radio ham and a camera nut. You can study astronomy sitting down."

"I see," the physicist replied gravely. "A matter of efficient self-protection. I knew about Art's hobbies. By the way, Art, I owe you an apology; yesterday afternoon I took a look in your basement. But don't worry-I didn't touch anything."

"Oh, I'm not worried about your touching stuff, Uncle Don," Art protested, turning pinker, "but the place must have looked a mess."

"It didn't look like a drawing room but it did look like a working laboratory. I see you keep notebooks — no, I didn't touch them, either!"

"We all keep notebooks," Morrie volunteered. "That's the influence of Ross's old man."

"Dad told me he did not care," Ross explained, "how much I messed around as long as I kept it above the tinker-toy level. He used to make me submit notes to him on everything I tried and he would grade them on clearness and completeness. After a while I got the idea and he quit."

"Does he help you with your projects?"

"Not a bit. He says they're our babies and we'll have to nurse them."

They prepared to adjourn to their clubhouse, an outbuilding left over from the days when the Old Ross Place was worked as a farm. They gathered up the forlorn pieces of Starstruck V, while Ross checked each item. "I guess that's all," he announced and started to pick up the remains.

"Wait a minute," Morrie suggested. "We never did search for the piece that clipped Doctor Cargraves."

"That's right," the scientist agreed. "I have a personal interest in that item, blunt instrument, missile, shrapnel, or whatever. I want to know how close I came to playing a harp."

Ross looked puzzled. "Come here, Art," he said in a low voice.

"I am here. What do you want?"

"Tell me what piece is still missing-"

"What difference does it make?" But he bent over the box containing the broken rocket and checked the items. Presently he too looked puzzled.

"Ross-"

"Yeah?"

"There isn't anything missing."

"That's what I thought. But there has to be."

"Wouldn't it be more to the point," suggested Cargraves, "to look around near where I was hit?"

"I suppose so."

They all searched, they found nothing. Presently they organized a system which covered the ground with such thoroughness that anything larger than a medium-small ant should have come to light. They found a penny and a broken Indian arrowhead, but nothing resembling a piece of the exploded rocket.

"This is getting us nowhere," the doctor admitted. "Just where was I when you found me?"

"Right in the gateway," Morrie told him. "You were collapsed on your face and-"

"Just a minute. On my face?"

"Yes. You were-"

"But how did I get knocked on my face? I was facing toward your testing ground when the lights went out. I'm sure of that. I should have fallen backwards."

"Well… I'm sure you didn't, sir. Maybe it was a ricochet, as you said."

"Hmm… maybe." The doctor looked around. There was nothing near the gate which would make a ricochet probable. He looked at the spot where he had lain and spoke to himself.

"What did you say, doctor?"

"Uh? Oh, nothing, nothing at all. Forget it. It was just a silly idea I had. It couldn't be." He straightened up as if dismissing the whole thing.

"Let's not waste any more time on my vanishing `blunt instrument.' It was just curiosity. Let's get on back."

The clubhouse was a one-story frame building about twenty feet square. One wall was filled with Ross's chemistry workbench with the usual clutter of test-tube racks, bunsen burners, awkward-looking, pretzel-like arrangements of glass tubing, and a double sink which looked as if it had been salvaged from a junk dealer. A homemade hood with a hinged glass front occupied one end of the bench. Parallel to the adjacent wall, in a little glass case, a precision balance' of a good make but of very early vintage stood mounted on its own concrete pillar.

"We ought to have airconditioning," Ross told the doctor, "to do really good work."

"You haven't done so badly," Cargraves commented. The boys had covered the rough walls with ply board; the cracks had been filled and the interior painted with washable enamel. The floor they had covered with linoleum, salvaged like the sink, but serviceable. The windows and door were tight. The place was clean.

"Humidity changes could play hob with some of your experiments, however," he went on. "Do you plan to put in airconditioning sometime?"

"I doubt it. I guess the Galileo Club is about to fold up."

"What? Oh, that seems a shame."

"It is and it isn't. This fall we all expect to go away to Tech."

"I see. But aren't there any other members?"

"There used to be, but they've moved, gone away to school, gone in the army. I suppose we could have gotten new members but we didn't try. Well .. we work together well and… you know how it is."

Cargraves nodded. He felt that he knew more explicitly than did the boy. These three were doing serious work; most of their schoolmates, even though mechanically minded, would be more interested in needling a stripped-down car up to a hundred miles an hour than in keeping careful notes.

"Well, you are certainly comfortable here. It's a shame you can't take it with you." A low, wide, padded seat stretched from wall to wall opposite the chemistry layout. The other two boys were sprawled on it, listening. Behind them, bookshelves had been built into the wall. Jules Verne crowded against Mark's Handbook of Mechanical Engineering. Cargraves noted other old friends: H.G. Wells' Seven Famous Novels, The Handbook of Chemistry and Physics, and Smyth's Atomic Energy for Military Purposes. Jammed in with them, side by side with Ley's Rockets and Eddington's Nature of the Physical World, were dozens of puip magazines of the sort with robot men or space ships on their covers.

He pulled down a dog-eared copy of Haggard's When the Earth Trembled and settled his long body between the boys. He was beginning to feel at home. These boys he knew; he had only to gaze back through the corridors of his mind to recognize himself.

Ross said, "If you'll excuse me, I want to run up to the house." Cargraves grunted, "Sure thing," with his nose still in the book. Ross came back to announce, "My mother would like all of you to stay for lunch."

Morrie grinned, Art looked troubled. "My mother thinks I eat too many meals over here as it is," he protested feebly, his eyes on his uncle. Cargraves took him by the arm. "I'll go your bail on this one, Art," he assured him; then to Ross, "Please tell your mother that we are very happy to accept."

At lunch the adults talked, the boys listened. The scientist, his turban bandage looking stranger than ever, hit it off well with his elders. Any one would hit it off well with Mrs. Jenkins, who could have been friendly and gracious at a cannibal feast, but the boys were not used to seeing Mr. Jenkins in a chatty mood.

The boys were surprised to find out how much Mr. Jenkins knew about atomics. They had the usual low opinion of the mental processes of adults; Mr. Jenkins they respected but had subconsciously considered him the anachronism which most of his generation in fact was, a generation as a whole incapable of realizing that the world had changed completely a few years before, at Alamogordo, New Mexico, on July 16, 1945. Yet Mr. Jenkins seemed to know who Doctor Cargraves was and seemed to know that he had been retained until recently by North American Atomics. The boys listened carefully to find out what Doctor Cargraves planned to do next, but Mr. Jenkins did not ask and Cargraves did not volunteer the information.

After lunch the three and their guest went back to the clubhouse. Cargraves spent most of the afternoon spread over the bunk, telling stories of the early days at Oak Ridge when the prospect of drowning in the inescapable, adhesive mud was more dismaying than the everpresent danger of radioactive poisoning, and the story, old but ever new and eternally exciting, of the black, rainy morning in the New Mexico desert when a great purple-and-golden mushroom had climbed to the stratosphere, proclaiming that man had at last unloosed the power of the suns.

Then he shut up, claiming that he wanted to re-read the old H. Rider Haggard novel he had found. Ross and Morrie got busy at the bench; Art took a magazine. His eyes kept returning to his fabulous uncle. He noticed that the man did not seem to be turning the pages very often.

Quite a while later Doctor Cargraves put down his book. "What do you fellows know about atomics ?"

The boys exchanged glances before Morrie ventured to answer. "Not much I guess. Highschool physics can't touch it, really, and you can't mess with it in a home laboratory."

"That's right. But you are interested?"

"Oh, my, yes! We've read what we could — Pollard and Davidson, and Gamov's new book. But we don't have the math for atomics."

"How much math do you have?"

"Through differential equations."

"Huh?" Cargraves looked amazed. "Wait a minute. You guys are still in high school?"

"Just graduated."

"What kind of high school teaches differential equations? Or am I an old fuddy-duddy?"

Morrie seemed almost defensive in his explanation. "It's a new approach. You have to pass a test, then they give you algebra through quadratics, plane and spherical trigonometry, plane and solid geometry, and plane and solid analytical geometry all in one course, stirred in together. When you finish that course-and you take it as slow or as fast as you like -you go on."

Cargraves shook his head. "There've been some changes made while I was busy with the neutrons. Okay, Quiz Kids, at that rate you'll be ready for quantum theory and wave mechanics before long. But I wonder how they go about cramming you this way? Do you savvy the postulational notion in math?"

"Why, I think so."

"Tell me."

Morrie took a deep breath. "No mathematics has any reality of its own, not even common arithmetic. All mathematics is purely an invention of the mind, with no connection with the world around us, except that we find some mathematics convenient in describing things."

"Go on. You're doing fine!"

"Even then it isn't real-or isn't `true' -the way the ancients thought of it. Any system of mathematics is derived from purely arbitrary assumptions, called `postulates', the sort of thing the ancients called `axioms.'"

"Your jets are driving, kid! How about the operational notion in scientific theory? No… Art-you tell me."

Art looked embarrassed; Morrie looked pleased but relieved. "Well, uh… the operational idea is, uh, it's building up your theory in terms of the operations you perform, like measuring, or timing, so that you don't go reading into the experiments things that aren't there."

Cargraves nodded. "That's good enough — it shows you know what you're talking about." He kept quiet for a long time, then he added, "You fellows really interested in rockets?"

Ross answered this time, "Why, er, yes, we are. Rockets among other things. We would certainly like to have a go at those junior prizes."

"That's all?"

"Well, no, not exactly. I guess we all think, well, maybe some day…" His voice trailed off.

"I think I see." Cargraves sat up. "But why bother with the competition? After all, as you pointed out, model rockets can't touch the full-sized commercial jobs. The prizes are offered just to keep up interest in rocketry — it's like the model airplane meets they used to have when I was a kid. But you guys can do better than that — why don't you go in for the senior prizes?"

Three sets of eyes were fixed on him. "What do you mean ?" Cargraves shrugged. "Why don't you go to the moon with me?"

Chapter 3 CUTRATE COLUMBUS

THE SILENCE THAT FILLED THE clubhouse had a solid quality, as if one could slice it and make sandwiches. Ross recovered his voice first. "You don't mean it," he said in a hushed tone.

"But I do," Doctor Cargraves answered evenly. "I mean it quite seriously. I propose to try to make a trip to the moon. I'd like to have you fellows with me. Art," he added, "close your mouth. You'll make a draft."

Art gulped, did as he was told, then promptly opened it again. "But look," he said, his words racing, "Uncle Don, if you take us — I mean, how could we-or if we did, what would we use for — how do you propose-"

"Easy, easy!" Cargraves protested. "All of you keep quiet and I'll tell you what I have in mind. Then you can think it over and tell me whether or not you want to go for it."

Morrie slapped the bench beside him. "I don't care," he said, "I don't care if you're going to try to fly there on your own broom — I'm in. I'm going along."

"So am I," Ross added quickly, moistening his lips.

Art looked wildly at the other two. "But I didn't mean that I wasn't — I was just asking — Oh, shucks! Me, too! You know that."

The young scientist gave the impression of bowing without getting up.

"Gentlemen, I appreciate the confidence you place in me. But you are not committed to anything just yet."

"But-"

"So kindly pipe down," he went on, "and I'll lay out my cards, face up. Then we'll talk. Have you guys ever taken an oath ?"

"Oh, sure — Scout Oath, anyhow."

"I was a witness in court once."

"Fine. I want you all to promise, on your honor, not to spill anything I tell you without my specific permission, whether we do business or not. It is understood that you are not bound thereby to remain silent if you are morally obligated to speak up — you are free to tell on me if there are moral or legal reasons why you should. Otherwise, you keep mum — on your honor. How about it?"

"Yes, sir!"

"Right!"

"Check."

"Okay," agreed Cargraves, settling back on his spine. "That was mostly a matter of form, to impress you with the necessity of keeping your lips buttoned. You'll understand why, later. Now here is the idea: All my life I've wanted to see the day when men would conquer space and explore the planets — and I wanted to take part in it. I don't have to tell you how that feels." He waved a hand at the book shelves. "Those books show me you understand it; you've got the madness yourselves. Besides that, what I saw out on your rocket grounds, what I see here, what I saw yesterday when I sneaked a look in Art's lab, shows me that you aren't satisfied just to dream about it and read about it — you want to do something. Right?"

"Right!" It was a chorus.

Cargraves nodded. "I felt the same way. I took my first degree in mechanical engineering with the notion that rockets were mechanical engineering and that I would need the training. I worked as an engineer after graduation until I had saved up enough to go back to school. I took my doctor's degree in atomic physics, because I had a hunch-oh, I wasn't the only one! -I had a hunch that atomic power was needed for practical space ships. Then came the war and the Manhattan Project. When the Atomic Age opened up a lot of people predicted that space flight was just around the corner. But it didn't work out that way-nobody knew how to harness the atom to a rocket. Do you know why?"

Somewhat hesitantly Ross spoke up. "Yes, I think I do."

"Go ahead."

"Well, for a rocket you need mass times velocity, quite a bit of mass in what the jet throws out and plenty of velocity. But in an atomic reaction there isn't very much mass and the energy comes out in radiations in all directions instead of 2 nice, lined-up jet. Just the same-"

"`Just the same' what?"

"Well, there ought to be a way to harness all that power. Darn it — with so much power from so little weight, there ought to be some way."

"Just what I've always thought," Cargraves said with a grin. "We've built atomic plants that turn out more power than Boulder Dam. We've made atomic bombs that make the two used in the war seem like firecrackers. Power to burn, power to throw away. Yet we haven't been able to hook it to a rocket. Of course there are other problems. An atomic power plant takes a lot of shielding to protect the operators — you know that. And that means weight. Weight is everything in a rocket. If you add another hundred pounds in dead load, you have to pay for it in fuel. Suppose your shield weighed only a ton — how much fuel would that cost you, Ross?"

Ross scratched his head. "I don't know what kind of fuel you mean nor what kind of a rocket you are talking about — what you want it to do."

"Fair enough," the scientist admitted. "I asked you an impossible question. Suppose we make it a chemical fuel and a moon rocket and assume a mass-ratio of twenfy to one. Then for a shield weighing a ton we have to carry twenty tons of fuel."

Art sat up suddenly. "Wait a minute, Uncle Don."

"Yes?"

"If you use a chemical fuel, like alcohol and liquid oxygen say, then you won't need a radiation shield."

"You got me, kid. But that was just for illustration. If you had a decent way to use atomic power, you might be able to hold your mass-ratio down to, let's say, one-to-one. Then a one-ton shield would only require one ton of fuel to carry it. That suit you better?"

Art wriggled in excitement. "I'll say it does. That means a real space ship. We could go anywhere in it!"

"But we're still on earth," his uncle pointed out dryly. "I said `if.' Don't burn out your jets before you take off. And there is still a third hurdle: atomic power plants are fussy to control — hard to turn on, hard to turn off. But we can let that one alone till we come to it. I still think we'll get to the moon."

He paused. They waited expectantly.

"I think I've got a way to apply atomic power to rockets." Nobody stood up. Nobody cheered. No one made a speech starting, "On this historic occasion-" Instead they held their breaths, waiting for him to go on.

"Oh, I'm not going into details now. You'll find out all about it, if we work together."

"We will!"

"Sure thing!"

"I hope so. I tried to interest the company I was with in the scheme, but they wouldn't hold still."

"Gee whillickers! Why not?"

"Corporations are in business to make money; they owe that to their stockholders. Do you see any obvious way to make money out of a flight to the moon?"

"Shucks." Art tossed it off. "They ought to be willing to risk going broke to back a thing like this."

"Nope. You're off the beam, kid. Remember they are handling other people's money. Have you any idea how much it would cost to do the research and engineering development, using the ordinary commercial methods, for anything as big as a trip to the moon?"

"No," Art admitted. "A good many thousands, I suppose."

Morrie spoke up. "More like a hundred thousand."

"That's closer. The technical director of our company made up a tentative budget of a million and a quarter."

"Whew!"

"Oh, he was just showing that it was not commercially practical. He wanted to adapt my idea to power plants for ships and trains. So I handed in my resignation."

"Good for you!"

Morrie looked thoughtful. "I guess I see," he said slowly, "why you swore us to secrecy. They own your idea."

Cargraves shook his head emphatically, "No, not at all. You certainly would be entitled to squawk if I tried to get you into a scheme to jump somebody else's patent rights — even if they held them by a yellowdog, brain-picking contract." Cargraves spoke with vehemence. "My contract wasn't that sort. The company owns the idea for the purposes for which the research was carried out — power. And I own anything else I see in it. We parted on good terms. I don't blame them. When the Queen staked Columbus, nobody dreamed that he would come back with the Empire State Building in his pocket."

"Hey," said Ross, "these senior prizes — they aren't big enough. That's why nobody has made a real bid for the top ones. The prize wouldn't pay the expenses, not for the kind of budget you mentioned. It's a sort of a swindle, isn't it?"

"Not a swindle, but that's about the size of it," Cargraves conceded. "With the top prize only $250,000 it won't tempt General Electric, or du Pont, or North American Atomic, or any other big research corporation. They can't afford it, unless some other profit can be seen. As a matter of fact, a lot of the prize money comes from those corporations." He sat up again. "But we can compete for it!"

"How?"

"I don't give a darn about the prize money. I just want to go!"

"Me too!" Ross made the statement; Art chimed in.

"My sentiments exactly. As to how, that's where you come in. I can't spend a million dollars, but I think there is a way to tackle this on a shoestring. We need a ship. We need the fuel. We need a lot of engineering and mechanical work. We need overhead expenses and supplies for the trip. I've got a ship."

"You have? Now? A space ship?" Art was wide-eyed.

"I've got an option to buy an Atlantic freighter-rocket at scrap prices. I can swing that. It's a good rocket, but they are replacing the manned freighters with the more economical robot-controlled jobs. It's a V-17 and it isn't fit to convert to passenger service, so we get it as scrap. But if I buy it, it leaves me almost broke. Under the UN trusteeship for atomics, a senior member of the Global Association of Atomic Scientists — that's me!" he stuck in, grinning, "can get fissionable material for experimental purposes, if the directors of the

Association approve. I can swing that. I've picked thorium, rather than uranium-235, or plutonium-never mind why. But the project itself had me stumped, just too expensive. I was about ready to try to promote it by endorsements and lecture contracts and all the other claptrap it sometimes takes to put over scientific work -when I met you fellows."

He got up and faced them. "I don't need much to convert that old V-17 into a space ship. But I do need skilled hands and brains and the imagination to know what is needed and why. You'd be my mechanics and junior engineers and machine-shop workers and instrument men and presently my crew. You'll do hard, dirty work for long hours and cook your own meals in the bargain. You'll get nothing but coffee-and-cakes and a chance to break your necks. The ship may never leave the ground. If it does, chances are you'll never live to tell about it. It won't be one big adventure. I'll work you till you're sick of me and probably nothing will come of it. But that's the proposition. Think it over and let me know."

There was the nerve-tingling pause which precedes an earthquake. Then the boys were on their feet, shouting all at once. It was difficult to make out words, but the motion had been passed by acclamation; the Galileo Club intended to go to the moon.

When the buzzing had died down, Cargraves noticed that Ross's face was suddenly grave. "What's the matter, Ross? Cold feet already ?"

"No," Ross shook his head. "I'm afraid it's too good to be true."

"Could be, could be. I think I know what's worrying you. Your parents?"

"Uh, huh. I doubt if our folks will ever let us do it."

Chapter 4 THE BLOOD OF PIONEERS

CARGRAVES LOOKED AT THEIR woebegone faces. He knew what they were faced with; a boy can't just step up to his father and say, "By the way, old man, count me out on those plans we made for me to go to college. I've got a date to meet Santa Claus at the North Pole." It was the real reason he had hesitated before speaking of his plans. Finally he said, "I'm afraid it's up to each of you. Your promise to me does not apply to your parents, but ask them to respect your confidence. I don't want our plans to get into the news."

"But look, Doctor Cargraves," Morrie put in, "why be so secret about it? It might make our folks feel that it was just a wild-eyed kid's dream. Why can't you just go to them and explain where we would fit into it?"

"No," Cargraves answered, "they are your parents. When and if they want to see me, I'll go to them and try to give satisfactory answers. But you will have to convince them that you mean business. As to secrecy, the reasons are these: there is only one aspect of my idea that can be patented and, under the rules of the UN Atomics Convention, it can be licensed by any one who wants to use it. The company is obtaining the patent, but not as a rocket device. The idea that I can apply it to a cheap, shoestring venture into space travel is mine and I don't want any one else to beat me to it with more money and stronger backing. Just before we are ready to leave we will call in the reporters — probably to run a story about how we busted our necks on the takeoff."

"But I see your point," he went on. "We don't want this to look like a mad-scientist-and-secret-laboratory set-up. Well, I'll try to convince them."

Doctor Cargraves made an exception in the case of Art's mother, because she was his own sister. He cautioned Art to retire to his basement laboratory as soon as dinner was over and then, after helping with the dishes, spoke to her. She listened quietly while he explained. "Well, what do you think of it?

She sat very still, her eyes everywhere but on his face, her hands busy twisting and untwisting her handkerchief. "Don, you can't do this to me." He waited for her to go on.

"I can't let him go, Don. He's all I've got. With Hans gone…"

"I know that," the doctor answered gently. "But Hans has been gone since Art was a baby. You can't limit the boy on that account."

"Do you think that makes it any easier?" She was close to tears.

"No, I don't. But it is on Hans' account that you must not keep his son in cotton batting. Hans had courage to burn. If he had been willing to knuckle under to the Nazis he would have stayed at Kaiser Wilhelm Institute. But Hans was a scientist. He wouldn't trim his notion of truth to fit political gangsters. He-"

"And it killed him!"

"I know, I know. But remember, Grace, it was only the fact that you were an American girl that enabled you to pull enough strings to get him out of the concentration camp."

"I don't see what that's got to do with it. Oh, you should have seen him when they let him out!" She was crying now.

"I did see him when you brought him to this country," he said gently, "and that was bad enough. But the fact that you are American has a lot to do with it. We have a tradition of freedom, personal freedom, scientific freedom. That freedom isn't kept alive by caution and unwillingness to take risks. If Hans were alive he would be going with me — you know that, Sis. You owe it to his son not to keep him caged. You can't keep him tied to your apron strings forever, anyhow. A few more years and you will have to let him follow his own bent."

Her head was bowed. She did not answer. He patted her shoulder. "You think it over, Sis. I'll try to bring him back in one piece." When Art came upstairs, much later, his mother was still sitting, waiting for him. "Arthur?"

"Yes, Mother."

"You want to go to the moon?"

"Yes, Mother."

She took a deep breath, then replied steadily. "You be a good boy on the moon, Arthur. You do what your uncle tells you to."

"I will, Mother."

Morrie managed to separate his father from the rest of the swarming brood shortly after dinner. "Poppa, I want to talk to you man to man."

"And how else ?"

"Well, this is different. I know you wanted me to come into the business, but you agreed to help me go to Tech."

His father nodded. "The business will get along. Scientists we are proud to have in the family. Your Uncle Bernard is a fine surgeon. Do we ask him to help with the business ?"

"Yes, Poppa, but that's just it-I don't want to go to Tech."

"So? Another school?"

"No, I don't want to go to school." He explained Doctor Cargraves' scheme, blurting it out as fast as possible in an attempt to give his father the whole picture before he set his mind. Finished, he waited.

His father rocked back and forth. "So it's the moon now, is it? And maybe next week the sun. A man should settle down if he expects to accomplish anything, Maurice."

"But, Poppa, this is what I want to accomplish!"

"When do you expect to start?"

"You mean you'll let me? I can?"

"Not so fast, Maurice. I did not say yes; I did not say no. It has been quite a while since you stood up before the congregation and made your speech, `Today I am a man-' That meant you were a man, Maurice, right that moment. It's not for me to let you; it's for me to advise you. I advise you not to. I think it's foolishness."

Morrie stood silent, stubborn but respectful.

"Wait a week, then come back and tell me what you are going to do. There's a pretty good chance that you will break your neck on this scheme, isn't there?"

"Well… yes, I suppose so."

"A week isn't too long to make up your mind to kill yourself. In the meantime, don't talk to Momma about this."

"Oh, I won't!"

"If you decide to go ahead anyway, I'll break the news to her. Momma isn't going to like this, Maurice."

Doctor Donald Cargraves received a telephone call the next morning which requested him, if convenient, to come to the Jenkins' home. He did so, feeling, unreasonably he thought, as if he were being called in on the carpet. He found Mr. and Mrs. Jenkins in the drawing room; Ross was not in sight. Mr. Jenkins shook hands with him and offered him a chair.

"Cigarette, Doctor? Cigar?"

"Neither, thank you."

"If you smoke a pipe," Mrs. Jenkins added, "please do so." Cargraves thanked her and gratefully stoked up his old stinker.

"Ross tells me a strange story," Mr. Jenkins started in. "If he were not pretty reliable I'd think his imagination was working overtime. Perhaps you can explain it."

"I'll try, sir."

"Thanks. Is it true, Doctor, that you intend to try to make a trip to the moon."

"Quite true."

"Well! Is it also true that you have invited Ross and his chums to go with you in this fantastic adventure?"

"Yes, it is." Doctor Cargraves found that he was biting hard on the stem of his pipe.

Mr. Jenkins stared at him. "I'm amazed. Even if it were something safe and sane, your choice of boys as partners strikes me as outlandish." Cargraves explained why he believed the boys could be competent junior partners in the enterprise. "In any case," he concluded, "being young is not necessarily a handicap. The great majority of the scientists in the Manhattan Project were very young men."

"But not boys, Doctor."

"Perhaps not. Still, Sir Isaac Newton was a boy when he invented the calculus. Professor Einstein himself was only twenty-six when he published his first paper on relativity — and the work had been done when he was still younger. In mechanics and in the physical sciences, calendar age has nothing to do with the case; it's solely a matter of training and ability."

"Even if what you say is true, Doctor, training takes time and these boys have not had time for the training you need for such a job. It takes years to make an engineer, still more years to make a toolmaker or an instrument man. Tarnation, I'm an engineer myself. I know what I'm talking about."

"Ordinarily I would agree with you. But these boys have what I need. Have you looked at their work?"

"Some of it."

"How good is it?"

"It's good work — within the limits of what they know."

"But what they know is just what I need for this job. They are rocket fans now. They've learned in their hobbies the specialties I need." Mr. Jenkins considered this, then shook his head. "I suppose there is something in what you say. But the scheme is fantastic. I don't say that space flight is fantastic; I expect that the engineering problems involved will some day be solved. But space flight is not a backyard enterprise. When it comes it will be done by the air forces, or as a project of one of the big corporations, not by half-grown boys."

Cargraves shook his head. "The government won't do it. It would be laughed off the floor of Congress. As for corporations, I have reason to be almost certain they won't do it, either."

Mr. Jenkins looked at him quizzically. "Then it seems to me that we're not likely to see space flight in our lifetimes."

"I wouldn't say so," the scientist countered. "The United States isn't the only country on the globe. It wouldn't surprise me to hear some morning that the Russians had done it. They've got the technical ability and they seem to be willing to spend money on science. They might do it."

"Well, what if they do?"

Cargraves took a deep breath. "I have nothing against the Russians; if they beat me to the moon, I'll take off my hat to them. But I prefer our system to theirs; it would be a sour day for us if it turned out that they could do something as big and as wonderful as this when we weren't even prepared to tackle it, under our set-up. Anyhow," he continued, "I have enough pride in my own land to want it to be us, rather than some other country."

Mr. Jenkins nodded and changed his tack. "Even if these three boys have the special skills you need, I still don't see why you picked boys. Frankly, that's why the scheme looks rattlebrained to me. You should have experienced engineers and mechanics and your crew should be qualified rocket pilots."

Doctor Cargraves laid the whole thing before them, and explained how he hoped to carry out his plans on a slim budget. When he had finished Mr. Jenkins said, "Then as a matter of fact you braced these three boys because you were hard up for cash?"

"If you care to put it that way."

"I didn't put it that way; you did. Candidly, I don't altogether approve of your actions. I don't think you meant any harm, but you didn't stop to think. I don't thank you for getting Ross and his friends stirred up over a matter unsuited to their ages without consulting their parents first." Donald Cargraves felt his mouth grow tense but said nothing; he felt that he could not explain that he had lain awake much of the night over misgivings of just that sort.

"However," Mr. Jenkins went on, "I understand your disappointment and sympathize with your enthusiasm." He smiled briefly. "I'll make you a deal. I'll hire three mechanics-you pick them - and one junior engineer or physicist, to help you in converting your ship. When the time comes, I'll arrange for a crew. Hiring will not be needed there, in my opinion — we will be able to pick from a long list of volunteers. Wait a minute," he said, as Cargraves started to speak, "you'll be under no obligation to me. We will make it a business proposition of a speculative sort. We'll draw up a contract under which, if you make it, you assign to me a proper percentage of the prize money and of the profits from exclusive news stories, books, lectures, and so forth. Does that look like a way out?"

Cargraves took a deep breath. "Mr. Jenkins," he said slowly, "if I had had that proposition last week, I would have jumped at it. But I can't take it."

"Why not?"

"I can't let the boys down. I'm already committed."

"Would it make a difference if I told you there was absolutely no chance of Ross being allowed to go?"

"No. I will have to go looking for just such a backer as yourself, but it can't be you. It would smack too much of allowing myself to be bought off-No offense intended, Mr. Jenkins! -to welch on the proposition I made Ross."

Mr. Jenkins nodded. "I was afraid you would feel that way. I respect your attitude, Doctor. Let me call Ross in and tell him the outcome." He started for the door.

"Just a moment, Mr. Jenkins-"

"Yes?"

"I want to tell you that I respect your attitude, too. As I told you, the project is dangerous, quite dangerous. I think it is a proper danger but I don't deny your right to forbid your son to risk his neck with me."

"I am afraid you don't understand me, Doctor Cargraves. It's dangerous, certainly, and naturally that worries me and Mrs. Jenkins, but that is not my objection. I would not try to keep Ross out of danger. I let him take flying lessons; I even had something to do with getting two surplus army trainers for the high school. I haven't tried to keep him from playing around with explosives. That's not the reason."

"May I asked what it is ?"

"Of course. Ross is scheduled to start in at the Technical Institute this fall. I think it's more important for him to get a sound basic education than for him to be first man on the moon." He turned away again.

"Wait a minute! If it's his education you are worried about, would you consider me a competent teacher ?"

"Eh? Well… yes."

"I will undertake to tutor the boys in technical and engineering subjects. I will see to it that they do not fall behind."

Mr. Jenkins hesitated momentarily. "No, Doctor, the matter is settled. An engineer without a degree has two strikes against him to start with. Ross is going to get his degree." He stepped quickly to the door and called out,

"Ross!"

"Coming, Dad." The center of the argument ran downstairs and into the room. He looked around, first at Cargraves, then anxiously at his father, and finally at his mother, who looked up from her knitting and smiled at him but did not speak. "What's the verdict?" he inquired.

His father put it bluntly. "Ross, you start in school in the fall. I cannot okay this scheme."

Ross's jaw muscles twitched but he did not answer directly. Instead he said to Cargraves, "How about Art and Morrie?"

"Art's going. Morrie phoned me and said his father didn't think much of it but would not forbid it."

"Does that make any difference, Dad?"

"I'm afraid not. I don't like to oppose you, son, but when it comes right down to cases, I am responsible for you until you are twenty-one. You've got to get your degree."

"But… but… look, Dad. A degree isn't everything. If the trip is successful, I'll be so famous that I won't need a tag on my name to get a job. And if I don't come back, I won't need a degree!"

Mr. Jenkins shook his head. "Ross, my mind is made up." Cargraves could see that Ross was fighting to keep the tears back. Somehow it made him seem older, not younger. When he spoke again his voice was unsteady. "Dad?"

"Yes, Ross?"

"If I can't go, may I at least go along to help with the rebuilding job? They'll need help."

Cargraves looked at him with new interest. He had some comprehension of what the proposal would cost the boy in heartache and frustration. Mr. Jenkins looked surprised but answered quickly. "You may do that up till the time school opens."

"Suppose they aren't through by then? I wouldn't want to walk out on them."

"Very well. If necessary you can start school the second semester. That is my last concession." He turned to Doctor Cargraves. "I shall count on you for some tutoring." Then to his son, "But that is the end of the matter, Ross. When you are twenty-one you can risk your neck in a space ship if you like. Frankly, I expect that there will still be plenty of chance for you to attempt the first flight to the moon if you are determined to try it." He stood up.

"Albert."

"Eh? Yes, Martha?," he turned deferentially to his wife.

She laid her knitting in her lap and spoke emphatically. "Let him go, Albert!"

"Eh? What do you mean, my dear?"

"I mean, let the boy go to the moon, if he can. I know what I said, and you've put up a good argument for me. But I've listened and learned. Doctor Cargraves is right; I was wrong. We can't expect to keep them in the nest."

"Oh, I know what I said," she went on, "but a mother is bound to cry a little. Just the same, this country was not built by people who were afraid to go. Ross's great-great-grandfather crossed the mountains in a Conestoga wagon and homesteaded this place. He was nineteen, his bride was seventeen. It's a matter of family record that their parents opposed the move." She stirred suddenly and one of her knitting needles broke.

"I would hate to think that I had let the blood run thin." She got up and went quickly from the room.

Mr. Jenkins' shoulders sagged. "You have my permission, Ross," he said presently. "Doctor, I wish you good luck. And now, if you will excuse me.

He followed his wife.

Chapter 5 GROWING PAINS

"HOW MUCH FARTHER?" The noise of the stripped-down car combined with desert wind caused Art to shout. "Look at the map," Ross said, his hands busy at the wheel in trying to avoid a jack rabbit. "It's fifty-three miles from Route 66 to the turnoff, then seven miles on the turnoff."

"We left Highway 66 about thirty-nine, forty miles back," Art replied. "We oughtto be in sight of the turnoff before long." He squinted out across bare, colorful New Mexico countryside. "Did you ever see so much wide-open, useless country? Cactus and coyotes — what's it good for?"

"I like it," Ross answered. "Hang on to your hat." There was a flat, straight stretch ahead, miles along; Ross peeled off and made the little car dig… seventy… eighty… ninety… ninety-five. The needle quivered up toward three figures."

"Hey, Ross?"

"Yeah?"

"This rig ain't young any more. Why crack us up?"

"Sissy," said Ross, but he eased up on the gas.

"Not at all," Art protested. "If we kill ourselves trying to get to the moon, fine — we're heroes. But if we bust our fool necks before we start, we'll just look silly."

"Okay, okay — is that the turnoff?"

A dirt road swung off to the right and took out over the desert. They followed it about a quarter of a mile, then pulled up at a steel gate barring the road. A strong fence, topped by barbed wire, stretched out in both directions. There was a sign on the gate:

DANGER

Unexploded Shells

Enter this area at your own risk. Disturb nothing - report all suspicious objects to the District Forester.

"This is it," Ross stated. "Got the keys?" The area beyond was an abandoned training ground of the war, part of more than 8,000,000 acres in the United States which had been rendered useless until decontaminated by the hazardous efforts of army engineer specialists. This desert area was not worth the expense and risk of decontamination, but it was ideal for Cargraves; it assured plenty of room and no innocent bystanders — and it was rent free, loaned to the Association of Atomic Scientists, on Cargraves' behalf.

Art chucked Ross some keys. Ross tried them, then said, "You've given me the wrong keys."

"I don't think so. Nope," he continued, "those are the keys Doc sent."

"What do we do?"

"Bust the lock, maybe."

"Not this lock. Do we climb it?"

"With the rig under one arm? Be your age."

A car crawled toward them, its speed lost in the vastness of the desert. It stopped near them and a man in a military Stetson stuck his head out. "Hey, there!"

Art muttered, "Hey, yourself," then said, "Good morning."

"What are you trying to do?"

"Get inside."

"Don't you see the sign? Wait a minute — either one of you named Jenkins?"

"He's Ross Jenkins. I'm Art Mueller."

"Pleased to know you. I'm the ranger hereabouts. Name o' Buchanan. I'll let you in, but I don't rightly know as I should."

"Why not?" Ross's tone was edgy. He felt that they were being sized up as youngsters.

"Well… we had a little accident in there the other day. That's why the lock was changed."

"Accident?"

"Man got in somehow — no break in the fence. He tangled with a land mine about a quarter of a mile this side of your cabin."

"Did it… kill him?"

"Deader `n a door nail. I spotted it by the buzzards. See here — I'll let you in; I've got a copy of your permit. But don't go exploring. You stay in the marked area around the cabin, and stay on the road that follows the power line."

Ross nodded. "We'll be careful."

"Mind you are. What are you young fellows going to do in there, anyway? Raise jackrabbits?"

"That's right. Giant jackrabbits, eight feet tall."

"So? Well, keep `em inside the marked area, or you'll have jackrabbit hamburger."

"We'll be careful," Ross repeated. "Any idea who the man was that had the accident? Or what he was doing here?"

"None, on both counts. The buzzards didn't leave enough to identify. Doesn't make sense. There was nothing to steal in there; it was before your stuff came."

"Oh, it's here!"

"Yep. You'll find the crates stacked out in the open. He wasn't a desert man," the Ranger went on. "You could tell by his shoes. Must `a' come by car, but there was no car around. Doesn't make sense."

"No, it doesn't seem to," Ross agreed, "but he's dead, so that ends it."

"Correct. Here are your keys. Oh, yes-" He put his hand back in his pocket. "Almost forgot. Telegram for you."

"For us? Oh, thanks!"

"Better put up a mail box out at the highway," Buchanan suggested. "This reached you by happenstance."

"We'll do that," Ross agreed absently, as he tore open the envelope.

"So long." Buchanan kicked his motor into life.

"So long, and thanks again."

"For Heaven's sake, what does it say?," Art demanded.

"Read it:"

PASSED FINAL TESTS TODAY. LEAVING SATURDAY. PLEASE PROVIDE BRASS BAND, DANCING GIRLS, AND TWO FATTED CALVES — ONE RARE, ONE MEDIUM. (signed) DOC AND MORRIE.

Ross grinned. "Imagine that! Old Morrie a rocket pilot! I'll bet his hat doesn't fit him now."

"I'll bet it doesn't. Darn! We all should have taken the course."

"Relax, relax. Don't be small about it — we'd have wasted half the summer." Ross dismissed the matter.

Art himself did not understand his own jealousy. Deep inside, it was jealousy of the fact that Morrie had been able to go to Spaatz Field in the company of Art's idolized uncle, rather than the purpose of the trip. All the boys had had dual-control airplane instruction; Morrie had gone on and gotten a private license. Under the rules-out of date, in Art's opinion -an airplane pilot could take a shortened course for rocket pilot. Doctor Cargraves held a slightly dusty aircraft license some fifteen years old. He had been planning to qualify for rocket operation; when he found that Morrie was eligible it was natural to include him.

This had left Ross and Art to carry out numerous chores for the enterprise, then to make their own way to New Mexico to open up the camp.

The warning to follow the power line had been necessary; the boys found the desert inside pockmarked by high explosive and crisscrossed with tracks, one as good as another, carved years before by truck and tank and mobile carrier. The cabin itself they found to be inside a one-strand corral a quarter of a mile wide and over a mile long. Several hundred yards beyond the corral and stretching away for miles toward the horizon was an expanse which looked like a green, rippling lake — the glassy crater of the atom bomb test of 1951, the UN's Doomsday Bomb.

Neither the cabin nor the piled-up freight could hold their attention until they had looked at it. Ross drove the car to the far side of the enclosure and they stared.

Art gave a low respectful whistle. "How would you like to have been under that?" Ross inquired in a hushed voice.

"Not any place in the same county — or the next county. How would you like to be in a city when one of those things goes off?"

Ross shook his head. "I want to zig when it zags. Art, they better never have to drop another one, except in practice. If they ever start lobbing those things around, it `ud be the end of civilization."

"They won't," Art assured him. "What d'you think the UN police is for? Wars are out. Everybody knows that."

"You know it and I know it. But I wonder if everybody knows it ?"

"It'll be just too bad if they don't."

"Yeah — too bad for us."

Art climbed out of the car. "I wonder if we can get down to it?

"Well, don't try. We'll find out later."

"There can't be any duds in the crater or anywhere in the area — not after that."

"Don't forget our friend that the buzzards ate. Duds that weren't exposed to the direct blast might not go off. This bomb was set off about five miles up."

"Huh? I thought-"

"You were thinking about the test down in Chihuahua. That was a ground job. Come on. We got work to do." He trod on the starter.

The cabin was pre-fab, moved in after the atom bomb test to house the radioactivity observers. It had not been used since and looked it.

"Whew! What a mess," Art remarked. "We should have brought a tent."

"It'll be all right when we get it fixed up. Did you see kerosene in that stuff outside?"

"Two drums of it."

"Okay. I'll see if I can make this stove work. I could use some lunch." The cabin was suitable, although dirty. It haddrilled well; the water was good, although it had a strange taste. There were six rough bunks needing only bedding rolls. The kitchen was the end of the room, the dining room a large pine table, but there were shelves, hooks on the walls, windows, a tight roof overhead. The stove worked well, even though it was smelly; Ross produced scrambled eggs, coffee, bread and butter, German-fried potatoes, and a bakery apple pie with only minor burns and mishaps.

It took all day to clean the cabin, unload the car, and uncrate what they needed at once. By the time they finished supper, prepared this time by Art, they were glad to crawl into their sacks. Ross was snoring gently before Art closed his eyes. Between Ross's snores and the mournful howls of distant coyotes Art was considering putting plugs in his ears, when the morning sun woke him up.

"Get up, Ross!"

"Huh? What? Wassamatter?"

"Show a leg. We're burning daylight."

"I'm tired," Ross answered as he snuggled back into the bedding. "I think I'll have breakfast in bed."

"You and your six brothers. Up you come — today we pour the foundation for the shop."

"That's right." Ross crawled regretfully out of bed. "Wonderful weather — I think I'll take a sun bath."

"I think you'll get breakfast, while I mark out the job."

"Okay, Simon Legree."

The machine shop was a sheet metal and stringer affair, to be assembled. They mixed the cement with the sandy soil of the desert, which gave them a concrete good enough for a temporary building. It was necessary to uncrate the power tools and measure them before the fastening bolts could be imbedded in the concrete. Ross watched as Art placed the last bolt. "You sure we got `em all?"

"Sure. Grinder, mill, lathe-" He ticked them off. "Drill press, both saws-"

They had the basic tools needed for almost any work. Then they placed bolts for the structure itself, matching the holes in the metal sills to the bolts as they set them in the wet concrete. By nightfall they had sections of the building laid out, each opposite its place, ready for assembly. "Do you think the power line will carry the load?" Art said anxiously, as they knocked off.

Ross shrugged. "We won't be running all the tools at once. Quit worrying, or we'll never get to the moon. We've got to wash dishes before we can get supper."

By Saturday the tools had been hooked up and tested, and Art had rewound one of the motors. The small mountain of gear had been stowed and the cabin was clean and reasonably orderly. They discovered in unpacking cases that several had been broken open, but nothing seemed to have been hurt. Ross was inclined to dismiss the matter, but Art was worried. His precious radio and electronic equipment had been gotten at.

"Quit fretting," Ross advised him. "Tell Doc about it when he comes. The stuff was insured."

"It was insured in transit," Art pointed out. "By the way, when do you think they will get here?"

"I can't say," Ross answered. "If they come by train, it might be Tuesday or later. If they fly to Albuquerque and take the bus, it might be tomorrow — what was that?" He glanced up.

"Where?" asked Art.

"There. Over there, to your left. Rocket."

"So it is! It must be a military job; we're off the commercial routes. Hey, he's turned on his nose jets!"

"He's going to land. He's going to land here!"

"You don't suppose?"

"I don't know. I thought — there he comes! It can't-" His words were smothered when the thunderous, express-train roar reached them, as the rocket decelerated. Before the braking jets had been applied, it was traveling ahead of its own din, and had been, for them, as silent as thought. The pilot put it down smoothly not more than five hundred yards from them, with a last blast of the nose and belly jets which killed it neatly.

They began to run.

As they panted up to the sleek, gray sides of the craft, the door forward of the stub wings opened and a tall figure jumped down, followed at once by a smaller man.

"Doc! Morrie!"

"Hi, sports!" Cargraves yelled. "Well, we made it. Is lunch ready?"

Morrie was holding himself straight, almost popping with repressed emotion.

"I made the landing," he announced.

"You did?" Art seemed incredulous.

"Sure. Why not? I got my license. Want to see it?"

"`Hot Pilot Abrams,' it says here," Ross alleged, as they examined the document. "But why didn't you put some glide on it? You practically set her down on her jets."

"Oh, I was practicing for the moon landing."

"You were, huh? Well, Doc makes the moon landing or I guarantee I don't go."

Cargraves interrupted the kidding. "Take it easy. Neither one of us will try an airless landing."

Morrie looked startled. Ross said, "Then who-"

"Art will make the moon landing."

Art gulped and said, "Who? Me?"

"In a way. It will have to be a radar landing; we can't risk a crack-up on anything as hard as an all jet landing when there is no way to walk home. Art will have to modify the circuits to let the robot-pilot do it. But Morrie will be the standby," he went on, seeing the look on Morrie's face. "Morrie's reaction time is better than mine. I'm getting old. Now how about lunch? I want to change clothes and get to work."

Morrie was dressed in a pilot's coverall, but Cargraves was wearing his best business suit. Art looked him over. "How come the zoot suit, Uncle? You don't look like you expected to come by rocket. For that matter, I thought the ship was going to be ferried out?"

"Change in plans. I came straight from Washington to the field and Morrie took off as soon as I arrived. The ship was ready, so we brought it out ourselves, and saved about five hundred bucks in ferry pilot charges."

"Everything on the beam in Washington?" Ross asked anxiously.

"Yes, with the help of the association's legal department. Got some papers for each of you to sign. Let's not stand here beating our gums. Ross, you and I start on the shield right away. After we eat."

"Good enough."

Ross and the doctor spent three days on the hard, dirty task of tearing out the fuel system to the tail jets. The nose and belly jets, used only in maneuvering and landing, were left unchanged. These operated on aniline and nitric fuel; Cargraves wanted them left as they were, to get around one disadvantage of atomic propulsion-the relative difficulty in turning the power off and on when needed.

As they worked, they brought each other up to date. Ross told him about the man who had tangled with a dud land mine. Cargraves paid little attention until Ross told him about the crates that had been opened. Cargraves laid down his tools and wiped sweat from his face. "I want the details on that," he stated.

"What's the matter, Doc? Nothing was hurt."

"You figure the dead man had been breaking into the stuff?"

"Well, I thought so until I remembered that the Ranger had said flatly that this bozo was already buzzard meat before our stuff arrived."

Cargraves looked worried and stood up. "Where to, Doc?"

"You go ahead with the job," the scientist answered absently. "I've got to see Art."

Ross started to speak, thought better of it, and went back to work.

"Art," Cargraves started in, "what are you and Morrie doing now?"

"Why, we're going over his astrogation instruments. I'm tracing out the circuits on the acceleration integrator. The gyro on it seems to be off center, by the way."

"It has to be. Take a look in the operation manual. But never mind that. Could you rig an electric-eye circuit around this place?"

"I could if I had the gear."

"Never mind what you might do `if' — what can you do with the stuff you've got?"

"Wait a minute, Uncle Don," the younger partner protested. "Tell me what you want to do — I'll tell you if I can wangle it."

"Sorry. I want a prowler circuit around the ship and cabin. Can you do it?"

Art scratched his ear. "Let me see. I'd need photoelectric cells and an ultraviolet light. The rest I can piece together. I've got two light meters in my photo kit; I could rig them for the cells, but I don't know about UV light. If we had a sun lamp, I could filter it. How about an arc? I could jimmy up an arc."

Cargraves shook his head. "Too uncertain. You'd have to stay up all night nursing it. What else can you do?"

"Mmmm… Well, we could use thermocouples maybe. Then I could use an ordinary floodlight and filter it down to infrared."

"How long would it take? Whatever you do, it's got to be finished by dark, even if it's only charging the top wire of the fence."

"Then I'd better do just that," Art agreed, "if that — Say!"

"Say what?"

"Instead of giving the fence a real charge and depending on shocking anybody that touches it, I'll just push a volt or two through it and hook it back in through an audio circuit with plenty of gain. I can rig it so that if anybody touches the fence it will howl like a dog. How's that?"

"That's better. I want an alarm right now. Get hold of Morrie and both of you work on it." Cargraves went back to his work, but his mind was not on it. The misgivings which he had felt at the time of the mystery of the missing `blunt instrument' were returning. Now more mysteres — his orderly mind disliked mysteries.

He started to leave the rocket about an hour later to see how Art was making out. His route led him through the hold into the pilot compartment. There he found Morrie. His eyebrows went up. "Hi, sport," he said. "I thought you were helping Art."

Morrie looked sheepish. "Oh, that!" he said. "Well, he did say something about it. But I was busy." He indicated the computer, its cover off.

"Did he tell you I wanted you to help him?"

"Well, yes — but he didn't need my help. He can do that sort of work just as well alone."

Cargraves sat down. "Morrie," he said slowly, "I think we had better have a talk. Have you stopped to think who is going to be secondin-command of this expedition?"

Morrie did not answer. Cargraves went on. "It has to be you, of course. You're the other pilot. If anything happens to me the other two will have to obey you. You realize that?"

"Art won't like that." Morrie's voice was a mutter.

"Not as things stand now. Art's got his nose out of joint. You can't blame him — he was disappointed that he didn't get to take pilot training, too."

"But that wasn't my fault."

"No, but you've got to fix it. You've got to behave so that, if the time comes, they'll want to take your orders. This trip is no picnic.

There will be times when our lives may depend on instant obedience. I put it to you bluntly, Morrie — if I had had a choice I would have picked Ross for my second-incommand — he's less flighty than you are. But you're it, and you've got to live up to it. Otherwise we don't take off."

"Oh, we've got to take off! We can't give up now!"

"We'll make it. The trouble is, Morrie," he went on, "American boys are brought up loose and easy. That's fine. I like it that way. But there comes a time when loose and easy isn't enough, when you have to be willing to obey, and do it wholeheartedly and without argument. See what I'm driving at?"

"You mean you want me to get on back to the shop and help Art."

"Correct." He swung the boy around and faced him toward the door, slapped him on the back and said, "Now git!"

Morrie "got." He paused at the door and flung back over his shoulder,

"Don't worry about me, Doc. I can straighten out and fly right."

"Roger!" Cargraves decided to have a talk with Art later.

Chapter 6 DANGER IN THE DESERT

THE SPACE SUITS WERE delivered the next day, causing another break in the work, to Cargraves' annoyance. However, the boys were so excited over this evidence that they were actually preparing to walk on the face of the moon that he decided to let them get used to the suits.

The suits were modified pressurized stratosphere suits, as developed for the air forces. They looked like diving suits, but were less clumsy. The helmets were "goldfish bowls" of Plexiglas, laminated with soft polyvinyl-butyral plastic to make them nearly shatter-proof. There were no heating arrangements. Contrary to popular belief, vacuum of outer space has no temperature; it is neither hot nor cold. Man standing on the airless moon would gain or lose heat only by radiation, or by direct contact with the surface of the moon. As the moon was believed to vary from extreme subzero to temperatures hotter than boiling water, Cargraves had ordered thick soles of asbestos for the shoes of the suits and similar pads for the seats of the pants of each suit, so that they could sit down occasionally without burning or freezing. Overgloves of the same material completed the insulation against contact. The suits were so well insulated, as well as airtight, that body heat more than replaced losses through radiation. Cargraves would have preferred thermostatic control, but such refinements could be left to the pioneers and colonists who would follow after. Each suit had a connection for an oxygen bottle much larger and heavier than the jump bottle of an aviator, a bottle much too heavy to carry on earth but not too heavy for the surface of the moon, where weight is only one-sixth that found on earth.

The early stratosphere suits tended to starfish and become rigid, which made the simplest movements an effort. In trying on his own suit, Cargraves was pleased to find that these suits were easy to move around in, even when he had Ross blow him up until the suit was carrying a pressure of three atmospheres, or about fortyfive pounds to the square inch. The constant-volume feature, alleged for the de-Camp joints, appeared to be a reality.

Cargraves let them experiment, while seeing to it that as many field tests as possible were made to supplement the manufacturer's laboratory tests. Then the suits were turned over to Art for installation of walky-talky equipment.

The following day the doctor turned all the boys to work on the conversion of the drive mechanism. He was expecting delivery of the atomic fission element thorium; the antiradiation shield had to be ready. This shield was constructed of lead, steel, and organic plastic, in an arrangement which his calculations indicated would be most effective in screening the alpha, beta, and gamma radiations and the slippery neutrons, from the forward part of the rocket.

Of these radiations, the gamma are the most penetrating and are much like X-rays. Alpha particles are identical with the nuclei of helium atoms; beta particles are simply electrons moving at extremely high speeds. Neutrons are the electrically uncharged particles which make up much of the mass of most atomic nuclei and are the particles which set off or trigger the mighty explosions of atomic bombs.

All of these radiations are dangerous to health and life.

The thorium drive unit was to be shielded only on the forward side, as radiations escaping to outer space could be ignored. Morrie had landed the rocket with one side facing the cabin, inside the corral. It was now necessary to jack the rocket around until the tubes pointed away from the cabin, so that radiations, after the thorium was in place, would go harmlessly out across the crater of the Doomsday Bomb and, also, so that the rocket would be in position for a captive test run with the exhaust directed away from the cabin.

The jacking-around process was done with hydraulic jacks, muscle, and sweat, in sharp contrast to the easy-appearing, powered manipulation of rockets by dolly and cradle and mobile sling, so familiar a sight on any rocket field. It took all of them until late afternoon. When it was over Cargraves declared a holiday and took them on a long-promised trip into the Doomsday Crater.

This bomb site has been pictured and described so much and the boys were so used to seeing it in the distance that the thrill of being in it was limited. Nevertheless the desolation, the utter deadness, of those miles and miles of frozen, glassy waste made their flesh creep. Cargraves marched ahead, carrying a Geiger radiation counter, of the sort used to prospect for uranium in Canada during the war. This was largely to impress the boys with the necessity for unsleeping watchfulness in dealing with radioactive elements. He did not really expect to hear the warning rattle of danger in the ear phones; the test had been made so long before that the grim lake was almost certainly as harmless as the dead streets of Hiroshima.

But it put them in the mood for the lecture he had in mind. "Now, listen, sports," he started in when they got back, "day after tomorrow the thorium arrives. From then on the holiday is over. This stuff is poison. You've got to remember that all the time."

"Sure," agreed Morrie. "We all know that."

"You know it at the tops of your minds. I want you to know it every minute, way down in your guts. We'll stake out the unshielded area between the ship and the fence. If your hat blows into that stretch, let it stay there, let it rot — but don't go after it."

Ross looked perturbed. "Wait a second, Doc. Would it really hurt anything to expose yourself for just a few seconds?"

"Probably not," Cargraves agreed, "provided that were all the dosage you ever got. But we will all get some dosage all the time, even through the shield. Radioactivity accumulates its poisonous effect. Any exposure you can possibly avoid, you must avoid. It makes your chances better when you get a dose of it accidentally. Art!"

"Uh? Yes, sir!"

"From now on you are the medical officer. You must see to it that everybody wears his X-ray film all the time-and I mean all the time - and his electroscope. I want you to change the films and develop them and check the electroscopes according to the dose in the manual. Complete charts on everything, and report to me each Friday morning — oftener if you find anything outside the limits. Got me?"

"Got you, Doc."

"Besides that, you arrange for blood counts once a week for everybody, over in town."

"I think I could learn to do a blood count myself," Art offered.

"You let the regular medic do it. You've got enough to worry about to keep all the electronic equipment purring along properly. One more thing." He looked around him, waiting to get their full attention. "If any one shows the possibility of overdosage of radiation, by film or by blood count or whatever, I will have to send him home for treatment. It won't be a case of `just one more chance.' You are dealing with hard facts herd — not me, but natural laws. If you make a mistake, out you go and we'll have to find somebody to take your place."

They all nodded solemnly. Art said, "Doc?"

"Suppose it's your film that shows the overdosage?"

"Me? Not likely! If it does you can kick me all the way to the gate — I'm afraid of that stuff!

"Just the same," he went on more seriously, "you run the same checks on me as on everybody else. Now let's have supper. I want you and Morrie to do the KP tonight, so that Ross can start his study period right after supper. Ross, you and I are getting up at five, so let's hit the sack early."

"Okay. What's cookin'?"

"Trip into Albuquerque — shopping." He was reluctant to explain. The place had no firearms. They had seemed a useless expense — many a man has spent years in the desert without shooting off anything but his mouth, he had reasoned. As for the dreamed of trip, what could one shoot on the moon? But signs of prowlers, even in this fenced and forbidding area, had him nervous. Art's watchdog fence was tested each night and Art slept with the low power-hum of the hot circuit in his ears; thus far there had been no new alarm. Still he was nervous.

Cargraves was awakened about three A.M. to find Art shaking his shoulder and light pouring in his eyes. "Doc! Doc! Wake up!"

"Huh? Wassamatter?"

"I got a squawk over the loudspeaker."

Cargraves was out of bed at once. They bent over the speaker. "I don't hear anything."

"I've got the volume low, but you'd hear it. There it is again — get it?" There had been an unmistakable squawk from the box. "Shall I wake the others?"

"Mmmm… no. Not now. Why did you turn on the light?"

"I guess I wanted it," Art admitted.

"I see." Cargraves hauled on trousers and fumbled with his shoes. "I want you to turn out the lights for ten seconds. I'm going out that window. If I'm not back in twenty minutes, or if you hear anything that sounds bad, wake the boys and come get me. But stay together. Don't separate for any reason." He slipped a torch in his pocket. "Okay."

"You ought not to go by yourself."

"Now, Art. I thought we had settled such matters."

"Yes, but — oh, well !" Art posted himself at the switch.

Cargraves was out the window and had catfooted it around behind the machine shop before the light came on again. He lurked in the shadow and let his eyes get used to the darkness.

It was a moonless night, clear and desert sharp. Orion blazed in the eastern sky. Cargraves soon was able to pick out the sage bushes, the fence posts, the gloomy bulk of the ship a hundred yards away.

The padlock on the machine shop was undisturbed and the shop's windows were locked. Doing his best to take advantage of the scanty cover, he worked his way down to the ship.

The door was ajar. He could not remember whether he or Ross had been last man out. Even if it had been Ross, it was not like Ross to fail to lock the door.

He found that he was reluctant to enter the craft. He wished that he had not put off buying guns; a fortyfive in his hand would have comforted him. He swung the door open and scrambled in fast, ducking quickly away from the door, where his silhouette would make a target. He crouched in the darkness, listening and trying to slow his pounding heart. When he was sure he could hear nothing, he took the flashlight, held it at arm's length away from him and switched it on.

The piloting compartment was empty. Somewhat relieved, he sneaked back through the hold, empty also, and into the drive compartment. Empty. Nothing seemed disturbed.

He left the ship cautiously, this time making sure that the door was locked. He made a wide sweep around the cabin and machine shop and tried to assure himself that no one was inside the corral. But in the starlight, fifty men might have hidden in the sage, simply by crouching down and holding still.

He returned to the cabin, whistling to Art as he approached. "About time you got back," Art complained. "I was just about to roust out the others and come and get you. Find anything?"

"No. Anything more out of the squawk box?"

"Not a peep."

"Could it have been a coyote brushing against the wire?"

"How would a coyote get through the outer fence ?" Art wanted to know.

"Dig under it. There are coyotes in here. We've heard them."

"You can't tell how far a coyote is from you by its howl."

"Listen to the old desert rat! Well, leave the light on, but go back to bed. I'll be awake. I've got to be up in another hour in any case. Crawl in the sack." Cargraves settled down to a pipe and some thought.

Cargraves was too busy on the trip to Albuquerque to worry about the preceding night. Ross's style of herding his hot rod left little time to think about anything but the shortness of life and the difficulty of hanging on to his hat. But Ross poured them into the city with plenty of time for shopping.

Cargraves selected two Garand rifles, Army surplus stock at a cheap price, and added a police thirty-eight special, on a fortyfive frame. His mouth watered at a fancy sporting rifle with telescopic sights, but money was getting short; a few more emergency purchases or any great delay in starting would bankrupt the firm.

He ordered a supply of army-style Crations and Krations for the trip. Ross remarked privately, while the clerk wrote up the order, "In most stories about space travel, they just eat pills of concentrated food. Do you think it will ever come to that?"

"Not with my money," the physicist answered. "You guys can eat pills if you want to. I want food I can get my teeth in."

"Check," said Ross.

They stopped at a nursery where Cargraves ordered three dozen young rhubarb plants. He planned to use a balanced oxygen-carbon-dioxide air-refreshing system during the stay on the moon, if possible, and the plants were to supply the plantlife half of the cycle. Enough liquid oxygen would be carted along for breathing throughout the round trip, but a "balanced aquarium" arrangement for renewing their air supply would enable them to stay on the moon as long as their food lasted.

The chemical fertilizers needed for hydroponic farming of the rhubarb were ordered also. This done, they grabbed a chocolate malt and a hamburger apiece and hightailed it for the camp.

Morrie and Art swarmed out of the machine shop as they arrived. "Hi, Doc!

Hi, Ross! What's the good word?"

Ross showed them the guns. Art was eager to try them and Cargraves okayed it. Morrie hung back and said, "By the way, Doc, the CAB inspector was here today."

"The what?"

"The Civil Aeronautics inspector. He had a letter from you."

"From me? What did it say?"

"Why, it requested them to send an inspector to go over the rebuilt parts of the rocket and approve it for flight. I told him it wasn't ready."

"What else did you say? Did you tell him it was atomic-powered?"

"No, but he seemed to know it. He knew that we planned a space flight, too. What's the pitch, Doc? I thought you were going to keep it quiet a while longer?"

"So did I," Cargraves said bitterly. "What did you tell him?"

"Nothing — so help me. I decided you ought to handle it, so I played stupid. I tipped Art and he did the same. Did we do wrong?" he went on anxiously. "I know he was CAB, but it seemed to me he ought to talk to you. Do you suppose we offended him?"

"I hope you gave him apoplexy," Cargraves said savagely. "He was no CAB inspector, Morrie. He was a phony."

"Huh? Why… But he had your letter."

"Faked. I'll bet he's been holed up somewhere outside the gate, waiting for me to be away. Did you leave him alone at any time?"

"No. Wait a minute — only once, for about five minutes. We were down at the ship and he sent me back for a flashlight. I'm sorry." The boy looked miserable.

"Forget it. It was the natural, polite thing to do. You didn't know he was phony. I wonder how he got through the gate? Did he come in a car?"

"Yes. I… Was the gate locked?"

"Yes, but he might have bulldozed the forester into letting him in." They had been moving down toward the ship as they talked. Cargraves made a quick examination of the ship, but found nothing amiss. It seemed likely that the intruder had not found what he was looking for, probably because the drive was not yet installed.

He still worried about the matter of the locked gate. "I'm going to run down to the gate," he announced, heading for the car. "Tell the boys."

"I'll drive you." None of the boys approved the way Cargraves drove a car; it was one respect in which they did not look up to him.

Privately, they considered his style stuffy.

"Okay. Snap it up."

Morrie ran down toward where the other two were wasting ammunition on innocent tin cans and bellowed at them. Seconds later he had the engine revved up and was ready to gun the rig when Cargraves slid into the seat beside him.

The padlock was intact, but one link of the bullchain had been hacksawed away and replaced with wire. "So that's that," Cargraves dismissed the matter.

"Hadn't we better put on a new chain?" inquired Morrie.

"Why bother? He's still got the hacksaw."

The trip back was gloomy. Cargraves was worried. Morrie felt responsible for not having unmasked and made prisoner the impostor. In retrospect he could think of a dozen dramatic ways to have done it. Cargraves told him to keep his lip buttoned until after supper. When the dishes were out of the way, he brought the others up to date on the ominous happenings. Art and Ross took it with grave faces but without apparent excitement. "So that's how it is," Ross said. "Seems like somebody doesn't like us."

"Why that dirty so-and-so," Art said softly. "I thought he was too smooth.

I'd like to have him on the other end of one of those Garands."

"Maybe you will," Cargraves answered him soberly. "I might as well admit, fellows, that I've been worried..."

"Shucks, we knew that when you ordered that watchdog hook-up."

"I suppose so. I can't figure out why anybody would do this. Simple curiosity I can understand, once the fact leaked out-as it seems to have done -that we are after space flight. But whoever it is has more than curiosity eating him, considering the lengths he is willing to go to."

"I'll bet he wants to steal your space drive, Uncle Don."

"That would make a swell adventure yarn, Art; but it doesn't make sense. If he knows I've got a rocket drive, all he has to do is apply for a license to the commission and use it."

"Maybe he thinks you are holding out some secrets on the commission?"

"If he thinks so, he can post a bond for the costs and demand an examination. He wouldn't have to fake letters, or bust open gates. If he proves it on me, I go to jail."

"The point is," Morrie asserted, "not why he's snooping but what we can do to stop him. I think we ought to stand watches at night." He glanced at the two rifles.

"No," Cargraves disagreed. "Art's squawk circuit is better than a guard. You can't see enough at night. I found that out."

"Say," put in Art. "Look — I could take the pilot radar and mount it on the roof of the cabin. With it set to scan for a landing it'll pick up anything in the neighborhood."

"No," Cargraves answered, "I wouldn't want to risk jimmying up the equipment. It's more important to have it just right for the moon landing than it is to use it for prowlers."

"Oh, I won't hurt it!"

"I still think," insisted Morrie, "that getting a shot at him is the best medicine."

"So much the better," Art pointed out. "I'll spot him in the scope. You wear phones with about a thousand feet of cord and I'll coach you right up to him, in the dark. Then you got `im."

"Sounds good," Morrie agreed.

"Take it easy," Cargraves cautioned. "You fellows may think this is the Wild West but you will find that a judge will take a very sour attitude if you plug a man engaged in simple trespassing. You boys've read too many comic books."

"I never touch the things," Art denied fiercely. "Anyhow. Not often," he amended.

"If we can't shoot, then why did you buy the guns?" Ross wanted to know.

"Fair enough. You can shoot — but you have to be certain it's self-defense; I'll take those guns back to the shop before I'll have a bunch of wild men running around with blood in their eyes and an itch in their trigger fingers. The other use for the guns is to throw a scare into any more prowlers. You can shoot, but shoot where he isn't — unless he shoots first."

"Okay."

"Suits."

"I hope he shoots first!"

"Any other ideas?"

"Just one," Art answered. "Suppose our pal cut our power line. We've got everything on it — light, radio, even the squawk box. He could cut the line after we went to sleep and loot the whole place without us knowing it."

Cargraves nodded. "I should have thought of that." He considered it. "You and I will string a temporary line right now from the ship's batteries to your squawk box. Tomorrow we'll hook up an emergency lighting circuit." He stood up. "Come on, Art. And you guys get busy. Study hour."

"Study hour?" Ross protested. "Tonight? We can't keep our minds on books — not tonight."

"You can make a stab at it," the doctor said firmly. "Guys have been known to write books while waiting to be hanged."

The night passed quietly. Ross and Doc were down at the ship early the next morning, leaving Art and Morrie to work out an emergency lighting circuit from the battery of the car. Doc planned to have everything ready for the thorium when it arrived. He and Ross climbed into the rocket and got cheerfully to work. Cargraves started laying out tools, while Ross, whistling merrily off key, squeezed himself around the edge of the shield. Cargraves looked up just in time to see a bright, bright flash, then to be hit in the face by a thunderous pressure which threw him back against the side of the ship.

Chapter 7 "WE'LL GO IF WE HAVE TO WALK"

ART WAS SHAKING HIS SHOULDER. "Doc!" he was pleading. "Doc! Wake up-are you hurt bad ?"

"Ross..." Cargraves said vaguely. "It's not Ross; it's Art."

"But Ross — how's Ross? Did it, did it kill him?"

"I don't know. Morrie's with him."

"Go find out."

"But you're-"

"Go find out, I said!" Whereupon he passed out again.

When he came to a second time, Art was bending over him. "Uncle," he said, "the thorium has come. What do we do?"

Thorium. Thorium? His head ached, the word seemed to have no meaning.

"Uh, I'll be out in a... what about Ross? Is he dead?"

"No, he's not dead."

"How bad is he hurt?"

"It seems to be his eyes, mostly. He isn't cut up any, but he can't see. What'll I tell them about the thorium, Uncle?"

"Oh, hang the thorium! Tell them to take it back."

"What?"

He tried to get up, but he was too dizzy, too weak. He let his head fall back and tried to collect his spinning thoughts.

"Don't be a dope, Art," he muttered peevishly. "We don't need thorium. The trip is off, the whole thing was a mistake. Send it back — it's poison." His eyes were swimming; he closed them. "Ross..." he said.

He was again brought back to awareness by the touch of hands on his body. Morrie and Art were gently but firmly going over him. "Take it easy, Doc," Morrie warned him.

"How's Ross?"

"Well..." Morrie wrinkled his brow. "Ross seems all right, except for his eyes. He says he's all right."

"But he's blind?"

"Well, he can't see."

"We've got to get him to a hospital." Cargraves sat up and tried to stand up. "Ow!" He sat down suddenly.

"It's his foot," said Art.

"Let's have a look at it. Hold still, Doc." They took his left shoe off gently and peeled back the sock. Morrie felt it over. "What do you think, Art?"

Art examined it. "It's either a sprain or a break. We'll have to have an X-ray."

"Where's Ross?" Cargraves persisted. "We've got to get him to a hospital."

"Sure, sure," Morrie agreed. "We've got to get you to one, too. We moved Ross up to the cabin."

"I want to see him."

"Comin' up! Have a seet, while I get the car."

With Art's help Cargraves managed to get up on his good foot and hobble to the door. Getting down from the ship's door was painful, but he made it, and fell thankfully into the seat of the car.

"Who's there?" Ross called out, as they came in with Cargraves leaning on the two boys.

"All of us," Art told him.

Cargraves saw that Ross was lying in his bunk with his eyes covered with a handkerchief. Cargraves hobbled over to him. "How is it, kid?" he said huskily.

"Oh, it's you, Doc. I'll get by. It'll take more than that to do me in. How are you?"

"I'm all right. How about your eyes?"

"Well," Ross admitted, "to tell the truth, they don't work too well. All I see is purple and green lights." He kept his voice steady, almost cheerful, but the pulse in his neck was throbbing visibly. Cargraves started to remove the bandage. Morrie stopped him.

"Let the bandage alone, Doc," he said firmly. "There's nothing to see. Wait till we get him to a hospital."

"But... Okay, okay. Let's get on with it."

"We were just waiting for you. Art will drive you."

"What are you going to do?"

"I," said Morrie, "am going to climb up on the roof of this shack with a load of sandwiches and a gun. I'll still be there when you get back."

"But-" Cargraves shrugged and let the matter pass.

Morrie scrambled down when they got back and helped Cargraves hobble into the cabin. Ross was led in by Art; his eyes were bandaged professionally and a pair of dark glasses stuck out of his shirt pocket. "What's the score?" Morrie demanded of all of them, but his eyes were fastened on Ross.

"It's too early to tell," Cargraves said heavily, as he eased into a chair.

"No apparent damage, but the optic nerve seems paralyzed."

Morrie clucked and said nothing. Ross groped at a chair and sat down.

"Relax," he advised Morrie. "I'll be all right. The flash produced a shock in the eyes. The doctor told me all about it. Sometimes a case like this goes on for three months or so, then it's all right."

Cargraves bit his lip. The doctor had told him more than he had told Ross; sometimes it was not all right; sometimes it was permanent.

"How about you, Doc?"

"Sprain, and a wrenched back. They strapped me up."

"Nothing else?"

"No. Anti-tetanus shots for both of us, but that was just to be on the safe side."

"Well," Morrie announced cheerfully, "it looks to me as if the firm would be back in production in short order."

"No," Cargraves denied. "No, it won't be. I've been trying to tell these goons something ever since we left the hospital, but they wouldn't listen. We're through. The firm is busted."

None of the boys said anything. He went on, raising his voice. "There won't be any trip to the moon. Can't you see that?"

Morrie looked at him impassively. "You said, `The firm is busted.' You mean you're out of money?"

"Well, not quite, but that's a factor. What I meant-"

"I've got some E-bonds," Ross announced, turning his bandaged head.

"That's not the point," Cargraves answered, with great gentleness. "I appreciate the offer; don't think I don't. And don't think I want to give up. But I've had my eyes opened. It was foolish, foolish from the start, sheer folly. But I let my desires outweigh my judgment. I had no business getting you kids into this. Your father was right, Ross. Now I've got to do what I can to make amends."

Ross shook his head. Morrie glanced at Art and said, "How about it, medical officer?"

Art looked embarrassed, started to speak, and changed his mind. Instead he went to the medicine cabinet, and took out a fever thermometer. He came back to Cargraves. "Open your mouth, Uncle."

Cargraves started to speak. Art popped the tube in his mouth. "Don't talk while I'm taking your temperature," he warned, and glanced at his wrist watch.

"Why, what the-"

"Keep your mouth closed!"

Cargraves subsided, fuming. Nobody said anything until Art reached again for the thermometer. "What does it say ?" Morrie demanded.

"A tenth over a hundred."

"Let me see that," Cargraves demanded. Art held it away from him. The doctor stood up, absentmindedly putting his weight on his injured foot. He then sat down quite suddenly. Art shook down the thermometer, cleaned it and put it away.

"It's like this," Morrie said firmly. "You aren't boss; I'm boss."

"Huh? What in the world has got into you, Morrie?"

Morrie said, "How about it, Art?"

Art looked embarrassed but said stubbornly, "That's how it is, Uncle."

"Ross?"

"I'm not sure of the pitch," Ross said slowly, "but I see what they are driving at. I'm stringing along with Art and Morrie."

Cargraves' head was beginning to ache again. "I think you've all gone crazy. But it doesn't make any difference; we're washed up anyhow."

"No," Morrie said, "we're not crazy, and it remains to be seen whether or not we're washed up. The point is: you are on the sick list. That puts me in charge; you set it up that way yourself. You can't give any orders or make any decisions for us until you are off the sick list."

"But-" He stopped and then laughed, his first laugh in hours. "This is nuts. You're hijacking me, with a technicality. You can't put me on the sick list for a little over a degree of temperature."

"You weren't put on the sick list for that; you are being kept on the sick list for it. Art put you on the sick list while you were unconscious. You stay there until he takes you off — you made him medical officer."

"Yes, but-Look here, Art -you put me on the sick list earlier? This isn't just a gag you thought up to get around me?"

"No, Uncle," Art assured him, "when I told Morrie that you said not to accept the thorium, he tried to check with you. But you were out like a light. We didn't know what to do, until Morrie pointed out that I was medical officer and that I had to decide whether or not you were in shape to carry out your job. So-"

"But you don't have... Anyway, all this is beside the point. I sent the thorium back; there isn't going to be any trip; there isn't any medical officer; there isn't any secondin-command. The organization is done with."

"But that's what I've been trying to tell you, Uncle. We didn't send the thorium back."

"Huh?"

"I've signed for it," Morrie explained, "as your agent."

Cargraves rubbed his forehead. "You kids — you beat me! However, it doesn't make any difference. I have made up my mind that the whole idea was a mistake. I am not going to the moon and that puts the kibosh on it. Wait a minute, Morrie! I'm not disputing that you are in charge, temporarily — but I can talk, can't I?"

"Sure. You can talk. But nothing gets settled until your temperature is down and you've had a night's sleep."

"Okay. But you'll see that things settle themselves. You have to have me to build the space drive. Right?"

"Mmmm… yes."

"No maybes about it. You kids are learning a lot about atomics, fast. But you don't know enough. I haven't even told you, yet, how the drive is supposed to work."

"We could get a license on your patent, even without your permission," Ross put in. "We're going to the moon."

"Maybe you could — if you could get another nuclear physicist to throw in with you. But it wouldn't be this enterprise. Listen to me, kids. Never mind any touch of fever I've got. I'm right in the head for the first time since I got banged on the head at your rocket test. And I want to explain some things. We've got to bust up, but I don't want you sore at me."

"What do you mean: `since you got banged in the head' ?"

Cargraves spoke very soberly. "I knew at that time, after we looked over the grounds, that that `accident' was no accident. Somebody put a slug on me, probably with a blackjack. I couldn't see why then and I still don't see why. I should have seen the light when we started having prowlers. But I couldn't believe that it was really serious. Yesterday I knew it was. Nobody impersonates a federal inspector unless he's playing for high stakes and willing to do almost anything. It had me worried sick. But I still didn't see why anybody would want anything we've got and I certainly didn't think they would try to kill us."

"You think they meant to kill us?" asked Ross.

"Obviously. The phony inspector booby-trapped us. He planted some sort of a bomb."

"Maybe he meant to wreck the ship rather than to kill us."

"What for?"

"Well," said Art, "maybe they're after the senior prizes."

"Wrecking our ship won't win him any prize money."

"No, but it could keep us from beating him."

"Maybe. It's farfetched but it's as good an answer as any. But the reason doesn't matter. Somebody is out to get us and he's willing to go to any lengths. This desert is a lonely place. If I could afford a squadron of guards around the place we might bull it through. But I can't. And I can't let you kids get shot or bombed. It's not fair to you, nor to your parents."

Art looked stubborn and unhappy.

Morrie's face was an impassive mask. Finally he said, "If that's all you've got to say, Doc, I suggest we eat and adjourn until tomorrow."

"All right."

"Not just yet." Ross had stood up. He groped for the back of his chair and tried to orient himself. "Where are you, Doc?"

"I'm here — to your left."

"All right. Now I've got some things to say. I'm going to the moon. I'm going to the moon, somehow, whether you want to go or not. I'm going to the moon even if I never get back the use of my eyes. I'm going to the moon even if Morrie or Art has to lead me around. You can do as you please."

"But I'm surprised at you, Doc," he went on. "You're afraid to take the responsibility for us, aren't you? That's the size of it?"

"Yes, Ross, that's the size of it."

"Yet you were willing to take the responsibility of leading us on a trip to the moon. That's more dangerous than anything that could happen here, isn't it? Isn't it?"

Cargraves bit his lip. "It's different."

"I'll tell you how it's different. If we get killed trying to make the jump, Einety-nine chances out of a hundred we all get killed together. You don't have to go back and explain anything to our parents. That's how it's different!"

"Now, Ross!"

"Don't `Now, Ross' me. Want the deuce, Doc?" he went on bitterly. "Suppose it had happened on the moon; would you be twittering around, your morale all shot? Doc, I'm surprised at you. If you are going to have an attack of nerves every time the going gets a little tough, I vote for Morrie for permanent captain."

"That's about enough, Ross," Morrie put in quietly.

"Okay. I was through, anyway." Ross sat down.

There was an uncomfortable silence. Morrie broke it by saying, "Art, let's you and me throw together some food. Study hour will be late as it is." Cargraves looked surjrised. Morrie saw his expression and continued, "Sure. Why not? Art and I can take turns reading aloud."

Cargraves pretended to be asleep that night long before he was. Thus he was able to note that Morrie and Art stood alternate watches all night, armed and ready. He refrained from offering any advice.

The boys both went to bed at sunrise. Cargraves got painfully but quietly out of bed and dressed. Leaning on a stick he hobbled down to the ship. He wanted to inspect the damage done by the bomb, but he noticed first the case containing the thorium, bulking large because of its antiradiation shipping shield. He saw with relief that the seal of the atomics commission was intact. Then he hunched himself inside the ship and made his way slowly to the drive compartment.

The damage was remarkably light. A little welding, he thought, some swaging, and some work at the forge would fix it. Puzzled, he cautiously investigated further.

He found six small putty-like pieces of a plastic material concealed under the back part of the shield. Although there were no primers and no wiring attached to these innocentappearing little objects he needed no blueprint to tell him what they were. It was evident that the saboteur had not had time to wire more than one of his deadly little toys in the few minutes he had been alone. His intentions had certainly been to wreck the drive compartment — and kill whoever was unlucky enough to set off the trap.

With great care, sweating as he did so, he removed the chunks of explosive, then searched carefully for more. Satisfied, he slipped them into his shirt pocket and went outside. The scramble, hampered by his game leg, out of the door of the rocket, made him shaky; he felt like a human bomb. Then he limped to the corral fence and threw them as far as he could out into the already contaminated fields. He took the precaution of removing them all from his person before throwing the first one, as he wanted to be ready to fall flat. But there was no explosion; apparently the stuff was relatively insensitive to shock. Finished, he turned away, content to let sun and rain disintegrate the stuff.

He found Ross outside the cabin, turning his bandaged face to the morning sun. "That you, Doc?" the young man called out.

"Yes. Good morning, Ross."

"Good morning, Doc." Ross moved toward the scientist, feeling the ground with his feet. "Say, doc — I said some harsh things last night. I'm sorry. I was upset, I guess."

"Forget it. We were all upset." He found the boy's groping hand and pressed it. "How are your eyes?"

Ross's face brightened. "Coming along fine. I slipped a peek under the bandage when I got up. I can see-"

"Good!"

"I can see, but everything's fuzzy and I see double, or maybe triple. But the light hurt my eyes so I put the bandage back."

"It sounds as if you were going to be all right," Cargraves ventured. "But take it easy."

"Oh, I will. Say, Doc..."

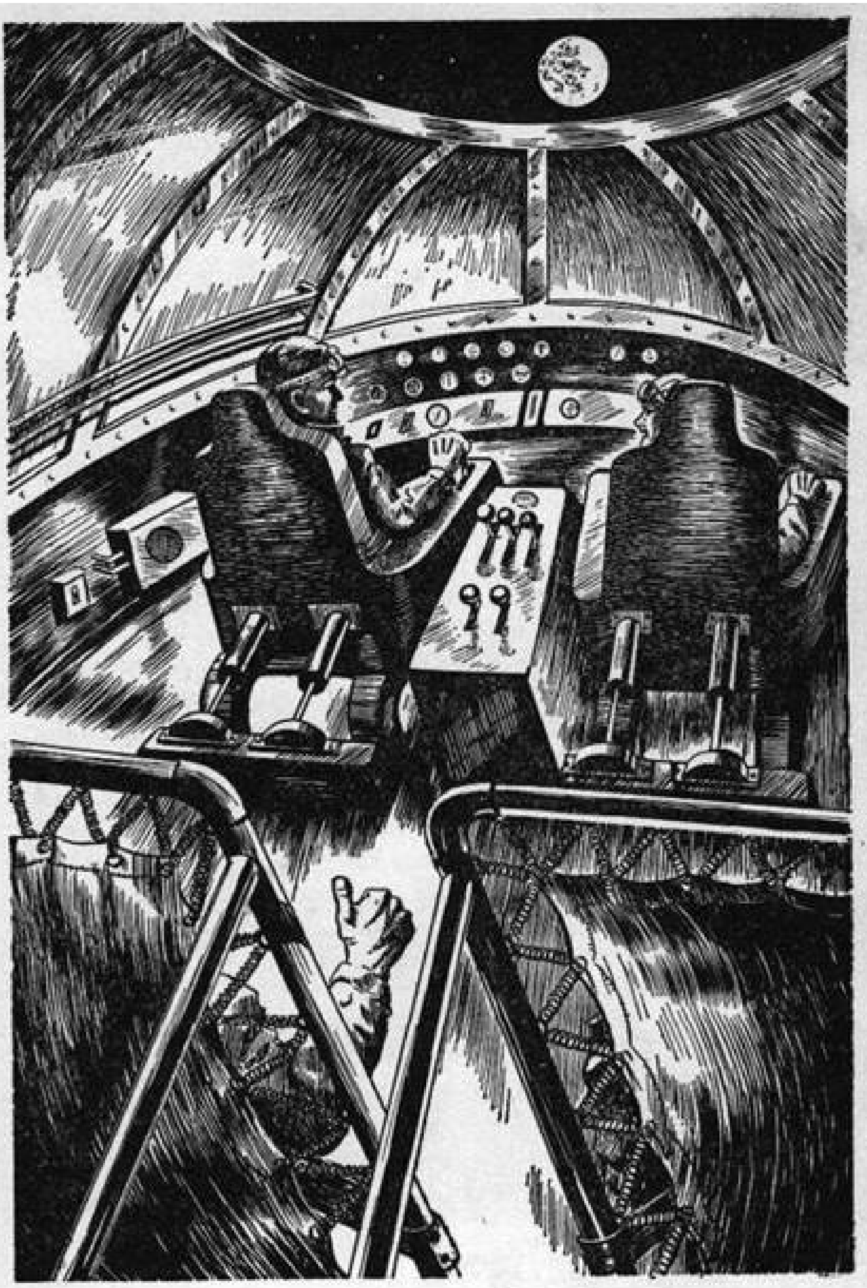
"Yes, Ross ?"

"Nnnn... Oh, nothing. Never mind."

"I think I know, Ross. I've changed my mind. I changed my mind last night before I got to sleep. We're going through with it."

"Good!"

"Maybe it's good, maybe it's bad. I don't know. But if that's the way you fellows feel about it, I'm with you. We'll go if we have to walk."



Chapter 8 SKYWARD!

"THAT SOUNDS MORE LIKE you, Doc!"

"Thanks. Are the others up yet?"

"Not yet. They didn't get much sleep."

"I know. Let's let them sleep. We'll sit out in the car. Take my arm."

When they had settled themselves Ross asked, "Doc, how much longer will it take to get ready?"

"Not long. Why?"

"Well, I think the key to our problems lies in how fast we can get away. If these attempts to stop us keep up, one of them is going to work. I wish we would leave today."

"We can't do that," Cargraves answered, "but it shouldn't be long. First I've got to install the drive, but it's really just a matter of fitting the parts together. I had almost everything prepared before I ever laid eyes on you guys."

"I wish my blinkers weren't on the fritz."

"It's one job I'll have to do myself. Not that I am trying to keep you out of it, Ross," he added hastily, seeing the boy's expression. "I've never explained it because I thought it would be easier when we had all the gear in front of us."

"Well, how does it work?"

"You remember Heron's turbine in elementary physics? Little boiler on the bottom and a whirligig like a lawn sprinkler on top? You heat the boiler, steam comes up through the whirligig, and makes it whirl around. Well, my drive works like that. Instead of fire, I use a thorium atomic power pile; instead of water, I use zinc. We boil the zinc, vaporize it, get zinc `steam.' We let the `steam' exhaust through the jet. That's the works."

Ross whistled. "Simple — and neat. But will it work?"

"I know it'll work. I was trying for a zinc `steam' power plant when I hit on it. I got the hard, hot jet I wanted, but I couldn't get a turbine to stand up under it. Broke all the blades. Then I realized I had a rocket drive."

"It's slick, Doc! But say — why don't you use lead? You'd get more mass with less bulk."

"A good point. Concentrated mass means a smaller rocket motor, smaller tanks, smaller ship, less dead weight all around. But mass isn't our main trouble; what we've got to have is a high-velocity jet. I used zinc because it has a lower boiling point than lead. I want to superheat the vapor so as to get a good, fast jet, but I can't go above the stable limit of the moderator I'm using."

"Carbon?"

"Yes, carbon-graphite. We use carbon to moderate the neutron flow and cadmium inserts to control the rate of operation. The radiations get soaked up in a bath of liquid zinc. The zinc boils and the zinc `steam' goes whizzing out the jet as merry as can be."

"I see. But why don't you use mercury instead of zinc? It's heavier than lead and has a lower boiling point than either one of them."

"I'd like to, but it's too expensive. This is strictly a cut-rate show." Doc broke off as Morrie stuck his head out the cabin door.

"Hi, there! Come to breakfast, or we'll throw it out!"

"Don't do that!" Cargraves slipped a leg over the side of the car-the wrong leg-touched the ground and said, "Ouch!"

"Wait a minute, and lean on me," Ross suggested.

They crept back, helping each other. "Aside from the pile," Cargraves went on, "there isn't much left. The thorium is already imbecided in the graphite according to my calculations. That leaves just two major jobs: the air lock and a test-stand run."

The rocket, although it had operated on the trans-Atlantic run above the atmosphere, had no air lock, since it's designers had never intended it to be opened up save on the ground. If they were to walk the face of the moon, an air lock, a small compartment with two doors, was necessary. Cargraves planned to weld a steel box around the inside of the present door frame, with a second airtight door, opening inward.

"I can weld the lock," Ross offered, "while you rig the pile. That is, if my eyes clear up in time."

"Even if they do, I don't think it would be smart to stare at a welding arc. Can't the others weld?"

"Well, yes, but just between us chickens, I run a smoother seam."

"We'll see..."

At breakfast Cargraves told the other two of his decision to go ahead. Art turned pink and got his words twisted. Morrie said gravely, "I thought your temperature would go down over night. What are the plans?"

"Just the same, only more so. How's your department?"

"Shucks, I could leave this afternoon. The gyros are purring like kittens; I've calculated Hohmann orbits and S-trajectories till I'm sick of `em; the computer and me are like that." He held out two fingers.

"Fine. You concentrate on getting the supplies in, then. How about you, Art?"

"Who, me? Why, I've got everything lined up, I guess. Both radars are right on the beam. I've got a couple wrinkles I'd like to try with the FM circuit."

"Is it all right the way it is?"

"Good enough, I guess."

"Then don't monkey with the radios. I can keep you busy."

"Oh, sure."

"How about the radar screen Art was going to rig?" Morrie inquired.

"Eh? Oh, you mean the one for our friend the prowler. Hm…" Cargraves studied the matter. "Ross thinks and I agree that the best way to beat the prowler is to get out of here as fast as we can. I don't want that radar out of the ship. It would waste time and always with the chance of busting a piece of equipment we can't afford to replace and can't get along without."

Morrie nodded. "Suits. I still think that a man with a gun in his hands is worth more than a gadget anyhow. See here — there are four of us. That's two hours a' night. Let's stand guard."

Cargraves agreed to this. Various plans were offered to supplement the human guard and the charged fence, but all were voted down as too time-consuming, too expensive or impractical. It was decided to let the matter stand, except that lights would be left burning at night, including a string to be rigged around the ship. All of these lines were to be wired to cut over automatically to the ship's batteries.

Cargraves sat down to lunch on Wednesday of the following week with a feeling of satisfaction. The thorium power pile was in place, behind the repaired shield. This in itself was good; he disliked the finicky, ever-dangerous work of handling the radioactive element, even though he used body shields and fished at it with tongs.

But the pile was built; the air lock had been welded in place and tested for airtightness; almost all the supplies were aboard. Acceleration hammocks had been built for Art and Ross (Cargraves and Morrie would ride out the surges of power in the two pilot seats). The power pile had been operated at a low level; all was well, he felt, and the lights on the board were green.

The phony inspector had not showed up again, nor were the night watches disturbed. Best of all, Ross's eyesight had continued to improve; the eye specialist had pronounced him a cure on Monday, subject to wearing dark glasses for a couple of weeks.

Cargraves' sprain still made him limp, but he had discarded his stick. Nothing bothered him. He tackled Aggregate a la Galileo (hash to ordinary mortals) with enthusiasm, while thinking about a paper he would write for the Physical Review. Some Verified Experimental Factors in Space Flight seemed like a good title — by Doctor Donald Morris Cargraves, B.S., Sc.D., LL.D., Nobel Prize, Nat. Acad., Fr. Acad., *etc.* The honors were not yet his — he was merely trying them on for size.

The car ground to a stop outside and Art came in with the mail.

"Santa Claus is here!" he greeted them. "One from your folks, Ross, and one from that synthetic blonde you're sweet on."

"I'm not sweet on her and she's a natural blonde," Ross answered emphatically.

"Have it your own way — you'll find out. Three for you, Morrie — all business. The rest are yours, Doc," he finished, holding back the one from his mother. "Hash again," he added.

"It's to soften you up for what you're going to eat on the moon," said the cook. "Say, Doc-"

"Yes, Morrie?"

"The canned rations are at the express office in town, it says here. I'll pick `em up this afternoon. The other two are bills. That finishes my checkoff list."

"Good," he answered absently, as he tore open a letter. "You can help Ross and me on the test stand. That's the only big job left." He unfolded the letter and read it.

Then he reread it. Presently Ross noticed that he had stopped eating and said, "What's the matter, Doc?"

"Well, nothing much, but it's awkward. The Denver outfit can't supply the dynamometers for the test stand run." He tossed the letter to Ross.

"How bad off does that leave us?" asked Morrie.

"I don't know, yet. I'll go with you into town. Let's make it right after lunch; I have to call the East Coast and I don't want to get boxed in by the time difference."

"Can do."

Ross handed the letter back. "Aren't there plenty of other places to buy them?"

"Hardly `plenty.' Half-a-million-pound dynamometers aren't stock items. We'll try Baldwin Locomotives."

"Why don't we make them?" asked Art. "We made our own for the Starstruck series.'"

Cargraves shook his head. "High as my opinion is of you lugs as good, all-around jackleg mechanics and pretzel benders, some jobs require special equipment. But speaking of the Starstruck series," he went on, intentionally changing the subject, "do you guys realize we've never named the ship? How does Starstruck VI appeal to you ?"

Art liked it. Morrie objected that it should be Moonstruck. But Ross had another idea. "Starstruck was a good enough name for our model rockets, but we want something with a little more — oh, I don't know; dignity, I guess-for the moon ship."

"The Pioneer?"

"Corny."

"The Thor — for the way she's powered."

"Good, but not enough."

"Let's call it Einstein."

"I see why you want to name it for Doctor Einstein," Cargraves put in, "but maybe I've got another name that will symbolize the same thing to you. How about the Galileo?"

There was no dissension; the members of the Galileo Club again were unanimous. The man who had first seen and described the mountains of the moon, the man whose very name had come to stand for steadfast insistence on scientific freedom and the freely inquiring mind — his name was music to them.

Cargraves wondered whether or not their own names would be remembered after more than three centuries. With luck, with lots of luck — Columbus had not been forgotten. If the luck ran out, well, a rocket crash was a fast clean death.

The luck appeared to be running out, and with nothing as gallant and spectacular as a doomed and flaming rocket. Cargraves sweated in a phone booth until after five o'clock, East Coast time, and then another hour until it was past five in Chicago as well before he admitted that dynamometers of the size he needed were not to be had on short notice.

He blamed himself for having slipped up, while neglecting to credit himself with having planned to obtain the instruments from the Denver firm for reasons of economy; he had expected to get them secondhand. But blaming himself comforted him.

Morrie noted his long face as he climbed into the heavily loaded little car. "No soap, eh?"

"No soap. Let's get back to camp."

They sped along the desert road in worried silence for several minutes. Finally Morrie spoke up. "How about this, Doc? Make a captive run on the ground with the same yoke and frame you planned to use, but without dynamometers."

"What good would that do? I have to know what the thrust is."

"I'm getthig to that. We put a man inside. He watches the accelerometer — the pendulum accelerometer of course; not the distance-integrating one. It reads in g's. Figure the number of gravities against the gross weight of the ship at the time and you come out with your thrust in pounds."

Cargraves hesitated. The boy's mistake was so obvious and yet so easy to make that he wished to point it out without hurting his pride. "It's a clever plan, except that I would want to use remote control — there's always the chance that a new type of atomic-fission power plant will blow up. But that's not the hitch; if the ship is anchored to the ground, it won't be accelerating no matter how much thrust is developed."

"Oh!" said Morrie. "Hmm. I sure laid an egg on that one, Doc."

"Natural mistake."

After another five miles Morrie spoke again. "I've got it, Doc. The Galileo has to be free to move to show thrust on the accelerometer. Right? Okay, I'll test-fly it. Hold it, hold it," he went on quickly, "I know exactly what you are going to say: you won't let any one take a risk if you can help it. The ship might blow up, or it might crash. Okay, so it might. But it's my job. I'm not essential to the trip; you are. You have to have Ross as flight engineer; you have to have Art for the radar and radio; you don't have to have a second pilot. I'm elected."

Cargraves tried to make his voice sound offhand. "Morrie, your analysis does your heart credit, but not your head. Even if what you said is true, the last part doesn't quite add up. I may be essential, if the trip is made. But if the test flight goes wrong, if the power pile blows, or if the ship won't handle and crashes, then there won't be any trip and I'm not essential."

Morrie grinned. "You're sharp as a tack, Doc."

"Tried to frame me, eh? Well, I may be old and feeble but I'm not senile. Howsoever, you've given me the answer.

"We skip the captive run and test-fly it. I test-fly it." Morrie whistled, "When?"

"Just as soon as we get back."

Morrie pushed the accelerator down to the floor boards; Cargraves wished that he had kept quiet until they reached the camp.

Forty minutes later he was handing out his final instructions. "Drive outside the reservation and find some place at least ten miles away where you can see the camp and where you can huddle down behind a road cut or something. If you see a Hiroshima mushroom, don't try to come back. Drive on into town and report to the authorities." He handed Ross a briefcase. "In case I stub my toe, give this stuff to your father. He'll know what to do with it. Now get going. I'll give you twenty minutes. My watch says seven minutes past five."

"Just a minute, Doc."

"What is it, Morrie?" His tones showed nervous irritability. "I've polled the boys and they agree with me. The Galileo is expendable but you aren't. They want you left around to try it again."

"That's enough on that subject, Morrie."

"Well, I'll match you for it."

"You're on thin ice, Morrie!"

"Yes, sir." He climbed in the car. The other two squeezed in beside him.

"So long!"

"Good luck!"

He waved back at them as they drove away, then turned toward the open door of the Galileo. He was feeling suddenly very lonely.

The boys found such a spot and crouched down behind a bank, like soldiers in a trench. Morrie had a small telescope; Art and Ross were armed with the same opera glasses they had used in their model rocket tests. "He's closed the door," announced Morrie.

"What time is it?"

"I've got five twenty-five."

"Any time now. Keep your eyes peeled." The rocket was tiny even through the opera glasses; Morrie's view was slightly better. Suddenly he yelled, "That's it! Geronimo!"

The tail jet, bright silver even in the sun light, had flared out. The ship did not move. "There go his nose jets!" Red and angry, the aniline-and-nitric reached out in front. The Galileo, being equipped with nose and belly maneuvering jets, could take off without a launching platform or catapult. He brought his belly jets into play now; the bow of the Galileo reared up, but the opposing nose and tail jets kept her nailed to one spot.

"He's off!" The red plumes from the nose were suddenly cut and the ship shot away from the ground. It was over their heads almost before they could catch their breaths. Then it was beyond them and shooting toward the horizon. As it passed over the mountains, out of sight, the three exhaled simultaneously. "Gosh!" said Art, very softly.

Ross started to run.

"Hey, where y' going?"

"Back to the camp! We want to be there before he is!"

"Oh!" They tore after him.

Ross set a new high in herding the rig back to the camp site, but his speed did not match their urgency. Nor were they ahead of time. The Galileo came pouring back over the horizon and was already braking on her nose jets when the car slammed to a stop.

She came in at a steep dive, with the drive jet already dead. The nose jets splashed the ground on the very spot where she had taken off. He kicked her up with the belly jets and she pancaked in place. Morrie shook his head. "What a landing!" he said reverently.

Cargraves fell out of the door into a small mob. The boys yelled and pounded him on the back.

"How did she behave? How did she handle?"

"Right on the button! The control of the drive jet is laggy, but we expected that. Once she's hot she doesn't want to cool off. You have to get rid of your head of `steafli.'(<— SeaGull/Zopharnal - Is this right?) I was half way to Oklahoma City before I could slow down enough to turn and come back."

"Boy, oh boy! What a ship!"

"When do we start?"

Cargraves' face sobered. "Does staying up all night to pack suit you?"

"Does it! Just try us!"

"It's a deal. Art, get in the ship and get going with the radio. Get the Associated Press station at Salt Lake. Get the United Press. Call up the radio news services. Tell them to get some television pickups out here. The lid is off now. Make them realize there is a story here."

"On my way!" He scrambled up into the ship, then paused in the door. "Say — what if they don't believe me?"

"Make them believe you. Tell them to call Doctor Larksbee at the commission for confirmation. Tell them that if they miss they'll be scooped on the biggest story since the war. And say — call up Mr. Buchanan on the forestry frequency. He's kept his mouth shut for us; he ought to be in on it."

By midnight the job was practically complete and Cargraves insisted that they take turns lying down, two at a time, not to sleep, but just to keep from starting the trip completely tired out. The fuel tanks for the belly and nose jets were topped off and the specially installed reserve tanks were filled. The tons of zinc which served the main drive were already aboard as well as an equal weight of powdered reserve. The food was aboard; the carefully rationed water was aboard. (Water was no problem; the airconditioner would scavenge the vapor of their own exhalations.) The liquid oxygen tanks were full. Cargraves himself had carried aboard the two Garands, excusing it to himself on the pretext that they might land in some wild spot on the return trip… that, despite the fact they had ripped the bindings from their few books in order to save space and weight.

He was tired. Only the carefully prepared lists enabled him to be sure that the ship was in all respects ready — or would be soon.

The boys were tired, confused, and excited. Morrie had worked the problem of their departure trajectory three times and then had gotten nerves over it, although it had checked to the last decimal each time. He was gnawed by fear that he had made some silly and fatal mistake and was not satisfied until Cargraves had gotten the same answer, starting with a clear board.

Mr. Buchanan, the Ranger, showed up about one o'clock, "Is this the Central New Mexico Insane Asylum?" he inquired pleasantly.

Cargraves admitted it. "I've wondered what you folks were up to," the Ranger went on. "Of course I saw your ship, but your message surely surprised me. I hope you don't mind me thinking you're crazy; I wish you luck just the same."

"Thanks." Cargraves showed him the ship, and explained their plans. The moon was full and an hour past its greatest elevation. They planned to take off shortly after daybreak, as it was sinking in the west. This would lose them the earth's spin, but, after the trial run, Cargraves did not care; he had power to throw away. Waiting twelve hours to save a difference of about 1600 miles per hour was more than his nerves could stand.

He had landed the rocket faced west; it would save jacking her around as well.

Buchanan looked the layout over and asked where the jets would splash. Cargraves showed him. Whereupon Buchanan asked, "Have you arranged for any guards?"

In truth, Cargraves had forgotten it. "Never mind," said Buchanan, "I'll call Captain Taylor and get some state police over."

"Never mind calling; we'll radio. Art!"

The press started showing up at four; by the time the state police arrived, Cargraves knew that he had been saved real grief. The place was crowded. Escorts were necessary from the outer gate to the corral to make sure that no one drove on the danger-studded mock-battle fields. Once in the corral it took the firm hand of the state police to keep them there — and to keep them from swarming over the ship.

At five they ate their last breakfast in the camp, with a guard at the door to give them some peace. Cargraves refused to be interviewed; he had prepared a typed handout and given copies to Buchanan to distribute. But the boys were buttonholed whenever his back was turned. Finally Captain Taylor assigned a bodyguard to each.

They marched in a hollow square of guards to the ship. Flash guns dazzled their eyes and television scanners followed their movements. It seemed impossible that this was the same lonely spot where, only hours before, they had worried about silent prowlers in the dark.

Cargraves had the boys climb in, then turned to Buchanan and Captain Taylor. "Ten minutes, gentlemen. Are you sure you can keep everybody clear? Once I get in the seat I can't see the ground near me."

"Don't worry, Captain Cargraves," Taylor assured him. "Ten minutes it is."

Buchanan stuck out his hand. "Good luck, Doctor. Bring me back some green cheese." `

A man came puffing up, dodged past a guard, and thrust a folded paper in Cargraves' hand.

"Here, what's this?" demanded Taylor. "Get back where you belong."

The man shrugged. "It's a court order."

"Eh? What sort?"

"Temporary injunction against flying this ship. Order to appear and show cause why a permanent injunction should not be issued to restrain him from willfully endangering the lives of minors."

Cargraves stared. It felt to him as if the world were collapsing around him. Ross and Art appeared at the door behind him. "Doc, what's up?"

"Hey, there! You boys-come down out of there," yelled the stranger, and then said to Captain Taylor, "I've got another paper directing me to take them in charge on behalf of the court."

"Get back in the ship," Cargraves ordered firmly, and opened the paper. It seemed in order. State of New Mexico and so forth. The stranger began to expostulate. Taylor took him by the arm.

"Take it easy," he said.

"Thanks," said Cargraves. "Mr. Buchanan, can I have a word with you? Captain, will you hang on to this character?"

"Now, I don't want any beef," protested the stranger. "I'm just carrying out my duty."

"I wonder," Cargraves said thoughtfully. He led Buchanan around the nose of the craft and showed him the paper.

"It seems to be in order," Buchanan admitted.

"Maybe. This says it's the order of a state court. This is federal territory, isn't it? As a matter of fact, Captain Taylor and his men are here only by your invitation and consent. Isn't that right?"

"Hmmm... yes. That's so." Buchanan suddenly jammed the paper in his pocket. "I'll fix his clock!"

"Just a minute." Cargraves told him rapidly about the phony inspector, and the prowlers, matters which he had kept to himself, save for a letter to the Washington CAB office. "This guy may be a phony, or a stooge of a phony. Don't let him get away until you check with the court that supposedly issued this order."

"I won't!"

They went back, and Buchanan called Taylor aside. Cargraves took the stranger by the arm, not gently. The man protested. "How would you like a poke in the eye?" Cargraves inquired.

Cargraves was six inches taller, and solid. The man shut up. Taylor and Buchanan came back in a moment or two. The state policeman said, "You are due to take off in three minutes, Captain. I had better be sure the crowd is clear." He turned and called out, "Hey! Sergeant Swanson!"

"Yes, sir!'

"Take charge of this guy." It was the stranger, not Cargraves, whom he indicated.

Cargraves climbed in the ship. As he turned to close the door a cheer, ragged at first but growing to a solid roar, hit him. He clamped the door and locked it, then turned. "Places, men."

Art and Ross trotted to their hammocks, directly behind the pilots' seats. These hammocks were vertical, more like stretchers braced upright than garden hammocks. They snapped safety belts across their knees and chests.

Morrie was already in his chair, legs braced, safety belts buckled, head back against the shock pad. Cargraves slipped into the seat beside him, favoring his bad foot as he did so. "All set, Morrie." His eyes glanced over the instrument board, particularly noticing the temperature of the zinc and the telltale for position of the cadmium damping plates.

"All set, Captain. Give her the gun when you are ready."

He buckled himself in and glanced out the quartz glass screen ahead of him. The field was clear as far as he could see. Staring straight at him, round and beautiful, was their destination. Under his right hand, mounted on the arm rest, was a large knurled knob. He grasped it. "Art?"

"Ready sir."

"Ross?"

"Ready, Captain."

"Copilot?"

"Ready, Captain. Time, six-oh-one."

He twisted the knob slowly to the right. Back behind him, actuated by remote control, cadmium shields slowly withdrew from between lattices of graphite and thorium; uncountable millions of neutrons found it easier to seek atoms of thorium to destroy. The tortured nuclei, giving up the ghost, spent their energy in boiling the molten zinc.

The ship began to tremble.

With his left hand he cut in the nose rockets, balancing them against the increasing surge from the rear. He slapped in the belly jets; the ship reared. He let the nose jets die.

The Galileo leaped forward, pressing them back into their pads.

They were headed skyward, out and far.

Chapter 9 INTO THE LONELY DEPTHS

TO ROSS AND ART THE WORLD seemed to rotate dizzily through ninety degrees. They had been standing up, strapped to their upright hammocks, and staring straight forward past Cargraves and Morrie out through the conning port at the moon and the western horizon.

When the rocket took off it was as if they had been suddenly forced backwards, flat on their backs and pushed heavily into the cushions and springs. Which, in a way, was exactly what had happened to them. It was the powerful thrust of the jet which had forced them back against the springs and held them there. The force of the drive made the direction they were traveling "up."

But the moon still stared back at them, dead ahead through the port; "up" was also "west." From where they lay, flat on their backs, Cargraves and Morrie were above them and were kept from falling on them by the heavy steel thrust members which supported the piloting chairs.

The moon shimmered and boiled under the compression waves of air. The scream of the frantic molecules of air against the skin of the craft was louder and even more nerve-racking than steady thunder of the jet below them. The horizon dropped steadily away from the disk of the moon as they shot west and gained altitude. The sky, early morning gray as they took off, turned noonday blue as their flat climb took them higher and higher into the sunlight.

The sky started to turn purple and the stars came out. The scream of the air was less troublesome. Cargraves cut in his gyros and let Joe the Robot correct his initial course; the moon swung gently to the right about half its width and steadied. "Everybody all right ?," he called out, his attention free of the controls for a moment.

"Swell!" Art called back.

"Somebody's sitting on my chest," Ross added.

"What's that?"

"I say, somebody's sitting on my chest!" Ross shouted.

"Well, wait a bit. His brother will be along in a minute."

"What did you say?"

"Never mind!" Cargraves shouted. "It wasn't important. Copilot!"

"Yes, Captain!"

"I'm going into full automatic. Get ready to check our course."

"Aye, aye, sir." Morrie clamped his octant near his face and shifted his head a little so that he could see the scope of the belly radar easily. He dug his head into the pads and braced his arms and hands; he knew what was coming. "Astrogator ready!"

The sky was black now and the stars were sharp. The image of the moon had ceased to shake and the unearthly scream of the air had died away, leaving only the tireless thunder of the jet. They were above the atmosphere, high above — free.

Cargraves yelled, "Hang on to your hats, boys! Here we go! He turned full control over to Joe the Robot pilot. That mindless, mechanical-and-electronic worthy figuratively shook his nonexistent head and decided he did not like the course. The image of the moon swung "down" and toward the bow, in terms of the ordinary directions in the ship, until the rocket was headed in a direction nearly forty degrees further east than was the image of the moon.

Having turned the ship to head for the point where the moon would be when the Galileo met it, rather than headed for where it now was, Joe turned his attention to the jet. Thee cadmium plates were withdrawn a little farther; the rocket really bit in and began to dig.

Ross found that there was indeed a whole family on his chest. Breathing was hard work and his eyes seemed foggy.

If Joe had had feelings he need have felt no pride in what he had just done, for his decisions had all been made for him before the ship left the ground. Morrie had selected, with Cargraves' approval, one of several three-dimensional cams and had installed it in Joe's innards. The cam "told" Joe what sort of a course to follow to the moon, what course to head first, how fast to gun the rocket and how long to keep it up. Joe could not see the moon-Joe had never heard of the moon - but his electronic senses could perceive how the ship was headed in relation to the steady, unswerving spin of the gyros and then head the ship in the direction called for by the cam in his tummy.

The cam itself had been designed by a remote cousin of Joe's, the gteat "Eniac" computer at the University of Pennsylvania. By means of the small astrogation computer in the ship either Morrie or Cargraves could work out any necessary problem and control the Galileo by hand, but Joe, with the aid of his cousin, could do the same thing better, faster, more accurately and with unsleeping care — provided the human pilot knew what to ask of him and how to ask it.

Joe had not been invented by Cargraves; thousands of scientists, engineers, and mathematicians had contributed to his existence. His grandfathers had guided the Nazi V-2 rockets in the horror-haunted last days of World War II. His fathers had been developed for the deadly, ocean-spanning guidedmissiles of the UN world police force. His brothers and sisters were found in every rocket ship, private and commercial, passenger-carrying or unmanned, that cleft the skies of earth.

Trans-Atlantic hop or trip to the moon, it was all one to Joe. He did what his cam told him to do. He did not care, he did not even know.

Cargrave called out, "How you making out down there?"

"All right, I guess," Ross answered, his voice laboring painfully.

"I feel sick," Art admitted with a groan.

"Breathe through your mouth. Take deep breaths."

"I can't."

"Well, hang on. It won't be long."

In fact it was only fifty-five seconds at full drive until Joe, still advised by his cam, decided that they had had enough of full drive. The cadmium plates slid farther back into the power pile, thwarting the neutrons; the roar of the rocket drive lessened.

The ship did not slow down; it simply ceased to accelerate so rapidly. It maintained all the speed it had gained and the frictionless vacuum of space did nothing to slow its headlong plunge. But the acceleration was reduced to one earth-surface gravity, one g, enough to overcome the powerful tug of the earth's mighty weight and thereby permit the ship to speed ahead unchecked — a little less than one g, in fact, as the grasp of the earth was already loosening and would continue to drop off to the changeover, more than 200,000 miles out in space, where the attraction of the moon and that of the earth are equal.

For the four in the ship the reduction in the force of the jet had returned them to a trifle less than normal weight, under an artificial gravity produced by the drive of the jet.

This false "gravity" had nothing to do with the pull of the earth; the attraction of the earth can be felt only when one is anchored to it and supported by it, its oceans, or it's air.

The attraction of the earth exists out in space but the human body has no senses which can perceive it. If a man were to fall from a tremendous height, say fifty thousand miles, it would not seem to him that he was falling but rather that the earth was rushing up to meet him.

After the tremendous initial drive had eased off, Cargraves called out again to Art. "Feeling any better, kid?"

"I'm all right now," Art replied.

"Fine. Want to come up here where you can see better?"

"Sure!" responded both Art and Ross, with one voice.

"Okay. Watch your step."

"We will." The two unstrapped themselves and climbed up to the control station by means of hand and toe holds welded to the sides of the ship. Once there they squatted on the supporting beams for the pilots' chairs, one on each side. They looked out.

The moon had not been visible to them from their hammock positions after the change in course. From their new positions they could see it, near the "lower" edge of the conning port. It was full, silver white and so dazzling bright that it hurt their eyes, although not sufficiently nearer to produce any apparent increase in size. The stars around it in the coalblack sky were hard bright diamonds, untwinkling.

"Look at that," breathed Ross. "Look at old Tycho shining out like a searchlight. Boy!"

"I wish we could see the earth," said Art. "This bucket ought to have more than one view port."

"What do you expect for a dollar-six-bits ?" asked Ross. "Chimes? The Galileo was a freighter."

"I can show it to you in the scope," Morrie offered, and switched on the piloting radar in the belly. The screen lit up after a few seconds but the picture was disappointing. Art could read it well enough-it was his baby -but esthetically it was unsatisfying. It was no more than a circular plot reading in bearing and distance; the earth was simply a vague mass of light on that edge of the circle which represented the astern direction.

"That's not what I want," Art objected. "I want to see it. I want to see it shape up like a globe and see the continents and the oceans."

"You'll have to wait until tomorrow, then, when we cut the drive and swing ship. Then you can see the earth and the sun, too."

"Okay. How fast are we going? Never mind — I see," he went on, peering at the instrument board. "3,300 miles per hour."

"You're looking at it wrong," Ross corrected him. "It says 14,400 miles per hour."

"You're crazy."

"Like fun. Your eyes have gone bad."

"Easy, boys, easy," Cargraves counseled. "You are looking at different instruments. What kind of speed do you want?"

"I want to know how fast we're going," Art persisted.

"Now, Art, I'm surprised at you. After all you've had every one of these instruments apart. Think what you're saying."

Art stared at the instrument board again, then looked sheepish. "Sure, I forgot. Let's see now — we've gained 14,000 and some, close to 15,000 now, miles per hour in free fall — but we're not falling."

"We're always falling," Morrie put in, smug for the moment in his status as a pilot. "You fall all the time from the second you take off, but you drive to beat the fall."

"Yes, yes, I know," Art cut him off. "I was just mixed up for a moment. Thirty-three hundred is the speed I want — 3310 flow."

'Speed' in space is a curiously slippery term, as it is relative to whatever point you select as 'fixed' — but the points in space are never fixed. The speed Art settled for was the speed of the Galileo along a line from the earth to their meeting place with the moon. This speed was arrived at deep inside Joe the Robot by combining by automatic vector addition three very complicated figures: first was the accumulated acceleration put on the ship by its jet drive, second the motions imposed on the ship by its closeness to the earth — its 'free fall' speed of which Art had spoken. And lastly, there was the spin of the earth itself, considered both in amount and direction for the time of day of the takeoff and the latitude of the camp site in New Mexico. The last was subtracted, rather than added, insofar as the terms of ordinary arithmetic apply to this sort of figuring.

The problem could be made vastly more complicated. The Galileo was riding with the earth and the moon in their yearly journey around the sun at a speed of about 19 miles per second or approximately 70,000 miles per hour as seen from outer space. In addition, the earthmoon line was sweeping around the earth once each month as it followed the moon — but Joe the Robot had compensated for that when he set them on a course to where the moon would be rather than where it was.

There were also the complicated motions of the sun and its planets with reference to the giddily whirling 'fixed' stars, speeds which could be nearly anything you wanted, depending on which types of stars you selected for your reference points, but all of which speeds are measured in many miles per second.

But Joe cared nothing for these matters. His cam and his many circuits told him how to get them from the earth to the moon; he knew how to do that and Doctor Einstein's notions of relativity worried him not. The mass of machinery and wiring which made up his being did not have worry built into it. It was, however, capable of combining the data that came to it to show that the Galileo was now moving somewhat more than 3300 miles per hour along an imaginary line which joined earth to the point where the moon would be when they arrived.

Morrie could check this figure by radar observations for distance, plus a little arithmetic. If the positions as observed did not match what Joe computed them to be, Morrie could feed Joe the corrections and Joe would accept them and work them into his future calculations as placidly and as automatically as a well-behaved stomach changes starch into sugar.

"Thirty-three hundred miles per hour," said Art. "That's not so much. The V-2 rockets in the war made more than that. Let's open her up wide and see what she'll do. How about it, Doc?"

"Sure," agreed Ross, "we've got a clear road and plenty of room. Let's bust some space."

Cargraves sighed. "See here," he answered, "I did not try to keep you darned young speed demons from risking your necks in that pile of bailing wire you call an automobile, even when I jeopardized my own life by keeping quiet. But I'm going to run this rocket my way. I'm in no hurry."

"Okay, okay, just a suggestion," Ross assured him. He was quiet for a moment, then added, "But there's one thing that bothers me…"

"What?"

"Well, if I've read it once, I've read it a thousand times, that you have to go seven miles per second to get away from the earth. Yet here we are going only 3300 miles per hour."

"We're moving, aren't we?"

"Yeah, but-"

"As a matter of fact we are going to build up a lot more speed before we start to coast. We'll make the first part of the trip much faster than the last part. But suppose we just held our present speed — how long would it take to get to the moon?"

Ross did a little fast mental arithmetic concerning the distance of the moon from the earth, rounding the figure off to 240,000 miles. "About three days."

"What's wrong with that? Never mind," Cargraves went on. "I'm not trying to be a smart-Aleck. The misconception is one of the oldest in the book, and it keeps showing up again, every time some nontechnical man decides to do a feature story on the future of space travel. It comes from mixing up shooting with rocketry. If you wanted to fire a shot at the moon, the way Jules Verne proposed, it would have to go seven miles per second when it left the gun or it would fall back. But with a rocket you could make the crossing at a slow walk if you had enough power and enough fuel to keep on driving just hard enough to keep from falling back. Of course it would raise Cain with your mass-ratio. But we're doing something of that sort right now. We've got tower to spare; I don't see why we should knock ourselves out with higher acceleration than we have to just to get there a little sooner. The moon will wait. It's waited a long time.

"Anyhow," he added, "no matter what you say and no matter how many physics textbooks are written and studied, people still keep mixing up gunnery and rocketry. It reminds me of that other old chestnut — about how a rocket can't work out in empty space, because it wouldn't have anything to push on."

"Go ahead and laugh!" Cargraves continued, seeing their expressions, "It strikes you as funny as a The-World-Is-Flat theory. But I heard an aeronautical engineer, as late as 1943, say just that."

"No! Not really!"

"I certainly did. He was a man with twenty-five years of professional experience and he had worked for both Wright Field and the Navy. But he said that in it. Next year the Nazis were bombing London with V-2s. Yet according to him it couldn't be done!"

"I'd think any man who had ever felt the kick of a shotgun would understand how a rocket works," Ross commented.

"It doesn't work out that way. Mostly it has no effect on his brain cells; it just gives him a sore shoulder." He started to lift himself out of his semi-reclining position in his pilot's chair. "Come on. Let's eat. Wow! My foot's gone to sleep. I want to stock up and then get some sleep. Breakfast wasn't much good for me — too many people staring down our necks."

"Sleep?" said Art. "Did you say `sleep'? I can't sleep; I'm too excited. I don't suppose I'll sleep the whole trip."

"Suit yourself. Me, I'm going to soak up shuteye just as soon as we've eaten. There's nothing to see now, and won't be until we go into free fall. You've had better views of the moon through a telescope."

"It's not the same thing," Art pointed out.

"No, it's not," Cargraves conceded. "Just the same, I intend to reach the moon rested up instead of worn out. Morrie, where did you stow the can openers?"

"I-" Morrie stopped and a look of utter consternation came over his face. "I think I left them behind. I put them down on the sink shelf and then some female reporter started asking me some fool question and-"

"Yeah, I saw," Ross interrupted him. "You were practically rolling over and playing dead for her. It was cute."

Cargraves whistled tunelessly. "I hope that we find out that we haven't left behind anything really indispensable. Never mind the can openers, Morrie. The way I feel I could open a can with my bare teeth."

"Oh, you won't have to do that, Doc," Morrie said eagerly. "I've got a knife with a gadget for-" He was feeling in his pocket as he talked. His expression changed abruptly and he withdrew his hand. "Here are the can openers, Doc."

Ross looked at him innocently. "Did you get her address, Morrie?"

Supper, or late breakfast, as the case may be, was a simple meal, eaten from ration cans. Thereafter Cargraves got out his bedding roll and spread it on the bulkhead-now a deck -which separated the pilot compartment from the hold. Morrie decided to sleep in his copilot's chair. It, with its arm rests, head support, and foot rest, was not unlike an extremely well-padded barber's chair for the purpose, one which had been opened to a semi-reclining position. Cargraves let him try it, cautioning him only to lock his controls before going to sleep.

About an hour later Morrie climbed down and spread his roll beside Cargraves. Art and Ross slept on their acceleration hammocks, which were very well adapted to the purpose, as long as the occupant was not strapped down.

Despite the muted roar of the jet, despite the excitement of being in space, they all were asleep in a few minutes. They were dead tired and needed it.

During the 'night' Joe the Robot slowly reduced the drive of the jet as the pull of the earth grew less.

Art was first to awaken. He had trouble finding himself for a moment or two and almost fell from his hammock on to the two sleepers below before he recollected his surroundings. When he did it brought him wide awake with a start. Space! He was out in space! — Headed for the moon!

Moving with unnecessary quiet, since he could hardly have been heard above the noise of the jet in any case and since both Ross and Cargraves were giving very fair imitations of rocket motors themselves, he climbed out of the hammock and monkey-footed up to the pilots' seats. He dropped into Morrie's chair, feeling curiously but pleasantly light under the much reduced acceleration.

The moon, now visibly larger and almost painfully beautiful, hung in the same position in the sky, such that he had to let his gaze drop as he lay in the chair in order to return its stare. This bothered him for a moment — how were they ever to reach the moon if the moon did not draw toward the point where they were aiming?

It would not have bothered Morrie, trained as he was in a pilot's knowledge of collision bearings, interception courses, and the like. But, since it appeared to run contrary to common sense, Art worried about it until he managed to visualize the situation somewhat thus: if a car is speeding for a railroad crossing and a train is approaching from the left, so that their combined speeds will bring about a wreck, then the bearing of the locomotive from the automobile will not change, right up to the moment of the collision.

It was a simple matter of similar triangles, easy to see with a diagram but hard to keep straight in the head. The moon was speeding to their meeting place at about 2000 miles an hour, yet she would never change direction; she would simply grow and grow and grow until she filled the whole sky.

He let his eyes rove over her face, naming the lovely names in his mind, Mare Tranquilitatis, Oceanus Procellarum, the lunar Apennines, LaGrange, Ptolemous, Mare Imbrium, Catharina. Beautiful words, they rolled on the tongue.

He was not too sure of the capitals of all the fifty-one United States and even naming the United Nations might throw him, but the geography-or was it lunography? -of the moon was as familiar to him as the streets of his home town.

This face of the moon, anyway — he wondered what the other face was like, the face the earth has never seen.

The dazzle of the moon was beginning to hurt his eyes; he looked up and rested them on the deep, black velvet of space, blacker by contrast with the sprinkle of stars.

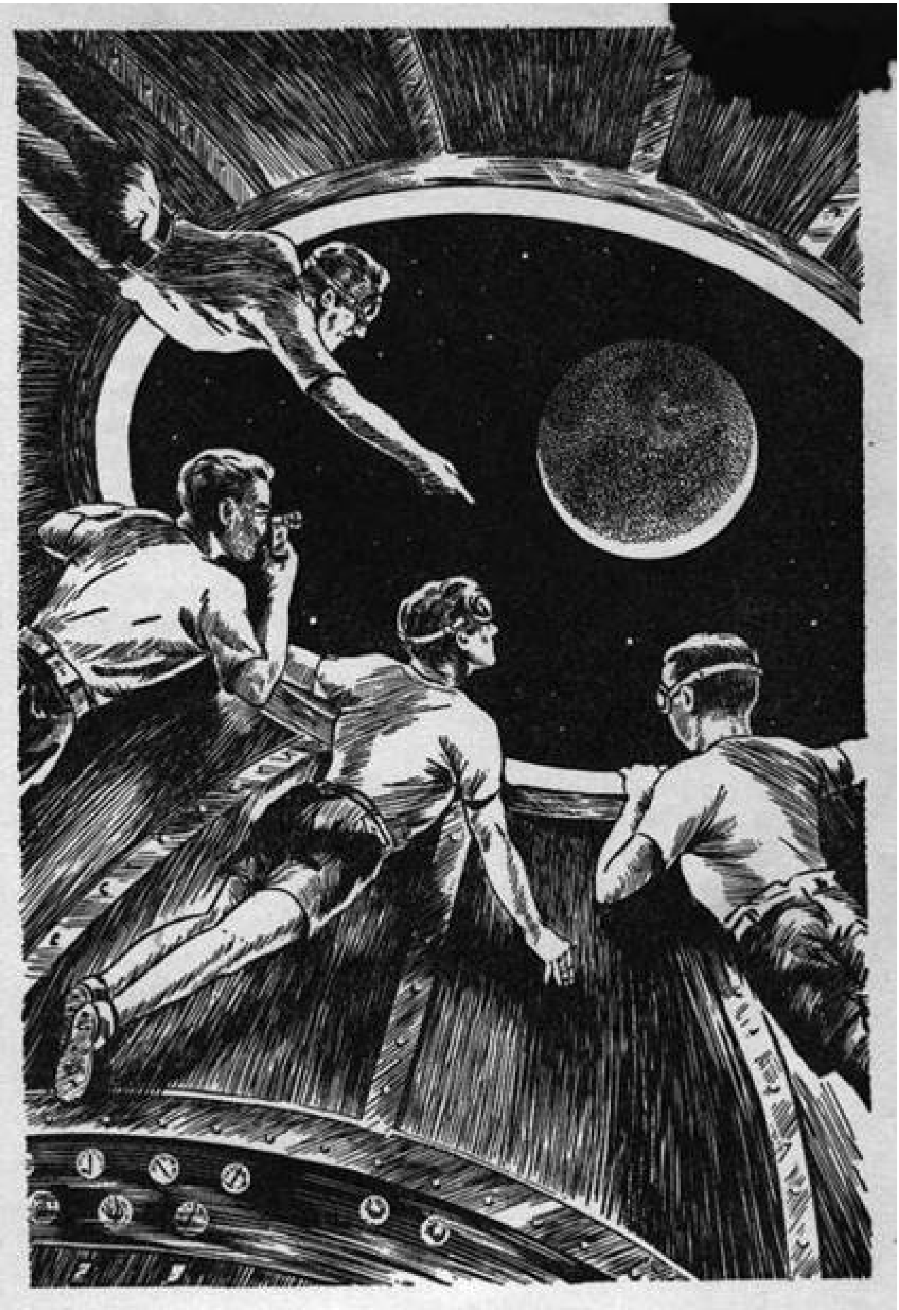
There were few of the really bright stars in the region toward which the Galileo was heading. Aldebaran blazed forth, high and aft, across the port from the moon. The righthand frame of the port slashed through the Milky Way and a small portion of that incredible river of stars was thereby left visible to him. He picked out the modest lights of Aries, and near mighty Aldebaran hung the ghostly, fairy Pleiades, but dead ahead, straight up, were only faint stars and a black and lonely waste.

He lay back, staring into this remote and solitary depth, vast and remote beyond human comprehension, until he was fascinated by it, drawn into it. He seemed to have left the warmth and safety of the ship and to be plunging deep into the silent blackness ahead.

He blinked his eyes and shivered, and for the first time felt himself wishing that he had never left the safe and customary and friendly scenes of home. He wanted his basement lab, his mother's little shop, and the humdrum talk of ordinary people, people who stayed home and did not worry about the outer universe.

Still, the black depths fascinated him. He fingered the drive control under his right hand. He had only to unlock it, twist it all the way to the right, and they would plunge ahead, nailed down by unthinkable acceleration, and speed on past the moon, too early for their date in space with her. On past the moon, away from the sun and the earth behind them, on an on and out and out, until the thorium burned itself cold or until the zinc had boiled away, but not to stop even then, but to continue forever into the weary years and the bottomless depths.

He blinked his eyes and then closed them tight, and gripped both arms of the chair.



Chapter 10 THE METHOD OF SCIENCE

"ARE YOU ASLEEP?" THE VOICE in his ear made Art jump; he had still had his eyes closed — it startled him. But it was only Doc, climbing up behind him.

"Oh! Good morning, Doc. Gee, I'm glad to see you. This place was beginning to give me the jim-jams."

"Good morning to you, if it is morning. I suppose it is morning, somewhere." He glanced at his watch. "I'm not surprised that you got the willies, up here by yourself. How would you like to make this trip by yourself?"

"Not me."

"Not me, either. The moon will be just about as lonely but it will feel better to have some solid ground underfoot. But I don't suppose this trip will be really popular until the moon has some nice, noisy night clubs and a bowling alley or two." He settled himself down in his chair.

"That's not very likely, is it?"

"Why not? The moon is bound to be a tourists' stop some day — and have you ever noticed how, when tourists get somewhere new, the first thing they do is to look up the same kind of entertainments they could find just as easily at home?"

Art nodded wisely, while tucking the notion away in his mind. His own experience with tourists and travel was slight — until now! "Say, Uncle, do you suppose I could get a decent picture of the moon through the port?"

Cargraves squinted up at it. "Might. But why waste film? They get better pictures of it from the earth. Wait until we go into a free orbit and swing ship. Then you can get some really unique pics — the earth from space. Or wait until we swing around the moon."

"That's what I really want! Pictures of the other side of the moon."

"That's what I thought." Cargraves paused a moment and then added, "But how do you know you can get any?"

"But — Oh, I see'. what you mean. It'll be dark on that side."

"That's not exactly what I meant, although that figures in, too, since the moon will be only about three days past `new moon' — `new moon,' that is, for the other side. We'll try to time it to get all the pics you want on the trip back. But that isn't what I mean: how do you know there is any back side to the moon? You've never seen it. Neither has any one else, for that matter."

"But-there has to -I mean, you can see…"

"Did I hear you say there wasn't any other side to the moon, Doc?"

It was Ross, whose head had suddenly appeared beside Cargraves'.

"Good morning, Ross. No, I did not say, there was no other side to the moon. I had asked Art to tell me what leads him to think there is one."

Ross smiled. "Don't let him pull your leg, Art. He's just trying to rib you."

Cargraves grinned wickedly. "Okay, Aristotle, you picked it. Suppose you try to prove to me that there is a far side to the moon."

"It stands to reason."

"What sort of reason? Have you ever been there? Ever seen it?"

"No, but-"

"Ever met anybody who's ever seen it? Ever read any accounts by anybody who claimed to have seen it?"

"No, I haven't, but I'm sure there is one."

"Why?"

"Because I can see the front of it."

"What does that prove? Isn't your experience, up to now, limited to things you've seen on earth? For that matter I can name a thing you've seen on earth that hasn't any back side."

"Huh? What sort of a thing? What are you guys talking about?" It was Morrie this time, climbing up on the other side.

Art said, "Hi, Morrie. Want your seat?"

"No, thanks. I'll just squat here for the time being." He settled himself, feet dangling. "What's the argument?"

"Doc," Ross answered, "is trying to prove there isn't any other side to the moon."

"No, no, no," Cargraves hastily denied. "And repeat `no.' I was trying to get you to prove your assertion that there was one. I was saying that there was a phenomenon even on earth which hasn't any back side, to nail down Ross's argument from experience with other matters — even allowing that earth experience necessarily applies to the moon, which I don't."

"Whoops! Slow up! Take the last one first. Don't natural laws apply anywhere in the universe?"

"Pure assumption, unproved."

"But astronomers make predictions, eclipses and such, based on that assumption — and they work out."

"You've got it backwards. The Chinese were predicting eclipses long before the theory of the invariability of natural law was popular. Anyhow, at the best, we notice certain limited similarities between events in the sky and events on earth. Which has nothing to do with the question of a back side of the moon which we've never seen and may not be there."

"But we've seen a lot of it," Morrie pointed out.

"I get you," Cargraves agreed. "Between librations and such — the eccentricity of the moon's orbit and its tilt, we get to peek a little way around the edges from time to time and see about 60 per cent of its surface — if the surface is globular. But I'm talking about that missing 40 per cent that we've never seen."

"Oh," said Ross, "you mean the side we can't see might just be sliced off, like an apple with a piece out of it. Well, you may be right, but I'll bet you six chocolate malts, payable when we get back, that you're all wet."

"Nope," Cargrave answered, "this is a scientific discussion and betting is inappropriate. Besides, I might lose. But I did not mean anything of the slice-out-of-an-apple sort. I meant just what I said: no back side at all. The possibility that when we swing around the moon to look at the other side, we won't find anything at all, nothing, just empty space-that when we try to look at the moon from behind it, there won't be any moon to be seen — not from that position. I'm not asserting that that is what we will find; I'm asking you to prove that we will find anything."

"Wait a minute," Morrie put in, as Art glanced wildly at the moon as if to assure himself that it was still there — it was! "You mentioned something of that sort on earth — a thing with no back. What was it? I'm from Missouri."

"A rainbow. You can see it from just one side, the side that faces the sun. The other side does not exist."

"But you can't get behind it."

"Then try it with a garden spray some sunny day. Walk around it. When you get behind it, it ain't there."

"Yes, but Doc," Ross objected, "you're just quibbling. The cases aren't parallel. A rainbow is just light waves; the moon is something substantial."

"That's what I'm trying to get you to prove, and you haven't proved it yet. How do you know the moon is substantial? All you have ever seen of it is just light waves, as with the rainbow."

Ross thought about this. "Okay, I guess I see what you're getting at. But we do know that the moon is substantial; they bounced radar off it, as far back as `46."

"Just light waves again, Ross. Infrared light, or ultra-shortwave radio, but the same spectrum. Come again."

"Yes, but they bounced."

"You are drawing an analogy from earth conditions again. I repeat, we know nothing of moon conditions except through the insubstantial waves of the electromagnetic spectrum."

"How about tides?"

"Tides exist, certainly. We have seen them, wet our feet in them.

But that proves nothing about the moon. The theory that the moon causes the tides is a sheer convenience, pure theory. We change theories as often as we change our underwear. Next year it may be simpler to assume that the tides cause the moon. Got any other ideas?"

Ross took a deep breath. "You're trying to beat me down with words. All right, so I haven't seen the other side of the moon. So I've never felt the moon, or taken a bite out of it. By the way, you can hang on to the theory that the moon is made of green cheese with that line of argument."

"Not quite," said Cargraves. "There is some data on that, for what it's worth. An astronomer fellow made a spectrograph of green cheese and compared it with a spetcrograph of the moon. No resemblance."

Art chortled. "He didn't, really?"

"Fact. You can look it up."

Ross shrugged. "That's no better than the radar data," he said correctly. "But to get on with my proof. Granted that there is a front side to the moon, whatever it's nature, just as long as it isn't so insubstantial that it won't even reflect radar, then there has to be some sort of a back, flat, round, square, or wiggly. That's a matter of certain mathematical deduction."

Morrie snorted.

Cargraves limited himself to a slight smile. "Now, Ross. Think it over. What is the content of mathematics?"

"The content of mathe-" He collapsed suddenly. "Oh."

"I guess I finally get it. Mathematics doesn't have any content. If we found there wasn't any other side, then we would just have to invent a new mathematics."

"That's the idea. Fact of the matter is, we won't know that there is another side to the moon until we get there. I was just trying to show you," he went on, "just how insubstantial a `common sense' idea can be when you pin it down. Neither `common sense' nor `logic' can prove anything. Proof comes from experiment, or to put it another way, from experience, and from nothing else. Short lecture on the scientific method — you can count it as thirty minutes on today's study time. Anybody else want breakfast but me? Or has the low weight made you queasy?" He started to climb out of his chair.

Ross was very thoughtful while they made preparations for breakfast. This was to be a proper meal, prepared from their limited supply of non-canned foods. The Galileo had been fitted with a galley of sorts, principally a hot plate and a small refrigerator. Dishes and knives, forks, and spoons could be washed, sparingly, with the water which accumulated in the dump of the airconditioner, and then sterilized on the hot plate. The ship had everything necessary to life, even a cramped but indispensable washroom. But every auxiliary article, such as dishes, was made of zinc-reserve mass for the hungry jet.

They sat, or rather squatted, down to a meal of real milk, cereal, boiled eggs, rolls, jam, and coffee. Cargraves sighed contentedly when it had been tucked away. "We won't get many like that," he commented, as he filled his pipe. "Space travel isn't all it's cracked up to be, not yet."

"Mind the pipe, Skipper!" Morrie warned.

Cargraves looked startled. "I forgot," he admitted guiltily. He stared longingly at the pipe. "Say, Ross," he inquired, "do you think the airconditioner would clean it out fast enough?"

"Go ahead. Try it," Ross urged him. "One pipeful won't kill us. But say, Doc-"

"Yes?"

"Well, uh, look — don't you really believe there is another side to the moon?"

"Huh? Still on that, eh? Of course I do."

"But it's just my opinion. I believe it because all my assumptions, beliefs, prejudices, theories, superstitions, and so forth, tend that way. It's part of the pattern of fictions I live by, but that doesn't prove it's right. So if it turns out to be wrong I hope I am sufficiently emotionally braced not to blow my top."

"Which brings us right back to study time," he went on. "You've all got thirty minutes credit, which gives you an hour and a half to go. Better get busy."

Art looked dumfounded. "I thought you were kidding Uncle. You don't mean to run such a schedule on the moon, do you?"

"Unless circumstances prevent. Now is a good time to work up a little reserve, for that matter, while there is nothing to see and no work to do."

Art continued to look astonished, then his race cleared. "I in afraid we can't, Uncle. The books are all packed down so far that we can't get at them till we land."

"So? Well, we won't let that stop us. A school," he quoted, "is a log with a pupil on one end and a teacher on the other. We'll have lectures and quizzes — starting with a review quiz. Gather round, victims."

They did so, sitting cross-legged in a circle on the hold bulkhead. Cargraves produced a pencil and a reasonably clean piece of paper from his always bulging pockets. "You first, Art. Sketch and describe a cyclotron. Basic review — let's see how much you've forgotten."

Art commenced outlining painfully the essential parts of a cyclotron. He sketched two hollow half-cylinders, with their open sides facing each other, close together. "These are made of copper," he stated, "and each one is an electrode for a very high frequency, high voltage power source. It's actually a sort of shortwave radio transmitter — I'll leave it out of the sketch. Then you have an enormously powerful electromagnet with its field running through the opening between the dees, the half-cylinders, and vertical to them. The whole thing is inside a big vacuum chamber. You get a source of ions-"

"What sort of ions?"

"Well, maybe you put a little hydrogen in the vacuum chamber and kick it up with a hot filament at the center point of the two dees. Then you get hydrogen nuclei-protons."

"Go ahead."

"The protons have a positive charge, of course. The alternating current would keep them kicking back and forth between the two electrodes — the dees. But the magnetic field, since the protons are charged particles, tends to make them whirl around in circles. Between the two of them, the protons go whirling around in a spiral, gaining speed each revolution until they finally fly out a little thin, metal window in the vacuum chamber, going to beat the band."

"But why bother?"

"Well, if you aim this stream of highspeed protons at some material, say a piece of metal, things begin to happen. It can knock electrons off the atoms, or it can even get inside and stir up the nuclei and cause transmutations or make the target radioactive — things like that."

"Good enough," Cargraves agreed, and went on to ask him several more questions to bring out details. "Just one thing," he said afterwards. "You know the answers, but just between ourselves, that sketch smells a bit. It's sloppy."

"I never did have any artistic talent," Art said defensively. "I'd rather take a photograph any day."

"You've taken too many photographs, maybe. As for artistic talent, I haven't any either, but I learned to sketch. Look, Art-the rest of you guys get this, too -if you can't sketch, you can't see. If you really see what you're looking at, you can put it down on paper, accurately. If you really remember what you have looked at, you can sketch it accurately from memory."

"But the lines don't go where I intend them to."

"A pencil will go where you push it. It hasn't any life of its own. The answer is practice and more practice and thinking about what you are looking at. All of you lugs want to be scientists. Well, the ability to sketch accurately is as necessary to a scientist as his slipstick. More necessary, you can get along without a slide rule. Okay, Art. You're next, Ross. Gimme a quick tell on the protoactinium radioactive series."

Ross took a deep breath. "There are three families of radioactive isotopes: the uranium family, the thorium family, and the protoactinium family. The last one starts with isotope U-235 and-" They kept at it for considerably longer than an hour and a half, for Cargraves had the intention of letting them be as free as possible later, while still keeping to the letter and spirit of his contract with Ross's father.

At last he said, "I think we had better eat again. The drive will cut out before long. It's been cutting down all the time — notice how light you feel?"

"How about a Kration?" inquired Morrie, in his second capacity as commissary steward.

"No, I don't think so," Cargraves answered slowly. "I think maybe we had better limit this meal to some amino acids and some gelatine." He raised his eyebrows.

"Umm — I see," Morrie agreed, glancing at the other two. "Maybe you are right." Morrie and Cargraves, being pilots, had experienced free fall in school. The stomachs of Ross and Art were still to be tried.

"What's the idea?" Art demanded.

Ross looked disgusted. "Oh, he thinks we'll toss our cookies. Why, we hardly weigh anything now. What do you take us for, Doc? Babies?"

"No," said Cargraves, "but I still think you might get dropsick. I did. I think predigested foods are a good idea."

"Oh, shucks. My stomach is strong. I've never been air sick."

"Ever been seasick?"

"I've never been to sea."

"Well, suit yourself," Cargraves told him. "But one thing I insist on. Wear a sack over your face. I don't want what you lose in the airconditioner." He turned away and started preparing some gelatine for himself by simply pouring the powder into water, stirring, and drinking.

Ross made a face but he did not dig out a Kration. Instead he switched on the hot plate, preparatory to heating milk for amino-acid concentrates.

A little later Joe the Robot awoke from his nap and switched off the jet completely.

They did not bounce up to the ceiling. The rocket did not spin wildly. None of the comic-strip things happened to them. They simply gradually ceased to weigh anything as the thrust died away. Almost as much they noticed the deafening new silence. Cargraves had previously made a personal inspection of the entire ship to be sure that everything was tied, clamped, or stored firmly so that the ship would not become cluttered `up with loosely floating bric-a-brac.

Cargraves lifted himself away from his seat with one hand, turned in the air like a swimmer, and floated gently down, rather across-up and down had ceased to exist -to where Ross and Art floated, loosely attached to their hammocks by a single belt as an added precaution. Cargraves checked his progress with one hand and steadied himself by grasping Art's hammock. "How's everybody?"

"All right, I guess," Art answered, gulping. "It feels like a falling elevator." He was slightly green.

"You, Ross?"

"I'll get by," Ross declared, and suddenly gagged. His color was gray rather than green.

Space sickness is not a joke, as every cadet rocket pilot knows. It is something like seasickness, like the terrible, wild retching that results from heavy pitching of a ship at sea— except that the sensation of everything dropping out from under one does not stop!

But the longest free-flight portions of a commercial rocket flight from point to point on earth last only a few minutes, with the balance of the trip on thrust or in glide, whereas the course Cargraves had decided on called for many hours of free fall. He could have chosen, with the power at his disposal, to make the whole trip on the jet, but that would have prevented them from turning ship, which he proposed to do now, until the time came to invert and drive the jet toward the moon to break their fall.

Only by turning the ship would they be able to see the earth from space; Cargraves wanted to do so before the earth was too far away.

"Just stay where you are for a while," he cautioned them.. "I'm about to turn ship."

"I want to see it," Ross said stoutly. "I've been looking forward to it." He unbuckled his safety belt, then suddenly he was retching again. Saliva overflowed and drooled out curiously, not down his chin but in large droplets that seemed undecided where to go.

"Use your handkerchief," Cargraves advised him, feeling none too well himself. "Then come along if you feel like it." He turned to Art.

Art was already using his handkerchief.

Cargraves turned away and floated back to the pilot's chair. He was aware that there was nothing that he could do for them, and his own stomach was doing flipflops and slow, banked turns. He wanted to strap his safety belt across it. Back in his seat, he noticed that Morrie was doubled up and holding his stomach, but he said nothing and gave his attention to turning the ship. Morrie would be all right.

Swinging the ship around was a very simple matter. Located at the center of gravity of the ship was a small, heavy, metal wheel. He had controls on the panel in front of him whereby he could turn this wheel to any axis, as it was mounted freely on gymbals, and then lock the gymbals. An electric motor enabled him to spin it rapidly in either direction and to stop it afterwards.

This wheel by itself could turn the ship when it was in free fall and then hold it in the new position. (It must be clearly understood that this turning had no effect at all on the course or speed of the Galileo, but simply on its attitude, the direction it faced, just as a fancy diver may turn and twist in falling from a great height, without thereby disturbing his fall.)

The little wheel was able to turn the huge vessel by a very simple law of physics, but in an application not often seen on the earth. The principle was the conservation of momentum, in this case angular momentum or spin. Ice skaters understand the application of this law; some of their fanciest tricks depend on it.

As the little wheel spun rapidly in one direction the big ship spun slowly in the other direction. When the wheel stopped, the ship stopped and just as abruptly.

"Dark glasses, boys!" Cargraves called out belatedly as the ship started to nose over and the stars wheeled past the port. In spite of their wretched nausea they managed to find their goggles, carried on their persons for this event, and get them on.

They needed them very soon. The moon slid away out of sight. The sun and the earth came in to view. The earth was a great shining crescent like a moon, two days past new. At this distance-one-fourth the way to the moon -it appeared sixteen times as wide as the moon does from the earth and many times more magnificent. The horns of the crescent were blue-white from the polar ice caps. Along its length showed the greenish blue of sea and the deep greens and sandy browns of ocean and forest and field… for the line of light and dark ran through the heart of Asia and down into the Indian Ocean. This they could plainly see, as easily as if it had been a globe standing across a school room from them. The Indian Ocean was partly obscured by a great cloud bank, stormy to those underneath it perhaps, but blazing white as the polar caps to those who watched from space.

In the arms of the crescent was the nightside of earth, lighted dimly but plainly by the almost full moon behind them. But-and this is never seen on the moon when the new moon holds the old moon in her arms -the faintly lighted dark face was picked out here and there with little jewels of light, the cities of earth, warm and friendly and beckoning!

Halfway from equator to northern horn were three bright ones, not far apart — London, and Paris, and reborn Berlin. Across the dark Atlantic, at the very edge of the disk, was one especially bright and rosy light, the lights of Broadway and all of Greater New York.

All three of the boys were seeing New York for the first time, not to mention most of the rest of the great globe.

But, although it was their home, although they were it from a glorious vantage point new to mankind, their attention was torn away from the earth almost at once. There was a still more breathtaking object in the sky — the sun.

Its apparent width was only one-sixteenth that of the mighty crescent earth, but it brooked no competition. It hung below the earth-below when referred to the attitude of the Galileo, not in the sense of "up" or "down" -and about four times the width of the earth away. It was neither larger nor smaller than it appears from the earth and not appreciably brighter than it is on a clear, dry desert noon. But the sky was black around it in the airless space; its royal corona shone out; its prominences could be seen; its great infernal storms showed on its face.

"Don't look too directly at it," Cargraves warned, "even when you have the polarizer turned to maximum interference." He referred to the double lenses the boys wore, polaroid glass with thick outer lens that were rotatable.

"I gotta have a picture of this!" Art declared, and turned and swam away. He had forgotten that he was space sick.

He was back shortly with his Contax and was busy fitting his longest lens into it. The camera was quite old, being one of the few things his mother had managed to bring out of Germany, and was his proudest possession. The lens in place, he started to take his Weston from its case. Cargraves stopped him.

"Why burn out your light meter?" he cautioned.

Art stopped suddenly. "Yes, I guess I would," he admitted. "But how am I going to get a picture?"

"Maybe you won't. Better use your slowest film, your strongest filter, your smallest stop, and your shortest exposure. Then pray."

Seeing that the boy looked disappointed, he went on, "I wouldn't worry too much about pictures of the sun. We can be sure that to the astronomers who will follow us after we've blazed the trail. But you ought to be able to get a swell picture of the earth. Waste a little film on the sun first, then we will try it. I'll shade your lens from the sunlight with my hand."

Art did so, then prepared to photograph the earth. "I can't get a decent light reading on it, either," he complained. "Too much interference from the sun."

"Well, you know how much light it is getting — the works. Why not assume it's about like desert sunlight, then shoot a few both above and below what that calls for?"

When Art had finished Cargraves said, "Mind the sunburn, boys." He touched the plastic inner layer of the quartz port. "This stuff is supposed to filter out the worst of it — but take it easy."

"Shucks, we're tanned." And so they were; New Mexico sun had left its mark.

"I know, but that's the brightest sunshine you ever saw. Take it easy."

"How much chance is there," asked Morrie, "that this pure stuff is dangerous? I mean aside from bad sunburn."

"You read the same papers I did. We're getting more cosmic radiation, too. Maybe it'll knock us down dead. Maybe it'll cause your children to have long green tendrils. That's one of the chances we take."

"Well, Columbus took a chance."

"And look how far he got!," put in Art.

"Yeah, thrown in the hoosegow for his trouble."

"Be that as it may," said Cargraves, "I'm going to turn the ship again so that the sun doesn't shine in so directly. This tub is getting too hot." It was no trouble to keep the Galileo warm enough, but how to get rid of unwanted heat was another matter. Her polished sides reflected most of the heat that struck them, but sunshine pouring directly in the view port produced a most uncomfortable greenhouse effect. Refrigeration, in the ordinary sense, was no answer; the ship was a closed system and could lose heat only by radiation to outer space. At the moment she was absorbing radiant heat from the sun much faster than she was radiating it.

"I want to take some more pictures," Art protested.

"I'll keep the earth in sight," Cargraves promised, and set the controls of the spinning wheel to suit his purpose. Then he floated back to the view port and joined the others, who were swimming in front of it like goldfish in a bowl.

Ross touched the transparent wall with a finger tip; the light contact pushed him back from the port. "Doc, what do you think would happen if a meteor hit this port?"

"I don't like to think about it. However, I wouldn't worry too much about it. Ley has calculated that the chance of being hit by a meteor on a trip out to the moon and back is about one in a half a million. I figure I was in much graver danger every time I climbed into that alleged automobile you guys drive.

"That's a good car."

"I'll admit it performs well." He turned away with a motion much like that of a sprint swimmer turning on the side of a pool. "Art, when you are through snapping that Brownie, I've got something better for you to do. How about trying to raise earth?"

"Just one more of — Huh? What did you say?"

"How about heating up your tubes and seeing if there is anybody on the air-or lack-of-air, as the case may be?"

No attempt had been made to use the radios since blasting off. Not only did the jet interfere seriously, but also the antenna were completely retracted, even spike antenna, during the passage through the atmosphere. But now that the jet was silent an attempt at communication seemed in order.

True, the piloting radar had kept them in touch by radio, in a manner of speaking, during the early part of the journey, but they were now beyond the range of the type of equipment used for piloting. It bore little resemblance to the giant radars used to bounce signals against the moon. The quartz windows through which it operated would have been quite inadequate for the large antenna used to fling power from the earth to the moon.

Art got busy at once, while stating that he thought the chances of picking up anything were slim. "It would have to be beamed tight as a, as a, well — tight. And why would anybody be beaming stuff out this way?"

"At us, of course," Ross offered.

"They can't find us. Radar won't pick up anything as small as this ship at this distance — too little mirror cross section." Art spoke authoritatively. "Not the radars they've got so far. Maybe some day, if — hey!"

"What have you got?"

"Keep quiet!" Art stared ahead with that look of painful, unseeing concentration found only under a pair of earphones. He twiddled his dials carefully, then fumbled for pencil and paper. Writing, he found, was difficult without gravity to steady himself and his hand. But he scribbled.

"Get a load of this," he whispered a few minutes later. He read:

RADIO PARIS CALLING ROCKET SHIP GALILEO
RADIO PARIS CALLING ROCKET SHIP GALILEO

PARIS CALLING ROCKET SHIP GALILEO RADIO
PARIS-

"And then they repeat. It's a recording." His voice was shaky.

"Gosh!" Ross had no other comment.

"Well, boys, it looks like we're celebrities." Cargraves tried to make his words sound casual. Then he found that he was holding a piece of his pipe in each hand; he had broken it in two without knowing it. Shrugging, he let the pieces float away from him.

"But how did they find us?" persisted Art.

"The message shows it," Morrie pointed out. "See that time? That's the time we went into free fall. They followed the jet."

"How? By telescope?"

"More likely," Cargraves put in, "by anti-rocket radiation tracer."

"Huh? But the UN patrol are the only ones with that sort of gear."

Cargraves permitted himself a grin. "And why shouldn't the UN be interested in us? See here, kid — can you squirt anything back at them?"

"I'll sure try!"

Chapter 11 ONE ATOM WAR TOO MANY

ART GOT BUSY AT HIS TASK, but nothing came back which would tell him whether or not his attempts had been successful. The recording continued to come in whenever he listened for it, between attempts to send, for the next three and a half hours. Then it faded out — they were off the beam.

Nevertheless, it was the longest direct communication of record in human history.

The Galileo continued her climb up from the earth, toward that invisible boundary where the earth ceased to claim title and the lesser mass of the moon took charge. Up and up, out and farther out, rising in free flight, slowing from the still effective tug of the earth but still carried on by the speed she had attained under the drive of the jet, until at last the Galileo slipped quietly over the border and was in the moon's back yard. From there on she accelerated slowly as she fell toward the silvery satellite.

They ate and slept and ate again. They stared at the receding earth. And they slept again.

While they slept, Joe the Robot stirred, consulted his cam, decided that he had had enough of this weightlessness, and started the jet. But first he straightened out the ship so that the jet faced toward the moon, breaking their fall, while the port stared back at earth.

The noise of the jet woke them up. Cargraves had had them strap themselves down in anticipation of weight. They unstrapped and climbed up to the control station. "Where's the moon?" demanded Art.

"Under us, of course," Morrie informed him.

"Better try for it with radar, Morrie," Cargraves directed.

"Cheek!" Morrie switched on the juice, waited for it to warm, then adjusted it. The moon showed as a large vague mass on one side of the scope. "About fifteen thousand miles," he declared. "We'd better do some checking, Skipper."

They were busy for more than an hour, taking sights, taking readings, and computing. The bearing and distance of the moon, in relation to the ship, were available by radar. Direct star sights out the port established the direction of drive of the ship. Successive radar readings established the course and speed of the ship for comparison with the courses and speeds as given by the automatic instruments showing on the board. All these factors had to be taken into consideration in computing a check on the management of Joe the Robot.

Minor errors were found and the corrections were fed to the automatic pilot. Joe accepted the changes in his orders without comment.

While Morrie and Cargraves did this, Art and Ross were preparing the best meal they could throw together. It was a relief to have weight under their feet and it was a decided relief to their stomachs. Those organs had become adjusted to free fall, but hardly reconciled. Back on firm footing they hollered for solid food.

The meal was over and Cargraves was thinking sadly of his ruined pipe, when the control alarm sounded. Joe the Robot had completed his orders, his cam had run out, he called for relief.

They all scrambled up to the control station. The moon, blindingly white and incredibly huge was shouldering its way into one side of the port. They were so close to it now that their progress was visible, if one looked closely, by sighting across the frame of the port at some fixed object, a crater or a mountain range.

"Whee!" Art yelled.

"Kinda knocks your eyes out, doesn't it?" Ross said, gazing in open wonder.

"It does," agreed Cargraves. "But we've got work to do. Get back and strap yourselves down and stand by for maneuvering."

While he complied, he strapped himself into his chair and then flipped a switch which ordered Joe to go to sleep; he was in direct, manual command of the rocket. With Morrie to coach him by instrument, he put the ship through a jockeying series of changes, gentle on the whole and involving only minor changes in course at any one time, but all intended to bring the ship from the flat conoid trajectory it had been following into a circular orbit around the moon.

"How'm I doin'?" he demanded, a long time later.

"Right in the groove," Morrie assured him, after a short delay.

"Sure enough of it for me to go automatic and swing ship?"

"Let me track her a few more minutes." Presently Morrie assured him as requested. They had already gone into free flight just before Cargraves asked for a check. He now called out to Art and Ross that they could unstrap. He then started the ship to swinging so that the port faced toward the moon and switched on a combination which told Joe that he must get back to work; it was now his business to watch the altitude by radar and to see to it that altitude and speed remained constant.

Art was up at the port, with his camera, by the time he and Morrie had unstrapped.

"Goshawmighty," exclaimed Art, "this is something!" He unlimbered his equipment and began snapping frantically, until Ross pointed out that his lens cover was still on. Then he steadied down.

Ross floated face down and stared out at the desolation. They were speeding silently along, only two hundred miles above the ground, and they were approaching the sunrise line of light and darkness. The shadows were long on the barren wastes below them, the mountain peaks and the great gaping craters more horrendous on that account. "It's scary," Ross decided. "I'm not sure I like it."

"Want off at the next corner?" Cargraves inquired.

"No, but I'm not dead certain I'm glad I came."

Morrie grasped his arm, to steady himself apparently, but quite as much for the comfort of solid human companionship. "You know what I think, Ross," he began, as he stared out at the endless miles of craters. "I think I know how it got that way. Those aren't volcanic craters, that's certain — and it wasn't done by meteors. They did it themselves!"

"Huh? Who?"

"The moon people. They did it. They wrecked themselves. They ruined themselves. They had one atomic war too many."

"Huh? What the-" Ross stared, then looked back at the surface as if to read the grim mystery there. Art stopped taking pictures.

"How about it, Doc?"

Cargraves wrinkled his brow. "Could be," he admitted. "None of the other theories for natural causes hold water for one reason or another. It would account for the relatively smooth parts we call `seas.' They really were seas; that's why they weren't hit very hard."

"And that's why they aren't seas any more," Morrie went on. "They blew their atmosphere off and the seas boiled away at Tycho. That's where they set off the biggest ammunition dump on the planet. It cracked the whole planet. I'll bet somebody worked out a counter-weapon that worked too well. It set off every atom bomb on the moon all at once and it ruined them! I'm sure of it."

"Well," said Cargraves, "I'm not sure of it, but I admit the theory is attractive. Perhaps we'll find out when we land. That notion of setting off all the bombs at once-there are strong theoretical objections to that. Nobody has any idea how to do it."

"Nobody knew how to make an atom bomb a few years ago," Morrie pointed out.

"That's true." Cargraves wanted to change the subject; it was unpleasantly close to horrors that had haunted his dreams since the beginning of World War II. "Ross, how do you feel about the other side of the moon now?"

"We'll know pretty soon," Ross chuckled. "Say — this is the Other Side!"

And so it was. They had leveled off in their circular orbit near the left limb of the moon as seen from the earth and were coasting over the mysterious other face. Ross scanned it closely. "Looks about the same."

"Did you expect anything different?"

"No, I guess not. But I had hoped." Even as he spoke they crossed the sunrise line and the ground below them was dark, not invisible, for it was still illuminated by faint starlight — starlight only, for the earthshine never reached this face. The suncapped peaks receded rapidly in the distance. At the rate they were traveling, a speed of nearly 4000 miles per hour necessary to maintain them in a low-level circular orbit, the complete circuit of the planet would take a little over an hour and a half.

"No more pictures, I guess," Art said sadly. "I wish it was a different time of the month."

"Yes," agreed Ross, still peering out, "it's a dirty shame to be this close and not see anything."

"Don't be impatient," Cargraves told him; "When we start back in eight or nine days, we swing around again and you can stare and take pictures till you're crosseyed."

"Why only eight or nine days? We've got more food than that."

"Two reasons. The first is, if we take off at new moon we won't have to stare into the sun on the way back. The second is, I'm homesick and I haven't even landed yet." He grinned. In utter seriousness he felt that it was not wise to stretch their luck by sticking around too long.

The trip across the lighted and familiar face of the moon was delightful, but so short that it was like window shopping in a speeding car. The craters and the "seas" were old familiar friends, yet strange and new. It reminded them of the always strange experience of seeing a famous television star on a personal appearance tour-recognition with an odd feeling of unreality.

Art shifted over to the motion-picture camera once used to record the progress of the Starstruck series, and got a complete sequence from Mare Fecunditatis to the crater Kepler, at which point Cargraves ordered him emphatically to stop at once and strap himself down.

They were coming into their landing trajectory. Cargraves and Morrie had selected a flat, unnamed area beyond Oceanus Procellarum for the landing because it was just on the border between the earth side and the unknown side, and thereby fitted two plans: to attempt to establish radio contact with earth, for which direct line-of-sight would be necessary, and to permit them to explore at least a portion of the unknown side.

Joe the Robot was called again and told to consult a second cam concealed in his dark insides, a cam which provided for the necessary braking drive and the final ticklish contact on maneuvering jets and radar. Cargraves carefully leveled the ship at the exact altitude and speed Joe would need for the approach and flipped over to automatic when Morrie signaled that they were at the exact, precalculated distance necessary for the landing.

Joe took over. He flipped the ship over, using the maneuvering rockets, then started backing in to a landing, using the jet in the tail to kill their still tremendous speed. The moon was below them now and Cargraves could see nothing but the stars, the stars and the crescent of the earth — a quarter of a million miles away and no help to him now.

He wondered if he would ever set foot on it again.

Morrie was studying the approach in the radar scope. "Checking out to nine zeros, Captain," he announced proudly and with considerable exaggeration. "It's in the bag."

The ground came up rapidly in the scope. When they were close and no longer, for the moment, dropping at all, Joe cut the main jet and flipped them over.

When he had collected, himself from the wild gyration of the somersault, Cargraves saw the nose jets reach out and splash in front of them and realized that the belly jets were in play, too, as the surge of power pushed the seat of the chair up against him. He felt almost as if he could land it himself, it seemed so much like his first wild landing on the New Mexico desert.

Then for one frantic second he saw the smooth, flat ground ahead of the splash of the plowing nose jets give way to a desolation of rocky ridges, sharp crevasses, loose and dangerous cosmic rubble… soil from which, if they landed without crashing, they could not hope to take off.

The sunlight had fooled them. With the sun behind them the badlands had cast no shadows they could see; the flat plain had appeared to stretch to the mountains ahead. These were no mountains, but they were quite sufficient to wreck the Galileo.

The horrible second it took him to size up the situation was followed by frantic action. With one hand he cut the automatic pilot; with the other he twisted violently on the knob controlling the tail jet. He slapped the belly jets on full.

Her nose lifted.

She hung there, ready to fall, kept steady on her jets only by her gyros. Then slowly, slowly, slowly the mighty tail jet reached out — so slowly that he knew at that moment that the logy response of the atoumatic pilot would never serve him for what he had to do next, which was to land her himself.

The Galileo pulled away from the surface of the moon.

"That was close," Morrie said mildly.

Cargrave swiped the sweat from his eyes and shivered.

He knew what was called for now, in all reason. He knew that he should turn the ship away from the moon, head her in the general direction of the earth and work out a return path, a path to a planet with an atmosphere to help a pilot put down his savage ship. He knew right then that he was not the stuff of heroes, that he was getting old and knew it.

But he hated to tell Morrie.

"Going to put her down on manual?" the boy inquired.

"Huh?"

"That's the only way we'll get her down on a strange field. I can see that now you've got to be able to see your spot at the last half minute — nose jet,and no radar."

"I can't do it, Morrie."

The younger man said nothing. He simply sat and stared ahead without expression.

"I'm going to head her back to earth, Morrie."

The boy gave absolutely no sign of having heard him. There was neither approval nor disapproval on his face, nor any faint suggestion.

Cargraves thought of the scene when Ross, blind and bandaged, had told him oft. Of Art, quelling his space sickness to get his pictures. He thought, too, of the hot and tiring days when he and Morrie had qualified for piloting together.

The boy said nothing, neither did he look at him.

These kids, these damn kids! How had he gotten up here, with a rocket under his hand and a cargo of minors to be responsible for? He was a laboratory scientist, not a superman. If it had been Ross, if Ross were a pilot — even where he now was, he shivered at the recollection of Ross's hairraising driving. Art was about as bad. Morrie was worse.

He knew he would never be a hot pilot — not by twenty years. These kids, with their casual ignorance, with their hot rod rigs, it was for them; piloting was their kind of a job. They were too young and too ignorant to care and their reflexes were not hobbled by second thoughts. He remembered Ross's words: "I'll go to the moon if I have to walk!"

"Land her, Morrie."

"Aye, aye, sir!"

The boy never looked, at him. He flipped her up on her tail, then let her drop slowly by easing off on the tail jet. Purely by the seat of his pants, by some inner calculation-for Cargraves could see nothing through the port but stars, and neither could the boy -he flipped her over again, cutting the tail jet as he did so.

The ground was close to them and coming up fast.

He kicked her once with the belly jets, placing them thereby over a smooth stretch of land, and started taking her down with quick blasts of the nose jets, while sneaking a look between blasts.

When he had her down so close that Cargraves was sure that he was going to land her on her nose, crushing in the port and killing them, he gave her one more blast which made her rise a trifle, kicked her level and brought her down on the belly jets, almost horizontal, and so close to the ground that Cargraves could see it ahead of them, out the port.

Glancing casually out the port, Morrie gave one last squirt with the belly jets and let her settle. They grated heavily and were stopped. The Galileo sat on the face of the moon.

"Landed, sir. Time: Oh-eight-threefour."

Cargraves drew in a breath. "A beautiful, beautiful landing, Morrie."

"Thanks, Captain."

Chapter 12 THE BARE BONES

ROSS AND ART WERE ALREADY out of their straps and talking loudly about getting out the space suits when Cargraves climbed shakily out of his chair — and then nearly fell. The lowered gravitation, one-sixth earth-normal, fooled him. He was used to weightlessness by now, and to the chest-binding pressure of high acceleration; the pseudo-normal weight of a one-g drive was no trouble, and maneuvering while strapped down was no worse than stunting in an airplane.

This was different and required a little getting used to, he decided. It reminded him a little of walking on rubber, or the curiously light-footed feeling one got after removing snow shoes or heavy boots.

Morrie remained at his post for a few moments longer to complete and sign his log. He hesitated over the space in the log sheet marked 'position'. They had taught him in school to enter here the latitude and longitude of the port of arrival — but what were the latitude and longitude of this spot?

The moon had its north and south poles just as definitely as the earth, which gave any spot a definite latitude, nor was longitude uncertain once a zero meridian was selected. That had been done; Tycho was to be the Greenwich of the moon.

But his navigation tables were tables for the earth.

The problem could be solved; he knew that. By spherical trigonometry the solutions of celestial triangles on which all navigation was based could be converted to the special conditions of Luna, but it would require tedious calculation, not at all like the precalculated short cuts used by all pilots in the age of aircraft and rocket. He would have to go back to the Marc St. Hilaire method, obsolete for twenty years, after converting laboriously each piece of data from earth reference terms to moon reference terms.

Well, he could do it later, he decided, and get Cargraves to check him. The face of the moon called him.

He joined the little group huddled around the port. In front of them stretched a dun and lifeless floor, breaking into jagged hills a few miles beyond them. It was hot, glaring hot, under the oblique rays of the sun, and utterly still. The earth was not in sight; they had dropped over the rim into the unknown side in the last minutes of the impromptu landing.

Instead of the brassy sky one might expect over such a scene of blistering desert desolation, a black dome of night, studded brilliantly with stars, hung over it. At least, thought Morrie, his mind returning to his problem in navigation, it would be hard to get lost here. A man could set a course by the stars with no trouble.

"When are we going out?" demanded Art.

"Keep your shirt on," Ross told him and turned to Cargraves. "Say, Doc, that was sure a slick landing. Tell me-was that first approach just a look around on manual, or did you feed that into the automatic pilot, too?"

"Neither one, exactly." He hesitated. It had been evident from their first remarks that neither Ross nor Art had been aware of the danger, nor of his own agonizing indecision. Was it necessary to worry them with it now? He was aware that, if he did not speak, Morrie would never mention it.

That decided him. The man-man was the word, he now knew, not "boy" -was entitled to public credit. "Morrie made that landing," he informed them. "We had to cut out the robot and Morrie put her down."

Ross whistled.

Art said, "Huh? What did you say? Don't tell me that radar cut out — I checked it six ways."

"Your gadgets all stood up," Cargraves assured him, "but there are some things a man can do that a gadget can't. This was one of them." He elaborated what had happened.

Ross looked Morrie up and down until Morrie blushed. "Hot Pilot I said, and Hot Pilot it is," Ross told him. "But I'm glad I didn't know." He walked aft, whistling Danse Macabre, off key again, and began to fiddle with his space suit.

"When do we go outside?," Art persisted.

"Practically at once, I suppose."

"Whoopee!"

"Don't get in a hurry. You might be the man with the short straw and have to stay with the ship."

"But… Look, Uncle, why does anybody have to stay with the ship? Nobody's going to steal it."

Cargraves hesitated. With automatic caution, he had intended always to keep at least one man in the ship, as a safety measure. On second thought there seemed no reason for it. A man inside the ship could do nothing for a man outside the ship without first donning a pressure suit and coming outside. "We'll compromise," he said. "Morrie and I — no, you and I." He realized that he could not risk both pilots at once.

"You and I will go first. If it's okay, the others can follow us. All right, troops," he said, turning. "Into your space suits!"

They helped each other into them, after first applying white sunburn ointment liberally over the skin outside their goggles. It gave them an appropriate out-of-this-world appearance. Then Cargraves had them cheek their suits at twice normal pressure while he personally inspected their oxygen-bottle back packs. All the while they were checking their walky-talkies; ordinary conversation could be heard, but only faintly, through the helmets as long as they were in the air of the ship; the radios were louder.

"Okay, sports," he said at last. "Art and I will go into the lock together, then proceed around to the front, where you can see us. When I give you the high sign, come on out. One last word: stay together. Don't get more than ten yards or so away from me. And remember this. When you get out there, every last one of you is going to want to see how high you can jump; I've heard you talking about it. Well, you can probably jump twenty-five or thirty feet high if you try. But don't do it.

"Why not?" Ross's voice was strange, through the radio.

"Because if you land on your head and crack your helmet open, we'll bury you right where you fall! Come on, Morrie. No, sorry — I mean `Art'."

They crowded into the tiny lock, almost filling it. The motor which drove the impeller to scavenge the air from the lock whirred briefly, so little was the space left unoccupied by their bodies, then sighed and stopped. The scavenger valve clicked into place and Cargraves unclamped the outer door.

He found that he floated, rather than jumped, to the ground. Art came after him, landing on his hands and knees and springing lightly up.

"Okay, kid?"

"Swell!"

They moved around to the front, boots scuffing silently in the loose soil. He looked at it and picked up a handful to see if it looked like stuff that had been hit by radioactive blast. He was thinking of Morrie's theory. They were on the floor of a crater; that was evident, for the wall of hills extended all around them. Was it an atomic bomb crater?

He could not tell. The moon soil did have the boiled and bubbly look of atom-scorched earth, but that might have been volcanic action, or, even, the tremendous heat of the impact of a giant meteor. Well, the problem could wait.

Art stopped suddenly. "Say! Uncle, I've got to go back."

"What's the matter?"

"I forgot my camera!"

Cargraves chuckled. "Make it next time. Your subject won't move." Art's excitement had set a new high, he decided; there was a small school of thought which believed he bathed with his camera.

Speaking of baths, Cargraves mused, I could stand one. Space travel had its drawbacks. He was beginning to dislike his own smell, particularly when it was confined in a space suit!

Ross and Morrie were waiting for them, not patiently, at the port. Their radio voices, blanked until now by the ship's sides, came clearly through the quartz. "How about it, Doc?," Ross sang out, pressing his nose to the port.

"Seems all right," they heard him say.

"Then here we come!"

"Wait a few minutes yet. I want to be sure."

"Well — okay." Ross showed his impatience, but discipline was no longer a problem. Art made faces at them, then essayed a little dance, staying close to the ground but letting each step carry him a few feet into the air — or, rather, vacuum. He floated slowly and with some grace. It was like a dance in slow motion, or a ballet under water.

When he started rising a little higher and clicking his boot heels together as he sailed, Cargraves motioned for him to stop. "Put down your flaps, chum," he cautioned, "and land. You aren't Nijinsky."

"Who's Nijinsky?"

"Never mind. Just stay planted. Keep at least one foot on the ground. Okay, Morrie," he called out, "come on out. You and Ross."

The port was suddenly deserted.

When Morrie set foot on the moon and looked around him at the flat and unchanging plain and at the broken crags beyond he felt a sudden overwhelming emotion of tragedy and of foreboding welling up inside him. "It's the bare bones," he muttered, half to himself, "the bare bones of a dead world."

"Huh?" said Ross. "Are you coming, Morrie?"

"Right behind you."

Cargraves and Art had joined them. "Where to?" asked Ross, as the captain came up.

"Well, I don't want to get too far from the ship this first time," Cargraves declared. "This place might have some dirty tricks up its sleeve that we hadn't figured on. How much pressure you guys carrying?"

"Ship pressure."

"You can cut it down to about half that without the lower pressure bothering you. It's oxygen, you know."

"Let's walk over to those hills," Morrie suggested. He pointed astern where the rim of the crater was less than half a mile from the ship. It was the sunward side and the shadows stretched from the rim to within a hundred yards or so of the ship.

"Well, part way, anyhow. That shade might feel good. I'm beginning to sweat."

"I think," said Morrie, "if I remember correctly, we ought to be able to see earth from the top of the rim. I caught a flash of it, just as we inverted. We aren't very far over on the back side."

"Just where are we?"

"I'll have to take some sights before I can report," Morrie admitted. "Some place west of Ocean us Procellarum and near the equator."

"I know that."

"Well, if you're in a hurry, Skipper, you had better call up the Automobile Club."

"I'm in no hurry. Injun not lost — wigwam lost. But I hope the earth is visible from there. It would be a good spot, in that case, to set up Art's antenna, not too far from the ship. Frankly, I'm opposed to moving the ship until we head back, even if we miss a chance to try to contact earth."

They were in the shadows now, to Cargraves' relief. Contrary to popular fancy, the shadows were not black, despite the lack of air-dispersed sunlight. The dazzle of the floor behind them and the glare of the hills beyond all contrived to throw quite a lot of reflected light into the shadows.

When they had proceeded some distance farther toward the hills, Cargraves realized that he was not keeping his party together too well. He had paused to examine a place, discovered by Ross, where the base rock pushed up through the waste of the desert floor, and was trying in the dim light to make out its nature, when he noticed that Morrie was not with them.

He restrained his vexation; it was entirely possible that Morrie, who was in the lead, had not seen them stop. But he looked around anxiously.

Morrie was about a hundred yards ahead, where the first folds of the hills broke through. "Morrie!"

The figure stood up, but no answer came over the radio. He noticed then that Morrie was veering, weaving around. "Morrie! Come back here! Are you all right?"

"All right? Sure, I'm all right." He giggled.

"Well, come back here."

"Can't come back. I'm busy — I've found it!" Morrie took a careless step, bounded high in the air, came down, and staggered.

"Morrie! Stand still." Cargraves was hurrying toward him.

But he did not stand still. He began bounding around, leaping higher and higher. "I've found it!" he shrieked. "I've found it!" He gave one last bound and while he floated lazily down, he shouted, "I've found… the bare bones-" His voice trailed off. He lit feet first, bounced through a complete forward flip and collapsed.

Cargraves was beside him almost as he fell, having himself approached in great flying leaps.

First the helmet — no, it was not cracked. But the boy's eyes stared out sightlessly. His head lolled, his face was gray.

Cargraves gathered him up in his arms and began to run toward the Galileo. He knew the signs though he had seen it only in the low-pressure chamber used for pilot training — anoxia! Something had gone wrong; Morrie was starved for oxygen. He might die before he could be helped, or, still worse, he might live with his brain permanently damaged, his fine clear intellect gone.

It had happened before that way, more than once during the brave and dangerous days when man was conquering high-altitude flying.

The double burden did not slow him down. The two together, with their space suits, weighed less than seventy pounds. It was just enough to give him stability.

He squeezed them into the lock, holding Morrie close to his chest and waited in agonizing impatience as the air hissed through the valve. All his strength would not suffice to force that door open until the pressure equalized.

Then he was in and had laid him on the deck. Morrie was still out. He tried to remove the suit with trembling, glove-hampered fingers, then hastily got out of his own suit and unclamped Morrie's helmet. No sign of life showed as the fresh air hit the patient.

Cussing bitterly he tried to give the boy oxygen directly from his suit but found that the valve on Morrie's suit, for some reason, refused to respond. He turned then to his own suit, disconnected the oxygen line and fed the raw oxygen directly to the boy's face while pushing rhythmically on his chest.

Morrie's eyes flickered and he gasped.

"What happened? Is he all right?" The other two had come through the lock while he worked.

"Maybe he is going to be all right. I don't know."

In fact he came around quickly, sat up and blinked his eyes. "Whassa matter?" he wanted to know.

"Lie down," Cargraves urged and put a hand on his shoulder.

"All right… hey! I'm inside."

Cargraves explained to him what had happened. Morrie blinked. "Now that's funny. I was all right, except that I was feeling exceptionally fine-"

"That's a symptom."

"Yes, I remember. But it didn't occur to me then. I had just picked up a piece of metal with a hole in it, when-"

"A what? You mean worked metal? Metal that some one made-"

"Yes, that's why I was so ex-" He stopped and looked puzzled. "But it couldn't have been."

"Possible. This planet might have been inhabited… or visited.

"Oh, I don't mean that." Morrie shrugged it off, as if it were of no importance. "I was looking at it, realizing what it meant, when a little baldheaded short guy came up and . . but it couldn't have been."

"No," agreed Cargraves, after a short pause, "it couldn't have been. I am afraid you were beginning to have anoxia dreams by then. But how about this piece of metal?"

Morrie shook his head. "I don't know," he admitted "I remember holding it and looking at it, just as clearly as I remember anything, ever. But I remember the little guy just as well. He was standing there and there were others behind him and I knew that they were the moon people. There were buildings and trees." He stopped. "I guess that settles it."

Cargraves nodded, and turned his attention to Morrie's oxygen pack. The valve worked properly now. There was no way to tell what had been wrong, whether it had frosted inside when Morrie walked on into the deeper shadows, whether a bit of elusive dirt had clogged it, or whether Morrie himself had shut it down too far when he had reduced pressure at Cargraves' suggestion and thereby slowly suffocated himself. But it must not happen again. He turned to Art.

"See here, Art. I want to rig these gimmicks so that you can't shut them off below a certain limit. Mmmm . . no, that isn't enough. We need a warning signal too — something to warn the wearer if his supply stops. See what you can dream up."

Art got the troubled look on his face that was habitual with him whenever his gadget-conscious mind was working at his top capacity. "I've got some peanut bulbs among the instrument spares," he mused. "Maybe I could mount one on the neck ring and jimmy it up so that when the flow stopped it would-" Cargraves stopped listening; he knew that it was only a matter of time until some unlikely but perfectly practical new circuit would be born.

Chapter 13 SOMEBODY IS NUTS!

THE TOP OF THE RING OF HILLS showed them the earth, as Morrie had thought. Cargraves, Art, and Ross did the exploring, leaving Morrie back to recuperate and to work on his celestial navigation problem. Cargraves made a point of going along because he did not want the two passengers to play mountain goat on the steep crags — a great temptation under the low gravity conditions.

Also, he wanted to search over the spot where Morrie had had his mishap. Little bald men, no; a piece of metal with a hole in it — possible. If it existed it might be the first clue to the greatest discovery since man crawled up out of the darkness and became aware of himself.

But no luck — the spot was easy to find; footprints were new to this loose soil! But search as they might, they found nothing. Their failure was not quite certain, since the gloom of the crater's rim still hung over the spot. In a few days it would be daylight here; he planned to search again.

But it seemed possible that Morrie might have flung it away in his anoxia delirium, if it ever existed. It might have carried two hundred yards before it fell, and then buried itself in the loose soil.

The hill top was more rewarding. Cargraves told Art that they would go ahead with the attempt to try to beam a message back to earth… and then had to restrain him from running back to the ship to get started. Instead they searched for a place to install the "Dog House".

The Dog House was a small pre-fab building, now resting in sections fitting snugly to the curving walls of the Galileo. It had been Ross's idea and was one of the projects he and Art had worked on during the summer while Cargraves and Morrie were training. It was listed as a sheetmetal garage, with a curved roof, not unlike a Quonset hut, but it had the special virtue that each panel could be taken through the door of the Galileo.

It was not their notion simply to set it up on the face of the moon; such an arrangement would have been alternately too hot and then too cold. Instead it was to be the frame for a sort of tailormade cave.

They found a place near the crest, between two pinnacles of rock with a fairly level floor between and of about the right size. The top of one of the crags was easily accessible and had a clear view of earth for line-of-sight, beamed transmission. There being no atmosphere, Art did not have to worry about horizon effects; the waves would go where he headed them. Having settled on the location, they returned for tools and supplies.

Cargraves and Ross did most of the building of the Dog House. It would not have been fair to Art to require him to help; he was already suffering agonies of indecision through a desire to spend all his time taking pictures and an equally strong desire to get his set assembled with which he hoped to raise earth. Morrie, at Cargraves' request, stayed on light duty for a few days, cooking, working on his navigation, and refraining from the strain of spacesuit work.

The low gravitational pull made light work of moving the building sections, other materials, and tools to the spot. Each could carry over five hundred pounds, earth-weight, of the total each trip, except on the steeper portions of the trail where sheer bulk and clumsiness required them to split the loads.

First they shoveled the sandy soil about in the space between the two rocks until the ground was level enough to receive the metal floor, then they assembled the little building in place. The work went fast; wrenches alone were needed for this and the metal seemed light as cardboard. When that was done, they installed the "door," a steel drum, barrel-sized, with an airtight gasketed head on each end.

Once the door was in place they proceeded to shovel many earth-tons of lunar soil down on top of the roof, until the space between the rock walls was filled, some three feet higher than the roof of the structure. When they were finished, nothing showed of the Dog House but the igloo-style door, sticking out between the rocky spires. The loose soil of Luna, itself a poor conductor of heat, and the vacuum spaces in it, would be their insulation.

But it was not yet airtight. They installed portable, temporary lights, then dragged in sealed canisters and flat bales. From the canisters came sticky, tacky sheets of a rubbery plastic. This they hung like wallpaper, working as rapidly as possible in order to finish before the volatiles boiled out of the plastic. They covered ceiling, walls and floor, then from the bales they removed aluminum foil, shiny as mirrors, and slapped it on top of the plastic, all except the floor, which was covered with heavier duraluminum sheets.

It was ready for a pressure test. There were a few leaks to patch and they were ready to move in. The whole job had taken less than two 'days'.

The Dog House was to be Art's radio shack, but that was not all. It was to be also a storeroom for everything they could possibly spare from the ship, everything not necessary to the brief trip back. The cargo space would then be made available for specimens to take back to earth, even if the specimens were no more than country rock, lunar style.

But to Cargraves and to the three it was more than a storeroom, more than a radio shack. They were moving their personal gear into it, installing the hydroponic tank for the rhubarb plants to make the atmosphere self-refreshing, fitting it out as completely as possible for permanent residence.

To them it was a symbol of man's colonization of this planet, his intention to remain permanently, to fit it to his needs, and wrest a living from it.

Even though circumstances required them to leave it behind them in a few days, they were declaring it to be their new home, they were hanging up their hats.

They celebrated the completion of it with a ceremony which Cargraves had deliberately delayed until the Dog House was complete. Standing in a semicircle in front of the little door, they were addressed by Cargraves:

"As commander of this expedition, duly authorized by a commission of the United Nations and proceeding in a vessel of United States registry, I take possession of this planet as a colony, on behalf of the United Nations of earth in accordance with the laws thereof and the laws of the United States. Run `em up, Ross!"

On a short and slender staff the banner of the United Nations and the flag of the United States whipped to the top. No breeze disturbed them in that airless waste — but Ross had taken the forethought to stiffen the upper edges of each with wire; they showed their colors.

Cargraves found himself gulping as he watched the flag and banner hoisted. Privately he thought of this little hole in the ground as the first building of Luna City. He imagined that in a year or so there would be dozens of such cave dwellings, larger and better equipped, clustered around this spot. In them would live prospectors, scientists, and tough construction workers. Workers who would be busy building the permanent Luna City down under the floor of the crater, while other workers installed a great rocket port up on the surface.

Nearby would be the beginnings of the Cargraves Physical Laboratory, the Galileo Lunar Observatory.

He found that tears were trickling down his cheeks; he tried futilely to wipe them away through his helmet. He caught Ross's eye and was embarrassed. "Well, sports," he said with forced heartiness, "let's get to work. Funny," he added, looking at Ross, "what effect a few little symbols can have on a man."

Ross looked from Cargraves to the bits of gay bunting. "I don't know," he said slowly. "A man isn't a collection of chemical reactions; he is a collection of ideas."

Cargraves stared. His "boys" were growing up!

"When do we start exploring?" Morrie wanted to know. "Any reason why we shouldn't get going, now that the Dog House is finished ?"

"Before long, I think," Cargraves answered uncomfortably. He had been stalling Morrie's impatience for the last couple of days; Morrie was definitely disappointed that the rocket ship was not to be used, as originally planned, for point to point exploration. He felt confident that he could repeat his remarkable performance in making the first landing.

Cargraves, on the other hand, was convinced that a series of such landings would eventually result in a crash, leaving them marooned to starve or suffocate even if they were not killed in the crash. Consequently he had not budged from his decision to limit exploradon to trips on foot, trips which could not be more than a few hours in duration.

"Let's see how Art is getting on," he suggested. "I don't want to leave him behind — he'll want to take pictures. On the other hand, he needs to get on with his radio work. Maybe we can rally around and furnish him with some extra hands."

"Okay." They crawled through the air lock and entered the Dog House. Art and Ross had already gone inside.

"Art," Cargraves inquired when he had taken off his clumsy suit, "how long will it be until you are ready to try out your Earth sender?"

"Well, I don't know, Uncle. I never did think we could get through with the equipment we've got. If we had been able to carry the stuff I wanted-"

"You mean if we had been able to afford it," put in Ross. "Well… anyhow, I've got another idea. This place is an electronics man's dream — all that vacuum! I'm going to try to gimmick up some really big power tubes — only they won't be tubes. I can just mount the elements out in the open without having to bother with glass. It's the easiest way to do experimental tube design anybody ever heard of."

"But even so," Morrie pointed out, "that could go on indefinitely. Doc, you've got us scheduled to leave in less than ten earth-days. Feel like stretching the stay?" he added hopefully.

"No, I don't," Cargraves stated. "Hmmm… Art, let's skip the transmitter problem for a moment. After all, there isn't any law that says we've got to establish radio contact with the earth. But how long would it take to get ready to receive from the earth?"

"Oh, that!" said Art. "They have to do all the hard work for that. Now that I've got everything up here I can finish that hook-up in a couple of hours."

"Fine! We'll whip up some lunch."

It was nearer three hours when Art announced he was ready to try. "Here goes," he said. "Stand by."

They crowded around. "What do you expect to get?" Ross asked eagerly.

Art shrugged. "Maybe nothing. NAA, or Berlin Sender, if they are beamed on us. I guess Radio Paris is the best bet, if they are still trying for us." He adjusted his controls with the vacant stare that always came over him.

They all kept very quiet. If it worked, it would be a big moment in history, and they all knew it.

He looked suddenly startled.

"Got something?"

He did not answer for a moment. Then he pushed a phone off one ear and said bitterly, "One of you guys left the power on your walky-talky."

Cargraves checked the suits himself. "No, Art, they are all dead."

Art looked around the little room. "But… but . . there's nothing else it could be. Somebody is nuts!"

"What's the matter?"

"What's the matter? I'm getting a power hum from somewhere and it's from somewhere around here… close!"

Chapter 14 NO CHANCE AT ALL!

"ARE YOU sure?," CARGRAVES demanded.

"Of course I'm sure!"

"It's probably Radio Paris," Ross suggested. "You don't know how far away it is."

Art looked indignant. "Suppose you sit down here and try your luck, Mr. de Forrest. It was close. It couldn't have been an earth station."

"Feed back?"

"Don't be silly!" He tried fiddling with his dials a bit more. "It's gone now."

"Just a minute," said Cargraves. "We've got to be sure about this. Art, can you get any sort of a transmitter rigged?"

"Not very easy, but yes, I can, too. The homing set is all set to go." The homing set was a low-power transmitter intended simply for communication between the Dog House and any member of the party outside in a suit.

"Gimme half a second to hook it up." It took more than half a second but shortly he was leaning toward the microphone, shouting, "Hello! Hello! Is there anybody there! Hello!"

"He must have been dreaming," Morrie said quietly to Cargraves. "There couldn't be anybody out there."

"Shut up," Art said over his shoulder and went back to calling, "Hello! Hello, hello."

His expression suddenly went blank, then he said sharply, "Speak English! Repeat!"

"What was it?" demanded Cargraves, Ross, and Art.

"Quiet… please!" Then, to the mike, "Yes, I hear you.

"Who is this? What? Say that again?… This is the Space Ship Galileo, Arthur Mueller transmitting. Hold on a minute."

Art flipped a switch on the front of the panel. "Now go ahead. Repeat who you are."

A heavy, bass voice came out of the transmitter: "This is Lunar Expedition Number One," the voice said. "Will you be pleased to wait one minute while I summon our leader?"

"Wait a minute," yelled Art. "Don't go away!" But the speaker did not answer.

Ross started whistling to himself. "Stop that whistling," Art demanded.

"Sorry," Ross paused, then added, "I suppose you know what this means?"

"Huh? I don't know what anything means!"

"It means that we are too late for the senior prizes. Somebody has beaten us to it."

"Huh? How do you figure that?"

"Well, it's not certain, but it's likely."

"I'll bet we landed first."

"We'll see. Listen!" It was the speaker again, this time a different voice, lighter in timbre, with a trace of Oxford accent. "Are you there? This is Captain James Brown of the First Lunar Expedition. Is this the Rocket Ship Galileo?"

Cargraves leaned over to the mike. "Rocket Ship Galileo, Captain Cargraves speaking. Where are you?"

"Some distance away, old chap. But don't worry. We are locating you. Keep sending, please."

"Let us know where we are in reference to you."

"Do not worry about that. We will come to you. Just remain where you are and keep sending."

"What is your lunar latitude and longitude?"

The voice seemed to hesitate, then went on, "We have you located now. We can exchange details later. Good-by."

Thereafter Art shouted "hello" until he was hoarse, but there was no answer. "Better stay on the air, Art," Cargraves decided. "Ross and I will go back to the ship. That's what they will see. I don't know, though. They might not show up for a week." He mused. "This presents a lot of new problems."

"Somebody ought to go to the ship," Morrie pointed out, "without waiting. They may be just coming in for a landing. They may show up any time."

"I don't think it was ship transmission," said Art, then turned back to his microphone.

Nevertheless it was decided that Cargraves and Ross would go back to the ship. They donned their suits and crawled through the air lock, and had no more than started down the steep and rocky slope when Ross saw the rocket.

He did not hear it, naturally, but he had glanced back to see if Cargraves was behind him. "Look!" he called into his helmet mike, and pointed.

The ship approached them from the west, flying low and rather slowly. The pilot was riding her on her jet, for the blast shot more downward than to the stern. "We had better hurry!," Ross shouted, and went bounding ahead.

But the rocket did not come in for a landing. It nosed down, forward jets driving hard against the fall, directly toward the Galileo. At an altitude of not more than five hundred feet the pilot kicked her around, belly first, and drove away on his tail jet.

Where the Galileo lay, there was a flash, an utterly silent explosion, and a cloud of dust which cleared rapidly away in the vacuum. The sound reached them through their feet, after a long time — it seemed to them.

The Galileo lay on her side, a great gaping hole in her plates. The wound stretched from shattered view port to midships.

Cargraves stood perfectly still, staring at the unbelievable. Ross found his voice first. "They gave us no chance," he said, shaking both fists at the sky. "No chance at all!"

Chapter 15 WHAT POSSIBLE REASON?

HE TURNED AND STUMBLED back up the slope to where Cargraves still stood forlorn and motionless. "Did you see that, Doc?" he demanded. "Did you see that? The dirty rats bombed us — they bombed us. Why? Why, Doc? Why would they do such a thing?"

Tears were streaming down his face. Cargraves patted him clumsily. "I don't know," he said slowly. "I don't know," he repeated, still trying to readjust himself to the shock.

"Oh, I want to kill somebody!"

"So do I." Cargraves turned away suddenly. "Maybe we will. Come on — we've got to tell the others." He started up the slope.

But Art and Morrie were already crawling out of the lock when they reached it. "What happened?" Morrie demanded. "We felt a quake."

Cargraves did not answer directly. "Art, did you turn off your transmitter?"

"Yes, but what happened?"

"Don't turn it on again. It will lead them to us here." He waved a hand out at the floor of the crater. "Look!"

It took a minute or two for what they saw to sink in. Then Art turned helplessly to Cargraves. "But, Uncle," he pleaded, "what happened? Why did the ship blow up?"

"They blitzed us," Cargraves said savagely. "They bombed us out. If we had been aboard they would have killed us. That's what they meant to do."

"But why?"

"No possible reason. They didn't want us here." He refrained from saying what he felt to be true: that their unknown enemy had failed only temporarily in his intent to kill. A quick death by high explosive would probably be a blessing compared with what he felt was in store for them marooned… on a dead and airless planet.

How long would they last? A month? Two months? Better by far if the bomb had hit them.

Morrie turned suddenly back toward the lock. "What are you doing, Morrie?"

"Going to get the guns!"

"Guns are no good to us."

But Morrie had not heard him. His antenna was already shielded by the metal drum.

Ross said, "I'm not sure that guns are no good, Doc."

"Huh? How do you figure?"

"Well, what are they going to do next? Won't they want to see what they've done? They didn't even see the bomb hit; they were jetting away."

"If they land we'll hijack their ship!"

Art came up closer. "Huh? Hey, Ross, that's tellin' `em! We'll get them! We'll show them! Murderers!" His words tumbled over one another, squeaking and squawking in their radios.

"We'll try!" Cargraves decided suddenly. "We'll try. If they land we won't go down without a fight. We can't be any worse off than we are." He was suddenly unworried; the prospect of a gun fight, something new to his experience, did not upset him further. It cheered him. "Where do you think we ought to hide, Ross? In the Galileo?"

"If we have to — There they come!" The rocket had suddenly appeared over the far rim.

"Where's Morrie?"

"Here." He came up from behind them, burdened with the two rifles and the revolver. "Here, Ross, you take… hey!" He had caught sight of the strangers' rocket. "We've got to hurry," he said.

But the rocket did not land. It came down low, dipping below the level of the crater's rim, then scooted on its tail across near the wreckage of the Galileo, up, out, and away.

"And we didn't even get a crack at them," Morrie said bitterly.

"Not yet," Ross answered, "but I think they'll be back. This was a second bombing run, sure as anything, in case they missed the first time. They'll still come back to see what they've done. How about it, Doc?"

"I think they will," Cargraves decided. "They will want to look over our ship and to kill us off if they missed any of us. But we don't go to the Galileo."

"Why not?"

"We haven't time. They will probably turn as fast as they can check themselves, come back and land. We might be caught out in the open."

"That's a chance we'll have to take."

It was decided for them. The rocket appeared again from the direction it had gone. This time it was plainly a landing trajectory. "Come on!" shouted Cargraves, and went careening madly down the slope.

The rocket landed about halfway between the Galileo and the shadows, now close to the foot of the hills, for the sun had climbed four 'days' higher in the sky. The ship was noticeably smaller than the Galileo even at that distance.

Cargraves did not notice such details. His immediate intent was to reach the door of the craft before it opened, to be ready to grapple with them as they came out.

But his good sense came to his aid before he was out in the sunlight. He realized he had no gun. Morrie had kept one, Ross had the other, and Art was waving the revolver around. He paused just short of the dazzling, sunlighted area. "Hold it," he ordered. "I don't think they have seen us. I don't think they will — yet."

"What are your plans?" Morrie demanded.

"Wait for them to get out, then rush the ship — after they get well away from it. Wait for my signal."

"Can't they hear us?"

"Maybe. If they are on this frequency, we're goners. Switch off your talkies, everybody." He did so himself; the sudden silence was chilling.

The rocket was almost tail towards them. He now saw three suit-clad figures pile out from a door that swung out from the side. The first looked around briefly, but he appeared not to see them. Since it was almost certain that he was wearing sun goggles, it was doubtful if he could see much inside the shadows.

He motioned to the other two and moved toward the Galileo, using a long, loping gallop that the Galileo's crew had learned was the proper way to walk on the moon. That alone was enough to tell Cargraves that these men, their enemies, were not grounding on the moon for the first time.

Cargraves let them get all the way to the Galileo, and, in fact, to disappear behind it, before he got up from where he had been crouching. "Come on!" he yelled into a dead microphone, and slammed ahead in great leaps that took him fifty feet at a stride.

The outer door of the lock stood open. He swarmed into it and closed it after him. It clamped by means of a wheel mounted in its center; the operation was obvious. That done he looked around. The tiny lock was dimly illuminated by a pane of glass set in the inner door. In this feeble light he looked and felt for what he needed next — the spill valve for air.

He found it and heard the air hissing into the compartment. He leaned his weight against the inner door and waited.

Suddenly it gave way; he was in the rocket and blinking his eyes.

There was a man still seated in the pilot's chair. He turned his head, and appeared to say something. Cargraves could not hear it through his helmet and was not interested. Taking all advantage of the low gravity he dived at the man and grappled him about the head and shoulders.

The man was too surprised to put up much of a fight — not that it would have mattered; Cargraves felt ready to fight anything up to and including tigers.

He found himself banging the man's head against the soft padding of the acceleration chair. That, he realized, was no good. He drew back a gauntleted fist and buried it in the pit of the man's stomach.

The man grunted and seemed to lose interest. Cargraves threw a short jab straight to the unguarded chin. No further treatment was needed. Cargraves pushed him down to the floor, noticing without interest that the belt of his victim carried a holster with what appeared to be a heavy-caliber Mauser, and then stood on him. He looked out the conning port.

There was a figure collapsed on the ground near the broken bow of the Galileo, whether friend or foe it was impossible to say. But another was standing over him and concerning him there was no doubt. It was not alone the unfamiliar cut of his space suit, it was the pistol in his hand. He was firing in the direction of the rocket in which Cargraves stood.

He saw the blaze of a shot, but no answering report. Another shot followed it — and this one almost deafened him; it struck the ship containing him, making it ring like a giant bell.

He was in a dilemma. He wanted very urgently to join the fight; the weapon on the person of his disabled opponent offered a way. Yet he could not leave his prisoner inside the ship while he went out, nor did he, even in the heat of fighting, have any stomach for killing an unconscious man.

He had already decided, in the space of a breath, to slug his man heavily and get outside, when the fast drama beyond the port left him no time. The spacesuited stranger at the bow of the Galileo was suddenly without a helmet. Around his neck was only a jagged collar.

He dropped his pistol and clutched at his face. He stood there for a moment, as if puzzled by his predicament, took two hesitant steps forward, and sank gently to the ground.

He thrashed around a bit but did not get up. He was still convulsing when a third man appeared around the end of the ship. He did not last long. He appeared confused, unable to comprehend the turn of events, which was quite likely, in view of the ghostly stillness of the gun fight. It was entirely possible that he never knew what hit him, nor why. He was still reaching for his iron when he was struck twice, first in the chest and the second shot lower down.

He bowed forward, until his helmet touched the ground, then collapsed.

Cargraves heard a noise behind him. Snatching the gun he had taken to the ready, and turning, he watched the door of the air lock open.

It was Art, wild-eyed and red. "Any more in here?" the boy called out to him, while swinging his revolver in a wide arc. His voice reached Cargraves faintly, muffled by their two helmets.

"No. Turn on your radio," he shouted back, then realized his own was still off. Switching it on, he repeated his statement.

"Mine is on," Art replied. "I turned it on while the lock filled. How are they doing outside?"

"All right, it looks like. Here, you guard this guy." He pointed down at his feet. "I'm going outside."

But it was unnecessary. The lock opened again and both Ross and Morrie bulged out of it. Cargraves wondered absently how the two had managed to squeeze into that coffin-like space.

"Need any help?" demanded Morrie.

"No. It doesn't look like you guys did, either."

"We ambushed `em," Ross said jubilantly. "Hid in the shadow of the ship and picked `em off as they showed up. All but the second one. He darn near got us before we got him. Do you know," he went on conversationally, as if he had spent a lifetime shooting it out, "it's almost impossible to sight a gun when you're wearing one of these fish bowls over your head?"

"Hmm… You made out all right."

"Pure luck. Morrie was shooting from the hip."

"I was not," Morrie denied. "I aimed and squeezed off every shot."

Cargraves cautioned them to keep an eye on the prisoner, as he wanted to take a look around outside. "Why," demanded Art, "bother to guard him? Shoot him and chuck him out, I say."

"Cool down," Cargraves told him. "Shooting prisoners isn't civilized."

Art snorted. "Is he civilized?"

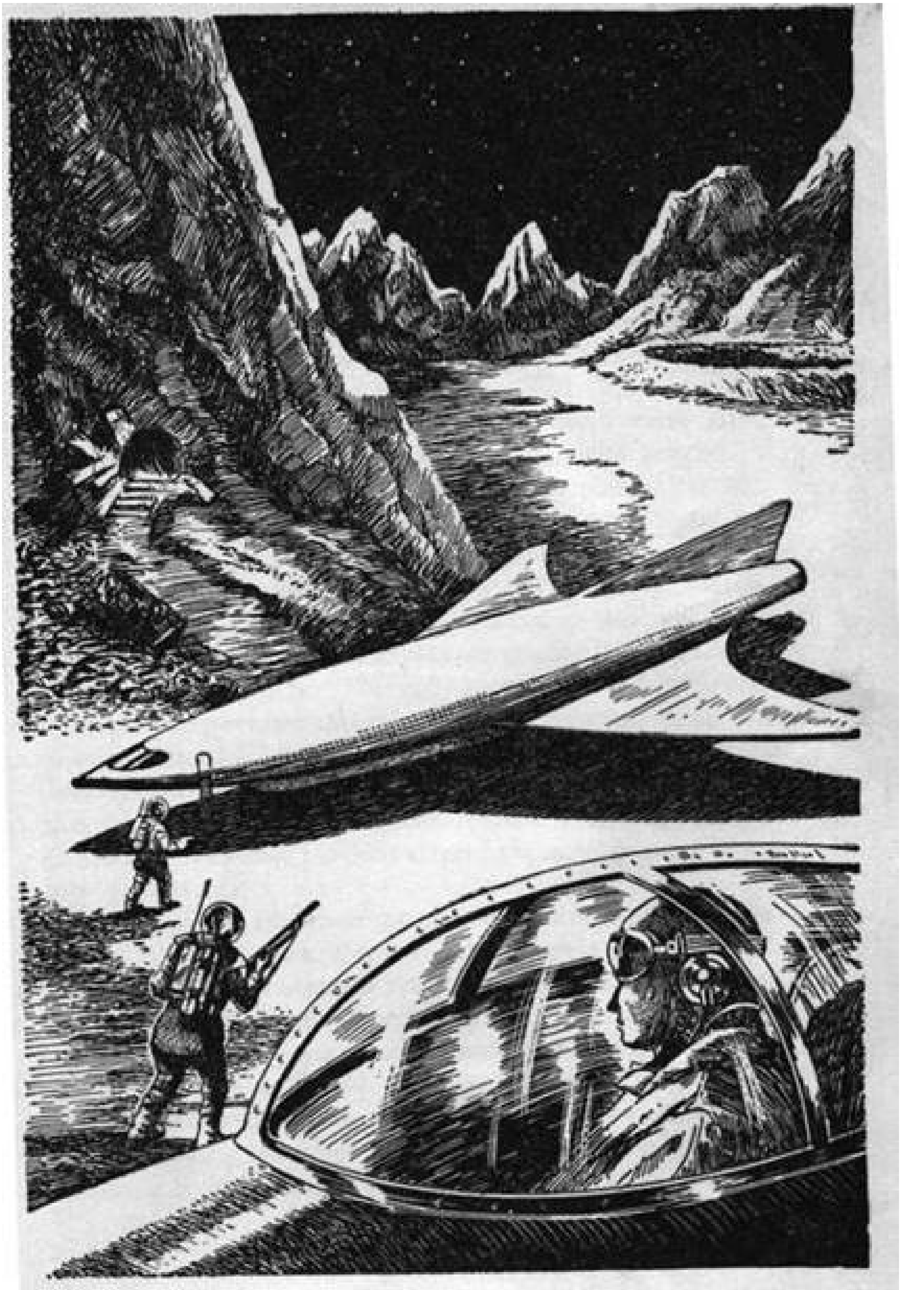
"Shut up, Art. Morrie — take charge." He shut himself in the air lock.

The examination took little time. Two of the strangers had received wounds which would have been fatal in any case, it seemed to him, but their suits were deflated in any event. The third, whose helmet had been struck, was equally beyond help. His eyes bulged sightlessly at the velvet sky. Blood from his nose still foamed. He was gone — drowned in vacuum.

He went back to the little ship, without even a glance at the dismal pile of junk that had been the sleekly beautiful Galileo.

Back in the ship, he threw himself in one of the acceleration chairs and sighed. "Not so bad," he said. "We've got a ship."

"That's what you think," Art said darkly. "Take a look at that instrument board."



Chapter 16 THE SECRET BEHIND THE MOON

"WHAT?" SAID CARGRAVES and looked where he was pointing.

"This is no space ship," Art said bitterly. "This thing is a jeep. Look at that." He indicated two gauges. One was marked SAUERSTOFF, the other ALKOHOL. "Oxygen and alcohol. This thing is just a kiddy wagon."

"Maybe those are just for the maneuvering jets," Cargraves answered, not very hopefully.

"Not a chance, Doc," Ross put in. "I've already given her the once-over, with Art translating the Jerry talk for me. Besides, did you notice that this boat hasn't any wings of any sort? It's purely a station wagon for the moon. Look, we've got company."

The prisoner had opened his eyes and was trying to sit up. Cargraves grabbed him by a shoulder, yanked him to his feet, and shoved him into the chair he had just vacated. "Now, you," he snapped. "Talk!"

The man looked dazed and did not answer. "Better try German on him, Uncle," Art suggested. "The labels are all in German."

Cargraves reached far back into his technical education and shifted painfully to German. "What is your name?"

"My name is Friedrich Lenz, sergeant-technician of the second class. To whom am I speaking?"

"Answer the questions you are asked. Why did you bomb our ship?"

"In line of duty. I was ordered."

"That is not a reason. Why did you bomb a peaceful ship?" The man simply looked sullen. "Very well," Cargraves went on, still speaking in German. "Get the air lock open, Art. We'll throw this trash out on the face of the moon."

The self-styled sergeant-technician suddenly began talking very rapidly. Cargraves wrinkled his forehead. "Art," he said, returning to English, "you'll have to help me out. He's slinging it too fast for me."

"And translate!" protested Ross. "What does he say?"

"I'll try," Art agreed, then shifted to German. "Answer the question over again. Speak slowly."

"Ia-" the man agreed, addressing his words to Cargraves.

"Herr Kapitan!," Art thundered at him.

"Ja, Herr Kapitan," the man complied respectfully, "I was trying to explain to you-" He went on at length.

Art translated when he paused. "He says that he is part of the crew of this rocket. He says that it was commanded by Lieutenant — I didn't catch the name; it's one of the guys we shot — and that they were ordered by their leader to seek out and bomb a ship at this location. He says that it was not a — uh, a wanton attack because it was an act of war."

"War?" demanded Ross. "What in thunder does he mean, `war'? There's no war. It was sheer attempted murder."

Art spoke with the prisoner again.

"He says that there is a war, that there always has been a war. He says that there will always be war until the National Socialist Reich is victorious." He listened for a moment. "He says that the Reich will live a thousand years."

Morrie used some words that Cargraves had never heard him use before. "Ask him how he figures that one."

"Never mind," put in Cargraves. "I'm beginning to get the picture." He addressed the Nazi directly. "How many are there in your party, how long has it been on the moon, and where is your base?"

Presently Art said, "He claims he doesn't have to answer questions of that sort, under international law."

"Hummph! You might tell him that the laws of warfare went out when war was abolished. But never mind — tell him that, if he wants to claim prisoner-of-war privileges, we'll give him his freedom, right now!" He jerked a thumb at the air lock.

He had spoken in English, but the prisoner understood the gesture. After that he supplied details readily.

He and his comrades had been on the moon for nearly three months. They had an underground base about thirteen miles west of the crater in which the shattered Galileo lay. There was one rocket at the base, much larger than the Galileo, and it, too, was atom-powered. He regarded himself as a member of the army of the Nazi Reich. He did not know why the order had been given to blast the Galileo, but he supposed that it was an act of military security to protect their plans.

"What plans?"

He became stubborn again. Cargraves actually opened the inner door of the lock, not knowing himself how far he was prepared to go to force information out of the man, when the Nazi cracked.

The plans were simple — the conquest of the entire earth. The Nazis were few in number, but they represented some of the top military, scientific, and technical brains from Hitler's crumbled empire. They had escaped from Germany, established a remote mountain base, and there had been working ever since for the redemption of the Reich. The sergeant appeared not to know where the base was; Cargraves questioned him closely. Africa? South America? An island? But all that he could get out of him was that it was a long submarine trip from Germany.

But it was the objective, der Tag, which left them too stunned to worry about their own danger. The Nazis had atom bombs, but, as long as they were still holed up in their secret base on earth, they dared not act, for the UN had them, too, and in much greater quantity.

But when they achieved space flight, they had an answer. They would sit safely out of reach on the moon and destroy the cities of earth one after another by guided missiles launched from the moon, until the completely helpless nations of earth surrendered and pleaded for mercy.

The announcement of the final plan brought another flash of arrogance back into their prisoner. "And you cannot stop it," he concluded. "You may kill me, but you cannot stop it! Heil dem Führer!"

"Mind if I spit in his eye, Doc?" Morrie said conversationally.

"Don't waste it," Cargraves counseled. "Let's see if we can think ourselves out of this mess. Any suggestions?" He hauled the prisoner out of the chair and made him lie face down on the deck. Then he sat down on him. "Go right ahead," he urged. "I don't think he understands two words of English. How about it, Ross?"

"Well," Ross answered, "it's more than just saving our necks now. We've got to stop them. But the notion of tackling fifty men with two rifles and two pistols sounds like a job for Tarzan or Superman. Frankly, I don't know how to start."

"Maybe we can start by scouting them out. Thirteen miles isn't much. Not on the moon."

"Look," said Art, "in a day or two I might have a transmitter rigged that would raise earth. What we need is reinforcements."

"How are they going to get here?" Ross wanted to know. "We had the only space ship — except for the Nazis."

"Yes, but listen — Doc's plans are still available. You left full notes with Ross's father — didn't you, Doc? They can get busy and rebuild some more and come up here and blast those skunks out."

"That might be best," Cargraves answered. "We can't afford to miss, that's sure. They could raid the earth base of the Nazis first thing and then probably bust this up in a few weeks, knowing that our ship did work and having our plans."

Morrie shook his head. "It's all wrong. We've got to get at them right now. No delay at all, just the way they smashed us. Suppose it takes the UN six weeks to get there. Six weeks might be too long. Three weeks might be too long. A week might be too long. An atom war could be all over in a day."

"Well, let's ask our pal if he knows when they expect to strike, then," Ross offered.

Morrie shook his head and stopped Art from doing so. "Useless. We'll never get a chance to build a transmitter. They'll be swarming over this crater like reporters around a murder trial. Look — they'll be here any minute. Don't you think they'll miss this rocket?"

"Oh, my gosh!" It was Art. Ross added, "What time is it, Doc?"

To their complete amazement it was only forty minutes from the time the Galileo had been bombed. It had seemed like a full day.

It cheered them up a little but not much. The prisoner had admitted that the rocket they were in was the only utility, short-jump job. And the Nazi space ship-the Wotan, he termed it -would hardly be used for search. Perhaps they had a few relatively free hours.

"But I still don't see it," Cargraves admitted. "Two guns and two pistols — four of us. The odds are too long — and we can't afford to lose. I know you sports aren't afraid to die, but we've got to win."

"Why," inquired Ross, "does it have to be rifles?"

"What else?"

"This crate bombed us. I'll bet it carries more than one bomb."

Cargraves looked startled, then turning to the prisoner, spoke rapidly in German. The prisoner gave a short reply. Cargraves nodded and said, "Morrie, do you think you could fly this clunker?"

"I could sure make a stab at it."

"Okay. You are it. We'll make Joe Masterrace here take it off, with a gun in his ribs, and you'll have to feel her out. You won't get but one chance and no practice. Now let's take a look at the bomb controls."

The bomb controls were simple. There was no bombsight, as such. The pilot drove the ship on a straight diving course and kicked it out just before his blast upwards. There was a gadget to expel the bomb free of the ship; it continued on the ship's previous trajectory. Having doped it out, they checked with the Nazi pilot who gave them the same answers they had read in the mechanism.

There were two pilot seats and two passenger seats, directly behind the pilot seats. Morrie took one pilot seat; the Nazi the other. Ross sat behind Morrie, while Cargraves sat with Art in his lap, one belt around both. This squeezed Art up close to the back of the Nazi's chair, which was good, for Art reached around and held a gun in the Nazi's side.

"All set, Morrie?"

"All set. I make one pass to get my bearings and locate the mouth of their hideaway. Then I come back and give `em the works."

"Right. Try not to hit their rocket ship, if you can. it would be nice to go home. Blast off! Achtung! Aufstieg!"

The avengers raised ground.

"How is it going?" Cargraves shouted a few moments later. "Okay!" Morrie answered, raising his voice to cut through the roar. "I could fly her down a chimney. There's the hill ahead, I think — there!"

The silvery shape of the Wotan near the hill they were shooting towards put a stop to any doubts. It appeared to be a natural upthrust of rock, quite different from the craters, and lay by itself a few miles out in one of the 'seas'.

They were past it and Morrie was turning, blasting heavily to kill his momentum, and pressing them hard into their seats. Art fought to steady the revolver without firing it.

Morrie was headed back on his bombing run, coming in high for his dive. Cargraves wondered if Morrie had actually seen the air lock of the underground base; he himself had had no glimpse of it.

There was no time left to wonder. Morrie was diving; they were crushed against the pads as he fought a moment later to recover from the dive, kicking her up and blasting. They hung for a second and Cargraves thought that Morrie had played it too fine in his anxiety to get in a perfect shot; he braced himself for the crash.

Then they were up. When he had altitude, Morric kicked her over again, letting his jet die. They dropped, view port down, with the ground staring at them.

They could see the splash of dust and sand still rising. Suddenly there was a whoosh from the middle of it, a mighty blast of air, bits of debris, and more sand. It cleared at once in the vacuum of that plain, and they saw the open wound, a black hole leading downward.

He had blown out the air lock with a bull's-eye.

Morrie put her down to Cargraves' plan, behind the Wotan and well away from the hole. "Okay, Doc!"

"Good. Now let's run over the plan — I don't want any slipup. Ross comes with me. You and Art stay with the jeep. We will look over the Wotan first, then scout out the base. If we are gone longer than thirty minutes, you must assume that we are dead or captured. No matter what happens, under no circumstances whatever are you to leave this rocket. If any one comes toward you, blast off. Don't even let us come near you unless we are by ourselves. Blast off. You've got one more bomb — you know what to do with it."

Morrie nodded. "Bomb the Wotan. I hate to do that." He stared wistfully at the big ship, their one chain to the earth.

"But you've got to. You and Art have got to run for it, then, and get back to the Dog House and hole up. It'll be your business, Art, to manage somehow or other to throw together a set that can get a message back to earth. That's your only business, both of you. Under no circumstances are you to come back here looking for Ross and me. If you stay holed up, they may not find you for weeks — and that will give you your chance, the earth's chance. Agreed?"

Morrie hesitated. "Suppose we get a message through to earth.

How about it then?"

Cargraves thought for a moment, then replied, "We can't stand here jawing — there's work to be done. If you get a message through with a reply that makes quite clear that they believe you and are getting busy, then you are on your own. But I advise you not to take any long chances. If we aren't back here in thirty minutes, you probably can't help us." He paused for a moment and decided to add one more thing — the boy's personal loyalty had made him doubtful about one point. "You know, don't you, that when it comes to dropping that bomb, if you do, you must drop it where it has to go, even if Ross and I are standing on your target?"

"I suppose so."

"Those are orders, Morrie."

"I understand them."

"Morrie!"

"Aye aye, Captain!"

"Very well, sir — that's better. Art, Morrie is in charge. Come on, Ross."

Nothing moved on the rocket field. The dust of the bombing, with no air to hold it up, had dissipated completely. The broken air lock showed dark and still across the field; near them the sleek and mighty Wotan crouched silent and untended.

Cargraves made a circuit of the craft, pistol ready in his gloved fist, while Ross tailed him, armed with one of the Garands. Ross kept well back, according to plan.

Like the Galileo, the Wotan had but one door, on the port side just aft the conning compartment. He motioned Ross to stay back, then climbed a little metal ladder or staircase and tried the latch. To his surprise the ship was not locked — then he wondered why he was surprised. Locks were for cities.

While the pressure in the air chamber equalized, he unsnapped from his belt a flashlight he had confiscated from the Nazi jeep rocket and prepared to face whatever lay beyond the door. When the door sighed open, he dropped low and to one side, then shot his light around the compartment. Nothing… nobody.

The ship was empty of men from stem to stern. It was almost too much luck. Even if it had been a rest period, or even if there had been no work to do in the ship, he had expected at least a guard on watch.

However a guard on watch would mean one less pair of hands for work… and this was the moon, where every pair of hands counted for a hundred or a thousand on earth. Men were at a premium here; it was more likely, he concluded, that their watch was a radar, automatic and unsleeping.

Probably with a broad-band radio alarm as well, he thought, remembering how promptly their own call had been answered the very first time they had ever sent anything over the rim of their crater.

He went through a passenger compartment equipped with dozens of acceleration bunks, through a hold, and farther aft. He was looking for the power plant.

He did not find it. Instead he found a welded steel bulkhead with no door of any sort. Puzzled, he went back to the control station. What he found there puzzled him still more. The acceleration chairs were conventional enough; some of the navigational instruments were common types and all of them not too difficult to figure out; but the controls simply did not make sense.

Although this bewildered him, one point was very clear. The Nazis had not performed the nearly impossible task of building a giant space ship in a secret hideout, any more than he and the boys had built the Galileo singlehanded. In each case it had been a job of conversion plus the installation of minor equipment.

For the Wotan was one of the finest, newest, biggest ships ever to come out of Detroit!

The time was getting away from him. He had used up seven minutes in his prowl through the ship. He hurried out and rejoined Ross. "Empty," he reported, saving the details for later; "let's try their rat hole." He started loping across the plain.

They had to pick their way carefully through the rubble at the mouth of the hole. Since the bomb had not been an atom bomb but simply ordinary high explosive, they were in no danger of contamination, but they were in danger of slipping, sliding, falling, into the darkness.

Presently the rubble gave way to an excellent flight of stairs leading deep into the moon. Ross flashed his torch around.

The walls, steps, and ceiling were covered with some tough lacquer, sprayed on to seal the place. The material was transparent, or nearly so, and they could see that it covered carefully fitted stonework.

"Went to a lot of trouble, didn't they?" Ross remarked.

"Keep quiet!" answered Cargraves.

More than two hundred feet down the steep passageway ended, and they came to another door, not an air lock, but intended apparently as an airtight safety door. It had not kept the owners safe; the blast followed by a sudden letting up of normal pressure had been too much for it. It was jammed in place but so bulged and distorted that there was room for them to squeeze through.

There was some light in the room beyond. The blast had broken most of the old-fashioned bulbs the Nazis had used, but here and there a light shone out, letting them see that they were in a large hail. Cargraves went cautiously ahead.

A room lay to the right from the hall, through an ordinary non-air-tight door, now hanging by one hinge. In it they found the reason why the field had been deserted when they had attacked.

The room was a barrack room; the Nazis had died in their bunks. 'Night' and 'day' were arbitrary terms on the moon, in so far as the working times and eating times and sleeping times of men are concerned. The Nazis were on another schedule; they had had the bad luck to be sleeping when Morrie's bomb had robbed them of their air.

Cargraves stayed just long enough in the room to assure himself that all were dead. He did not let Ross come in at all. There was some blood, but not much, being mostly bleeding from mouths and bulging eyes. It was not this that caused his squeamish consideration; it was the expressions which were frozen on their dead faces.

He got out before he got sick.

Ross had found something. "Look here!" he demanded. Cargraves looked. A portion of the wall had torn away under the sudden drop in pressure and had leaned crazily into the room. It was a metal panel, instead of the rock masonry which made up the rest of the walls. Ross had pulled and pried at it to see what lay behind, and was now playing his light into the darkness behind it.

It was another corridor, lined with carefully dressed and fitted stones. But here the stone had not been covered with the sealing lacquer.

"I wonder why they sealed it off after they built it?" Ross wanted to know. "Do you suppose they have stuff stored down there? Their A-bombs maybe?"

Cargraves studied the patiently fitted stones stretching away into the unfathomed darkness. After a long time he answered softly, "Ross, you haven't discovered a Nazi storeroom. You have discovered the homes of the people of the moon."

Chapter 17 UNTIL WE ROT

FOR ONCE ROSS WAS ALMOST as speech-bound as Art. When he was able to make his words behave he demanded, "Are you sure? Are you sure, Doc?"

Cargraves nodded. "As sure as I can be at this time. I wondered why the Nazis had built such a deep and extensive a base and why they had chosen to use fitted stone masonry. It would be hard to do, working in a space suit. But I assigned it to their reputation for doing things the hard way, what they call `efficiency.' I should have known better." He peered down the mysterious, gloomy corridor. "Certainly this was not built in the last few months."

"How long ago, do you think?"

"How long? How long is a million years? How long is ten million years? I don't know — I have trouble imagining a thousand years. Maybe we'll never know."

Ross wanted to explore. Cargraves shook his head. "We can't go chasing rabbits. This is wonderful, the biggest thing in ages. But it will wait. Right now," he said, glancing at his watch, "we've got eleven minutes to finish the job and get back up to the surface — or things will start happening up there!"

He covered the rest of the layout at a fast trot, with Ross guarding his rear from the central hall. He found the radio 'shack', with a man dead in his phones, and noted that the equipment did not appear to have suffered much damage when the whirlwind of escaping air had slammed out of the place. Farther on, an arsenal contained bombs for the jeep, and rifles, but no men.

He found the storeroom for the guided missiles, more than two hundred of them, although the cradles were only half used up. The sight of them should have inspired terror, knowing as he did that each represented a potentially dead and blasted city, but he had no time for it. He rushed on.

There was a smaller room, well furnished, which seemed to be sort of a wardroom or common room for the officers. It was there that he found a Nazi who was not as the others.

He was sprawled face down and dressed in a space suit. Although he did not move Cargraves approached him very cautiously.

The man was either dead or unconscious. However, he did not have the grimace of death on his face and his suit was still under pressure. Wondering what to do, Cargraves knelt over him. There was a pistol in his belt; Cargraves took it and stuck it in his own.

He could feel no heart beat through the heavy suit and his own gauntlet, nor could he listen for it, while wearing a helmet himself.

His watch showed five minutes of the agreed time left; whatever he did must be done fast. He grappled the limp form by the belt and dragged it along.

"What have you got there?" Ross demanded.

"Souvenir. Let's get going. No time." He saved his breath for the climb. The sixty-pound weight that he and his burden made, taken together, flew up the stairs six at a time. At the top his watch still showed two minutes to go. "Leg it out to the jeep," he commanded Ross. "I can't take this item there, or Morrie may decide it's a trap. Meet me in the Wotan. Get going!" Heaving his light burden over one shoulder, he set out for the big ship at a gallop.

Once inside he put his load down and took the man out of his space suit. The body was warm but seemed dead. However, he found he could detect a faint heartbeat. He was starting an artificial respiration when the boys piled out of the lock.

"Hi," he said, "who wants to relieve me here? I don't know much about it."

"Why bother?" asked Morrie.

Cargraves paused momentarily and looked at him quizzically. "Well, aside from the customary reasons you have been brought up to believe in, he might be more use to us alive than dead."

Morrie shrugged. "Okay. I'll take over." He dropped to his knees, took Cargraves' place, and started working.

"Did you bring them up to date?," Cargraves asked Ross.

"I gave them a quick sketch. Told them the place seemed to be ours and I told them what we found — the ruins."

"Not very ruined," Cargraves remarked.

"Look, Uncle," demanded Art. "Can I go down there? I've got to get some pictures."

"Pictures can wait," Cargraves pointed out. "Right now we've got to find out how this ship works. As soon as we get the hang of it, we head back. That comes first."

"Well, sure," Art conceded, "but… after all — I mean. No pictures at all?"

"Well… Let's put it this way. It may take Ross and Morrie and me, not to mention yourself, quite some time to figure out how they handle this craft. There might be twenty minutes when we could spare you. In the meantime, table the motion. Come on, Ross. By the way, what did you do with the prisoner?"

"Oh, him," Morrie answered, "we tied him up and left him."

"Huh? Suppose he gets loose? He might steal the rocket."

"He won't get loose. I tied him myself and I took a personal interest in it. Anyhow he won't try to get away — no space suit, no food. That baby knows his chance of living to a ripe old age depends on us and he doesn't want to spoil it."

"That's right, Uncle," Art agreed. "You should have heard what he promised me."

"Good enough, I guess," Cargraves conceded. "Come on, Ross." Morrie went on with his job, with Art to spell him.

Cargraves returned, with Ross, to the central compartment a few minutes later. "Isn't that pile of meat showing signs of life yet?," he asked.

"No. Shall I stop?"

"I'll relieve you. Sometimes they come to after an hour or more. Two of you go over to the jeep with an additional space suit and bring back Sergeant What's-his-name. Ross and I are as much in the dark as ever," he explained. "The sergeant bloke is a pilot. We'll sweat it out of him."

He had no more than gotten firmly to work when the man under him groaned. Morrie turned back at the lock. "Go ahead," Cargraves confirthed. "Ross and I can handle this guy."

The Nazi stirred and moaned. Cargraves turned him over. The man's eyelids flickered, showing bright blue eyes. He stared up at Cargraves. "How do you do?" he said in a voice like a stage Englishman. "May I get up from here?"

Cargraves backed away and let him up. He did not help him.

The man looked around. Ross stood silently, covering him with a Garand. "That isn't necessary, really," the Nazi protested. Ross glanced at Cargraves but continued to cover the prisoner. The man turned to Cargraves. "Whom have I the honor of addressing?" he asked. "Is it Captain Cargraves of the Galileo?"

"That's right. Who are you?"

"I am Helmut von Hartwick, Lieutenant Colonel, Elite Guard." He pronounced lieutenant "leftenant."

"Okay, Helmut, suppose you start explaining yourself. Just what is the big idea?"

The self-styled colonel laughed. "Really, old man, there isn't much to explain, is there? You seem to have eluded us somehow and placed me at a disadvantage. I can see that."

"You had better see that, but that is not what I mean, and that is not enough." Cargraves hesitated. The Nazi had him somewhat baffled; he did not act at all like a man who has just come out of a daze. Perhaps he had been playing possum — if so, for how long?

Well, it did not matter, he decided. The Nazi was still his prisoner. "Why did you order my ship bombed?"

"Me? My dear chap, why do you think I ordered it?"

"Because you sound just like the phony English accent we heard over our radio. You called yourself `Captain James Brown.' I don't suppose there is more than one fake Englishman in this crowd of gangsters."

Von Hartwick raise his eyebrows. "`Gangsters' is a harsh term, old boy. Hardly good manners. But you are correct on one point; I was the only one of my colleagues who had enjoyed the questionable advantage of attending a good English school. I'll ask you not to call my accent `phony.' But, even if I did borrow the name `Captain James Brown,' that does not prove that I ordered your ship bombed. That was done under the standing orders of our Leader — a necessary exigency of war. I was not personally responsible."

"I think you are a liar on both counts. I don't think you ever attended an English school; you probably picked up that fake accent from Lord Haw-Haw, or from listening to the talkies. And your Leader did not order us bombed, because he did not know we were there. You ordered it, just as soon as you could trace a bearing on us, as soon as you found out we were here."

The Nazi spread his. hands, palms down, and looked pained. "Really, you Americans are so ready to jump to conclusions. Do you truly think that I could fuel a rocket, call its crew, and equip it for bombing, all in ten minutes? My only function was to report your location."

"You expected us, then?"

"Naturally. If a stupid radarman had not lost you when you swung into your landing orbit, we would have greeted you much sooner. Surely you don't think that we would have established a military base without preparing to defend it? We plan, we plan for everything. That is why we will win."

Cargraves permitted himself a thin smile. "You don't seem to have planned for this."

The Nazi tossed it off. "In war there are setbacks. One expects them."

"Do you call it `war' to bomb an unarmed, civilian craft without even a warning?"

Hartwick looked pained. "Please, my dear fellow! It ill befits you to split hairs. You seemed to have bombed us without warning. I myself would not be alive this minute had I not had the good fortune to be just removing my suit when you struck. I assure you I had no warning. As for your claim to being a civilian, unarmed craft, I think it very strange that the Galileo was able to blast our base if you carried nothing more deadly than a fly swatter. You Americans amaze me. You are always so ready to condemn others for the very things you do yourselves."

Cargraves was at a loss for words at the blind illogic of the speech.

Ross looked disgusted; he seemed about to say something. Cargraves shook his head at him.

"That speech," he announced, "had more lies, half-truths, and twisted statements per square inch than anything you've said yet. But I'll put you straight on one point: the Galileo didn't bomb your base; she's wrecked. But your men were careless. We seized your rocket and turned your own bombs on you-"

"Idioten!"

"They were stupid, weren't they? The Master Race usually is stupid when it comes to a showdown. But you claimed we bombed you without warning. That is not true; you had all the warning you were entitled to and more. You struck the first blow. It's merely your own cocksureness that led you to think we couldn't or wouldn't strike back."

Von Hartwick started to speak. "Shut up!" Cargraves said sharply. "I'm tired of your nonsense. Tell me how you happen to have this American ship. Make it good."

"Oh, that! We bought it."

"Don't be silly."

"I am not being silly. Naturally we did not walk in and place an order for one military space ship, wrapped and delivered. The transaction passed through several hands and eventually our friends delivered to us what we needed."

Cargraves thought rapidly. It was possible; something of the sort had to be true. He remembered vaguely an order for twelve such ships as the Wotan had originally been designed to be, remembered it because the newspapers had hailed the order as a proof of postwar recovery, expansion, and prosperity.

He wondered if all twelve of those rockets were actually operating on the run for which they had supposedly been purchased.

"That is the trouble with you stupid Americans," von Hartwick went on. "You assume that every one shares your silly belief in such rotten things as democracy. But it is not true. We have friends everywhere. Even in Washington, in London, yes, even in Moscow. Our friends are everywhere. That is another reason why we will win."

"Even in New Mexico, maybe?"

Von Hartwick laughed. "That was a droll comedy, my friend. I enjoyed the daily reports. It would not have suited us to frighten you too much, until it began to appear that you might be successful. You were very lucky, my friend, that you took off as soon as you did."

"Don't call me `my friend'," Cargraves said testily. "I'm sick of it."

"Very well, my dear Captain." Cargraves let the remark pass. He was getting worried by the extended absence of Art and Morrie. Was it possible that some other of the Nazis were still around, alive and capable of making trouble?

He was beginning to think about tying up the prisoner here present and going to look for them when the lock sighed open. Morrie and Art stepped out, prodding the other prisoner before them. "He didn't want to come, Uncle," Art informed him. "We had to convince him a little." He chuckled. "I don't think he trusts us."

"Okay. Get your suits off."

The other prisoner seemed completely dumfounded by the sight of von Hartwick. Hastily he unclamped his helmet, threw it back, and said in German, "Herr Oberst — it was not my fault. I was-"

"Silence!" shouted the Nazi officer, also in German. "Have you told these pig-dogs anything about the operation of this ship?"

"Nein, nein, Herr Oberst — I swear it!"

"Then play stupid or I'll cut your heart out!"

Cargraves listened to this interesting little exchange with an expressionless face, but it was too much for Art. "Uncle," he demanded, "did you hear that? Did you hear what he said he'd do?"

Von Hartwick looked from nephew to uncle. "So you understand German?" he said quietly. "I was afraid that you might." Ross had let the muzzle of his gun wander away from von Hartwick when the boys came in with their prisoner. Cargraves had long since shoved the pistol he had appropriated into his belt.

Von Hartwick glanced from one to another. Morrie and Art were both armed, one with a Garand, the other with revolver, but they had them trained on the Nazi pilot. Von Hartwick lunged suddenly at Cargraves and snatched the pistol from his belt.

Without appearing to stop to take aim he fired once. Then Cargraves was at him, clawing at his hands.

Von Hartwick brought the pistol down on his head, club fashion, and moved in to grapple him about the waist.

The Nazi pilot clasped his hands to his chest, gave a single bubbly moan, and sank to the floor. No one paid him any attention. After a split second of startled inaction, the three boys were milling around, trying to get in a shot at von Hartwick without hitting Cargraves. Cargraves himself had jerked and gone limp when the barrel of the pistol struck his head. Von Hartwick held the doctor's thirty pounds of moon-weight up with one arm. He shouted, "Silence!"

His order would have had no effect had not the boys seen something else: Von Hartwick was holding the pistol to Cargraves' head. "Careful, gentlemen," he said, speaking very rapidly. "I have no wish to harm your leader and will not do so unless you force me. I am sorry I was forced to strike him; I was forced to do so when he attacked me."

"Watch out!" commanded Morrie. "Art! Ross! Don't try to shoot."

"That is sensible," von Hartwick commended him. "I have no wish to try to shoot it out with you. My only purpose was to dispose of him." He indicated the body of the Nazi pilot.

Morrie glanced at it. "Why?"

"He was a soft and foolish pig. I could not afford to risk his courage. He would have told you what you want to know." He paused, and then said suddenly, "And now — I am your prisoner again!" The pistol sailed out of his hand and clanged against the floor.

"Get Doc out of my way," Ross snapped. "I can't get a shot in."

"No!" Morrie thundered. "Art, pick up the pistol. Ross, you take care of Doc."

"What are you talking about?" Ross objected. "He's a killer. I'll finish him off."

"No!"

"Why not?"

"Well — Doc wouldn't like it. That's reason enough. Don't shoot. That's an order, Ross. You take care of Doc. Art, you tie up the mug. Make it good."

"It'll be good!" promised Art.

The Nazi did not resist and Morrie found himself able to give some attention to what Ross was doing. "How bad is it?" he inquired, bending over Cargraves.

"Not too bad, I think. I'll know better when I get some of this blood wiped away."

"You will find dressings and such things," von Hartwick put in casually, as if he were not in the stages of being tied up, "in a kit under the instrument board in the control room."

"Go look for them, Ross," Morrie directed. "I'll keep guard. Not," he said to von Hartwick, "that it will do you any good if he dies. If he does, out you go, outside, without a suit. Shooting's too good for you."

"He won't die. I hit him very carefully."

"You had better hope he doesn't. You won't outlive him more than a couple of minute."

Von Hartwick shrugged. "It is hardly possible to threaten me. We are all dead men. You realize that, don't you?"

Morrie looked at him speculatively. "Finished with him, Art? Sure he's tied up tight?"

"He'll choke himself to death if he tries to wiggle out of that one."

"Good. Now you," he went on to von Hartwick, "you may be a dead man. I wouldn't know. But we're not. We are going to fly this ship back to earth. You start behaving yourself and we might take you with us."

Von Hartwick laughed. "Sorry to disillusion you, dear boy, but none of us is going back to earth. That is why I had to dispose of that precious pilot of mine."

Morrie turned away, suddenly aware that no one had bothered to find out how badly the sergeant-pilot was wounded. He was soon certain; the man was dead, shot through the heart. "I can't see that it matters," he told von Hartwick.. "We've still got you. You'll talk, or I'll cut your ears off and feed them to you."

"What a distressing thought," he was answered, "but it. won't help you. You see, I am unable to tell you anything; I am not a pilot."

Art stared at him. "He's kidding you, Morrie."

"No," von Hartwick denied. "I am not. Try cutting my ears off and you will see. No, my poor boys, we are all going to stay here a long time, until we rot, in fact. Heil dem Führer!"

"Don't touch him, Art," Morrie warned. "Doc wouldn't like it."

Chapter 18 TOO LITTLE TIME

CARGRAVES WAS WIDE ENOUGH awake to swear by the time Ross swabbed germicide on the cut in his hair line. "Hold still, Doc I-"

"I am holding still. Take it easy."

They brought him up to date as they bandaged him. "The stinker thinks he's put one over on us," Ross finished. "He thinks we can't run this boat without somebody to show us."

"He may be perfectly right," Cargraves admitted. "So far it's got us stumped. We'll see. Throw him in the hold, and we'll have another look. Morrie, you did right not to let him be shot."

"I didn't think you would want him killed until you had squeezed him dry."

Cargraves gave him an odd smile. "That wasn't your only reason, was it?

"Well — shucks !" Morrie seemed almost embarrassed. "I didn't want to just shoot him down after he dropped the gun. That's a Nazi trick."

Cargraves nodded approvingly. "That's right. That's one of the reasons they think we are soft. But we'll have a little surprise for him." He got up, went over, and stirred von Hartwick with his toe. "Listen to me, you. If possible, I am going to take you back to earth to stand trial... If not, we'll try you here."

Von Hartwick lifted his eyebrows. "For making war on you? How delightfully American!"

"No, not for making war. There isn't any war, and there hasn't been any war. The Third Reich disappeared forever in the spring of 1945 and today there is peace between Germany and the United States, no matter how many pipsqueak gangsters may still be hiding out. No, you phony superman, you are going to be tried for the murder of your accomplice — that poor dupe lying over there." He turned away. "Chuck him in the hold, boys. Come on, Ross."

Three hours later Cargraves was quite willing to admit that von Hartwick was correct when he said that the operation of the Wotan could not be figured out by a stranger. There were strange controls on the arms of the piloting seats which certainly had to be the flight controls, but no matter what they twisted, turned or moved, nothing happened. And the drive itself was sealed away behind a bulkhead which, from the sound it gave off when pounded, was inches thick.

Cargraves doubted whether he could cut through even with a steel-cutting flame. He was very reluctant to attempt to do so in any case; an effort to solve the mysteries of the ship by such surgery might, as likely as not, result in disabling the ship beyond any hope of repairing it.

There should be an operation manual somewhere. They all searched for it. They opened anything that would open, crawled under anything that could be crawled under, lifted everything that would move. There was no control manual in the ship.

The search disclosed something else. There was no food in the ship. This latter point was becoming important.

"That's enough, sports," he announced when he was certain that further search would be useless. "We'll try their barracks next. We'll find it. Not to mention food. You come with me, Morrie, and pick out some groceries."

"Me too!" Art shouted. "I'll get some pictures. The moon people! Oh, boy!"

Cargraves wished regretfully that he were still young enough for it to be impossible to stay worried. "Well, all right," he agreed, "but where is your camera?"

Art's face fell. "It's in the Dog House," he admitted.

"I guess the pictures will have to wait. But come along; there is more electronic equipment down there than you can run and jump over. Maybe raising earth by radio will turn out to be easy."

"Why don't we all go?" Ross wanted to know. "I found the ruins, but I haven't had a chance to look at them."

"Sorry, Ross; but you've got to stay behind and stand guard over Stinky. He might know more about this ship than he admits. I would hate to come up that staircase and find the ship missing. Stand guard over him. Tell him that if he moves a muscle you'll slug him. And mean it."

"Okay. I hope he does move. How long will you be gone?"

"If we can't find it in two hours we'll come back."

Cargraves searched the officers' room first, as it seemed the most likely place. He did not find it, but he did find that some of the Nazis appeared to have some peculiar and unpleasant tastes in books and pictures. The barrack room he took next. It was as depressing a place as it had been earlier, but he was prepared for it. Art he had assigned to the radio and radar room and Morrie to the other spaces; there seemed to be no reason for any one but himself to have to touch the bloating corpses.

He drew a blank in the barrack room. Coming out, he heard Art's voice in his phones. "Hey, Uncle, look what I've found!"

"What is it?," he said, and Morrie's voice cut in at once.

"Found the manual, Art?"

"No, but look!" They converged in the central hail. 'It' was a Graflex camera, complete with flash gun. "There is a complete darkroom off the radio room. I found it there. How about it, Uncle? Pictures?"

"Well, all right. Morrie, you go along — it may be your only chance to see the ruins. Thirty minutes. Don't go very far, don't bust your necks, don't take any chances, and be back on time, or I'll be after you with a Flit gun." He watched them go regretfully, more than a little tempted to play hookey himself. If he had not been consumed with the urgency of his present responsibilities — But he was. He forced himself to resume the dreary search.

It was all to no good. If there was an instruction manual in existence he had to admit that he did not know how to find it. But he was still searching when the boys returned.

He glanced at his watch. "Forty minutes," he said. "That's more prompt than I thought you would be; I expected to have to go look for you. What did you find? Get any good pictures?"

"Pictures? Did we get pictures! Wait till you see!"

"I never saw anything like it, Doc," Morrie stated impressively. "The place is a city. It goes down and down. Great big arched halls, hundreds of feet across, corridors running every which way, rooms, balconies — I can't begin to describe it."

"Then don't try. Write up full notes on what you saw as soon as we get back."

"Doc, this thing's tremendous!"

"I realize it. But it's so big I'm not even going to try to comprehend it, not yet. We've got our work cut out for us just to get out of here alive. Art, what did you find in the radio room? Anything you can use to raise earth?"

"Well, Uncle, that's hard to say, but the stuff doesn't look promising."

"Are you sure? We know that they were in communication — at least according to our nasty-nice boy friend."

Art shook his head. "I thought you said they received from earth. I found their equipment for that but I couldn't test it out because I couldn't get the earphones inside my suit. But I don't see how they could send to earth."

"Why not? They need two-way transmission."

"Maybe they need it but they can't afford to use it. Look, Uncle, they can beam towards the moon from their base on earth — that's all right; nobody gets it but them. But if the Nazis on this end try to beam back, they can't select some exact spot on earth. At that distance the beam would fan out until it covered too much territory — it would be like a broadcast."

"Oh!" said Cargraves, "I begin to see. Chalk up one for yourself, Art; I should have thought of that. No matter what sort of a code they used, if people started picking up radio from the direction of the moon, the cat would be out of the bag."

"That's what I thought, anyhow."

"I think you're dead right. I'm disappointed; I was beginning to pin my hopes on getting a message across." He shrugged. "Well, one thing at a time. Morrie, have you picked out the supplies you want to take up?"

"All lined up." They followed him into the kitchen space and found he had stacked three piles of tin cans in quantities to make three good-sized loads. As they were filling their arms Morrie said. "How many men were there here, Doc?"

"I counted forty-seven bodies not counting the one von Hartwick shot. Why?"

"Well, I noticed something funny. I've sort of acquired an eye for estimating rations since I've been running the mess. There isn't food enough here to keep that many men running two weeks. Does that mean what I think it means?"

"Hunnh… Look, Morrie, I think you've hit on something important. That's why von Hartwick is so cocky. It isn't just whistling in the dark. He actually expects to be rescued."

"What do you mean, Uncle?" Art wanted to know.

"He is expecting a supply ship, almost any time."

Art whistled. "He thinks we'll be caught by surprise!"

"And we would have been. But we won't be now." He put down his load of groceries. "Come along."

"Where?"

"I just remembered something." In digging through the officers' quarters he had come across many documents, books, manuals, records, and papers of many sorts. He had scanned them very briefly, making certain only that no one of them contained anything which would give a clue to the operation of the Wotan.

One of them was the day book or journal of the task-force commander. Among other things it had given the location of the Nazi base on earth; Cargraves had marked it as something he wanted to study later. Now he decided to do it at once.

It was long. It covered a period of nearly three months with Teutonic thoroughness. He read rapidly, with Art reading over his shoulder. Morrie stood around impatiently and finally pointed out that the time was approaching when they had promised Ross to return.

"Go ahead," Cargraves said absently. "Take a load of food. Get a meal started." He read on.

There was a roster of the party. He found von Hartwick listed as executive officer. He noted that as an indication that the Nazi was lying when he claimed not to understand the piloting of the Wotan. Not proof, but a strong indication. But falsehood was all that he expected of the creature.

He was beginning to find what he was looking for. Supply trips had been made each month. If the schedule was maintained-and the state of supplies certainly indicated it -the next ship should be along in six or seven days.

But the most important fact he was not sure of until he had finished the journal: there was more than one big rocket in their possession; the Wotan was not about to leave to get supplies; she would not leave, if the schedule had been followed, until the supply ship landed. Then she would be taken back empty and the other ship would be unloaded. By such an arrangement the party on the moon was never left without a means of escape — or, at least, that was the reason he read into the account.

There were just two and only two Nazi moon rockets — the Wotan and the Thor. The Thor was due in a week, as nearly as he could make out, which meant that she would leave her home base in about five days. The transit times for each trip had been logged in; forty-six hours plus for the earthmoon jump was the way the record read.

Fast time! he thought.

If the Thor ever took off, it might be too late for good intentions, too late for warnings. The Nazis were certainly aware that the techniques of space flight were now an open secret; there was reference after reference to the Galileo including a last entry noting that she had been located. They would certainly strike at the earliest possible moment.

He could see in his mind's eye the row upon row of A-bomb guidedmissiles in a near-by cavern. He could see them striking the defenseless cities of earth.

No time to rig a powerful transmitter. No time for anything but drastic measures.

Not time enough, he was afraid!

Chapter 19 SQUEEZE PLAY

"SOUP'S ON!" MORRIE GREETED him as he came hurrying into the Wotan. Cargraves started shucking off his suit as he answered.

"No time for that — no, gimme a couple of those sandwiches."

Morrie complied.

Ross inquired, "What's the rush?"

"Got to see the prisoner." He turned away, then stopped. "No — wait. Come here, guys." He motioned them into a football huddle. "I'm going to try something." He whispered urgently for a few minutes. "Now play up. I'll leave the door open."

He went into the hold and prodded von Hartwick with his boot. "Wake up, you." He took a bite of sandwich.

"I am awake." Von Hartwick turned his head with some difficulty as he was trussed up with his ankles pulled up toward his wrists, which were tied behind him. "Ah, food," he said cheerfully. "I was wondering when you would remember the amenities in dealing with prisoners."

"It's not for you," Cargraves informed him. "The other sandwich is for me. You won't need one."

Von Hartwick looked interest but not frightened. "So?"

"Nope," said Cargraves, wiping his mouth with his sleeve, "you won't. I had intended to take you to earth for trial, but I find I won't have time for that. I'll try you myself — now."

Von Hartwick shrugged under his bonds. "You are able to do as you like. I've no doubt you intend to kill me, but don't dignify it with the name of a trial. Call it a lynching. Be honest with yourself. In the first place my conduct has been entirely correct. True, I was forced to shoot one of my own men, but it was a necessary emergency military measure-"

"Murder," put in Cargraves.

"-in defense of the security of the Reich," von Hartwick went on unhurriedly, "and no concern of yours in any case. It was in my own ship, entirely out of jurisdiction of any silly laws of the corrupt democracies. As for the bombing of your ship, I have explained to you-"

"Shut up," Cargraves said. "You'll get a chance to say a few words later. Court's in session. Just to get it straight in your head, this entire planet is subject to the laws of the United Nations. We took formal possession and have established a permanent base. Therefore-"

"Too late, Judge Lynch. The New Reich claimed this planet three months ago."

"I told you to keep quiet. You're in contempt of court. One more peep and we'll think up a way to keep you quiet. Therefore, as the master of a vessel registered under the laws of the United Nations it is my duty to see that those laws are obeyed. Your so-called claim doesn't hold water. There isn't any New Reich, so it can't claim anything. You and your fellow thugs aren't a nation; you are merely gangsters. We aren't bound to recognize any fictions you have thought up and we don't. Morrie! Bring me another sandwich."

"Coming up, Captain!"

"Now as master of the Galileo," Cargraves went on, "I have to act for the government when I'm off by myself, as I am now. Since I haven't time to take you back to earth for trial, I'm trying you now. Two charges: murder in the first degree and piracy."

"Piracy? My dear fellow!"

"Piracy. You attacked a vessel of UN register. On your own admission you took part in it, whether you gave the orders or not. All members of a pirate crew are equally guilty, and it's a capital offense. Murder in the first degree is another one. Thanks for the sandwich, Morrie. Where did you find fresh bread?"

"It was canned."

"Clever, these Nazis. There was some doubt in my mind as to whether to charge you with first or second degree. But you had to grab the gun away from me first, before you could shoot your pal. That's premeditation. So you're charged — piracy and first-degree murder. How do you plead? Guilty or not guilty?"

Von Hartwick hesitated a bit before replying. "Since I do not admit the jurisdiction of this so-called court, I refuse to enter a plea. Even if I concede-which I don't -that you honestly believe this to be United Nations territory, you still are not a court."

"A ship's master has very broad powers in an emergency. Look it up some time. Get a ouija board and look it up."

Von Hartwick raised his eyebrows. "From the nature of that supposedly humorous remark I can see that I am convicted before the trial starts."

Cargraves chewed reflectively. "In a manner of speaking, yes," he conceded. "I'd like to give you a jury, but we don't really need one. You see, there aren't any facts to be established because there aren't any facts in doubt. We were all there. The only question is: What do those facts constitute under the law? This is your chance to speak your piece if you intend to."

"Why should I bother? You mongrel nations prate of justice and equality under law. But you don't practice it. You stand there with your hands dripping with the blood of my comrades, whom you killed in cold blood, without giving them a chance — yet you speak to me of piracy and murder!"

"We discussed that once before," Cargraves answered carefully. "There is a world of difference, under the laws of free men, between an unprovoked attack and striking back in your own defense. If a footpad assaults you in a dark alley, you don't have to get a court order to fight back. Next. Got any more phony excuses?"

The Nazi was silent. "Go ahead," Cargraves persisted. "You could still plead not guilty by reason of insanity and you might even convince me. I always have thought a man with a MasterRace complex was crazy as a hoot owl. You might convince me that you were crazy in a legal sense as well."

For the first time, von Hartwick's air of aloof superiority seemed to crack. His face got red and he appeared about to explode. Finally he regained a measure of control and said, "Let's have no more of this farce. Do whatever it is you intend to do and quit playing with me."

"I assure you that I am not playing. Have you anything more to say in your own defense?"

"I find you guilty on both charges. Have you anything to say before sentence is passed?"

The accused did not deign to answer.

"Very well. I sentence you to death."

Art took a quick, gasping breath and backed out of the doorway where he had been huddled, wide-eyed, with Ross and Morrie. There was no other sound.

"Have you anything to say before the sentence is executed?"

Von Hartwick turned his face away. "I am not sorry. At least I will have a quick and merciful death. The best you four swine can hope for is a slow and lingering death."

"Oh," said Cargraves, "I intended to explain to you about that. We aren't going to die."

"You think not?" There was undisguised triumph in von Hartwick's voice.

"I'm sure of it. You see, the Thor arrives in six or seven days-"

"What? How did you find that out?" The Nazi seemed stunned for a moment, then muttered, "Not that it matters to the four of you — but I see why you decided to kill me. You were afraid I would escape you."

"Not at all," returned Cargraves. "You don't understand. If it were practical to do so, I would take you back to earth to let you appeal your case before a higher court. Not for your sake-you're guilty as sin! -but for my own. However, I do not find it possible. We will be very busy until the Thor gets here and I have no means of making sure that you are securely imprisoned except by standing guard over you every minute. I can't do that; we haven't time enough. But I don't intend to let you escape punishment. I don't have a cell to put you in. I had intended to drain the fuel from your little rocket and put you in there, without a suit. That way, you would have been safe to leave alone while we worked. But, now that the Thor is coming, we will need the little rocket."

Von Hartwick smiled grimly. "Think you can run away, eh? That ship will never take you home. Or haven't you found that out yet?"

"You still don't understand. Keep quiet and let me explain. We are going to take several of the bombs such as you used on the Galileo and blow up the room containing your guided missiles. It's a shame, for I see it's one of the rooms built by the original inhabitants. Then we are going to blow up the Wotan."

"The Wotan? Why?" Von Hartwick was suddenly very alert.

"To make sure it never flies back to earth. We can't operate it; I must make sure that no one else does. For then we intend to blow up the Thor."

"The Thor? You can't blow up the Thor!"

"Oh, yes, we can — the same way you blew up the Galileo. But I can't chance the possibility of survivors grabbing the Wotan — so she must go first. And that has a strong bearing on why you must die at once. After we blast the Wotan we are going back to our own base-you didn't know about that, did you ? -but it is only one room. No place for prisoners. I had intended, as I said, to keep you in the jeep rocket, but the need to blast the Thor changes that. We'll have to keep a pilot in it all times, until the Thor lands. And that leaves no place for you. Sorry," he finished, and smiled.

"Anything wrong with it?" he added.

Von Hartwick was beginning to show the strain. "You may succeed-"

"Oh, we will!"

"But if you do, you are still dead men. A quick death for me, but a long and slow and lingering death for you. If you blast the Thor, you lose your own last chance. Think of it," he went on, "starving or suffocating or dying with cold. I'll make a pact with you. Turn me loose now and I'll give you my parole. When the Thor arrives, I'll intercede with the captain on your behalf. I'll-"

Cargraves cut him off with a gesture. "The word of a Nazi! You wouldn't intercede for your own grandmother! You haven't gotten it through your thick head yet that we hold all the aces. After we kill you and take care of your friends, we shall sit tidy and cozy and warm, with plenty of food and air, until we are picked up. We won't even be lonesome; we were just finishing our earth sender when you picked up one of our local signals. We'll-"

"You lie!" shouted von Hartwick. "No one will pick you up. Yours was the only ship. I know, I know. We had full reports."

"Was the only ship." Cargraves smiled sweetly. "But under a quaint old democratic law which you wouldn't understand, the plans and drawings and notes for my ship were being studied eagerly the minute we took off. We'll be able to take our pick of ships before long. I hate to disappoint you but we are going to live. I am afraid I must disappoint you on another score. Your death will not be as clean and pleasant as you had hoped."

"What do you mean?"

"I mean I am not going to get this ship all bloodied up again by shooting you. I'm going to-"

"Wait. A dying man is entitled to a last request. Leave me in the Wotan. Let me die with my ship!"

Cargraves laughed full in his face. "Lovely, von Nitwit. Perfectly lovely. And have you take off in her. Not likely!"

"I am no pilot — believe me!"

"Oh, I do believe. I would not think of doubting a dying man's last words. But I won't risk a mistake. Ross!"

"Yes, sir!"

"Take this thing and throw it out on the face of the moon."

"Deelighted!"

"And that's all." Cargraves had been squatting down; he got up and brushed the crumbs from his hands. "I shan't even have you untied so that you can die in a comfortable position. You are too handy at grabbing guns. You'll just have to flop around as you are. It probably won't take long," he went on conversationally. "They say it's about like drowning. In seven or eight minutes you won't know a thing. Unless your heart ruptures through your lungs and finishes you a little sooner."

"Swine!"

"Captain Swine, to you."

Ross was busily zipping his suit into place. "Okay, Doc?"

"Go ahead. No, on second thought," he added, "I'll do this job myself. I might be criticized for letting a boy touch it. My suit, Morrie."

He whistled as they helped him dress. He was still whistling as he picked up von Hartwick like a satchel, by the line which bound his ankles to his wrists, and walked briskly to the lock. He chucked his bundle in ahead of him, stepped in, waved to the boys, said, "Back soon!" and clamped the door.

As the air started whistling out von Hartwick began to gasp. Cargraves smiled at him, and said, "Drafty, isn't it?" He shouted to make himself heard through the helmet.

Von Hartwick's mouth worked.

"Did you say something?"

The Nazi opened his mouth again, gasped, choked, and sprayed foam out on his chest. "You'll have to talk louder," Cargraves shouted. "I can't hear you." The air whistled away.

"I'm a pilot!"

"What?"

"I'm a pilot! I'll teach you-"

Cargraves reached up and closed the exhaust valve. "I can't hear with all that racket. What were you saying?"

"I'm a pilot!" gasped von Hartwick.

"Yes? Well, what about it?"

"Air. Give me air-"

"Shucks," said Cargraves. "You've got plenty of air. I can still hear you talking. Must be four or five pounds in here."

"Give me air. I'll tell you how it works."

"You'll tell me first," Cargraves stated. He reached for the exhaust valve again.

"Wait! There is a little plug, in the back of the instrument-" He paused and gasped heavily. "The instrument panel. Starboard side. It's a safety switch. You wouldn't notice it; it looks just like a mounting stud. You push it in." He stopped to wheeze again.

"I think you'd better come show me," Cargraves said judicially. "If you aren't lying again, you've given me an out to take you back to earth for your appeal. Not that you deserve it."

He reached over and yanked on the spill valve; the air rushed back into the lock.

Ten minutes later Cargraves was seated in the lefthand pilot's chair, with his safety belt in place. Von Hartwick was in the righthand chair. Cargraves held a pistol in his left hand and cradled it over the crook of his right arm, so that it would remain pointed at von Hartwick, even under drive. He called out, "Morrie! Everybody ready?"

"Ready, Captain," came faintly from the rear of the ship. The boys had been forced to use the acceleration bunks in the passenger compartment. They resented it, especially Morrie, but there was no help for it. The control room could carry just two people under acceleration.

"Okay! Here we go!" He turned again to von Hartwick. "Twist her tail, Swine — Colonel Swine, I mean."

Von Hartwick glared at him. "I don't believe," he said slowly, "that you ever intended to go through with it."

Cargraves grinned and rubbed the chair arm. "Want to go back and see?" he inquired.

Von Hartwick swiveled his head around to the front. "Achtung!" he shouted. "Prepare for acceleration! Ready?" Without waiting for a reply he blasted off.

The ship had power to spare with the light load; Cargraves had him hold it at two g's for five minutes and then go free. By that time, having accelerated at nearly 64 feet per second for each second of the five minutes, even with due allowance for loss of one-sixth g to the pull of the moon at the start, they were making approximately 12,000 miles per hour.

They would have breezed past earth in twenty hours had it not been necessary to slow down in order to land. Cargraves planned to do it in a little less than twenty-four hours.

Once in free fall, the boys came forward and Cargraves required of von Hartwick a detailed lecture on the operation of the craft. When he was satisfied, he said, "Okay. Ross, you and Art take the prisoner aft and lash him to one of the bunks. Then strap yourselves down. Morrie and I are going to practice."

Von Hartwick started to protest. Cargraves cut him short. "Stow it! You haven't been granted any pardon; we've simply been picking your brains. You are a common criminal, going back to appeal your case."

They felt out the ship for the next several hours, with time out only to eat. The result of the practice on the course and speed were null; careful check was kept by instrument to see that a drive in one direction was offset by the same amount of drive in the opposite direction. Then they slept.

They needed sleep. By the time they got it they had been awake and active at an unrelenting pace for one full earth-day.

When they woke Cargraves called Art. "Think you could raise earth on this Nazi gear, kid?"

"I'll try. What do you want me to say and who do you want to talk to?"

Cargraves considered. Earth shone gibbous, more than half full, ahead. The Nazi base was not in line-of-sight. That suited him. "Better make it Melbourne, Australia," he decided, "and tell them this-" Art nodded. A few minutes later, having gotten the hang of the strange set, he was saying endlessly: "Space Ship City of Detroit calling UN police patrol, Melbourne; Space Ship City of Detroit calling UN police patrol, Melbourne-"

He had been doing this for twenty-five minutes when a querulous voice answered: "Pax, Melbourne; Pax, Melbourne — calling Space Ship City of Detroit. Come in, City of Detroit."

Art pushed up one phone and looked helpless. "You better talk to `em, Uncle."

"Go ahead. You tell them what I told you. It's your show."

Art shut up and did so.

Morrie let her down carefully and eased her over into a tight circular orbit just outside the atmosphere. Their speed was still nearly five miles per second; they circled the globe in ninety minutes. From that orbit he killed her speed slowly and dipped down cautiously until the stub wings of the City of Detroit, Wotan, began to bite the tenuous stratosphere in a blood-chilling thin scream.

Out into space again they went and then back in, each time deeper and each time slower. On the second of the braking orbits they heard the broadcast report of the UN patrol raid on the Nazi nest and of the capture of the Thor. On the next lap two chains bid competitively for an exclusive broadcast from space. On the third there was dickering for television rights at the field. On the fourth they received official instructions to attempt to land at the District-of-Columbia Rocket Port.

"Want me to take her down?" Morrie yelled above the scream of the skin friction.

"Go right ahead," Cargraves assured him. "I'm an old I want a chauffeur."

Morrie nodded and began his approach. They were somewhere over Kansas.

The ground of the rocket port felt strange and solid under the ship. Eleven days-only eleven days? -away from the earth's massive pull had given them new habits. Cargraves found that he staggered a little in trying to walk. He opened the inner door of the lock and waited for the boys to get beside him. Latching the outer door and broke the inner door open, he stepped to the seal.

As he swung it open, the face, an endless mass of guns flickered like heat "Oh, my gosh!" he said. 'Want to take the bows?' a solid wall of sound beat him in of eager eyes looked up at him. Flash lightning. He turned back to Ross. "This is awful! Say — don't you guys want to take the bows?"

I TERRA BASE

"To MATTHEW BROOKS DODSON," the paper in his hand read, "greetings:

Having successfully completed the field elimination tests for appointment to the position of cadet in the Interplanetary Patrol you are authorized to report to the Commandant, Terra Base, Santa Barbara Field, Colorado, North American Union, Terra, on or before One July 2075, for further examination.

"You are cautioned to remember that the majority of candidates taking these final tests usually fail and you should provide—"

Matt folded the paper and stuck it back in his belt pouch. He did not care to think about the chance of failure. The passenger across from him, a boy about his own age, caught his eye. "That paper looks familiar, you a candidate too?"

"That's right."

"Well, shake! M' name's Jarman—I'm from Texas."

"Glad to know you, Tex. I'm Matt Dodson, from Des Moines."

"Howdy, Matt. We ought to be about there—" The car sighed softly and slowed; their chairs rocked to meet the rapid deceleration. The car stopped and their chairs swung back to normal position. "We *are* there," Jarman finished.

The telescreen at the end of the car, busy a moment before with a blonde beauty demonstrating Sorkin's Super-Stellar Soap, now read: TERRA BASE STATION. The two boys grabbed their bags, and hurried out. A moment later, they were on the escalator, mounting to the surface.

Facing the station a half mile away in the cool, thin air stood Hayworth Hall, Earth headquarters of the fabulous Patrol. Matt stared at it, trying to realize that he was at last seeing it.

Jarman nudged him. "Come on."

"Huh? Oh—sure." A pair of slidewalks stretched from the station to the hall; they stepped onto the one running toward the building. The slidewalk was crowded; more boys streamed out of the station behind them. Matt noticed two boys with swarthy, thin features who were wearing high, tight turbans, although dressed otherwise much like himself. Further down the walk he glimpsed a tall, handsome youth whose impassive face was shiny black.

The Texas boy hooked his thumbs in his belt and looked around. "Granny, kill another chicken!" he said. "There's company for dinner. Speaking of that," he went on, "I hope they don't wait lunch too long. I'm hungry."

Matt dug a candy bar out of his pouch, split it and gave half to Jarman, who accepted it gratefully. "You're a pal, Matt, I've been living on my own fat ever since breakfast— and that's risky. Say, your telephone is sounding."

"Oh!" Matt fumbled in his pouch and got out his phone. "Hello?"

"That you, son?" came his father's voice.

"Yes, Dad."

"Did you get there all right?"

"Sure, I'm about to report in."

"How's your leg?"

"Leg's all right, Dad." His answer was not frank; his right leg, fresh from a corrective operation for a short Achilles' tendon, was aching as he spoke.

"That's good. Now see here, Matt—if it should work out that you aren't selected, don't let it get you down. You call me at once and—"

"Sure, sure, Dad," Matt broke in. "I'll have to sign off—I'm in a crowd. Good-by. Thanks for calling."

"Good-by, son. Good luck."

Tex Jarman looked at him understandingly. "Your folks always worry, don't they? I fooled mine—packed my phone in my bag." The slidewalk swung in a wide curve preparatory to heading back; they stepped off with the crowd, in front of Hayworth Hall. Tex paused to read the inscription over the great doorway. "*Quis custodi*— What does it say, Matt?"

"*Quis custodiet ipsos custodes*. That's Latin for: Who will watch the guardians?"

"You read Latin, Matt?"

"No, I just remember that bit from a book about the Patrol."

The rotunda of Hayworth Hall was enormous and seemed even larger, for, despite brilliant lighting at the floor level, the domed ceiling gave back no reflection at all; it was midnight black—black and studded with stars. Familiar stars—blazing Orion faced the tossing head of Taurus; the homely shape of the Dipper balanced on its battered handle at north-northeast horizon; just south of overhead the Seven Sisters shone.

The illusion of being outdoors at night was most persuasive. The lighted walls and floor at the level at which people walked and talked and hurried seemed no more than a little band of light, a circle of warmth and comfort, against the awful depth of space, like prairie schooners drawn up for the night under a sharp desert sky.

The boys caught their breaths, as did everyone who saw it for the first time. But they could not stop to wonder as something else demanded their attention. The floor of the rotunda was sunk many feet below the level at which they entered; they stood on a balcony which extended around the great room to enclose a huge, shallow, circular pit. In this pit a battered spaceship lurched on a bed of rock and sand as if it had crash-landed from the mimic sky above.

"It's the *Kilroy*—" Tex said, almost as if he doubted it.

"It *must* be," Matt agreed in a whisper.

They moved to the balcony railing and read a plaque posted there:

USSF Rocket Ship *Kilroy Was Here*

FIRST INTERPLANETARY SHIP

From Terra to Mars and return—Lieut. Colonel Robert deFries Sims, Commanding; Captain Saul S. Abrams; Master Sergeant Malcolm MacGregor. None survived the return landing. Rest in Peace.

They crowded next to two other boys and stared at the *Kilroy*. Tex nudged Matt. "See the gash in the dirt, where she skidded? Say, do you suppose they just built right over her, where she lay.

One of the other two—a big-boned six-footer with tawny hair—answered, "No, the Kilroy landed in North Africa."

"Then they must have fixed it to look like where she crashed. You a candidate too?"

"That's right."

I'm Bill Jarman—from Texas. And this is Matt Dodson."

"I'm Oscar Jensen—and this is Pierre Armand."

"Howdy, Oscar. Glad to know you, Pierre."

"Call me Pete," Armand acknowledged. Matt noticed that he spoke Basic English with an accent, but Matt was unable to place it. Oscar's speech was strange, too—a suggestion of a lisp. He turned back to the ship.

"Imagine having the guts to go out into space in a cracker box like that," he said. "It scares me to think about it"

"Me, too," agreed Oscar Jensen.

"It's a dirty shame," Pierre said, softly.

"What is, Pete?" Jarman demanded.

"That their luck didn't hold. You can see it was an almost perfect landing—they didn't just crash in, or there would have been nothing left but a hole in the ground."

"Yeah, I guess you're right. Say, there's a stairway down over on the far side—see it, Matt? Do you suppose we could look through her?"

"Maybe," Matt told him, "but I think we had better put it off. We've got to report in, you know."

"We had all better check in," agreed Jensen. "Coming, Pete?"

Armand reached for his bag. Oscar Jensen pushed him aside and picked it up with his own. "That's not necessary!" Armand protested, but Oscar ignored him.

Jarman looked at Pierre. "You sick, Pete?" he asked. "I noticed you looked kind of peaked. What's the trouble?"

"If you are," put in Matt, "ask for a delay."

Armand looked embarrassed. "He's not sick and he'll pass the exams," Jensen said firmly. "Forget it."

"Sho', sho'," Tex agreed. They followed the crowd and found a notice which told all candidates to report to room 3108, third corridor. They located corridor three, stepped on the slideway, and put down their baggage.

"Say, Matt," said Tex, "tell me—who was Kilroy?"

"Let me see," Matt answered. "He was somebody in the Second Global War, an admiral, I think. Yeah, Admiral 'Bull' Kilroy, that sounds right."

"Funny they'd name it after an admiral."

"He was a flying admiral."

"You're a savvy cuss," Tex said admiringly. "I think I'll stick close to you during the tests."

Matt brushed it off. "Just a fact I happened to pick up."

In room 3108 a decorative young lady waved aside their credentials but demanded their thumb prints. She fed these into a machine at her elbow. The machine quickly spit out instruction sheets headed by the name, serial number, thumb print, and photograph of each candidate, together with temporary messing and rooming assignments.

The girl handed out the sheets and told them to wait next door. She abruptly turned away.

"I wish she hadn't been so brisk," complained Tex, as they went out. "I wanted to get her telephone code. Say," he went on, studying his sheet, "there's no time left on here for a siesta."

"Did you expect it?" asked Matt.

"Nope—but I can hope, can't I?"

The room next door was filled with benches but the benches were filled with boys. Jarman stopped at a bench which was crowded by three large cases, an ornate portable refresher kit, and a banjo case. A pink-faced youth sat next to this. "Your stuff?" Tex asked him.

The young man grudgingly admitted it. "You won't mind if we move it and sit down," Tex went on. He started putting the items on the floor. The owner looked sulky but said nothing.

There was room for three. Tex insisted that the others sit down, then sat down on his bag and leaned against Mart's knees, with his legs stretched out. His footwear, thus displayed, were seen to be fine western boots, high-heeled and fancy.

A candidate across from them stared at the boots, then spoke to the boy next to him. "Pipe the cowboy!"

Tex snorted and started to get up. Matt put a hand on his shoulder, shoving him back. "It's not worth it, Tex. We've got a busy day ahead."

Oscar nodded agreement. "Take it easy, fellow."

Tex subsided. "Well—all right. Just the same," he added, "my Uncle Bodie would stuff a man's feet in his mouth for less than that." He glared at the boy across from him.

Pierre Armand leaned over and spoke to Tex. "Excuse me—but are those really shoes for riding on horses?"

"Huh? What do you think they are? Skis?"

"Oh, I'm sorry! But you see, I've never seen a horse."

"What?"

"I have," announced Oscar, "in the zoo, that is."

"In a zoo?" repeated Tex.

"In the zoo at New Auckland."

"Oh—" said Tex. "I get it. You're a Venus colonial." Matt then recalled where he had heard Oscar's vaguely familiar lisp before—in the speech of a visiting lecturer. Tex turned to Pierre. "Pete, are you from Venus, too?"

"No, I'm—" Pete's voice was drowned out.

"Attention, please! Quiet!" The speaker was dressed in the severely plain, oyster—white uniform of a space cadet. "All of you," he went on, speaking into a hand amplifier, "who have odd serial numbers come with me. Bring your baggage. Even numbers wait where you are."

"Odd numbers?" said Tex. "That's me!" He jumped up.

Matt looked at his instructions. "Me, too!"

The cadet came down the aisle in front of them. Matt and Tex waited for him to pass. The cadet did not hold himself erectly; he crouched the merest trifle, knees relaxed and springy, hands ready to grasp. His feet glided softly over the floor. The effect was catlike, easy grace; Matt felt that if the room were suddenly to turn topsy—turvy the cadet would land on his feet on the ceiling—which was perfectly true.

Matt wanted very much to look like him.

As the cadet was passing, the boy with the plentiful baggage plucked at his sleeve. "Hey, mister!"

The cadet turned suddenly and crouched, then checked himself as quickly. "Yes?"

"I've got an odd number, but I can't carry all this stuff. Who can I get to help me?"

"You can't." The cadet prodded the pile with his toe. "All of this is yours?"

"Yes. What do I do? I can't leave it here. Somebody'd steal it."

"I can't see why anyone would." The cadet eyed the pile with distaste. "Lug it back to the station and ship it home. Or throw it away."

The youngster looked blank. "You'll have to, eventually," the cadet went on. "When you make the lift to the school ship, twenty pounds is your total allowance."

"But— Well, suppose I do, who's to help me get it to the station?"

"That's your problem. If you want to be in the Patrol, you'll have to learn to cope with problems."

"But—"

"Shut up." The cadet turned away. Matt and Tex trailed along.

Five minutes later Matt, naked as an egg, was stuffing his bag and clothes into a sack marked with his serial number. As ordered, he filed through a door, clutching his orders and a remnant of dignity. He found himself in a gang refresher which showered him, scrubbed him, rinsed him, and blew him dry again, assembly—line style. His instruction sheet was waterproof; he shook from it a few clinging drops.

For two hours he was prodded, poked, thumped, photographed, weighed, X-rayed, injected, sampled, and examined until he was bewildered. He saw Tex once, in another queue. Tex waved, slapped his own bare ribs, and shivered. Matt started to speak but his own line started up.

The medicos examined his repaired leg, making him exercise it, inquired the date of the operation, and asked if it hurt him. He found himself admitting that it did. More pictures were taken; more tests were made. Presently he was told, "That's all. Get back into line."

"Is it all right, sir?" Matt blurted out.

"Probably. You'll be given some exercises. Get along."

After a long time he came into a room in which several boys were dressing. His path took him across a weighing platform; his body interrupted electric—eye beams. Relays closed, an automatic sequence took place based on his weight, height, and body dimensions. Presently a package slid down a chute and plunked down in front of

him.

It contained an undergarment, a blue coverall, a pair of soft boots, all in his size.

The blue uniform he viewed as a makeshift, since he was anxious to swap it for the equally plain, but oyster white, uniform of a cadet. The shoes delighted him. He zipped them on, relishing their softness and glovelike fit. It seemed as if he could stand on a coin and call it, heads or tails. "Cat feet"—his first space boots! He took a few steps, trying to walk like the cadet he had seen earlier.

"Dodson!"

"Coming." He hurried out and shortly found himself thrust into a room with an older man in civilian clothes.

"Sit down. I'm Joseph Kelly." He took Mart's instruction sheet. "Matthew Dodson . .. nice to know you, Matt."

"How do you do, Mr. Kelly."

"Not too badly. Why do you want to join the Patrol, Matt?"

"Why, uh, because—" Matt hesitated. "Well, to tell the truth, sir, I'm so confused right now that I'm darned if I know!"

Kelly chuckled. "That's the best answer I've heard today. Do you have any brothers or sisters, Matt?" The talk wandered along, with Kelly encouraging Matt to talk. The questions were quite personal, but Matt was sophisticated enough to realize that "Mr. Kelly" was probably a psychiatrist; he stammered once or twice but he tried to answer honestly.

"Can you tell me now why you want to be in the Patrol?"

Matt thought about it "I've wanted, to go out into space ever since I can remember."

"Travel around, see strange planets and strange people— that's understandable, Matt. But why not the merchant service? The Academy is a long, hard grind, and it's three to one you won't finish, even if you are sworn in as a cadet— and not more than a quarter of the candidates will pass muster. But you could enter the merchant school—I could have you transferred today—and with your qualifications you'd be a cinch to win your pilot's ticket before you are twenty. How about it?"

Matt looked stubborn.

"Why not, Matt? Why insist on trying to be an officer of the Patrol? They'll turn you inside out and break your heart and no one will thank you for your greatest efforts. They'll make you over into a man your own mother wouldn't recognize—and you won't be any happier for it. Believe me, fellow—I know."

Matt did not say anything.

"You still want to try it, knowing chances are against you?"

"Yes. Yes, I think I do."

"Why, Matt?"

Matt still hesitated. Finally he answered in a low voice. "Well, people look up to an officer in the Patrol."

Mr. Kelly looked at him. "That's enough reason for now, Matt. You'll find others—or quit." A clock on the wall suddenly spoke up:

"Thirteen o'clock! Thirteen o'clock!" Then it added thoughtfully, "I'm hungry."

"Mercy me!" said Kelly. "So am I. Let's go to lunch, Matt."

II ELIMINATION PROCESS

MATT'S INSTRUCTIONS told him to mess at table 147, East Refectory. A map on the back of the sheet showed where East Refectory was; unfortunately he did not know where Matt was—he had gotten turned around in the course of the morning's rat race. He ran into no one at first but august personages in the midnight black of officers of the Patrol and he could not bring himself to stop one of them.

Eventually he got oriented by working back to the rotunda and starting over, but it made him about ten minutes late. He walked down an endless line of tables, searching for number 147 and feeling very conspicuous. He was quite pink by the time he located it.

There was a cadet at the head of the table; the others wore the coveralls of candidates. The cadet looked up and said, "Sit down, mister—over there on the right. Why are you late?"

Matt gulped. "I got lost, sir."

Someone tittered. The cadet sent a cold glance down the table. "You. You with the silly horse laugh—what's your name?"

"Uh, Schultz, sir."

"Mister Schultz, there is nothing funny about an honest answer. Have you never been lost?"

"Why— Well, uh, once or twice, maybe."

"Hm ... I shall be interested in seeing your work in astrogation, if you get that far." The cadet turned back to Matt. "Aren't you hungry? What's your name?"

"Yes, sir. Matthew Dodson, sir." Matt looked hurriedly at the controls in front of him, decided against soup, and punched the "entree," "dessert," and "milk" buttons. The cadet was still watching him as the table served him.

"I am Cadet Sabbatello. Don't you like soup, Mr. Dodson?"

"Yes, sir, but I was in a hurry."

"There's no hurry. Soup is good for you." Cadet Sabbatello stretched an arm and punched Mart's "soup" button. "Besides, it gives the chef a chance to clean up the galley." The cadet turned away, to Mart's relief. He ate heartily. The soup was excellent, but the rest of the meal seemed dull compared with what he had been used to at home.

He kept his ears open. One remark of the cadet stuck in his memory. "Mr. van Zook, in the Patrol we never ask a man where he is from. It is all right for Mr. Romolus to volunteer that he comes from Manila; it is incorrect for you to ask him."

The afternoon was jammed with tests; intelligence, muscular control, reflex, reaction time, sensory response. Others required him to do two or more things at once. Some seemed downright silly. Matt did the best he could.

He found himself at one point entering a room containing nothing but a large, fixed chair. A loudspeaker addressed him: "Strap yourself into the chair. The grips on the arms of the chair control a spot of light on the wall. When the lights go out, you will see a lighted circle. Center your spot of light in the circle and keep it centered."

Matt strapped himself down. A bright spot of light appeared on the wall in front of him. He found that the control in his right hand moved the spot up and down, while the one in his left hand moved it from side to side. "Easy!" Matt told himself. "I wish they would start."

The lights in the room went out; the lighted target circle bobbed slowly up and down. He found it not too difficult to bring his spot of light into the circle and match the bobbing motion.

Then his chair turned upside down.

When he recovered from his surprise at finding himself hanging head down in the dark, he saw that the spot of light had drifted away from the circle. Frantically he brought them together, swung past and had to correct.

The chair swung one way, the circle another, and a loud explosion took place at his left ear. The chair bucked and teetered; a jolt of electricity convulsed his hands and he lost the circle entirely.

Matt began to get sore. He forced his spot back to the circle and nailed it. "Gotcha!" Smoke poured through the room, making him cough, watering his eyes, and veiling the target. He squinted and hung on grimly, intent only on hanging onto that pesky circle of light—through more explosions, screaming painful noise, flashing lights, wind in his eyes, and endless, crazy, motions of his chair.

Suddenly the room lights flared up, and the mechanical voice said: "Test completed. Carry out your next assignment."

Once he was given a handful of beans and a small bottle, and was told to sit down and place the bottle at a mark on the floor and locate in his mind the exact position of the bottle. Then he was to close his eyes and drop the beans one at a time into the bottle—if possible.

He could tell from the sound that he was not making many hits, but he was mortified to find, when he opened his eyes, that only one bean rested in the bottle.

He hid the bottom of his bottle in his fist and queued up at the examiner's desk. Several of those lined up had a goodly number of beans in their bottles, although he noted two with no beans at all. Presently he handed his bottle to the examiner. "Dodson, Matthew, sir. One bean."

The examiner noted it without comment. Matt blurted out, "Excuse me, sir—but what's to keep a person from cheating by peeking?"

The examiner smiled. "Nothing at all. Go on to your next test."

Matt left, grumbling. It did not occur to him that he might not know what was being tested.

Late in the day he was ushered into a cubbyhole containing a chair, a gadget mounted on a desk, pencil and paper, and framed directions.

"If any score from a previous test," Matt read, "appears in the window marked SCORE, return the starting lever to the position marked NEUTRAL to clear the board for your test."

Matt found the window labeled "SCORE"; it had a score showing in it—"37." Well, he thought, that gives me a mark to shoot at. He decided not to clear the board until he had read the instructions.

"After the test starts," he read, "a score of "1" will result each time you press the lefthand button except as otherwise provided here below. Press the lefthand button whenever the red light appears provided the green light is not lighted as well except that no button should be pressed when the righthand gate is open unless all lights are out. If the right—hand gate is open and the lefthand gate is closed, no score will result from pressing any button, but the lefthand button must nevertheless be pressed under these circumstances if all other conditions permit a button to be pressed before any score may be made in succeeding phases of the test. To put out the green light, press the righthand button. If the lefthand gate is not closed, no button may be pressed. If the lefthand gate is closed while the red light is lighted, do not press the lefthand button if the green light is out unless the righthand gate is open. To start the test move the starting lever from neutral all the way to the right. The test runs for two minutes from the time you move the starting lever to the right. Study these instructions, then select your own time for commencing the test. You are not permitted to ask questions of the examiner, so be sure that you understand the instructions. Make as high a score as possible."

"Whew!" said Matt.

Still, the test looked simple—one lever, two pushbuttons, two colored lights, two little gates. Once he mastered the instructions, it would be as easy as flying a kite, and a durn sight simpler than flying a copter!—Matt had had his copter license since he was twelve. He got to work.

First, he told himself, there seems to be just two ways to make a score, one with the red light on and one with both lights out and one gate open.

Now for the other instructions— Let's see, if the lefthand gate is not closed—no, if the lefthand gate is closed—he stopped and read them over again.

Some minutes later he had sixteen possible positions of gates and conditions of lights listed. He checked them against the instructions, seeking scoring combinations. When he was through he stared at the result, then checked everything over again.

After rechecking he stared at the paper, whistled tunelessly, and scratched his head. Then he picked up the paper, left the booth, and went to the examiner.

That official looked up. "No questions, please."

"I don't have a question," Matt said. "I want to report something. There's something wrong with that test. Maybe the wrong instructions sheet was put in there. In any case, there is no possible way to make a score under the instructions that are in there."

"Oh, come, now!" the examiner answered. "Are you sure of that?"

Matt hesitated, then answered firmly, "I'm sure of it, Want to see my proof?"

"No. Your name is Dodson?" The examiner glanced at a timer, then wrote on a chart. "That's all."

"But— Don't I get a chance to make a score?"

"No questions, please! I've recorded your score. Get along —it's dinner time."

There were a large number of vacant places at dinner. Cadet Sabbatello looked down the long table. "I see there have been some casualties," he remarked. "Congratulations, gentlemen, for having survived thus far."

"Sir—does that mean we've passed all the tests we took today?" one of the candidates asked.

"Or at least won a retest. You haven't flunked." Matt sighed with relief. "Don't get your hopes up. There will be still fewer of you here tomorrow."

"Does it get worse?" the candidate went on.

Sabbatello grinned wickedly. "Much worse. I advise you all to eat little at breakfast. However," he went on, "I have good news, too. It is rumored that the Commandant himself is coming down to Terra to honor you with his presence when you are sworn in—if you are sworn in."

Most of those present looked blank. The cadet glanced around. "Come, come, gentlemen!" he said sharply. "Surely not all of you are that ignorant. You!" He addressed Matt. "Mister, uh—Dodson. You seem to have some glimmering of what I am talking about. Why should you feel honored at the presence of the Commandant?"

Matt gulped. "Do you mean the Commandant of the Academy, sir?"

"Naturally. What do you know about him?"

"Well, sir, he's Commodore Arkwright." Matt stopped, as if the name were explanation.

"And what distinguishes Commodore Arkwright?"

"Uh, he's blind, sir."

"Not blind, Mr. Dodson, not blind! It simply happens that he had his eyes burned out. How did he lose his eyesight?" The cadet stopped him. "No—don't tell them. Let them find out for themselves."

The cadet resumed eating and Matt did likewise, while thinking about Commodore Arkwright. He himself had been too young to pay attention to the news, but his father had read an account of the event to him—a spectacular, single—handed rescue of a private yacht in distress, inside the orbit of Mercury. He had forgotten just how the Patrol officer had exposed his eyes to the Sun—something to do with transferring the yacht's personnel—but he could still hear his father reading the end of the report: "—these actions are deemed to be in accordance with the tradition of the Patrol."

He wondered if any action of his would ever receive that superlative distinction. Unlikely, he decided; "duty satisfactorily performed" was about the best an ordinary man could hope for.

Matt ran into Tex Jarman as he left the mess hall. Tex pounded him on the back. "Glad to see you, kid. Where are you rooming?"

"I haven't had time to look up my room yet."

"Let's see your sheet." Jarman took it. "We're in the same corridor—swell. Let's go up."

They found the room and walked in. Sprawled on the lower of two bunks, reading and smoking a cigarette, was another candidate. He looked up.

"Enter, comrades," he said, "Don't bother to knock."

"We didn't," said Tex.

"So I see." The boy sat up. Matt recognized the boy who had made the crack about Tex's boots. He decided to say nothing—perhaps they would not recognize each other. The lad continued, "Looking for someone?"

"No," Matt answered, "this is the room I'm assigned to."

"My roommate, eh? Welcome to the palace. Don't trip over the dancing girls. I put your stuff on your bed."

The sack containing Matt's bag and civilian clothes rested on the upper bunk. He dragged it down.

"What do you mean, his bed?" demanded Tex. "You ought to match for the lower bunk."

Matt's roommate shrugged. "First come, first served."

Tex clouded up. "Forget it, Tex," Matt told him. "I prefer the upper. By the way," he went on, to the other boy, "I'm Matt Dodson."

"Girard Burke, at your service."

The room was adequate but austere. Matt slept in a hydraulic bed at home, but he had used mattress beds in summer camp. The adjoining refresher was severely functional but very modern—Matt noted with pleasure that the shower was installed with robot massage. There was no shave mask, but shaving was not yet much of a chore.

In his wardrobe he found a package, marked with his serial number, containing two sets of clothing and a second pair of space boots. He stowed them and his other belongings; then turned to Tex. "Well, what'll we do now?"

"Let's look around the joint."

"Fine. Maybe we can go through the Kilroy."

Burke chucked his cigarette toward the oubliette. "Wait a sec. I'll go with you." He disappeared into the 'fresher.

Tex said in a low voice. "Tell him to go fly a kite, Matt."

"It'ud be a pleasure. But I'd rather get along with him, Tex."

"Well, maybe they'll eliminate him tomorrow."

"Or me." Matt smiled wryly.

"Or me. Shucks, no, Matt—we'll get by. Have you thought about a permanent roomie? Want to team up?"

"It's a deal." They shook hands.

"I'm glad that's settled," Tex went on. "My cellmate is a nice little guy, but he's got a blood brother, or some such, he wants to room with. Came to see him before dinner. They chattered away in Hindustani, I guess it was. Made me nervous. Then they shifted to Basic out of politeness, and that made me more nervous."

"You don't look like the nervous type."

"Oh, all us Jarmans are high strung. Take my Uncle Bodie. Got so excited at the county fair he jumped between the shafts of a sulky and won two heats before they could catch him and throw him."

"Is that so?"

"My solemn word. Didn't pay off, though. They disqualified him because he wasn't a two—year—old."

Burke joined them and they sauntered down to the rotunda. Several hundred other candidates had had the same idea but the administration had anticipated the rush. A cadet stationed at the stairway into the pit was permitting visitors in parties of ten only, each party supervised by a cadet. Burke eyed the queue. "Simple arithmetic tells me there's no point in waiting."

Matt hesitated. Tex said, "Come on, Matt. Some will get tired and drop out."

Burke shrugged, said, "So long, suckers," and wandered away.

Matt said doubtfully, "I think he's right, Tex."

"Sure—but I got rid of him, didn't I?"

The entire rotunda was a museum and memorial hall of the Patrol. The boys found display after display arranged around the walls—the original log of the first ship to visit Mars, a photo of the take—off of the disastrous first Venus expedition, a model of the German rockets used in the Second Global War, a hand—sketched map of the far side of the Moon, found in the wrecked *Kilroy*.

They came to an alcove the back wall of which was filled by a stereo picture of an outdoor scene. They entered and found themselves gazing, in convincing illusion, out across a hot and dazzling lunar plain, with black sky, stars, and Mother Terra herself in the background.

In the foreground, life size, was a young man dressed in an old—fashioned pressure suit. His features could be seen clearly through his helmet, big mouth, merry eyes, and ; thick sandy hair cut in the style of the previous century.

Under the picture was a line of lettering: *Lieutenant Ezra Dahlquist, Who Helped Create the Tradition of the Patrol—1969—1996.*

Matt whispered, "There ought to be a notice posted somewhere to tell us what he did."

"I don't see any," Tex whispered back. "Why are you whispering?"

"I'm not—yes, I guess I was. After all, he can't hear us, can he? Oh —there's a vocal!"

"Well, punch it."

Matt pressed the button; the alcove filled with the first bars of Beethoven's Fifth. The music gave way to a voice: "The Patrol was originally made up of officers sent to it by each of the nations then in the Western Federation. Some were trustworthy, some were not. In 1996 came a day shameful and glorious in the history of the Patrol, an attempted *coup d'etat*, the so—called Revolt of the Colonels. A cabal of high—ranking officers, acting from Moon Base, tried to seize power over the entire world. The plot would have been successful had not Lieutenant Dahlquist disabled every atom—bomb rocket at Moon Base by removing the fissionable material from each and wrecking the triggering mechanisms. In so doing he received so much radiation that he died of his burns." The voice stopped and was followed by the Valhalla theme from *Götterdämmerung*.

Tex let out a long sigh; Matt realized that he had been holding his own breath. He let it go, then took another; it seemed to relieve the ache in his chest.

They heard a chuckle behind them. Girard Burke was leaning against the frame of the alcove. "They go to a lot of trouble to sell it around here," he remarked. "Better watch it, me lads, or you will find yourselves buying it."

"What do you mean by that? Sell what?"

Burke gestured toward the picture. "That. And the plug that goes with it. If you care for that sort of thing, there are three more, one at each cardinal point of the compass."

Matt stared at him. "What's the matter with you, Burke? Don't you want to be in the Patrol?"

Burke laughed. "Sure I do. But I'm a practical man; I don't have to bamboozled into it by a lot of emotional propaganda." He pointed to the picture of Ezra Dahlquist. "Take him. They don't tell you he disobeyed orders of his superior officer—if things had fallen the other way, he'd be called a traitor. Besides that, they don't mention that it was sheer clumsiness that got him burned. Do you expect me to think he was a superman?"

Matt turned red. "No, I wouldn't expect it." He took a step forward. "But, since you are a practical man, how would you like a nice, practical punch in the snoot?"

Burke was no larger than Matt and a shade shorter, but he leaned forward, balanced on the balls of his feet, and said softly, "I'd love it. You and who else?"

Tex stepped forward. "I'm the 'who else.' "

"Stay out of this, Tex!" Matt snapped.

"I will not! I don't believe in wasting fair fighting on my social inferiors."

"Stay out, I tell you!"

"Nope, I want a piece of this. You slug him and I'll kick him in the stomach as he goes down."

Burke looked at Jarman, and relaxed, as if he knew that the fighting moment was past. "Tut, tut, gentlemen! You're squabbling among yourselves." He turned away. "Goodnight, Dodson. Don't wake me coming in."

Tex was still fuming. "We should have let him have it. He'll make your life miserable until you slap him down. My Uncle Bodie says the way to deal with that sort of pimple is to belt him around until he apologizes."

"And get kicked out of the Patrol before we're in it? I let him get me mad, so that puts him one up. Come on— let's see what else there is to see."

But Call—to—Quarters sounded before they worked around to the next of the four alcoves. Matt said good night to Tex at his door and went inside. Burke was asleep or shamming. Matt peeled off his clothes, shinnied up into his bunk, looked for the light switch, spotted it, and ordered it to switch off.

The unfriendly presence under him made him restless, but he was almost asleep when he recalled that he had not called his father back. The thought awakened him. Presently he became aware of a vague ache somewhere inside him. Was he coming down with something?

Could it be that he was homesick? At his age? The longer he considered it the more likely it seemed, much as he hated to admit it. He was still pondering it when he fell asleep.

III OVER THE BUMPS

THE NEXT MORNING Burke ignored the trouble they had had; he made no mention of it. He was even moderately cooperative about sharing the 'fresher. But Matt was glad to hear the call to breakfast.

Table 147 was not where it should be. Puzzled, Matt moved down the line until he found a table marked "147—149," with Cadet Sabbatello in charge. He found a place and sat down, to find himself sitting next to Pierre Armand. "Well! Pete!" he greeted him. "How are things going?"

"Glad to see you, Matt. Well enough, I guess." His tone seemed doubtful.

Matt looked him over. Pete seemed—"dragged through a knothole" was the phrase Matt settled on. He was about to ask what was wrong when Cadet Sabbatello rapped on the table. "Apparently," said the cadet, "some of you gentlemen have forgotten my advice last night, to eat sparingly this morning. You are about to go over the bumps today —and ground—hogs have been known to lose their breakfasts as well as their dignity."

Matt looked startled. He had intended to order his usual lavish breakfast; he settled for milk toast and tea. He noticed that Pete had ignored the cadet's advice; he was working on a steak, potatoes, and fried eggs—whatever ailed Pete, Matt decided, it had not affected his appetite.

Cadet Sabbatello had also noticed it. He leaned toward Pete. "Mister, uh—"

"Armand, sir," Pete answered between bites.

"Mr. Armand, either you have the digestion of a Martian sandworm, or you thought I was joking. Don't you expect to be dropsick?"

"No, sir."

"No?"

"You see, sir, I was born on Ganymede."

"Oh! I beg your pardon. Have another steak. How are you doing?"

"Pretty well, on the whole, sir."

"Don't be afraid to ask for dispensations. You'll find that everyone around here understands your situation."

"Thank you, sir."

"I mean it. Don't play 'iron man.' There's no sense in it."

After breakfast, Matt fell in step with Armand. "Say, Pete, I see why Oscar carried your bag yesterday. Excuse me for being a stupe."

Pete looked self—conscious. "Not at all. Oscar has been looking out for me—I met him on the trip down from Terra Station."

Matt nodded. "I see." He had no expert knowledge of interplanetary schedules, but he realized that Oscar, coming from Venus, and Pete, coming from one of Jupiter's moons, would—have to change ships at the artificial satellite of Earth called Terra Station, before taking the shuttle rocket down.

It accounted for the two boys being well acquainted despite cosmically different backgrounds. "How do you feel?" he went on.

Pete hesitated. "As a matter of fact, I feel as if I were wading in quicksand up to my neck. Every move is an effort."

"Gee, that's too bad! Just what is the surface gravity on Ganymede? About one—third 'g' isn't it?"

"Thirty—two per cent. Or from my point of view, everything here weighs three times as much as it ought to. Including me."

Matt nodded. "As if two other guys were riding on you, one on your shoulders, and one on your back."

"That's about it. The worst of it is, my feet hurt all the time. I'll get over it—"

"Sure you will!

"—since. I'm of Earth ancestry and potentially just as strong as my grandfather was. Back home, I'd been working out in the centrifuge the last couple of earth—years. I'm a lot stronger than I used to be. There's Oscar." Matt greeted Oscar, then hurried to his room to phone his father in private.

A copter transport hopped Matt and some fifty other candidates to the site of the variable acceleration test—in cadet slang, the "Bumps." It was west of the base, in the mountains, in order to have a sheer cliff for free fall. They landed on a loading platform at the edge of this cliff and joined a throng of other candidates. It was a crisp Colorado morning. They were near the timberline; gaunt evergreens, twisted by the winds, surrounded the clearing.

From a building just beyond the platform two steel skeletons ran vertically down the face of the two—thousand—foot cliff. They looked like open frames for elevators, which one of them was. The other was a guide for the testing car during the drop down the cliff.

Matt crowded up to the rail and leaned over. The lower ends of the skeleton frameworks disappeared, a dizzy distance below, in the roof of a building notched into the sloping floor of the canyon. He was telling himself that

he hoped the engineer who had designed the thing knew what he was doing when he felt a dig in the ribs. It was Tex. "Some roller coaster, eh, Matt?"

"Hi, Tex. That's an understatement if I ever heard one."

The candidate on Matt's left spoke up. "Do you mean to say we ride down that thing?"

"No less," Tex answered. "Then they gather the pieces up in a basket and haul 'em up the other one."

"How fast does it go?"

"You'll see in a mom— Hey! *Thar she blows!*"

A silvery, windowless car appeared inside one guide frame, at its top. It poised for a split second, then dropped. It dropped and dropped and dropped, gathering speed, until it disappeared with what seemed incredible velocity— actually about two hundred and fifty miles per hour—into the building below. Matt braced himself for the crash. None came, and he caught his breath.

Seconds later the car reappeared at the foot of the other framework. It seemed to crawl; actually it was accelerating rapidly during the first half of the climb. It passed from view into the building at the top of the cliff.

"Squad nine!" a loudspeaker bawled behind them.

Tex let out a sigh "Here I go, Matt," he said. "Tell mother my last words were of her. You can have my stamp collection." He shook hands and walked away.

The candidate who had spoken before gulped; Matt saw that he was quite pale. Suddenly he took off in the same direction but did not line up with the squad; instead he went up to the cadet mustering the squad and spoke to him, briefly and urgently. The cadet shrugged and motioned him away from the group.

Matt found himself feeling sympathetic rather than contemptuous.

His own test group was mustered next. He and his fellows were conducted into the upper building, where a cadet explained the test: "This test examines your tolerance for high acceleration, for free fall or weightlessness, and for violent changes in acceleration. You start with centrifugal force of three gravities, then all weight is removed from you as the car goes over the cliff. At the bottom the car enters a spiraling track which reduces its speed at deceleration of three gravities. When the car comes to rest, it enters the ascending tower; you make the climb at two gravities, dropping to one gravity, and momentarily to no weight, as the car reaches the top. Then the cycle is repeated, at higher accelerations, until each of you has reacted. Any questions?"

Matt asked, "How long is the free fall, sir?"

"About eleven seconds. We would increase it, but to double it would take four times as high a cliff. However, you will find this one high enough." He smiled grimly.

A timid voice asked, "Sir, what do you mean by 'react'?"

"Any of several things—hemorrhage, loss of consciousness."

"It's dangerous?"

The cadet shrugged. "What isn't? There has never been any mechanical failures. Your pulse, respiration, blood pressure, and other data are telemetered to the control room. We'll try not to let you die under test."

Presently he led them out of the room, down a passage and through a door into the test car. It had pendulum seats, not unlike any high—speed vehicle, but semi—reclining and heavily padded. They strapped down and medical technicians wired them for telemetering their responses. The cadet inspected, stepped out and returned with an officer, who repeated the inspection. The cadet then distributed "sick kits"—cloth bags of double thickness to be tied and taped to the mouth, so that a person might retch without inundating his companions. This done, he asked, "Are you all ready?" Getting no response, he went out and closed the door.

Matt wished that he had stopped him before it was too late.

For a long moment nothing happened. Then the car seemed to incline; actually, the seats inclined as the car started to move and picked up speed.

The seats swung back to the at—rest position but Matt felt himself getting steadily heavier and knew thereby that they were being centrifuged. He pressed against the pads, arms leaden, legs too heavy to move.

The feeling of extra weight left him, he felt his normal weight again, when suddenly that, too, was taken from him. He surged against the safety belts.

His stomach seemed to drop out of him. He gulped and swallowed; his breakfast stayed down. Somebody yelled, "We're falling!" It seemed to Matt the most unnecessary statement he had ever heard.

He set his jaw and braced himself for the bump. It did not come—and still his stomach seemed trying to squirm its way out of his body. Eleven seconds? Why, he had been falling more than eleven seconds already. What had gone wrong?

And still they fell, endlessly.

And fell.

Then he was forced back against the pads. The pressure increased smoothly until he was as heavy as he had been just before the drop. His abused stomach tried to retch but the pressure was too much for it.

The pressure eased off to normal weight. A short while later the car seemed to bounce and momentarily he was weightless, while his insides grabbed frantically for anchorage. The feeling of no weight lasted only an instant; he sagged into the cushions.

The door was flung open; the cadet strode in, followed by two medical technicians. Someone yelled, "Let me out of here! Let me out of here!" The cadet paid no attention but went to the seat in front of Matt. He unstrapped the occupant and the two medical assistants carried him out. His head lolled loosely as they did so. The cadet then went to the candidate who was kicking up the fuss, unstrapped him, and stepped back. The boy got up, staggered, and shuffled out.

"Anyone need a fresh sick kit?" There were muffled responses. Working swiftly, the cadet helped those who needed it. Matt felt weakly triumphant that his own kit was still clean.

"Stand by for five gravities," commanded the cadet. He made them answer to their names, one by one. While he was doing so another boy started clawing at his straps. Still calling the roll, the cadet helped him free and let him leave. He followed the lad out the door and shut it.

Matt felt himself tensing unbearably. He was relieved when the pressure took hold—but only momentarily, for he found that five gravities were much worse than three. His chest seemed paralyzed, he fought for air.

The giant pressure lifted—they were over the edge again, falling. His mistreated stomach revenged itself at once; he was sorry that he had eaten any breakfast at all.

They were still falling. The lights went out—and someone screamed. Falling and still retching, Matt was sure that the blackness meant some sort of accident; this time they would crash—but it did not seem to matter.

He was well into the black whirlpool of force that marked the deceleration at the bottom before he realized that he had come through without being killed. The thought brought no particular emotion; breathing at five gravities fully occupied him. The ride up the cliff, at double weight dropping off to normal weight, seemed like a vacation—except that his stomach protested when they bounced to a stop.

The lights came on and the cadet re—entered the room. His gaze stopped at the boy on Matt's right. The lad was bleeding at his nose and ears. The candidate waved him away feebly. "I can take it," he protested. "Go on with the test."

"Maybe you can," the cadet answered, "but you are through for today." He added, "Don't feel bad about it. It's not necessarily a down check."

He inspected the others, then called in the officer. The two held a whispered consultation over one boy, who was then half led, half carried from the test chamber. "Fresh sick kits?" asked the cadet.

"Here," Matt answered feebly. The change was made, while Matt vowed to himself never to touch milk toast again.

"Seven gravities," announced the cadet. "Speak up, or stand by." He called the roll again. Matt was ready to give up, but he heard himself answer "ready" and the cadet was gone before he could make up his mind. There were only six of them left now.

It seemed to him that the lights were going out again, gradually, as the weight of his body built up to nearly a thousand pounds. But the lights "came on" again as the car dropped over the cliff; he realized dully that he had blacked out.

He had intended to count seconds on this fall to escape the feeling of endless time, but he was too dazed. Even the disquiet in his middle section seemed remote. Falling — falling —

Again the giant squeezed his chest, drained the blood from his brain, and shut the light from his eyes. The part that was Matt squeezed out entirely. ...

"How do you feel?" He opened his eyes, saw a double image, and realized dimly that the cadet was leaning over him. He tried to answer. The cadet passed from view; he felt someone grasping him; he was being lifted and carried.

Someone wiped his face with a wet, cold towel. He sat up and found himself facing a nurse.

"You're all right now," she said cheerfully. "Keep this until your nose stops bleeding." She handed him the towel. "Want to get up?"

"Yes, I think so."

"Take my arm. We'll go out into the air."

Out on the loading platform Matt sat in the sunshine, dabbling at his nose and regaining his strength. He could hear sounds of excitement from the rail behind each time the car dropped. He sat there, soaking in the sun and wondering whether or not he really wanted to be a spaceman.

"Hey, Matt." It was Tex, looking pale and not too sure of himself. There was a blood stain down the front of his coverall.

"Hello, Tex. I see you've had it."

"Yeah."

"How many g's?"

"Seven."

"Same here. What do you think of it?"

"Well—" Tex seemed at a loss. "I wish my Uncle Bodie could have tried it. He wouldn't talk so much about the time he rassled the grizzly."

There were many vacant seats at lunch. Matt thought about those who had gone—did they mind being "bumped out," or were they relieved?

He was hungry but ate little, for he knew what was ahead that afternoon—rocket indoctrination. He had looked forward to this part of the schedule most eagerly. Space flight! Just a test jump, but the real thing nevertheless. He had been telling himself that, even if he failed, it would be worth it to get this first flight.

Now he was not sure; the "bumps" had changed his viewpoint. He had a new, grim respect for acceleration and he no longer thought drop—sickness funny; instead he was wondering whether or not he would ever get adjusted to free fall. Some never did, he knew.

His test group was due in Santa Barbara Field at fourteen—thirty. He had a long hour to kill with nothing to do but fret. Finally it was time to go underground, muster, and slidewalk out to the field.

The cadet in charge led them up to the surface into a concrete trench about four feet deep. Matt blinked at the sunlight. His depression was gone; he was anxious to start. On each side and about two hundred yards away were training rockets, lined up like giant birthday candles, poised on their fins with sharp snouts thrusting against the sky.

"If anything goes wrong," the cadet said, "throw yourself flat in the trench. Don't let that get your goat—I'm required to warn you.

"The jump lasts nine minutes, with the first minute and a half under power. You'll feel three gravities, but the acceleration is only two gravities, because you are still close to the Earth.

"After ninety seconds you'll be travelling a little faster than a mile a second and you will coast on up for the next three minutes for another hundred miles to an altitude of about one hundred fifty miles. You fall back toward the earth another three minutes, brake your fall with the jet and ground at the end of the ninth minute.

"A wingless landing on an atmosphere planet with gravity as strong as that of Earth is rather tricky. The landing will be radar—robot controlled, but a human pilot will stand by and check the approach against the flight plan. He can take over if necessary. Any questions?"

Someone asked, "Are these atomic—powered ships?"

The cadet snorted. "These jeeps? These are chemically powered, as you can see from the design. Monatomic hydrogen. They are much like the first big rockets ever built, except that they have variable thrust, so that the pilot and the passengers won't be squashed into strawberry jam as the mass—ratio drops off."

A green signal flare arched up from the control tower. "Keep your eyes on the second rocket from the end, on the north," advised the cadet.

There was a splash of orange flame, sun bright, at the base of the ship. *"There she goes!"*

The ship lifted majestically, and poised for an instant, motionless as a hovering helicopter. The noise reached Matt, seemed to press against his chest. It was the roar of an impossibly huge blowtorch. A searchlight in the tower blinked, and the ship mounted, up and up, higher and faster, its speed increasing with such smoothness that it was hard to realize how fast it was going—except that the roar was gone. Matt found himself staring straight at the zenith, watching a dwindling artificial sun, almost as dazzling as Sol himself.

Then it was gone. Matt closed his mouth and started to look away,vwhen his attention was seized by the ice trail left as the rocket sliced its way through the outer atmosphere. White and strange, it writhed like a snake with a broken back. Under the driving force of the many—hundred—miles—an—hour winds of that far altitude it twisted visibly as he watched.

"That's all!" the cadet shouted. "We can't wait for the landing."

They went underground, down a corridor, and entered an elevator. It went up right out of the ground and into the air, supported by a hydraulic piston. It mounted close by the side of a rocket ship; Matt was amazed to see how large it was close up.

The elevator stopped and its door let down drawbridge fashion into the open hatch in the rocket's side. They trooped across; the cadet raised the bridge and went down again.

They were in a conical room. Above them the pilot lay in his acceleration rest. Beside them, feet in and head out, were acceleration couches for passengers. "Get in the bunks!" shouted the pilot. "Strap down."

Ten boys jostled one another to reach the couches. One hesitated. "Uh, oh, Mister!" he called out.

"Yes? Get in your couch."

"I've changed my mind. I'm not going."

The pilot used language decidedly not officerlike and turned to his control board. 'Tower! Remove passenger from number nineteen." He listened, then said, "Too late to change the flight plan. Send up mass." He shouted to the waiting boy, "What do you weigh?"

"Uh, a hundred thirty—two pounds, sir."

"One hundred and thirty—two pounds and make it fast!" He turned back to the youngster. "You better get off this base fast, for if I have to skip my take—off I'll wring your neck."

The elevator climbed into place presently and three cadets poured across. Two were carrying sandbags, one had five lead weights. They strapped the sandbags to the vacant couch, and clamped the weights to its sides. "One thirty—two mass," announced one of the cadets.

"Get going," snapped the pilot and turned back to the board.

"Don't blow your tubes, Harry," advised the cadet addressed. Matt was amazed, then decided the pilot must be a cadet, too. The three left, taking with them the boy; the hatch door shut with a *whish*.

"Stand by to raise!" the pilot called out, then looked down to check his passengers. "Passengers secure, nineteen," he called to the tower. "Is that confounded elevator clear?"

There was silence as the seconds trickled away.

The ship shivered. A low roar, muffled almost below audibility, throbbed in Mart's head. For a moment he felt slightly heavy, the feeling passed, then he was pressed strongly against the pads.

Matt was delighted to find that three gravities were not bad, flat on his back as he was. The minute and a half under power stretched out; there was nothing to hear but the muted blast of the reactor, nothing to see but the sky through the pilot's port above.

But the sky was growing darker. Already it was purple; as he watched it turned black. Fascinated, he watched the stars come out.

"Stand by for free fall!" the pilot called out, using an amplifier. "You'll find sick kits under each pillow. If you need 'em, put 'em on. I don't want to have to scrape it off the port."

Matt fumbled with heavy fingers under his head, found the kit. The sound of the jet died away, and with it the thrust that had kept them pinned down. The pilot swung out of his rest and floated, facing them. "Now look, sports —we've got six minutes. You can unstrap, two at a time and come up for a look—see. But get this: Hang on tight. Any man who starts floating free, or skylarking, gets a down check." He pointed to a boy. "You—and the next guy."

The "next guy" was Matt. His stomach was complaining and he felt so wretched that he did not really want the privilege offered—but his face was at stake; he clamped his jaws, swallowed the saliva pouring into his mouth, and unstrapped.

Free, he clung to one strap, floating loosely, and tried to get his bearings. It was curiously upsetting to have no up—and—down; it made everything swim—he had trouble focusing his eyes. "Hurry up there!" he heard the pilot shout, "or you'll miss your turn."

"Coming, sir."

"Hang on—I'm going to turn the ship." The pilot un—clutched his gyros and cut in his processing flywheels. The ship turned end over end. By the time Matt worked his way to the control station, moving like a cautious and elderly monkey, the rocket was pointed toward Earth.

Matt stared out at the surface, nearly a hundred miles below and still receding. The greens and browns seemed dark by contrast with the white dazzle of clouds. Off to the left and right he could see the inky sky, stabbed with stars. "That's the Base, just below," the pilot was saying. "Look sharp and you can make out Hayworth Hall, maybe, by its shadow."

It did not seem "just below" to Matt; it seemed "out"— or no direction at all. It was disquieting. "Over there—see? —is the crater where Denver used to be. Now look south—that brown stretch is Texas; you can see the Gulf beyond it."

"Sir," asked Matt, "can we see Des Moines from here?"

"Hard to pick out. Over that way—let your eye slide down the Kaw River till it strikes the Missouri, then up river. That dark patch—that's Omaha and Council Bluffs. Des Moines is between there and the horizon." Matt strained his eyes, trying to pick out his home. He could not be sure— but he did see that he was staring over the bulge of the Earth at a curved horizon; he was seeing the Earth as round. "That's all," ordered the pilot. "Back to your bunks. Next pair!"

He was glad to strap a belt across his middle. The remaining four minutes or so stretched endlessly; he resigned himself to never getting over space sickness. Finally the pilot chased the last pair back, swung ship jet toward Earth, and shouted, "Stand by for thrust—we're about to ride 'er down on her tail!"

Blessed weight pressed down on him and his stomach stopped complaining. The ninety seconds of deceleration seemed longer; it made him jumpy to know that the Earth was rushing up at them and not be able to see it. But at last there came a slight bump and his weight dropped suddenly to normal. "Grounded," announced the pilot, "and all in one piece. You can unstrap, sports."

Presently a truck arrived, swung a telescoping ladder up to the hatch, and "they climbed down. On the way back they passed a great unwieldy tractor, crawling out to retrieve the rocket. Someone stuck his head out of the tractor. "Hey! Harry—why didn't you land it in Kansas?"

Their pilot waved at the speaker. "Be grateful I didn't!"

Matt was free until mess; he decided to return to the observation trench; he still wanted to see a ship land on its jet. He had seen winged landings of commercial stratosphere rockets, but never a jet landing.

Matt had just found a vacant spot in the trench when a shout went up—a ship was coming in. It was a ball of flame, growing in the sky, and then a pillar of flame, streaking down in front of him. The streamer of fire brushed the ground, poised like a ballet dancer, and died out. The ship was down.

He turned to a candidate near him. "How long till the next one?"

"They've come in about every five minutes. Stick around."

Presently a green flare went up from the control tower and he looked around, trying to spot the ship about to take off, when another shout caused him to turn back. There again was a ball of fire in the sky, growing.

Unbelievably, it went out. He stood there, stupefied— to hear a cry of "Down! Down, everybody! Flat on your faces!" Before he could shake off his stupor, someone tackled him and threw him.

He was rocked by a sharp shock, on top of it came the roar of an explosion. Something snatched at his breath.

He sat up and looked around. A cadet near him was peering cautiously over the parapet. "Allah the Merciful," he heard him say softly.

"What happened?"

"Crashed in. Dead, all dead." The cadet seemed to see him for the first time. "Get back to your quarters," he said sharply.

"But how did it happen?"

"Never mind—this is no time for sightseeing." The cadet moved down the line, clearing out spectators.

IV FIRST MUSTER

MATT'S ROOM WAS EMPTY, which was a relief. He did not want to see Burke, nor anyone. He sat down and thought about it.

Eleven people—just like that. All happy and excited and then—*crrump!*—not enough left to cremate. Suddenly he himself was back up in the sky— He broke off the thought, trembling.

At the end of an hour he had made up his mind that the Patrol was not for him. He had thought of it, he realized, through a kid's bright illusions—*Captain Jenks of the Space Patrol, The Young Rocketeers*, stuff like that. Well, those books were all right—for kids—but he wasn't hero material, he had to admit.

Anyhow, his stomach would never get used to free fall. Right now it tightened up when he thought about it.

By the time Burke returned he was calm and, if not happy, at least he was not unhappy, for his mind was at rest.

Burke came in whistling. He stopped when he saw Matt. "Well, junior, still here? I thought the bumps would send you home."

"No."

"Didn't you get dropsick?"

"Yes." Matt waited and tried to control his temper. "Didn't you?"

Burke chuckled. "Not likely. I'm no groundhog, junior.

"Call me 'Matt.'"

"Okay, Matthew. I was going out into space before I could walk. My old man builds 'em, you know."

"I didn't know."

"Sure. 'Reactors, Limited'—he's chairman of the board. Say, did you see the fireworks out at the field?"

"You mean the ship that crashed?"

"What else? Quite a show, wasn't it?"

Matt could feel himself coming to a slow boil. "Do you mean to stand there and tell me," he said quietly, "that you regard the deaths of eleven human beings as 'quite a show'?"

Burke stared at him. Then he laughed. "I'm sorry, old fellow. I apologize. But it actually didn't occur to me that you didn't know."

"Didn't know what?"

"But you weren't supposed to know, of course. Relax, son—no one was killed. You were framed."

"Huh? What are you talking about?"

Burke sat down and laughed until he had tears. Matt grabbed him by the shoulder. "Cut that out and talk."

The other candidate stopped and looked up. "Honest, I rather like you, Dodson—you're such a perfect country cousin. How do you feel about Santa Claus and the Stork?"

"Talk!"

"Haven't you caught on to what they've been doing to you ever since you checked in?"

"Doing what?"

"War of nerves, man. Haven't you noticed some tests were too easy —too easy to cheat in, that is? When you went over the bumps, didn't you notice that they let you take a good look at the drop before you made it? When they could just as easily have kept you inside where it wouldn't worry you?"

Matt thought about it. It was an enticing notion—he could see how some of the things he had not understood would fit in to such a theory. "Go on."

"Oh, it's a good gag—it cleans out the weak sisters and it cleans out the stupes, too—the guys so dumb that they can't resist an invitation to cheat, never dreaming that it might be booby—trapped. It's efficient —a Patrol officer has to be smart and fast on his feet and cool—headed. It keeps from wasting money on second—raters."

"You just called me dumb and yet I got by."

"Of course you did, junior, because your heart is pure." He laughed again. "And I got by. But you'll never make a Patrolman, Matt. They've got other ways to get rid of the good, dumb boys. You'll see."

"Okay, so I'm dumb. But don't call me junior again. What's this got to do with the ship that crashed?"

"Why, it's simple. They want to eliminate all the dead—wood before swearing us in. There are candidates with cast—iron stomachs who don't get upset by the bumps, or anything. So they send up a ship under robot control—no pilot, no passengers and crash it, just to scare off those who can be scared. It's a darn sight cheaper than training just one cadet, if he doesn't pay off in the long run."

"How do you know? Have you got inside information on it?"

"In a way, yes. It's a logical necessity—those ships can't crash, unless you crash 'em on purpose. I know—my old man makes them."

"Well—maybe you're right." Matt dropped the matter, unsatisfied but lacking basis for further argument. It did convince him of one thing, however—spacesickness or not, come what may, he resolved to hang on as long as Girard Burke did, and at least twenty—four hours longer!

His table at dinner that night was numbered "147, 149, 151 & 153." There was room enough to seat the survivors.

Cadet Sabbatello looked them over pleasantly. "Congratulations, gentlemen, on having lasted it out. Since you will be sworn in tonight, when next we meet it will be in a different status." He grinned. "So relax and enjoy your last meal of freedom."

In spite of no effective breakfast and little lunch, Matt found himself unable to eat much. Girard Burke's interpretation of the tests and what they meant troubled him. He still intended to take the oath, but he had an uneasy feeling that he was about to take it without knowing what it signified—what the Patrol really was.

When the meal broke up, on sudden impulse he followed the cadet in charge of the table out. "Excuse me—Mr. Sabbatello, could I speak to you privately, sir?"

"Eh? I suppose so—come along." He led Matt to his own room; it was exactly like Matt's. "Now what is it?"

"Uh—Mr. Sabbatello, that crash today: was anybody hurt?"

"Hurt? It killed eleven people. Don't you call that hurt'?"

"Are you sure? Is it possible that it was a drone and nobody was inside?"

"It's possible, but it's not the case. I wish it were—the pilot was a friend of mine."

"Oh—I'm sorry. But I had to know, for sure. You see, it's very important to me."

"'Why?"

Matt sketched out Burke's version of what had happened, without giving Burke's name. As he talked, Sabbatello showed more and more annoyance. "I see," he said, when Matt was done. "It is true that some of the tests are psychological rather than overt. But this matter of the crash —who fed you that nonsense?"

Matt did not say anything.

"Never mind. You can protect your informant—it won't matter in the least in the long run. But about the crash—" He considered. "I'd give my word of honor to you—in fact I do—but if you accept the hypothesis your friend holds, then you won't pay any attention to my sworn word." He thought a moment. "Are you a Catholic?"

"Uh, nossir." Matt was startled.

"It doesn't matter. Do you know who Saint Barbara is?"

"Not exactly, sir. The field—"

"Yes, the field. She was a third—century martyr. The point is that she is the patron saint of all who deal with high explosives, rocket men among others." He paused.

"If you go over to the chapel, you will find that a mass is scheduled during which Saint Barbara will be asked to intercede for the souls of the men who were lost this afternoon. I think you realize that no priest would lend his office to any such chicanery as your friend suggests?"

Matt nodded solemnly. "I see your point, sir. I don't need to go to the chapel—I've found out what I needed to know."

"Fine. You had better hightail it and get ready. It would be embarrassing to be late to your own swearing in."

First Muster was scheduled for twenty—one o'clock in the auditorium. Matt was one of the first to arrive, scrubbed and neat and wearing a fresh coverall. A cadet took his name and told him to wait inside. The floor of the hall had been cleared of seats. Above the stage at the far end were the three closed circles of the Federation—Freedom, Peace, and Law, so intertwined that, if any one were removed, the other two would fall apart. Under them was the Patrol's own sign, a star blazing in the night.

Tex was one of the last to show up. He was greeting Matt, breathlessly, when a cadet, speaking from the rostrum, called out, "Attention!

"Gather on the left side of the hall," he went on. The candidates milled and shuffled into a compact group. "Remain where you are until muster. When your name is called, answer 'Here!', then walk across to the other side. You will find white guide lines on the deck there. Toe the lines to form ranks."

Another cadet came down from the rostrum and moved toward the mass of boys. He stopped, picked a slip of paper from four such slips he held, and fixed Tex with his eye. "You, mister," he said. "Take this."

Jarman took it, but looked puzzled. "What for?"

"As well as answering to your own name, when you hear this name, speak up. Step out in front and sing out, 'I answer for him!'"

Tex looked at the slip. Matt saw that it read: "John Martin."

"But why?" demanded Tex.

The cadet looked at him. "You really don't know?"

"Nary a notion."

"Hmmph! Well, since the name doesn't ring a bell, just take it that he is a classmate of yours who can't be here tonight, in person. So you answer for him to make the muster complete. Get it?"

"Yes, sir. Can do."

The cadet moved on down the line. Tex turned to Matt. "What gives, d'you s'pose?"

"It beats me."

"Me, too. Well, we'll probably find out."

The cadet on the rostrum moved to stage .left. "Silence!" he commanded. "The Commandant!"

From the rear entered two men dressed in the midnight black. The younger of them walked so that his sleeve brushed the elbow of his senior. They moved to the center of the platform; the younger man stopped. The elder halted immediately, whereupon the aide withdrew. The Commandant of the Academy stood facing the new class.

Or, rather, facing down the center of the hall. He stood still for a long moment; someone coughed and shuffled, at which he turned toward the group and faced them thereafter. "Good evening, gentlemen."

Seeing him, Matt was reminded strongly of Cadet Sabbatello's protest: "Not *blind*, Mr. Dodson!" Commodore Arkwright's eyes looked strange—the sockets were deep set and the eyelids drooped like a man in thought. Yet, as that sightless gaze rested on him, it seemed to Matt that the Commandant could not only see him but could peer inside his head.

"I welcome you to our fellowship. You come from many lands, some from other planets. You are of various colors and creeds. Yet you must and shall become a band of brothers.

"Some of you are homesick. You need not be. From this day on every part of this family of planets is your home, each place equally. Each living, thinking creature in this system is your neighbor—and your responsibility.

"You are about to take an oath, by your own choice, as a member of the Patrol of this our System. In time, you expect to become an officer of that Patrol. It is necessary that you understand the burden you assume. You expect to spend long hours studying your new profession, acquiring the skills of the spaceman and the arts of the professional soldier. These skills and arts you must have, but they will not make you an officer of the Patrol."

He paused, then went on, "An officer in command of a ship of the Patrol, away from base, is the last of the absolute monarchs, for there is none but himself to restrain him. Many places where he must go no other authority reaches. He himself must embody law, and the rule of reason, justice and mercy.

"More than that, to the members of the Patrol singly and together is entrusted such awful force as may compel or destroy, all other force we know of—and with this trust is laid on them the charge to keep the peace of the System and to protect the liberties of its peoples. They are soldiers of freedom.

"It is not enough that you be skillful, clever, brave— The trustees of this awful power must each possess a meticulous sense of honor, self—discipline beyond all ambition, conceit, or avarice, respect for the liberties and dignity of all creatures, and an unyielding will to do justice and give mercy. He must be a true and gentle knight."

He stopped and there was no sound at all in the huge room. Then he said, "Let those who are prepared to take the oath be mustered."

The cadet who had been acting as adjutant stepped forward briskly. "Adams!"

"Uh—here, sir!" A candidate trotted across the room.

"Akbar."

"Here!"

"Alvarado—"

"Anderson, Peter—"

"Anderson, John—"

"Angelico—"

Then, presently, it was, "Dana—Delacroix—DeWitt—Diaz — Dobbs," and "Dodson!"

"Here!" shouted Matt. His voice squeaked but no one laughed. He hurried over to the other side, found a place and waited, panting. The muster went on:

"Eddy—Eisenhower—Ericsson—" Boys trickled across the room until few were left. "Sforza, Stanley, Suliman," and then, finally: "Zahm!" The last candidate joined his fellows.

But the cadet did not stop. "Dahlquist!" he called out.

There was no answer.

"Dahlquist!" he repeated. "Ezra Dahlquist!"

Matt felt cold prickles around his scalp. He recognized the name now—but Dahlquist would not be here, not Ezra Dahlquist. Matt was sure of that, for he remembered an alcove in the rotunda, a young man in a picture, and the hot, bright sand of the Moon.

There was a stir in the rank behind him. A candidate pushed his way through and stepped forward. "I answer for Ezra Dahlquist!"

"Martin!"

This time there was no hesitation. He heard Tex's voice, his tone shrill: "I answer for him."

"Rivera."

A strong baritone: "Answering for Rivera!"

"Wheeler!"

"I answer for Wheeler."

The cadet turned toward the Commandant and saluted:

"All present, sir. Class of 2075, First Muster complete."

The man in black returned the salute. "Very well, sir. We will proceed with the oath." He stepped forward to the very edge of the platform, the cadet at his elbow. "Raise your right hands."

The Commandant raised his own hand. "Repeat after me: Of my own free will, without reservation—"

" 'Of my own free will, without reservation—' "

"I swear to uphold the peace of the Solar System—"

In chorus they followed him.

"—to protect the lawful liberties of its inhabitants—

"—to defend the constitution of the Solar Federation—

"—to carry out the duties of the position to which I am now appointed—

"—and to obey the lawful orders of my superior officers,

"To these ends I subordinate all other loyalties and renounce utterly any that may conflict with them.

"This I solemnly affirm in the Name I hold most sacred."

"So help me, God," concluded the Commandant. Matt repeated his words, but the response around him took a dozen different forms, in nearly as many languages.

The Commandant turned his head to the cadet by his side. "Dismiss them, sir."

"Aye aye, sir." The cadet raised his voice. "On being dismissed, face to the right and file out. Maintain your formation until clear of the door. Dismissed!"

At the cue of his command, music swelled out and filled the hall; the newly created cadets marched away to the strains of the Patrol's own air, *The Long Watch*. It persisted until the last of them were gone, then faded out.

The Commandant waited until the youngster cadets had left, then faced around. His aide joined him at once, whereupon the acting cadet adjutant moved quickly from his side. Commodore Arkwright turned toward the departing cadet. "Mr. Barnes."

"Yes, sir?"

"Are you ready to be commissioned?"

"Er— I don't think so, sir. Not quite."

"So? Well, come see me soon."

"Yes, sir. Thank you."

The Commodore turned away and headed rapidly for the stage exit, with his aide's sleeve brushing his. "Well, John," asked the senior, "What did you think of them?"

"A fine bunch of boys, sir."

"That was my impression. All youth and eagerness and young expectation. But how many of them will we have to eliminate? It's a sorry thing, John, to take a boy and change him so that he is no longer a civilian, then kick him out. It's the cruelest duty we have to perform."

"I don't see a way to avoid it."

"There is no way. If we had some magic touchstone— Tell the field that I want to raise ship in thirty minutes."

"Aye aye, sir."

V INTO SPACE

The PATROL ACADEMY may lack ivy—covered buildings and tree—shaded walks; it does not lack room. There are cadets in every reach of the Federation, from ships circling Venus, or mapping the scorched earth of Mercury, to ships patrolling the Jovian moons.

Even on years—long exploration flights to the frozen fringes of the Solar System cadets go along—and are brevetted as officers when their captains think them ready, without waiting to return.

The public thinks of the Academy as the school ship P.R.S. *James Randolph*, but every cadet mess in every ship of the Patrol is part of the Academy. A youngster cadet is ordered to the *Randolph* as soon as he is sworn in and he remains attached to that ship until he is ready to go to a regular Patrol vessel as a passed cadet. His schooling continues; in time he is ordered back to where he started, Hayworth Hall, to receive his final polish.

An oldster, attached to Hayworth Hall, will not necessarily be there. He may be at the radiation laboratories of Oxford University, or studying interplanetary law at the Sorbonne, or he may even be as far away as Venus, at the Institute for System Studies. Whatever his route —and no two cadets pursue exactly the same course of training—the Academy is still in charge of him, until, and *if*, he is commissioned.

How long it takes depends on the cadet. Brilliant young Hartstone, who died on the first expedition to Pluto, was brevetted less than a year after he reported to Hayworth Hall as a groundhog candidate. But it is not unusual to find oldsters at Terra Base who have been cadets for five years or more.

Cadet Matthew Dodson admired himself in the mirror of the 'fresher. The oyster—white uniform he had found waiting when he returned from First Muster the evening before, and with it a small book of regulations embossed with his name and clipped to a new assignment schedule. The schedule had started out: "1.. Your first duty as a cadet is to read the regulation book herewith, at once. Hereafter you are responsible for the contents."

He had read it before taps, until his mind was a jumble of undigested rules: "A cadet is an officer in a limited sense—" "—behave with decorum and sobriety appropriate to the occasion—" "—in accordance with local custom rather than Patrol custom unless in conflict with an invariant law of the Federation or regulation of the Patrol." "—but the responsibility of determining the legality of the order rests on the person ordered as well as on the person giving the order." "—circumstances not covered by law or regulation must be decided by the individual in the light of the living tradition of the Patrol." "Cadets will at all times be smooth—shaven and will not wear their hair longer than two inches."

He felt that he understood the last mentioned.

He got up before reveille the next morning and dived into the 'fresher, shaved hastily and rather unnecessarily and got into uniform.

It fit him well enough, but to his eye the fit was perfect, the styling superb. As a matter of fact, the uniform lacked style, decoration, trim, insignia, or flattering cut.

But Matt thought he looked wonderful.

Burke pounded on the 'fresher door. "Have you died in there?" He stuck his head in. "Oh—all right, so you look sweet. Now how about getting out?"

"Coming." Matt stalled around the room for a few minutes, then overcome by impatience, tucked his regulation book in his tunic (regulation #383), and went to the refectory. He walked in feeling selfconscious, proud, and about seven feet tall. He sat down at his table, one of the first to arrive. Cadets trickled in; Cadet Sabbatello was one of the last.

The oldster looked grimly down the table. "Attention," he snapped. "All of you—stand up."

Matt jumped to his feet with the rest. Sabbatello sat down. "From now on, gentlemen, make it a rule to wait until your seniors are seated. Be seated." The oldster studied the studs in front of him, punched his order, and looked up. The youngsters had resumed eating. He rapped the table sharply. "Quiet, please. Gentlemen, you have many readjustments to make. The sooner you make them, the happier you will be. Mr. Dodson—stop dunking your toast; you are dripping it on your uniform. Which brings me," he went on, "to the subject of table manners—"

Matt returned to his quarters considerably subdued.

He stopped by Tex's room and found him thumbing through the book of regulations. "Hello, Matt. Say, tell me something—is there anything in this bible that says Mr. Dynkowski has the right to tell me not to blow on my coffee?"

"I see you've had it, too. What happened?"

Jarman's friendly face wrinkled. "Well, I'd begun to think of Ski as an all—right guy, helpful and considerate. But this morning at breakfast he starts out by asking me how I manage to carry around all that penalty-weight." Tex glanced at his waist line; Matt noted with surprise that Tex looked quite chubby in cadet uniform.

"All us Jarmans are portly," Tex went on defensively. "He should see my Uncle Bodie. Then he—"

"Skip it," said Matt. "I know the rest of it—now."

"Well, I guess I shouldn't have lost my temper."

"Probably not." Matt looked through the book. "Maybe this will help. It says here that, in case of doubt, you may insist that the officer giving the order put it in writing and stamp his thumb print, or use other means to provide a permanent record."

"Does it, really?" Tex grabbed the book. "That's for me!— 'cause I sure am in doubt. Boy! Just wait and see his face when I pull this one."

"I'd like to," agreed Matt. "Which way do you take the lift, Tex?"

The Patrol Rocket Ship Simon Bolivar, transport, was at Santa Barbara Field, having discharged a battalion of Space Marines, but P.R.S. Bolivar could take but about half the new class. The rest were to take the public shuttle rocket from Pike's Peak, launching catapult to Terra Space Station, there to be transferred to the *Randolph.*

"Transport," Tex answered. "How about you?"

"Me, too. I'd like to see Terra Station, but I'm glad we're going in a Patrol ship. What are you taking with you?"

Tex hauled out his luggage and hefted it. "It's a problem. I've got about fifty pounds here. Do you suppose if I rolled it up real small I could get it down to twenty pounds?"

"An interesting theory," Matt said. "Let's have a look at it—you've got to eliminate thirty pounds of penalty-weight."

Jarman spread his stuff out on the floor. "Well," Matt said at once, "you don't need all those photographs." He pointed to a dozen large stereos, each weighing a pound or more.

Tex looked horrified. "Leave my harem behind?" He picked up one. "There is the sweetest redhead in the entire Rio Grande Valley." He picked up another. "And Smitty—I couldn't get along without Smitty. She thinks I'm wonderful."

"Wouldn't she still think so if you left her pic behind?"

"Oh, of course. But it wouldn't be gallant." He considered. "I'll compromise—I'll leave behind my club."

"Your club?" Matt asked, failing to see anything of that description.

"The one I use to beat off the little darlings when they get too persistent."

"Oh. Maybe someday you'll teach me your secret. Yes, leave your club behind; there aren't any girls in the *Randolph*."

"Is that good?" demanded Tex.

"I refuse to commit myself." Matt studied the pile. "You know what I'd suggest? Keep that harmonica—I like harmonica music. Have those photos copied in micro. Feed the rest to the cat."

"That's easy for you to say."

"I've got the same problem." He went to his room. The class had the day free, for the purpose of getting ready to leave Earth. Matt spread his possessions out to look them over. His civilian clothes he would ship home, of course, and his telephone as well, since it was limited by its short range to the neighborhood of an earth—side relay office.

He made a note to telephone home before he packed the instrument. Might as well make one other call, too, he decided; even though he was resolved not to waste time on girls in his new life, it would be polite to phone and say good—by. He did so.

He put the instrument down a few minutes later, baffled to find that he had apparently promised to write regularly.

He called home, spoke with his parents and kid brother, —and then put the telephone with things to be shipped. He was scratching his head over what remained when Burke came in. He grinned. "Trying to swallow your penalty—weight?"

"I'll figure it out."

"You don't have to leave that junk behind, you know."

"Huh?"

"Ship it up to Terra Station, rent a locker, and store it. Then, when you go on liberty to the Station, you can bring back what you want. Sneak it aboard, if it's that sort of thing." Matt made no comment; Burke went on, "What's the matter, Galahad? Shocked at the notion of running contraband?"

"No. But I don't have a locker at Terra Station."

"Well, if you're too cheap to rent one, you can ship the stuff to mine. You scratch me and I'll scratch you."

"No, thanks." He thought about expressing some things to the Terra Station post office, then discarded the idea— the rates were too high. He went on sorting. He would keep his camera, but his micro kit would have to go, and his chessmen. Presently he had cut the list to what he hoped was twenty pounds; he took the stuff away to weigh it.

Reveille and breakfast were an hour early the next day. Shortly after breakfast the call-to-muster ran through Hayworth Hall, to be followed by heart-quickening strains of "Raise Ship!" Matt slung his jump bag over his shoulder and hurried down to the lower corridors. He pushed his way through a throng of excited youngster cadets and found his assigned area.

Muster was by squads and Matt was a temporary squad leader, as his name came first, alphabetically, in his squad. He had been, given a list; he reached into his pouch and had an agonizing moment of thinking he had left it up in his room before his fingers closed on it.

"Dodsworth!"

"Here."

"Dunstan,"

"Here."

He was still working through Frankel, Freund, and Funston when the oldster mustering the entire corridor shouted for him to report. He hurried to a conclusion, faced around, and saluted. "Squad nineteen—all present!"

Someone tittered and Matt realized suddenly that he had used the scout salute, rather than the relaxed, open-palmed gesture of the Patrol. His cheeks burned.

A brassy amplified voice called out, "All deck parties report." In turn, the oldster in Mart's corridor called out, "Third deck party, all present." When all reports were in there was a momentary silence, long enough for Matt to have a spine—tingling anticipation of what was to come. Would they? But they were doing so; the voice over the speaker called out: "Dahlquist?"

Another voice—heard only through the speaker—replied, "I answer for him."

It went on, until the Four were mustered, whereupon the first voice stated, "All present, sir."

"Man the ship."

They mounted a slidewalk, to step off in a large underground room, far out under Santa Barbara Field. There were eight large elevators arranged in a wide circle around the room. Matt and his squad were crowded into one of them and mounted to the surface. Up it went, much higher than had been necessary to enter the test-flight rocket, up and up, close by the huge bulk of the *Bolivar*.

It stopped and they trotted across the drawbridge into the ship. Inside the airlock stood a space-marines sergeant, gaudy and splendid who kept repeating, "Seventh deck! Down the hatch to your own deck—step lively!" He pointed to the hatch, down which disappeared a narrow, vertical steel ladder.

Matt hitched his jump bag out of his way and lowered himself into the hatch, moving fast to avoid getting his fingers stepped on by the cadet who followed him. He lost track of the decks, but there was a sergeant master-at-arms on each. He got off when he heard, "Third deck!"

He was in a wide, low cylindrical compartment, the deck of which was covered with plastic-foam padding. It ,was marked off in sections, each about seven feet by three and fitted with safety belts.

Matt found an unoccupied section, sat down, and waited. Presently cadets stopped dribbling in, the room was crowded. The master-at-arms called out, "Down, everybody—one to a section." He then counted them by noting that all sections were filled.

A loudspeaker warned, "All hands, prepare for acceleration!" The sergeant told them to strap down and remained standing until all had done so. He then lay down, grasped two handholds, and reported the third deck ready.

"All hands, stand by to raise!" called out the speaker.

There was a long and breathless wait.

"Up ship!" shouted the speaker.

Matt felt himself pressed into the padding.

Terra Space Station and the school ship *Randolph* lie in a circular orbit 22,300 miles above the surface of the Earth, where they circle the Earth in exactly twenty-four hours, the natural period of a body at that distance.

Since the Earth's rotation exactly matches their period, they face always one side of the Earth—the ninetieth western meridian, to be exact. Their orbit lies in the ecliptic, the plane of the Earth's orbit around the Sun, rather than in the plane of the Earth's equator. This results in them swinging north and south each day as seen from the earth. When it is noon in the Middle West, Terra Station and the *Randolph* lie over the Gulf of Mexico; at midnight they lie over the South Pacific.

The state of Colorado moves eastward about 830 miles per hour. Terra Station and the *Randolph* also move eastward nearly 7000 miles per hour—1.93 miles per second, to be finicky. The pilot of the Bolivar had to arrive at the *Randolph* precisely matched in course and speed. To do this he must break his ship away from our heavy planet, throw her into an elliptical orbit just tangent to the circular orbit of the *Randolph* and with that tangency so exactly placed that, when he matched speeds, the two ships would lie relatively motionless although plunging ahead at two miles per second. This last maneuver was no easy matter like jockeying a copter over a landing platform, as the two speeds, unadjusted, would differ by 3000 miles an hour.

Getting the *Bolivar* from Colorado to the *Randolph,* and all other problems of journeying between the planets, are subject to precise and elegant mathematical solution under four laws formulated by the saintly, absent—minded Sir Isaac Newton nearly four centuries earlier than this flight of the Bolivar—the three Laws of Motion and the Law of Gravitation. These laws are simple; their application in space to get from where you are to where you want to be, at the correct time with the correct course and speed, is a nightmare of complicated, fussy computation.

The "weight" pressing Matt into the padding was four gravities—Matt weighed nearly six hundred pounds. He lay there, breathing with difficulty, while the ship punched its way through the thick soup of air and out into free space. The heavy weight bound down the cadets while the Bolivar attained a speed of some six miles per second and climbed to an altitude of 900 miles.

At the end of five minutes and a few odd seconds the drive stopped.

Matt raised his head, while the sudden silence rang in his ears. The master-at-arms detected Matt's movement and others. He shouted, "Stay where you are—don't move."

Matt relaxed. They were in free fall, weightless, even though the *Bolivar* was speeding away from the Earth at more than 20,000 miles an hour. Each body—ship, planet, meteor, atom—in space falls continually. It moves also with whatever other motion it has inherited from its past experience.

Matt was acutely aware of his weightlessness, for his stomach told him about it, complainingly. To be on the safe side, he removed a sick kit from his jump bag, but he did not put it on. He was feeling queasy; it was not as bad as it had been on his test flight, not half as bad as the "bumps." He hoped to get by without losing his breakfast.

The loudspeaker sang out, "End of acceleration. Four hours of free fall." The master—at—arms sat up. "You can unstrap now," he said.

In a matter of seconds the compartment took on the look of a particularly crowded aquarium. One hundred boys were floating, swimming, squirming in every attitude and position between the deck and the overhead. These two barriers no longer seemed like floor and ceiling since up—and—down was gone; they were simply walls which rotated slowly and erratically for each observer as his own body turned past them.

"Hey, you guys!" yelled the sergeant. "Grab on to something and listen to me." Matt looked around, found himself near the overhead, spotted a handhold, and grasped it. "It's time you kids learned some traffic rules for free flight. You got to learn to zig when the other guy zags. If you happen to meet the Captain and you zig when you should 'a' zagged and bump him, he ain't going to like it. See?"

He stuck out a scarred thumb. "Rule one: all groundhogs —that's you and don't try to tell me anything different—are required to hold on with at least one hand at all times. That applies until you pass your free-fall acrobatics test. Rule two.— give way to officers and don't make them have to shout 'Gangway!' Besides that, give way to anybody on duty, or busy, or with his hands full.

"If you're moving aft, pass inboard of the man you meet, and contrariwise if you're moving forward. If you're moving clockwise, figuring 'clockwise' from the bow end of the ship,

you pass the man you meet outboard and let him pass inboard—contrariwise for counterclockwise. No matter what direction you're going, if you overtake a man you pass inboard of him. Is that all clear?"

Matt thought it was, though he doubted if he could remember it. But a remaining possibility occurred to him. "Sergeant," he asked innocently, "suppose you're moving directly in or out from the center of the ship—what do you do?"

The sergeant looked disgusted, which gave his face an odd appearance to Matt, as their two faces were upside down with respect to each other. "You get what usually happens to jaywalkers—okay, so you're moving across the traffic: just stay out of everybody's way. It's your lookout. Any more questions?"

No one answered; he went on: "All right, go out and look around the ship—but try to behave yourselves and not bump into anybody so you'll be a credit to deck three."

The third deck had no ports of any sort, but the Bolivar was a long-jump transport; she possessed recreation rooms and viewports. Matt started forward, seeking a place from which to get a glimpse of the Earth.

He remembered to pass outboard as he pulled himself along, but apparently some passengers had not been indoctrinated. Each hatchway was a traffic jam of youngsters, each trying to leave his own deck to sightsee in some other deck, any deck.

The sixth deck, he found, was a recreation room. It contained the ship's library—locked—and games equipment, also locked. But it did have six large viewports.

The recreation deck had carried a full load of passengers. Now, in free fall, cadets from all other decks gradually found their way to the recreation deck, just as Matt had, seeking a view of outside; at the same time the original roster of that deck showed no tendency to want to leave their favored billet.

It was crowded.

Crowded as a basket full of kittens—Matt removed someone's space boot from his left eye and tried to worm his way toward one of the ports. Judicious work with his knees and elbows and a total disregard of the rules of the road got him to the second or third layer near one port. He placed a hand on a shoulder in front of him. The cadet twisted around. "Hey! Who do you think you're shoving? Oh—hello, Matt."

"Hi, Tex. How's it going?"

"All right. Say, you should have been here a few minutes ago. We passed one of the television relay stations, close by. Boy, oh, boy, are we traveling!"

"We did, huh? What did it look like?"

"Couldn't see much of it, must have been ten miles away, maybe. But, with the time we're making it was just there she comes and there she goes."

"Can you see the Earth?" Matt squirmed toward the port.

"Natch." Tex gave way and let Matt slide into his place. The frame of the port cut across the eastern Atlantic. Matt could see an arc extending almost from the North Pole to the Equator.

It was high noon over the Atlantic. Beyond it, bright in the afternoon sunlight, he could make out the British Isles, Spain, and the brassy Sahara. The browns and greens of land were in sharp contrast to the deep purple of the ocean. In still greater contrast stood the white dazzle of cloud. As his eye approached the distant, rounded horizon the details softened, giving a strong effect of stereo, of depth, of three—dimensional globularness—the world indeed was round!

Round and green and beautiful! He discovered presently that he had been holding his breath. His nausea was quite gone.

Someone tugged at his leg. "Don't stay there all day. Do you want to hog it?"

Regretfully Matt gave way to another cadet. He turned and shoved himself away from the port and in so doing became disoriented. He could not find Tex in the helter-skelter mass of floating bodies.

He felt a grip on his right ankle. "Let's get out of here, Matt."

"Right." They worked their way to the hatch and moved to the next deck. Being without ports it was not heavily populated. They propelled themselves toward the center of the room, away from the traffic, and steadied themselves on handholds. "Well," said Matt, "so this is it—space, I mean. How do you like it?"

"Makes me feel like a goldfish. And I'm getting crosseyed trying to figure out which side is up. How's your gizzard? Been dropsick?"

"No." Matt swallowed cautiously. "Let's not talk about it. Where were you last night, Tex? I looked for you a couple of times, but your roomate said he hadn't seen you since dinner."

"Oh, that—" Tex looked pained. "I was in Mr. Dynkowski's room. Say, Matt, that was a bum steer you gave me."

"Huh? What steer?"

"You know—when you advised me to ask Mr. Dynkowski to put an order in writing if I was in doubt about it. Man, oh man, did you get me.in a jam!" .

"Wait a minute—I didn't advise you to do that; I just pointed out that the regs let you do it if you wanted to."

"Just the same, you were egging me on."

"The deuce I was! My interest was purely theoretical. You were a free agent."

"Oh, well—skip it. Skip it."

"What happened?"

"Well, last night at dinner I ordered pie for dessert. I picked it up, just like I always have ever since I got too big for Ma to slap my hands for it, and started shoveling it in my face, happy as a pup in a pansy bed. Ski ordered me to cease and desist—told me to use my fork."

"Yeah? Go on."

"I said to put it in writing, please, sir, polite as a preacher."

"It stopped him?"

"Like fun it did! He said, Very well, Mr. Jarman, cool as could be, took out his notebook, wrote it out, stamped his thumb print on it, tore out the page and handed it to me."

"So you used your fork. Or didn't you?"

"I sure did. But that's only the beginning. Immediately he wrote out another order and handed it to me. He told me to read it aloud. Which I did."

"What did it say?"

"Wait a minute ... I've got it here somewhere." Tex poked around in his pouch. "Here—read it."

Matt read, " 'Cadet Jarman—immediately after this meal you will report to the officer-of-thewatch, taking with you the first written order I gave you. Explain to him the events leading up to the first order and get an opinion from him as to the legality of orders of this type—S. Dynkowski, psd. cdt.'"

Matt whistled. "Oh, oh. ... What did you do?"

"I finished my pie, the way he told me to, though I didn't want it very much by then. Ski was nice about it. He grinned at me and said, 'No hard feelings, Mr. Jarman. All according to protocol and all that sort of thing.' Then he wanted to know where in the world I had gotten the idea."

Matt felt his neck grow warm. "You told him it was my idea?"

"Do I look stupid? I just told him somebody had pointed out regulation number nine-oh-seven to me."

Matt relaxed. "Thanks, Tex. I'll remember that."

"Forget it. But he sent you a message."

"Me?"

"It was just one word: 'Don't,'"

"Don't what?"

"Just 'Don't.' He added that amateur space lawyers frequently talked themselves out of the Patrol."

"Oh." Matt tucked this away and started trying to digest it. "What happened afterwards? When you saw the duty officer?"

"I reported to the duty office and the cadet on watch sent me on in. I saluted and announced my name, like a good little boy, and showed him the two orders." Tex paused and stared into the distance.

"Yes? Go on, man—don't stop like that"

"Then he most scientifcially ate my ears off. My Uncle Bodie couldn't have done a better job." Tex paused again, as if the memory were too painfully sharp. "Then he quieted down a little bit and explained to me in words of one syllable that reg nine-oh-seven was for emergencies only and that youngster cadets were under the orders of oldster cadets at all times and in all matters, unless the regulations specifically say otherwise."

"He did? Say, that covers an awful lot of ground. Why, that means a senior cadet can order us to do almost anything. You mean it's covered by law that an oldster can tell me how to part my hair?"

"Just precisely that—you happened to pick the very words Lieutenant von Ritter used. An oldster can't tell you to violate a regulation—he can't tell you to take a poke at the captain and he can't order you to hold still while he takes a poke at you. But that's about all that limits him. Mr. von Ritter says that it's left up to the good judgment and discretion of the senior, and table manners were very definitely Mr. Dynowski's business and not to forget it! Then he told me to report back to Ski."

"Did he crow over you?"

"Not a bit." Tex's brow wrinkled. "That's the funny part about it. Ski treated the whole affair just as if he had been giving me a lesson in geometry. He said that now that I was assured that his orders were according to regulation he wanted me to know why he had told me how to eat my pie. He even said he could see that I would regard it as improper interference with my private life. I said I guessed I didn't have any private life any more. He said no, I had one all right, but it would feel pretty microscopic for a while.

"Then he explained the matter. A patrol officer is supposed to be able to move in all society—if your hostess eats with her knife, then you eat with your knife."

"Everybody knows that."

"Okay. He pointed out that candidates come from everywhere. Some of them even come from families and societies where it's good manners for everybody to eat out of one dish, with their fingers". . .

some of the Moslem boys. But there is an overall way to behave that is acceptable anywhere among the top crust."

"Nuts," said Matt. "I've seen the Governor of Iowa with a hot dog in one hand and a piece of pie in the other."

"I'll bet it wasn't at a state dinner," Tex countered. "No, Matt, it made sense the way he told it. He said pie wasn't important, but it was part of a larger pattern—for instance that you must never mention death on Mars or to a Martian."

"Is that a fact?"

"I guess so. He said that in time I would learn how to 'eat pie with a fork' as he put it, under any possible circumstances on any planet. He let it go at that."

"I should think he would. I take it he lectured you all evening?"

"Oh, my, no. Ten minutes, maybe."

"Then where were you? You still hadn't come back to your room, just before taps."

"Oh, I was still in Ski's room, but I was busy."

"Doing what? Stroking his brow?"

"No." Tex looked mildly embarrassed. "I was writing— 'I will always eat my pie with my fork,' two thousand times."

Tex and Matt attempted to explore the ship and did in fact visit every deck that was open to them. But the power-room door was locked and a space-marine guard kept them from entering the passageway leading to the pilot room. They tried to get another view from the ports in the recreation room but found that a degree of order had been instituted; the master-at-arms of that deck was requiring each cadet that entered to state that he had not yet had a chance to look out before the cadet was allowed to tarry.

As for the other passenger decks, they found that when they had seen one, they had seen all. Shipboard refreshers interested them for a while, as the curious and clever modifications necessary to make a refresher function properly in space were new to both of them. But four hours is too long to spend inspecting showers and fixtures; after a while they found another fairly quiet spot to loaf and experienced for the first time the outstanding characteristic of all space travel—its monotony.

Much later the ship's speaker blared, "Prepare for acceleration. Ten minute warning."

Strapped down again, each in his place, the boys felt short blasts of power at rather long intervals, then a very considerable wait, after which there was the softest and gentlest of bumps. "That's the drag line," remarked the sergeant in Matt's compartment. "They'll warp us in. It won't be long now."

Ten minutes later the speaker announced, "By decks, in succession

—discharge passengers."

"Unstrap," said the sergeant. He left his midships position and posted himself at the hatch ladder. Transferring passengers was a lengthy process, as the two ships were linked by only one air lock each. Matt's party waited while four decks forward of them were emptied, then they pulled themselves along the ladder to the seventh deck. There a passenger port was open but beyond it, instead of empty space, was the inside of a corrugated tube, six feet in diameter. A line ran down the center of it and was made fast to a padeye in the ship. Along this line swarmed a steady stream of cadets, monkey fashion.

In his turn, Matt grabbed the line and pulled himself along. Fifty feet beyond the air lock, the tube suddenly opened out into another compartment, and Matt found himself inside his new home, the P.R.S. *Randolph.*

VI 'READING, AND 'RITING, AND 'RITHMETIC —"

THE P.R.S. *Randolph* had been a powerful and modern cruiser of her day. Her length was 900 feet, her diameter 200, making her of moderate size, but her mass, as a school ship, was only 60,000 tons, more or less.

She was kept ten miles astern of Terra Station in their common orbit. Left to the influence of their mutual gravitations, she would have pursued a most leisurely orbit around the ten-times-more-massive Terra Station, but, for the safety of traffic at Terra Station, it was better to keep in a fixed position.

This was easy to accomplish. The mass of Earth is six billion trillion tons; the mass of Terra Station is one hundred-million-billionth of that, a mere 600,000 tons. At ten miles the "weight" of the *Randolph* with respect to Terra Station was roughly one thirtieth of an ounce, about the weight on Earth of enough butter for one half slice of bread.

On entering the *Randolph* Matt found himself in a large, well—lighted compartment of odd shape, somewhat like a wedge of cake. Clumps of youngster cadets were being herded out exits by other cadets who wore black armbands. One such cadet headed toward him, moving through the air with the easy grace of a pollywog. "Squad nineteen—where's the squad leader of squad nineteen?"

Matt held out his arm. "Here, sir! I'm squad leader of nineteen."

The upperclassman checked himself with one hand on the guide line to which Matt still clung. "I relieve you, sir. But stick close to me and help me round up these yahoos. I suppose you know them by sight?"

"Uh, I think so, sir."

"You should—you've had time." Matt was chagrined to find, in the next few moments that the new squad leader—Cadet Lopez—knew the squad muster roll by heart, whereas Matt had to refer to his copy to assist him in locating the members. He was not really aware of the implications of order and efficient preparation; it did impress him as "style." With Matt to spot and Lopez to dive, hawklike, all the way across the compartment if necessary, to round up stragglers, squad nineteen was soon assembled near one exit, where they clung like a colony of bats.

"Follow me," Lopez told them, "and hang on. No free maneuvers. Dodson—bring up the rear."

"Aye aye, sir."

They snaked their way through endless passages, by guide line across compartment after compartment, through hatches, around corners. Matt was quite lost. Presently the man just head of him stopped. Matt closed in and found the squad gathered just inside another compartment. "Soup's on," announced Lopez. "This is your messroom. Lunch in a few minutes."

Behind Lopez, secured firmly to the far wall, were mess tables and benches. The table tops faced Matt—under him, over him, or across from him—what you will. It seemed an impractical arrangement. "I'm not very hungry," one youngster said faintly.

"You ought to be," Lopez answered reasonably. "It's been five hours or more since you had breakfast. We're on the same time schedule here as Hayworth Hall, zone plus eight, Terra. Why aren't you hungry?"

"Uh, I don't know, sir. I'm just not."

Lopez grinned and suddenly looked as young as his charges. "I was just pulling your leg, kiddo. The chief engineer will have some spin on us in no time, as soon as we break loose from the *Bolivar*. Then you can sit down on your soft, round fanny and console your tender stomach in peace. You'll have an appetite. In the meantime, take it easy."

Two more squads filtered in. While they waited Matt said to Lopez, "How fast will the ship spin, sir?"

"We'll build up to one gravity at the outer skin. Takes about two hours to do it, but we'll eat as soon as we're heavy enough for you groundhogs to swallow your soup without choking."

"But how fast is that, sir?"

"Can you do simple arithmetic?"

"Why, yes, sir."

"Then do it. The *Randolph* is two hundred feet through and we spin on her main axis. The square of the rim speed divided by her radius—what's the rpm?"

Matt got a faraway look on his face. Lopez said, "Come, now, Mr. Dodson—pretend you're heading for the surface and about to crash. *What's the answer?*"

"Uh—I'm afraid I can't do it in my head, sir."

Lopez looked around. "All right—who's got the answer?" No one spoke up. Lopez shook his head mournfully. "And you laddies expect to learn to astrogate! Better by far you should have gone to cow colleges. Never mind—it works out to about five and four-tenths revolutions per minute. That gives one full gravity for the benefit of the women and children. Then it's cut down day by day, until a month from now we're in free fall again. That gives you time to get used to it—or else."

Someone said, "Gee, it must take a lot of power."

Lopez answered, "Are you kidding? It's done by electric-braking the main axis flywheels. The shaft has field coils wound on it; you cut it in as a generator and let the reaction between the wheel and the ship put a spin on the ship. You store the juice. Then when you want to take the spin off, you use the juice to drive it as a motor and you are back where you started, free for nothing, except for minor losses. Savvy?"

"Er, I guess so, sir."

"Look it up in the ship's library, sketch the hook—up, and show it to me after supper." The junior cadet said nothing; Lopez snapped. "What's the matter, Mister? Didn't you hear me?"

"Yes, sir—aye aye, sir."

"That's better."

Very slowly they drifted against a side wall, bumped against it, and started sliding slowly toward the outboard wall, the one to which the mess tables were fastened. By the time they reached it there was enough spin on the ship to enable them to stand up and the mess tables now assumed their proper relationship, upright on the floor, while the hatch through which they had lately floated was a hole in the ceiling above.

Matt found that there was no sensation of dizziness; the effect was purely one of increasing weight. He still felt light, but he weighed enough to sit down at a mess table and stay in contact with his seat; minute by minute, imperceptibly, he grew heavier.

He looked over his place at the table, seeking controls that would permit him to order his meal. There were clips and locking holes which he guessed were intended for use in free flight, but nothing else. He looked up as Lopez banged on the table.

"And now, gentlemen, this is not a resort hotel. Count off, around the table." He waited until the youngsters had done so, then said, "Remember your order. Numbers one and two will rustle up the calories today, and all of you in rotation thereafter."

"Where, sir?"

"Use your eyes. Over there."

"Over there" was a door which concealed a delivery conveyor. Cadets from other tables were gathering around it. The two cadets designated as waiters went over and returned shortly with a large metal rack containing twenty rations, each packed in its service platter and still steaming hot. Clipped to each were knife, fork, and spoons—and sipping tubes.

Matt found that the solid foods were covered by lids that snapped back over the food unless clipped up out of the way, while the liquids were in covered containers fitted with valves through which sipping tubes might be slipped. He had never before seen table utensils adapted for free-fall conditions in space. They delighted him, even though Earthside equipment would have served as long as the ship was under spin.

Lunch was hot roast beef sandwiches with potatoes, green salad, lime sherbert, and tea. Lopez kept up a steady fire of questions throughout the meal, but Matt did not come into his range. Twenty minutes later the metal tray in front of Matt was polished almost as well as the sterilizer would achieve. He sat back, feeling that the Patrol was a good outfit and the *Randolph* a fine place to be.

Before turning his charges loose Lopez gave them each their schedule of assignments. Mart's room number was A-5197. All living quarters were on A-deck which was the insulated outer skin of the ship. Lopez gave them a brief, condescending lecture on the system of numbering the spaces in the ship and dismissed them. His manner gave no hint that he himself had been lost for one full day shortly after his own arrival a year earlier.

Matt got lost, of course.

He attempted to take a short cut straight through the ship on the advice of a passing marine and got completely twisted when he found himself at the no-weight center of the *Randolph*. When he had worked his way back down levels of increasing weight until he found himself at one gravity and could go no further he stopped the first cadet with a black arm band whom he could find and threw himself on his mercy. A few minutes later he was led to corridor five and found his own room.

Tex was already there. "Hello, Matt," he greeted him. "What do you think of our little cabin in the sky?"

Matt put down his jump bag. "Looks all right, but the first time I have to leave it I'm going to unroll a ball of string. Is there a viewport?"

"Not likely! What did you expect? A balcony?"

"I don't know. I sort of hoped that we'd be able to look out and see Earth." He started poking around, opening doors. "Where's the 'fresher?"

"Better start unrolling your ball of string. It's way down the passage."

"Oh. Kind of primitive. Well, I guess we can stand it." He went on exploring. There was a common room about fifteen feet square. It had doors, two on each side, leading into smaller cubicles. "Say, Tex," he announced when he had opened them all, "this place is fitted up for four people."

"Go to the head of the class."

"I wonder who we'll draw."

"So do I." Tex took out his assignment sheet. "It says here that we can reshuffle roommates until supper time tomorrow. Got any ideas, Matt?"

"No, I can't say I really know anybody but you. It doesn't matter as long as they don't snore—and as long as it isn't Burke."

They were interrupted by a rap on the door. Tex called out, "Come in!" and Oscar Jensen stuck his blond head inside.

"Busy?"

"Not at all."

"I've got a problem. Pete and I found ourselves assigned to one of these four-way rooms and the two roommates we landed with want us to make room for two other fellows. Are you guys tied down as yet?"

Tex looked at Matt, who nodded. Tex turned back to Oscar. "You can kiss me, Oscar—we're practically married."

An hour later the four had settled down to domesticity. Pete was in high spirits. "The *Randolph* is just what the doctor ordered," he announced. "I'm going to like it here. Any time my legs start to ache all I have to do is go up to G—deck and it's just like being back home —I weigh my proper weight again."

"Yep," agreed Tex, "if the joint were co—educational it would be perfect."

Oscar shook his head. "Not for me. I'm a woman-hater."

Tex clucked sorrowfully. "You poor, poor boy. Now take my Uncle Bodie—he thought he was a woman-hater, too. . . ."

Matt never found out how Uncle Bodie got over his disability. An announcer, mounted in the common room, summoned him to report to compartment B-121. He got there, after a few wrong turns, and found another youngster cadet just coming out. "What's it for?" he asked.

"Go on in," the other told him. "Orientation."

Matt went in and found an officer seated at a desk. "Cadet Dodson, sir, reporting as ordered."

The officer looked up and smiled. "Sit down, Dodson, Lieutenant Wong is my name. I'm your coach."

"My coach, sir?"

"Your tutor, your supervisor, anything you care to call it. It's my business to see that you and a dozen more like you study what you need to study. Think of me as standing behind you with a black snake whip." He grinned.

Matt grinned back. He began to like Mr. Wong.

Wong picked up a sheaf of papers. "I've got your record here—let's lay out a course of study. I see you type, use a slide rule and differential calculator, and can take shorthand—those are all good. Do you know any outer languages? By the way, don't bother to talk Basic; I speak North American English fairly well. How long have you spoken Basic?"

"Er, I don't know any outer languages, sir. I had Basic in high school, but I don't really think in it. I have to watch what I'm saying."

"I'll put you down for Venerian, Martian, and Venus trade talk. Your voicewriter—you've looked over the equipment in your room?"

"Just glanced at it, sir. I saw there was a study desk and a projector."

"You'll find a spool of instructions in the upper righthand drawer of the desk. Play them over when you go back. The voicewriter built into your desk is a good model. It can hear and transcribe not only the Basic vocabulary, but the Patrol's special vocabulary of technical words. If you will stick to its vocabulary, you can even write love letters on it—" Dodson glanced sharply at Lieutenant Wong, but Wong's face was impassive; Matt decided not to laugh.

"—so it's worth your while to perfect your knowledge of Basic even for social purposes. However, if you speak a word the machine can't find on its list, it will just 'beep' complainingly until you come to its rescue. Now about math—I see you have a condition in tensor calculus."

"Yes, sir," Matt admitted. "My high school didn't offer it."

Wong shook his head sadly. "I sometimes think that modern education is deliberately designed to handicap a boy. If cadets arrived here having already been taught the sort of things the young human animal can learn, and should learn, there would be fewer casualties in the Patrol. Never mind—we'll start you on tensors at once. You can't study nuclear engineering until you've learned the language of it. Your school was the usual sort, Dodson? Classroom recitations, daily assignments, and so forth?"

"More or less. We were split into three groups."

"Which group were you in?"

"I was in the fast one, sir, in most subjects."

"That's some help, but not much. You're in for a shock, son. We don't have classrooms and fixed courses. Except for laboratory work and group drills, you study alone. It's pleasant to sit in a class daydreaming while the teacher questions somebody else, but we haven't got time for that. There is too much ground to cover. Take the outer languages alone—have you ever studied under hypnosis?"

"Why, no, sir."

"We'll start you on it at once. When you leave here, go to the Psycho Instruction Department and ask for a first hypno in Beginning Venerian. What's the matter?"

"Well. . . . Sir, is it absolutely necessary to study under hypnosis?"

"Definitely. Everything that can possibly be studied under hypno you will have to learn that way in order to leave time for the really important subjects."

Matt nodded. "I see. Like astrogation."

"No, no, no! Not astrogation. A ten-year-old child could learn to pilot a spaceship if he had the talent for mathematics. That is kindergarten stuff, Dodson. The arts of space and warfare are the least part of your education. I know, from your tests, that you can soak up the math and physical sciences and technologies. Much more important is the world around you, the planets and their inhabitants—extraterrestrial biology, history, cultures, psychology, law and institutions, treaties and conventions, planetary ecologies, system ecology, interplanetary economics, applications of extraterritorialism, comparative religious customs, law of space, to mention a few."

Matt was looking bug-eyed. "My gosh! How long does it take to learn all those things?"

"You'll still be studying the day you retire. But even those subjects are not your education; they are simply raw materials. Your real job is to learn how to think—and that means you must study several other subjects: epistemology, scientific methodology, semantics, structures of languages, patterns of ethics and morals, varieties of logics, motivational psychology, and so on. This school is based on the idea that a man who can think correctly will automatically behave morally—or what we call 'morally.' What is moral behavior for a Patrolman, Matt? You are called Matt, aren't you? By your friends?"

"Yes, sir. Moral behavior for a Patrolman ,. ."

"Yes, yes. Go on."

"Well, I guess it means to do your duty, live up to your oath, that sort of thing."

"Why should you?"

Matt kept quiet and looked stubborn.

"Why should you, when it may get you some messy way of dying?

Never mind. Our prime purpose here is to see to it that you learn how your own mind works. If the result is a man who fits into the purposes of the Patrol because his own mind, when he knows how to use it, works that way—then fine! He is commissioned. If not, then we have to let him go."

Matt remained silent until Wong finally said, "What's eating on you, kid? Spill it."

"Well—look here, sir. I'm perfectly willing to work hard to get my commission. But you make it sound like something beyond my control. First I have to study a lot of things I've never heard of. Then, when it's all over, somebody decides my mind doesn't work right. It seems to me that what this job calls for is a superman."

"Like me." Wong chuckled and flexed his arms. "Maybe so, Matt, but there aren't any supermen, so we'll have to do the best we can with young squirts like you. Come, now, let's make up the list of spools you'll need."

It was a long list. Matt was surprised and pleased to find that some story spools had been included. He pointed to an item that puzzled him—An Introduction to Lunar Archeology. "I don't see why I should study that—the Patrol doesn't deal with Selenites; they've been dead for millions of years."

"Keeps your mind loosened up. I might just as well have stuck in modern French music. A Patrol officer shouldn't limit his horizons to just the things he is sure to need. I'm marking the items I want you to study first, then you beat it around to the library and draw out those spools, then over to Psycho for your first hypno. In about a week, when you've absorbed this first group, come back and see me."

"You mean you expect me to study all the spools I'm taking out today in *one week*?" Matt looked at the list in amazement.

"That's right. In your off hours, that is—you'll be busy with drills and lab a lot. Come back next week and we'll boost the dose. Now get going."

"But— Aye aye, sir!"

Matt located the Psycho Instruction Department and was presently ushered into a small room by a bored hypno technician wearing the uniform of the staff services of the Space Marines. "Stretch out in that chair," he was told. "Rest your head back. This is your first treatment?" Matt admitted that it was.

"You'll like it. Some guys come in here just for the rest— they already know more than they ought to. What course was it you said you wanted?"

"Beginning Venerian."

The technician spoke briefly to a pick—up located on his desk. "Funny thing—about a month ago an oldster was in here for a brush up in electronics. The library thought I said 'colonies' and now he's loaded up with a lot of medical knowledge he'll never use. Lemme have your left arm." The technician irradiated a patch on his forearm and injected the drug. "Now just lay back and follow the bouncing light. Take it easy . . . relax . . . relax . . . and . . . close . . . your ... eyes ... and ... relax ... you're ... getting—"

Someone was standing in front of him, holding a hypodermic pressure injector "That's all. You've had the antidote."

"Huh?" said Matt. "Wazzat?"

"Sit still a couple of minutes and then you can go."

"Didn't it take?"

"Didn't what take? I don't know what you were being exposed to; I just came on duty."

Matt went back to his room feeling rather depressed. He had been a little afraid of hypnosis, but to find that he apparently did not react to the method was worse yet. He wondered whether or not he could ever keep up with his studies if he were forced to study everything, outer languages as well, by conventional methods.

Nothing to do but to go back and see Lieutenant Wong about it tomorrow, he decided.

Oscar was alone in the suite and was busy trying to place a hook in the wall of a common room. A framed picture was leaning against the chair on which he stood. "Hello, Oscar."

"Howdy, Matt." Oscar turned his head as he spoke; the drill he was using slipped and he skinned a knuckle. He started to curse in strange, lisping speech. "*May maledictions pursue this nameless thing to the uttermost depths of world slime!*"

Matt clucked disapprovingly. "*Curb thy voice, thou impious fish.*"

Oscar looked up in amazement. "Matt—I didn't know you knew any Venerian."

Matt's mouth sagged open. He closed it, then opened it to speak "Well, I'll be a— neither did I."

VII TO MAKE A SPACEMAN

THE SERGEANT CROUCHED in the air, his feet drawn up. "At the count of one," he was saying, "take the ready position, with your feet about six inches from the steel. At the count of two, place your feet firmly against the steel and push off." He shoved against the steel wall and shot into the air, still talking, "Hold the count of four, turn on the count of five—" His body drew up into a ball and turned over a half turn, "—check your rotation—" His body extended again, "—and make contact on the count of seven—" His toes touched the far wall, "—letting your legs collapse softly so that your momentum will be soaked up without rebound." He collapsed loosely, like an empty sack, and remained floating near the spot where he had landed.

The room was a cylinder fifty feet in diameter in the center of the ship. The entire room was mounted in rollers and was turned steadily in the direction opposite to the spin of the ship and with the same angular speed: thus it had no net spin. It could be entered only from the end, at the center of rotation.

It was a little island of "free fall"—the free-fall gymnasium. A dozen youngster cadets clung to a grab line running fore—and—aft along the wall of the gym and watched the sergeant. Matt was one of the group.

"And now, gentlemen, let's try it again. By the numbers—One! Two! Three!" by the count of five, at which time they all should have turned in the air, neatly and together, all semblance of order was gone. There were collisions, one cadet had even failed to get away from the grab line, and two cadets, refugees from a midair skirmish, were floating aimlessly toward the far end of the room. Their faces had the bewildered look of a dog trying to get traction on smooth ice as they threshed their arms and legs in an effort to stay their progress.

"No! No! No!" said the sergeant and covered his face with his hands. "I can't bear to look. Gentlemen—please! A little coordination. Don't throw yourself at the far wall like an Airedale heading into a fight. A steady, firm shove— like this."

He took off sideways, using the traction given him by his space boots, and intercepted the two deserters, gathering one in each arm and letting his momentum carry the three bodies slowly toward the far end of the grab line, "Grab on," he told them, "and back to your places. Now, gentlemen—once more. Places! By the numbers—normal push off, with arrested contact—one!"

A few moments later he was assuring them that he would much rather teach a cat to swim.

Matt did not mind. He had managed to reach the far wall and stay there. Without grace, proper timing, nor at the spot he had aimed for, but he had managed it, after a dozen failures. For the moment he classed himself as a spaceman.

When the class was dismissed he hurried to his room and into his own cubicle, selected a spool on Martian history, inserted it in his projector, and began to study. He had been tempted to remain in the free-fall gymnasium to practice; he wanted very badly to pass the "space legs" test—free-fall acrobatics—as those who had passed it and qualified in the use of basic space suits as well were allowed one liberty a month at Terra Station.

But he had had an extra interview with Lieutenant Wong a few days before. It had been brief, biting, and had been concerned with the efficient use of his time.

Matt did not want another such—nor the five demerits that went with it. He settled his head in the neck rest of his study chair and concentrated on the recorded words of the lecturer while scenes in color-stereo passed in front of him, portraying in chill beauty the rich past of the ancient planet.

The projector was much like the study box he had used at home, except that it was more gadgeted, it could project in three dimensions, and was hooked in with the voicewriter. Matt found this a great time-saver. He could stop the lecture, dictate a summary, then cause the projector to throw his printed notes on the screen.

Stereo-projection was a time-saver for manual subjects as well. "You are now entering the control room of a type A-6 utility rocket," the unseen lecturer would say, "and will practice an airless landing on Luna"—while the camera moved through the door of the rocket's pilot room and panned down to a position corresponding to the pilot's head. From there on a pictured flight could be made very realistic.

Or it might be a spool on space suits. "This is a four-hour suit," the voice would say, "type M, and may be worn anywhere outside the orbit of Venus. It has a low-capacity rocket unit capable of producing a total change of speed in a 300 lb. mass of fifty foot-seconds. The builtin radio has a suit-to-suit range of fifty miles. Internal heating and cooling is—" By the time Matt's turn came for spacesuit drill he knew as much about it as could be learned without practice.

His turn came when he passed the basic free-fall test. He was not finished with free-fall drill-—there remained group precision drill, hand-to-hand combat, use of personal weapons, and other refinements —but he was judged able to handle himself well enough. He was free, too, to go out for free-fall sports, wrestling, bank tennis, jai alai, and several others —up to now he had been eligible only for the chess club. He picked space polo, a game combining water polo and assault with intent to maim, and joined the local league, in the lowest or "bloodynose" group.

He missed his first chance at spacesuit drill because a battered nose had turned him into a mouth breather—the respirator for a type-M suit calls for inhaling through the nose and exhaling through the mouth. But he was ready and anxious the following week. The instructor ordered his group to "Suit up!" without preliminary, as it was assumed that they had studied the instruction spool.

The last of the ship's spin had been removed some days before. Matt curled himself into a ball, floating free, and spread open the front of his suit. It was an unhandy process; he found shortly that he was trying to get both legs down one leg of the suit. He backed out and tried again. This time the big fishbowl flopped forward into the opening.

Most of the section were already in their suits. The instructor swam over to Matt and looked at him sharply. "You've passed your free-fall basic?"

"Yes," Matt answered miserably.

"It's hard to believe. You handle yourself like a turtle on its back. Here." The instructor helped Matt to tuck in, much as if he were dressing a baby in a snow suit. Matt blushed.

The instructor ran through the checkoff list—tank pressure, suit pressure, rocket fuel charge, suit oxygen, blood oxygen (measured by a photoelectric gadget clipped to the earlobe) and finally each suit's walky—talky unit. Then he herded them into the airlock.

Matt felt his suit swell up as the pressure died away in the lock. It was becoming slightly harder to move his arms and legs. "Hook up your static lines," called out the instructor. Matt uncoiled his from his belt and waited. Reports came in: "Number one hooked." "Number two hooked."

"Number three hooked," Matt sang out into the mike in his helmet as he snapped his line to the belt of cadet number four. When they were all linked like mountain climbers the instructor hooked himself to the chain and opened the outer door of the lock. They looked out into the star-flecked void.

"Click on," directed the instructor, and placed his boots gently against the side of the lock. Matt did likewise and felt the magnetic soles of his boots click against the steel. "Follow me and stay closed up." Their teacher walked along the wall to the open door and performed an awkward little squatting spread-eagle step. One boot was still inside the door, flat to the wall, with the toe pointing inboard; with the other he reached around the corner, bent his knees, and felt for the outer surface of the ship. He withdrew the foot still in the lock and straightened his body—with which he almost disappeared, for he now stuck straight out from the ship, his feet flat to her side.

Following in order, Matt went out through the door. The ninety degree turn to get outside the lock and "standing" on the outer skin of the ship he found to be tricky; he was forced to use his hands to steady himself on the door frame. But he got outside and "standing up." There was no true up—and—down; they were still weightless, but the steel side was a floor "under" them; they stuck to it as a fly sticks to a ceiling.

Matt took a couple of trial steps. It was like walking in mud; his feet would cling stickily to the ship, then pull away suddenly. It took getting used to.

They had gone out on the dark side of the ship. Sun, Moon and Earth lay behind its bulk, underfoot. Not even Terra Station could be seen.

"We'll take a walk," announced the instructor, his voice hollow in their helmets. "Stick together." He started around the curving side of the ship. A cadet near the end of the chain tried to break both magnetized boots free from the ship at the same time. He accomplished it, by jumping—and then had no way to get back. He moved out until his static line tugged at the two boys on each side of him.

One of them, caught with one foot free of the ship in walking, was broken loose also, though he reached wildly for the steel and missed. The cadet next to him, last in line, came loose in turn.

No more separated, as the successive tugs on the line had used up the energy of the first cadet's not-so-violent jump. But three cadets now dangled on the line, floating and twisting grotesquely.

The instructor caught the movement out of the corner of his eye, and squatted down. He found what he sought, a steel ring recessed in the ship's side, and snapped his static line to it. When he was certain that the entire party was not going to be dragged loose, he ordered, "Number nine—haul them in, gently—very gently. Don't pull yourself loose doing it."

A few moments later the vagrants were back and sticking to the ship. "Now," said the instructor, "who was responsible for that piece of groundhog stupidity?"

No one answered. "Speak up," he said sharply. "It wasn't an accident; it's impossible to get both feet off unless you hop. Speak up, confound it, or I'll haul every last one of you up in front of the Commandant."

At the mention of that awful word a small, meek voice answered, "I did it, sergeant."

"Hold out your hand, so I'll know who's talking. I'm not a mind reader."

"Vargas—number ten." The cadet held out his arm.

"Okay. Back to the airlock, everybody. Stick together." When they were there, the instructor said, "Inside, Mr. Vargas. Unhook your line, snap to the lock and wait for us. You'll take this drill over—about a month from now."

"But sergeant—"

"Don't give me any lip, or swelp me, I'll report you" for AWOL—jumping ship."

Silently the cadet did as ordered. The instructor leaned inside to see that Vargas actually anchored himself, then straightened out.

"Come, gentlemen—we'll start again—and no monkeyshines. This is a drill, not a tea party."

Presently Matt said, "Sergeant Hanako—"

"Yes? Who is it?"

"Dodson. Number three. Suppose we had all pulled loose?"

"We'd 'ave had to work our way back on our rocket units."

Matt thought about it. "Suppose we didn't have reaction, units?"

"Nothing much—under these circumstances. The officer of the watch knows we're outside; the radio watch is guarding our frequency. They would just have tracked us by radar until they could man a scooter and come get us. Just the same—listen, all of you—just because they've got you wrapped in cotton batting is no reason to behave like a bunch of school girls. I don't know of any nastier, or lonelier, way to die than all by yourself in a space suit, with your oxygen running out." He paused. "I saw one once, after they found him and fetched him back."

They were rounding the side of the ship, and the bulging sphere of the Earth had been rising over their metal horizon.

Suddenly the Sun burst into view.

"Mind the glare!" Sergeant Hanako called out. Hastily Matt set his visor for maximum interference and adjusted it to shade his face and eyes. He did not attempt to look at the Sun; he had dazzled his eyes often enough from the viewports of the ship's recreation rooms, trying to blank out the disc of the Sun exactly, with a coin, so that he might see the prominences and the ghostly aurora. It was an unsatisfactory business; the usual result was a headache and spots before his eyes.

But he never grew tired of looking at Earth. She hung before him, great and fat and beautiful, and seeming more real than when seen through a port. She swelled across Aquarius, so huge that had she been in Orion she would have concealed the giant hunter from Betelgeuse to Rigel.

Facing them was the Gulf of Mexico. Above it sprawled North America wearing the polar cap like a chef's hat. The pole was still bright under the failing light of late northern summer. The sunrise line had cleared North America except for the tip of Alaska; only the central Pacific was dark.

Someone said, "What's that bright dot in the Pacific, over near the edge? Honolulu?"

Honolulu did not interest Matt; he searched, as usual, for Des Moines—but the Mississippi Valley was cloudy; he could not 'find it. Sometimes he could pick it out with his naked eyes, when the day was clear in Iowa. When it was night in North America he could always tell which jewel of light was home—or thought he could.

They were facing Earth so that the north pole seemed "up" to them.

Far off to the right, almost a ship's width from the Earth, nearly occulting Regulus in Leo, was the Sun, and about half way between the Sun and Earth, in Virgo, was a crescent Moon. Like the Sun, the Moon appeared no larger than she did from Earth surface. The gleaming metal sides of Terra Station, in the sky between Sun and Moon and ninety degrees from Earth, outshone the Moon. The Station, a mere ten miles away, appeared half a dozen times as wide as the Moon.

That's enough rubbernecking," announced Hanako. "Let's move around." They walked forward, looking the ship over and getting the feel of her size, until the sergeant stopped them. "Any further and we'd be slapping our feet over the Commandant's head. He might be asleep." They sauntered aft and Hanako let them work around the edge of the stern until they looked across the openings of her mighty tubes. He called them back promptly. "Even though she ain't blasted in years, this area is a little bit hot—and you're not shielded from the pile abaft frame ninety-three anyhow. Forward, now!"

By hot he did not mean warm to the touch, but radioactive.

He led them amidships, unhooked himself from the cadet next to him and hooked the lad's line to the ship. "Number twelve—hook to steel," he added.

"The trick to jetting yourself in space,"—he went on, 'lies in balancing your body on the jet—the thrust has to pass through your center of gravity. If you miss and don't correct it quickly, you start to spin, waste your fuel, and have the devil's own time stopping your spin.

"It's no harder than balancing a walking stick on your finger—but the first time you try it, it seems hard.

"Rig out your sight." He touched a stud at his belt; a light metal gadget snapped up in front of his helmet so that a small metal ring was about a yard in front of his face. "Pick out a bright star, or a target of any sort, lined up in the direction you want to go. Then take the ready position— no, no! Not yet—I'll take it."

He squatted down, lifted himself on his hands, and very cautiously broke his boots loose from the side, then steadied himself on a cadet within reach. He turned and stretched out, so that he floated with his back to the ship, arms and legs extended. His rocket jet stuck straight back at the ship from the small of his back; his sight stuck out from his helmet in the opposite direction.

He went on, "Have the firing switch ready in your right hand. Now, have you fellows ever seen a pair of adagio dancers? You know what I mean—a man wears a piece of leopard skin and a girl wearing less than that and they go leaping around the stage, with him catching her?"

Several voices answered yes. Hanako continued, "Then you know what I'm talking about. There's one stunt they always do—the girl jumps and the man pushes her up and balances her overhead on one hand. He has his hand at the small of her back and she lays there, artistic—like.

"That's exactly the way you got to ride a jet. The push comes at the small of your back and you balance on it. Only you have to do the balancing—if the push doesn't pass exactly through your center of gravity, you'll start to turn. You can see yourself starting to turn by watching through your sight.

"You have to correct it before it gets away from you. You do this by shifting your center of gravity. Drag in the arm or leg on the side toward which you've started to turn. The trick is—"

"Just a second, Sarge," someone cut in, "you said that just backwards. You mean; haul in the arm or leg on the *other* side, don't you?"

"Who's talking?"

"Lathrop, number six. Sorry."

"I meant what I said, Mr. Lathrop."

"But—"

"Go ahead, do it your way. The rest of the class will do it my way. Let's not waste time. Any questions? Okay, stand clear of my jet."

The half circle backed away until stopped by the anchored static lines. A bright orange flame burst from the sergeant's back and he moved straight out or "up," slowly at first, then with increasing speed. His microphone was open; Matt could hear, by radio only, the muted rush of his jet—and could hear the sergeant counting seconds: "And . . . *one!* . . . and . . . *two!* . . . and . . . *three!*" With the count of ten, the jet and the counting stopped.

Their instructor was fifty feet "above" them and moving away, back toward them. He continued to lecture. "No matter how perfectly you've balanced you'll end up with a small amount of spin. When you want to change direction, double up in a ball—" He did so. "—to spin faster—and snap out of it when you've turned as far as you want." He suddenly flattened out and was facing them. "Cut in your jet and balance on it to straighten out on your new course—before you drift past the direction you want."

He did not cut in his jet, but continued to talk, while moving away from them and slowly turning. "There is always some way to squirm around on your axis of rotation so that you can face the way you need to face for a split second at least. For example, if I wanted to head toward the Station—" Terra Station was almost a right angle away from his course; he went through contortions appropriate to a monkey dying in convulsions and again snapped out in starfish spread, facing the Station—but turning slow cartwheels now, his axis of rotation unchanged.

"But I don't want to go to the Station; I want to come back to the ship." The monkey died again; when the convulsions ceased, the sergeant was facing them. He cut in his jet and again counted ten seconds. He hung in space, motionless with respect to the ship and his class and about a quarter mile away. "I'm coming in on a jet landing, to save

time." The jet blasted for twenty seconds and died; he moved toward them rapidly.

When he was still a couple of hundred feet away, he flipped over and blasted away from the ship for ten seconds. The sum of his maneuvers was to leave him fifty feet away and approaching at ten feet per second. He curled up in a ball again and came out of it feet toward the ship.

Five seconds later his boots clicked to steel and he let himself collapse without rebound. "But that is not the way you'll do it," he went on. "My tanks hold more juice than yours do—you've got fifty seconds of power, with each second good for a change of speed on one foot—second—that's for three hundred pounds of mass; some of you skinny guys will go a little faster.

"Here's your flight plan: ten seconds out, counted. Turn as quick as you can and blast fifteen seconds back. That means you'll click on with five foot—seconds. Even your crippled grandmother ought to be able to do that without bouncing off. Lathrop! Unhook—you're first."

As the cadet came up, Hanako anchored himself to the ship with two short lines and took from his belt a very long line. He snapped one end to a hook in the front of the cadet's belt and the other to his own suit. The student looked at it with distaste. "Is the sky hook necessary?"

Sergeant Hanako stared at him. "Sorry, Commodore—regulations. And shut up. Take the ready position."

Silently the cadet crouched, then he was moving away, a fiery brush growing out of his back. He moved fairly straight at first, then started to turn.

He pulled in a leg—and turned completely over.

"Lathrop—cut off your jet!" snapped Hanako. The flame died out, but the figure in the suit continued to turn and to recede. Hanako paid out his safety line. "Got a big fish here, boys," he said cheerfully. "What do you think he'll weigh?" He tugged on the line, which caused Lathrop to spin the other way, as the line had wound itself around him. When the line was free he hauled the cadet in.

Lathrop clicked on. "You were right, sergeant. I want to try it again —your way."

"Sorry. The book says a hundred per cent reserve fuel for this drill; you'd have to recharge." Hanako hesitated. "Sign up for tomorrow morning—I'll take you as an extra."

"Oh—thanks, Sarge!"

"Don't mention it. Number one!"

The next cadet moved out smoothly, but returned on an angle and had to be snubbed with the safety line before he could click on. The next cadet had trouble orienting himself at all. He receded, his back to the —ship, and seemed to be about to continue in the direction of Draco till the end of time. Hanako tugged gently on the safety line while letting it run through his gloves and turned him around toward the ship. "Ten seconds on the jet, while I keep a strain on the line," he ordered. The safety line kept the cadet straightened out until he got back. "Number three!" called out Hanako.

Matt stepped forward with a feeling of tight excitement. The instructor hooked the safety line and said, "Any questions? Go ahead when ready."

"Okay." Matt crouched, broke his boots free, and stretched out. He steadied himself against the sergeant's knee. In front of him lay the northern constellations. He picked out the Pole Star as a target, then loosened the safety catch of the firing switch in his glove.

"And . . . *one!*" He felt a soft, steady pressure across his saddle, a shove of not quite ten pounds. Polaris seemed to vibrate to the blasting of the tiny jet. Then the star swung to the left, beyond the ring of the sight.

He pulled in his right arm and right leg. The star swung faster, checked and started back. Cautiously he extended his right—side limbs again—and almost forgot to cut the jet on the count of ten.

He could not see the ship. Earth swam in the velvety darkness off to the right. The silence and aloneness were more intense, more complete, than he had ever experienced.

"Time to turn," said Hanako in his ear.

"Oh—" said Matt, and grabbed his knees.

The heavens wheeled around him. He saw the ship swinging into sight, too late. He checked by starfishing, but it

had moved on past. "Take it easy," advised the sergeant. "Don't curl up quite so tight, and catch it on the next time around. There's no hurry."

He drew himself in again, but not so much. The ship came around again, though twice as far away as it had been before. This time he checked before it swung past. The figures crawling on her side were about three hundred feet away and still backing away from him. He got someone's helmet centered in his sight, pressed the switch and began to count.

For a few worried seconds he thought that something had gone wrong. The figures on the ship did not seem— to be getting nearer and now they were swinging slowly past him. He was tempted to blast again—but Hanako's orders had been specific; he decided not to.

The ship swung out of sight; he doubled up in a ball to bring it around more quickly. When it showed up it was distinctly nearer and he felt relieved. Actually the two bodies, ship and man, had been closing at five feet per second—but five feet per second is a slow walk.

A little more than a minute after cutting his jet, he jackknifed to bring his boots in front of him and clicked on, about ten feet from the instructor.

Hanako came over and placed his helmet against Mart's so he could speak to him privately, with the radio shut off. "A good job, kid, the way you kept your nerve when you swung past. Okay—I'll post you for advanced training."

Matt remembered to cut out his walky—talky. "Gee, thanks!"

"You did it, not me." Hanako cut back in the voice circuit. "Okay, there—number four."

Matt wanted to chase back to his room, find Tex, and do some boasting. But there were seven more to go. Some did well, some had to be fished out of difficulty.

The last man outdid himself. He failed to cut off his power in spite of Hanako's shouts for him to do so. He moved away from the ship in a wide curve and commenced to spin, while the sergeant whipped at the safety line to try to stop the spin and head him back. At the end of a long fifty seconds his power gave out; he was nearly a thousand feet away and still receding rapidly.

The sergeant played him like a fisherman fighting a barracuda, then brought him in very, very slowly, for there was no way to check whatever speed the tension on the line placed on him.

When at last he was in, clicked down, and anchored by static line, Hanako sighed. "Whew!" he said. "I thought I was going to have to go get him." He went to the cadet and touched helmets, radio off.

The cadet did not shut off his instrument. "I don't know," they heard him reply. "The switch didn't go bad—I just couldn't seem to move a muscle. I could hear you shouting but I couldn't move."

Matt went back to the airlock with the group, feeling considerably sobered. He suspected that there would be a vacant place at supper. It was the Commandant's policy to get a cadet who was to be dropped away from the ship without delay. Matt did not question the practice, but it jarred him when he saw it happening—it brought the cold breath of disaster on his own neck.

But he cheered up as soon as he was dismissed. Once he was out of his suit and had inspected it and stowed it as the rules required, he zipped to his room, bouncing his turns in a fashion not approved for in—ship progress.

He banged on the door of Tex's cubicle. "Hey, Texl Wake up! I've got news for you."

No answer—he opened the door, but Tex was not there. Nor, as it happened, were Pete nor Oscar. Disconsolately he went into his own sanctum and picked out a study spool.

Nearly two hours later Tex came bouncing in as Matt was getting ready for lunch and shouted, "Hey! Matt! Mitt me, big boy—shake hands with a spaceman!"

"Huh?"

"I just passed "basic space suit'—sergeant said it was the best first test he had ever seen."

"He did? Oh—"

"He sure did. Oh boy—Terra Station, here I come!"

VIII TERRA STATION

"LIBERTY PARTY—man the scooter!"

Matt zipped up the front of his space suit and hurriedly ran through the routine check. Oscar and Tex urged him along, as the liberty party was already filing through the door of the lock. The cadet officer-of-thewatch checked Matt in and sealed the door of the lock behind him.

The lock was a long corridor, sealed at each end, leading to a hangar pocket in the side of the *Randolph* in which the scooter rockets were stowed. The pressure died away and the far end of the lock opened; Matt pulled himself along, last in line, and found the scooter loaded. He could not find a place; the passenger racks were filled with space—suited cadets, busy strapping down.

The cadet pilot beckoned to him. Matt picked his way forward and touched helmets. "Mister," said the oldster, "can you read instruments?"

Guessing that he referred only to the simple instrument panel of a scooter, Matt answered, "Yes, sir."

"Then get in the copilot's chair. What's your mass?"

"Two eighty-seven, sir," Matt answered, giving the combined mass, in pounds, of himself and his suit with all its equipment. Matt strapped down, then looked around, trying to locate Tex and Oscar. He was feeling very important, even though a scooter requires a copilot about as much as a hog needs a spare tail.

The oldster entered Mart's mass on his center-of-gravity and moment-of-inertia chart, stared at it thoughtfully and said to Matt, "Tell Gee-three to swap places with Bee-two."

Matt switched on his walky-talky and gave the order. There was a scramble while a heavyset youngster changed seats with a smaller cadet. The pilot gave a high sign to the cadet manning the hangar pocket; the scooter and its launching cradle swung out of the pocket, pushed by powerdriven lazy tongs.

A scooter is a passenger rocket reduced to its simplest terms and has been described as a hat rack with an outboard motor. It operates only in empty space and does not have to be streamlined.

The rocket motor is unenclosed. Around it is a tier of light metal supports, the passenger rack. There is no "ship" in the sense of a hull, airtight compartments, *etc.* The passengers just belt themselves to the rack and let the rocket motor scoot them along.

When the scooter was clear of the ship the cadet in the hangar pocket turned the launching cradle, by power, until the scooter pointed at Terra Station. The pilot slapped the keys in front of him; the scooter took off.

The cadet pilot watched his radarscope. When the distance to the Station was closing at eighty-eight feet per second he cut his jet. "Latch on to the Station," he told Matt.

Matt plugged in and called the station. "Scooter number three, *Randolph*—scheduled trip. Arriving nine minutes, plus or minus," Matt sent, and congratulated himself on having studied the spool on small-craft procedures.

"Roger," a feminine voice answered, then added, "Use out-orbit contact platform Bee-for-Busy."

"Bee-for-Busy," acknowledged Matt. "Traffic?"

"None out-orbit. *Winged Victory* in-orbit, warping in."

Matt reported to his pilot. "No traffic," repeated the oldster. "Mister, I'm going to catch forty winks. Wake me when we've closed to a mile and a half."

"Aye aye, sir."

"Think you could bring her in?"

Matt gulped. "I'll try, sir."

"Figure it out while I'm asleep." The cadet promptly closed his eyes, floating as comfortably in free fall as if he had been in his own cubicle. Matt concentrated on the instrument dials.

Seven minutes later he shook the oldster, who opened his eyes and said, "What's your flight plan, Mister?"

"Well, uh—if we keep going as is, we'll just slide past on the out-orbit side. I don't think I'd change it at all. When we close to four thousand feet I'd blast until our relative speed is down to about ten foot-seconds, then forget the radar and brake by eye as we pass along the side."

"You've been studying too hard."

"Is that wrong?" Matt asked anxiously.

"Nope. Go ahead. Do it." The oldster bent over the tracking 'scope to assure himself that the scooter would miss the Station. Matt watched the closing range, while excitement built up inside him. Once he glanced ahead at the shining cylindrical bulk of the Station, but looked back quickly. A few seconds later he punched his firing key and a plume of flame shot out in front of them.

A scooter has jets at both ends, served by the same interconnected tanks, fuel pumps and piping. Scooters are conned "by the seat of your pants" rather than by complex mathematics. As such they are invaluable in letting student pilots get the feel of rocket ships.

As the distance decreased Matt felt for the first time the old nightmare of rocket pilots: is the calculated maneuver enough to avoid a crash? He felt this, even though he knew his course would slide him past the corner of the mammoth structure. It was a relief to release the firing key.

The oldster said, "Can you spot Bee-for-Busy when you see it?"

Matt shook his head. "No, sir. This is my first trip to Terra Station."

"It is? And I let you pilot! Well, there it is, ahead—third platform down. Better start braking."

"Aye aye, sir." The scooter was passing along the side of the Station and about a hundred yards out, at the speed of a brisk walk. Matt let Bee-for-Busy approach for a few moments more, then gave a short, experimental blast. It did not seem to slow them much; he gave a somewhat longer blast.

A few minutes later he had the scooter almost dead in space and practically abreast their contact point. He looked inquiringly at the pilot. "I've seen worse," the oldster grunted. "Tell them to bring us in."

"*Randolph* number three—ready for contact," Matt reported, via radio.

"We see you," the girl's voice answered. "Stand by for a line."

A line, shot by a gun, came sailing out in perfectly flat trajectory and passed through a metal loop sticking out from the scooter. "I relieve you, sir," the pilot told Matt. "Shinny out there and make that line fast."

A few minutes later the scooter was secured to platform Bee-for-Busy and the cadets were filing into the platform's airlock. Matt located Oscar and Tex in the suiting room and they undressed together. "What did you think of that contact?" Matt said to them, with studied casualness.

"All right, I guess," answered Tex. "What about it?"

"I made it."

Oscar raised his eyebrows. "You did? Nice going, kid."

Tex looked amazed. "The pilot let you jockey it? On your first trip?"

"Well, why not? You think I'm kidding?"

"No, I'm just impressed. May I touch you? How about an autograph?"

"Oh, come off it!"

They were, of course, in the free-fall part of the Station. As soon as they had stowed their suits, they hurried to the centrifuged belt frequented by the traveling public. Oscar knew his way around somewhat, having changed ships at the Station when he was a candidate, and led them to the door at the axis of rotation—the only possible place to pass from the free-fall zone to the weight zone.

From the axis they went down several levels, past offices and private quarters to the first of the public levels. It was, in effect, a wide, brightly lighted street, with a high ceiling and with slideways down the middle. Shops and restaurants lined it. The slideways curved up and away in the distance, for the corridor curved completely around the Station. "This," Oscar told them, "is Paradise Walk."

"I see why," agreed Tex, and gave a low whistle. The others followed his gaze. A tall, willowy blonde, dressed in some blue wisps of nothing much, was looking in the display window of a jewelry shop.

"Take it easy, Tex," advised Oscar. "She's taller than you are."

"I like them tall," Tex answered. "Watch me."

He sauntered over to the young woman. Matt and Oscar could not hear his opening remark, but it did not offend her, for she laughed. Then she looked him up and down with cool amusement and spoke. Her voice carried quite clearly. "I am married and at least ten years older than you are. I never pick up cadets."

Tex appeared to tuck his tail between his legs and slunk back toward his friends. He started to say, fiercely, "Well, you can't rule a guy out for try—," when the woman called out:

"Wait a moment! All three of you." She came up to them and looked from Matt to Oscar, "You are youngsters, aren't you?"

"Youngster cadets, yes, ma'am," answered Oscar.

She fumbled in her jewelled pouch. "If you want to have some fun and meet some younger girls, you might try this address." She handed Oscar a card.

He looked startled and said, "Thank you, ma'am."

"Not at all." She moved away and managed to lose herself in the crowd at once.

"What does it say?" demanded Matt.

Oscar looked at it, then held it out. "Read it."

Terra Station First Baptist Church
Ralph Smiley, D.D., Pastor
SOCIAL HALL
#2437, Level "C"

Tex grinned. "Well, you can't say I scored a clean miss."

There ensued an argument. Matt and Tex wanted to go at once to the social hall; Oscar insisted that he was hungry and wanted some civilized food. The longer they argued the more reasonable seemed Oscar's case. Finally Tex switched sides and Matt gave in to the majority.

He regretted it a few minutes later, when he saw the prices on the menu. The restaurant they selected was a tourist trap, a fancy dining room with an adjoining bar. It had human waiters instead of automatic tables and items were priced accordingly.

Tex saw the expression on his face. "Relax, Matt," he told him. "This is on me—Pop sent me a check."

"Oh, I wouldn't want to do that."

"Want to fight?"

Matt grinned. "Okay, thanks."

Oscar said, "How hard shall we punish you, Tex? Tea and toast?"

"Anything you want. Let's really celebrate. Which reminds me—I think we ought to have a drink."

"Huh?" said Oscar. "And have an M.P. catch us? No, thank you."

Matt started to protest but Tex stood up. "Just leave this to Father Jarman. It's high time you two poor, underprivileged outlanders tasted a real old Southern mint julep." He started for the bar. Oscar shrugged.

Tex scouted out the bar before entering. There were no cadets, of course; more important there were no officers and no marine M.P.'s. The hour was early and the bar almost deserted. He went up to the bartender. "Can you make a mint julep?" he asked.

The bartender looked up and answered, "Beat it. I'm not supposed to serve you liquor. This is off limits to cadets."

"I didn't ask you if this was off limits—I asked you if you could make a mint julep." Tex slid a bill across the counter. "Three mint juleps, in fact."

The barman eyed the bill. Finally he caused it to disappear. "Go on back into the dining room."

"Right!" said Tex.

A few minutes later a waiter placed a complete tea service in front of them, but the teapot did not contain tea. Tex poured out the drink, splitting it carefully three ways, in tea cups. "Here's to you, chums—drink up."

Matt took a sip. "It tastes like medicine," he announced.

"Like medicine?" Tex protested. "This noble potion? I'll meet you at dawn, suh—coffee and pistols for two."

"I still say it tastes like medicine. What do you think of it, Oscar?"

"It's not bad."

Matt pushed his aside. "Aren't you going to drink it?" asked Tex.

"No. Thanks, Tex, really—but I think it would make me sick. I guess I'm a sissy."

"Well, we won't waste it." He picked up Mart's cup and poured some into his own. "Split it with me, Oscar?"

"No. You go ahead."

"Okay, if you say so." He poured the rest into his cup.

When the food they ordered was served, Tex was no longer interested. While Matt and Oscar were busily chewing he kept urging them to sing. "Come on, Oscar! You can learn it."

"I can't sing."

"Sure you can. I've heard you sing, with the Hog Alley band. Ill sing the verse, we'll all clap, then hit the chorus together: 'Deep in ... the heart of ... Texas!' Like that."

"Shut up," said Oscar, "or you'll be deep in the heart of trouble."

"Kill—joy! Come on, Matt."

"I can't sing with my mouth full."

"Look," said Oscar to Matt, in a tense, low voice. "Do you see what I see?"

Matt looked and saw Lieutenant Wong entering the far end of the dining room. He went to a table, sat down, looked around, spotted the table of cadets, nodded, and started studying a menu. "Oh, mother!" Matt breathed softly.

"Then we'll sing 'Ioway,' " announced Tex. "I'm broadminded."

"We won't sing anything. For the love of Mike, Tex— shut up! An officer just came into the joint."

"Where?" demanded Tex. "Invite him over. I don't hold any grudges. They're good boys, all of 'em, the stinkers. Matt shot a quick glance at Lieutenant Wong and was dismayed to see the officer crooking a finger at him, beckoning. He got up and walked stiffly toward the officer.

"Dodson—"

"Yes, sir."

"Go back and tell Jarman to quiet down before I have to come over there and ask him what his name is."

"Uh—aye aye, sir!"

When he got back to the table, Tex was already quiet and appeared sobered but very much puzzled. Oscar's usually pleasant face was dark with anger. "What's the verdict?"

Matt reported. "I see. Wong's all right. Well, we got to get him out of here." Oscar flagged the waiter, then opened Tex's pouch and paid the bill.

He stood up. "Let's go. Pull yourself together, Tex, or I'll break your neck."

"Where to?" asked Matt.

"Into the 'fresher."

Fortunately it turned out that they had that room to themselves. Oscar marched Tex to a—washbasin and told him to stick his finger down his throat. "Why?" objected Tex.

"Because if you don't, I'll do it for you. Look, Matt—can you take care of him? Ill be back in a few minutes."

It was nearly twenty minutes before Oscar returned, bearing a carton of hot, black coffee and a tube of pills. He forced the coffee and half a dozen of the pills on the patient. "What are the pills?" Matt wanted to know.—

"Thiamin chloride."

"You seem to know your way around?"

"Well . . ." Oscar wrinkled his brow. "Venus isn't like Earth, you know. Still sort of wild and woolly. You see a lot of things go on. Drink the rest of the coffee, Tex."

"Yessir."

"The front of his uniform is all messed up," said Matt.

"So I see. I guess we should have undressed him."

"What'll we do? If he goes back like that, there will be questions asked—bad ones."

"Let me think." Presently he said to Tex, "Go in there—" Oscar indicated one of a row of 'fresher booths, "—and take off your uniform. Hand it out and lock yourself in. We'll be back after a while." Tex seemed to feel that he was being consigned to the salt mines, but there was no real opposition left in him. He went. Shortly thereafter Matt and Oscar left, Oscar with a tightly rolled bundle of a cadet uniform under one arm.

They took the slideway half around the Station, through crowds of gorgeously dressed and hurrying people, past rich and beckoning shops. Matt enjoyed it thoroughly.

"They say," said Oscar, "that this is what the big cities used to be like, back before the Disorders."

"It certainly doesn't look like Des Moines."

"Nor like Venus." Oscar found what he was looking for, an automatic laundry service, in a passageway off the waiting room of the emigrant zone. After a considerable wait the uniform came back to them, clean, pressed, and neatly packaged. It being Terra Station, the cost was sky high. Matt looked at what remained of his funds.

"Might as well be broke," he said and invested the remainder in a pound of chocolate—coated cherries. They hurried back. Tex looked so woe—begone and so glad to see them that Matt had a sudden burst of generosity and handed the box to Tex. "Present to you, you poor, miserable, worthless critter."

Tex seemed touched by the gesture—it was no more than a gesture, since candy and such are, by ancient right, community property among roommates.

"Hurry up and get dressed, Tex. The scooter shoves off in just thirty-two minutes." Twenty-five minutes later, suited up, they were filing into the airlock, Tex with the chocolates under his arm.

The trip back was without incident, except for one thing: Matt had not thought to specify a pressure container for the candy. Before Tex could strap down the box had bulged.

By the time they reached the *Randolph* the front and left side of his space suit was covered with a bubbly, sticky mess compounded of cherry juice, sugar syrup, and brown stains of chocolate as the semi—liquid confection boiled and expanded in the vacuum. He would have thrown the package away had not the oldster, strapped next to him in the rack, reminded him of the severe penalties for jettisoning anything in a traffic lane.

The cadet in charge of the hangar pocket in the *Randolph* looked Tex over in disgust. "Why didn't you pack it inside your suit?"

"Uh, I just didn't think of it, sir."

"Hummph! Next time you will, no doubt. Go on inside and place yourself on the report for 'gross untidiness in uniform.' And clean up that suit."

"Aye aye, sir."

Pete was in their suite when they got back. He came out of his cubicle. "Have fun? Gee, I wish I hadn't had the duty."

"You didn't miss much," said Oscar.

Tex looked from one to the other. "Gee, fellows, I'm sorry I ruined your liberty."

"Forget it," said Oscar. "Terra Station will still be there next month."

"That's right," agreed Matt, "but see here, Tex—tell us the truth. That was the first drink you ever had—wasn't it?"

Tex looked shamefaced. "Yes . . . my folks are all temperance—except my Uncle Bodie."

"Never mind your Uncle Bodie. If I catch you taking another, I'll beat you to death with the bottle."

"Aw, shucks, Matt!"

Oscar looked at Matt quizzically. "Easy on that holier-than-thou stuff, kid. Maybe it could happen to you."

"Maybe it could. Maybe some day I'll get you to chaperone me and find out what happens. But not in public."

"It's a date."

"Say," demanded Pete, "what goes on here? What's it all about?"

IX LONG HAUL

LIFE IN THE *Randolph* had a curious aspect of timelessness —or, rather, datelessness. There was no weather, there were no seasons. The very divisions into "night" and "day" were arbitrary and were continually being upset by night watches and by laboratory periods at any hour, in order to make maximum use of limited facilities. Meals were served every six hours around the clock and the meal at one in the "morning" was almost as well attended as breakfast at seven hundred.

Matt got used to sleeping when he could find time—and the "days" tumbled past. It seemed to him that there was never time enough for all that he was expected to do. Mathematics and the mathematical subjects, astrogation and atomic physics in particular, began to be a bugaboo; he was finding himself being rushed into practical applications of mathematics before he was solidly grounded.

He had fancied himself, before becoming a cadet, as rather bright in mathematics, and so he was—by ordinary standards. He had not anticipated what it would be like to be part of a group of which every member was unusually talented in the language of science. He signed up for personal coaching in mathematics and studied harder than ever. The additional effort kept him from failing, but that was all. It is not possible to work all the time without cracking up, but the environment would have kept Matt from overworking even if he had been so disposed. Corridor number five of "A" deck, where Matt and his roommates lived, was known as "Hog Alley" and had acquired a ripe reputation for carefree conduct even before Tex Jarman added his talents.

The current "Mayor of Hog Alley" was an oldster named Bill Arensa. He was a brilliant scholar and seemed able to absorb the most difficult study spool in a single playing, but he had been in the *Randolph* an unusually long time—a matter of accumulated demerits.

One evening after supper, soon after arrival, Matt and Tex were attempting to produce a little harmony. Matt was armed with a comb and a piece of tissue paper; Tex had his harmonica. A bellow from across the hallway stopped them. "Open up in there! You youngsters—come busting out!"

Tex and Matt appeared as ordered. The Mayor looked them over.

"No blood," he remarked. "I'd swear I heard someone being killed. Go back and get your noisemakers."

Arensa ushered them into his own room, which was crowded. He waved a hand around at the occupants. "Meet the Hog Alley People's Forum—Senator Mushmouth, Senator Filibuster, Senator Hidebound, Doctor Dogoodly, and the Marquis de Sade. Gentlemen, meet Commissioner Wretched and Professor Farflung." The oldster went into his study cubicle.

"What's your name, Mister?" said one of the cadets, addressing Tex.

"Jarman, sir."

"And yours?"

"We've got no time for those details," announced Arensa, returning bearing a guitar. "That number you gentlemen were working on—let's try it again. Brace yourself for the down beat. . . and a one, and a two!"

Thus was born the Hog Alley band. It grew to seven pieces and started working on a repertoire to be presented at a ship's entertainment. Matt dropped out when he became eligible for the space polo league, as he could not spare time for both—his meager, talent was no loss to the band.

Nevertheless he remained in the orbit of the oldster. Arensa adopted all four of them, required them to report to his room from time to time, and supervised their lives. However, he never placed them on the report. By comparing notes with other youngster cadets on this point, Matt discovered that he and his friends were well off. They attended numerous sessions of the "Forum," first by direction, later from choice. The staple recreation in the *Randolph*, as it is in all boarding schools, was the bull session. The talk ranged through every possible subject and was kept spiced by Arensa's original and usually radical ideas.

However, no matter what was discussed, the subject usually worked around to girls and then broke up with the un-startling conclusion: "There's no sense in talking about it—there aren't any girls in the *Randolph*. Let's turn in."

Almost as entertaining was the required seminar in "Doubt." The course had been instituted by the present commandant and resulted from his own observation that every military organization—with the Patrol no exception—suffered from an inherent vice. A military hierarchy automatically places a premium on conservative behavior and dull conformance with precedent; it tends to penalize original and imaginative thinking. Commodore Arkwright realized that these tendencies are inherent and inescapable; he hoped to offset them a bit by setting up a course that could not be passed without original thinking.

The method was the discussion group, made up of youngsters, oldsters, and officers. The seminar leader would chuck out some proposition that attacked a value usually regarded as axiomatic. From there on anything could be said.

It took Matt a while to get the hang of it. At his first session the leader offered: "Resolved: that the Patrol is a detriment and should be abolished." Matt could hardly believe his ears.

In rapid succession he heard it suggested that the past hundred years of Patrol—enforced peace had damaged the race, that the storm of mutations that followed atomic warfare were necessarily of net benefit under the inexorable laws of evolution, that neither the human race nor any of the other races of the system could expect to survive permanently in the universe if they deliberately forsook war, and that, in any case, the Patrol was made up of a bunch of self-righteous fatheads who mistook their own trained-in prejudices for the laws of nature.

Matt contributed nothing to the first discussion he attended.

The following week he heard both mother love and love of mother questioned. He wanted to reply, but, for the life of him, could think of no other answer than "Because!" Thereafter came attacks on monotheism as a desirable religious form, the usefulness of the scientific method, and the rule of the majority, in reaching decisions. He discovered that it was permissible to express opinions that were orthodox as well as ones that were unorthodox and began to join the debate by defending some of his own pet ideas.

At once he found his own unconscious assumptions that lay behind his opinions subjected to savage attack and found himself again reduced to a stubborn and unvoiced "Because!"

He began to catch on to the method and found that he could ask an innocent question that would undermine someone else's line of argument. From then on he had a good time.

He particularly enjoyed it after Girard Burke was assigned to his seminar. Matt would lie in wait until Girard would express some definite opinion, then jump him—always with a question; never with a statement. For some reason not clear to Matt, Burke's opinions were always orthodox; to attack them Matt was forced to do some original thinking.

But he asked Burke about it after class one day. "See here, Burke—I thought you were the bird with a new slant on everything?"

"Well, maybe I am. What about it?"

"You don't sound like it in 'Doubt.' "

Burke looked wise. "You don't catch me sticking my neck out."

"What do you mean?"

"Do you think our dear superiors are really interested in your bright ideas? Won't you ever learn to recognize a booby trap, son?"

Matt thought about it. "I think you're crazy." Nevertheless he chewed it over.

The days rolled past. The pace was so hard that there was little time to be bored. Matt shared the herd credo of all cadets that the *Randolph* was a madhouse, unfit for human habitation, sky junk, etc., etc.—but in fact he had no opinion of his own about the school ship; he was too busy. At first he had had some acute twinges of homesickness; thereafter it seemed to recede. There was nothing but the treadmill of study, drill, more study, laboratory, sleep, eat, and study again.

He was returning from the communications office, coming off watch late one night, when he heard sounds from Pete's cubicle. At first he thought Pete must be running his projector, studying late. He was about to bang on his door and suggest going up to the galley to wheedle a cup of cocoa when he became convinced that the sound was not a projector.

Cautiously he opened the door a crack. The sound was sobbing. He closed the door noiselessly and knocked on it. After a short silence Pete said, "Come in."

Matt went in. "Got anything to eat?"

"Some cookies in my desk."

Matt got them out. "You look sick, Pete. Anything wrong?"

"No. Nothing."

"Don't give me the space drift. Out with it."

Pete hesitated. "It's nothing. Nothing anybody can do anything about."

"Maybe so, maybe not. Tell me."

"There's nothing you can do. I'm *homesick*, that's all!"

"Oh—" Matt had a sudden vision of the rolling hills and broad farms of Iowa. He suppressed it. 'That's bad, kid. I know how you feel."

"No, you don't. Why, you're practically at home—you can just step to a port and *see* it."

"That's no help."

"And it hasn't been so terribly long since you've been home. Me—it took me two years just to make the trip to Terra; there's no way of telling when I'll ever see home again." Pete's eyes got a faraway look; his voice became almost lyrical. "You don't know what it's like, Matt. You've never seen it. You know what they say: 'Every civilized man has two planets, his own and Ganymede.' "

"Huh?"

Pete did not even hear him. "Jupiter hanging overhead, filling half the sky—" He stopped. "It's beautiful, Matt. There's no place like it."

Matt found himself thinking about Des Moines in a late summer evening . . . with fireflies winking and the cicadas singing in the trees, and the air so thick and heavy you could cup it in your hand. Suddenly he hated the steel shell around him, with its eternal free—fall and its filtered air and its artifical lights. "Why did we ever sign up, Pete?"

"I don't know. I don't know!"

"Are you going to resign?"

"I can't. My father had to put up a bond to cover my passage both ways—if I leave voluntarily he's stuck for it."

Tex came in, yawning and scratching. "What's the matter with you guys? Can't you sleep? Don't you want anybody else to sleep?"

"Sorry, Tex."

Jarman looked them over. "You both look like your pet dog had died. What's the trouble?"

Matt bit his lip. "Nothing much. I'm homesick, that's all."

Pete spoke up at once. "That's not quite straight. I was the one that was pulling the baby act—Matt was trying to cheer me up."

Tex looked puzzled. "I don't get it. What difference does it make where you are so long as you aren't in Texas?"

"Oh, Tex, for heaven's sake!" Matt exploded.

"What's the matter? Did I say something wrong?" Tex looked from Matt to Pete. "Pete, you certainly are a mighty far piece away from your folks, I've got to admit. Tell you what—comes time we get some leave, you come home with me. I'll let you count the legs on a horse."

Pete grinned feebly. "And meet your Uncle Bodie?"

"Sho', sho'! Uncle Bodie'll tell you about the time he rode the twister, bareback. Is it a deal?"

"If you'll come to visit at my home someday. You, too, Matt."

"It's a deal." They shook hands all around.

The effects of the nostalgic binge with Pete might have worn off if another incident had not happened soon after. Matt went across the passage to Arensa's room, intending to ask the oldster for some help in a tricky problem in astroga—tion. He found the oldster packing. "Come in, Senator," said Arensa. "Don't clutter up the doorway. What's on your mind, son?"

"Uh, nothing, I guess. You got your ship, sir?" Arensa had been passed for outer duty the month before; he was now technically a "passed cadet" as well as an "oldster."

"No." He picked up a sheaf of papers, glanced at them, and tore them across. "But I'm leaving."

"Oh."

"No need to be delicate about it—I wasn't fired. I've resigned."

"Oh."

"Don't stare at me and say 'oh'! What's so odd about resigning?"

"Nothing. Nothing at all."

"You were wondering why, weren't you? Well, I'll tell you. I've had it, that's why. I've had it and I'm sick of it. Because, sonny, I have no wish to be a superman. My halo is too tight and I'm chucking it. Can you—understand that?"

"Oh, I wasn't criticizing!"

"No, but you were thinking it. You stick with it, Senator. You're just the sort of serious-minded young squirt they want and need. But not for me—I'm not going to be an archangel, charging around the sky and brandishing a flaming sword. Did you ever stop to think what it would feel like to atom-bomb a city? Have you ever really thought about it?"

"Why, I don't know. It hasn't been necessary for the Patrol actually to use a bomb since they got it rolling right. I don't suppose it ever will be."

"But that's what you signed up for, just the same. It's your reason for being, my boy." He stopped and picked up his guitar. "Forget it. Now what can I do with this? I'll sell it to you cheap, Earthside price."

"I couldn't even pay Earthside prices right now."

"Take it as a gift." Arensa chucked it at him. "The Hog Alley band ought to have a gitter and I can get another. In thirty minutes I shall be in Terra Station, Senator, and six hours later I shall be back with the ground crawlers, the little people who don't know how to play God—and wouldn't want to!"

Matt couldn't think of anything to say.

It seemed odd thereafter not to have Arensa's bellowing voice across the passageway, but Matt did not have time to think about it. Matt's drill section in piloting was ordered to the Moon for airless-landing.

The section had progressed from scooters to drill in an A-6 utility rocket rigged for instruction. The cargo space of this ship—P.R.S. *Shakysides* to the cadets; drill craft #106 on the rolls of the *Randolph*—had been fitted as a dozen duplicate control rooms, similar in every visible detail to the real control rooms, to the last switch, dial, scope and key. The instruments in the duplicate rooms showed the same data as their twins in the master room but when a cadet touched a control in one of the instruction rooms, it had no effect on the ship; instead the operation was recorded on tape.

The pilot's operations were recorded, too, so that each student pilot could compare what he did with what he should have done, after having practiced under conditions identical with those experienced by the actual pilot.

The section had completed all it could learn from practice contacts at the *Randolph* and at Terra Station. They needed the hazard of a planet. The two-day trip to Moon Base was made in the Shakysides herself, under conditions only a little worse than those encountered by an emigrant.

Matt and his companions saw nothing of the Lunar colonies. There was no liberty; they lived for two weeks in pressurized underground barracks at the Base and went up to the field each day for landing drill, first in the dummy control rooms of the *Shakysides*, then in dual-controlled A-6 rockets for actual piloting.

Matt soloed at the end of the first week. He had the "feel" for piloting; given a precalculated flight plan he could make his craft respond. It was as natural to him as mathematical astrogation was difficult.

Soloing left him with time on his hands. He explored the Base and took a spacesuited walk on the burned and airless Lunar plain. The student pilots were quartered in a corner of the marine barracks. Matt killed time by watching the space marines and chinning with the non—coms.

He liked the spit-and-polish style with which the space marines did "things, the strutting self-confidence with which they handled themselves. There is no more resplendent sight in the solar system than an old space-marine sergeant in full dress, covered with stripes, hash marks, and ribbons, the silver at his temples matching the blazing sunburst on his chest. Matt began to feel dowdy in the one plain, insignia-less uniform he had brought in his jump bag.

He enjoyed their frequent ceremonials. At first it startled him to hear a unit mustered without the ghostly repetition of the names of the Four—"Dahlquist! Martin! Rivera! Wheeler!"—but the marines had traditional rites of their own and more of them.

Faithful to his intention of swotting astrogation as hard as possible, Matt had brought some typical problems along. Reluctantly he tackled them one day. "Given: Departure from the orbit of Deimos, Mars, not earlier than 1200 Greenwich, 15 May 2087; chemical fuel, exhaust velocity 10,000 meters per second; destination, suprastratospheric orbit around Venus. Required: Most economical orbit to destination and quickest orbit, mass-ratios and times of departure and arrival for each. Prepare flight plan and designate check points, with precalculation for each point, using stars of 2nd magnitude or brighter. Questions: Is it possible to save time or fuel by tacking on the Terra-Luna pair? What known meteor drifts will be encountered and what evasive plans, if any, should be made? All answers must conform to space regulations as well as to ballistic principles."

The problem could not be solved in any reasonable length of time without machine calculation. However, Matt could set it up and then, with luck, sweettalk the officer in charge of the Base's computation room into letting him use a ballistic integrator. He got to work.

The sweet voice of a bugle reached him, first call for changing the guard. He ignored it.

He was sweating over his preliminary standard approximation when the bugle again interrupted him with call-to-muster. It completely disrupted his chain of reasoning. Confounded problem!—why would they assign such a silly problem anyhow? The Patrol didn't fiddle around with chemical fuels and most economical orbits—that was merchant service stuff.

Two minutes later he was watching guard mount, down in the main HQ under the barracks. When the band sounded off with "Till the Suns are cold and the heavens dark—" Matt found himself choking up.

He stopped by the guard office, reluctant to get back to the fussy complexities of mathematics. The new sergeant of the guard was an acquaintance, Master Sergeant Macleod. "Come in, young fellow, and rest yourself. Did you see the guard mount?"

"Thanks. Yes, I did. It's pretty wonderful to see."

"Know what you mean. Been doing it twenty years and I get more of a bang out of it than I did when I was a recruit. How's tricks? They keeping you busy?"

Matt grinned sheepishly. "I'm playing hooky. I should be studying astrogation, but I get so darned sick of it."

"Don't blame you a bit. Figures make my head ache."

Matt found himself telling the older man his troubles. Sergeant Macleod eyed him with sympathetic interest. "See here, Mr. Dodson—you don't like that longhaired stuff. Why don't you chuck it?"

"Huh?"

"You like the space marines, don't you?"

"Why, yes."

"Why not switch over and join a man's outfit? You're a likely lad and educated—in a year I'd be saluting you. Ever thought about it?"

"Why, no, I can't say that I have."

"Then do so. You don't belong with the Professors—you didn't know that was what we call the Patrol, did you?— the 'Professors.' "

"I'd heard it."

"You had? Well, we work for the Professors, but we aren't of them. We're . . . well, you've seen. Think it over."

Matt did think it over, so much so that he took the Mars-to-Venus problem back with him, still unsolved.

It was no easier to solve for the delay, nor were other and more complicated problems made any simpler by virtue of the idea, buzzing in the back of his mind, that he need not belabor himself with higher mathematics in order to be a spaceman. He began to see himself decked out in the gaudy, cock-pheasant colors of the space marines.

At last he took it up with Lieutenant Wong. "You want to transfer to the marines?"

"Yes. I think so."

"Why?"

Matt explained his increasing feeling of frustration in dealing with both atomic physics and astrogation.

Wong nodded. "I thought so. But we knew that you would have tough sledding since you came here insufficently prepared. I don't like the sloppy work you've been doing since you came back from Luna."

"I've done the best I could, sir."

"No, you haven't. But you can master these two subjects and I will see to it that you do."

Matt explained, almost inaudibly, that he was not sure he wanted to. Wong, for the first time, looked vexed.

"Still on that? If you turn in a request for transfer, I won't okay it and I can tell you ahead of time that the Commandant will turn it down."

Matt's jaw muscles twitched. "That's your privilege, sir."

"Damn it, Dodson, it's not my privilege; it's my duty. You would never make a marine and I say so because I know you, your record, and your capabilities. You have a good chance of making a Patrol officer."

Matt looked startled. "Why couldn't I become a marine?"

"Because it's too easy for you—so easy that you would fail."

"Huh?"

"Don't say "huh." The spread in I.Q. between leader and follower should not be more than thirty points. You are considerably more than thirty points ahead of those old sergeants—don't get me wrong; they are fine men. But your mind doesn't work like theirs." Wong went on, "Have you ever wondered why the Patrol consists of nothing but officers—and student officers, cadets?"

"Mmm, no, sir."

"Naturally you wouldn't. We never wonder at what we grow up with. Strictly speaking, the Patrol is not a military organization at all."

"Sir?"

"I know, I know—you are trained to use weapons, you are under orders, you wear a uniform. But your purpose is not to fight, but to prevent fighting, by every possible means. The Patrol is not a fighting organization; it is the repository of weapons too dangerous to entrust to military men.

"With the development last century of mass—destruction weapons, warfare became all offense and no defense, speaking broadly. A nation could launch a horrific attack but it could not even protect its own rocket bases. Then space travel came along.

"The spaceship is the perfect answer in a military sense to the atom bomb, and to germ warfare and weather warfare. It can deliver an attack that can't be stopped—and it is utterly impossible to attack that spaceship from the surface of a planet."

Matt nodded. "The gravity gauge."

"Yes, the gravity gauge. Men on the surface of a planet are as helpless against men in spaceships as a man would be trying to conduct a rock-throwing fight from the bottom of a well. The man at the top of the well has gravity working for him.

"We might have ended up with the tightest, most nearly unbreakable tyranny the world has ever seen. But the human race got a couple of lucky breaks and it didn't work out that way. It's the business of the Patrol to see that it stays lucky.

"But the Patrol can't drop an atom bomb simply because some pipsqueak Hitler has made a power grab and might some day, when he has time enough, build spaceships and mass-destruction weapons. The power is too great, too awkward—it's like trying to keep order in a nursery with a loaded gun instead of a switch.

"The space marines are the Patrol's switch. They are the finest—"

"Excuse me, sir—"

"Yes?"

"I know how the marines work. They do the active policing in the System—but that's why I want to transfer. They're a more active outfit. They are—"

"—more daring, more adventurous, more colorful, more glamorous —and they don't have to study things that Matthew Dodson is tired of studying. Now shut up and listen; there is a lot you don't know about the set-up, or you wouldn't be trying to transfer."

Matt shut up.

"People tend to fall into three psychological types, all differently motivated. There is the type, motivated by economjc factors, money . . . and there is the type motivated by 'face,' or pride. This type is a spender, fighter, boaster, lover, sportsman, gambler; he has a will to power and an itch for glory. And there is the professional type, which claims to follow a code of ethics rather than simply seeking money or glory—priests and ministers, teachers, scientists, medical men, some artists and writers. The idea is that such a man believes that he is devoting his life to some purpose more important than his individual self. You follow me?"

"I... think so."

"Mind you this is terrifically over—simplified. And don't try to apply these rules to non—terrestrials; they won't fit. The Martian is another sort of a cat, and so is the Venerian."

Wong continued, "Now we get to the point: The Patrol is meant to be made up exclusively of the professional type. In the space marines, every single man jack, from the generals to the privates, is or should be the sort who lives by pride and glory."

"Oh..."

Wong waited for it to sink in. "You can see it in the very uniforms; the Patrol wears the plainest of uniforms, the marines wear the gaudiest possible. In the Patrol all the emphasis is on the oath, the responsibility to humanity. In the space marines the emphasis is on pride in their corps and its glorious history, loyalty to comrades, the ancient virtues of the soldier. I am not disparaging the marine when I say that he does not care a tinker's damn for the political institutions of the Solar System; he cares only for his organization.

"But it's not your style, Matt. I know more about you than you do yourself, because I have studied the results of your psychological tests. You will never make a marine."

Wong paused so long that Matt said diffidently, "Is that all, sir?"

"Almost. You've got to learn astrogation. If deepsea diving were the key to the Patrol's responsibility, it would be that that you would have to learn. But the key happens to be space travel. So—I'll lay out a course of sprouts for you. For a few weeks you'll do nothing but astrogate. Does that appeal to you?"

"No, sir."

"I didn't think it would. But when I get through with you, you'll be able to find your way around the System blindfolded. Now let me see —"

The next few weeks were deadly monotony but Matt made progress. He had plenty of time to think—when he was not bending over a calculator. Oscar and Tex went to the Moon together; Pete was on night shift in the power room. Matt kept sullenly and stubbornly at work—and brooded. He promised himself to stick it out until Wong let up on him. After that—well, he would have a leave coming up one of these days. If he decided to chuck it, why, lots of cadets never came back from their first leave.

In the meantime his work began to get the grudging approval of Lietuenant Wong.

At last Wong let up on him and he went back to a normal routine. He was settling into it when he found himself posted for an extra duty. Pursuant thereto, he reported one morning to the officer of the watch, received a briefing, memorized a list of names, and was issued a black armband. Then he went to the main airlock and waited.

Presently a group of scared and greenish boys began erupting from the lock. When his turn came, he moved forward and called out, "Squad seven! Where is the squad leader of squad seven?"

He got his charges rounded up at last and told the acting squad leader to follow along in the rear, then led them slowly and carefully down to "A" deck. He was glad to find when he got there that none of them had gotten lost. "This is your messroom," he told them. "We'll have lunch before long."

Something about the expression of one of them amused him. "What's the matter, Mister?" he asked the boy. "Aren't you hungry?"

"Uh, no, sir."

"Well, cheer up—you will be."

X QUIS CUSTODIET IPSOS CUSTODES?

INTERPLANETARY PATROL Cadet Matthew Dodson sat in the waiting room of Pikes Peak Catapult Station and watched the clock. He had an hour to wait before boarding the New Moon for Terra Station; meanwhile he was expecting his roommates.

It had been a good leave, he supposed; he had done everything he had planned to do—except joining the others at the Jarman ranch at the end; his mother had kicked up such a fuss at the idea.

Still, it had been a good leave. His space-burned face, lean and beginning to be lined, looked slightly puzzled. He had confided to no one his tentative intention of resigning while on leave. Now he was trying to remember just when and why it had ceased to be his intention. He had been sent on temporary duty to the P.R.S *Nobel,* as assistant to the astrogator during a routine patrol of circum-Terra bomb-rockets. Matt had joined his ship at Moon Base and, at the conclusion of the patrol when the *Nobel* had grounded at Terra Base for overhaul, was detached with permission to take leave before reporting back to the *Randolph.* He had gone straight home.

The entire family met him at the station and copted him home. His mother had cried a little and his father had shaken hands very vigorously. It seemed to Matt that his kid brother had grown almost incredibly. It was good to see them, good to be back in the old family bus. Matt would have piloted the copter himself had not Billie, his brother, gone straight to the controls.

The house had been redecorated throughout. His mother obviously expected favorable comment and Matt had given it—but he hadn't really liked the change. It had not been what he had pictured. Besides that, the rooms seemed smaller. He decided that it must be the effect of redecorating; the house couldn't have shrunk!

His own room was filled with Bill's things, although Bill had been temporarily evicted to his old room, now turned into a hobby room for his mother. The new arrangements were sensible, reasonable—and annoying.

In thinking it over Matt knew that the changes at home had had nothing to do with his decision. Certainly not! Nor his father's remarks about posture, even though they had stuck in his craw—

He and his father had been alone in the living room, just before dinner, and Matt had been pacing up and down, giving an animated and, he believed, interesting account of the first time he had soloed. His father had taken advantage of a pause to say, "Stand up, son."

Matt stopped. "Sir?"

"You are all crouched over and seem to be limping. Does your leg still bother you?"

"No, my leg is fine."

"Then straighten up and "square your shoulders. Look proud. Don't they pay any attention to your posture at school?"

"What's wrong with the way I was walking?"

Bill had appeared in the door just as the subject had come up. "I'll show you, Mattie," he had interrupted, and proceeded to slouch across the room in a grotesque exaggeration of a spaceman's relaxed and boneless glide. The boy made it look like the amble of a chimpanzee.

"You walk like that."

"The devil I do!"

"The devil you don't."

"Bill!" said his father. "Go wash up and get ready for dinner. And don't talk that way. Go on, now!" When the younger son had left his father turned again to Matt and said, "I thought I was speaking privately, Matt. Honestly, it's not as bad as Bill makes out; it's only about half that bad."

"But— Look, Dad, I walk just like everybody else—among spacemen, I mean. It comes of getting used to free-fall. You carry yourself sort of pulled in, for days on end, ready to bounce a foot off a bulkhead, or grab with your hands. When you're back under weight, after days and weeks of that, you walk the way I do. 'Cat feet' we call it."

"I suppose it would have that effect," his father had answered reasonably, "but wouldn't it be a good idea to practice walking a little every day, just to keep in form?"

"In free-fall? But—" Matt had stopped, suddenly aware that there was no way to bridge the gap.

"Never mind. Let's go in to dinner."

There had been the usual round of family dinners with aunts and uncles. Everyone asked him to tell about school, about what it felt like to go out into space. But, somehow, they had not actually seemed very interested. Take Aunt Dora.

Great-aunt Dora was the current family matriarch. She had been a very active woman, busy with church and social work. Now she was bedfast and had been for three years. Matt called on her because his family obviously expected it. "She often complains to me that you don't write to her, Matt, and—"

"But, Mother, I don't have time to write to everyone!"

"Yes, yes. But she's proud of you, Matt. She'll want to ask you a thousand questions about everything. Be sure to wear your uniform—she'll expect it."

Aunt Dora had not asked a thousand questions; she had asked just one—why had he waited so long to come to see her? Thereafter Matt found himself being informed, in detail, on the shortcomings of the new pastor, the marriage chances of several female relatives and connections, and the states of health of several older women, many of them unknown to him, including details of operations and postoperative developments.

He was a bit dizzy when he escaped, pleading a previous date.

Yes, maybe that was it—it might have been the visit to Aunt Dora that convinced him that he was not ready to resign and remain in Des Moines. It could not have been Marianne.

Marianne was the girl who had made him promise to write regularly—and, in fact, he had, more regularly than had she. But he had let her know that he was coming home and she had organized a picnic to welcome him back. It had been jolly. Matt had renewed old acquaintances and had enjoyed a certain amount of hero worship from the girls present. There had been a young man there, three or four years older than Matt, who seemed unattached. Gradually it dawned on Matt that Marianne treated the newcomer as her property.

It had not worried him. Marianne was the sort of girl who never would get clearly fixed in her mind the distinction between a planet and a star. He had not noticed this before, but it and similar matters had come up on the one date he had had alone with her.

And she had referred to his uniform as "cute."

He began to understand, from Marianne, why most Patrol officers do not marry until their mid—thirties, after retirement.

The clock in Pikes Peak Station showed thirty minutes until up-ship. Matt began to worry that Tex's casual way might have caused the other three to miss connections, when he spotted them in the crowd. He grabbed his jump bag and went toward them.

They had their backs toward him and had not seen him as yet. He sneaked up behind Tex and said in a hoarse voice, "Mister—report to the Commandant's office."

Tex jumped into the air and turned completely around. "Matt! You horsethief, don't scare me like that!"

"Your guilty conscience. Hi, Pete. Hello, Oscar."

"How's the boy, Matt? Good leave?"

"Swell."

"Here, too." They shook hands all around.

"Let's get aboard."

"Suits." They weighed in, had their passes stamped, and were allowed to proceed on up to where the *New Moon* stood upright and ready in the catapult cradle, her mighty wings outstretched. A stewardess showed them to their seats.

At the ten-minute warning Matt announced, "I'm going up for some makeelearnee. Anybody with me?"

"I'm going to sleep," denied Tex.

"Me, too," added Pete. "Nobody ever sleeps in Texas. I'm dead."

Oscar decided to come along. They climbed up to the control room and spoke to the captain. "Cadets Dodson and Jensen, sir—request permission to observe."

"I suppose so," the captain grunted. "Strap down." The pilot room of any licensed ship was open to all members of the Patrol, but the skippers on the Terra—to—Station run were understandably bored with the practice.

Oscar took the inspector's chair; Matt had to use deck pads and straps. His position gave him an excellent view of the copilot and mate, waiting at the airplane-type controls. If the rocket motor failed to fire, after catapulting,

it would be the mate's business to fight the ship into level flight and bring her down to a deadstick landing on the Colorado prairie.

The captain manned the rocket-type controls. He spoke to the catapult control room, then sounded the siren. Shortly thereafter the ship mounted up the face of the mountain, at a bone-clamping six gravities. The acceleration lasted only ten seconds; then the ship was flung straight up at the sky, leaving the catapult at 1300 miles per hour.

They were in free-fall and climbing. The captain appeared to be taking his time about cutting in the jet; for a moment Matt held to the excited hope that an emergency landing was going to be necessary. But the jet roared on time.

When they had settled in their orbit and the jet was again silent, Matt and Oscar thanked the captain and went back to their proper seats. Tex and Pete were both asleep; Oscar followed suit at once. Matt decided that he must have missed quite a bit in letting himself be talked out of finishing his leave in Texas.

His thoughts went back—to the problem he had been considering. Certainly he had not decided to stick simply because his own leave had been fairly quiet; he had never thought of home as being a night club, or a fair ground.

One night at dinner his father had asked him to describe just what it was that the *Nobel* did in circum-Terra patrol. He had tried to oblige. "After we lift from Moon Base we head for Terra on an elliptical orbit. As we approach the Earth we brake gradually and throw her into a tight circular orbit from pole to pole—"

"Why pole to pole? Why not around the equator?"

"Because, you see, the atom—bomb rockets are in pole-to-pole orbits. That's the only way they can cover the whole globe. If they were circling around the equator—"

"I understand that," his father had interrupted, "but your purpose, as I understand it, is to inspect the bomb rockets. If you—your ship—circled around the equator, you could just wait for the bomb rockets to come past."

You may understand it," his mother had said to his father, "but I don't."

Matt looked from one to the other, wondering which one to answer—and how. "One at a time . . . please," he protested. "Dad, we can't just intercept the bombs; we have to sneak up on them, match orbits until you are right alongside it and making exactly the same course and speed. Then you bring the bomb inside and ship and inspect it."

"And of what does that inspection consist?"

"Just a sec, Dad. Mother, look here for a moment." Matt took an orange from the table's centerpiece. "The rocket bombs go round and round, like this, from pole-to-pole, every two hours. In the meantime the Earth is turning on its axis, once every twenty—four hours." Matt turned the orange slowly in his left hand while moving a finger of his right hand rapidly around it from top to bottom to simulate a pole-to-pole bomb. "That means that if a bomb passes over Des Moines on this trip, it will just about pass over the Pacific Coast on its next trip. In twenty-four hours it covers the globe."

"Goodness! Matthew, I wish you wouldn't talk about an atom bomb being over Des Moines, even in fun."

"In fun?" Matt had been puzzled. "As a matter of fact ... let me think; we're about forty—two north and ninety—four west—" He glanced at his watch finger and studied for a few moments. "Jay-three ought to be along in about seven minutes—yes, it will be almost exactly overhead by the time you finish your coffee." Long weeks in the *Nobel*, plotting, calculating,, and staring in radarscopes had gotten Matt so that he knew the orbits of circum-Terra prowler rockets a bit better than a farmer's wife knows her own chickens; Jay-three was an individual to him, one with fixed habits.

His mother was looking horrified. She spoke directly to her husband as if she expected him to do something about it. "John. ... I don't like this. I don't like it, do you hear me? What if it should fall?"

"Nonsense, Catherine—it can't fall."

Mart's younger brother chortled. "Mom doesn't even know what holds the Moon up!"

Matt turned to his brother. "Who pushed your button squirt? Do you know what holds the Moon up?"

"Sure—gravity."

"Not exactly. Suppose you give me a quick tell, with diagrams."

The boy tried; his effort was hardly successful. Matt shut him off. "You know somewhat less about astronomy than the ancient Egyptians. Don't make fun of your elders. Now, look, Mother—don't get upset. Jay-three can't fall on us. It's in a free orbit that does not intersect the Earth—like smarty—pants here says, it can't fall down any more than the Moon can fall. Anyhow, if the Patrol was to bomb Des Moines tonight, at this time, it wouldn't use Jay-three for the very reason that it is overhead. To bomb a city you start with a rocket heading for your target and a couple of thousand miles away, because you have to signal its robot to start the jet and seek the target. You have to slow it down and bend it down. So it wouldn't be Jay-three; it would be—" He thought again. "—Eye-two, or maybe Ache-one." He smiled wryly. "I got bawled out over Eye-two."

"Why?" demanded his brother.

"Matt, I don't think you have picked the right tack to quiet your mother's fears," his father said dryly. "I suggest we not talk about bombing cities."

"But I didn't— Sorry, Father."

"Catherine, there really is nothing to get worked up over —you might just as well be afraid of the local policeman. Matt, you were going to tell me about inspection. Why do the rockets have to be inspected?"

"I want to know why Mattie got bawled out!"

Matt cocked an eyebrow at his brother. "I might as well start by telling him, Dad—it has to do with inspection. Okay, Bill—I made a poor dive when we started to pick it up and had to come back on my suit jet and try again."

"What do you mean, Matthew?"

"He means—"

"Pipe down, Billie. Dad, you send a man out in a suit to insert the trigger guard and attach a line to the rocket so you can bring her inboard of the ship and work on her. I was the man. I made a bad push-off and missed the rocket entirely. She was about a hundred yards away and I guess I misjudged the distance. I turned over and found I was floating on past her. I had to jet back and try again."

His mother still seemed confused, but did not like what she heard. "Matthew! That sounds dangerous to me."

"Safe as houses, Mother. You *can't* fall, any more than the rocket can, or the ship. But it's embarrassing. Anyhow, I finally got a line on her and rode her back into the ship."

"You mean you were *riding* an atom bomb?"

"Shucks, Mother, it's safe—the tamper around the fission material stops most of the radioactivity. Anyhow, the exposure is short."

"But suppose it went off?"

"It can't go off. To go off it has to either crash into the ground with a speed great enough to slap the subcritical masses together as fast as its trigger-gun could do it, or you have to fire the trigger-gun by radio. Besides that, I had inserted the trigger guard—that's nothing more nor less than a little crowbar, but when it's in place not even a miracle could set it off, because you can't bring the subcritical masses together."

"Maybe we had better drop this subject, Matt. It seems to make your mother nervous."

"But, Dad, she asked me."

"I know. But you still haven't told me what you inspect for."

"Well, in the first place, you inspect the bomb itself, but there's never anything wrong with the bomb. Anyhow, I haven't had the course for bomb-officer yet—he has to be a nucleonics engineer. You inspect the rocket motor, especially the fuel tanks. Sometimes you have to replace a little that has escaped through relief valves. But mostly you give her a ballistic check and check her control circuits."

"Ballistic check?"

"Of course, theoretically you ought to be able to predict where a prowler bomb would be every instant for the next thousand years. But it doesn't work out that way. Little things, the effect of the tidal bulges and the fact that the Earth is not a perfect uniform sphere and such, cause them to gradually wander a little away from the predicted orbits. After you find one and service it—they're never very far from where they ought to be—you correct the orbit by putting the whole ship in just precisely the proper trajectory and then put the rocket outside the ship again. Then you go after the next one."

"Clear enough. And these corrections have to be made often enough that a ship is kept busy just inspecting them?"

"Well, no, Dad, we inspect oftener than we really have to—but it keeps the ship and the crew busy. Keeps it from getting monotonous. Anyhow, frequent inspections keep you on the safe side."

"Sounds like a waste of taxpayers' money to inspect too often."

"But you don't understand—we're not there to inspect; we're there to *patrol*. The inspection ship is the ship that would deliver an attack in case anybody started acting up. We have to stay on patrol until the next ship relieves us, so we might as well inspect. Granted that you can bomb a city from Moon Base, you can do a better, more accurate job, with less chance of hitting the wrong people, from close by."

His mother was looking very upset. His father raised his eyebrows and said, "We've wandered back to the subject of bombing, Matt."

"I was simply answering your questions, sir."

"I'm afraid I asked the wrong question. Your mother is not able to take the answers impersonally. Catherine, there isn't the slightest chance of the North American Union being bombed. Tell her that, Matt—I think she'll believe you."

Matt had remained silent. His father had insisted, "Go ahead, Matt. Catherine, after all, it's our Patrol. For all practical purposes the other nations don't count. A majority

of the Patrol officers are from North America, That's true, Matt, isn't it?"

"I've never thought about it I guess so."

"Very well. Now, Catherine, you can't imagine Matt bombing Des Moines, now can you? And that is what it amounts to. Tell, her, Matt."

"But— Dad, you don't know what you are saying!"

"What? What's that, young man!"

"I—" Matt had looked around him, then had gotten up very suddenly and left the room.

His father came into his room some time later. "Matt?"

"Yes, sir?"

"Look, Matt, I let the conversation get out of hand tonight. I'm sorry and I don't blame you for getting upset. Your mother, you know. I try to protect her. Women get worked up so easily."

"It's all right, Dad. I'm sorry I walked out"

"No matter. Let's forget it. There's just one thing I feel we ought to get straight on. I know that you feel loyal to the Patrol and its ideals and it's good that you should, but—well, you are a little young still to see the political realities involved, but you must know that the Patrol could not bomb the North American Union."

"It would in a show down!"

"But there won't be any show down. Even if there were, you couldn't bomb your own people and neither could your shipmates."

Matt thought about it, fiercely. He remembered Commander Rivera—one of the Four, of the proud Tradition—how Rivera, sent down to reason with the official in his own capital, his very native city, had kept the trust. Suspecting that he might be held as hostage, he had left orders to go ahead with the attack unless he returned in person to cancel the orders. Rivera, whose body was decaying radioactive dust but whose name was mustered whenever a unit of the Patrol called the roll.

His father was still talking. "Of course, the Patrol has to patrol this continent just as it patrols all through the System. It would look bad, otherwise this is no reason to frighten women with an impossibility."

"I'd rather not talk about it, Dad."

Matt glanced at his watch and figured how long it would be until the *New Moon* reached Terra Station. He wished he could sleep, like the others. He was sure now what it was that had changed his mind about resigning and remaining in Des Moines. It was not a desire to emulate Rivera. No, it was an accumulation of things—all of them adding up to just one idea, that little Mattie didn't live there any more!

For the first few weeks after leave, Matt was too busy to fret. He had to get back into the treadmill, with more studying to do and less time to do it in. He was on the watch list for cadet officer of the watch now, and had more laboratory periods in electronics and nucleonics as well. Besides this he shared with other oldsters the responsibility for bringing up the youngster cadets. Before; leave his evenings had usually been free for study, now he coached youngsters in astrogation three nights a week.

He was beginning to think that he would have to give up space polo, when he found himself elected captain of the Hog Alley team. Then he was busier than ever. He hardly thought about abstract problems until his next session; with Lieutenant Wong.

"Good afternoon," his coach greeted him. "How's your class in astrogation?"

"Oh, that— It seems funny to be teaching it instead of flunking it."

"That's why you're stuck with it—you still remember what it was that used to stump you and why. How about atomics?"

"Well ... I suppose I'll get by, but I'll never be an Einstein."

"I'd be amazed if you were. How are you getting along otherwise?" Wong waited.

"All right, I. guess. Do you know, Mr. Wong—when I went on leave I didn't intend to come back."

"I rather thought so. That space-marines notion was just your way of dodging around, trying to avoid your real problem."

"Oh. Say, Mr. Wong—tell me straight. Are you a regular Patrol officer, or a psychiatrist?"

Wong almost grinned. "I'm a regular Patrol officer, Matt, but I've had the special training required for this job."

"Uh, I see. What was it I was running away from?"

"I don't know. You tell me."

"I don't know where to start."

"Tell me about your leave, then. We've got all afternoon."

"Yes, sir." Matt meandered along, telling as much as he could remember. "So you see," he concluded, "it was a lot of little things. I was home—but I was a stranger. We didn't talk the same language."

Wong chuckled. "I'm not laughing at you," he apologized. "It isn't funny. We all go through it—the discovery that there's no way to go back. It's part of growing up— but with spacemen it's an especially acute and savage process."

Matt nodded. "I'd already gotten that through my thick head. Whatever happens I won't go back—not to stay. I might go into the merchant service, but I'll stay in space."

"You're not likely to flunk out at this stage, Matt."

"Maybe not, but I don't know yet that the Patrol is the place for me. That's what bothers me."

"Well... can you tell me about it?"

Matt tried. He related the conversation with his fattier and his mother that had gotten them all upset. "It's this: if it comes to a show down, I'm expected to bomb my own home town. I'm not sure it's in me to do it. Maybe I don't belong here."

"Not likely to come up, Matt. Your father was right there."

"That's not the point. If a Patrol officer is loyal to his oath only when, it's no skin off his own nose, then the whole system breaks down."

Wong waited before replying. "If the prospect of bombing your own town, your own family, didn't worry you, I'd have you out of this ship within the hour—you'd be an utterly dangerous man. The Patrol doesn't expect a man to have godlike perfection. Since men are imperfect, the Patrol works on the principle of calculated risk. The chance of a threat to the System coming from your home town in your lifetime is slight; the chance that you might be called on to carry out the attack is equally slight—you might be away on Mars. Taking the two chances together you have something close to zero.

"But if you did hit the jackpot, your commanding officer would probably lock you up in your room rather than take a chance on you."

Matt still looked troubled. "Not satisfied?" Wong went on. "Matt, you are suffering from a disease of youth—you expect moral problems to have nice, neat, black-and-white answers. Suppose you relax and let me worry about whether or not you have what it takes. Oh, some day you'll be caught in a squeeze and no one around to tell you the right answer. But I have to decide whether or not you can get the right answer when the problem comes along— and I don't, even know what your problem will be! How would you like to be in my boots?"

Matt grinned sheepishly. "I wouldn't like it."

XI AES TRIPLEX

OSCAR, MATT, AND TEX were gathered in their common room just before lunch when Pete bounced in. Literally so—he caromed off the door frame and zipped into the room, shouting, "Hey, fellows!"

Oscar grabbed his arms as he rebounded from the inner wall. "Cut your jet and ground—what's the excitement?"

Peter turned in the air and faced them. "The new 'Passed' list is posted!"

"Who's on it?"

"Don't know—just heard about it. Come on!"

They streamed after him. Tex came abreast of Matt and said, "I don't know why I should be getting in a sweat—I won't be on it."

"Pessimist!" They turned out of Hog Alley, went inboard three decks, and forward. There was a clot of cadets gathered around the bulletin board outside the watch office. They crowded in.

Pete spotted his own name at once. "Look!" The paragraph read: "Armand, Pierre—temporary duty P.R.S. *Charles' Wain*, rpt. Terr.St, dtch. Leda, Gnymd, d.&a.o."

"Look!" he repeated. "*I'm going home*—'delay and await orders.'"

Oscar patted his shoulder. "Congratulations, Pete—that's swell. Now if you will kindly get your carcass out of the way—"

Matt spoke up. "I'm on it!"

"What ship?" asked Tex.

"The *Aes Triplex*."

Oscar turned at this. "*What* ship?"

"*Aes Triplex*."

"Matt—that's *my* ship. We're shipmates, boy!"

Tex turned disconsolately away. "Just as I said—no 'Jarman.' I'll be here five years, ten years, fifteen years—old and grizzled. Promise to write on my birthday."

"Gee, Tex, I'm sorry!" Matt tried to swallow his own elation.

"Tex, did you look on the other half of the list?" Pete wanted to know.

"What other half? Huh?"

Pete pointed. Tex dove back into the swarm; presently he reappeared. "What do you know? They passed me!"

"Probably didn't want to expose another class of youngsters to you. What ship?"

"P.R.S. *Oak Ridge*. Say, you and Oscar got the same ship?"

"Yep—the *Aes Triplex*."

"Rank discrimination, that's what it is. Well, come on, we'll be late to lunch."

They ran into Girard Burke in the passageway. Tex stopped him. "No use bothering to look, Stinky. Your name's not on the list."

"What list? Oh, you mean the 'Passed' list. Don't bother me, children—you're talking to a free man."

"So they finally bounced you?"

"Like fun! Resignation accepted, effective today. I'm going in business with my father."

"Going to build sky junk, eh? I don't envy you."

"No, we're starting an export line, with our own ships. The next time you see me, just remember to address me as 'Captain.' " He moved away.

"I'll 'captain' him," Tex muttered. "I'll bet he resigned by request."

"Maybe not," conceded Matt. "Girard is a smooth character. Well, we've seen the last of him."

"And a good thing, too."

Tex was missing after lunch. He showed up after nearly two hours. "I worked it. Shake hands with your new shipmate."

"Huh? No fooling!"

"Fact. First I located Dvorak and convinced him that he would rather have a ship in the circum-Terra patrol than the *Aes Triplex*—so he could see his girl oftener. Then I went to see the Commandant and pointed out to him that you guys were used to having the benefit of my advice and would be lost without it. That's all there was to it. The Commandant saw the wisdom of my words and approved the swap with Dvorak."

"Not for that reason, I'll bet," Matt answered. "Probably he wanted me to continue to look out for you."

Tex took on an odd look. "Do you know, Matt, you aren't so far wrong."

"Really? I was just kidding."

"What he did say was that he thought Cadet Jensen would be a good influence on me. What do you think of that, Oscar?"

Oscar snorted. "If I've reached the place where I'm a good influence on anybody, it's time I cultivated some new vices."

"I'd be glad to help."

"I don't want you, I want your Uncle Bodie—there's a man of the world."

Three weeks later, at Moon Base, Oscar and Matt were settling into their stateroom in the *Aes Triplex*. Matt was not feeling his best; the previous evening at Tycho Colony had been late and noisy. They had taken the last possible shuttle to Moon Base.

The ship's phone in their room sounded; Matt answered it to get the squeal out of his ears. "Yes? Cadet Dodson speaking—"

"Officer of the watch. Is Jensen there too?"

"Yes, sir."

"Both of you report to the Captain."

"Aye aye, sir." Matt turned a troubled face to Oscar. "What'll I do, Oz? The rest of my uniforms are over at the base tailor shop—and this one I've got on looks as if I had slept in it."

"You did. Wear one of mine."

"Thanks, but it would fit me like socks on a rooster. Do you suppose I have time to run over and pick up my clean ones?"

"Hardly!"

Matt rubbed the stubble on his chin. "I ought to shave, anyhow."

"Look," said Oscar, "if I'm any judge of skippers, you'll do better to show up naked as an oyster and with a beard down to here, than to keep him waiting. Let's get going."

The door opened and Tex stuck his head in. "Say—did you guys get a call to report to the Old Man?"

"Yes—Tex, can you lend me a clean uniform?"

Tex could. Matt crossed the passageway to Tex's tiny room and changed. He belted in tightly at the waist, distributed the wrinkles in back, and hoped for the best. The three headed for the cabin.

"I'm glad I don't have to report by myself," Tex announced. "I'm nervous."

"Relax," Oscar advised. "Captain McAndrews is supposed to be a very human sort of a guy."

"Hadn't, you heard? McAndrews is detached—busted his ankle. At the last minute the Department ordered Captain Yancey to command the expedition."

"Yancey!" Oscar let out a low whistle. "Oh, my sore feet!"

"What's the matter, Oscar?" Matt demanded. "You know him?"

"My father knew him. Father had the fresh-foods contract for the port at New Auckland when Yancey—Lieutenant Yancey, then—was portmaster." They stopped outside the commanding officer's cabin.

"That ought to give you an inside track."

"Not likely! They didn't get along."

"I wonder if I did right," Tex mused darkly, "when I wangled the swap from the *Oak Ridge*?"

"Too late to fret. Well, I guess we might—" Oscar stopped! speaking, for the door in front of them suddenly opened! and they found themselves facing the commanding officer. He was tall, wide-shouldered, and flat-hipped, and so handsome that he looked like a television star playing a Patrol officer.

"Well?" he snapped. "Don't stand chatting outside my; door. Come in!"

They filed in silently. Captain Yancey sat down, facing them, and looked them over, one after the other. "What's the trouble, gentlemen?" he said presently. "Are you all struck dumb?"

Tex found his voice. "Cadet Jarman, sir, reporting to the Captain." Yancey's eyes flicked over to Matt.

Matt wet his lips. "Cadet Dodson, sir."

"Cadet Jensen, sir, reporting as ordered." The office looked at Oscar sharply, then spoke to him in Venerian.

"*Do these ears detect some echo of the speech of the Fair Planet*."

"*It is true, thou old and wise one*."

"Never could stand that silly talk," Yancey commented, relapsing into Basic. "I won't ask you where you are from, but—is your father in the provisions racket?"

"My father is a food wholesaler, sir."

"I thought so." The Captain continued to look at him for a moment, then turned to Matt. "Now, Mister, what is the idea of the masquerade? You look like a refugee from an emigrant ship."

Matt tried to explain; Yancey cut him short. "I'm not interested in excuses. I keep a taut ship. Remember that."

"Aye aye, sir."

The Captain settled back and struck a cigarette. "Now, gentlemen, you are no doubt wondering as to why I sent for you. I must admit to a slight curiosity as to the sort of product the old school is turning out. In my day, it was a real course of sprouts and no nonsense about it. But now I understand that the psychologists have taken over and the old rules are all changed."

He leaned forward and fixed Matt with his eyes. "They aren't changed here, gentlemen. In my ship, the old rules still obtain."

No one answered. Yancey waited, then went on, "The regulations state that you shall pay a social call on your commanding officer within twenty-four hours after reporting to a new ship or station. Please consider that the social call has commenced. Sit down, gentlemen. Mr. Dodson, you will find coffee over there on your left. Will you please favor me by pouring it?"

Forty minutes later they left, feeling quite confused. Yancey had demonstrated that he could put them most charmingly at their ease and had displayed a dry, warm wit and a gift for telling anecdotes. Matt decided that he liked him.

But just as they left Yancey glanced at his clock and laid, "I'll see you later, Mr. Dodson—in fifteen minutes."

Once they were outside Tex demanded, "What's he want to see you for, Matt?"

"Can't you guess?" answered Oscar. "Look, Matt, I'll tear over to the tailor shop for you—you can't do that and shave, too, not in fifteen minutes."

"You're a lifesaver, Oz!"

P.R.S. *Aes Triplex* blasted from Moon Base thirteen hours later in a trajectory intended to produce an elliptical orbit with its far end in the asteroid belt. Her orders were to search for the missing P.R.S. *Pathfinder*. The *Pathfinder* had been engaged in radar-charting a sector of the asteroid belt for the Uranographic Office of the Patrol. Her mission had taken her beyond the range of ship-type radio; nevertheless she should have reported in by radio nearly six months earlier, at which time she should have been approaching conjunction with Mars. But Deimos Station, around Mars, had been unable to raise the *Pathfinder*; she was presumed lost.

The possible locations of the *Pathfinder* were a moving zone in space, defined by using geometry, ballistics, the characteristics of the ship, her mission, and her last reported location, course, and speed. This zone was divided into four sectors and the *Aes Triplex* was to search one sector while three other Patrol vessels covered the other sectors. The joint task was designated "Operation Samaritan" but each ship was independent as they necessarily would be too far apart to be commanded as a task force.

While searching, the rescue vessels would continue the *Pathfinder*'s mission of charting the space drift that clutters the asteroid belt.

In addition to the commanding officer and the three cadets, the company of the *Aes Triplex* included Commander Hartley Miller, executive officer and astrogator, Lieutenant Novak, Chief Engineer, Lieutenant Thurlow, Bomb Officer, Lieutenant Brunn, Communications Officer, Sublieutenants Peters, Gomez, and Cleary, assistant engineer and communications watch officers respectively, and Dr. Pickering, ship's surgeon, along to care for survivors—if my were found.

The ship contained no marines, unless one chooses to count Dr. Pickering, who was technically a staff corps member of the marines rather than a member of the Patrol. Every task in the ship would be performed by the officers or cadets. Time was when the lowliest subaltern in an infantry regiment had his personal servant, but servants are too expensive a luxury in terms of fuel and space and food to lift through millions of miles of space. Besides that, some few manual tasks are a welcome relief from boredom in the endless monotony of space; even the undesirable chore of cleaning the refresher was taken in turn by the entire ship's company, in accordance with custom, except for the Captain, the Executive Officer, and the Surgeon.

Captain Yancey assigned Lieutenant Thurlow as training officer who in turn set up the jobs of assistant astrogator, junior communication watch officer, junior assistant engineer, and assistant bomb officer and arranged a schedule of rotation among these—quite unnecessary—positions. It was also Mr. Thurlow's job to see to it that Matt, Oscar, and Tex made intensive use of the one study projector available to the cadets.

The Executive Officer assigned other tasks not directly concerned with formal training. Matt was appointed the ship's "farmer." As the hydroponics tanks supply both fresh air and green vegetables to a ship he was responsible for the ship's airconditioning and shared with Lieutenant Brunn the tasks of the ship's mess.

Theoretically every ration taken aboard a Patrol vessel is precooked and ready for eating as soon as it is taken out of freeze and subjected to the number of seconds, plainly marked on the package, of high-frequency heating required. Actually many Patrol officers fancy themselves chefs. Mr. Brunn was one and his results justified his conceit—the *Aes Triplex* set a good table.

Matt found that Mr. Brunn expected more of the "farm" than that the green plants should scavenge carbon dioxide from the air and replace it with oxygen; the mess officer

wanted tiny green scallions, fragrant fresh mint, cherry tomatoes, Brussels sprouts, new potatoes. Matt began to wonder whether it wouldn't have been simpler to have stayed in Iowa and grown tall corn.

When he started in as airconditioning officer Matt was not even sure how to take a carbon—dioxide count, but shortly he was testing his growing solutions and adding capsules of salts with the confidence and speed of a veteran, thanks to Brunn and to spool #62A8134 from the ship's files—"Simplified Hydroponics for Spaceships, with Growth Charts and Additives Formulae." He began to enjoy tending his "farm."

Until human beings give up the habit of eating, spaceships on long cruises must carry about seven hundred pounds of food per man per year. The green plants grown in a ship's airconditioner enable the stores officer to get around this limitation to some extent, as the growing plants will cycle the same raw materials—air, carbon dioxide, and water—over and over again with only the addition of quite small quantities of such salts as potassium nitrate, iron sulphate, and calcium phosphate.

The balanced economy of a spaceship is much like that of a planet; energy is used to make the cycles work but the same raw materials are used over and over again. Since beefsteak and many other foods can't be grown conveniently aboard ship some foods have to be carried and the ship tends to collect garbage, waste paper, and other trash.

Theoretically this could be processed back into the cycles of balanced biological economy, but in practice this is too complicated.

However, all mass in an atomic powered ship can be used, if desired, as reaction mass, mass for the rocket jet. The radioactive materials in the power pile of an atom-powered ship are not themselves used up to any great extent; instead they heat other materials to extreme temperatures and expel them out the rocket tube at very high speeds, as a sort of "steam" jet.

Even though turnip greens and such can be used in the jet, the primary purpose of the "farm" is to take the carbon dioxide out of the air. For this purpose each man in the ship must be balanced by about ten square feet of green plant leaf. Lieutenant Brunn, with his steady demands for variety in fresh foods, usually caused Matt to have too much growing at one time; the air in the ship would get too fresh and the plants would start to fail for lack of carbon dioxide to feed on. Matt had to watch his CO2 count and sometimes build it up by burning waste paper or plant cuttings.

Brunn kept a file of seeds in his room; Matt went there one "day" (ship's time) to draw out Persian melon seeds and set a crop. Brunn told him to help himself. Matt rummaged away, then said, "For the love of Pete! Look at this, Mr. Brunn."

"Huh?" The officer looked at the package Matt held. The outside was marked, "Seeds, melon, Persian—jumbo fancy, stock #12—Q4728—a"; the envelope inside read "Seed, pansies, giant variegated."

Brunn shook his head. "Let that be a lesson, Dodson— never trust a stock clerk—or you'll wind up half way to Pluto with a gross of brass spittoons when you ordered blank spacecharts."

"What'll I substitute? Cantaloupe?"

"Let's grow some watermelon—the Old Man likes watermelon."

Matt left with watermelon seeds, but he took along the truant pansy seeds.

Eight weeks later he devised a vase of sorts by covering a bowl from the galley with the same sponge-cellulose sheet which was used to restrain the solutions used in his farming, thereby to keep said solutions from floating around the "farm" compartment during free fall. He filled his vase with water, arranged his latest crop therein, and clipped the whole to the mess table as a centerpiece.

Captain Yancey smiled broadly when he appeared for dinner and saw the gay display of pansies. "Well, gentlemen," he applauded, "this is most delightful. All the comforts of home!" He looked along the table at Matt. "I suppose we have you to thank for this, Mr. Dodson?"

"Yes, sir." Matt's ears turned pink.

"A lovely idea. Gentlemen, I move that we divest Mr. Dodson of the plebeian title of 'farmer' and designate him 'horticulturalist extraordinary.' Do I hear a second?" There were nine "ayes" and a loud "no" from Commander Miller. A second ballot, proposed by the Chief Engineer, required the Executive Officer to finish his meal in the galley.

Lieutenant Brunn explained the mishap that resulted in the flower garden. Captain Yancey frowned. "You've checked the rest of your supply of seeds, of course, Mr. Brunn?"

"Uh, no, sir."

"Then do so." Lieutenant Brunn immediately started to leave the table, "—after dinner," added the Captain. Brunn resumed his place.

"That puts me in mind of something that happened to me when I was 'farmer' in the old Percival Lowell—the one before the present one," Yancey went on. "We had touched at Venus South Pole and had managed somehow to get a virus infection, a sort of rust, into the 'farm'—don't look so superior, Mr. Jensen; someday you'll come a cropper with a planet that is new to you!"

"Me, sir? I wasn't looking superior."

"No? Smiling at the pansies, no doubt?"

"Yes, sir."

"Hmmph! As I was saying, we got this rust infection and about ten days out I didn't have any more farm than an Eskimo. I cleaned the place out, sterilized, and reseeded. ? Same story. The infection was all through the ship and I couldn't chase it down. We finished that trip on preserved foods and short rations and I wasn't allowed to eat at the table the rest of the trip." He smiled to himself, then' shouted at the galley door, "How you getting along in there, Red?"

The Executive Officer appeared in the doorway, a spoon in one hand, covered dish in the other. "Fine," he answered in a muffled voice, "I just ate your dessert, Captain."

Lieutenant Brunn shouted, "Hey! Commander! Stop! Don't! Those berries are for breakfast."

"Too late." Commander Miller wiped his mouth.

"Captain?"

"Yes, Dodson?"

"What did you do about airconditioning?"

"Well. Mister, what would you have done?"

Matt studied it. "Well, sir, I would have jury—rigged something to take the Cee—Oh—Two out of the air."

"Precisely. I exhausted the air from an empty compartment, suited up, and drilled a couple of holes to the outside. Then I did a piping job to carry foul air out of the dark side of the ship in a fractional still arrangement—freeze out the water first, then freeze out the carbon dioxide. Pesky thing was always freezing up solid and forcing me to tinker with it. But it worked well enough to get us home." Yancey backed away from the table. "Hartley, if you're through making a pig of yourself, let's run over that meteor-layout. I've got an idea."

The ship was approaching the orbit of Mars and soon would be in the comparatively hazardous zone of the asteroids and their company of space drift. Matt was rotated, in turn, to assistant astrogator, but continued as ship's farmer. Tex looked him up one day in the hydroponics compartment. "Hey! Hayseed—"

"Hey yourself, Tex."

"Got the south forty plowed yet? Looks like rain." Tex pretended to study the blinking lights used to stimulate plant growth, then looked away. "Never mind—I'm here on business. The Old Man wants to see you."

"Well, for heaven's sake, why didn't you say so, instead of banging your choppers?" Matt stopped what he was doing and hurriedly started climbing into his uniform. Because of the heat and the humidity in the "farm" Matt habitually worked there bare naked, both for comfort and to save his clothes.

"Well, I did tell you, didn't I?"

The Captain was in his cabin. "Cadet Dodson, sir."

"So I see." Yancey held up a sheet of paper. "Dodson, I've just written a letter to the Department, to be transmitted as soon as we are in radio contact, recommending that fresh flowers be grown in all ships, as a means of stimulating morale. You are credited therein as the originator of the idea."

"Er . .. thank you, sir."

"Not at all. Anything that relieves the tedium, the boredom, the barrenness of life in deep space is in the interest of the Patrol. We have enough people going space-happy as it is. Flowers are considered good for psychotics on Earth; perhaps they will help to keep spacemen from going wacky. Enough of that—I've a question to ask you."

"Yes, sir?"

"I want to know why in the devil you were spending your time growing pansies when you are behind in your study schedule?"

Matt did not have anything to say.

"I've been looking over the reports Mr. Thurlow sends me and I find that both Mr. Jensen and Mr. Jarman are covering more ground than you are. In the past few weeks they have pulled 'way ahead of you. It's a fine thing to have hobbies but your duty is to study."

"Yes, sir."

"I've marked your performance unsatisfactory for this quarter; you have the next quarter in which to make up the deficiency. By the way, have you made up your mind about your next move?"

Matt did a doubletake, then realized that the Captain had changed the subject to chess; he and Matt were fighting it out for first place in the ship's tournament. "Uh, yes, sir—I've decided to take your pawn."

"I thought so." Yancey reached behind him; Matt heard the pieces click into their sockets as the Captain made the move on his own board. "Wait till you see what's going to happen to your queen!"

The speeds of the asteroids, flying boulders, rocks, sand, and space drift that infest the area between Mars and Jupiter vary from about fifteen miles per second near Mars to about eight miles per second near Jupiter. The orbits of this flying junkyard are erratically inclined to the plane of the ecliptic an average of about nine degrees and some of the orbits are quite eccentric as well.

All this means that a ship on a circular orbit, headed "east," or with the traffic, may expect the possibility of side—swiping collisions at relative speeds averaging two miles per second, with crashes remotely possible at double that speed.

Two miles per second is only about twice the muzzle velocity of a good sporting rifle. With respect to small stuff, sand and gravel, the *Aes Triplex* was built to take it. Before the ship reached the danger zone, an allhands chore in space suits took place; armor-plate segments, as thick as the skin of the ship, were bolted over the ship's quartz ports, leaving only the eyes of the astrogational instruments and the radar antennae exposed.

To guard against larger stuff Captain Yancey set up a meteor-watch much tighter than is usual in most parts of space. Eight radars scanned all space through a global 360°. The only condition necessary for collision is that the other object hold a steady bearing—no fancy calculation is involved. The only action necessary then to avoid collision is to change your own speed, any direction, any amount. This is perhaps the only case where theory of piloting is simple.

Commander Miller put the cadets and the sublieutenants on a continuous heel-and-toe watch, scanning the meteor-guard 'scopes. Even if the human being failed to note a steady bearing the radars would "see" it, for they were so rigged that, if a "blip" burned in at one spot on the screen, thereby showing a steady bearing, an alarm would sound— and the watch officer would cut in the jet, fast!

However, even the asteroid belt is very empty space indeed; the chances were strongly against collision with anything larger than a grain of sand. The only difference in the *Aes Triplex*, aside from the increased work for the junior officers, was a ship's order directing all hands to strap down when sleeping, instead of floating loosely and comfortably about, so that the sleeper would not break his neck in case of sudden acceleration.

P.R.S. *Aes Triplex* was equipped with two jeeps, nestled in hangar pockets—quite ordinary short-range, chemically-powered rockets except that they were equipped with search radar as powerful as the ship's. When they reached their search area a pilot and copilot were assigned to each jeep —and a second crew also, as each rocket was to remain away from the ship a week at a time, then swap crews and go out again.

Lieutenants Brunn, Thurlow, and Novak, and Sublieutenant Peters were designated pilots. A cadet was assigned to each senior lieutenant and Sublieutenant Gomez was teamed with Sublieutenant Peters. Matt drew Lieutenant Thurlow.

Dr. Pickering took over the mess. That left Sublieutenant Cleary as "George," the man who does everything—an impossibility, since meteor-guard and search watches would have to be kept up. Consequently the two jeep crews not actually in space had to help out even during their week of rest.

Each Monday the ship placed the jeep rockets on station so that the three vessels would sweep the largest possible volume of space, with their search fields barely overlapping. The placement was made by the mother ship, so that the jeep would be left with full tanks in the unhappy event that she was not picked up—and thereby have enough fuel to shape an orbit toward the inner planets, if need be.

XII P.R.S. PATHFINDER

MATT TOOK ALONG a supply of study spools on his first week of search intending to play them on the jeep's tiny, earphones-type viewer. He did not get much chance; four hours out of eight he had to keep his eyes glued to the search scopes. During the four hours off watch he had to sleep, eat, attend to chores, and study, if possible.

Besides that, Lieutenant Thurlow liked to talk.

The bomb officer was expecting Earthside duty in postgraduate study at the end of the cruise. "And then I'll have to make up my mind, Matt. Do I stay in and make physics a parttime specialty, or resign and go in for research?"

"It depends on what you want to do."

"Trite but true. I think I want to be a scientist, full time—but after a few years the Patrol becomes a father and a mother to you. I don't know. That pile of rock is creeping up on us—I can see it through the port now."

"It is, eh?" Matt moved forward until he, too, could see the undersized boulder that Thurlow had been watching by radar. It was of irregular shape, a pattern of sunlight and sharp, dark shadow.

"Mister Thurlow," said Matt, "look—about the middle. Doesn't that look like striation to you?"

"Could be. Some specimens have been picked up that were definitely sedimentary rock. That was the first proof that the asteroids used to be a planet, you know."

"I thought that Goodman's integrations were the first proof?"

"Nope, you're switched around. Goodman wasn't 'able to run his checks until the big ballistic computer at Terra Station was built."

"I knew that—I just had it backwards, I guess." The theory that the asteroids had once been a planet, between Mars and Jupiter, was denied for many years because their orbits showed no interrelation, i.e., if a planet had blown to bits the orbits should intersect at the point of the explosion. Professor Goodman, using the giant, strain—free computer, had shown that the lack of relationship was caused by the perturbations through the ages of the other planets acting on the asteroids.

He had assigned a date to the disaster, nearly half a billion years ago, and had calculated as well that most of the ruined planet had escaped from the System entirely. The debris around them represented about one per cent of the lost planet.

Lieutenant Thurlow measured the angular width of the fragment, noted its distance by radar, and recorded the result as gross size. The rock, large as it was, was too small to merit investigation of its orbit; it was simply included in the space-drift survey. Smaller objects were merely listed while collisions with minute particles were counted by an electronic circuit hooked to the hull of the jeep.

"The thing that bothers me," went on Thurlow, "about getting out is this— Matt, have you noticed the difference between people in the Patrol and people not in the Patrol?"

"Haven't I, though!"

"What is the difference?"

"The difference? Uh, why, we're spacemen and they're not. I guess it's a matter of how big your world is."

"Partly. But don't get carried away by mere size. A hundred million miles of empty space isn't significant—if it's empty. No, Matt, the split goes deeper. We've given the human race a hundred years of peace, and now there is no one left who remembers war. They've come to accept peace and comfort as the normal way of life. But it isn't. The human animal has millions of years of danger and starving and death behind him; the past century is just a flicker of an eyelash in his history. But only the Patrol seems aware of it."

"Would you abolish the Patrol?"

"Oh, my, no, Matt! But I wish there were some way to make people realize by how thin a barrier the jungle has been shut out. And another thing, too—" Thurlow grinned sheepishly. "—I wish they had some understanding of what we are. The taxpayer's hired man, that's what they think of us."

Matt nodded. "They think we're some sort of traffic cop. There is a man back home who sells used copters—asked me why Patrolmen should be pensioned when they retire. He said that he hadn't been able to sit back and take it easy at thirty-five and he didn't see why he should have to support somebody else who did." Matt looked puzzled. "At the same time he sort of glamorized the Patrol—wants his son to be a cadet. I don't understand it."

"That's it. To them we are a kind of expensive, useless prize pet—their property. They don't understand that we're not for hire. The sort of guardian you can hire is worth about as much as the sort of wife you can buy."

The following week Matt found time to look up what the ship's library afforded on the subject of the exploded planet. There was not much—dry statistics on sizes of asteroids, fragments, and particles, distributional and orbital data, Goodman's calculations summarized. Nothing at all about what he wanted to know—how it happened!—nothing but some finespun theories.

He took it up with Thurlow the next time they were out on Patrol. The lieutenant shrugged. "What do you expect, Matt?"

"I don't know, but more than I found."

"Our time scale is all wrong for us to learn much. Suppose you pick out one of the spools you've been studying— here, this one." The officer held out one marked "Social structures of the Martian aborigines." "Now suppose you examine a couple of frames in the middle. Can you reconstruct the thousands and thousands of frames that come before it, just by logic?"

"Naturally not."

"That's the situation. If the race manages to keep from blowing its top for a few million years, maybe we'll begin to find out some things. So far, we don't even know what questions to ask,"

Matt was dissatisfied, but had no answer ready. Thurlow knit his brows. "Maybe we aren't built to ask the right questions. You know the Martian 'double-world' idea—"

"Certainly, but I don't understand it."

"Who does? Let's forget the usual assumption that a Martian is talking in religious symbols when he says that we live just on 'one side' while he lives on"both sides.' Suppose that what he means is as real as butter and eggs, that he really does live in two worlds at the same time and that we are in the one he regards as unimportant. If you accept that, then it accounts for the Martian being unwilling to waste time talking with us, or trying to explain things to us. He isn't being stuffy, he's being reasonable. Would you waste time trying to explain rainbows to an earthworm?"

"The cases aren't parallel."

"Maybe they are to a Martian. An earthworm can't even see, much less have a color sense. If you accept the 'double world' as real, then to a Martian we just don't have the proper senses to be able to ask the right questions. Why bother with us?"

The radio squealed for attention. Thurlow glanced toward it and said, "Someone calling, Matt. See who it is and tell 'em we don't want any."

"Okay." Matt flipped the switch and answered, "Jeep One, *Triplex*—go ahead."

"*Triplex* calling," came Sublieutenant Cleary's familiar voice. "Stand by to be picked up."

"Huh? Cut the comedy—we're only three days out."

"Stand by to be picked up—official. Jeep Two has found the *Pathfinder*."

"The deuce you say! Did you hear that, Mr. Thurlow? Did you hear that?"

It was true; Peters and Gomez, in the other jeep, had discovered the missing ship, almost by accident. The *Pathfinder* was found anchored to a smallish asteroid about a mile in greatest dimension. Since it was a listed body, 1987—CD, the crew of the jeep had paid little attention to it, until its rotation brought the *Pathfinder* into view.

With fine consideration Captain Yancey had elected to pick up Thurlow and Dodson before rendezvousing with the second jeep. Once they were inside, the *Aes Triplex* moved toward 1987—CD and matched orbits. Sublieutenant Peters had elected to expend some of his get—away fuel and had matched orbits also.

Matt fidgeted while the second jeep was brought into the ship. He could see nothing, since the ports were covered, and for the moment had no assigned duties. With maddening deliberation Captain Yancey secured his ship to the *Pathfinder*, sending a line over by Sublieutenant Gomez. The rest of the ship's company was crowded into the control room. Tex and Matt took the opportunity to question Sublieutenant Peters.

"Couldn't tell much," he informed them. "Off hand, she looks undamaged, but the door of the lock was standing open."

"Any chance anyone is alive inside?" asked Tex.

"Possible. Hardly likely."

Captain Yancey looked around. "Pipe down," he ordered. "This is a control room, not a sewing circle." When he had finished he ordered Peters and Gomez to come with him; the three suited up and left the ship.

They were gone about an hour. When they returned the Captain called them all into the mess room. "I am sorry to tell you, gentlemen, that none of our comrades is alive."

He went on heavily, "There is not much doubt as to what happened. The outer armored door of the lock was open and undamaged. The inner door had been punched through by a missile about the size of my fist, producing explosive decompression in the connecting compartments. Apparently they had had the enormous bad luck to have a meteor enter the ship through the door just as it was opened."

"Wait a minute, Skipper," objected Miller. "Was every airtight door in the ship wide open? One rock shouldn't have done the trick."

"We couldn't get into the after part of the ship; it still holds pressure. But we could reconstruct what happened, because we could count the bodies—seven of them, the entire ship's company. They were all near the lock and not in spacesuits, except for one man in the lock—his suit was pierced by a fragment apparently. The others seem to have been gathered at the lock, waiting for him to come in." Yancey looked grave. "Red, I think we are going to have to put in a recommended technical order over this— something to require personnel to spread out while suit operations are going on, so that an accident to the lock won't affect the entire ship's company."

Miller frowned. "I suppose so, Captain. Might be awkward to comply with, sometimes, in a small ship."

"It's awkward to lose your breath, too. Now about the investigation—you'll be the president, Red, and Novak and Brunn will be your other two members. The rest of us will remain in the ship until the board has completed its work. When they have finished and have removed from the *Pathfinder* anything needed as evidence I will allow sufficient time for each of you to satisfy his curiosity."

"How about the surgeon, Captain? I want him for an expert witness."

"Okay, Red. Dr. Pickering, you go with the board."

The cadets crowded into the stateroom shared by Matt and Oscar. "Can you beat it?" said Tex. "Of all the cheap tricks! We have to sit in here, a week or ten days, maybe, while a board measures how big a hole there is in the door."

"Forget it, Tex," advised Oscar. "I figure the Old Man didn't want you carving your initials in things, or maybe snagging the busted door for a souvenir, before they found out what the score was."

"Oh, nuts!"

"Quit crabbing. He promised you that you could snoop around and take pictures and satisfy your ghoulish appetites as soon as the board is finished. In the meantime, enjoy the luxury of eight hours of sleep for a change. No watches, none of any sort."

"Say, that's right!" agreed Matt. "I hadn't thought about it, but there's no point in watching for rocks when you're tied down and can't duck."

"As the crew of the *Pathfinder* know only too well."

Last Muster was held for the *Pathfinder* on the following day. The bodies themselves had been sealed into a compartment of the dead ship; muster took place in the wardroom of the *Aes Triplex*. It was rather lengthy, as it was necessary to read the services of three different faiths before the Captain concluded with the Patrol's own all-inclusive farewell: "Now we shape our orbit home—"

It so happened that there were just enough persons present to answer the roll. The *Aes Triplex*'s company was a captain and eleven others. For the *Pathfinder* there were exactly eleven—six patrol officers, one civilian planetologist, and the Four who are present at every muster. Captain Yancey called off the *Pathfinder*'s roll and the others answered, one after the other, from Commander Miller down to Tex—while The Long Watch, muted down to a requiem, played softly over the ship's speaker system.

Matt found his throat almost too dry to answer. Tex's chubby cheeks ran with tears and he made no effort to wipe them.

Lieutenant Brunn was a source of information for the first couple of days of the investigation. He described the *Pathfinder* as in good shape, except for the damaged door. On the third day he suddenly shut up. "The Captain doesn't want the board's findings discussed until he has had time to study them."

Matt passed the word on to the others. "What's cooking?" demanded Tex. "What can there possibly be to be secret about?"

"How should I know?"

"I've got a theory," said Oscar.

"Huh? What? Spill it."

"The Captain wants to prove a man can't die of curiosity. He figures that you are a perfect test case."

"Oh, go soak your head."

Captain Yancey called them all together again the following day. "Gentlemen, I appreciate your patience. I have not wanted to discuss what was found in the *Pathfinder* until I had time to decide what should be done about it. It comes to this: the planetologist with the *Pathfinder*, Professor Thorwald, came to the unmistakable conclusion that the disrupted planet was inhabited."

The room started to buzz. "Quiet, please! There are samples of fossil-bearing rock in the *Pathfinder*, but there are other exhibits as well, which Professor Thorwald concluded —Dr. Pickering and Commander Miller and I concur—concluded to be artifacts, items worked by intelligent hands.

"That fact alone would be enough ,to send a dozen ships scurrying into the asteroid belt," he went on. "It is probably the most important discovery in System-study since they opened the diggings in Luna. But Professor Thorwald formed another conclusion even more startling. With the aid of the ship's bomb officer, using the rate-of-radioactive-decay method, he formed a tentative hypothesis that the planet—he calls it Planet Lucifer—was disrupted by artificial nuclear explosion. In other words, they did it themselves."

The silence was broken only by the soft sighing of the room's ventilators. Then Thurlow exploded, "But Captain, that's impossible!"

Captain Yancey looked at him. "Do you know all the answers, young man? I'm sure I don't."

"I'm sorry, sir."

"In this case I wouldn't even venture to have an opinion. I'm not competent. However, gentlemen, if it be true, as Professor Thorwald certainly thought it was, then I hardly need point out to you that we have more reason than ever to be proud of our Patrol—and our responsibility is even heavier than we had thought.

"Now to business—I am very reluctant to leave the *Pathfinder* where she is. Aside from sentimental reasons she is a ship of the Patrol and she is worth a good many millions. I think we can repair her and take her back."

XIII LONG WAY HOME

MATT TOOK PART in the rebuilding of the inner door of the *Pathfinder*'s airlock and the checks for airtightness, all under the careful eye of the chief engineer. There was little other damage inside the ship. The rock, or meteor, that had punched the gaping hole in the inner door had expended most of its force in so doing; an inner bulkhead had to be patched and a few dents smoothed. The outer, armored door was quite untouched; it was clear that the invader, by bad chance, had come in while the outer door was standing open.

The plants in the airconditioner had died for lack of attention and carbon dioxide. Matt took over the job while the others helped in the almost endless chores of checking every circuit, every instrument, every gadget necessary to the ship's functioning. It was a job which should have been done at a repair base and could not have been accomplished if there had actually been much wrong.

Oscar and Matt squeezed an hour out of sleep to explore 1987-CD, a job that mixed mountain climbing with suitjet work. The asteroid had a gravitational field, of course, but even a mass the size of a small mountain is negligible compared with that of a planet. They simply could not feel it; muscles used to opposing the tenacious pull of robust Terra made nothing of the frail pull of 1987—CD. ' At last the *Pathfinder* was cast loose and her drive tested by a scratch crew consisting of Captain Yancey at the controls and Lieutenant Novak in the power room. The *Aes Triplex* lay off a few miles, waited until she blasted her jet for a few seconds, then joined her. The two ships tied together and Captain Yancey and the chief engineer came back into the *Aes Triplex*.

"She's all yours, Hartley," he announced. "Test her yourself, then take over when you are ready."

"If she suits you she suits me. With your permission, sir, I'll transfer my crew now."

"So? Very well, Captain—take command and carry out your orders. Log it, Mister," Captain Yancey added, over his shoulder to the officer of the watch.

Thirty minutes later the split crew passed out through the airlock of the *Aes Triplex* and into the airlock of the other. P.R.S. *Pathfinder* was back in commission.

Remaining with the *Aes Triplex* was Captain Yancey, Lieutenant Thurlow, now executive officer and astrogator, Sublieutenant Peters, now chief engineer, Cadet Jensen, chief communications officer, and Cadets Jarman and Dodson, watch officers, all departments—and Dr. Picketing, ship's surgeon.

Commander Miller, captain of the *Pathfinder*, had one less officer than Captain Yancey, but all of his officers were experienced; Captain Yancey had elected to burden himself with the cadets. He would have assumed command of the derelict himself and taken his chances with her, except for one point—the law did not permit it. He could place a master aboard her and put her back in commission, but there was no one present with authority to relieve him of his own ship—he was prisoner of his own unique status, commanding officer operating alone.

In her original flight plan it had been intended that the *Pathfinder* should make port at Deimos, Mars, when Mars overtook her and was in a favorable position. The delay caused by the disaster made the planned orbit quite out of the question; Mars would not be at the rendezvous. Furthermore Captain Yancey wanted to get the astounding evidence contained in the *Pathfinder* to Terra Base as quickly as possible; there was little point in sending it to the outpost on Mars' outer satellite.

Accordingly reaction mass was pumped from the *Aes Triplex* to the smaller ship until her tanks were full and a fast, fairly direct, though uneconomical, orbit to Earth was plotted for her. The *Aes Triplex*, using an economical "Hohmann"-type, much longer orbit, would mosey in past the orbit of Mars, past the orbit of Earth (Earth would not be anywhere close at the time), in still further, swinging around the Sun and out again, catching up with Earth nearly a year later than the *Pathfinder*. She had mass to accomplish this, even after replenishing the *Pathfinder*, but she was limited to time—wasting, but fuel—saving, orbits more usual to merchant vessels than to ships of the Patrol.

[* Hohmann, Dr. Walter—*The Attainability of the Celestial Bodies*, Munich, 1925. This pioneer work in astrogation, written long before the flight of the *Kilroy Was Here*, remains the foundation work in its field. All subsequent work is refinement of basic principles set forth by Hohmann.]

Matt, in one of his multiple roles as assistant astrogator, noticed a peculiarity of the orbit and called it to Oscar's attention. "Say, Oz, come and look at this—when we get to perihelion point, the other side of the Sun, we almost clip a cloud off your home town. See?"

Oscar looked over the charted positions. "Well, darn if we don't! What's the nearest approach?"

"Less than a hundred thousand miles. We'll tack on her a bit—the Old Man is a heller for efficient orbits, I find. Want to jump ship?"

"We'd be going a trifle fast for that," Oscar commented dryly.

"Oh, where's the old pioneer spirit? You could swipe one of the jeeps and be gone before you're missed."

"Gosh, I'd like to. It would be nice to have some leave." Oscar shook his head sadly and stared at the chart.

"I know what's eating on you—since you've been made the head of a department you've acquired a sense of responsibility. How does it feel to be one of the mighty?"

Tex had come into the chartroom while they were talking. He chipped in with, "Yeah, come on, Oz—tell your public."

Oscar's fair skin turned pink. "Quit riding me, you guys. It's not my fault."

"Okay, you can get up now. Seriously," Matt went on, "this is quite a break for all of us—acting ship's officers on what was supposed to be a training tour. You know what I think?"

"Do you think?" inquired Tex.

"Shut up. If we keep our noses clean and get any chance to show some stuff, it might mean brevet commissions for all of us."

"Captain Yancey give me a brevet?" said Tex. "A fat chance!"

"Well, Oscar almost certainly. After all, he is chief comm officer."

"I tell you that doesn't mean a thing," protested Oscar. "Sure, I've got the tag—with nobody to communicate with. We're out of range, except for the *Pathfinder*, and she's pulling away fast."

"We won't always be out of range."

"It won't make any difference. Can you see the Old Man letting me—or any of us—do anything without staring down the backs of our necks? Anyhow, I don't want a brevet. Suppose we got back and it wasn't confirmed? Embarrassing!"

"I'd jump at the chance," announced Tex. "It may be the only way I'll ever get one."

"Drop the orphan-child act,— Tex. Suppose your Uncle Bodie heard you talking like that."

In fact, the atmosphere in the ship was very different, even though the Captain, or Lieutenant Thurlow, or both, supervised them very carefully. Captain Yancey took to calling them by their first names at mess and dropped the use of "cadet" entirely. He sometimes referred to the "ship's officers," using the term so that it plainly included the three cadets. But there was no suggestion of brevet rank made.

Out of the asteroid belt, out of radio range, and in interminable free fall, the ship's duties were light. The cadets had plenty of time to study, enough time for card games and bull sessions. Matt caught up with his assignments and reached the point where he was digging into the ship's library for advanced work, for the courses outlined for them when they left the *Randolph* had been intended for a short cruise.

The Captain set up a seminar series, partly to pass his own time and partly as a supplement to their education. It was supposed to illustrate various problems faced by a Patrol officer as a spaceman, or in his more serious role as a diplomatic representative. Yancey lectured well; the cadets found, too, that he could be drawn into reminiscence. It was both enjoyable and instructive and helped! to pass the weary weeks.

At long, long last they were within radio range of Venus—and there was mail for all of them, messages that had been chasing them half around the Solar System. An official dispatch from the Department congratulated the Commanding Officer on the recovery of the *Pathfinder* and commended the ship's company—this was entered, in due course, in the record of each. A private message from Hartley Miller told Captain Yancey that the trip home had been okay and that the longhairs were tearing same over the contents of the ship. Yancey read this aloud to them.

In addition to letters from home, Matt received a wedding announcement from Marianne. He wondered if she had married the young man he had met at the picnic, but he could not be sure of the name—the whole thing seemed very remote. There was a letter, too, to all three cadets date—marked "Leda, Ganymede" from Pete, of the having-a-wonderful-time-wish-you-were-here sort. "Lucky stiff!" said

Tex.

" 'Touring the world'—phooey!"

Other messages poured in—ships' movements, technical orders, personnel changes, the accumulated minutiae of a large military organization—and a detailed resume of the news of four planets from the time they had lost contact to the present.

Oscar found that Captain Yancey did not breathe on his neck in his duties as communications chief—but by then it did not surprise him. Oscar simply was the comm chief and had almost forgotten that he had ever been anything else.

He felt, however, that he was really confirmed in his office the day a message came in top cipher, the first not in "clear." He was forced to ask the Captain for the top-cipher machine, kept in the Captain's safe. It was turned over to him without comment.

Oscar was bug-eyed when he took the translated message to Yancey. It read: TRIPLEX—CAN YOU INVESTIGATE TROUBLE EQUATORIAL REGION VENUS—OPERATIONS.

Yancey glanced at it. "Tell the Executive Officer I want to see him, please. And don't discuss this."

"Aye aye, sir."

Thurlow came in somewhat mystified. "What's up, Captain?" Yancey handed him the flimsy. The lieutenant read it and whistled.

"Can you see any way to comply?"

"You know how much reaction potential we have, Captain. We could manage a circular orbit. We can't land."

"That's the way I see it. I suppose we'll have to refuse—dammit, I'd rather take a whipping than send in a negate. Why did they pick on us? There must be half a dozen other ships better located."

"I don't think so, Captain. I think we are the only available ship. Have you studied the movements file?"

"Not especially. Why?"

"Well, the Thomas Paine should be the ship—but she's grounded at New Aukland for emergency repairs."

"I see. There ought to be a standing circum—Venus patrol — there'll have to be, some day." Yancey scratched his chin and looked unhappy.

"How about this, Captain—"

"Yes?"

"If we change course right now we could do it cheaply. Then we could bring her in for atmospheric braking with no further expenditure. Then ease her down with the jet."

"Hmmm—how much margin?"

Lieutenant Thurlow got a far—away look in his eyes, while he approximated a fourth—order solution in his head. Captain Yancey joined him in the trance, his lips moving soundlessly.

"Practically none, Captain. After you've steadied in circum, you'd have to dive in and accept atmospheric terminal speed, or close to it, before you blasted."

Yancey shook his head. "Into *Venus?* I'd as soon fly a broom on Walpurgis night. No, Mr. Thurlow, we'll just have to call them up and confess."

"Just a minute, Captain—they know we don't have marines."

"Of course."

"Then they don't expect us to deliver police action. What we can do is to send a jeep down."

"I've been wondering when you would work around to that. All right, Mr. Thurlow—it's yours. I hand it over reluctantly, but I can't seem to help it. Never had a mission of your own, have you?"

"No, sir."

"You're getting one young. Well, I'll ask Operations for the details while you're preparing the course change."

"Fine, sir! Does the Captain care to designate the cadet to go with me, or shall I pick him?"

"You're not going with just one, Lieutenant—you'll take all three. I want you to leave the jeep manned at all times and I want you to have an armed man at your elbow. The equatorial region of Venus—there is no telling what you'll run into."

"But that leaves you with no one but Peters, sir—not counting the surgeon, of course."

"Mr. Peters and I will make out all right. Peters plays a very good hand of cribbage."

Details from Operations were slight. The M.R.S. *Gary* had radioed for help claiming to be imperiled by a native uprising. She had given her position, then radio contact had been lost.

Yancey elected to use atmospheric braking in any case to save his reaction mass for future use—otherwise the *Aes Triplex* might have circled Venus until she could be succored. The ship's company spent a crowded, tiring fifty-six hours shut up in the control room while the ship dipped to the clouds of Venus and out again, a bit deeper and bit slower on each round trip. The ship grew painfully hot and the time spent in free space on each lap was hardly enough to let her radiate what she picked up. Most of the ship was intolerably hot, for the control room and the "farm" were refrigerated at the expense of the other spaces. In space, there is no way to get rid of unwanted heat, permanently, except by radiation—and the kinetic energy difference between the original orbit and the circum-Venus orbit the Captain wanted had to be absorbed as heat, a piece at a time, then radiated into space.

But at the end of that time three hot, tired, but very excited, young men, with one a little older, were ready to climb into jeep no. 2.

Matt suddenly remembered something. "Oh, Doctor—Doctor Pickering!" The surgeon had spent a medically uneventful voyage writing a monograph entitled "Some Notes on Comparative Pathologies of the Inhabited Planets" and was now at loose ends. He had relieved Matt as "farmer."

"Yes, Matt?"

"Those new tomato plants—they have to be cross-pollenated three days from now. You'll do it for me? You won't forget?"

"Can do!"

Captain Yancey guffawed. "Get your feet out of the furrows, Dodson. Forget the farm—we'll look out for it. Now, gentlemen—" He looked around and caught their eyes. "Try to stay alive. I doubt very much if this mission warrants expending four Patrol officers."

As they filed in Tex dug Matt in the ribs. "Did you hear that, kid—'four Patrol officers.' "

"Yeah, but look what else he said."

Thurlow tucked his orders in his pouch. They were simple: proceed to latitude north two degrees seven, longitude two hundred twelve degrees zero; locate the *Gary* and investigate reported native uprising. Keep the peace.

The lieutenant settled himself and looked around at his crew. "Hold your hats, boys. Here we go!"

XIV "THE NATIVES ARE FRIENDLY ..."

WITH THURLOW at the controls and Matt in the copilot's seat the jeep started down. It started with an orbital speed of better than four miles per second, the speed of the *Aes Triplex* in her tight circular orbit around the equator of Venus. The lieutenant's purpose was to kill this speed exactly over his destination, then balance the jeep down on its tail. A jet landing was necessary, as the jeep had no wings.

He needed to do this precisely, with the least use of fuel. He was helped somewhat by riding "with the current" from west to east; the 940-mile-per-hour rotational speed of Venus at her equator was profit rather than loss. However, exact placement was another matter. A departure time was selected so that the entire descending curve would be on the day side of the planet in order to use the Sun as a reckoning point for placement in longitude; placement in latitude would have to depend on dead reckoning by careful choice of course.

The Sun is the only possible celestial body to use in air navigation at Venus, and even Sol is lost to the naked eye as soon as one is inside the planetwide blanket of cloud. Matt "shot the Sun" by keeping one eye glued on the eyepiece of an infrared adapter which had been fitted to the ship's octant, and was enabled thereby to coach his skipper from a prepared flight plan. It had not been considerred practical to cut a cam for the automatic robot; too little was known about the atmospheric conditions to be expected.

When Matt informed his pilot that they were about thirty miles up, by radar, and approaching the proper longitude, is given by the infrared image of the Sun, Thurlow brought the jeep down toward their target, ever lower and slower, and finally braked her with the jet to let her drop in a parabola distorted by air resistance.

They were enveloped in the everpresent Venerian clouds. The pilot's port was utterly useless to them. Matt now started watching the surface under them, using an infrared-sensitive "cloud piercer."

Thurlow watched his radar altimeter, checking it against the height-time plan for grounding.

"If we are going to dodge around any, it's got to be now," he said quietly to Matt. "What do you see?"

"Looks fairly smooth. Can't tell much."

Thurlow sneaked a look. "It's not water, anyway—and it's not forest. I guess we'll chance it."

Down they dropped, with Matt watching the ghostly infrared-produced picture narrowly at the end, ready to tell Thurlow to give her full power if it were a meadow.

Thurlow eased off his jet—and cut it. There was a bump as if they had fallen a couple of feet. They were down, landed on Venus.

"Whew!" said the pilot and wiped sweat from his forehead. "I don't want to have to try that every day."

"Nice landing, Skipper!" called out Oscar.

"Yea bo!" agreed Tex.

"Thanks, fellows. Well, let's get the stilts down." He punched a stud on the control board. Like most rockets built for jet landings, the jeep was fitted with three stabilizing jacks which came telescoping out of the craft's sides and slanting downward. Hydraulic pressure forced them down until they touched something solid enough to hold them, whereupon the thrusting force was automatically cut off and they locked in place, propping the rocket on three sides, tripod fashion, and holding it erect.

Thurlow waited until three little green lights appeared under the stud controlling the stilts, then unclutched the jeep's stabilizing gyros. The jeep held steady, he unstrapped. "All right, men. Let's take a look. Matt and Tex, stay inside. Oscar, if you don't mind my mentioning it, since it's your home town, you should do the honors."

"Right!" Oscar unstrapped and hurried to the lock. There was no need to check the air, since Venus is man-inhabited, and all of them, as members of the Patrol, had been immunized to the virulent Venerian fungi.

Thurlow crowded close behind him. Matt unstrapped and came down to sit by Tex in the passenger rest Oscar had left. The space around the lock was too limited in the little craft to make it worthwhile to do anything but wait.

Oscar stared out into the mist. "Well, how does it feel to be home?" asked Thurlow.

"Swell! What a beautiful, beautiful day!"

Thurlow smiled at Oscar's back and said, "Let's get the ladder down and see where we are." The access door was more than fifty feet above the jeep's fins, with no convenient loading elevator.

"Okay." Oscar turned and squeezed past Thurlow. The jeep settled suddenly on the side away from the door, seemed to catch itself, then started to fall over with increasing speed.

"The gyros!" yelled Thurlow. "Matt, clutch the gyros!" He tried to scramble past Oscar; they fouled each other, then the two fell sprawling backwards as the jeep toppled over.

At the pilot's yell Matt tried to comply—but he had been sprawled out, relaxing. He grabbed the sides of the rest, trying to force himself up and back to the control station, but the rest tilted backwards; he found himself "skinning the cat" out of it, and then was resting on the side of the craft, which was now horizontal.

Oscar and Thurlow were the first things he saw as he untangled himself. They were piled up on the inner wall of the ship, with Oscar mostly on top. Oscar started to get up—and stopped. "Eeeyowp!"

"You hurt, Oz?"

"My arm."

"What's the trouble?" This was Tex, who appeared from behind Matt, apparently untouched by the tumble.

Oscar helped himself up with his right arm, then tenderly felt his left forearm. "I don't know. A sprain—or a break, maybe. Eeee—ah! It's a break."

"Are you sure?" Matt stepped forward. "Let me see it."

"What's the matter with the skipper?" asked Tex.

"Huh?" said Matt and Oscar together. Thurlow had not moved. Tex went to him and knelt over him.

"Looks like he's knocked out cold."

"Throw some water over him."

"No, don't do that Do—" The craft settled again. Oscar looked startled and said, "I think we had better get out of here."

"Huh? We can't," protested Matt. "We've got to bring Mr. Thurlow to."

Oscar did not answer him but started climbing up toward the open lock, now ten feet over their heads, swearing in Venerian as he struggled painfully and awkwardly, using one hand, from strut to brace. " 'S'matter with old Oz?" asked Tex. "Acts like he's blown his top."

"Let him go. We've got to take care of the skipper." They knelt over Thurlow and gave him a quick, gentle' examination. He seemed unhurt, but remained unconscious.; "Maybe he's just had the breath knocked out of him," suggested Matt. "His heart beat is strong and steady."

"Look at this, Matt." It was a lump on the back of the; lieutenant's head. Matt felt it gently.

"Didn't bash in his skull. He's just had a wallop on his noggin. He'll be all right—I think."

"I wish Doc Pickering was here."

"Yeah, and if fish had feet, they'd be mice. Quit worrying, Tex. Stop messing with him and give him a chance to come out of it naturally."

Oscar stuck his head down into the open door. "Hey, you guys! Come up out of there—and fast!"

"What for?" asked Matt. "Anyhow, we can't—we got to stay with the boss, and he's still out cold."

"Then carry him!"

"How? Piggyback?"

"Any way—but *do it!* The ship is sinking!"

Tex opened his mouth, closed it again, and dived toward a small locker. Matt yelled. "Tex—get a line!"

"What do you think I'm doing? Iceskating?" Tex reappeared with a coil of thin, strong line used in warping the little craft in to her mother ship. "Easy now—lift him as I slip it under his chest."

"We ought to make a proper sling. We might hurt him."

"No time for that!" urged Oscar from above them. "Hurry!"

Matt swarmed up to the door with the end of the line while Tex was still fastening the loop under the armpits of the unconscious man. A quick look around was enougfl to confirm Oscar's prediction; the jeep lay on her side with her fins barely touching solid ground. The nose was lower than the tail and sinking in thin, yellow mud. The mud stretched away into the mist, like a flat field, its surface carpeted with a greenish—yellow fungus except for a small space adjacent to the ship where the ship, in failing, had splashed a gap in the surface.

Matt had no time to take the scene in; the mud was almost up to the door. "Ready down there?"

"Ready. Ill be right up."

"Stay where you are and steady him. I think I can handle him." Thurlow weighed one hundred forty pounds, Earthside; his Venus weight was about one hundred and seventeen. Matt straddled the door and took a strain on the line.

"I can give you one hand, Matt," Oscar said anxiously.

"Just stay out of my way." With Matt pulling and Tex pushing and steadying from below, they got the limp lieutenant over the lip of the door and laid out on the rocket.

The craft lurched again as a tail fin slid off the bank. "Let's get going, troops," Matt urged. "Oz, can you get up on that bank by yourself?"

"Sure."

"Then do so. We'll leave the line on the skipper and chuck the end to you and you can hang onto it with your good hand. That way, if he goes in the mud, we can haul him out."

"Quit talking and get busy." Oscar trotted the length of the craft, taking the end of the line with him. He made it to the bank by stepping from a tail fin.

Matt and Tex had no trouble carrying Thurlow as far as the fins, but the last few feet, from fins to bank, were awkward. They had to work close to the jet tube, still sizzling hot, and balance themselves in a trough formed by a fin and the converging side of the ship. They finally made it by letting Oscar take most of the lieutenant's weight by hauling from the bank with his one good arm.

When they had gotten Thurlow laid out on the turf Matt jumped back aboard the jeep. Oscar shouted at him. "Hey, Matt—where do you think you're going?"

"Back inside."

"Don't do it. Come back here." Matt hesitated, Oscar added, "That's an order, Matt."

Matt answered, "I'll only be a minute. We've got no weapons and no survival kits. I'll duck in and toss them out."

"Don't try it." Matt stood still a moment, balanced between Oscar's unquestioned seniority and the novelty of taking direct orders from his roommate. "Look at the door, Matt," Oscar added. "You'd be trapped."

Matt looked. The far end of the door was already in the mud and a steady stream was slopping into the ship, like molasses. As he looked the jeep rolled about a quarter turn, seeking a new stability. Matt made it to the bank in one flying leap.

He looked back and saw that the door was out of sight; a big bubble formed and *plopped!*—and then another. "Thanks, Oz!"

They stood and watched as the tail slid away from the bank. A cloud of steam came up and joined the mist as the jet tube hit the wetness; then the tail lifted and the jeep was almost vertical, upside down, for a few moments, with only her after end showing above the slime.

She sank slowly. Presently there was nothing but bubbles in the mud and a ragged break in the false lawn to show where it had been.

Mart's chin was trembling. "I should have stayed at the controls. I could have caught her on her gyros."

"Nonsense," said Oscar. "He didn't tell you to stay put."

"I should have known better."

"Quit beating yourself with it. The procedures say it's the pilot's business. If there was any doubt in his mind he should have left her stabilized on gyro until he inspected. Right now we got to take care of him, so cut out the post-mortem."

"Okay." Matt knelt down and tried Thurlow's pulse. It was still steady. "Nothing we can do for him at the moment but let him rest. Let's see your arm."

"Okay, but take it easy. Ouch!"

"Sorry. I'm afraid I'll have to hurt you; I've never actually set a bone before."

"I have," said Tex, "out on the range. Here you go, Oz old boy—lie down on your back. And relax—it's going to hurt."

"Okay. Only I thought that down in Texas you just shot "em." Oscar managed to smile.

"Just for broken legs. Broken arms we usually save. Matt, you whip up a couple of splints. Got a knife?"

"Yep."

"Good thing—I don't have. Better take your blouse off first, Oscar." With help Jensen complied; Tex placed a foot in Oscar's left armpit, grasped his left hand in both of his, and gave a steady tug.

Oscar yelped. "I think that did it," said Tex. "Matt, hurry up with those splints."

"Coming." Matt had found a clump of grass, twelve to fifteen feet tall and superficially similar to Earthside bamboo. He cut about a dozen lengths as thick as his little finger and around fifteen inches long, brought them,back and gave them to Tex. "Will these do?"

"I guess so. Here goes your blouse, Oscar." Tex attempted to tear strips from the garment, then gave up. "Golly, that stuff is tough. Gimme your knife, Matt."

Ten minutes later Oscar was adequately splinted and bandaged, with what remained of his blouse rigged as a sling. Tex took off his own blouse and sat down on it, for the turf was damp and the day was hot and muggy as only Venus can be. "That's done," he said, "and the skipper hasn't blinked an eye. That leaves you holding the sack, Oz—when do we have lunch?"

"A fine question, that." Oscar wrinkled his brows. "First, let's see what we've got to work with. Turn out your pouches."

Matt had his knife. Oscar's pouch contained nothing of significance. Tex contributed his harmonica. Oscar looked worried. "Fellows, do you suppose I'm justified in looking through Mr. Thurlow's pouch?"

"I think you ought to," said Tex. "I've never seen anybody stay out so long."

"I agree," added Matt. "I think we had better admit he s got a concussion and assume that he's going to be out of the running for a while. Go ahead, Oscar."

Thurlow's pouch contained some personal items that they skipped over quickly, the orders to the expedition, and a second knife—which had set in its handle a small, ornamental, magnetic compass. "Golly, I'm glad to find that item. I've been wondering how we would ever find our way back to this spot without natives to guide us."

"Who wants to?" asked Tex. "It doesn't seem to have any attractions for me."

"The jeep is here."

"And the *Triplex* is somewhere over your head. One is about as close as the other—to a pedestrian, meaning me."

"Look, Tex—somehow we've got to get that firecracker out of the mud and put her back into commission. Otherwise we stay here for life."

"Huh? I'd been depending on you, the old Venerian hand, to lead us back to civilization."

"You don't know what you're saying. Maybe you can walk five or six thousand miles through swamps, and sink holes, and cane brake; I can't. Just remember that there isn't a permanent settlement, not even a plantation, more than five hundred miles from either one of the poles. You know Venus isn't really explored—I know about as much about this neck of the woods as you know about Tibet."

"I wonder what in the world the *Gary* was doing here?" Matt commented.

"Search me."

"Say!" said Tex. "Maybe we can get home in the *Gary*."

"Maybe we can, but we haven't even found the *Gary* yet. Consequently if we find we can't, just as soon as we carry out these orders—" Oscar held up the paper he had taken from Thurlow's pouch, "—we've got to find some way to haul the jeep out of the sinkhole."

"With our own, little pink pattypaws?" inquired Tex. "And what's that about our orders? We don't seem to be in very good shape to go around quelling riots, putting down insurrection, and generally throwing our weight about. We haven't even got a bean shooter, much less a bean. Come to think about it, if I had a bean, I'd eat it."

"Oscar's right," agreed Matt, "We're here; we've got a mission to perform; we've got to carry it out. That's what Mr. Thurlow would say. After that comes trying to figure out a way to get back."

Tex stood up. "I should have gone into the cattle business. Okay, Oscar—what next?"

"The first thing is for you and Matt to build a litter to carry the boss. We've got to find open water and I don't want to split up the party."

The same clump of cane grass that furnished splints provided material for a litter frame. Using both knives Matt and Tex cut two seven—foot lengths as thick as their upper arms. The stuff was light and, in that thickness, satisfactorily stiff. They slipped the poles through the sleeves of their blouses, then notched in cross pieces near each end. There was a wide gap in the middle which they wound about with the line salvaged from the jeep.

The result was a sloppy piece of work, but serviceable. Thurlow was still unconscious. His breathing was shallow but his pulse was still steady. They lifted him onto the stretcher and set out, with Oscar in the lead, compass in hand.

For about an hour they tramped through swampy land, splashing through mud, getting welts from the undergrowth, and pursued by clouds of insects. At last Matt called out, "Oz! We've just got to have some rest."

Jensen turned around. "Okay—this is the end of the line, anyhow. Open water."

They crowded forward and joined him. Beyond the cane brake, perfectly flat and calm under the fog, was a pond or lake. Its size was uncertain as the far shore was lost in the mist.

They tramped out a spot to put the litter down, then Oscar bent over the water and slapped it—*Slap!—Slap!—Slap, slap, slap—Slap, slap!*

"What do we do now?"

"We wait—and pray. Thank goodness the natives are usually friendly."

"Do you think they can help us?"

"If they want to help I'll lay you even money that they can snake the jeep out of that muck and polish it clean in three days."

"You really think so? I knew the Venerians were friendly but a job like that—"

"Don't underrate the Little People. They don't look like us but don't let that throw you."

Matt squatted down and started fanning the insects away from the unconscious officer. Presently Oscar slapped the water again, in the same pattern.

"Looks like nobody's home, Oz."

"I hope you're wrong, Tex. Most of Venus is supposed to be inhabited, but this might be a tabu spot."

A triangular head, large as a collie's, broke water about ten feet from them. Tex jumped. The Venerian regarded him with shiny, curious eyes. Oscar stood up. *"Greetings, thou whose mother was my mothers friend."*

The Venerian turned her attention to Oscar. *"May thy mother rest happily."* She surface-dived and disappeared almost without a ripple.

"That's a relief," said Oscar. "Of course they say this planet has only one language but this is the first time I've put it to a test."

"Why did it leave?"

"Gone back to report, probably. And don't say 'it,' Matt say 'she.'"

"It's a difference that could only matter to another Venerian."

"Well, it's a bad habit, anyway." Oscar squatted down and waited.

After a time made longer by insects, heat, and sultriness the water was broken in a dozen places at once. One of the amphibians climbed gracefully up on the bank and stood up. She came about to Matt's shoulder. Oscar repeated the formal greeting. She looked him over. *"My mother tells me that she knows thee not."*

"Doubtless being busy with important thoughts she has forgotten."

"Perhaps. Let us go to my mother and let her smell thee."

"Thou art gracious. Canst thou carry my sibling?" Oscar pointed to Thurlow. *"Being ill, 'she' cannot close 'her' mouth to the waters."*

The Venerian agreed. She called one of her followers to her side and Oscar joined the consultation, illustrating how Thurlow's mouth must be covered and his nose pinched *together "—lest the waters return 'her to 'her' mother's mother's mother."* The second native argued but agreed.

Tex was getting more and more round-eyed. "See here, Matt," he said urgently in Basic, "surely you're not figuring on going under water?"

"Unless you want to stay here until the insects eat you up, you've got to. Just take it easy, let them tow you, and try to keep your lungs full. When they dive you may have to stay under several minutes."

"I don't like it either," said Matt.

"Shucks, I visited my first Venerian home when I was nine. They know you can't swim the way they do. At least the ones around the colonies know it," he admitted doubtfully.

"Maybe you had better impress them with it."

"I'll try."

The leader cut him short with assurances. She gave a sharp command and six of her party placed themselves by the cadets, two to each man. Three others took over Thurlow, lifting him and sliding him into the water. One of them was the one who had been instructed.

Oscar called out, "Take it easy, fellows!" Matt felt little hands urging him into the lake. He took a deep breath and stepped off into the water.

The water closed over his head. It was blood warm and fresh. He opened his eyes, saw the surface, then his head broke water again. The little hands grasped his sides and propelled him along, swimming strongly. He told himself to relax and stop fighting it. After a while it even began to seem pleasant, once he was sure that the little creatures did not intend to pull him under. But he remembered Oscar's advice and tried to watch out for a dive. Luckily, he saw the trio of which Tex was the middle go under; he gulped air just in time.

They went down and down, until his eardrums hurt, then forward. By the time they started up the pains in his chest were almost unbearable. He was fighting a reflex to open his mouth and breathe anything, even water, when they broke surface again.

There were three more of the lung-searing passages under water; when they broke water for the last time Matt saw that they were no longer outdoors.

The cave—if it was a cave—was about a hundred feet long and less than half as wide. In the center of it was the water entrance through which they had come. It was lighted from above, rather dimly, from some sort of glowing, orange clusters.

Most of this he noticed after he pulled himself up on the bank. His first impression was a crowd of Venerians surrounding the pool. They were obviously curious about their guests and chattered among themselves. Matt picked up a few words of it and heard a reference to "—slime spawn—" which annoyed him.

The three with Thurlow broke water. Matt pulled away from his custodians and helped drag him onto dry land. He was frantic for a moment when he could not find the lieutenant's pulse; then he located it. It was fast and fluttery.

Thurlow opened his eyes and looked at him. "Matt—the gyros..." !

"It's all right, Lieutenant. Just take it easy."

Oscar was standing over him. "How is he Matt?"

"Coming out of it, it looks like."

"Maybe the immersion did him good."

"It didn't do me any good," asserted Tex. "I swallowed about a gallon of water on that last one. Those little frogs are careless."

"They're more like seals," said Matt

"They're neither one," Oscar cut in sharply. They're people. Now," he went on, "to try to set up some friendly relations." He turned around, looking for the leader of the group.

The crowd separated, leaving an aisle to the pool. An amphibian, walking alone, but followed by three others, came slowly down this aisle toward them. Oscar faced her. *"Greetings, most worthy mother of many."*

She looked him slowly up and down, then spoke, but not to him. *"As I thought. Take them away."*

Oscar started to protest, but it did him no good. Four of the little people closed in around him. Tex yelled at him. "How about it, Oz? Let 'em have it?"

"No!" Oscar called back. "Don't resist."

Three minutes later they were herded into a small room that was almost completely dark, the gloom being broken only by a single sphere of the orange light. After depositing Thurlow on the floor the little people went away, closing the door after them by drawing across it a curtain. Tex looked around him, trying to adjust his eyes to the dim light, and said, "About as cozy as a grave. Oz, you should have let us put up a scrap. I'll bet we could have licked the whole caboodle of 'em."

"Don't be silly, Tex. Suppose we had managed it—a possibility which I doubt, but suppose we had: how would you like to try to swim your way out of here?"

"I wouldn't try it. We'd dig a tunnel up to the surface— we've got two knives."

"Maybe you would; I wouldn't attempt it. The Little People generally built their cities underneath lakes."

"I hadn't thought of that angle—say, that's bad." Tex studied the ceiling as if wondering when it would give way. "Look, Oz, I don't, think we're under the lake, or the walls of this dungeon would be damp."

"Huh uh, they're good at this sort of thing."

"Well—okay, so they've got us. I'm not beefing, Oz—your intentions were good—but it sure looks like we should 'a' taken our chances in the jungle."

"For Pete's sake, Text—haven't I got enough to worry about without you second-guessing me? If you're not beefing, then stop beefing."

There was a short silence, then Tex said, "Excuse me, Oscar. My big mouth."

"Sorry. I shouldn't have lost my temper. My arm hurts."

"Oh. How's it doing? Didn't I set it right?"

"I think you did a good job on it, but it aches. And it's beginning to itch, under the wrappings—makes me edgy. What are you doing, Matt?"

After checking on Thurlow's condition—unchanged—Matt had gone to the door and was investigating the closure. The curtain he found to be a thick, firm fabric of some sort, fastened around the edges. He was trying his knife on it when Oscar spoke to him.

"Nothing," he answered. "This stuff won't cut."

"Then quit trying to and relax. We don't want to get out of here—not yet, anyway."

" 'Speak for yourself, John.' Why don't we?"

"That's what I've been trying to tell Tex. I won't say this is a pleasure resort but we are about eight hundred per cent better off than we were a couple of hours ago, in every way."

"How?"

"Have you got any idea of what it means to spend a night in the jungle here, with nothing at all to shut it out? When it gets dark and the slime worms come up and start nibbling at your toes? Maybe we could live through a night of it, or even two nights, by being active and very, very lucky—but how about him?" Oscar gestured at Thurlow's still form. "That's why I made it our first business to find natives. We're safe, even if we are locked up."

Matt shivered. The slime worms have no teeth; instead they excrete an acid that dissolves what they wish to sample. They average about seven feet long. "You've sold me."

Tex said, "I wish my Uncle Bodie was here."

"So do I—he'd keep you shut up. I'm not anxious to get out of here until we've had something to eat and some sleep. Then maybe the boss will be back on his feet and will know what to do next."

"What makes you think they'll feed us?"

"I don't know that they will, but I think they will. If they are anything like the same breed of cat as the natives around the polar colonies, they'll feed us. To keep another creature shut up without feeding it is a degree of orneriness they just wouldn't think of." Oscar groped for words. "You have to know them to understand what I mean, but the Little People don't have the cussedness in them that humans have."

Matt nodded. "I know that they are described as being a gentle, unwarlike race. I can't imagine becoming really fond of them, but the spools I studied showed them as friendly."

"That's just race prejudice. A Venerian is easier to like than a man."

"Oz, that's not fair," Tex protested. "Matt hasn't got any race prejudice and neither have I. Take Lieutenant Peters—did it make any difference to us that he's as black as the ace of spades?"

"That's not the same thing—a Venerian is really different. I guess you have to be brought up with them, like I have, to take them for granted. But everything about them is different—for instance, like the fact that you never lay eyes on anything but females."

"Say, how about that, Oz? Are there really male Venerians, or is it just a superstition?"

"Sure there are—the Little People are unquestionably bisexual. But I doubt if we'll ever get a picture of one or a chance to examine one. The guys who claim to have seen one are mostly liars," he added, "because their stories never add up."

"Why do you suppose they are so touchy about it?"

"Why won't a Hindu eat beef? There doesn't have to be any reason for it. I go for the standard theory; the males are little and helpless and have to be protected."

"I'm glad I'm not a Venerian," Matt commented.

"Might not be such a bad life," Tex asserted. "Me—I could use a little coddling right now."

"Don't go taking me for an authority on Venerians," warned Oscar. "I was born here, but I wasn't born here." He patted the floor. "I know the polar region natives, the sort around my own home town—and that's just about the only sort anybody knows."

"You think that makes such a difference?" Matt wanted to know.

"I think we're lucky to be able to talk with them at all—even if the accent does drive me wild. As for other differences—look, if the only humans you had ever met were Eskimos, how far would that get you in dealing with the mayor of a Mexican town? The local customs would all be different."

"Then maybe they won't feed us, after all," Tex said mournfully.

But they were fed, and shortly. The curtain was thrust back, something was deposited on the floor, and the door was closed again.

There was a platter of some lumpish substance, color and texture indeterminate in the dim light, and an object about the size and shape of an ostrich egg. Oscar took the platter and sniffed at it, then took a small piece and tasted it. "It's all right," he announced. "Go ahead and eat."

"What is it?" inquired Tex.

"It's . . . well, never mind. Eat it. It won't hurt you and it will keep you alive."

"But what is it? I want to know what I'm eating."

"Permit me to point out that you eat this or go hungry. I don't care which. If I told you, your local prejudices would get in your way. Just pretend it's garbage and learn to love it."

"Aw, quit horsing around, Oz."

But Oscar refused to be drawn into any further discussion. He ate rapidly until he had finished his share, glanced at Thurlow and said reluctantly, "I suppose we ought to leave some for him."

Matt tried the stuff. "What's it like?" asked Tex.

"Not bad. Reminds me of mashed soybeans. Salty—it makes me thirsty."

"Help yourself," suggested Oscar.

"Huh? Where? How?"

"The drinking bladder, of course." Oscar handed him the "ostrich egg." It was soft to Mart's touch, despite its appearance. He held it, looking puzzled.

"Don't know how to use it? Here—" Oscar took it, looked at the ends, and selected one, which he placed to his lips.

"There!" he said, wiping his lips. "Try it. Don't squeeze too hard, or you'll get it all over you." Matt tried it and got a drink of water. It was a bit like using a nursing bottle.

"It's a sort of a fish's gizzard," explained Oscar, "and spongy inside. Oh, don't look squeamish, Tex! It's sterile."

Tex tried it gingerly, then gave in and tackled the food. After a while they all sat back, feeling considerably better. "Not bad," admitted Tex, "but do you know what I'd like? A stack of steaming hotcakes, tender and golden brown—"

"Oh, shut up!" said Matt.

"—with melted butter and just swimming in maple syrup. Okay, I'll shut up." He unzipped his pouch and took out his harmonica.. "Well, what d'yuh know! Still dry." He tried a couple of notes, then broke into a brilliant execution of *The CrossEyed Pilot*.

"Hey, stop that," said Oscar. "This is a sort of a sick room, you know."

Tex turned a troubled glance, at the patient. "You think he can hear it?"

Thurlow turned and muttered in his sleep. Matt bent over him. "*J'ai soif*," the lieutenant mumbled, then repeated distinctly, "*J'ai soif*."

"What did he say?"

"I don't know."

"It sounded like French to me. Either of you guys savvy French?"

"Not me."

"Nor me," Matt concurred. "Why would he talk French?

I always thought he was North American; he spoke Basic like one."

"Maybe he was French—Canadian." Tex knelt beside him and felt his forehead. "He seems sort of feverish. Maybe we should give him some water."

"Okay." Oscar took the bladder and put it to Thuflow's lips; he squeezed gently so that a little welled out. The injured man worked his lips and then began to suck on it, without appearing to wake up. Presently he let it fall from his mouth. "There," said Oscar, "maybe he'll feel better now."

"Are we going to save that for him?" asked Tex, eyeing the remainder of the food.

"Go ahead and eat it, if you want it. It turns rancid few hours after it's . . . well, it turns rancid."

"I don't believe I want any more," Tex decided.

They had been sleeping an undetermined length of time when a noise awakened them—a voice, unquestionably human. "Hey!" it demanded, *"where art thou taking me? I insist that thou take me to see thy mother!"*

The noise was right at their door. *"Quell thy tongue!"* answered a native accent; the curtain was shoved aside and someone was pushed into the room before the door was again closed.

"Hello there!" called out Oscar.

The figure spun around. "Men ..." he said, as if he could not believe it. "Men!" He began to sob.

"Hello, Stinky," said Tex. "What are you doing here?"

It was Girard Burke.

There was considerable confusion for the next several moments. Burke alternated between tears and uncontrollable shaking. Matt, who had awakened last, had trouble sorting out what was going on from the fantasy he had been dreaming, and everybody talked at once, all asking questions and none of them answering.

"Quiet!" commanded Oscar. "Let's get this straight. Burke, as I understand it, you were in the *Gary*?"

"I'm skipper of the *Gary*."

"Huh? Well, I'll be switched. Come to think of it, we knew the captain of the *Gary* was named Burke, but it never occurred to anybody that it could be Stinky Burke. Who would be crazy enough to trust you with a crate, Stinky?"

"It's my own ship—or, anyhow, my father's. And I'll thank you to call me Captain Burke, not 'Stinky.' "

"Okay, Captain Stinky."

"But how did he get here?" Matt wanted to know, still trying to catch up.

"He's just explained that," said Tex. "He's the guy that yelled for help. But what beats me is that it should happen to be us—it's like dealing out a bridge hand and getting thirteen spades."

"Oh, I don't know," objected Oscar. "It's a coincidence, but not a very startling one. He's a spaceman, he hollers for help, and naturally the Patrol responds. It happened to be us. It's about as likely, or as unlikely, as running across your piano teacher on the downtown streets of your home town."

"I don't have a piano teacher," objected Tex.

"Skip it. Neither do I. Now I think—"

"Wait a minute," broke in Burke, "do I gather that you were sent here, in answer to my message?"

"Certainly."

"Well, thank heaven for that—even if you guys were stupid enough to stumble right into it. Now tell me—how many are there in the expedition and how are they equipped? This is going to be a tough nut to crack."

"Huh? What are you talking about, Stinky? This is the expedition, right in front of you."

"What? This is no time to joke. I sent for a regiment of marines, equipped for amphibious operations."

"Maybe you did, but this is what you got—total. Lieutenant Thurlow is in command, but he got a crack on the skull so I'm temporarily filling in for him. You can talk to me—what's the situation?"

Burke seemed dazed by the knowledge. He stared without speaking. Oscar went on, "Snap out of it, Stinky. Give us the data, so we can work out an operation plan."

"Huh? Oh, it's no use. It's utterly hopeless." "What's so hopeless? The natives seem friendly, on the whole. Tell us what the difficulty was, so we can work it out with them."

"Friendly!" Burke gave a bitter laugh. "They killed all of my men. They're going to kill me. And they'll kill you."

XV PIE WITH A FORK

"OKAY," agreed Oscar. "Now that that's settled, I still want to know the score. Suppose you pull yourself together, —Burke, and tell us what happened?"

The merchant rocketship *Gary*, built by "Reactors Ltd." and transferred to the family corporation "System Enterprises," was a winged rocket especially fitted for point-to-point operations on Venus. The elder Mr. Burke had placed his son in command, backing him up with an experienced crew; the purpose of the trip was to investigate a tip concerning ores of the transuranic elements.

The tip had been good; the ores were present in abundance. Young Burke had then undertaken to negotiate exploitation rights with the local Venerian authorities in order to hold the valuable claim against other exploiters who were sure to follow.

He had not been able to interest the local "mother of many" in his wishes; the swamp he wanted, she gave Burke to understand, was tabu. However, he was able to intrigue her into visiting the *Gary*. Once aboard the ship he again tried to get her to change her mind. When she turned him down again he had refused to allow her to leave the rocket ship.

"You mean you kidnapped her," said Matt.

"Nothing of the sort. She came aboard of her own free will. I just didn't get up and open the door for her and went on arguing."

"Oh, yeah?" commented Oscar. "How long did this go on?"

"Not very long."

"Exactly how long? You might as well tell me; I'll find out from the natives."

"Oh, well! Overnight—what's so criminal about that?"

"I don't know just how criminal it is here. On Mars, as I learned in school and as I'm sure you did too, the punishment would be to stake you out on the desert, unprotected, for exactly the same length of time."

"Hell's hells—I didn't hurt her. I'm not that silly. I wanted her cooperation."

"So you twisted her arm to get it. You held her prisoner, in effect kidnapped her by enticement and held her for ransom. Okay—you kept her overnight. What happened when you let her go?"

"That's what I'm trying to tell you. I never got a chance to turn her loose. I was going to, of course, but—"

"Sez you!"

"Don't get sarcastic. The next morning they attacked the ship. There must have been thousands of the beasts."

"So you turned her loose?"

"I was afraid to. I figured as long as we held her nothing much could happen to us. But I was wrong—they poured something on the door that ate it right away and they were in the ship before we could stop them. They killed my crew, just overran them—but we must have gotten at least twice as many of them, the brutes!"

"How come you're still breathing?"

"I locked myself in the comm room and sent out the call for help that got you here. They didn't find me there until they went through the ship, compartment by compartment. I must have passed out from the fumes when they melted their way in—anyhow I woke up while they were bringing me here."

"I see." Oscar sat a while and thought, his knees pulled up under his chin. "This is your first time on Venus, Stinky?"

"Well, yes."

"I thought so. It's apparent that you didn't know just how stubborn and difficult the Little People can be if you start pushing them around."

Burke looked wry. "I know now. That's why I distinctly called for a regiment of marines. I can't imagine what the Department was thinking about, to send three cadets and a watch officer. Of all the brass-hatted stupidity! My old man will raise plenty of Cain about it when I get back."

Tex gave a snort of disgust. "Did you think the Patrol was invented to keep a jughead like you from having to pay for his fun?"

"Why, you—"

"Quiet, Burke. And never mind the side remarks, Tex. This is an investigation, not a debate. You know the Patrol never sends marines until they've tried negotiation, Burke."

"Sure, that's why I specified marines. I wanted them to cut the red tape and get some action."

"You were kidding yourself. And there's no point in talking about what you'll do when you get back. We don't know yet that we can get back."

"That's true." Burke chewed his lip and thought about it. "Look here, Jensen, you and I were never very chummy in school, but that's unimportant now; we're in the same boat and we've got to stick together. I've got a proposition. You know these frogs better than I do —"

"People, not 'frogs.'"

"Okay, you know the natives. If you can manage to square this and get me out of here, I can cut you in on—"

"Careful there, Burke!"

"Don't get on your high horse. Just hear me out, will you? Just listen. Do I have free speech or don't I?"

"Let him talk, Oz," advised Tex. "I like to watch his tonsils."

Oscar held his tongue, Burke went on, "I wasn't going to suggest anything that would smirch your alabaster character. After all, you're here to get me out of this; it's my business if I want to offer a reward. Now this swamp we staked out is loaded with the stuff—transuranics, all the way from element 97 through 104. I don't have to tell you what that means—101 and 103 for jet-lining alloys; 100 for cancer therapy —not to mention the catalyzing uses. Why, there's millions in catalysts alone. I'm no hog; I'll cut you all in ... say for ten per cent apiece."

"Is that all you have to say?"

"Not quite. If you can work it so that they'll let us go and leave us alone while we jury-rig some repairs on the *Gary* so that we can get away with a load this trip, I'll make it twenty per cent. You'll like the *Gary*; she's the sweetest job in the System. But if that won't work and you can get me back in your ship it's still worth ten per cent."

"Are you through?"

"Yes."

"I can answer for all of us. If I didn't consider the source, I'd be insulted."

"Fifteen per cent. There's no need to get shirty; after all, it's absolutely free just for doing what you were ordered down here to do anyhow."

"Oz," said Matt, "do we have to listen to this tripe?"

"Not any more of it," decided Jensen. "He's had his say. Burke, I'll keep this factual and leave my personal opinions out of it. You can't hire the Patrol, you know that. In—"

"I wasn't offering to hire you, I was just trying to do you a favor, show my appreciation."

"I've got the floor. In the second place, we haven't got a ship, not at present."

"Huh? What's that?" Burke seemed startled. . Oscar gave him a quick resume of the fate of the jeep. Burke looked both amazed and terribly, bitterly disappointed. "Well, of all the gang of stupes! Just forget that offer; you haven't got anything to sell."

"I've already forgotten it and you had better be glad I have. Let me point out that we wouldn't have been making a jet-landing in a jungle if you hadn't made an ass of yourself and then called for help. However, we hope to recover the jeep if I can manage to smooth out the trouble you've caused—and that's no small job."

"Well, of course if you can square things and get your ship back, the offer stands."

"Stop talking about that clumsy piece of bribery! We can't possibly promise you anything, even if we wanted to. We've got our mission to carry out."

"Okay—your mission is to get me out of here. It comes to the same thing; I was just being generous."

"Our mission isn't anything of the sort. Our prime mission is what the prime mission of the Patrol always is: to keep the peace. Our orders read to investigate a reported native uprising—there isn't any—and keep the peace.' There's not a word about springing Girard Burke from the local jail and giving him a free ride home."

"But—"

"I'm not through. You know how the Patrol works as well as I do. It acts in remote places and a Patrol officer has to use his own judgment, being guided by the Tradition—"

"Well, if it's precedent you're looking for, you've got to—"

"Shut up! Precedent is merely the assumption that somebody else, in the past with less information, nevertheless knows better than the man on the spot. If you had gotten any use out of the time you spent as a cadet, you'd know that the Tradition is something very different. To follow a tradition means to do things in the same grand style as your predecessors; it does not mean to do the same things."

"Okay, okay—you can skip the lecture."

"I need some information from you. Had the Little People here ever seen a man before you came along?"

"Uh . . . why, they knew about men, a little anyhow. Of course there was Stevens."

"Who was Stevens?"

"Mineralogist, working for my old man. He did the quickie survey that caused us to bring the *Gary* in. Oh, there was his pilot, too."

"And those are the only men these natives have encountered, aside from the crew of the *Gary*?"

"So far as I know, yes."

"Have they ever heard of the Patrol?"

"I doubt it—yes, they have, too. At least the boss mother seemed to know the native word for it."

"Hmm . . . that rather surprises me. So far as I know the Patrol has never had any occasion to land this near the equator—and if it had I think Captain Yancey would have briefed us about it."

Burke shrugged. Oscar went on, "It affects what we're to do. You've stirred up a mess, Burke. With the discovery of valuable minerals here, there will be more men coming along. The way you've started things off there could be more and more trouble, until there was nothing but guerrilla warfare between the natives and the men, everywhere you looked. It might even spread to the poles. It's the Patrol's business to stamp out such things before they get started and that's what I construe our mission here to be. I've got to apologize and smooth it over and do my darnedest to correct a first bad impression. Can you give me any more information, anything at all, that might help me when I try it?"

"I don't think so. But go ahead—soft-soap the old girl any way you can. You can even pretend to take me away from here under arrest if it will do any good. Say, that might be a good idea! I'll be agreeable to it just as long as I get out."

Oscar shook his head. "I might take you out under arrest, if she wants it that way. But as far as I can see you are a perfectly legal prisoner here for a crime under the local customs."

"What in the world are you talking about?"

"I might point oat that what you've admitted doing is a crime anywhere. You can be tried for it on Terra if she wants it that way. But it really doesn't matter to me, one way or the other. It's no business of the Patrol."

"But you can't leave me here!"

Oscar shrugged. "That's the way I see it. Lieutenant Thurlow might snap out of it at any time, then you could take it up with him. As long as I'm in charge I'm not going to jeopardize the Patrol's mission to try to help you get away with murder—and I do mean murder!"

"But—" Burke looked wildly around him. "Tex! Matt! Are you going to let him side up with those frog-people against a *man?*"

Matt gave him a stony-eyed stare. Tex said, "Button your lip, Stinky."

Oscar added, "Yes, do. —And go to sleep. My arm hurts and I don't want to be bothered any more with you tonight."

The room quieted down at once, even though none of them got to sleep quickly. Matt lay awake a long time, worrying out their predicament, wondering whether or not Oscar could convince the frog mother—he thought of her as such—of the innocence of their intentions, and repeatedly blaming himself for the disaster to the jeep. Presently! he fell into an exhausted sleep.

He was awakened by a moaning sound. It brought him wide awake at once and to the lieutenant's side. He found Tex already awake with him. "What is it?" he asked. "Is he worse?"

"He keeps trying to say something," Tex answered.

Thurlow's eyes came open and he looked up at Matt. *"Maman,"* he said querulously. *"Maman—pourquoi fait-il nuit ainsi?"*

Oscar joined them. "What's he saying?"

"Sounds like he's calling for his momma," said Tex. "The rest is just gibberish."

"Where did that bladder get to? We could give him a drink." It was found and again the patient drank, then seemed to drop at once to sleep.

"You guys go back to sleep," said Oscar. "I want to snag a word with the guard that brings us our next meal and try to get to see the big mother. He's got to have some medical attention, somehow."

"I'll take the watch, Oz," Matt offered.

"No, I can't sleep very well anyhow. This darn thing itches." He held up his damaged arm.

"Well—all right."

Matt was still awake when the curtain opened. Oscar had been sitting cross-legged at the door, waiting; as the native shoved inside a platter of food, he thrust his arm into the opening.

"Remove thy arm," said the native emphatically.

"Attend thou me," insisted Oscar. *"I must have speech with thy mother."*

"Remove thy arm."

"Thou wilt carry my message?"

"Remove thy arm!"

Oscar did so and the curtain was hurriedly secured. Matt said, "Doesn't look as if they intended to powwow with us, does it, Oz?"

"Keep your shirt on," Oscar answered. "Breakfast. Wake up the others."

It was the same dull fodder as before. "Split it five ways, Tex," Oscar directed. "The lieutenant may snap out of it and be hungry."

Burke looked at it and sniffed. "I'm sick of that stuff. I don't want any."

"Okay, split it four ways." Tex nodded and did so.

They ate; presently Matt sat back, burped reflectively, and said, "You know, while I could use some orange juice and coffee, that stuffs not bad."

"Did I ever tell you," asked Tex, "about the time my Uncle Bodie got incarcerated in the jail at Juarez?—by mistake, of course."

"Of course," agreed Oscar. "What happened?"

"Well, they fed him nothing but Mexican jumping beans. He—"

"Didn't they upset him?"

"Not a bit. He ate as many as he could and a week later he jumped over a twelve foot wall and bounced home."

"Having met your Uncle Bodie, I can well believe it. What do you suppose he would do under these circumstances?"

"Obvious. He'd make love to the old girl and inside of three days he'd be head man around here."

"I think I'll have some breakfast after all." announced Burke.

"You'll leave that chow for the lieutenant," Oscar said firmly. "You had your chance."

"You've got no authority over me."

"There are two reasons why you are wrong."

"So? What are they?"

"Matt and Tex."

Tex stood up. "Shall I clip him, boss?"

"Not yet."

"Oh, shucks!"

"Anyhow," objected Matt. "I get first crack—I'm senior to you, Tex."

"Pulling rank on me, eh? Why you unspeakable rat!"

"Mister Rat, if you please, Yep, in this instance I claim rank."

"But this is a social occasion."

"Shut up, you guys," instructed Oscar. "Neither of you is to clip him unless he gets to sniffing around that food dish."

There was a noise at the door, the curtain was pushed back and a native announced, *"My mother will see thee. Come."*

"Myself alone, or me and my sisters?"

"All of you. Come."

However, when Burke attempted to pass through the door two of the little creatures pushed him back inside. They continued, to restrain him while four others picked up Lieutenant Thurlow and carried him outside. The numerous party set out down the passageway.

"I wish they would light these rabbit nests," Tex complained, after stumbling.

"It's light enough to their eyes," Oscar answered.

"Natch," agreed Tex, "but a fat lot of good that does me. My eyes don't see infrared."

"Then pick up your big feet."

They were taken to another large room, not the entrance hall, for it contained no pool of water. An amphibian, the same who had viewed them and ordered them taken away on their arrival, sat on a raised platform at the far end of the room. Only Oscar recognized her as such; to the others she looked like the rest.

Oscar quickened his pace and drew ahead of his escort *"Greetings, thou old and wise mother of many."*

She sat up and looked at him steadily. The room was very quiet. On every side the little folk waited, looking first from the earthlings to their chief executive, then back again. Matt felt that somehow the nature of her answer would show them their fate.

"Greetings." She had chucked the ball back to Oscar by refusing to assign him any title at all, good or bad. *"Thou sought speech with me. Thou may speak."*

"What manner of city is thine? Have I, perhaps, journeyed so far that manners are no longer observed?" The Venerian word meant much more than "manners"; it referred to the entire obligatory code of custom by which the older and stronger looked out for the weaker and younger.

The entire audience stirred. Matt wondered if Oscar had overplayed his hand. The expression of the leader changed but Matt had no way of reading it. *"My city and my daughters live ever by custom —"* She used a more inclusive term, embracing tabus and other required acts, as well as the law of assistance, *"—and I have never before heard it suggested that we fail in performance."*

"I hear thee, gracious mother of many, but thy words confuse me. We come, my 'sisters' and I, seeking shelter and help for ourselves and our 'mother' who is gravely ill. I myself am injured and am unable to protect my younger 'sisters.' What have we received in thy house? Thou hast deprived us of our freedom; our 'mother' lies unattended and failing. Indeed we have not even been granted the common decency of personal rooms in which to eat."

A noise rose from the spectators which Matt correctly interpreted as the equivalent of a shocked gasp. Oscar had deliberately used the offensive word *"eat,"* instead of talking around it. Matt was sure now that Oscar had lost his judgment.

If so, Oscar went on to confirm it. *"Are we fish, that such should be done to us? Or are the customs such among thy daughters?"*

"We follow the customs," she said shortly, and even Matt and Tex could interpret the anger in her voice. *"It was my understanding that thy breed had no decencies. It will be corrected."* She spoke sharply in an aside to one of her staff; the little creature trotted away. *"As to thy*

freedom, what I had done was lawful for it was to protect my daughters."

"To protect thy daughters? From what? From my ailing 'mother'? Or from my injured arm?"

"Thy sister who knows no customs has forfeited thy freedom."

"I hear thy words, wise mother, but I understand them not."

The amphibian seemed nonplused. She inquired specifically about Burke, naming him by his terrestrial tag, calling it "Captain-Burke," as one word. Oscar assured her that ; Burke was no "daughter" of Oscar's "mother," nor of Oscar's "mother's mother."

The matriarch considered this. *"If we return you to the upper waters will you leave us?"*

"What of my 'mother'?" asked Oscar. *"Wouldst thou, cast 'her' forth thus ailing, to die and to be destroyed by the creatures of the slime?"* On this occasion he carefully avoided the Venerian expression for "to be eaten."

The mother-of-many had Thurlow carried up to the dais on which she sat. Several of the little folk gathered around him and examined him, speaking to each other in high, lisping whispers. Presently the matriarch herself joined the consultation, then spoke again. *"Thy mother sleeps."*

"It is a sickly sleep. 'Her' head was injured by a blow." Oscar joined the group and showed them the lump on the back of Thurlow's head. They compared it with Oscar's own head, running gentle, inquisitive little hands through his blond hair. There was more lisping chatter; Matt found himself unable to follow even what he could hear; most of the words were strange.

"My learned sisters tell me that they dare not take thy mother's head apart for fear that they could not get it back together," announced the mother-of-many.

"Well, that's a relief!" Tex said out of the corner of his mouth.

"Old Oz wouldn't let them anyhow," Matt whispered.

The leader gave instructions and four of her "daughters" picked up the unconscious officer and started carrying him out of the room. Tex called out, "Hey, Oz—do you think that's safe?"

"It's all right," Oscar called back, then explained to the matriarch, "My 'sister' feared for the safety of our 'mother.' "

The creature made a gesture that reminded Matt suddenly of his great-aunt Dora—she positively sniffed. *"Tell her that her nose need not twitch!"*

"She says not to get in an uproar, Tex."

"I heard her. Okay, you're the boss," Tex answered, and then muttered, "My nose, indeed!"

When Thurlow had been removed the leader turned toward them again. *"May thy dreams be of daughters."*

"May thy dreams be as pleasant, gracious mother."

"We will speak again." She gathered herself up to a lordly four feet and left the chamber. When she was gone the group of escorts conducted the cadets out of the council hall but by a different passageway than that from which they had come. The group stopped presently at another doorway. The guide in charge wished them farewell with the same formula as the matriarch. A curtain was drawn but it was not fastened, a point that Matt immediately checked. He turned to Oscar.

"I've got to hand it to you, Oz. Anytime you get tired of the Patrol and don't want to run for prime minister of the System, I can book you for a swell job, selling snow to Eskimos. For you it would be a cinch."

"Mart's not just fanning the air," agreed Tex. "Oscar, you were wonderful. Uncle Bodie couldn't have handled the old gal any slicker."

"That's high praise, Tex. I'll admit to being relieved. If the Little People weren't so downright decent it wouldn't have worked."

The living room of their apartment—there were two rooms —was about the size of the room they had been in, but was more comfortable. There was a softly padded, wide couch running around the wall. In the center of the room was a pool of water, black under the dim light. "Oz, do you suppose that bathtub connects with the outside?" Tex wanted to know.

"They almost always do."

Matt became interested. "Maybe we could swim out."

"Go ahead and try it. Don't get lost in the dark and remember not to swim under water more than half the distance you can hold your breath." Oscar smiled cynically.

"I see your point."

"Anyhow, we want to stay until we've gotten over the last hurdle."

Tex wandered on into the second room. "Hey, Oz—come look at this."

Matt and Oscar joined him. There were rows of little closets down each side, ten in all, each with its own curtain. "Oh, yes, our eating booths."

"That reminds me," said Matt. "I thought you had wrecked everything, Oz, when you started talking about eating. But you pulled out of it beautifully."

"I didn't pull out of it; I did it on purpose."

"Why?"

"It was a squeeze play. I had to shock them with the idea that they were indecent, or looked that way to us. It established us as 'people,' from their point of view. After that it was easy." Oscar went on. "Now that we are accepted as people, we've got to be awfully careful not to undo it. I don't like to eat in one of these dark little cubbyholes any better than you do, but we don't dare take a chance of being seen eating—you don't dare even fail to draw the curtain, as one of them might come popping in. Remember, eating is the only sort of privacy they observe."

"I get you," agreed Tex. "Pie with a fork."

"Huh?"

"Never mind—it's a painful memory. But Matt and I won't slip."

XVI P.R.S. *ASTARTE*

OSCAB WAS SUMMONED again the next day into the presence of the city's chief magistrate and started laying the foundation, in a leisurely, indirect fashion, for formal diplomatic relations in the future. He began by getting her story of the trouble with the *Gary* and its skipper. It was much as Burke had admitted it to be, although from a different viewpoint.

Oscar had inquired casually as to why the swamp Burke wanted was tabu. He was worried that he might be invading religious matters but he felt that he needed to know—it was a dead certainty that others would be along, in due course, to attempt to exploit the transuranic ores; if the Patrol was to prevent further breaches of the peace the matter must be investigated.

The matriarch answered without hesitation; the swamp was tabu because the ore muds were poisonous.

Oscar felt the relief of a man who has just been told that it will not be necessary to lose a leg, after all. The ores were understandably poisonous; it was a matter that the Patrol could undoubtedly negotiate—conditional or practical tabus had been overcome many times with natives. He tabled the matter, as something to be taken up at a later time by the appropriate experts.

In a later interview he sounded her out on the. subject of the Patrol. She had heard of it, in a fashion, apparently—she used the native word given by the polar-region natives to all colonial government, a word meaning "guardians of the customs" or "keepers of the law."

The native meaning was quite useful to Oscar, for he found it impossible to get over to her the idea that the Patrol was intended to prevent war—"war" was a concept she had never heard of!

But her conservative mind was naturally prejudiced in favor of any organization tagged as "guardians of the customs." Oscar approached it from that viewpoint. He explained to her that more of his own kind would be arriving; therefore the "great mother of many" of his own people had sent them as messengers to propose that a "mother" from Oscar's people be sent to aid her in avoiding friction.

She was receptive to the idea as it fitted her own experience and concepts. The groups of natives near the polar colonies were in the habit of handling their foreign affairs by exchanging "mothers"—actually judges—who ruled on matters arising out of differences in custom; Oscar had presented the matter in the same terms.

He had thus laid the groundwork for a consulate, extraterritorial courts, and an Earthman police force; the mission, as he saw it, was complete—provided he could get back to base and report before other prospectors, mining engineers, and boomers of all sorts started showing up.

Only then had he spoken to her of getting back—to have her suggest that he remain permanently as "mother" for his people. (The root word translated as "mother" is used for every position of authority in the Venerian speech; the modifiers and the context give the word its current meaning—)

The proposal left Oscar temporarily speechless. "I didn't know what to say next," he confessed later. "From her point of view she was honoring me. If I turned it down, it might offend her and crab the whole deal."

"Well, how did you talk your way out of it?" Tex wanted to know. "Or did you?"

"I think so. I explained as diplomatically as possible that I was too young for the honor and that I was acting as 'mother' only because Thurlow was laid up and that, in any case, my 'great mother of many had other work which I was obliged, by custom, to carry out."

"I guess that held her."

"I think she just filed it away as a point to negotiate. The Little People are great negotiators; you'll have to come to New Auckland some time and listen to the proceedings of a mixed court."

"Keep to the point," suggested Matt

"That is to the point—they don't fight; they just argue until somebody gives in. Anyhow, I told her that we had to get Thurlow back where he could get surgical attention. She understood that all right and expressed regret for the steenth time that her own little girls couldn't do the trick. But she had a suggestion for curing the boss."

"Yes?" demanded Matt. "What was it?" Matt had appointed himself Thurlow's caretaker, working with the amphibian healers who now had him as a professional responsibility. He had taught them to take his pulse and to watch his respiration; now there was always one of the gentle creatures squatting on the end of Thurlow's couch, watching him with grave eyes. They seemed genuinely distressed at not being able to help him; the lieutenant had remained in a semi-coma, coming out of it enough occasionally that it had been possible to feed him and give him water, but never saying anything that the cadets could understand. Matt found that the little nurses were quite unsqueamish about feeding a helpless person; they accepted offensive necessities with the same gallantry as a human nurse.

But Thurlow, while he did not die, did not get any better.

"The old girl's suggestion was sort of radical, but logical. She suggested that her healers take Burke's head apart first, to see how it was made. Then they could operate on the boss and fix him."

"What?" said Matt.

Tex was having trouble controlling himself. He laughed so hard he strangled, then got hiccoughs and had to be pounded on the back. "Oh, boy!" he finally exploded, tears streaming down his cheeks, "this is wonderful. I can't wait to see Stinky's face. You haven't told him, have you?"

"No."

"Then let me. Dibs on the job."

"I don't think we ought to tell him," objected Oscar. "Why kick him when he's down?"

"Oh, don't be so noble! It won't hurt any to let him know that his social rating is 'guinea pig.' "

"She really hates him, doesn't she?" Matt commented.

"Why shouldn't she?" Tex answered. "A dozen or more of her people dead—do you expect her to regard it as a schoolboy prank?"

"You've both got her wrong," Oscar objected. "She doesn't hate him."

"Huh?"

"Could you hate a dog? Or a cat—"

"Sure could," said Tex. "There was an old tomcat we had once—"

"Pipe down and let me finish. Conceding your, point, you can hate a cat only by placing it on your own social level. She doesn't regard Burke as ... well, as people at all, because he doesn't follow the customs. We're 'people' to her, because we do, even though we look like him. But Burke in her mind is just a dangerous animal, like a wolf or a shark, to be penned up or destroyed—but not hated or punished.

"Anyhow," he went on, "I told her it wouldn't do, because we had an esoteric and unexplainable but unbreakable religious tabu that interfered—that blocked her off from pressing the point. But I told her we'd like to use Burke's ship to get the lieutenant back. She gave it to me. We go out tomorrow to look at it."

"Well, for crying out loud—why didn't you say so, instead of giving all this buildup?"

They had made much the same underwater trip as on entering the city, to be followed by a longish swim and a short trip overland. The city mother herself honored them with her company.

The *Gary* was everything Burke had claimed for her, modern, atomic-powered, expensively outfitted and beautiful, with sharp wings as graceful as a swallow's.

She was also a hopeless wreck.

Her hull was intact except the ruined door, which appeared to have been subjected to great heat, or an incredible corrosive, or both. Matt wondered how it had been done and noted it as still another indication that the Venerians were not the frog-seal-beaver creatures his Earth—side prejudices had led him to think.

The inside of the ship had looked fairly well, too, until they started checking over the controls. In searching the ship the amphibians, to whom even a common door latch was a puzzle, had simply burned their way through impediments—including the access hatch to the ship's autopilot and gyro compartment. The circuits of the ship's nervous system were a mass of fused and melted junk.

Nevertheless they spent three hours convincing themselves that it would take the resources of a dockyard to make the ship fly again. They gave up reluctantly at last and started back, their spirits drooping.

Oscar had at once taken up with the city mother the project of recovering the jeep. He had not mentioned it before as the *Gary* seemed the better bet. Language difficulties would have hampered him considerably—their hostesses had no word for "vehicle," much less a word for "rocket ship"—but the *Gary* gave him something to point to wherewith to explain.

When she understood what he was driving at she gave orders which caused the party to swim to the point where the cadets had first been picked up. The cadets made sure of the spot by locating the abandoned litter and from there Oscar had led them back to the sinkhole that was the grave of the jeep. There he acted out what had happened, showing her the scar in the bank where the jeep had balanced and pacing off on the bank the dimensions of the ship.

The mother-of-many discussed the problem with her immediate staff while the cadets waited, ignored rather than excluded. Then she abruptly gave the order to leave; it was getting on in the late afternoon and even the Venerians do not voluntarily remain out in the jungle overnight.

That had ended the matter for several days. Oscar's attempts to find out what, if anything, was being done about the jeep were brushed off as one might snub a persistent brat. It left them with nothing to do. Tex played his harmonica until threatened with a ducking in the room's center pool. Oscar sat around, nursing his arm and brooding. Matt spent much of his time watching over Thurlow and became well acquainted with the nurses who never left him, especially one bright-eyed cheerful little thing who called herself Th'wing."

Th'wing changed his viewpoint about Venerians. At first he regarded her much as he might a good and faithful, and unusually intelligent dog. By degrees he began to think of her as a friend, an interesting companion—and as "people." He had tried to tell her about himself and his own kind and his own world. She had listened with alert interest, but without ever taking her eyes off Thurlow.

Matt was forced willy-nilly into the concepts of astronomy—and came up against a complete block. To Th'wing there was the world of water and swamp and occasional dry land; above that was the endless cloud. She knew the Sun, for her eyes, perceptive to infrared, could see it, even though Matt could not, but she thought of it as a disc , of light and warmth, not as a star.

As for other stars, none of her people had ever seen them and the idea did not exist. The notion of another planet was not ridiculous; it was simply incomprehensible— Matt got nowhere.

He told Oscar about it. "Well, what did you expect?" Oscar had wanted to know. "All the natives are like that. They're polite but they think you are talking about your religion."

"The natives around the colonies, too?"

"Same deal."

"But they've seen rocket ships, some of 'em, anyhow. Where do they think we come from? They must know we haven't been here always."

"Sure they know that—but the ones at South Pole think we came orignally from North Pole and the ones around North Pole are sure we came from South Pole—and it's no use trying to tell them anything different."

The difficulty was not onesided. Th'wing was continually using words and concepts which Matt could not understand and which could not be straightened out even with Oscar's help. He began to get hazily the idea that Th'wing was the sophisticated one and that he, Matt, was the ignorant outlander. "Sometimes I think," he told Tex, "that Th'wing thinks that I am an idiot studying hard to become a moron—but flunking the course."

"Well, don't let it throw you, kid. You'll be a moron, yet, if you just keep trying."

On the morning fifteen Venus days after their arrival the mother of the city sent for them and had them taken to the site of the jeep. They stood on the same bank where they had climbed ashore from the sinking ship, but the scene had changed. A great hole stretched out at their feet; in it the jeep lay, three—quarters exposed. A swarm of

Venerians crawled over it and around it like workmen in a dockyard.

The amphibians had begun by adding something to the thin yellow mud of the sinkhole. Oscar had tried to get the formula for the additive, but even his command of the language was useless—the words were strange. Whatever it was, the effect was to turn the almost-liquid mud into a thick gel which became more and more stiff the longer it was exposed to air. The little folk had carved it away from the top as fast as it consolidated;, the jeep was now surrounded by the sheer walls of a caisson—like pit. A ramp led up on the shoreward side and a stream of the apparently tireless little creatures trotted up it, bearing more jelled blocks of mud.

The cadets had climbed down into the pit to watch, talking in high spirits about the prospects of putting the jeep back into commission and jetting out again, until the Venerian in charge of the work had urged them emphatically to go up out of the pit and stay out of the way. They joined the city mother and waited.

"Ask her how she expects to get it up out of there, Oz," Tex suggested. Oscar did so.

"Tell thy impatient daughter to chase her fish and I will chase mine."

"No need for her to be rude about it," Tex complained.

"What did she say?" inquired the mother-of-many.

" 'She' thanks thee for the lesson," Oscar prevaricated. The Little People worked rapidly. It was evident that the ship would be entirely free before the day was far advanced—and clean as well; the outside shone now and a steady procession of them had been pouring in and out of the door of the ship, bearing cakes of jellied mud. In the last hour the routine had changed; the little workers came out bearing distended bladders. The cleanup squad was at work.

Oscar watched them approvingly. "I told you they would lick it clean."

Matt looked thoughtful. "I'm worried, Oz, about the possibility that they will mess with something on the control board and get into trouble."

"Why? The leads are all sealed away. They can't hurt anything. You locked the board when you left it, didn't you?"

"Yes, of course."

"Anyhow, they can't fire the jet when she's in that attitude even if you hadn't."

"That's true. Still, I'm worried."

"Well, let's take a look, then. I want to talk to the foreman in any case. I've got an idea."

"What idea?" asked Tex.

"Maybe they can get her upright in the pit. It seems to me we could take off from there and never have to drag her out. Might save several days." They went down the ramp and located the Venerian in charge, then Matt and Tex went inside the ship while Oscar stayed to talk over his idea.

It was hard to believe that the pilot room had lately; been choked with filthy, yellow mud. A few amphibians were still working in the after end of the room; elsewhere the compartment was clean.

Matt climbed to the pilot's seat and started inspecting. He noticed first that the sponge—rubber eyeguards for the infrared viewer were missing. This was not important, but he wondered what had happened to them—did the little folk have the vice of souvenir snitching? He filed away the suspicion, and attempted a dry run on the controls, without firing the jet.

Nothing operated—nothing at all.

He looked the board over more carefully. To a casual inspection it was clean, bright, in perfect order, but he now perceived many little pits and specks. He dug at one with a finger nail, something came away. He worked at it a bit more and produced a tiny hole into the interior of the control board. It gave him a sick feeling at the pit of his stomach. "Say, Tex—come here a minute. I've got something."

"You think you've got something," Tex answered in muffled tones. "Wait till you've seen this."

He found Tex with a wrench in his hand and a cover plate off the gyro compartment. "After what happened to the *Gary* I decided to check this first. Did you ever see such a mess?"

The mud had gotten in. The gyros, although shut down, were of course still spinning when the ship had gone into the sinkhole and normally would have coasted for days; they should still have been spinning when Tex removed the cover. Instead they had ground to a stop against the mud—burned to a stop.

"We had better call Oscar," Matt said dully.

With Oscar's help they surveyed the mess. Every instrument, every piece of electronic equipment had been invaded. Non—metallic materials were missing completely; thin metal sheets such as instrument cases were riddled with pinholes. "I can't understand what did it," Oscar protested, almost in tears.

Matt asked the Venerian in charge of the work. She did not understand him at first; he pointed out the pinholes, whereupon she took a lump of the jelled mud and mashed it flat. With a slender finger she carefully separated out what seemed to be a piece of white string, a couple inches long. "This is the source of thy troubles."

"Know what it is, Oz?"

"Some sort of worm. I don't recognize it. But I wouldn t expect to; the polar regions are nothing like this, thank goodness." "

"I suppose we might as well call off the working party.

"Let's don't jump the gun. There might be some way to salvage the mess. We've got to."

"Not a chance. The gyros alone are enough. You can't raise ship in a wingless job without gyros. It's impossible."

"Maybe we could clean them up and get them to working."

"Maybe you could—I can't. The mud got to the bearings, Oz."

Jensen agreed regretfully. The gyros, the finest precision equipment in a ship, were no better than their bearings. Even an instrument maker in a properly equipped shop would have thrown up his hands at gyros abused as these had been.

"We've at least got to salvage some electronic equipment and jury-rig some sort .of a sending set. We've got to get a. message through."

"You've seen it. What do you think?"

"Well—we'll pick out the stuff that seems in the best shape and take it back with us. They'll help us with the stuff."

"What sort of shape will it be in after an hour or so in the water? No, Oz, the thing to do is to lock up the door, once the last of the filth is out and come back and work here."

"Okay, we'll do that." Oscar called to Tex, who was still snooping around. He arrived swearing.

"What now, Tex?" Oscar asked wearily.

"I thought maybe we could at least take some civilized food back with us, but those confounded worms bored into the cans. Every ration in the ship is spoiled."

"Is that all?"

" 'Is that all? Is that all! the man says! What do you want? Flood, pestilence, and earthquakes?"

But it was not all—further inspection showed another thing which would have dismayed them had they not already been as low in spirit as they could get. The jeep's jet ran on liquid hydrogen and liquid oxygen. The fuel tanks, insulated and protected from direct radiation, could retain fuel for long periods, but the warm mud had reached them and heated them; the expanding gases had bled out through relief valves. The jeep was out of fuel.

Oscar looked this situation over stonily. "I wish the *Gary* had been chemically powered," he finally commented.

"What of it?" Matt answered. "We couldn't raise ship if we had all the juice this side of Jupiter."

The mother-of-many had to be shown before she was convinced that there was anything wrong with the ship. Even then, she seemed only half convinced and somehow vexed with the cadets for being unsatisfied with the gift of their ship back. Oscar spent much of the return journey trying to repair his political fences with her.

Oscar ate no dinner that night. Even Tex only picked at his food and did not touch his harmonica afterwards. Matt spent the evening silently sitting out a watch in Thurlow's room.

The mother-of-many sent for all three of them the next morning. After formal exchange of greetings she commenced, "Little mother, is it true that thy *Gary* is indeed dead, like the other *Gary*?"

"It is true, gracious mother."

"Is it true that without a *Gary* thou canst not find thy way back to thine own people?"

"It is true, wise mother of many; the jungle would destroy us."

She stopped and gestured to one of her court. The "daughter" trotted to her with a bundle half as big as the bearer. The city mother took it and invited, or commanded, the cadets to join her on the dais. She commenced unwrapping. The object inside seemed to have more bandages than a mummy. At long last she had it uncovered and held out to them. "Is this thine?"

It was a large book. On the cover, in large ornate letters, was:

LOG of the *Astarte*

Tex looked at it and said, "Great leaping balls of fire! It can't be."

Matt stared and whispered, "It must be. The lost first expedition. They didn't fail—they got here."

Oscar stared and said nothing at all until the city mother repeated her question impatiently. "Is this thine?"

"Huh? What? Oh, sure! Wise and gracious mother, this thing belonged to my 'mother's mother's mother.' We are her 'daughters'"

"Then it is thine."

Oscar took it from, her and gingerly opened the brittle pages. They stared at the original entry for "raise ship"—but most especially at the year entry in the date column—"1971."

"Holy Moses!" breathed Tex. "Look at that—just look at it. More than a hundred years ago."

They thumbed through it. There was page after page of one line entries of "free fall, position according to plan" which they skipped over rapidly, except for one: "Christmas day. Carols were sung after the mid-day meal."

It was the entries after grounding they were after. They were forced to skim them as the mother-of-many was beginning to show impatience: "—climate no worse than the most extreme terrestrial tropics in the rainy season, the dominant life form seems to be a large amphibian. This planet is definitely possible of colonization."

"—the amphibians have considerable intelligence and seem to talk with each other. They are friendly and an attempt is being made to bridge the semantic gap."

"—Hargraves has contracted an infection, apparently fungoid, which is unpleasantly reminiscent of leprosy. The surgeon is treating it experimentally."

"—after the funeral muster Hargraves' room was sterilized at 400°."

The handwriting changed shortly thereafter. The city mother was growing so obviously discontented that they glanced only at the last two entries: "—Johnson continues to fail, but the natives are very helpful—"

"—my left hand is now useless. I have made up my mind to decommission the ship and take my chances in the hands of the natives. I shall take this log with me and add to it, if possible."

The handwriting was firm and clear; it was their own eyes that blurred it.

The mother-of-many immediately ordered up the party used to ferry the humans in and out of the city. She was not disposed to stop to talk and, once the journey began, there was no opportunity to until they reached dry land.

"Look here, Oz," Tex started in, as soon as he had shaken off the water, "do you really think she's taking us to the *Astarte*?"

"Could be. Probably is."

"Do you think there is a chance that we will find the ship intact?" asked Matt.

"Not a chance. Not a chance in this world. On one point alone, she couldn't possibly have any fuel left in her tanks. You saw what happened to the jeep. What do you think a century has done to the Astarte?" He paused and looked thoughtful. "Anyhow, I'm not going to get my hopes up, not again. I couldn't stand it, three times. That's too many."

"I guess you're right," agreed Matt. "It won't do to get excited. She's probably a mound of rust under a covering of vines."

"Who said anything about not getting excited?" Oscar answered. "I'm so excited I can hardly talk. But don't think of the Astarte as a possible way to get back; think of her historically."

"Yow think of it that way," said Tex. "I'm a believer and a hoper. I want to get out of this dump."

"Oh, you'll get out! They'll come find us some day—and then they'll finish the mission we flubbed."

"Look," answered Tex, "couldn't we go off duty and not think about the mission just for the next quarter of a mile? These insects are something fierce—you think about Oscar and I'll think about Mother Jarman's favorite son. I wish I was back in the good old *Triplex*."

"You were the guy that was always beefing that the *Triplex* was a madhouse."

"So I was wrong. I can be big about it."

They came to one of the rare rises in the level of the ground, all of ten feet above water level. The natives started to whisper and lisp excitedly among themselves. Matt caught the Venerian word for "tabu." "Did you get that, Oz?" he said in Basic. "Tabu."

"Yes. I don't think she told them where she was taking, them."

The column stopped and spread out; the three cadets moved forward, pushing rank growth aside and stepped in a clearing.

In front of them, her rakish wings festooned in vines and her entire hull sheathed in some translucent substance, was the Patrol Rocket Ship *Astarte*.

XVII HOTCAKES FOR BREAKFAST

THE CITY MOTHER was standing near the door of the *Astarte,* underneath the starboard wing. Two of her people were working at the door, using bladders to squirt some liquid around the edges. The translucent layer over the hull melted away wherever the liquid touched it. They grasped a free edge of the skin stuff and began to peel it away. "Look at that," said Tex. "Do you see what they've done? The ship is *Venusized.*"

His use of the term was loose; an item that has been "planetized" is one that has been rendered stable against certain typical conditions of the planet concerned, as defined by tests of the Bureau of Standards—for example, an item listed in the colonial edition of the Sears & Montgomery catalog as "Venusized" is thereby warranted to resist the excessive humidity, the exotic fungi, and certain of the planet's pests. The Astarte was merely encased in a sheath.

"Looks like it," agreed Oscar, his voice carefully restrained. "Sort of a spray-gun job."

"Five gets you ten it never saw a spray gun. The Venerians did it" Tex slapped at an insect. "You know what this means, Oz?"

"I'm way ahead of you. Don't get your hopes up. And don't try to get mine up, either. A hundred years is a long time."

"Oz, you don't get any fun out of life."

The little workers were having difficulties. The top of the door was much higher than they could reach; they were now trying to form two-high pyramids, but, having no shoulders to speak of, they were hardly built for the job. Matt said to Oscar, "Couldn't we give them a hand with that?"

"I'll see." Oscar went forward and suggested that the cadets take over the job of squirting on the solvent. The mother person looked at him.

"Canst thou grow a new hand, if needed?"

Oscar admitted that he could not.

"Then do not tamper with that which thou dost not understand."

Using their own methods the natives soon had the door cleared. It was latched but not locked; the door refused to open for a moment, then gave suddenly. They scrambled up into the airlock.

"Wait a minute," Matt whispered. "Hadn't we better go easy? We don't know that the infection that got them is necessarily dead."

"Don't be silly," Tex whispered back. If your immunizations hadn't worked, you'd have been a sick chicken long ago."

"Tex is right, Matt. And .there's no need to whisper. Ghosts can't hear."

"How do you know?" objected Tex. "Are you a doctor of ghostology?"

"I don't believe in ghosts."

"I do. Once my Uncle Bodie stayed overnight—"

"Let's get on inside," Matt insisted.

The passageway beyond the inner door was dark, save for the light that filtered in through the lock. The air had a strange odor, not precisely foul but lifeless—old.

The control room beyond was dimly but adequately lighted; the light from outside filtered softly through the sheathing that still covered the quartz pilot's port. The room was very cramped. The cadets were used to roomy modern ships; the *Astarte's* wings gave her a false impression of great size. Inside she was smaller than the jeep.

Tex began humming something about "—stout—hearted men—," then broke off suddenly. "Look at the darned thing!" he said. "Just look at it. To think they actually made an interplanetary jump in it. Look at that control board. Why, she's as primitive as a rowboat. And yet they took the chance. Puts you in mind of Columbus and the *Santa Maria*"

"Or the Viking ships," suggested Matt.

"There were men in those days," agreed Oscar, not very originally but with great sincerity.

"You can say that louder," commented Tex. "There's no getting around it, fellows; we were born too late for the age of adventure. Why, they weren't even heading for a listed port; they just blasted off into the dark and trusted to luck that they could get back."

"They didn't get back," Oscar said softly.

"Let's talk about something else," Matt requested. "I'm covered with goose pimples as it is."

"Okay," Oscar concurred, "I'd better get back and see what her royal nibs is doing anyway." He left, to return almost at once, accompanied by the city mother. "She was just waiting to be invited," he called out ahead of them, in Basic, "and huffy at being forgotten. Help me butter her up."

The native official turned out to be helpful; except for the control room the other spaces were dark, even to her. She stepped to the door, made known her wants, and returned with one of the glowing orange spheres they used for lighting. It was a poor excuse for a flashlight, but about as effective as a candle.

Everywhere the ship was orderly and clean, save for a faint film of dust. "Say what you like, Oscar," commented Matt, "I'm beginning to get my hopes up. I don't believe there is anything wrong with her. It looks as if the crew had just gone out for a walk. We may be able to put her in commission."

"I'm ready to throw in with Oscar," Tex objected. "I've lost my enthusiasm—I'd rather go over Niagara Falls in a barrel."

"*They* flew her," Matt pointed out.

"Sure they did—and my hat's off to them. But it takes heroes to fly a box as primitive as this and I'm not the hero type."

The mother-of-many lost interest presently and went outside. Tex borrowed the orange sphere and continued to look around while Matt and Oscar gave the control room a careful going over. Tex found a locker containing small, sealed packages marked "Personal effects of Roland Hargraves," "Personal effects of Rupert H. Schreiber," and other names. He put them back carefully.

Oscar shouted for him presently. "I think we had better get going. Her nibs hinted that when she left."

"Come see what I've found. Food!"

Matt and Oscar came to the door of the galley storeroom. "Do you suppose any of it is any good?" asked Matt.

"Why not? It's all canned. Jigger for me and we'll find out." Tex operated with a can opener. "Phewey!" he said presently. "Anybody want to sample some embalmed corned beef hash? Throw it outside, Matt, before it stinks up the place."

"It already has."

"But look at this!" Tex held up a can marked: *Old Plantation Hotcake Flour*. "This won't be spoiled—hotcakes for breakfast, troops. I can hardly wait."

"What good are flapjacks without syrup?"

"All the comforts of home—half a dozen cans of it." He produced one marked: *Genuine Vermont Maple Syrup, unadulterated.*

Tex wanted to take some back with them. Oscar vetoed it, on both practical and diplomatic grounds. Tex suggested that they remain in the ship, not go back. "Presently, Tex, presently," Oscar agreed. "You forgot about Lieutenant Thurlow."

"So I did. Close my big mouth."

"Speaking of Mr. Thurlow," put in Matt, "you've given me an idea. He won't touch much of that native hash, even when he seems to come pretty far out of it. How about that sugar syrup? I could feed it to him from a drinking bladder."

"It can't hurt him and it might help," decided Oscar. "We'll take half the syrup back with us." Tex picked the cans up, Matt tucked a can opener in his pouch, and they went outside.

Matt was pleased to find Th'wing on watch in Thurlow's room when they got back; she would be easier to deal with than the other nurses. He explained to her what he had in mind, in polite circumlocutions. She accepted a can Matt had opened and tasted, beforehand, and turned her back apologetically while she tasted it.

She spat it out. *"Art thou sure that this will not harm thy ailing mother?"*

Matt understood her hesitation, since Venerian diet runs to starch and protein, not to sugar. —He assured her that Thurlow would be helped thereby. They transferred the contents to a bladder.

The cadets talked over what they should do about the Astarte after dinner that night. Matt insisted that she could be made to fly; Tex remained of the opinion that they would be silly to attempt it. "She might get high enough to crash—no higher."

Oscar listened, then said, "Matt, did you check the tanks?" Matt admitted that he had. "Then you know there isn't any fuel."

"Then why are you arguing?" Tex interrupted. "The matter is settled."

"No, it's not, announced Oscar. "We'll try to fly her."

"Huh!"

"She can't fly and we'll try anyhow," Oscar went on.

"But why?"

"Okay—here's why. If we just sit here long enough, the Patrol will come along and find us, won't they?"

"Probably," agreed Matt.

"Absolute certainty. That's the way the Patrol works. They won't let us down. Look at the search for the *Pathfinder* —four ships, month after month. If their mishap hadn't killed them, the Patrol would have brought them back alive. We're still alive and we are somewhere near our original destination. They'll find us—the delay simply means they aren't sure we are lost yet; we haven't been out of touch so very long. Anyhow, we knew there wasn't a ship ready at either North Pole or South Pole to attempt an equatorial search, or we wouldn't have gotten the mission in the first place, so it may take a while before they can come for us. But they'll come."

"Then why not wait?" insisted Tex.

"Two reasons. The first is the boss—we've got to get him to a proper hospital before he just fades away and dies."

"And kill him in the take off."

"Maybe. That wouldn't faze him, is my guess. The second reason is —*we* are the Patrol."

"Huh? Come again."

"It's agreed that the Patrol wouldn't give up looking for us. Okay, if that's the sort of an outfit the Patrol is and we are part of the Patrol, then when they find us, they'll find us doing our level best to pull out unassisted, not sitting on our fat fannies waiting for a lift."

"I get you," said Tex. "I was afraid your busy little brain would figure that out, given time. Very well—mark me down as a reluctant hero. I think I'll turn in; this hero business is going to be sweaty and wearing."

It was indeed sweaty. The Venerians continued to be helpful but the actual work of attempting to outfit a ship for space had to be done entirely by the humans. With the permission of the city mother Oscar, transferred their headquarters to the Astarte. Thurlow was not moved, but arrangements were made for one cadet to be ferried each day back to the city, to report on Thurlow and to bring food back. There were few supplies left in the Astarte which were still edible.

However the pancake mix turned out to be usable. Tex had gadgeted together an oil burner of sorts—they had no electrical power as yet—and had charged the contraption with a fish oil obtained from the natives. Over this he baked his hotcakes. They were noticeably inferior to any that any of the three had ever tasted, for the flour had aged and changed flavor. They showed little tendency to rise.

But they were hotcakes and they were drowned in maple syrup. It was a ceremony, at the beginning of each working day, held on the sly behind a locked door, lest one of their puritanical friends be offended.

They embarked on a systematic campaign to vandalize each of the other ships for anything at all that might prove useful in outfitting the Astarte. In this, too, they were dependent on the natives; Matt or Tex could pick out what was wanted, but it took the little folk to move anything several miles through swamp and water and unmarked jungle.

They talked of the flight as if they really expected to make it. "You give me radar," Matt told Oscar, "any sort of approach radar, so that I've got a chance to land, and I'll set her down somewhere at South Pole. You can forget about the astrogational junk; it'll be dead reckoning."

They had settled on New Auckland, South Pole, as their nominal destination. North Pole would have been equally reasonable, but Oscar was a southern colonial, which decided it.

Oscar had promised the radar, not knowing quite how he could manage it. The *Gary* was the only hope; her communications room had been wrecked but Oscar had hopes of salvaging her belly radar. He set about doing it, while swearing at the impossibility of doing delicate work with one arm in a sling.

Little from the jeep was worth salvaging and none of it was entirely intact. Oscar had tried at first to use the radar equipment of the Astarte, but had given up—a century of difference in technology baffled him. Not only were the electronic circuits of the Astarte vastly more complicated and equally less efficient than the gear he had been brought up. with but the nomenclature was different—the markings, for example, on a simple resistor were Greek to him.

As for radio circuits the only sending installation actually fit to operate was a suit walky-talky from the *Gary*.

Nevertheless there came a morning when they had done what they could do. Tex was dealing out hotcakes. "It looks to me," he said, "as if we were ready to go, if we had some 'go' juice."

"How do you figure that," asked Matt. "The control board isn't even hooked to the jet."

"What of it? I'm going to have to throttle by hand anyhow. I'm going to take that big piece of tubing we pulled out of the *Gary* and string it from you back to me, at the jet throttle. You can shout down it and if I like it I'll do it."

"And if you don't like it?"

"Then I'll do something else. Easy on that syrup, Oz; it's the very last."

Oscar stopped himself, syrup can in midair. "Oh, I'm sorry, Tex. Here—let me slop some from my plate onto yours."

"Don't bother. It was just a reflex remark. To tell the truth, I'm sick of hotcakes. We've had them every day now for more than two weeks, with nothing to break the monotony but hash a la native."

"I'm sick of them, too, but it didn't seem polite to say so, with you doing the cooking." Oscar pushed back his plate. "I don't mind the syrup running out"

"But it hasn't—" Matt stopped.

"Something bite you, Matt?"

"No, I—nothing." He continued to look thoughtful.

"Close your mouth, then. Say, Oz, if we had some 'go' juice for the *Tart*, what would you pick?"

"Monatomic hydrogen."

"Why pick the one thing she can't burn? I'd settle for alcohol and oxygen."

"As long as you haven't got it, why not wish for the best?"

"Because we agreed to play this game for keeps. Now we've got to go through the motions of trying to make some fuel, from now till they find us. That's why I say alcohol and oxygen. I'll whomp up some sort of a still and start cooking alky while you and Matt figure out how to produce liquid oxygen with just your bare hands and a ship's equipment."

"How long do you figure it will take you to distill several tons of alcohol with what you can rig up?"

"That's the beauty of it. I'll still be working away at it, like a good little boy, busy as a moonshiner, when they come to rescue us. Say, did I ever tell you about Uncle Bodie and the moonshiners? It seems —"

"Look here," interrupted Matt, "how would you go about cooking up some maple syrup—here?"

"Huh? Why fret about it? We're sick of hotcakes."

"So am I, but I want to know how you can make maple syrup right here. Or, rather, how the natives can do it?"

"Are you nuts, or is this a riddle?"

"Neither one. I just remembered something I had overlooked. You said there wasn't any more maple syrup, and I was about to say that there was still plenty in Thurlow's room." Two days before, it had been Mart's turn to go into the city. As usual he had visited Thurlow's sickroom. His friend Th'wing had been on watch and had left him alone with the lieutenant for twenty minutes or so.

During the interval the patient had roused and Matt had wished to offer him a drink; there were several drinking bladders at hand.

The first one Matt picked up turned out to be charged with maple syrup, and so did the next and the next—the entire row, in fact. Then he found the one he wanted, lying on the couch. "I didn't think anything about it at the time— I was busy with the lieutenant. But this is what bothers me: He's been taking quite a lot of the syrup; you might say he's been living on nothing else. I opened the first can when we first took it to him, and I opened both the other cans myself, as needed—Th'wing couldn't cope with the can opener. So I know that the syrup was almost gone.

"Where did the rest of the syrup come from?"

"Why, I suppose the natives made it," answered Oscar. "It wouldn't be too hard to get sugar from some of the plants around here. There's a sort of grass somewhat like sugar cane, up near the Poles; they could find something of the sort."

"But, Oz, this was *maple* syrup!"

"Huh? It couldn't be. Your taster has gone haywire."

"It was maple, I tell you."

"Well, what if it was—mind you, I don't concede that you can get the true maple flavor this side of Vermont, but what difference does it make?"

"I think we've been overlooking a bet. You were talking about distilling alcohol; I'll bet the natives can supply alcohol in any quantities."

"Oh." Oscar thought about it. "You're probably right. They are clever about things like that—that gunk they use to jell mud and those solvents they cleaned the *Tart* with. Kitchen chemists."

"Maybe they aren't kitchen chemists. Maybe they are the real thing."

"Huh?" said Tex. "What do you mean, Matt?"

"Just what I said. We want 'go' juice for the *Tart*—maybe if we just had sense enough to ask the mother-of-many for it, we'd get it."

Oscar shook his head. "I wish you were right, Matt. Nobody has more respect for the Little People than I have, but there isn't a rocket fuel we can use that doesn't involve one or more liquefied gases. We might even make them understand what we needed but they wouldn't have the facilities for it."

"Why are you so sure?"

"Well, shucks, Matt, liquid oxygen—even liquid air—calls for high pressures and plenty of power, and high-pressure containers for the intermediate stages. The Little People make little use of power, they hardly use metal."

"They don't use power, eh? How about those orange lights?"

"Well, yes, but that can't involve much power."

"Can you make one? Do you know how they work?"

"No, but—"

"What I'm trying to get at is that there may be more ways of doing engineering than the big, muscley, noisy ways we've worked out. You've said yourself that we don't really know the natives, not even around the poles. Let's'at least ask!"

"I think he's got something there, Oz," said Tex. "Let's ask."

Oscar was looking very thoughtful. "I've realized for some time that our friends here were more civilized than the ones around the colonies, but I couldn't quite put my finger on it."

"What is civilization?"

"Never mind the philosophy—let's get going." Oscar unlocked the ship's outer door and spoke to a figure, waiting in what was to her bright sunlight and busy looking at the pictures in a 1971 *Saturday Evening Post*. "Hey, girlie! *Wouldst thou graciously conduct us to the home of thy mother?"*

It was maple syrup. Both Tex and Oscar agreed. Th'wing explained quite readily that, when the supply ran low, they had made more, using the original terrestrial stuff as a sample.

Oscar went to see the city mother, taking with him a bottle of grain alcohol salvaged from the medical supplies of the *Gary*. Matt and Tex had to sweat it out, for it had been agreed that Oscar did best with her nibs when not accompanied. He returned after more than two hours, looking stunned.

"What gives, Oz? What did you find out?" Matt demanded.

"It's bad news," said Tex. "I can tell from your face."

"No, it's not bad news."

"Then spill it, man, spill it—you mean they can do it?"

Oscar swore softly in Venerian. "They can do anything!"

"Back off and try again," advised Tex. "They can't play a harmonica. I know; I let one try. Now tell us."

"I started in by showing her the ethyl alcohol and tried to explain that we still had a problem and asked her if her people could make the stuff. She seemed to think it was a silly question—just sniffed it and said they could. Then I positively strained myself trying to act out liquid oxygen, first telling her that there were two different things in air, one inert and one active. The —best I could do was to use their words for 'living' and 'dead.' I told her I wanted the living part to be like water. She cut me off and sent for one of her people. They talked back and forth for several minutes and I swear I could understand only every second or third word and could not even get the gist of it. It was a part of their language totally new to me. Then the other old girl leaves the room.

"We waited. She asked me if we would be leaving soon if we got what we wanted. I said, yes if— Then she asked me to do her the favor of taking Burke along; she was apologetic about it but firm. I said we would."

"I'm glad of that," said Matt. "I despise Stinky's insides, but it sticks in my craw to leave him to die here. He ought to have a trial."

"Keep quiet, Matt," said Tex. "Who cares about Stinky? Go on, Oscar."

"After quite a wait, the other old girl came back, with a bladder—just an ordinary bladder by the appearance, but darker than a drinking bladder. Her nibs hands it to me and asks me if this is what I wanted. I said sorry but I did not want water. She squeezed a few drops out on my hand." Oscar held out his hand. "See that? It burned me."

"It actually was liquid oxygen?"

"That or liquid air. I didn't have any way to test, think it was oxygen. But get this—the bladder wasn't even cold. And it didn't fume until she squeezed out the drop The other gal was carrying it around as casually as you carry a hot-water bottle."

Oscar stared off into space a moment. "It beats me," he said. "The only thing I can think of is catalyst chemistry—they must have catalyst chemistry down to the point where they can do things without fuss that we do with heat and pressure."

"Why try to figure it out?" asked Tex. "You'll probably get the wrong answer. Just let it go that they've forgotten more about chemistry than we'll ever learn. And we get the 'go' juice."

For two days a steady procession of little folk had formed a double line from the water's edge to the Astarte, bearing full bladders toward the ship and returning with empty ones. Thurlow was already abroad, still attended by his patient little nurses. Burke was brought to the ship under escort and turned loose. The cadets let him alone, which seemed to disconcert him. He looked the ship over—it was the first he had heard of it—and finally sought out Jensen.

"If you think I'm going to ride in that flying coffin you're greatly mistaken."

"Suit yourself."

"Well, what are you going to do about it?"

"Nothing. You can stay in the jungle, or try to persuade the city mother to take you back."

Burke considered it. "I think I'll stay with the frogs. If you get through, you can tell them where I am and have them come get me."

"I'll tell them where you are all right and all the rest of it, too."

"You needn't think you can scare me." Burke went away.

He returned shortly. "I've changed my mind. I'm coming with you."

"You mean they wouldn't have you."

"Well—yes."

"Very well," answered Cadet Jensen, "the local authorities having declined jurisdiction, I arrest you under the colonial code titled 'Relations with Aborigines,' charges and specifications to be made known to you at your arraignment and not necessarily limited to the code cited. You are warned that anything you say may be used in evidence against you."

"You can't do this!"

"Mattl Tex! Take him in and strap him down."

"With pleasure!" They strapped him to an acceleration rest mounted in the galley, where, they had agreed, he would be the least nuisance. Done, they reported it to Jensen,"

"See here, Oz," Matt added, "do you think you can make any charges stick against him?"

"I rather doubt it, unless they allow our hearsay under a "best evidence' rule. Of course he ought to be strung up higher than the Milky Way, but the best I expect is to get his license revoked and his passport lifted. The Patrol will believe our story and that's enough for those items."

Less than an hour later Thurlow's nurses left the ship and the cadets said goodby to the mother-of-many, a flowery, long-winded business in which Oscar let himself be trapped into promising to return some day. But at last he closed the outer door and Tex clamped it. "Are you sure they understand how to keep clear of our blast?" asked Matt.

"I paced off the safety line with her myself and heard her give the orders. Quit worrying and get to your station."

"Aye aye, sir."

Matt and Oscar went forward, Oscar with the ancient log tucked in his sling. Tex took station at the hand throttles. Oscar sat down in the copilot's chair and opened the log to the page of the last entry. He took a stub of pencil that he had found in the galley, wet it in his mouth, entered the date, and wrote in a large hand:

He paused and said to Matt, "I still think we ought to shift the command."

"Stow it," said Matt. "If Commodore Arkwright can command the

Randolph with his lights gone, you can command the Tart with a busted wing."

"Okay, if that's the way you want it." He continued to write,

O. Jensen, acting captain
M. Dodson, pilot and astrogator
W. Jarman, chief engineer
Lt. R. Thiwlow, passenger (sick list)
G. Burke, passenger, civilian (prisoner)

"Muster the crew, Mister."

"Aye aye, sir. Call your name, too, Oz?"

"Sure, its a short list as it is."

"How about Stinky?"

"Of course not! I've got him billed as cargo."

Matt took a deep breath and, speaking close to the speaking tube so that Tex could hear, called out: "Lieutenant Thurlow!"

Oscar replied, "I answer for him." He glanced back at the lieutenant, strapped in the inspector's rest where they could keep an eye on him. Thurlow opened his eyes with the puzzled, questioning look he always showed on the rare occasions when he seemed to be aware of anything.

"Jensen!"

"Here."

"Jarman!"

"Here!" Tex called back, his voice muffled and hollow through the tube.

Matt said, "Dodson present," then wet his lips and hesitated.

"Dahlquist!"

Oscar was about to reply when Thurlow's voice came from behind them: "I answer for him."

"Martin!" Matt went on mechanically, too startled to stop.

"I answer for him," said Oscar, his eyes on Thurlow.

"Rivera!"

"I answer for him," came Tex's voice.

"Wheeler!"

"Wheeler's here too," Tex answered again.

"They're all here, Matt. We're ready."

"Complement complete, Captain;"

"Very well, sir."

"How is he, Oz?"

"He's closed his eyes again. Raise ship when ready."

"Aye aye, sir. According to plan—*raise ship*!" He grasped the wing controls and waited. The *Astarte* reared on her belly jets, drove up and forward and into the mists of Venus.

XVIII IN THE COMMANDANT'S OFFICE

PASSED CADETS Dodson and Jarman, freshly detached from the P.R.S. *Pegasus*, at Terra Station out from New Auckland, climbed out of the *Randolph*'s scooter and into the *Randolph* herself. Cadet Jensen was not with them; Oscar, on dispatch authorization from the Academy, had been granted six months for leave at home, with the understanding that he would be ordered to temporary duty in the course of it, to accompany the first consul to the equatorial regions to his station and assist in establishing liaison. Matt and Tex showed their orders to the officer of the watch and left with him the inevitable copies. He gave them their rooming assignments—in Hog Alley, in a room with a different number but otherwise like the one they had had. "Seems like we never left it," remarked Tex, as he unpacked his jump bag.

"Except it seems funny not to have Oz and Pete around."

"Yeah, I keep expecting Oz to stick his head in and ask if we'd like to team up with him and Pete."

The room phone sounded, Tex answered.

"Cadet Jarman?"

"Speaking."

"The Commandant's compliments—you are to report to his office at once."

"Aye aye, sir." He switched off and continued to Matt. "They don't waste much time, do they?" He looked thoughtful and added, "You know what I think?"

"Maybe I can guess."

"Well, this quick service looks promising. And we did do quite a job, Matt. There's no getting around to it."

"I guess so. Bringing in the *Astarte*, a hundred and eight years overdue, was something—even if we had dragged it in on wheels it still would be something. I won't start calling you 'Lieutenant' just yet, but—he might commission us."

"Keep your fingers crossed. How do I look?"

"You aren't pretty, but you look nineteen times better than you did when we grounded at South Pole. Better get moving."

"Right." Tex left and Matt waited nervously. Presently the call he expected came in, telling him, too, to report to the Commandant.

He found that Tex was still inside. Rather than fidget under the eyes of others in the Commandant's outer office, he chose to wait in the passageway. After a while, Tex came out. Matt went up to him eagerly. "How about it?"

Tex gave him an odd look. "Just go on in."

"You can't talk?"

"We'll talk later. Go on in."

"Cadet Dodson!" someone called from the outer office.

"On deck," he called back. A couple of moments later he was in the presence of the Commandant.

"Cadet Dodson, reporting as ordered, sir."

The Commandant turned his face toward him and Matt felt again the eerie feeling that Commodore Arkwright could see him better than could an ordinary, sighted man. "Oh, yes, Mr. Dodson. At ease." The elder Patrolman reached unerringly for a clip on his desk. "I've been looking over your record. You've made up your deficiency in astrogation and supplemented it with a limited amount of practical work. Captain Yancey seems to approve of you, on the whole, but notes that you are sometimes absentminded, with a tendency to become preoccupied with one duty to the expense of others. I don't find that very serious—in a young man."

"Thank you, sir."

"It was not a compliment, just an observation. Now tell me, what would you do if—" Fortyfive minutes later Matt caught his breath sufficiently to realize that he had been subjected to a very searching examination. He had come into the Commandant's office feeling nine feet tall, four feet wide, and completely covered with hair. The feeling had passed.

The Commandant paused for a moment as if thinking, then went on, "When will you be ready to be commissioned, Mr. Dodson?"

Matt strangled a bit, then managed to answer, "I don't know, sir. Three or four years, perhaps."

"I think a year should suffice, if you apply yourself. I'm sending you down to Hayworth Hall. You can catch the shuttle from the Station this afternoon.

"The usual delay for leave, of course," he added.

"That's fine, sir!"

"Enjoy yourself. I have an item here for you—" The blind man hesitated a split second, then reached for another clip, "—a copy of a letter from Lieutenant Thurlow's mother. Another copy has been placed in your record."

"Uh, how is the lieutenant, sir?"

"Completely recovered, they tell me. One more thing before you go —"

"Yes, sir."

"Let me have some notes on what troubles you ran into in recommissioning the *Astarte*, emphasizing what you had to learn as you went along—especially any mistakes you made."

"Uh, aye aye, sir."

"Your notes will be considered in revising the manual on obsolete equipment. No hurry about it—do it when you come back from leave."

Matt left the Commandant's presence feeling only a fraction the size he had when he had gone in, yet he felt curiously elated rather than depressed. He hurried to the room he shared with Tex and found him waiting. Tex looked him over. "I see you've had it."

"Check."

"Hayworth Hall?"

"That's it." Matt looked puzzled. "I don't understand it. I went in there honestly convinced that I was going to be commissioned. But I feel wonderful. Why is that?"

"Don't look at me. I feel the same way, and yet I can't remember that he had a kind word to say. The whole business on Venus he just tossed off."

Matt said, "That's it!"

"What's what?"

" 'He just tossed it off.' That's why we feel good. He didn't make anything of it because he didn't expect anything less—*because we are Patrolmen*!"

"Huh? Yes, that's it—that's exactly it! Like he was thirty—second degree and we were first degree, but members of the same lodge." Tex started to whistle.

"I feel better," said Matt. "I felt good before, but now I feel better, now that I understand why. Say—one other thing."

"What?"

"You didn't tell him about the fight I had with Burke in New Auckland, did you?"

"Of course not." Tex was indignant.

"That's funny. I didn't tell anybody but you, and I could have sworn that no one saw it. I planned it that way."

"He knew about it?"

"He sure did."

"Was he sore?"

"No. He said he realized that Burke was out on bond and that I was on leave and he had no wish to invade my private life—but he wanted to give me a word of advice."

"Yeah? What was it?"

"Never lead with my left."

Tex looked amazed, then thoughtful. "I think he was telling you not to lead with your chin, too."

"Probably." Matt started repacking his jump bag. "When's the next scooter for the Station?"

"About thirty minutes. Say, Matt, you've got leave of course?"

"Check."

"How about picking up my invitation to spend a few weeks on the Jarman spread? I want you to meet my folks —and Uncle Bodie."

"Uncle Bodie, by all means. But Tex?"

"Yeah?"

"Hotcakes for breakfast?"

"No hotcakes."

"It's a deal"

"Shake."

Red Planet

For Tish

1
Willis

The thin air of Mars was chill but not really cold. It was not yet winter in southern latitudes and the daytime temperature was usually above freezing.

The queer creature standing outside the door of a domeshaped building was generally manlike in appearance, but no human being ever had a head like that. A thing like a coxcomb jutted out above the skull, the eye lenses were wide and staring, and the front of the face stuck out in a snout. The unearthly appearance was increased by a pattern of black and yellow tiger stripes covering the entire head.

The creature was armed with a pistol-type hand weapon slung at its belt and was carrying, crooked in its right arm, a ball, larger than a basketball, smaller than a medicine ball. It moved the ball to its left arm, opened the outer door of the building and stepped inside.

Inside was a very small anteroom and an inner door. As soon as the outer door was closed the air pressure in the anteroom began to rise, accompanied by a soft sighing sound. A loudspeaker over the inner door shouted in a booming bass, ‘Well? Who is it? Speak up! Speak up!’

The visitor placed the ball carefully on the floor, then with both hands grasped its ugly face and pushed and lifted it to the top of its head. Underneath was disclosed the face of an Earthhuman boy. ‘It's Jim Marlowe, Doc,’ he answered.

'Well, come in. Come in! Don't stand out there chewing your nails.’

'Coming.’ When the air pressure in the anteroom had equalized with the pressure in the rest of the house the inner door opened automatically. Jim said, ‘Come along, Willis,’ and went on in.

The ball developed three spaced bumps on its lower side and followed after him, in a gait which combined spinning, walking, and rolling. More correctly, it careened, like a barrel being manhandled along a dock. They went down a passage and entered a large room that occupied half the floorspace of the circular house plan. Doctor MacRae looked up but did not get up. ‘Howdy, Jim. Skin yourself. Coffee on the bench. Howdy, Willis,’ he added and turned back to his work. He was dressing the hand of a boy about Jim's age.

'Thanks, Doc. Oh—hello, Francis. What are you doing here?’

'Hi, Jim. I killed a waterseeker, then I cut my thumb on one of its spines.’

'Quit squirming!’ commanded the doctor.

'That stuff stings,’ protested Francis.

'I meant it to.’

'How in the world did you do that?’ persisted Jim. ‘You ought to know better than to touch one of those things. Just burn ‘em down and burn ‘em up.’ He zipped open the front of his outdoor costume, peeled it off his arms and legs and hung it on a rack near the door. The rack held Francis's suit, the headpiece of which was painted in bright colours like an Indian brave's war paint, and the doctor's suit, the mask of which was plain. Jim was now stylishly and appropriately dressed for indoors on Mars—in bright red shorts.

'I did burn it,’ explained Francis, ‘but it moved when I touched it. I wanted to get the tail to make a necklace.’

'Then you didn't burn it right. Probably left it full of live eggs. Who're you making a necklace for?’

'None of your business. And I did so burn the egg sac. What do you take me for? A tourist?’

'Sometimes I wonder. You know those things don't die until sundown.’

'Don't talk nonsense, Jim,’ the doctor advised. ‘Now, Frank, I'm going to give you an antitoxin shot. ‘Twon't do you any good but it'll make your mother happy. Long about tomorrow your thumb will swell up like a poisoned pup; bring it back and I'll lance it.’

'Am I going to lose my thumb?’ the boy asked. ‘No. But you'll do your scratching with your left hand for a few days. Now, Jim, what brings you here? Tummy ache?’

'No, Doc. It's Willis.’

'Willis, eh? He looks pert enough to me.’ The doctor stared down at the creature. Willis was at his feet, having come up to watch the dressing of Frank's thumb. To do so he had protruded three eye stalks from the top of his spherical mass. The stalks stuck up like thumbs, in an equal-sided triangle, and from each popped a disturbingly human eye. The little fellow turned around slowly on his tripod of bumps, or pseudopeds, and gave each of his eyes a chance to examine the doctor.

'Get me up a cup of Java, Jim,' commanded the doctor, then leaned over and made a cradle of his hands. 'Here, Willis, upsidaisy!' Willis gave a little bounce and landed in the doctor's hands, withdrawing all protuberances as he did so. The doctor lifted him to the examining table; Willis promptly stuck out legs and eyes again. They stared at each other.

The doctor saw a ball covered with thick, close-cropped fur, like sheared sheepskin, and featureless at the moment save for supports and eye stalks. The Mars creature saw an elderly male Earthman almost completely covered with wiry grey-and-white hair. The middle portion of this strange, unMartian creature was concealed in snow-white shorts and shirt. Willis enjoyed looking at him.

'How do you feel, Willis?' inquired the doctor. 'Feel good? Feel bad?'

A dimple showed at the very crown of the ball between the stalks, dilated to an opening. 'Willis fine!' he said. His voice was remarkably like Jim's.

'Fine, eh?' Without looking around the doctor added, 'Jim! Wash those cups again. And this time, sterilize them. Want everybody around here to come down with the pip?'

'Okay, Doc,' Jim acknowledged, and added to Francis, 'You want some coffee, too?'

'Sure. Weak, with plenty of cow.'

'Don't be fussy.' Jim dipped into the laboratory sink and managed to snag another cup. The sink was filled with dirty dishes. Nearby a large flask of coffee simmered over a Bunsen burner. Jim washed three cups carefully, put them through the sterilizer, then filled them.

Doctor MacRae accepted a cup and said, 'Jim, this citizen says he's okay. What's the trouble?'

'I know he says he's all right, Doc, but he's not. Can't you examine him and find out?'

'Examine him? How, boy? I can't even take his temperature because I don't know what his temperature ought to be. I know as much about his body chemistry as a pig knows about pattycake. Want me to cut him open and see what makes him tick?'

Willis promptly withdrew all projections and became as featureless as a billiard ball. 'Now you've scared him,' Jim said accusingly.

'Sorry.' The doctor reached out and commenced scratching and tickling the furry ball. 'Good Willis, nice Willis. Nobody's going to hurt Willis. Come on, boy, come out of your hole.'

Willis barely dilated the sphincter over his speaking diaphragm. 'Not hurt Willis?' he said anxiously in Jim's voice.

'Not hurt Willis. Promise.'

'Not cut Willis?’

'Not cut Willis. Not a bit.’

The eyes poked out slowly. Somehow he managed an expression of watchful caution, though he had nothing resembling a face. ‘That's better,’ said the doctor. ‘Let's get to the point, Jim. What makes you think there's something wrong with this fellow, when he and I can't see it?’

'Well, Doc, it's the way he behaves. He's all right indoors, but outdoors—He used to follow me everywhere, bouncing around the landscape, poking his nose into everything.’

'He hasn't got a nose,’ Francis commented.

'Go to the head of the class. But now, when I take him out, he just goes into a ball and I can't get a thing out of him. If he's not sick, why does he act that way?’

'I begin to get a glimmering,’ Doctor MacRae answered. ‘How long have you been teamed up with this balloon?’

Jim thought back over the twenty-four months of the Martian year. ‘Since along toward the end of Zeus, nearly November.’

'And now here it is the last of March, almost Ceres, and the summer gone. That suggest anything to your mind?’

'Uh, no.’

'You expect him to go hopping around through the snow? We migrate when it gets cold; he lives here.’

Jim's mouth dropped open. ‘You mean he's trying to hibernate?’

'What else? Willis's ancestors have had a good many millions of years to get used to the seasons around here; you can't expect him to ignore them.’

Jim looked worried. ‘I had planned to take him with me to Syrtis Minor.’

'Syrtis Minor? Oh, yes, you go away to school this year, don't you? You, too, Frank.’

'You bet!’

'I can't get used to the way you kids grow up. I came to Mars so that the years would be twice as long, but it doesn't seem to make any difference—they spin faster.’

'Say, Doc, how old are you?’ inquired Francis.

'Never mind. Which one of you is going to study medicine and come back to help me with my practice?’

Neither one answered. ‘Speak up, speak up!’ urged the doctor. ‘What are you going to study?’

Jim said, ‘Well, I don't know. I'm interested in areography*, but I like biology, too. Maybe I'll be a planetary economist, like my old man.’

'That's a big subject. Ought to keep you busy a long time. You,

Frank?’

Francis looked slightly embarrassed. ‘Well, uh—shucks, I still think I'd like to be a rocket pilot.’

'I thought you had outgrown that.’

'Why not?’ Francis answered. ‘I might make it.’

'On your own head be it. Speaking of such things, you younkers go to school before the colony migrates, don't you?’ Since Earthhumans do not hibernate, it was necessary that the colony migrate twice each Martian year. The southern summer was spent at Charax, only thirty degrees from the southern pole; the colony was now about to move to Copais in Utopia, almost as far to the north, there to remain half a Martian year, or almost a full Earth year.

There were year-around establishments near the equator—New Shanghai, Marsport, Syrtis Minor, others—but they were not truly colonies, being manned mainly by employees of the Mars Company. By contract and by charter the Company was required to provide advanced terrestrial education on Mars for colonists; it suited the Company to provide it only at Syrtis Minor.

'We go next Wednesday,’ said Jim, ‘on the mail scooter.’

'So soon?’

'Yes, and that's what worries me about Willis. What ought I to do, Doc?’

Willis heard his name and looked inquiringly at Jim. He repeated, in exact imitation of Jim, ‘What ought I to do, Doc?’

'Shut up, Willis —’

'Shut up, Willis.’ Willis imitated the doctor just as perfectly.

'Probably the kindest thing would be to take him out, find him a hole, and stuff him in it. You can renew your acquaintance when he's through hibernating.’

'But, Doc, that means I'll lose him! He'll be out long before I'm home from school. Why, he'll probably wake up even before the colony comes back.’

'Probably.’ MacRae thought about it. ‘It won't hurt him to be on his own again. It's not a natural life he leads with you, Jim. He's an individual, you know; he's not property.’

'Of course he's not! He's my friend.’

'I can't see,’ put in Francis, ‘why Jim sets such store by him. Sure, he talks a lot, but most of it is just parrot stuff. He's a moron, if you ask me.’

'Nobody asked you. Willis is fond of me, aren't you, Willis? Here, come to papa.’ Jim spread his arms; the little Martian creature hopped into them and settled in his lap, a warm, furry mass, faintly pulsating. Jim stroked him.

'Why don't you ask one of the Martians?’ suggested MacRae.

'I tried to, but I couldn't find one that was in a mood to pay any attention.'

'You mean you weren't willing to wait long enough. A Martian will notice you if you're patient. Well, why don't you ask *him*? He can speak for himself.'

'What should I say?'

'I'll try it. Willis!' Willis turned two eyes on the doctor; MacRae went on, 'Want to go outdoors and find a place to sleep?'

'Willis not sleepy.'

'Get sleepy outdoors. Nice and cold, find hole in ground. Curl up and take good long sleep. How about it?'

'No!' The doctor had to look sharply to see that it was not Jim who had answered; when Willis spoke for himself he always used Jim's voice. Willis's sound diaphragm had no special quality of its own, any more than has the diaphragm of a radio loudspeaker. It was much like a loudspeaker's diaphragm, save that it was part of a living animal.

'That seems definite, but we'll try it from another angle. Willis, do you want to stay with Jim?'

'Willis stay with Jim.' Willis added meditatively, 'Warm!'

'There's the key to your charm, Jim,' the doctor said dryly. 'He likes your blood temperature. But *ipse dixit*—keep him with you. I don't think it will hurt him. He may live fifty years instead of a hundred, but he'll have twice as much fun.'

'Do they normally live to be a hundred?' asked Jim.

'Who knows? We haven't been around this planet long enough to know such things. Now come on, get out. I've got work to do.' The doctor eyed his bed thoughtfully. It had not been made in a week; he decided to let it wait until wash day.

'What does *ipse dixit* mean, Doc?' asked Francis.

'It means, He sure said a mouthful.'

'Doc,' suggested Jim, 'why don't you have dinner with us tonight. I'll call mother. You, too, Frank.'

'Not me,' Frank said. 'I'd better not. My mother says I eat too many meals with you folks.'

'My mother, if she were here, would undoubtedly say the same thing,' admitted the doctor. 'Call your mother, Jim.'

Jim went to the phone, turned out two colonial housewives gossiping about babies, and finally reached his home on an alternate frequency. When his mother's face appeared on the screen he explained his wish. 'Delighted to have the doctor with us,' she said. 'Tell him to hurry along, Jimmy.'

'Right away, Mom!' Jim switched off and reached for his outdoor suit.

'Don't put it on,' advised MacRae. 'It's too chilly out. We'll go through the tunnels.'

'It's twice as far,' objected Jim.

'We'll leave it up to Willis. Willis, how do you vote?'

'Warm,' said Willis smugly.

Areography: equivalent to 'geography' for Earth. From 'Ares,' Greek for Mars.

2

South Colony, Mars

South colony was arranged like a wheel. The administration building was the hub; tunnels ran out in all directions and buildings were placed over them. A rim tunnel had been started to join the spokes at the edge of the wheel; thus far a fortyfive degree arc had been completed.

Save for three Moon huts erected when the colony was founded and since abandoned, all the buildings were shaped alike. Each was a hemispherical bubble of silicone plastic, processed from the soil of Mars and blown on the spot. Each was a double bubble, in fact; first one large bubble would be blown, say thirty or forty feet across; when it had hardened, the new building would be entered through the tunnel and an inner bubble, slightly smaller than the first, would be blown. The outer bubble 'polymerized'—that is to say, cured and hardened, under the rays of the sun; a battery of ultraviolet and heat lamps cured the inner. The walls were separated by a foot of dead air space, which provided insulation against the bitter subzero nights of Mars.

When a new building had hardened, a door would be cut to the outside and a pressure lock installed; the colonials maintained about two-thirds Earth-normal pressure indoors for comfort and the pressure on Mars is never as much as half of that. A visitor from Earth, not conditioned to the planet, will die without a respirator. Among the colonists only Tibetans and Bolivian Indians will venture outdoors without respirators and even they will wear the snug elastic Mars suits to avoid skin hemorrhages.

Buildings had not even view windows, any more than a modern building in New York has. The surrounding desert, while beautiful, is monotonous. South Colony was in an area granted by the Martians, just north of the ancient city of Charax—there is no need to give the Martian name since an Earthman can't pronounce it—and between the legs of the double canal Strymon. Again we follow colonial custom in using the name assigned by the immortal Dr Percival Lowell.

Francis accompanied Jim and Doctor MacRae as far as the junction of the tunnels under city hall, then turned down his own tunnel. A few minutes later the doctor and Jim—and Willis—ascended into the Marlowe home. Jim's mother met them; Doctor MacRae bowed. ‘Madame, I am again imposing on your good nature.’

'Fiddlesticks, Doctor. You are always welcome at our table.’

'I would that I had the character to wish that you were not so superlative a cook, that you might know the certain truth: it is yourself, my dear, that brings me here.’

Jim's mother blushed. She changed the subject. ‘Jim, hang up your pistol. Don't leave it on the sofa where Oliver can get it.’

Jim's baby brother, hearing his name, immediately made a dash for the pistol. Jim and his sister Phyllis both saw this, both yelled, ‘Ollie!’—and were immediately mimicked by Willis, who performed the difficult trick, possible only to an atonal diaphragm, of duplicating both voices simultaneously.

Phyllis was nearer; she grabbed the gun and slapped the child's hands. Oliver began to cry, reinforced by Willis. ‘Children!’ said Mrs Marlowe, just as Mr Marlowe appeared in the door.

'What's all the ruckus?’ he inquired mildly.

Doctor MacRae picked up Oliver, turned him upside down, and sat him on his shoulders. Oliver forgot that he was crying. Mrs Marlowe turned to her husband. ‘Nothing, darling. I'm glad you're home. Children, go wash for dinner, all of you.’

The second generation trooped out. ‘What was the trouble?’ Mr Marlowe repeated.

A few moments later Mr Marlowe joined Jim in his son's room. ‘Jim?’

'Yes, Dad.’

'What's this about your leaving your gun where the baby could reach it?’

Jim flushed. ‘It wasn't charged, Dad.’

'If all the people who had been killed with unloaded guns were laid end to end it would make quite a line up. You are proud of being a licensed gun wearer, aren't you?’

'Uh, yes, sir.’

'And I'm proud to have you be one. It means you are a responsible, trusted adult. But when I sponsored you before the Council and stood up with you when you took your oath, I guaranteed that you would obey the regulations and follow the code, wholeheartedly and all the time—not just most of the time. Understand me?’

'Yes, sir. I think I do.’

'Good. Let's go in to dinner.’

Doctor MacRae dominated the dinner table talk, as he always did, with a soft rumble of salty comments and outrageous observations. Presently he turned to Mr Marlowe and said, ‘You said something earlier about another twenty years and we could throw away our respirators; tell me: is there news about the Project?'

The colony had dozens of projects, all intended to make Mars more livable for human beings, but *the* Project always meant the atmosphere, or oxygen, project. The pioneers of the Harvard-Carnegie expedition reported Mars suitable for colonization except for the all-important fact that the air was so thin that a normal man would suffocate. However they reported also that many, many billions of tons of oxygen were locked in the Martian desert sands, the red iron oxides that give Mars its ruddy color. The Project proposed to free this oxygen for humans to breathe.

'Didn't you hear the Deimos newscast this afternoon?' Mr Marlowe answered.

'Never listen to newscasts. Saves wear and tear on the nervous system.'

'No doubt. But this was good news. The pilot plant in Libya is in operation, successful operation. The first day's run restored nearly four million tons mass of oxygen to the air—and no breakdowns.'

Mrs Marlowe looked startled. 'Four million tons? That seems a tremendous lot.'

Her husband grinned. 'Any idea how long it would take that one plant at that rate to do the job, that is, increase the oxygen pressure by five mass-pounds per square inch?'

'Of course I haven't. But not very long I should think.'

'Let me see —' His lips moved soundlessly. 'Uh, around two hundred thousand years—Mars years, of course.'

'James, you're teasing me!'

'No, I'm not. Don't let big figures frighten you, my dear; of course we won't depend on one plant; they'll be scattered every fifty miles or so through the desert, a thousand mega-horsepower each. There's no limit to the power available, thank goodness; if we don't clean up the job in our lifetimes, at least the kids will certainly see the end of it.'

Mrs Marlowe looked dreamy. 'That would be nice, to walk outside with your bare face in the breeze. I remember when I was a little girl, we had an orchard with a stream running through it —' She stopped.

'Sorry we came to Mars, Jane?' her husband asked softly.

'Oh, no! This is my home.'

'Good. What are you looking sour about, Doctor?'

'Eh? Oh, nothing, nothing! I was just thinking about the end result. Mind you, this is fine work, all of it—hard work, good work, that a man can get his teeth into. But we get it done and what for? So that another two billion, three billion sheep can fiddle around with nonsense, spend their time scratching themselves and *baa*ing. We should have left Mars to the Martians. Tell me, sir, do you know what television was used for when it first came out?’

'No. How would I?’

'Well, I didn't see it myself of course, but my father told me about it. It seems —’

'Your *father?* How old was he? When was he born?’

'My grandfather then. Or it may have been my great grandfather. That's beside the point. They installed the first television sets in cocktail bars—amusement places—and used them to watch wrestling matches.’

'What's a wrestling match?’ demanded Phyllis.

'An obsolete form of folk dancing,’ explained her father. ‘Never mind. Granting your point, Doctor, I see no harm —’

'What's folk dancing?’ persisted Phyllis.

'You tell her, Jane. She's got me stumped.’

Jim looked smug. ‘It's when folks dance, silly.’

'That's near enough,’ agreed his mother.

Doctor MacRae stared. ‘These kids are missing something. I think I'll organize a square dancing club. I used to be a pretty good caller, once upon a time.’

Phyllis turned to her brother. ‘Now I suppose you'll tell me that square dancing is when a square dances.’

Mr Marlowe raised his eyebrows. ‘I think the children have all finished, my dear. Couldn't they be excused?’

'Yes, surely. You may leave, my dears. Say Excuse me, please, Ollie.’ The baby repeated it, with Willis in mirror chorus.

Jim hastily wiped his mouth, grabbed Willis, and headed for his own room. He liked to hear the doctor talk but he had to admit that the old boy could babble the most fantastic nonsense when other grownups were around. Nor did the discussion of the oxygen project interest Jim; he saw nothing strange nor uncomfortable about wearing his mask. He would feel undressed going outdoors without it.

From Jim's point of view Mars was all right the way it was, no need to try to make it more like Earth. Earth was no great shakes anyway. His own personal recollection of Earth was limited to vague memories from early childhood of the emigrants’ conditioning station on the high Bolivian plateau—cold, shortness of breath, and great weariness.

His sister trailed after him. He stopped just inside his door and said, ‘What do you want, shorty?’

'Well.... Lookie, Jimmy, seeing as I'm going to have to take care of Willis after you've gone away to school, maybe it would be a good idea for you to sort of explain it to him, so he would do what I tell him without any trouble.’

Jim stared. ‘Whatever gave you the notion I was going to leave him behind?'

She stared back. 'But you are! You'll *have* to. You can't take him to school. You ask mother.'

'Mother hasn't anything to do with it. She doesn't care what I take to school.'

'Well, you oughtn't to take him, even if she doesn't object. I think you're mean.'

'You always think I'm mean if I don't cater to your every wish!'

'Not to me—to Willis. This is Willis's home; he's used to it. He'll be homesick away at school.'

'He'll have me!'

'Not most of the time, he won't. You'll be in class. Willis wouldn't have anything to do but sit and mope. You ought to leave him here with me—with us—where he'd be happy.'

Jim straightened himself up. 'I'm going to find out about this, right away.' He walked back into the living compartment and waited aggressively to be noticed. Shortly his father turned toward him.

'Yes? What is it, Jim? Something eating you?'

'Uh, well—look, Dad, is there any doubt about Willis going with me when I go away to school?'

His father looked surprised. 'It had never occurred to me that you would consider taking him.'

'Huh? Why not?'

'Well, school is hardly the place for him.'

'Why?'

'Well, you wouldn't be able to take care of him properly. You'll be awfully busy.'

'Willis doesn't take much care. Just feed him every month or so and give him a drink about once a week and he doesn't ask for anything else. Why can't I take him, Dad?'

Mr Marlowe looked baffled; he turned to his wife. She started in, 'Now, Jimmy darling, we don't want you to —'

Jim interrupted, 'Mother, every time you want to talk me out of something you start out, Jimmy darling!'

Her mouth twitched but she kept from smiling. 'Sorry, Jim. Perhaps I do. What I was trying to say was this: we want you to get off to a good start at school. I don't believe that having Willis on your hands will help any.'

Jim was stumped for the moment, but was not ready to give up. 'Look, Mother. Look, Dad. You both saw the pamphlet the school sent me, telling me what to do and what to bring and when to show up and so forth. If either one of you can find anything anywhere in those instructions that says I can't take Willis with me, I'll shut up like a Martian. Is that fair?'

Mrs Marlowe looked inquiringly at her husband. He looked back at her with the same appeal for help in his expression. He was acutely aware that Doctor MacRae was watching both of them, not saying a word but wearing an expression of sardonic amusement.

Mr Marlowe shrugged. ‘Take Willis along, Jim. But he's your problem.’

Jim's face broke out in a grin. ‘Thanks, Dad!’ He left the room quickly in order not to give his parents time to change their minds.

Mr Marlowe banged his pipe on an ashtray and glowered at Doctor MacRae. ‘Well, what are you grinning at, you ancient ape? You think I'm too indulgent, don't you?’

'Oh, no, not at all! I think you did perfectly right.’

'You think that pet of Jim's won't cause him trouble at school?’

'On the contrary. I have some familiarity with Willis's peculiar social habits.’

'Then why do you say I did right?’

'Why shouldn't the boy have trouble? Trouble is the normal condition for the human race. We were raised on it. We thrive on it.’

'Sometimes, Doctor, I think that you are, as Jim would put it, crazy as a spin bug.’

'Probably. But since I am the only medical man around, I am not likely to be committed for it. Mrs Marlowe, could you favor an old man with another cup of your delicious coffee?’

'Certainly, Doctor.’ She poured for him, then went on. ‘James, I am not sorry you decided to let Jim take Willis. It will be a relief.’

'Why, dear? Jim was correct when he said that the little beggar isn't much trouble.’

'Well, he isn't really. But—I just wish he weren't so truthful.’

'So? I thought he was the perfect witness in settling the children's squabbles?’

'Oh, he is. He'll play back anything he hears as accurately as a transcriber. That's the trouble.’ She looked upset, then chuckled. ‘You know Mrs Pottle?’

'Of course.’

The doctor added, ‘How can one avoid it? I, unhappy man, am in charge of her nerves.’

Mrs Marlowe asked, ‘Is she actually sick, Doctor?’

'She eats too much and doesn't work enough. Further communication is forbidden by professional ethics.’

'I didn't know you had any.’

'Young lady, show respect for my white hairs. What about this Pottle female?’

'Well, Luba Konski had lunch with me last week and we got to talking about Mrs Pottle. Honest, James, I didn't say much and I did not know that Willis was under the table.’

'He was?’ Mr Marlowe covered his eyes. ‘Do go on.’

'Well, you both remember that the Konskis housed the Pottles at North Colony until a house was built for them. Sarah Pottle has been Luba's pet hate ever since, and Tuesday Luba was giving me some juicy details on Sarah's habits at home. Two days later Sarah Pottle stopped by to give me advice on how to bring up children. Something she said triggered Willis—I knew he was in the room but I didn't think anything of it—and Willis put on just the wrong record and I couldn't shut him up. I finally carried him out of the room. Mrs Pottle left without saying goodbye and I haven't heard from her since.’

'That's no loss.’ her husband commented.

'True, but it got Luba in Dutch. No one could miss Luba's accent and Willis does it better than she does herself. I don't think Luba minds, though—and you should have heard Willis's playback of Luba's description of how Sarah Pottle looks in the morning—and what she does about it.’

'You should hear,’ answered MacRae, ‘Mrs Pottle's opinions on the servant problem.’

'I have. She thinks it's a scandal that the Company doesn't import servants for us.’

The doctor nodded. ‘With collars riveted around their necks.’

'That woman! I can't see why she ever became a colonist.’

'Didn't you know?’ her husband said. ‘They came out here expecting to get rich in a hurry.’

'Hummph!’

Doctor MacRae got a faraway look. ‘Mrs Marlowe, speaking as her physician, it might help me to hear what Willis has to say about Mrs Pottle. Do you suppose he would recite for us?’

'Doctor, you're an old fraud, with a taste for gossip.’

'Granted. I like also eavesdropping.’

'You're shameless.’

'Again granted. My nerves are relaxed. I haven't felt ashamed in years.’

'Willis may just give a thrilling account of the children's chitchat for the past two weeks.’

'Perhaps if you coaxed him?’

Mrs Marlowe suddenly dimpled. ‘It won't hurt to try.’ She left the room to fetch Jim's globular friend.

3

Gekko

Wednesday morning dawned clear and cold, as mornings have a habit of doing on Mars. The Suttons and the Marlowes, minus Oliver, were gathered at the Colony's cargo dock on the west leg of Strymon canal, ready to see the boys off.

The temperature was rising and the dawn wind was blowing firmly, but it was still at least thirty below. Strymon canal was a steel-blue, hard sheet of ice and would not melt today in this latitude. Resting on it beside the dock was the mail scooter from Syrtis Minor, its boat body supported by razor-edged runners. The driver was still loading it with cargo dragged from the warehouse on the dock.

The tiger stripes on Jim's mask, the war paint on Frank's, and a rainbow motif on Phyllis's made the young people easy to identify. The adults could be told apart only by size, shape, and manner; there were two extras, Doctor MacRae and Father Cleary. The priest was talking in low, earnest tones to Frank.

He turned presently and spoke to Jim. ‘Your own pastor asked me to say goodbye to you, son. Unfortunately the poor man is laid up with a touch of Mars throat. He would have come anyhow had I not hidden his mask.’ The Protestant chaplain, as well as the priest, was a bachelor; the two shared a house.

'Is he very sick?’ asked Jim.

'Not that sick. But take his blessing—and mine too.’ He offered his hand.

Jim dropped his travel bag, shifted his ice skates and Willis over to his left arm and shook hands. There followed an awkward silence. Finally Jim said, ‘Why don't you all go inside before you freeze to death?’

'Yeah,’ agreed Francis. ‘That's a good idea.’

'I think the driver is about ready now,’ Mr Marlowe countered. ‘Well, son, take care of yourself. We'll see you at migration.’ He shook hands solemnly.

'So long, Dad.’

Mrs Marlowe put her arms around him, pressed her mask against his and said, ‘Oh, my little boy—you're too young to go away from home!’

'Oh, Mother, please!’ But he hugged her. Then Phyllis had to be hugged. The driver called out: ‘'Board!’

''Bye everybody!’ Jim turned away, felt his elbow caught.

It was the doctor. ‘Take care of yourself, Jim. And don't take any gruff off of anybody.’

'Thanks, Doc.’ Jim turned and presented his school authorization to the driver while the doctor bade Francis goodbye.

The driver looked it over. ‘Both deadheads, eh? Well, seeing as how there aren't any pay passengers this morning you can ride in the observatory.’ He tore off his copy; Jim climbed inside and went up to the prized observation seats behind and above the driver's compartment. Frank joined him.

The craft trembled as the driver jacked the runners loose from the ice, then with a roar from the turbine and a soft, easy surge the car got under way. The banks flowed past them and melted into featureless walls as the speed picked up. The ice was mirror smooth; they soon reached cruising speed of better than two hundred fifty miles per hour. Presently the driver removed his mask; Jim and Frank, seeing him, did likewise. The car was pressurized now by an air ram faced into their own wind of motion; it was much warmer, too, from the air's compression.

'Isn't this swell?’ said Francis.

'Yes. Look at Earth.’

Their mother planet was riding high above the Sun in the north eastern sky. It blazed green against a deep purple background. Close to it, but easy to separate with the naked eye, was a lesser, pure white star—Luna, Earth's moon. Due north of them, in the direction they were going, Deimos, Mars’ outer moon, hung no more than twenty degrees above the horizon. Almost lost in the rays of the sun, it was a tiny pale disc, hardly more than a dim star and much outshone by Earth.

Phobos, the inner moon, was not in sight. At the latitude of Charax it never rose more than eight degrees or so above the northern horizon and that for an hour or less, twice a day. In the daytime it was lost in the blue of the horizon and no one would be so foolhardy as to watch for it in the bitter night. Jim did not remember ever having seen it except during migration between colonies.

Francis looked from Earth to Deimos. ‘Ask the driver to turn on the radio,’ he suggested. ‘Deimos is up.’

'Who cares about the broadcast?’ Jim answered. ‘I want to watch.’ The banks were not so high now; from the observation dome he could see over them into the fields beyond. Although it was late in the season the irrigated belt near the canal was still green and getting greener as he watched, as the plants came out of the ground to seek the morning sunlight.

He could make out, miles away, an occasional ruddy sand dune of the open desert. He could not see the green belt of the east leg of their canal; it was over the horizon.

Without urging, the driver switched on his radio; music filled the car and blotted out the monotonous low roar of the turbo-jet. It was terrestrial music, by Sibelius, a classical composer of another century. Mars colony had not yet found time to develop its own arts and still borrowed its culture. But neither Jim nor Frank knew who the composer was, nor cared. The banks of the canal had closed in again;

there was nothing to see but the straight ribbon of ice; they settled back and daydreamed.

Willis stirred for the first time since he had struck the outer cold. He extended his eye stalks, looked inquiringly around, then commenced to beat time with them.

Presently the music stopped and a voice said: ‘This is station D-M-S, the Mars Company, Deimos, *circum* Mars. We bring you now by relay from Syrtis Minor a program in the public interest. Doctor Graves Armbruster will speak on Ecological Considerations involved in Experimental Artificial Symbiotics as related to —’

The driver promptly switched the radio off.

'I would like to have heard that,’ objected Jim. ‘It sounded interesting.’

'Oh, you're just showing off,’ Frank answered. ‘You don't even know what those words mean.’

'The dickens I don't. It means —’

'Shut up and take a nap.’ Taking his own advice Frank lay back and closed his eyes. However he got no chance to sleep. Willis had apparently been chewing over, in whatever it was he used for a mind, the programme he had just heard. He opened up and started to play it back, woodwinds and all.

The driver looked back and up, looked startled. He said something but Willis drowned him out. Willis bulled on through to the end, even to the broken-off announcement. The driver finally made himself heard. ‘Hey, you guys! What you got up there? A portable recorder?’

'No, a bouncer.’

'A what?’

Jim held Willis up so that the driver could see him. ‘A bouncer. His name is Willis.’ The driver stared.

'You mean *that* thing is a recorder?’

'No, he's a bouncer. As I said, his name is Willis.’

'This I got to see,’ announced the driver. He did something at his control board, then turned around and stuck his head and shoulders up into the observation dome.

Frank said, ‘Hey! You'll wreck us.’

'Relax,’ advised the driver. ‘I put her on echo-automatic. High banks for the next couple o’ hundred miles. Now what is this gismo? When you brought it aboard I thought it was a volley ball.’

'No, it's Willis. Say hello to the man, Willis.’

'Hello, man,’ Willis answered agreeably.

The driver scratched his head. ‘This beats anything I ever saw in Keokuk. Sort of a parrot, eh?’

'He's a bouncer. He's got a scientific name, but it just means Martian roundhead. Never seen one before?’

'No. You know, bud, this is the screwiest planet in the whole system.'

'If you don't like it here,' asked Jim, 'why don't you go back where you came from?'

'Don't go popping off, youngster. How much will you take for the gismo? I got an idea I could use him.'

'Sell Willis? Are you crazy?'

'Sometimes I think so. Oh, well, it was just an idea.' The driver went back to his station, stopping once to look back and stare at Willis.

The boys dug sandwiches out of their travel bags and munched them. After that Frank's notion about a nap seemed a good idea. They slept until wakened by the car slowing down. Jim sat up, blinked and called down, 'What's up?'

'Coming into Cynia Station,' the driver answered. 'Lay over until sundown.'

'Won't the ice hold?'

'Maybe it will. Maybe it won't. The temperature's up and I'm not going to chance it.' The car slid softly to a stop, then started again and crawled slowly up a low ramp, stopped again. 'All out!' the driver called. 'Be back by sundown—or get left.' He climbed out; the boys followed.

Cynia Station was three miles west of the ancient city of Cynia, where west Strymon joins the canal Oeroe. It was merely a lunchroom, a bunkhouse, and a row of pre-fab warehouses. To the east the feathery towers of Cynia gleamed in the sky, seemed almost to float, too beautifully unreal to be solid.

The driver went into the little inn. Jim wanted to walk over and explore the city; Frank favoured stopping in the restaurant first. Frank won out. They went inside and cautiously invested part of their meagre capital in coffee and some indifferent soup.

The driver looked up from his dinner presently and said, 'Hey, George! Ever see anything like that?' He pointed to Willis.

George was the waiter. He was also the cashier, the hotel keeper, the station agent, and the Company representative. He glanced at Willis. 'Yep.'

'You did, huh? Where? Do you suppose I could find one?'

'Doubt it. You see 'em sometimes, hanging around the Martians. Not many of 'em.' He turned back to his reading—a *New York Times*, more than two years old.

The boys finished, paid their bills, and prepared to go outside. The cook-waiter-station-agent said, 'Hold on. Where are you kids going?'

'Syrtis Minor.'

'Not that. Where are you going right now? Why don't you wait in the dormitory? Take a nap if you like.’

'We thought we would kind of explore around outside,’ explained Jim.

'Okay. But stay away from the city.’

'Why?’

'Because the Company doesn't allow it, that's why. Not without permission. So stay clear of it.’

'How do we get permission?’ Jim persisted.

'You can't. Cynia hasn't been opened up to exploitation yet.’ He went back to his reading.

Jim was about to continue the matter but Frank tugged at his sleeve. They went outside together. Jim said, ‘I don't think he has any business telling us we can't go to Cynia.’

'What's the difference? He thinks he has.’

'What'll we do now?’

'Go to Cynia, of course. Only we won't consult his nibs.’

'Suppose he catches us?’

'How can he? He won't stir off that stool he's warming. Come on.’

'Okay.’ They set out to the east. The going was not too easy; there was no road of any sort and all the plant growth bordering the canal was spread out to its greatest extent to catch the rays of the midday sun. But Mars’ low gravity makes walking easy work even over rough ground. They came shortly to the bank of Oeroe and followed it to the right, toward the city.

The way was easy along the smooth stone of the bank. The air was warm and balmy even though the surface of the canal was still partly frozen. The sun was high; they were the better part of a thousand miles closer to the equator than they had been at daybreak.

'Warm,’ said Willis. ‘Willis want down.’

'Okay,’ Jim agreed, ‘but don't fall in.’

'Willis not fall in.’ Jim put him down and the little creature went skipping and rolling along the bank, with occasional excursions into the thick vegetation, like a puppy exploring a new pasture.

They had gone perhaps a mile and the towers of the city were higher in the sky when they encountered a Martian. He was a small specimen of his sort, being not over twelve feet tall. He was standing quite still, all three of his legs down, apparently lost in contemplation of the whichness of what. The eye facing them stared unblinkingly.

Jim and Frank were, of course, used to Martians and recognized that this one was busy in his ‘other world'; they stopped talking and continued on past him, being careful not to brush against his legs.

Not so Willis. He went darting around the Martian's peds, rubbing against them, then stopped and let out a couple of mournful croaks.

The Martian stirred, looked around him, and suddenly bent and scooped Willis up.

'Hey!’ yelled Jim. ‘Put him down!’

No answer.

Jim turned hastily to Frank. ‘You talk to him, Frank. I'll never be able to make him understand me. Please!’ Of the Martian dominant language Jim understood little and spoke less. Frank was somewhat better, but only by comparison. Those who speak Martian complain that it hurts their throats.

'What'll I say?’

'Tell him to put Willis down!’

'Relax. Martians never hurt anybody.’

'Well, tell him to put Willis down, then.’

'I'll try.’ Frank screwed up his mouth and got to work. His accent, bad at best, was made worse by the respirator and by nervousness. Nevertheless he clucked and croaked his way through a phrase that seemed to mean what Jim wanted. Nothing happened.

He tried again, using a different idiom; still nothing happened. ‘It's no good, Jim,’ he admitted. ‘Either he doesn't understand me or he doesn't want to bother to listen.’

Jim shouted, ‘Willis! Hey, Willis! Are you all right?’

'Willis fine!’

'Jump down! I'll catch you.’

'Willis fine.’

The Martian wobbled his head, seemed to locate Jim for the first time. He cradled Willis in one arm; his other two arms came snaking suddenly down and enclosed Jim, one palm flap cradling him where he sat down, the other slapping him across the belly.

He felt himself lifted and held and then he was staring into a large liquid Martian eye which stared back at him. The Martian ‘man’ rocked his head back and forth and let each of his eyes have a good look.

It was the closest Jim had ever been to a Martian; he did not care for it. Jim tried to wiggle away, but the fragile appearing Martian was stronger than he was.

Suddenly the Martian's voice boomed out from the top of his head. Jim could not understand what was being said although he spotted the question symbol at the beginning of the phrase. But the Martian's voice had a strange effect on him. Croaking and uncouth though it was, it was filled with such warmth and sympathy and friendliness that the native no longer frightened him. Instead he seemed like an old and trusted friend.

The Martian repeated the question.

'What did he say, Frank?’

'I didn't get it. He's friendly but I can't understand him.’

The Martian spoke again; Frank listened. ‘He's inviting you to go with him, I think.’

Jim hesitated a split second. ‘Tell him okay.’

'Jim, are you crazy?’

'It's all right. He means well. I'm sure of it.’

'Well—all right.’ Frank croaked the phrase of assent.

The native gathered up one leg and strode rapidly away toward the city. Frank trotted after. He tried his best to keep up, but the pace was too much for him. He paused, gasping, then shouted, ‘Wait for me,’ his voice muffled by his mask.

Jim tried to phrase a demand to stop, gave up, then got an inspiration. ‘Say, Willis—Willis boy. Tell him to wait for Frank.’

'Wait for Frank?’ Willis said doubtfully.

'Yes. Wait for Frank.’

'Okay.’ Willis hooted at his new friend; the Martian paused and dropped his third leg. Frank came puffing up.

The Martian removed one arm from Jim and scooped up Frank with it. ‘Hey!’ Frank protested. ‘Cut it out.’

'Take it easy,’ advised Jim.

'But I don't want to be carried.’

Frank's reply was disturbed by the Martian starting up again. Thus burdened, he shifted to a three-legged gait in which at least two legs were always on the ground. It was bumpy but surprisingly fast.

'Where do you suppose he is taking us?’ asked Jim.

'To the city I guess.’ Frank added, ‘We don't want to miss the scooter.’

'We've got hours yet. Quit worrying.’

The Martian said nothing more but continued slogging toward Cynia. Willis was evidently as happy as a bee in a flower shop. Jim settled down to enjoying the ride. Now that he was being carried with his head a good ten feet above ground his view was much improved; he could see over the tops of the plants growing by the canal and beyond them to the iridescent towers of Cynia. The towers were not like those of Charax; no two Martian cities looked alike. It was as if each were a unique work of art, each expressing the thoughts of a different artist.

Jim wondered why the towers had been built, what they were good for, how old they were.

The canal crops spread out around them, a dark green sea in which the Martian waded waist deep. The broad leaves were spread flat to the sun's rays, reaching greedily for lifegiving radiant energy. They curled aside as the native's body brushed them, to spread again as he passed.

The towers grew much closer; suddenly the Martian stopped and set the two boys down. He continued to carry Willis. Ahead of them, almost concealed by overhanging greenery, a ramp slanted down into the ground and entered a tunnel arch. Jim looked at it and said, ‘Frank, what do you think?’

'Gee, I don't know.’ The boys had been inside the cities of Charax and Copais, but only in the abandoned parts and at ground level. They were not allowed time to fret over their decision; their guide started down the slope at a good clip.

Jim ran after him, shouting, ‘Hey, Willis!’

The Martian stopped and exchanged a couple of remarks with Willis; the bouncer called out, ‘Jim wait.’

'Tell him to put you down.’

'Willis fine. Jim wait.’ The Martian started up again at a pace that Jim could not possibly match. Jim went disconsolately back to the start of the ramp and sat down on the ledge thereof.

'What are you going to do?’ demanded Frank.

'Wait, I suppose. What else can I do? What are you going to do?’

'Oh, I'll stick. But I'm not going to miss the scooter.’

'Well, neither am I. We couldn't stay here after sundown anyhow.’

The precipitous drop in temperature at sunset on Mars is almost all the weather there is, but it means death by freezing for an Earth human unless he is specially clothed and continuously exercising.

They sat and waited and watched spin bugs skitter past. One stopped by Jim's knee, a little tripod of a creature, less than an inch high; it appeared to study him. He touched it; it flung out its limbs and whirled away. The boys were not even alert, since a waterseeker will not come close to a Martian settlement; they simply waited.

Perhaps a half hour later the Martian—or, at least, *a* Martian of the same size—came back. He did not have Willis with him. Jim's face fell. But the Martian said, ‘Come with me,’ in his own tongue, prefacing the remark with the question symbol.

'Do we or don't we?’ asked Frank.

'We do. Tell him so.’ Frank complied. The three started down. The Martian laid a great hand flap on the shoulders of each boy and herded him along. Shortly he stopped and picked them up. This time they made no objection.

The tunnel seemed to remain in full daylight even after they had penetrated several hundred yards underground. The light came from everywhere but especially from the ceiling. The tunnel was large by human standards but no more than comfortably roomy for Martians. They passed several other natives; if another was moving their host always boomed a greeting, but if he was frozen in the characteristic trancelike immobility no sound was made.

Once their guide stepped over a ball about three feet in diameter.

Jim could not make out what it was at first, then he did a doubletake and was still more puzzled. He twisted his neck and looked back at it. It *couldn't be*—but it was!

He was gazing at something few humans ever see, and no human ever wants to see: a Martian folded and rolled into a ball, his hand flaps covering everything but his curved back. Martians—modern, civilized Martians—do not hibernate, but at some time remote eons in the past their ancestors must have done so, for they are still articulated so that they can assume the proper, heat-conserving, moisture-conserving globular shape, if they wish.

They hardly ever so wish.

For a Martian to roll up is the moral equivalent of an Earthly duel to the death and is resorted to only when that Martian is offended so completely that nothing less will suffice. It means: I cast you out, I leave your world, I deny your existence.

The first pioneers on Mars did not understand this, and, through ignorance of Martian values, offended more than once. This delayed human colonization of Mars by many years; it took the most skilled diplomats and semanticians of Earth to repair the unwitting harm. Jim stared unbelievingly at the withdrawn Martian and wondered what could possibly have caused him to do that to an entire city. He remembered a grisly tale told him by Doctor MacRae concerning the second expedition to Mars. ‘So this dumb fool,’ the doctor had said, ‘a medical lieutenant he was, though I hate to admit it—this idiot grabs hold of the beggar's flaps and tries to unroll him. Then it happened.’

'What happened?’ Jim had demanded.

'He disappeared.’

'The Martian?’

'No, the medical officer.’

'Huh? How did he disappear?’

'Don't ask me; I didn't see it. The witnesses—four of ‘em, with sworn statements—say there he was and then there he wasn't. As if he had met a boojum.’

'What's a boojum?’ Jim had wanted to know.

'You modern kids don't get any education, do you? The boojum is in a book; I'll dig up a copy for you.’

'But how did he disappear?’

'Don't ask me. Call it mass hypnosis if it makes you feel any better. It makes me feel better, but not much. All I can say is that seven-eighths of an iceberg never shows.’ Jim had never seen an iceberg, so the allusion was wasted on him—but he felt decidedly not better when he saw the rolled up Martian.

'Did you see that?’ demanded Frank.

'I wish I hadn't,’ said Jim. ‘I wonder what happened?’

'Maybe he ran for mayor and lost.'

'It's nothing to joke about. Maybe he—*Sssh!'* Jim broke off. He caught sight of another Martian, immobile, but not rolled up; politeness called for silence.

The Martian carrying them made a sudden turn to the left and entered a hall; he put them down. The room was very large to them; to Martians it was probably suitable for a cozy social gathering. There were many of the frames they use as a human uses a chair and these were arranged in a circle. The room itself was circular and domed; it had the appearance of being outdoors for the domed ceiling simulated Martian sky, pale blue at the horizon, increasing to warmer blue, then to purple, and reaching purple-black with stars piercing through at the highest point of the ceiling.

A miniature sun, quite convincing, hung west of the meridian. By some trick of perspective the pictured horizons were apparently distant. On the north wall Oeroe seemed to flow past.

Frank's comment was, 'Gee whiz!'; Jim did not manage that much.

Their host had placed them by two resting frames. The boys did not attempt to use them; stepladders would have been more comfortable and convenient. The Martian looked first at them, then at the frames, with great sorrowful eyes. He left the room.

He came back very shortly, followed by two others; all three were carrying loads of colourful fabrics. They dumped them down in a pile in the middle of the room. The first Martian picked up Jim and Frank and deposited them gently on the heap.

'I think he means, Draw up a chair,' commented Jim.

The fabrics were not woven but were a continuous sheet, like cobweb, and almost as soft, though much stronger. They were in all hues of all colours from pastel blue to deep, rich red. The boys sprawled on them and waited.

Their host relaxed himself on one of the resting frames; the two others did the same. No one said anything. The two boys were decidedly not tourists; they knew better than to try to hurry a Martian. After a bit Jim got an idea; to test it he cautiously raised his mask. Frank snapped, 'Say! What 'cha trying to do? Choke to death?'

Jim left his mask up. 'It's all right. The pressure is up.'

'It *can't* be. We didn't come through a pressure lock.'

'Have it your own way.' Jim left his mask up. Seeing that he did not turn blue, gasp, nor become slack-featured, Frank ventured to try it himself. He found himself able to breathe without trouble. To be sure, the pressure was not as great as he was used to at home and it would have seemed positively stratospheric to an Earthling, but it was enough for a man at rest.

Several other Martians drifted in and unhurriedly composed themselves on frames. After a while Frank said, ‘Do you know what's going on, Jim?’

'Uh—maybe.’

'No maybes about it. It's a growing-together.’

'Growing together’ is an imperfect translation of a Martian idiom which names their most usual social event—in bald terms, just sitting around and saying nothing. In similar terms, violin music has been described as dragging a horse's tail across the dried gut of a cat. ‘I guess you're right,’ agreed Jim. ‘We had better button our lips.’

'Sure.’

For a long time nothing was said. Jim's thoughts drifted away, to school and what he would do there, to his family, to things in the past. He came back presently to personal self-awareness and realized that he was happier than he had been in a long time, with no particular reason that he could place. It was a quiet happiness; he felt no desire to laugh nor even to smile, but he was perfectly relaxed and content.

He was acutely aware of the presence of the Martians, of each individual Martian, and was becoming even more aware of them with each drifting minute. He had never noticed before how beautiful they were. ‘Ugly as a native’ was a common phrase with the colonials; Jim recalled with surprise that he had even used it himself, and wondered why he ever had done so.

He was aware, too, of Frank beside him and thought about how much he liked him. Staunch—that was the word for Frank, a good man to have at your back. He wondered why he had never told Frank that he liked him.

Mildly he missed Willis, but he was not worried about him. This sort of a party was not Willis's dish; Willis liked things noisy, boisterous, and unrefined. Jim put aside the thought of Willis, lay back, and soaked in the joy of living. He noted with delight that the unknown artist who had designed this room had arranged for the miniature sun to move across the ceiling just as the true Sun moved across the sky. He watched it travel to the west and presently begin to drop toward the pictured horizon.

There came a gentle booming behind him—he could not catch the words—and another Martian answered. One of them unfolded himself from his resting stand and ambled out of the room. Frank sat up and said, ‘I must have been dreaming.’

'Did you go to sleep?’ asked Jim. ‘I didn't.

'The heck you didn't. You snored like Doc MacRae.’

'Why, I wasn't even asleep.’

'Says you!’

The Martian who had left the room returned. Jim was sure it was the same one; they no longer looked alike to him. He was carrying a drinking vase. Frank's eyes bulged out. ‘Do you suppose they are going to serve us *water?'*

'Looks like,’ Jim answered in an awed voice.

Frank shook his head. ‘We might as well keep this to ourselves; nobody'll ever believe us.’

'You're right.’

The ceremony began. The Martian with the vase announced his own name, barely touched the stem of the vase and passed it on. The next Martian gave his name and also simulated drinking. Around the circle it came. The Martian who had brought them in, Jim learned, was named ‘Gekko'; it seemed a pretty name to Jim and fitting. At last the vase came around to Jim; a Martian handed it to him with the wish, ‘May you never suffer thirst.’ The words were quite clear to him.

There was an answering chorus around him: ‘May you drink deep whenever you wish!’

Jim took the vase and reflected that Doc said that the Martians didn't have anything that was catching for humans. ‘Jim Marlowe!’ he announced, placed the stem in his mouth and took a sip.

As he handed it back he dug into his imperfect knowledge of the dominant language, concentrated on his accent and managed to say, ‘May water ever be pure and plentiful for you.’ There was an approving murmur that warmed him. The Martian handed the vase to Frank.

With the ceremony over the party broke up in noisy, almost human chatter. Jim was trying vainly to follow what was being said to him by a Martian nearly three times his height when Frank said, ‘Jim! You see that sun? We're going to miss the scooter!’

'Huh? That's not the real Sun; that's a toy.’

'No, but it matches the real Sun. My watch says the same thing.’

'Oh, for Pete's sake! Where's Willis? Gekko—where's Gekko?’

Gekko, on hearing his name, came over; he clucked inquiringly at Jim. Jim tried very hard to explain their trouble, tripped over syntax, used the wrong directive symbols, lost his accent entirely. Frank shoved him aside and took over. Presently Frank said, ‘They'll get us there before sunset, but Willis stays here.’

'Huh? They can't do that!’

'That's what the man says.’

Jim thought. ‘Tell them to bring Willis here and ask *him.'*

Gekko was willing to do that. Willis was carried in, placed upon the floor. He waddled up to Jim and said, ‘Hi, Jim boy! Hi, Frank boy!’

'Willis,’ said Jim earnestly, ‘Jim is going away. Willis come with Jim?’

Willis seemed puzzled. ‘Stay here. Jim stay here. Willis stay here. Good.’

'Willis,’ Jim said frantically, ‘Jim has *got* to go away. Willis come with Jim?’

'Jim go?’

'Jim go.’

Willis almost seemed to shrug. ‘Willis go with Jim,’ he said sadly.

'Tell Gekko.’ Willis did so. The Martian seemed surprised, but there was no further argument. He gathered up both boys and the bouncer and started for the door. Another larger Martian—tagged ‘G'kuro’ Jim recalled—relieved Gekko of Frank and tailed along behind. As they climbed the tunnel Jim found suddenly that he needed his mask; Frank put his on, too.

The withdrawn Martian was still cluttering the passageway; both their porters stepped over him without comment.

The sun was very low when they got to the surface. Although a Martian cannot be hastened, his normal pace makes very good time; the long-legged pair made nothing of the three miles back to Cynia Station. The sun had just reached the horizon and the air was already bitter when the boys and Willis were dumped on the dock. The two Martians left at once, hurrying back to the warmth of their city.

'Goodbye, Gekko!’ Jim shouted. ‘Goodbye, G'kuro!’

The driver and the station master were standing on the dock; it was evident that the driver was ready to start and had been missing his passengers. ‘What in the world?’ said the station master.

'We're ready to go,’ said Jim.

'So I see,’ said the driver. He stared at the retreating figures. He blinked and turned to the agent. ‘We should have left that stuff alone, George. I'm seeing things.’ He added to the boys, ‘Well, get aboard.’

They did so and climbed up to the dome. The car clumped down off the ramp to the surface of the ice, turned left onto Oeroe canal and picked up speed. The Sun dropped behind the horizon; the landscape was briefly illuminated by the short Martian sunset. On each bank the boys could see the plants withdrawing for the night. In a few minutes the ground, so lush with vegetation a half hour before, was bare as the true desert.

The stars were out, sharp and dazzling. Soft curtains of aurora hung over the skyline. In the west a tiny steady light rose and fought its way upwards against the motion of the stars. ‘There's Phobos,’ said Frank. ‘Look!’

'I see it,’ Jim answered. ‘It's cold. Let's turn in.’

'Okay. I'm hungry.’

'I've got some sandwiches left.’ They munched one each, then went down into the lower compartment and crawled into bunks. In time the car passed the city Hesperidum and turned west-northwest onto the canal Erymanthus, but Jim was unaware of it; Jim was dreaming that Willis and he were singing a duet for the benefit of amazed Martians.

'All out! End of the line!' The driver was prodding them.

'Huh?'

'Up you come, shipmate. This is it—Syrtis Minor.'

4

Lowell Academy

Dear Mother and Dad,

The reason I didn't phone you when we got in Wednesday night was that we didn't get in until Thursday morning. When I tried to phone on Thursday the operator told me that Deimos had set for South Colony and then I knew it would be about three days until I could relay a call through Deimos and a letter would get there sooner and save you four and a half credits on a collect phone call. Now I realize that I didn't get this letter off to you right away and maybe you're not going to get it until after I would have been able to make a phone call if I had made it but what you probably don't realize is how busy they keep you at school and how many demands there are on a fellow's time and anyhow you probably heard from Frank's mother that we had gotten here all right and anyway you look at it I still saved you four and one half credits by not making that phone call.

I can just hear Phyllis saying that I am just hinting that the half-and-four I saved should be turned over to me but I am not doing anything of the sort because I wouldn't do anything like that and besides I've still got some of the money left that you gave me before I left as well as part of my birthday money and with careful management I will not need any more until you all come through here at Migration even though everything costs more here than it does at home. Frank says it's because they always jack up the prices for the tourist trade but there aren't any tourists around now and won't be until the *Albert Einstein* gets in next week. Anyway if you simply split the difference with me you would still be a clear two and a quarter credits ahead.

The reason we didn't get here Wednesday night was because the driver decided the ice might not hold so we laid over at Cynia Station and Frank and I just fooled around and killed time until sunset.

Frank and I have been allowed to room together and we've got a dandy room. It was meant for just one boy and only has one study desk but we're mostly taking the same subjects and lots of times we can use the projector together. I am talking this letter into the study desk recorder because tonight is Frank's night to help out in the kitchen and all I've got left to study is a little bit of history and I'm saving that to do it with Frank when he comes back. Professor Steuben says that he does not know what they are going to do if they keep getting more students here with no more room, hang them on hooks maybe but he is just joking. He jokes a lot and everybody likes him and will be sorry when he leaves on the *Albert Einstein* and the new headmaster takes over.

Well that's all for now because Frank just got back and we had better get to work because tomorrow we have a quiz on system history.

Your loving son,
James Madison Marlowe, Jr.

PS. Frank just told me that he didn't write his folks either and he wonders if you would mind phoning his mother and telling her that he is all right and would she please send his camera right away, he forgot it.

PPS. Willis sends his love. I just asked him.

PPPS. Tell Phyllis that the girls here are dyeing their hair in stripes. I think it looks silly.

JIM

If Professor Otto Steuben, MA, LLD, had not retired, Jim's life at Lowell Academy would have been different. But retire he did and went back to San Fernando Valley for a well-earned rest. The entire school went to Marsport to see him off. He shook hands all around and wept a little and commended them to the care of Marquis Howe, recently arrived from Earth and now taking over.

When Jim and Frank got back from the space port they found the first arrivals gathered around the bulletin board. They crowded in and read the item that was drawing the crowd:

SPECIAL NOTICE

All students are required to keep themselves and their quarters neat and orderly at all times. The supervision of these matters by student monitors has not proved satisfactory. Therefore formal inspections by the Headmaster will be held each week. The first such inspection will be at ten hundred, Saturday, the 7th of Ceres.

(signed)

M. Howe, Headmaster

'Well, for crying out loud!' Frank burst out. 'What d'you think of that, Jim?'

Jim stared at it darkly. 'I think that today is the sixth of Ceres.'

'Yeah, but what's the idea? He must think that this is a school of correction.' Frank turned to an older student, who had, until now, been monitor of their corridor. 'Anderson, what do you think about it?'

'I really don't know. I thought we were doing all right the way we were.’

'What do you intend to do about it?’

'Me?’ The young man thought a while before replying. ‘I've got just one more semester to my degree, then I'm out of here. I think I'll just sit tight, keep my mouth shut, and sweat it out.’

'Huh? That's easy enough for you to say but I've got twelve semesters staring me in the face. What am I? A criminal?’

'That's your problem, fellow.’ The older student left.

One of the boys in the crowd seemed undisturbed by the notice. He was Herbert Beecher, son of the Company's Resident Agent General and a newcomer both to Mars and to the school. One of the other boys noticed his smirk. ‘What are you looking smug about, tourist?’ he demanded. ‘Did you know about this ahead of time?’

'Certainly I did.’

'I'll bet you thought it up.’

'No, but my old man says you guys have been getting away with it for a long time. My old man says that Stoobie was too soft to put any discipline into this school. My old man says that —’

'Nobody cares what your old man says. Beat it!’

'You better not talk about my old man that way. I'll —’

'Beat it I said!’

Young Beecher eyed his antagonist—a redheaded lad named Kelly—and decided that he meant it. He faded out of sight.

'He can afford to grin,’ Kelly said bitterly, ‘he lives in his old man's quarters. This thing only gets at those of us who have to live in the school. It's rank discrimination, that's what it is!’ About a third of boys were day students, mostly sons of Company employees who were stationed at Syrtis Minor. Another third were migratory colonials and the balance were the children of terrestrials at the outlying stations, especially those employed on the atmosphere project. Most of these last were Bolivians and Tibetans, plus a few Eskimos. Kelly turned to one of them. ‘How about it, Chen? Are we going to put up with this?’

The Asiatic's broad face showed no expression. ‘It is not worth getting excited about.’ He started to turn away.

'Huh? You mean you won't stand up for your rights?’

'These things pass.’

Jim and Frank went back to their room but continued to discuss it. ‘Frank,’ asked Jim, ‘what's behind this? Do you suppose they're pulling the same stunt over in the girl's school?’

'I could call up Dolores Montez and find out.’

'Mmm ... don't bother. I don't suppose it matters. The question is: what are we going to do about it?’

'What can we do about it?’

'I don't know. I wish I could ask Dad about this. He always told me to stand up for my rights—but maybe he would say that this is just something I should expect. I don't know.’

'Look,’ suggested Frank, ‘why don't we ask our fathers?’

'You mean call ‘em up tonight. Is there relay tonight?’

'No, don't call ‘em up; that costs too much. We'll wait till our folks come through here at Migration; that's not so very long now. If we're going to make a fuss, we've got to have our folks here to back us up, or we won't get any place with it. Meantime, we sit tight and do what he asks us. It may not amount to anything.’

'Now you're talking sense.’ Jim stood up. ‘I suppose we might as well try to get this dump tidied up.’

'Okay. Say, Jim, I just thought of something. Isn't the chairman of the Company named Howe?’

'John W. Howe,’ agreed Jim. ‘What about it?’

'Well, the head is named Howe, too.’

'Oh.’ Jim shook his head. ‘Doesn't mean anything. Howe is a very common name.’

'I'll bet it does mean something. Doc MacRae says you have to be somebody's cousin to get any of the juicy company appointments. Doc says that the company set-up is just one big happy family, and that the idea that it is a nonprofit corporation is the biggest joke since women were invented.’

'Hmm ... Well, I wouldn't know. Where shall I put this junk?’

Slips were distributed at breakfast the next morning giving what was described as ‘Official Arrangement of Rooms for Inspection'; the job the boys had done the night before had to be done over. Since Headmaster Howe's instructions failed to consider the possibility that two boys might be living in a one-boy room the rearranging was not easy; they were not ready by ten o'clock. However it was nearly two hours later that the Headmaster got around to their cubicle.

He poked his head inside, seemed about to leave, then came inside. He pointed to their outdoor suits, hanging on hooks by the clothes locker. ‘Why haven't you removed those barbaric decorations from your masks?’

The boys looked startled; Howe went on, ‘Haven't you looked at the bulletin board this morning?’

'Er—no, sir.’

'Do so. You are responsible for anything posted on the bulletin board.’ He shouted toward the door. ‘Orderly!’

One of the older students appeared in the doorway. ‘Yes, sir.’

'Weekend privileges suspended for these two pending satisfaction of inspection requirements. Five demerits each.’ Howe looked around. ‘This room is unbelievably cluttered and untidy. Why didn't you follow the prescribed diagram?’

Jim stuttered, tongue-tied by the evident unfairness of the question. Finally he got out, ‘This is supposed to be a single room. We did the best we could.’

'Don't resort to excuses. If you don't have room to store things neatly, get rid of the excess baggage.’ For the first time his eye lit on Willis, who, at the sight of strangers, had retreated to a corner and hauled in all out-rigging. Howe pointed at him. ‘Athletic equipment must be stored on tops of lockers or left in the gymnasium. It must not be thrown in corners.’

Jim started to answer; Frank kicked him in a shin. Howe went on lecturing as he moved toward the door. ‘I realize that you young people have been brought up away from civilization and have not had the benefits of polite society, but I shall do my best to remedy that. I intend that this school shall, above all other things, turn out civilized young gentlemen.’ He paused at the door and added, ‘When you have cleaned up those masks, report to my office.’

When Howe was out of earshot Jim said, ‘What did you kick me for?’

'You dumb idiot, he thought Willis was a ball.’

'I know; I was just about to set him right.’

Frank looked disgusted. ‘Don't you know enough to let well enough alone? You want to keep Willis, don't you? He would have whipped up some rule making him contraband.’

'Oh, he couldn't do that!’

'The heck he couldn't! I'm beginning to see that Stoobie kept our pal Howe from exercising his full talents. Say, what did he mean: demerits?’

'I don't know, but it doesn't sound good.’ Jim took down his respirator mask, looked at the gay tiger stripes. ‘You know, Frank, I don't think I want to become a civilized young gentleman.’

'You and me both!’

They decided to take a quick look at the bulletin board before they got into any more trouble rather than fix the masks at once. They went to the entrance foyer and did so. On the board was pinned:

NOTICE TO STUDENTS

1. The practice of painting respirator masks with so-called identification patterns will cease. Masks will be plain and each student will letter his name neatly in letters one inch high across the chest and across the shoulders of his outdoors suit.

2. Students are required to wear shirts and shoes or slippers at all times and places except in their own rooms.

3. Pets will no longer be permitted. In some cases, where the animals are of interest as scientific specimens, arrangements may be made to feed and care for same in the biology laboratory.

4. Food must not be kept in dormitory rooms. Students receiving food packages from parents will store them with the commissary matron and reasonable amounts may be withdrawn immediately after meals, except Saturday morning breakfast. Special permission may be obtained for ‘sweets parties’ during recreation hours on occasions such as birthdays, *etc.*

5. Students denied weekend privileges for disciplinary reasons may read, study, compose letters, play musical instruments or listen to music. They are not permitted to play cards, visit in other students’ rooms, nor leave the school area for any reason.

6. Students wishing to place telephone calls will submit a written request on the approved form and will obtain a key to the communications booth at the main office.

7. The student council is dissolved. Student government will be resumed only if and when the behaviour of the student body justifies it.

(signed) M. Howe, Headmaster

Jim whistled. Frank said, ‘Would you look at that, Jim? Dissolving the Student Council—imagine that! Do you suppose we have to get permission to scratch? What does he take us for?’

'Search me. Frank, I haven't *got* a shirt.’

'Well, I can lend you a sweat shirt until you can buy some. But take a look at paragraph three—you'd better get busy.’

'Huh? What about it?’ Jim reread it.

'You'd better go butter up the bio teacher, so you can make some arrangements for Willis.’

'What?’ Jim simply had not connected the injunction concerning pets with Willis; he did not think of Willis as a pet. ‘Oh, I can't do that, Frank. He'd be terribly unhappy.’

'Then you had better ship him home and let your folks care for him.’

Jim looked balky. ‘I won't do it. I won't!’

'Then what are you going to do?’

'I don't know.’ He thought about it. ‘I won't do anything about it. I'll just keep him under cover. Howe doesn't even know I've got him.’

'Well ... you might get away with it, so long as nobody snitches on you.’

'I don't think any of the fellows would do that.’

They went back to their room and attempted to remove the decorations from their masks. They were not very successful; the paint had bitten into the plastic and they succeeded only in smearing the colours around. Presently a student named Smythe stuck his head in the door. ‘Clean up your masks for you?’

'Huh? It can't be done; the colours have soaked in.’

'You're the umpteenth to find that out. But, from the goodness of my heart and a willingness to be of public service, I will paint your mask over to match the original shade—at a quarter credit per mask.'

'I thought there was a catch in it,' Jim answered.

'Do you want it, or don't you? Hurry up, my public is waiting.'

'Smitty, you would sell tickets to your grandmother's funeral.' Jim produced a quarter credit.

'That's an idea. How much do you think I could charge?'

The other boy produced a can of lacquer and a brush, rapidly painted out Jim's proud design, using a pigment that was a fair match for the olive-drab original shade. 'There. It'll dry in a couple of minutes. How about you, Sutton?'

'Okay, bloodsucker,' Frank agreed.

'Is that any way to talk about your benefactor? I've got a heavy date over on the girls' side and here I am spending my precious Saturday helping you out.' Smythe made equally rapid work of Frank's mask.

'Spending your time raising money for your date, you mean,' amended Jim. 'Smitty, what do you think of these trick rules the new Head has thought up? Should we knuckle under, or make a squawk?'

'Squawk? What for?' Smythe gathered up his tools. 'There's a brand-new business opportunity in each one, if you only had the wit to see it. When in doubt, come see Smythe—special services at all hours.' He paused at the door. 'Don't mention that deal about tickets to my grandmother's funeral; she'd want a cut on it before she kicks off. Granny is a very shrewd gal with a credit.'

'Frank,' remarked Jim when Smythe was gone, 'there is something about that guy I don't like.'

Frank shrugged. 'He fixed us up. Let's check in and get off the punishment list.'

'Right. He reminds me of something Doc used to say. Every law that was ever written opened up a new way to graft.'

'That's not necessarily so. Come on.'

They found a long line waiting outside the Headmaster's office. They were finally ushered in in groups of ten. Howe gave their masks a brief glance each, then started in to lecture. 'I hope that this will be a lesson to you young gentlemen not only in neatness, but in alertness. Had you noticed what was posted on the bulletin boards you would have been, each of you, prepared for inspection. As for the dereliction itself, I want you to understand that this lesson far transcends the matter of the childish and savage designs you have been using on your face coverings, offensive as they were.'

He paused and made sure of their attention. 'There is actually no reason why colonial manners should be rude and vulgar and, as head of this institution, I intend to see to it that whatever defects there may have been in your home backgrounds are repaired. The first purpose, perhaps the only purpose, of education is the building of character—and character can be built only through discipline. I flatter myself that I am exceptionally well prepared to undertake this task; before coming here I had twelve years' experience as a master at the Rocky Mountains Military Academy, an exceptionally fine school, a school that produced *men*'

He paused again, either to catch his breath or let his words soak in. Jim had come in prepared to let a reprimand roll off his back, but the schoolmaster's supercilious attitude and most especially his suggestion that a colonial home was an inferior sort of environment had gradually gotten his dander up. He spoke up. 'Mr Howe?'

'Eh? Yes? What is it?'

'This is not the Rocky Mountains; it's Mars. And this isn't a military academy.'

There was a brief moment when it seemed as if Mr Howe's surprise and anger might lead him to some violence, or even to apoplexy. After a bit he contained himself and said through tight lips. 'What is your name?'

'Marlowe, sir. James Marlowe.'

'It would be a far, far better thing for you, Marlowe, if it were a military academy.' He turned to the others. 'The rest of you may go. Weekend privileges are restored. Marlowe, remain behind.'

When the others had left Howe said, 'Marlowe, there is nothing in this world more offensive than a smart-aleck boy, an ungrateful upstart who doesn't know his place. You are enjoying a fine education through the graciousness of the Company. It ill behooves you to make cheap wisecracks at persons appointed by the Company to supervise your training and welfare. Do you realize that?'

Jim said nothing. Howe said sharply, 'Come! Speak up, lad—admit your fault and make your apology. Be a man!'

Jim still said nothing. Howe drummed on the desk top; finally he said, 'Very well, go to your room and think it over. You have the weekend to think about it.'

When Jim got back to his room Frank looked him over and shook his head admiringly. 'Boy, oh boy!' he said, 'ain't you the reckless one.'

'Well, he needed to be told.'

'He sure did. But what are your plans now? Are you going to cut your throat, or just enter a monastery? Old Howie will be gunning for you every minute from here on out. Matter of fact, it won't be any too safe to be your roommate.'

'Confound it, Frank, if that's the way you feel, you're welcome to find another roommate!’

'Easy, easy! I won't run out on you. I'm with you to the end.’ Smiling, the boy fell dead. ‘I'm glad you told him off. I wouldn't have had the courage to do it myself.’

Jim threw himself across his bunk. ‘I don't think I can stand this place. I'm not used to being pushed around and sneered at, just for nothing. And now I'm going to get it double. What can I do?’

'Derned if I know.’

'This was a nice place under old Stoobie. I thought I was going to like it just fine.’

'Stoobie was all right. But what *can* you do, Jim, except shut up, take it, and hope he will forget it?’

'Look, nobody else likes it either. Maybe if we stood together we could make him slow up.’

'Not likely. You were the only one who had the guts to speak up. Shucks, *I* didn't even back you up—and I agree with you a hundred per cent.’

'Well, suppose we all sent letters to our parents?’

Frank shook his head. ‘You couldn't get them all to—and some pipsqueak would snitch. Then you would be in the soup, for inciting to riot or some such nonsense. Anyhow,’ he went on, ‘just what could you say in a letter that you could put your finger on and prove that Mr Howe was doing something he had no right to? I know what my old man would say.’

'What would he say?’

'Many's the time he's told me stories about the school he went to back Earthside and what a rough place it was. I think he's a little proud of it. If I tell him that Howie won't let us keep cookies in our room, he'll just laugh at me. He'd say —’

'Dawggone it, Frank, it's not the rule about food in our rooms; it's the whole picture.’

'Sure, sure. *I* know it. But try to tell my old man. All we can tell is little things like that It'll have to get a lot worse before you could get our parents to do anything.’

Frank's views were confirmed as the day wore on. As the news spread student after student dropped in on them, some to pump Jim's hand for having bearded the Headmaster, some merely curious to see the odd character who had had the temerity to buck vested authority. But one two-pronged fact became apparent: no one liked the new school head and all resented some or all of his new ‘disciplinary’ measures, but no one was anxious to join up in what was assumed to be a foregone lost cause.

On Sunday Frank went out into Syrtis Minor—the terrestrial settlement, not the nearby Martian city. Jim, under what amounted to room arrest, stayed in their room, pretended to study and talked to Willis. Frank came back at supper time and announced, ‘I brought you a present.’ He chucked Jim a tiny package.

'You're a pal! What is it?’

'Open it and see.’

It was a new tango recording, made in Rio and direct from Earth via the *Albert Einstein,* titled *¿Quién Es La Señorita?* Jim was inordinately fond of Latin music; Frank had remembered it.

'Oh, boy!’ Jim went to the study desk, threaded the tape into the speaker, and got ready to enjoy it. Frank stopped him.

'There's the supper bell. Better wait.’

Reluctantly Jim complied, but he came back and played it several times during the evening until Frank insisted that they study. He played it once more just before lights-out.

The dormitory corridor had been dark and quiet for perhaps fifteen minutes when *¿Quién Es La Señorita?* started up again. Frank sat up with a start. ‘What the dickens? Jim—don't play that now!’

'I'm not,’ protested Jim. ‘It must be Willis. It has to be Willis.’

'Well, shut him up. Choke him. Put a pillow over his head.’

Jim switched on the light. ‘Willis boy—hey, Willis! Shut up that racket!’ Willis probably did not even hear him. He was standing in the middle of the floor, beating time with his eye stalks, and barrelling on down the groove. His rendition was excellent, complete with marimbas and vocal chorus.

Jim picked him up. ‘Willis! Shut up, fellow.’

Willis kept on beating it out.

The door burst open and framed Headmaster Howe. ‘Just as I thought,’ he said triumphantly, ‘no consideration for other people's rights and comforts. Shut off that speaker. And consider yourself restricted to your room for the next month.’

Willis kept on playing; Jim tried to hide him with his body. ‘Didn't you hear my order?’ demanded Howe. ‘I said to shut off that music.’ He strode over to the study desk and twisted the speaker switch. Since it was already shut off full, all he accomplished was breaking a finger nail. He suppressed an unschoolmasterly expression and stuck the finger in his mouth. Willis worked into the third chorus.

Howe turned around. ‘How do you have this thing wired?’ he snapped. Getting no answer, he stepped up to Jim and said, ‘What are you hiding?’ He shoved Jim aside, looked at Willis with evident disbelief and distaste. ‘What is *that?'*

'Uh, that's Willis,’ Jim answered miserably, raising his voice to be heard.

Howe was not entirely stupid; it gradually penetrated that the music he had been hearing came out of the curious-looking, fuzzy sphere in front of him.

'And what is Willis, may I ask?'

'Well, he's a ... a bouncer. A sort of a Martian.' Willis picked this moment to finish the selection, breathe a liquid contralto *buenas noches,* and shut up—for the moment.

'A bouncer? I've never heard of one.'

'Well, not very many have seen one, even among the colonists. They're scarce.'

'Not scarce enough. Sort of a Martian parrot, I assume.'

'Oh, no!'

'What do you mean, Oh, no?'

'He's not a bit like a parrot. He talks, he thinks—he's my friend!'

Howe was over his surprise and recalling the purpose of his visit. 'All that is beside the point. You saw my order about pets?'

'Yes, but Willis is not a pet.'

'What is he, then?'

'Well, he *can't* be a pet. Pets are animals; they're property. Willis isn't property; he's—well, he's just Willis.'

Willis picked this time to continue with the next thing he had heard after the last playing of the tango. 'Boy, when I hear that music,' he remarked in Jim's voice, 'I don't even remember that old no-good Howe.'

'I can't forget him,' Willis went on in Frank's voice. 'I wish I had had the nerve to tell him off the same time you did, Jim. You know what? I think Howe is nuts, I mean really nuts. I'll bet he was a coward when he was a kid and it's twisted him inside.'

Howe turned white. Frank's armchair psychoanalyzing had hit dead centre. He raised his hand as if to strike, then dropped it again, uncertain what to strike. Willis hastily withdrew all protuberances and became a smooth ball.

'I say it's a pet,' he said savagely, when he regained his voice. He scooped Willis up and headed for the door.

Jim stared after him. 'Say! Mr Howe—you can't take Willis!'

The Headmaster turned. 'Oh, I can't, can't I? You get back to bed. See me in my office in the morning.'

'If you hurt Willis, I'll ... I'll —'

'You'll what?' he paused. 'Your precious pet won't be hurt. Now you get back in that bed before I thrash you.' He turned again and left without stopping to see whether or not his order had been carried out.

Jim stood staring at the closed door, tears streaming down his cheeks, sobs of rage and frustration shaking him. Frank came over and put a hand on him. 'Jim. Jim, don't take on so. You heard him promise not to hurt Willis. Get back into bed and settle it in the morning. At the very worst you'll have to send Willis home.'

Jim shook off the hand.

Frank went on, ‘Don't let him get your goat, fellow; if he gets you angry, you'll do something silly and then he's got you.’

'I'm already angry.’

'I know you are and I don't blame you. But you've got to get over it and use your head. He was laying for you—you saw that. No matter what he does or says you've got to keep cool and outsmart him—or he gets you in wrong.’

'I suppose you're right.’

'I know I'm right. That's what Doc would say. Now come to bed.’

Neither one of them got much sleep that night. Toward morning Jim had a nightmare that Howe was a withdrawn Martian whom he was trying to unroll—against his better judgement.

There was a brand-new notice on the bulletin board at breakfast time. It read:

IMPORTANT NOTICE

Hereafter all personal weapons will be kept in the armoury at all times. The office of student armourer is abolished; weapons will be issued by the Headmaster and only when the student concerned is leaving the limits of the school and the adjoining settlement. The practice of wearing sidearms in areas where there is no actual danger from Martian *fauna* will cease.

(signed) M. Howe, Headmaster

Jim and Frank read it together. ‘I don't get it,’ said Jim. ‘Why should he want to take over such a headache? Especially since most of us are licensed?’ All the students usually kept their guns in the armoury, but the student armourer had kept check only on the weapons of those students still trying to win their licences.

Frank studied it. ‘Do you know what I think?’

'No what?’

'I think he's afraid of you personally.’

'Me? Why?’

'Because of what happened last night. There was murder in your eye and he saw it. I think he wants to pull your teeth. I don't think he gives a hoot about the rest of us hanging on to our guns.’

'You really think so? Hmm ... maybe it's a good thing our guns don't happen to be in the armoury at the moment.’

'The question is: what are you going to do about it?’

Jim thought about it. ‘I'm not going to give up my gun. Dad wouldn't want me to. I'm sure of that. Anyhow, I'm licensed and I don't have to. I'm a qualified marksman, I've passed the psycho tests, and I've taken the oath; I'm as much entitled to wear a gun as he is.’

'Okay, I'm with you on it. But we had better think up a wrinkle before you have to go see him this morning.’

The wrinkle showed up at breakfast—the student named Smythe. Frank spoke to Jim about it in a low voice; together they accosted the student after breakfast and brought him to their room. ‘Look, Smitty,’ began Jim, ‘you're a man with lots of angles, aren't you?’

'Mmm ... could be. What's up?’

'You saw that notice this morning?’

'Sure. Who didn't? Everybody is grousing about it.’

'Are you going to turn in your gun?’

'My gun has been in the armoury all along. What do I need a gun for around here? I've got a brain.’

'In that case you won't be called in about your gun. Now just supposing that you were handed two packages to take care of. You won't open them and you won't know what's in them. Do you think you could find a safe, a *really* safe place to keep them and still be able to give them back on short notice?’

'I don't suppose you want me to tell anybody about these, uh, packages?’

'Nope. Nobody.’

'Hmm ... this sort of service comes high.’

'How high?’

'Well, now, I couldn't afford to do it for less than two credits a week.’

'That's too much,’ Frank put in sharply.

'Well—you're friends of mine. I'll make you a flat rate of eight credits for the rest of the year.’

'Too much.’

'Six credits then, and I won't go lower. You've got to pay for the risk.’

'It's a deal,’ Jim said before Frank could bargain further.

Smythe left with a bundle before Jim reported to the Headmaster's office.

5

Little Pitchers Have Big Ears

Headmaster Howe kept Jim waiting thirty minutes before admitting him. When he was finally let in, Jim saw that Howe seemed to be quite pleased with himself. He glanced up. ‘Yes? You asked to see me?’

'You told me to see you, sir.’

'I did? Let me see now, what is your name?’

He darn well knows my name, Jim said savagely to himself; *he's trying to get my goat.* He recalled Frank's solemn warning not to lose his temper. ‘James Marlowe, sir,’ he answered evenly.

'Oh, yes. Now, Marlowe, you wanted to see me about something?'

'You told me to see you. About Willis.'

'Willis? Oh yes, the Martian roundhead.' Howe smiled with his lips. 'An interesting scientific specimen.'

Howe added nothing more. The silence kept up so long that Jim began to realize that the Headmaster intended to force him to make any moves. Jim had already resigned himself to the idea that it would be impossible to keep Willis at the school any longer. He said, 'I've come to get him. I'm going to take him out in town and arrange to send him home.'

Howe smiled more broadly. 'Oh, you are? And pray tell me how you are going to do that when you are restricted to the school for the next thirty days?'

Frank was still warning him; Jim could almost hear him. He answered, 'All right, sir, I'll get somebody to do it for me—today. Now, please, can I have Willis?'

Howe leaned back and crossed his fingers over his stomach. 'You bring up a most interesting point, Marlowe. You said last night that this creature is not a pet.'

Jim was puzzled. 'Yes?'

'You were quite emphatic about it. You said that he wasn't your property, but your friend. That's right, isn't it?'

Jim hesitated. He could feel that a trap was being built for him, but he was not sure what sort. 'What if I did?'

'Did you say that, or didn't you? Answer me!'

'Well—yes.'

Howe leaned forward. 'In that case, what are you doing in here demanding that I turn this creature over to you? You have no claim on him.'

'But—but —' Jim stopped, at a loss for words. He had been tricked with words, slippery words; he did not know how to answer them. 'You can't do that!' he blurted out. 'You don't own him, either! You have no right to keep him locked up.'

Howe carefully fitted his finger tips together. 'That is a matter still to be determined. Although you have waived all claim to him, it may be that the creature is property nevertheless—in which case he was found on the school grounds and I may take title to him on behalf of the school, as a scientific specimen.'

'But—You can't do that; that's not fair! If he belongs to anybody, he belongs to me! You've got no right to —'

'Silence!' Jim shut up; Howe went on more quietly, 'Don't tell me what I can or cannot do. You forget that I am in *loco parentis* to you. Any rights that you may have are vested in me, just as if I were your own father. As to the disposition of this creature, I am looking into it;

I expect to see the Agent General this afternoon. In due course you will be informed of the outcome.’

The Latin phrase confused Jim, as it was intended to; but he did catch one point in Howe's statement and snatched at it ‘I'm going to tell my father about this. You can't get away with it.’

'Threats, eh?’ Howe smiled sourly. ‘Don't bother to ask for the key to the communications booth; I don't propose to have students phoning their parents every time I tell them to wipe their noses. Send your father a letter—but let me hear it before you send it.’ He stood up. ‘That is all. You may go.’

Frank was waiting. ‘I don't see any blood,’ he announced, looking Jim over. ‘How did it go?’

'Oh, that so-and-so!’

'Bad, eh?’

'Frank, he won't let me have Willis.’

'He's going to make you send him home? But you expected that.’

'No, not that. He won't let me have him at all. He used a lot of doubletalk but all it meant was that he had him and meant to keep him.’ Jim seemed about to break down and blubber. ‘Poor little Willis—you know how timid he is. Frank, what'll I do?’

'I don't get it,’ Frank answered slowly. ‘He can't keep Willis, not for keeps. Willis belongs to you.’

'I told you he used a lot of doubletalk—but that's what he means to do just the same. How am I going to get him back? Frank, I've just got to get him back.’

Frank did not answer; Jim looked around disconsolately and noticed the room for the first time. ‘What happened here?’ he asked. ‘The place looks like you had tried to wreck it.’

'Oh, that. I started to tell you. While you were gone, a couple of Howie's stooges searched the place.’

'Huh?’

'Trying to find our guns. I just played dumb.’

'They did, did they?’ Jim appeared to make up his mind. ‘I've got to find Smythe.’ He headed for the door.

'Hey wait—what d'you want to find Smitty for?’

Jim looked back and his face was very old. ‘I'm going to get my gun and go back there and get Willis.’

'Jim! You're nuts!’

Jim did not answer but continued toward the door.

Frank stuck out a foot, tripped him and landed on his back as he went down. He grabbed Jim's right arm and twisted it behind his back. ‘Now you just rest there,’ he told Jim, ‘until you quiet down.’

'Let me up.’

'You got some sense in your head?’

No answer. ‘Okay,’ Frank went on, ‘I can sit here just as long as you want to. Let me know when you've quieted down.’ Jim started to struggle; Frank twisted his arm until he yelped and relaxed.

'That's better,’ said Frank. ‘Now listen to me: you're a nice guy, Jim, but you go off half cocked. Suppose you do get your gun and suppose you manage to scare old Howie into coughing up Willis. How long are you going to keep him? You know how long? Just long enough for him to call in some Company police. Then they lock you up and take Willis away from you again. And you'll never see Willis again, not to mention the trouble and grief you'll cause your folks.’

There followed a considerable silence. Finally Jim said, ‘Okay, let me up.’

'You've given up the idea of waving your gun around?’

'Sure.’

'On your honor? Licensed gun-wearer's oath and all that sort of thing?’

'Yes, I promise.’

Frank let him up and brushed him off. Jim rubbed his arm and said, ‘You needn't have twisted it so hard.’

'You're a fine one to complain; you ought to thank me. Now grab your notebook; we're going to be late to chemistry lab.’

'I'm not going.’

'Don't be silly, Jim. No use to pile up a bunch of cuts and maybe flunk just because you're sore at the Head.’

'That's not the idea. I'm quitting, Frank. I won't stay in this school.’

'What? Don't be hasty, Jim. I know how you feel, but it's here or nowhere. Your folks can't afford to send you back to Earth for school.’

'Then it's nowhere. I won't stay here. I'm going to hang around just long enough to find some way to get my hands on Willis, then I'm going home.’

'Well ...’ Frank stopped to scratch his head. ‘It's your problem. But see here—you might as well come on to chem lab. It won't hurt you any and you don't intend to leave this minute anyhow.’

'No.’

Frank looked worried. ‘Will you promise me to stay right here and not do anything rash till I get back?’

'Why should you worry?’

'Promise me, Jim, or I cut lab, too.’

'Oh, all right, all right! Go ahead.’

'Right!’ Frank dashed away.

When Frank got back he found Jim sprawled on his bunk. ‘Asleep?’

'No.’

'Figured out what you are going to do?’

'No.’

'Anything you want?'

'No.'

'Your conversation is brilliant,' Frank commented and sat down at the study desk.

'Sorry.' Nothing was heard from Howe the rest of that day. Frank managed to persuade Jim to attend classes the next day by pointing out that he did not want to invite attention to himself while he was waiting for an opportunity to grab Willis.

Tuesday also passed without word from Howe. Tuesday night, perhaps two hours after lights-out, Frank suddenly woke up. Someone was stirring in the room. 'Jim!' he called out softly.

Dead silence. Keeping quiet himself Frank reached out and switched on the light. Jim was standing near the door. 'Jim,' complained Frank, 'why didn't you answer me? You trying to scare me to death?'

'Sorry.'

'What's up? What are you doing out of bed?'

'Never mind. You go on back to sleep.'

Frank climbed out of bed. 'Oh, no! Not while you've got that wild look in your eye. Now tell papa.'

Jim waved him away. 'I don't want to mix you up in this. Go on back to bed.'

'Think you're big enough to make me? Now cut out the foolishness and give. What are your plans?'

Reluctantly Jim explained. It seemed likely to him that Headmaster Howe had Willis locked up somewhere in his office. Jim planned to break in and attempt a rescue. 'Now you go back to bed,' he finished. 'If they question you, you don't know anything; you slept all night.'

'Let you tackle it alone? Not likely! Anyhow you need somebody to jigger for you.' Frank started fumbling around in their locker.

'I don't want any help. What are you looking for?'

'Laboratory gloves,' answered Frank. 'You're going to get help whether you want it or not, you thumb-fingered idiot. I don't want you caught.'

'What do you want gloves for?'

'Ever hear of fingerprints?'

'Sure, but he'll know who did it—and I don't care; I'll be gone.'

'Sure, he'll know, but he may not be able to prove it. Here, put these on.' Jim accepted the gloves and with them he tacitly accepted Frank's help in the adventure.

Burglary is not common on Mars and locks are unusual items. As for night watchmen, manpower is not transported through millions of miles of space simply to be used to watch the silent corridors of a boys' school. The principal hazard that Jim and Frank faced in getting to the school's offices was the chance of running into some restless student going to the washroom after hours.

They moved as silently as possibly and scouted each stretch of corridor before entering it. In a few minutes they were at the outer door of the offices without—they hoped—having been seen. Jim tried the door; it was locked. 'Why do they bother to lock this?' he whispered.

'On account of guys like you and me,' Frank told him. 'Go back to the corner and keep your eye peeled.' He attacked the latch with his knife.

'Okay.' Jim went to the passageway intersection and kept lookout. Five minutes later Frank hissed at him; he went back. 'What's the matter?'

'Nothing's the matter. Come on.' Frank had the outer door open.

They tiptoed through the outer office, past recording desks and high stacked spool files to an inner door marked: Marquis Howe—HEADMASTER—*Private.*

The lettering on the door was new—and so was the lock. The lock was no mere gesture, capable of being picked or sprung with a knife; it was a combination type, of titanium steel, and would have looked more at home on a safe.

'Think you can open it?' Jim asked anxiously.

Frank whistled softly. 'Don't be silly. The party is over, Jim. Let's see if we can get back to bed without getting caught.'

'Maybe we can get the door off its hinges.'

'It swings the wrong way. I'd rather try to cut a hole through the partition.' He moved aside, knelt down, and tried the point of his knife on the wall.

Jim looked things over. There was an airconditioning duct running from the corridor through the room they were in and to the wall of the headmaster's office. The hole for the duct was almost as wide as his shoulders; if he could unscrew the holding flanges and let the duct sag out of the way—

No, he could not even get up to it; there was nothing to use as a ladder. The file cabinets were fastened to the floor, he found.

There was a small grille set in the bottom of the door, to permit the exhaust air to escape from the inner office. It could not be removed, nor would the hole left be large enough to be of use, but he lay down and tried to peer through it. He could see nothing; the room beyond was dark.

He cupped his hands over it and called out, 'Willis! Oh, Willis! Willis boy —'

Frank came over and said urgently, 'Cut that out. Are you trying to get us caught?’

'Sh!’ Jim put his ear to the grille.

They both heard a muffled reply: ‘Jim boy! Jim!’

Jim replied, ‘Willis! Come here, Willis!’ and listened. ‘He's in there,’ he said to Frank. ‘Shut up in something.’

'Obviously,’ agreed Frank. ‘Now will you quiet down before somebody comes?’

'We've got to get him out. How are you making out with the wall?’

'No good. There's heavy wire mesh set in the plastic.’

'Well, we've got to get him out. What do we do?’

'We don't do a darn thing,’ asserted Frank. ‘We're stymied. We go back to bed.’

'You can go back to bed if you want to. I'm going to stay here and get him out.’

'The trouble with you, Jim, is that you don't know when you are licked. Come on!’

'No. Sh!’ He added, ‘Hear anything?’

Frank listened. ‘I hear something. What is it?’

It was a scraping noise from inside the inner office. ‘It's Willis, trying to get out,’ Jim stated.

'Well, he can't. Let's go.’

'No.’ Jim continued to listen at the grille. Frank waited impatiently, his spirit of adventure by now more than satisfied. He was stretched between a reluctance to run out on Jim and an anxiety to get back to his room before they were caught. The scraping noise continued.

After a while it stopped. There was a soft *plop!* as if something soft but moderately heavy had fallen a foot or so, then there was a slight scurrying sound, almost beyond hearing.

'Jim? Jim boy?’

'Willis!’ yelped Jim. The bouncer's voice had come to him from just beyond the grille.

'Jim boy take Willis home.’

'Yes, yes! Stay there, Willis; Jim has to find a way to get Willis out.’

'Willis get out.’ The bouncer stated it positively.

'Frank,’ Jim said urgently ‘if we could just find something to use as a crowbar, I could bust that grille out of its frame. I think maybe Willis could squeeze through.’

'We've got nothing like that. We've got nothing but our knives.’

'Think, fellow, think! Is there anything in our room, anything at all?’

'Not that I know of.’ The scraping noise had resumed; Frank added, ‘What's Willis up to?’

'I guess he's trying to get the door open. We've got to find some way to open it for him. Look, I'll boost you up on my shoulders and you try to take the collar off that air duct.’

Frank looked the situation over. ‘No good. Even if we get the duct down, there'll be a grille set in the other side of the wall.’

'How do you know?’

'There always is.’

Jim shut up. Frank was certainly correct and he knew it. The scraping sound had continued, still continued. Frank dropped on one knee and put his head close to the grille. He listened.

'Take it easy,’ he advised Jim after a moment. ‘I think maybe Willis is making out all right by himself.’

'What do you mean?’

'That's a cutting sound if I ever heard one.’

'Huh? Willis can't cut through a door. Many's the time I've locked him up, back home.’

'Maybe. Maybe not. Maybe he just didn't want to get out bad enough.’ The scraping sound was more distinct now.

A few minutes later a fine circular line began to show around the grille, then the portion of the door enclosed by the line fell toward them. For an instant Willis could be seen through the hole. Sticking out from his tubby body was a clawed pseudolimb eight inches long and an inch thick. ‘What's that?’ demanded Frank.

'Darned if I know. He never did anything like *that* before.’

The strange limb withdrew, disappeared inside his body, and the fur closed over the spot, leaving no sign that it had ever existed. Willis proceeded to change his shape, until he was more nearly watermelon-shaped than globular. He oozed through the hole. ‘Willis out,’ he announced proudly.

Jim snatched him up and cradled him in his arms. ‘Willis! Willis, old fellow.’

The bouncer cuddled in his arms. ‘Jim boy lost,’ he said accusingly. ‘Jim went away.’

'Yes, but not ever again, Willis stay with Jim.’

'Willis stay. Good.’

Jim rubbed his cheek against the little fellow's fur. Frank cleared his throat. ‘It might be a good idea to pop back into our hole.’

'Sure.’ The trip back to their room was made quickly and, so far as they could detect, without arousing attention. Jim dumped Willis on his bed and looked around. ‘I wonder just what I should try to take? I'll have to get hold of Smitty and get my gun.’

'Hold on,’ said Frank. ‘Don't get ahead of yourself. You don't really have to go, you know.’

'Huh?’

'I didn't hurt the outer lock; we never touched Howe's private lock. All there is to show for Willis's escape is a hole that we obviously couldn't get through—and another one like it, probably, in Howe's desk. He can't prove a thing. You can arrange to ship Willis back and we can just sit tight.’

Jim shook his head. ‘I'm leaving. Willis is just part of it. I wouldn't stay in a school run by Howe if you paid me to.’

'Why be hasty, Jim?’

'I'm not being hasty. I don't blame you for staying; in another year you can take the rocket pilot candidate exams and get out. But if you should happen to bust the exams, I'll bet you don't stick here until graduation.’

'No, I probably won't. Have you figured out how you are going to get away without Howe stopping you? You don't dare leave until daylight; it is too cold until then.’

'I'll wait until daylight and just walk out.’

'The idea,’ Frank said dryly, ‘is to get away. What you want to do is to pull a sneak. I think we had better find a way to keep you under cover until that can be arranged. The chances ought to be good after noon.’

Jim was about to ask Frank why he thought the chances would be good after noon when Willis repeated the last three words. First he repeated them in Frank's voice, then he said them again in rich, fruity accents of an older man. ‘Good afternoon!’ he intoned.

'Shut up, Willis.’

Willis said it again, ‘Good afternoon, Mark. Sit down, my boy. Always happy to see you.’

'I've heard that voice,’ said Frank, puzzlement in his tones.

'Thank you, General. How do you do, sir?’ Willis went on, now in the precise, rather precious tones of Headmaster Howe.

'I know,’ said Frank. ‘I've heard it on broadcast; it's Beecher, the Resident Agent General.’

'Sh —’ said Jim, ‘I want to listen.’ Willis continued, again in the fruity voice:

'Not bad, not too bad for an old man.’

'Nonsense, General, you're not old.’—Howe's voice again.

'Kind of you to say so, my boy,’ Willis went on. ‘What have you in the bag? Contraband?’

Willis repeated Howe's sycophantic laugh. ‘Hardly. Just a scientific specimen—a rather interesting curiosity I confiscated from one of the students.’

There was a short pause, then the fruity voice said, ‘Bless my boots! Mark, wherever did you find this creature?’

'I just told you, sir,’ came Howe's voice. ‘I was forced to take it away from one of the students.’

'Yes, yes—but do you have any idea of *what* you've got?’

'Certainly, sir; I looked it up. *Areocephalopsittacus Bron* —'

'Spare me the learned words, Mark. It's a roundhead, a Martian roundhead. That's not the point. You say you got this from a student; do you think you could buy it from him?' the fruity voice continued eagerly.

Howe's voice answered slowly, 'I hardly think so, sir. I am fairly sure he wouldn't want to sell.' He hesitated, then went on, 'Is it important?'

'Important? That depends on what you mean by important ,' answered the voice of the Resident Agent General. 'Would you say that sixty thousand credits was important? Or even seventy thousand? For that is what I am sure the London zoo will pay for him, over and above the cost of getting him there.'

'Really?'

'Really. I have a standing order from a broker in London at fifty thousand credits; I've never been able to get him one. I'm sure the price can be boosted.'

'Indeed?' Howe agreed cautiously. 'That would be a fine thing for the Company, wouldn't it?'

There was a brief silence, then a hearty laugh. 'Mark, my boy, you slay me. Now see here—you are hired to run the school, aren't you?'

'Yes.'

'And I'm hired to look out for the interests of the Company, right? We put in a good day's work and earn our pay; that leaves eighteen hours a day that belongs to each of us, personally. Are you hired to find strange specimens?'

'No.'

'Neither am I. Do you understand me?'

'I think I do.'

'I'm sure you do. After all, I know your uncle quite well; I'm sure he wouldn't have sent his nephew out here without explaining the facts of life to him. He understands them very well himself, I can assure you. The fact is, my boy, that there are unlimited opportunities in a place such as this for a smart man, if he will just keep his eyes and ears open. Not graft, you understand.' Willis paused.

Jim started to say something; Frank said, 'Shut up! We don't want to miss any of this.'

The Resident's voice continued, 'Not graft at all. Legitimate business opportunities that are the natural concomitants of our office. Now about this student: what will it take to convince him he should sell? I wouldn't offer him too much or he will become suspicious. We mustn't have that.'

Howe was slow in replying. 'I am almost certain he won't sell, General, but there is another way, possibly.'

'Yes? I don't understand you.'

The boys heard Howe explain his particular theory of ownership with respect to Willis. They could not see Beecher dig Howe in the ribs but they could hear his choked laughter. 'Oh, that is rich! Mark, you slay me, you really do. Your talents are wasted as a school teacher; you should be a resident.'

'Well,' Howe's voice replied, 'I hardly expect to teach school all my life.'

'You won't, you won't. We'll find an agency for you. After all, the school will be smaller and of less importance after the non-migration policy goes into effect.'

('What's he talking about?' whispered Frank—'Quiet!' Jim answered.)

'Is there any news about that?' Howe wanted to know.

'I expect to hear from your uncle momentarily. You might stop in again this evening, my boy; I may have news.'

The remainder of the conversation was of no special interest, but Willis ploughed on with it nevertheless. The boys listened until Howe had made his farewell, after which Willis shut up.

Jim was frothing. 'Put Willis in a zoo! Why, the very idea! I hope he does catch me leaving; I'd welcome an excuse to take a shot at him!'

'Easy, fellow! I wonder,' Frank went on, 'what that business was about a non-migration policy?'

'I thought he said immigration.'

'I'm sure it was non-migration. What time is it?'

'About three.'

'We've got three hours, more or less. Jim, let's see what else we can coax out of Willis. I've got a hunch it may be important.'

'Okay.' Jim picked the fuzz ball up and said, 'Willis old fellow, what else do you know? Tell Jim everything you've heard—everything.'

Willis was happy to oblige. He reeled off bits of dialogue for the next hour, most of it concerned with unimportant routine of the school. At last the boys were rewarded by hearing again the unctuous tones of Gaines Beecher:

'Mark, my boy —'

'Oh—come in, General. Sit down. Happy to see you.'

'I just stopped by to say that I have gotten a dispatch from your dear uncle. He added a postscript sending his regards to you.'

'That's nice. Thank you, sir.'

'Not at all. Close that door, will you?' Willis put in sound effects of a door being closed. 'Now we can talk. The dispatch, of course, concerned the non-migration policy.'

'Yes?’

'I am happy to say that the board came round to your uncle's point of view. South Colony will stay where it is; this next ship load and the one following it will go to North Colony, where the new immigrants will have nearly twelve months of summer in which to prepare for the northern winter. What are you chuckling about?’

'Nothing important, sir. One of the students, a great lout named Kelly, was telling me today what his father was going to do to me when he came through here at migration. I am looking forward to seeing his face when he learns that his father will not show up.’

'You are not to tell him anything of the sort,’ the Resident's voice said sharply.

'Eh?’

'I want all this handled with the least possible friction. No one must know until the last possible moment. There are hotheads among the colonials who will oppose this policy, even though it has already been proved that, with reasonable precautions, the dangers of a Martian winter are negligible. My plan is to postpone migration two weeks on some excuse, then postpone it again. By the time I announce the change it will be too late to do anything but comply.’

'Ingenious!’

'Thank you. It's really the only way to handle colonials, my boy. You haven't been here long enough to know them the way I do. They are a neurotic lot, most of them failures back on Earth, and they will drive you wild with their demands if you are not firm with them. They don't seem to understand that all that they are and all that they have they owe directly to the Company. Take this new policy: if you let the colonists have their own way, they would continue to follow the sun, like so many rich playboys—and at the Company's expense.’

Willis shifted to Howe's voice. ‘I quite agree. If their children are any guide, they are a rebellious and unruly lot.’

'Really shiftless,’ agreed the other voice. ‘You must be firm with them. I must be going. Oh, about that, uh, specimen: you have it in a safe place?’

'Yes indeed, sir. Locked in this cabinet.’

'Hmm ... it might be better to bring it to my quarters.’

'Hardly necessary,’ Howe's voice denied. ‘Notice the lock on that door? It will be safe.’

There were goodbyes said and Willis shut up.

Frank muttered savagely to himself.

6

Flight

Jim shook him by the shoulder. ‘Snap out of it and help me. I'm going to be late.’

Frank said softly, ‘I wonder how he would like to tackle a winter at Charax? Maybe *he'd* like to stay inside for eleven or twelve months at a time—or go outside when it's a hundred below.’

'Sure, sure,’ agreed Jim. ‘But give me a hand.’

Frank turned suddenly and took down Jim's outdoors suit. He flung it at him, then took down his own and started climbing rapidly into it. Jim stared. ‘Hey—what are you doing?’

'I'm going with you.’

'Huh?’

'Think I'm going to sit here and do lessons when somebody is planning to trick my mother into being forced to last out a high-latitude winter? My own mother? Mom's got a bad heart; it would kill her.’ He turned and started digging things out of the locker. ‘Let's get moving.’

Jim hesitated, then said, ‘Sure, Frank, but how about your plans? If you quit school now you'll never be a rocket pilot.’

'So what? This is more important.’

'I can warn everybody of what's up just as well as two of us can.’

'The matter is settled, I tell you.’

'Okay. Just wanted to be sure you knew your own mind. Let's go.’ Jim climbed into his own suit, zipped it up, tightened straps, and then started picking over his belongings. He was forced to throw away a large part, as he wanted Willis to travel in his bag.

He picked up Willis. ‘Look, fellow,’ he said, ‘we're going home. I want you to ride inside here, where it's nice and warm.’

'Willis go for ride?’

'Willis go for ride. But I want you to stay inside and not say one word until I take you out. Understand?’

'Willis not talk?’

'Willis not talk at all, not till Jim takes him out.’

'Okay, Jim boy.’ Willis thought about it and added, ‘Willis play music?’

'No! Not a sound, not a word. No music. Willis close up and stay closed up.’

'Okay, Jim boy,’ Willis answered in aggrieved tones and promptly made a smooth ball of himself. Jim dropped him into the bag and zipped it.

'Come on,’ said Frank. ‘Let's find Smitty, get our guns, and get going.’

'The Sun won't be up for nearly an hour.’

'We'll have to risk it. Say, how much money have you got?’

'Not much. Why?’

'Our fare home, dope.'

'Oh —' Jim had been so preoccupied with other matters that he had not thought about the price of a ticket. The trip to the school had been free, of course, but they had no travel authorization for this trip; cash would be required.

They pooled resources—not enough for one ticket, much less than enough for two. 'What'll we do?' asked Jim.

'We'll get it out of Smitty.'

'How?'

'We'll get it. Let's go.'

'Don't forget your ice skates.'

Smythe roomed alone, a tribute to his winning personality. When they shook him, he wakened quickly and said, 'Very well, officer, I'll go quietly.'

'Smitty,' said Jim, 'we want our—we want those packages.'

'I'm closed for the night. Come back in the morning.'

'We got to have them now.'

Smythe got out of bed. 'There's an extra charge for night service, of course.' He stood on his bunk, removed the grille from his air intake, reached far inside, and hauled out the wrapped guns.

Jim and Frank tore off the wrappings and belted their guns on. Smythe watched them with raised eyebrows. Frank added, 'we've got to have some money.' He named the amount.

'Why come to me?'

'Because I know you've got it.'

'So? And what do I get in return? A sweet smile?'

'No.' Frank got out his slide rule, a beautiful circular instrument with twenty-one scales. 'How much for that?'

'Mmm—six credits.'

'Don't be silly! It cost my father twenty-five.'

'Eight, then. I won't be able to get more than ten for it.'

'Take it as security for fifteen.'

'Ten, cash. I don't run a pawn shop.' Jim's slide rule went for a smaller amount, then both their watches, followed by lesser items at lower prices.

At last they had nothing left to sell but their skates, and both boys refused the suggestion although they were still twelve credits short of what they needed. 'You've just got to trust us for the rest, Smitty,' Frank told him.

Smythe studied the ceiling. 'Well, seeing what good customers you've been, I might add that I also collect autographs.'

'Huh?'

'I'll have both of yours, on one IOU, at six per cent—per month.'

'Take it,' said Jim.

Finished, they started to leave. Smythe said, ‘My crystal ball tells me that you gentlemen are about to fade away. How?’

'Just walk out,’ Jim told him.

'Hmm ... it does not seem to have come to your attention that the front door is now locked at nights. Our friend and mentor, Mr Howe, unlocks it himself when he arrives in the morning.’

'You're kidding!’

'Go see for yourself.’

Frank tugged Jim's arm. ‘Come on. We'll bust it down if we have to.’

'Why do things the hard way?’ inquired Smythe. ‘Go out through the kitchen.’

'You mean the back door's not locked?’ demanded Frank.

'Oh, it's locked all right.’

'Then quit making silly suggestions.’

'I should be offended at that,’ Smythe answered, ‘but I consider the source. While the back door is locked, it did not occur to brother Howe to install a lock on the garbage dump.’

'The *garbage* dump,’ exploded Jim.

'Take it or leave it. It's your only way to sneak out.’

'We'll take it,’ decided Frank. ‘Come on, Jim.’

'Hold on,’ put in Smythe. ‘One of you can operate the dump for the other, but who's going to do it for the second man? He's stuck.’

'Oh, I see.’ Frank looked at him. ‘You are.’

'And what am I offered?’

'Confound you, Smitty, how would you like a lump on the head? You've already taken us for everything but our eye teeth.’

Smythe shrugged. ‘Did I refuse? After all, I told you about it. Very well, I'll chalk it up to overhead—good will, full measure, advertising. Besides, I don't like to see my clients fall afoul the law.’

They went quickly to the school's large kitchen. Smythe's cautious progress through the corridors showed long familiarity with casual disregard of rules. Once there, Smythe said, ‘All right, who goes first?’

Jim eyed the dump with distaste. It was a metal cylinder, barrel-size, laid on its side in the wall. It could be rotated on its main axis by means of a lever set in the wall; a large opening in it permitted refuse to be placed in it from inside the building, then removed from the outside, without disturbing the pressurization of the building—the simplest sort of a pressure lock. The interior showed ample signs of the use for which it was intended. ‘I'll go first,’ he volunteered and settled his mask over his face.

'Wait a second,’ said Frank. He had been eyeing the stocks of canned foods racked around the room. Now he dumped spare clothing from his bag and started replacing it with cans.

'Hurry up,' Smythe insisted. 'I want to get back to bed before the morning bell rings.'

'Yes, why bother?' protested Jim. 'We'll be home in a few hours.'

'Just a hunch. Okay, I'm ready.'

Jim climbed into the dump, drawing up his knees and clutching his bag to his chest. The cylinder rotated around him; he felt a sudden drop in pressure and a bitter cold draft. Then he was picking himself up from the pavement of the alley behind the school.

The cylinder creaked back to the loading position; in a moment Frank landed beside him. Jim helped him up. 'Boy, are you a mess!' he said, brushing at a bit of mashed potato that clung to his chum's suit.

'So are you, but there's no time to worry about it. Gee, but it's cold!'

'It'll be warmer soon. Let's go.' The pink glow of the coming Sun was already lighting the eastern sky, even though the air was still midnight cold. They hurried down the alley to the street in back of the school and along it to the right. This portion of the city was entirely terrestrial and could have been a city in Alaska or Norway, but beyond them, etched against the lightening sky, were the ancient towers of Syrtis Minor, denying the Earthlike appearance of the street.

They came, as they had planned, to a tributary canal and sat down to put on their skates. They were racers, with 22-inch razor-like blades, intended for speed alone. Jim finished first and lowered himself to the ice. 'Better hurry,' he said. 'I almost froze my behind.'

'You're telling me!'

'This ice is almost too hard to take an edge.'

Frank joined him; they picked up their bags and set out. A few hundred yards away the little waterway gave into the Grand Canal of the city; they turned into it and made speed for the scooter station. Despite the exercise they were tingling with cold by the time they got to it.

They went through the pressure door and inside. A single clerk was on duty there. He looked up and Frank went to him. 'Is there a scooter to South Colony today?'

'In about twenty minutes,' said the clerk. 'You want to ship those bags?'

'No, we want tickets.' Frank handed over their joint funds.

Silently the clerk attended to the transaction. Jim heaved a sigh of relief; scooters to the colony did not run every day. The chance that they might have to keep out of sight for a day or more and then try to get away without encountering Howe had been eating at him.

They took seats in the back of the station and waited. Presently Jim said, 'Frank, is Deimos up?'

'I didn't notice. Why?'

'Maybe I can get a call through to home.'

'No money.'

'I'll put it through collect.' He went to the booth opposite the clerk's desk; the clerk looked up but said nothing. Inside, he signalled the operator. Subconsciously he had been worrying about getting word to his father ever since Willis had spilled the secret of the so-called non-migration policy.

The screen lighted up and a pleasant-appearing young woman—with the fashionable striped hair—appeared therein. 'I'd like to call South Colony,' he said.

'No relay until later this morning,' she informed him. 'Would you like to record a delayed message?'

He was stopped; delayed messages were not accepted on a collect basis. 'No, thank you, I'll try later,' he fibbed and switched off.

The clerk was tapping on the booth's door. 'The driver is ready for you,' he told Jim. Jim hurriedly settled his mask in place and followed Frank out through the pressure door. The driver was just closing the baggage compartment of the scooter. He took their tickets and the two boys got aboard. Again they were the only passengers; they claimed the observation seats.

Ten minutes later, tired of staring almost into a rising Sun, Jim announced, 'I'm sleepy. I think I'll go down.'

'I think I'll ask the driver to turn on the radio,' said Frank.

'Oh, the heck with that. We've both had a hard night. Come on.'

'Well—all right.' They went into the lower compartment, found bunks, and crawled in. In a few minutes they both were snoring.

The scooter, leaving Syrtis Minor at sunrise, kept ahead of the daily thaw and did not have to lay over at Hesperidum. It continued south and reached Cynia about noon. So far advanced was the season that there was no worry about the ice holding from Cynia south to Charax; Strymon canal would not thaw again until the following spring.

The driver was pleased to have kept his schedule. When Deimos rose toward the end of the morning's run he relaxed and switched on his radio. What he heard caused him to make a quick check of his passengers. They were still asleep; he decided not to do anything about it until he reached Cynia Station.

On reaching there he hurried inside. Jim and Frank were awakened by the scooter stopping but did not get out. Presently the driver came back and said, 'Meal stop. Everybody out.'

Frank answered, 'We're not hungry.'

The driver looked disconcerted. 'Better come in anyhow,' he insisted. 'It gets pretty cold in the car when she's standing still.'

'We don't mind.' Frank was thinking that he would dig a can of something out of his bag as soon as the driver had left; from suppertime the night before until noon today seemed a long time to his stomach.

'What's the trouble?' the driver continued. 'Broke?' Something in their expressions caused him to continue, 'I'll stake you to a sandwich each.'

Frank refused but Jim interceded. 'Don't be silly, Frank. Thank you, sir. We accept.'

George, the agent and factotum of Cynia station, looked at them speculatively and served them sandwiches without comment. The driver bolted his food and was quickly through. When he got up, the boys did so, too. 'Just take it easy,' he advised them. 'I've got twenty, thirty minutes' work, loading and checking.'

'Can't we help you?' asked Jim,

'Nope. You'd just be in the way. I'll call you when I'm ready!'

'Well—thanks for the sandwich.'

'Don't mention it.' He went out.

Less than ten minutes later there came faintly to their ears the sound of a scooter starting up. Frank looked startled and rushed to the traffic-checking window. The car was already disappearing to the south. Frank turned to the agent. 'Hey, he didn't wait for us!'

'Nope.'

'But he said he'd call us.'

'Yep.' The agent resumed reading.

'But—but *why,'* insisted Frank. 'He told us to wait.'

The agent put down his newspaper. 'It's like this,' he said 'Clem is a peaceable man and he told me that he wasn't a cop. He said he would have no part in trying to arrest two strapping, able-bodied boys, both wearing guns.'

'What!'

'That's what I said. And don't go fiddling around with those heaters. You'll notice I ain't wearing my gun; you can take the station apart for all of me.'

Jim had joined Frank at the counter. 'What's this all about?' he asked.

'You tell me. All I know is, there's a call out to pick you up. You're charged with burglary, theft, truancy, destruction of company property—pretty near everything. Seems like you are a couple of desperate characters—though you don't look the part.'

'I see,' said Frank slowly. 'Well, what are you going to do about it?'

'Nothing. Nothing at all. Long about tomorrow morning a special scooter will arrive and I presume there will be force enough aboard her to subdue a couple of outlaws. In the meantime do as you please. Go outside. Wander around. When you get chilly, come back inside.'

He went back to his reading.

'I see. Come along, Jim.' They retreated to the far corner of the room for a war conference. The agent's attitude was easily understood. Cynia station was almost literally a thousand miles from anywhere; the station itself was the only human habitation against the deadly cold of night.

Jim was almost in tears. 'I'm sorry, Frank. If I hadn't been so darned anxious to eat, this wouldn't have happened.'

'Don't be so tragic about it,' Frank advised him. 'Can you imagine us shooting it out with a couple of innocent bystanders and hijacking the scooter? I can't.'

'Uh—no. I guess you're right.'

'Certainly I am. What we've got to decide is what to do next.'

'I know one thing; I'm not going to let them drag me back to school.'

'Neither am I. What's more important, we've got to get word to our folks about the deal that's being cooked up against them.'

'Say, look—maybe we can phone now!'

'Do you think he —' Frank nodded toward the agent. '— would let us?'

'Maybe. Maybe not. We've still got our guns—and I can be pushed just so far.' Jim got up and went to the agent. 'Any objection to us using the phone?'

The agent did not even glance up. 'Not a bit. Help yourself.'

Jim went into the booth. There was no local exchange; the instrument was simply a radio link to the relay station on the outer moon. A transparency announced that Deimos was above the horizon; seeing this, Jim punched the call button and asked for linkage to South Colony.

There was an unusually long delay, then a sweetly impersonal voice announced, 'Due to circumstances beyond our control calls are not being accepted from Cynia station to South Colony.'

Jim started to ask if Deimos were visible at South Colony, since he knew that line-of-sight was essential to radio transmission on Mars—indeed, it was the only sort of radio transmission he was familiar with—but the relay station had switched off and made no answer when he again punched the call button. He left the booth and told Frank about it.

'Sounds like Howe has fixed us,' Frank commented. 'I don't believe there is a breakdown. Unless —'

'Unless what?'

'Unless there is more to it than that. Beecher may be rigging things to interfere with messages getting through until he's put over his scheme.'

'Frank, we've got to get word to our folks. See here, I bet we could hole up with the Martians over at Cynia. After all, they offered us water and —'

'Suppose we could. Where does that get us?'

'Let me finish. We can mail a letter from here, giving our folks all the details and telling them where we are hiding. Then we could wait for them to come and get us.'

Frank shook his head. 'If we mail a letter from here, old frozen face over there is bound to know it. Then, when the cops show up and we are gone, he turns it over to them. Instead of our folks getting it, it goes back to Howe and Beecher.'

'You really think so? Nobody has any right to touch private mail.'

'Don't be a little innocent. Howe didn't have any right to order us to give up our guns—but he did. No, Jim, we've got to carry this message ourselves.'

On the wall opposite them was a map of the area served by Cynia station. Frank had been studying it idly while they talked. Suddenly he said, 'Jim, what's that new station south of Cynia?'

'Huh? Where do you mean?'

'There.' Frank pointed. Inked on the original map was a station on west Strymon, south of them.

'That?' said Jim. 'That must be one of the shelters for the Project.' The grand plan for restoring oxygen to Mars called for setting up, the following spring, a string of processing plants in the desert between Cynia and Charax. Some of the shelters had already been completed in anticipation of the success of atmosphere plant number one in Libya.

'It can't be much over a hundred miles away.'

'A hundred and ten, maybe,' Jim commented, looking at the scale.

Frank got a faraway look in his eyes. 'I think I can skate that far before dark. Are you game?'

'What? Are you crazy? We'd still be better than seven hundred miles from home.'

'We can skate better than two hundred miles a day,' answered Frank. 'Aren't there more shelters?'

'The map doesn't show any.' Jim thought. 'I *know* they've finished more than one; I've heard Dad talking about it.'

'If we had to, we could skate all night and sleep in the day time. That way we wouldn't freeze.'

'Hmm ... I think you're kidding yourself. I saw a man once who was caught out at night. He was stiff as a board. All right, when do we start?'

'Right now.'

They picked up their bags and headed for the door. The agent looked up, and said, 'Going somewhere?'

'For a walk.'

'Might as well leave your bags. You'll be back.'

They did not answer but went on out the door. Five minutes later they were skating south on west Strymon.

'Hey, Jim!'

'What?'

'Let's stop for a minute. I want to sling my bag.'

'Just what I was thinking.' Their travel bags unbalanced them and prevented proper arm motion and any real speed. But skating was a common form of locomotion; the bags had straps which permitted them to be slung as haversacks. Jim opened his before he put it on; Willis extended his eye stalks and looked at him reproachfully. 'Jim boy gone long time.'

'Sorry, old fellow.'

'Willis not talk.'

'Willis can talk all he wants to now. Look, if I leave the bag open a little bit so that you can see, will you manage not to fall out?'

'Willis want out.'

'Can't do that; I'm going to take you for a fine ride. You won't fall out?'

'Willis not fall out.'

'Okay.' He slung his bag and they set out again.

They picked up speed. With fast ice, little air resistance, and the low Martian gravity the speed of a skater on Mars is limited by his skill in stroking. Both of the boys were able. Willis let out a 'Whee!' and they settled down to putting miles behind them.

The desert plateau between Cynia and Charax is higher than the dead sea bottom between Cynia and the equator. This drop is used to move the waters of the southern polar cap across the desert to the great green belt near the equator. In midwinter the southern ice cap reaches to Charax; the double canal of Strymon, which starts at Charax, is one of the principal discharge points for the polar cap when it melts in the spring.

The boys were starting at the lower end of the canal's drop; the walls of the canal reached high above their heads. Furthermore the water level—or ice level—was low because the season was late autumn; the water level would be much higher during spring flood. There was nothing to see but the banks of the canal converging ahead of them, the blue sky beyond, and the purple-black sky overhead. The Sun was behind them and a bit west of meridian; it was moving north toward northern summer solstice. Seasons do not lag on Mars as much as they do on Earth; there are no oceans to hold the heat and the only 'flywheel' of the climate is the freezing and melting of the polar caps.

With nothing to see the boys concentrated on skating, heads down and shoulders swinging.

After many miles of monotonous speed Jim grew careless; the toe of his right runner caught on some minor obstruction in the ice. He went down. His suit saved him from ice burns and he knew how to fall safely, but Willis popped out of his bag like a cork from a bottle.

The bouncer, true to instinct, hauled in all excrescences at once. He hit as a ball and rolled; he travelled over the ice for several hundred yards. Frank threw himself into a hockey stop as soon as he saw Jim tumble. He stopped in a shower of ice particles and went back to help Jim up. ‘You all right?’

'Sure. Where's Willis?’

They skated on and recovered the bouncer who was now standing on his tiny legs and waited for them. ‘Whoopee!’ yelled Willis as they came up. ‘Do it again!’

'Not if I can help it,’ Jim assured him and stuffed him back in the bag. ‘Say, Frank, how long have we been travelling?’

'Not over three hours,’ Frank decided, after a glance at the Sun.

'I wish I had my watch,’ complained Jim. ‘We don't want to overrun the shelter.’

'Oh, we won't come to it for another couple of hours, at least.’

'But what's to keep us from passing right by it? We can't see over these banks.’

'Want to turn around and go back?’

'No.’

'Then quit worrying.’

Jim shut up but continued to worry. Perhaps that was why he noticed the only indication of the shelter when they came to it, for Frank skated on past it. It was merely a ramp down the bank. There were such ramps every few miles, as ancient as the canals themselves, but this one had set above it an overhanging beam, as if to support a hoist. Jim spotted it as terrestrial workmanship.

He stopped. Frank skated on ahead, noticed presently that Jim was not following him and came back. ‘What's up?’ he called out.

'I think this is it.’

'Hmm ... could be.’ They removed their skates and climbed the ramp. At the top, set back a short distance from the bank, was one of the bubble-shaped buildings which are the sign anywhere on Mars of the alien from Earth. Beyond it a foundation had been started for the reducing plant. Jim heaved a big sigh. Frank nodded and said, ‘Just about where we expected to find it.’

'And none too soon,’ added Jim. The Sun was close to the western horizon and dropping closer as they watched.

There was, of course, no one in the shelter; no further work would be done at this latitude until the following spring. The shelter was unpressurized; they simply unlatched the outer door, walked through the inner door without delay. Frank groped for the light switch, found it, and lighted up the place—the lighting circuit was powered by the building's atomic fuel power pack and did not require the presence of men,

It was a simple shelter, lined with bunks except for the space occupied by the kitchen unit. Frank looked around happily. ‘Looks like we've found a home from home, Jim.’

'Yep.’ Jim looked around, located the shelter's thermostat, and cut it in. Shortly the room became warmer and with it there was a soft sighing sound as the building's pressure regulator, hooked in with the thermostat, started the building's supercharger. In a few minutes the boys were able to remove their masks and finally their outdoor suits as well.

Jim poked around the kitchen unit, opening cupboards and peering into shelves. ‘Find anything?’ asked Frank.

'Nary a thing. Seems like they could have left at least a can of beans.’

'Now maybe you're glad I raided the kitchen before we left. Supper in five minutes.’

'Okay, so you've got a real talent for crime,’ acknowledged Jim. ‘I salute you.’ He tried the water tap. ‘Plenty of water in the tanks,’ he announced.

'Good!’ Frank answered. ‘That saves me having to go down and chip ice. I need to fill my mask. I was dry the last few miles.’ The high coxcomb structure on a Mars mask is not only a little supercharger with its power pack, needed to pressurize the mask; it is also a small water reservoir. A nipple in the mask permits the wearer to take a drink outdoors, but this is a secondary function. The prime need for water in a Mars mask is to wet a wick through which the air is forced before it reaches the wearer's nose.

'You were? Don't you know better than to drink yourself dry?’

'I forgot to fill it before we left.’

'Tourist!’

'Well, we left in kind of a hurry, you know.’

'How long were you dry?’

'I don't know exactly,’ Frank evaded.

'How's your throat?’

'All right. A little dry, maybe.’

'Let me see it,’ Jim persisted, coming closer.

Frank pushed him away. ‘I tell you it's all right. Let's eat.’

'Well—okay.’

They dined off canned corned beef hash and went promptly to bed. Willis snuggled up against Jim's stomach and imitated his snores.

Breakfast was more of the same, since there was some hash left and Frank insisted that they not waste anything. Willis had no breakfast since he had eaten only two weeks before, but he absorbed nearly a quart of water. As they were about to leave Jim held up a flashlight. ‘Look what I found.’

'Well, put it back and let's go.’

'I think I'll keep it,’ Jim answered, stuffing it in his bag. ‘We might have a use for it.’

'We won't and it's not yours.’

'For criminy's sake, I'm not swiping it; I'm just borrowing it. This is an emergency.’

Frank shrugged. ‘Okay, let's get moving.’ A few minutes later they were on the ice and again headed south. It was a beautiful day, as Martian days almost always are; when the Sun was high enough to fill the slot of the canal it was almost balmy, despite the late season. Frank spotted the telltale hoisting beam of a Project shelter around midday and they were able to lunch inside, which saved them the tedious, messy, and unsatisfactory chore of trying to eat through the mouth valve of a respirator mask. The shelter was a twin of the first but no foundation for the plant had as yet been built near it.

As they were preparing to leave the shelter Jim said, ‘You look sort of flushed, Frank. Got a fever?’

'That's just the bloom of health,’ Frank insisted. ‘I'm fine.’ Nevertheless he coughed as he put on his mask. ‘Mars throat,’ Jim thought but said nothing as there was nothing that he could do for Frank.

Mars throat is not a disease in itself; it is simply an extremely dry condition of the nose and throat which arises from direct exposure to Martian air. The humidity on Mars is usually effectively zero; a throat dehydrated by it is wide open to whatever disease organisms there may be present in the human throat at the time. The result is usually a virulent sore throat.

The afternoon passed without incident. As the Sun began to drop toward the skyline it seemed possible that home was not much more than five hundred miles away. Jim had watched Frank closely all afternoon. His chum seemed to be skating as strongly as ever; perhaps, he decided, the cough was just a false alarm. He skated up alongside Frank. ‘I guess we had better start watching for a shelter.’

'Suits me.’

Soon they passed another of the ramps built by long-dead Martians, but there was no hoisting beam above it nor any other sign of terrestrial activity. The banks, though somewhat lower now, were still too high to see over. Jim stepped up the stroke a bit; they hurried on.

They came to another ramp, but again there was nothing to suggest that a shelter might be above it. Jim stopped. ‘I vote we take a look up on the bank,’ he said. ‘We *know* they build the shelters by the ramps and they may have taken the hoist down for some reason.’

'It would just be wasting valuable time,’ Frank protested. ‘If we hurry, we can get to another ramp before dark.’

'Well, if you say so —’ Jim shoved off and picked up speed.

The next ramp was the same story; Jim stopped again. ‘Let's take a look,’ he pleaded. ‘We can't possibly reach the next one before sundown.’

'Okay.’ Frank stooped over and tugged at his skates.

They hurried up the bank and reached the top. The slanting rays of the Sun showed nothing but the vegetation bordering the canal.

Jim felt ready to bawl through sheer weariness and disappointment. ‘Well, what do we do now?’ he said.

'We go back down,’ Frank answered, ‘and keep going until we find it.’

'I don't think we could spot one of those hoist beams in the dark.’

'Then we keep going,’ Frank said grimly, ‘until we fall flat on our faces.’

'More likely we'll freeze.’

'Well, if you want my opinion,’ Frank replied, ‘I think we're washed up. I, for one, can't keep going all night, even if we don't freeze.’

'You don't feel good?’

'That's putting it mildly. Come on.’

'All right.’

Willis had climbed out of the bag and up on Jim's shoulder, in order to see better. Now he bounced to the ground and rolled away. Jim snatched at him and missed. ‘Hey! Willis! Come back here!’

Willis did not answer. Jim started after him. His progress was difficult. Ordinarily he would have gone under the canal plants, but, late in the day as it was, most of them had lowered almost to knee height preparatory to withdrawing into the ground for the night. Some of the less hardy plants were already out of sight, leaving bare patches of ground.

The vegetation did not seem to slow up Willis but Jim found it troublesome; he could not catch the little scamp. Frank shouted, ‘'Ware waterseekers! Watch where you put your feet!’ Thus warned, Jim proceeded more carefully—and still more slowly. He stopped. ‘Willis! Oh, Willis! Come back! Come back, doggone it, or we'll go away and leave you.’ It was a completely empty threat.

Frank came crashing up and joined him. ‘We can't hang around up here, Jim.’

'I know it. Wouldn't you know that he would pull a stunt like this just at the wrong time?’

'He's a pest, that's what he is. Come on.’

Willis's voice—or, rather, Jim's voice as used by Willis—reached them from a distance. ‘Jim boy! Jim! Come here!’

Jim struggled through the shrinking vegetation with Frank after him. They found the bouncer resting at the edge of an enormous plant, a desert cabbage quite fifty yards across. The desert cabbage is not often found near the canals; it is a weed and not tolerated in the green sea bottoms of the lower latitudes, though it may be found in the deserts miles from any surface water.

The western half of this specimen was still spread out in a semicircular fan, flat to the ground, but the eastern half was tilted up almost vertically, its flat leaves still reaching greedily for the Sun's rays to fuel the photosynthesis by which plants live. A hardy plant, it would not curl up until the Sun was gone completely, and it would not withdraw into the ground at all. Instead it would curl into a tight ball, thus protecting itself from the cold and incidentally simulating, on giant scale, the Earth plant for which it was named.

Willis sat by the edge of the half that was flat to the ground. Jim reached for him.

Willis bounced up on the edge of the desert cabbage and rolled toward the heart of the plant. Jim stopped and said, ‘Oh, Willis, darn your eyes, come back here. Please come back.’

'Don't go after him,’ warned Frank. ‘That thing might close up on you. The Sun is almost down.’

'I won't. Willis! Come back!’

Willis called back, ‘Come here, Jim boy.’

'You come *here.'*

'Jim boy come here. Frank come here. Cold there. Warm here.’

'Frank, what'll I do?’

Willis called again. ‘Come, Jim boy. Warm! Stay warm all night.’

Jim stared. ‘You know what, Frank? I think he means to let it close up on him. And he wants us to join him.’

'Sounds that way.’

'Come, Jim! Come, Frank!’ Willis insisted. ‘Hurry!’

'Maybe he knows what he's doing,’ Frank added. ‘Like Doc says, he's got instincts for Mars and we haven't.’

'But we can't go inside a cabbage. It would crush us.’

'I wonder.’

'Anyhow, we'd suffocate.’

'Probably.’ Frank suddenly added, ‘Do as you like, Jim. I can't skate any further.’ He set foot on a broad leaf—which flinched under the contact—and strode steadily toward the bouncer. Jim watched for a moment and then ran after them.

Willis greeted them ecstatically. ‘Good boy, Frank! Good boy, Jim! Stay nice and warm all night.’

The Sun was slipping behind a distant dune; the sunset wind whipped coldly at them. The far edges of the plant lifted and began to curl toward them. ‘We still could get out if we jumped, Frank,’ Jim said nervously.

'I'm staying.’ Nevertheless Frank eyed the approaching leaves apprehensively.

'We'll smother.’

'Maybe. That's better than freezing.’

The inner leaves were beginning to curl faster than the outer leaves. Such a leaf, four feet wide at its widest and at least ten feet long, raised up back of Jim and curved in until it touched his shoulder. Nervously he struck at it. The leaf snatched itself away, then slowly resumed its steady progress toward him. ‘Frank,’ Jim said shrilly, ‘they'll smother us!’

Frank looked apprehensively at the broad leaves, now curling up all around them. ‘Jim,’ he said, ‘sit down. Spread your legs wide. Then take my hands and make an arch.’

'What for?’

'So that we'll take up as much space as possible. Hurry!’

Jim hurried. With elbows and knees and hands the two managed to occupy a roughly spherical space about five feet across and a little less than that high. The leaves closed down on them, seemed to feel them out, then settled firmly against them, but not, however, with sufficient pressure to crush them. Soon the last open space was covered and they were in total darkness. ‘Frank,’ Jim demanded, ‘we can move now, can't we?’

'No! Give the outside leaves a chance to settle into place.’

Jim kept still for quite a long while. He knew that considerable time had passed for he spent the time counting up to one thousand. He was just starting on his second thousand when Willis stirred in the space between his legs. ‘Jim boy, Frank boy—nice and warm, huh?’

'Yeah, Willis,’ he agreed. ‘Say, how about it, Frank?’

'I think we can relax now.’ Frank lowered his arms; the inner leaf forming the ceiling immediately above him at once curled down and brushed him in the dark. He slapped at it instinctively; it retreated.

Jim said, ‘It's getting stuffy already.’

'Don't worry about it. Take it easy. Breathe shallowly. Don't talk and don't move and you'll use up less oxygen.’

'What difference does it make whether we suffocate in ten minutes or an hour? This was a crazy thing to do, Frank; any way you figure it we can't last till morning.’

'Why can't we? I read in a book that back in India men have let themselves be buried alive for days and even weeks and were still alive when they were dug up. Fakirs, they called them.'

'Fakers is right! I don't believe it.'

'I read it in a book, I tell you.'

'I suppose you think that anything that's printed in a book is true?'

Frank hesitated before replying, 'It had better be true because it's the only chance we've got. Now will you shut up? If you keep yapping, you'll use up what air there is and kill us both off and it'll be your fault.'

Jim shut up. All that he could hear was Frank's breathing. He reached down and touched Willis; the bouncer had withdrawn all his stalks. He was a smooth ball, apparently asleep. Presently Frank's breathing changed to rasping snores.

Jim tried to sleep but could not. The utter darkness and the increasing deadness of the air pressed down on him like a great weight. He wished again for his watch, lost to Smythe's business talent; if he only knew what time it was, how long it was until sunrise, he felt that he could stand it.

He became convinced that the night had passed—or had almost passed. He began to expect the dawn and with it the unrolling of the giant plant. When he had been expecting it 'any minute now' for a time he estimated at two hours, at least, be became panicky. He knew how late in the season it was; he knew also that desert cabbages hibernated by the simple method of remaining closed through the winter. Apparently Frank and he had had the enormous bad luck to take shelter in a cabbage on the very night on which it started its hibernation.

Twelve long months from now, more than three hundred days in the future, the plant would open to the spring Sun and release them—dead. He was sure of it.

He remembered the flashlight he had picked up in the first Project shelter. The thought of it stimulated him, took his mind off his fears for the moment. He leaned forward, twisted around and tried to get at his bag, still strapped to his shoulders.

The leaves above him closed in; he struck at them and they shrank away. He was able to reach the torch, drag it out, and turn it on. Its rays brightly illuminated the cramped space. Frank stopped snoring, blinked, and said, 'What's the matter?'

'I just remembered this. Good thing I brought it, huh?'

'Better put it out and go to sleep.'

'It doesn't use up any oxygen. I feel better with it on.'

'Maybe you do, but as long as you stay awake you use up more oxygen.'

'I suppose so.' Jim suddenly recalled what had been terrifying him before he got out the light. ‘It doesn't make any difference.’ He explained to Frank his conviction that they were trapped forever in the plant.

'Nonsense!’ said Frank.

'Nonsense yourself! Why didn't it open up at dawn?’

'Because,’ Frank said, ‘we haven't been in here more than an hour.’

'What?’

'Not more than an hour. Now shut up and let me sleep. Better put out that light.’ Frank settled his head again on his knees.

Jim shut up but did not turn out the light. It comforted him. Besides, the inner leaves which had shown an annoying tendency to close in on the tops of their heads now had retreated and flattened themselves firmly against the dense wall formed by the outer layers of leaves. Under the mindless reflex which controlled the movements of the plant they were doing their best to present maximum surface to the rays from the flashlight.

Jim did not analyse the matter; his knowledge of photosynthesis and of heliotropism was sketchy. He was simply aware that the place seemed roomier in the light and that he was having less trouble with the clinging leaves. He settled the torch against Willis, who had not stirred, and tried to relax.

It actually seemed less stuffy with the light on. He had the impression that the pressure was up a little. He considered trying to take off his mask but decided against it. Presently, without knowing it, he drifted off to sleep.

He dreamed and then dreamt that he was dreaming. Hiding in the desert cabbage had been only a fantastic, impossible dream; school and Headmaster Howe had merely been nightmares; he was home, asleep in his bed, with Willis cuddled against him. Tomorrow Frank and he would start for Syrtis Minor to enter school.

It had simply been a nightmare, caused by the suggestion that Willis be taken away from him. They were planning to take Willis away from him! They couldn't do that; he wouldn't let them!

Again his dream shifted; again he defied Headmaster Howe; again he rescued Willis and fled—and again they were locked away in the heart of a desert plant.

He knew with bitter certainty that it would always end like this. This was the reality, to be trapped and smothering in the core of a hibernating giant weed—to die there.

He choked and muttered, tried to wake up, then slipped into a less intolerable dream.

7

Pursued

Tiny Phobos, inner moon of Mars, came out of eclipse and, at breakneck speed, flew west to east into the face of the rising Sun. The leisurely spin of its ruddy primary, twenty-four and a half hours for each rotation, presently brought the rays of that Sun to east Strymon, then across the band of desert between the twin canals and to the banks of west Strymon. The rays struck a great ball perched near the eastern bank of that canal, a desert cabbage closed against the cold.

The plant stirred and unfolded. The sunward half of the plant opened flat to the ground; the other half fanned itself open like a spread peacock's tail to catch the almost horizontal rays. In so doing it spilled something out of its heart and onto the flat portion—two human bodies, twisted and stiff, clad garishly in elastic suits and grotesque helmets.

A tiny ball spilled out with them, rolled a few yards over the thick green leaves, and stopped. It extended eye stalks and little bumps of legs and waddled back to the sprawled bodies. It nuzzled up against one.

It hesitated, nuzzled again, then settled back and let out a thin wailing in which was compounded inconsolable grief and an utter sense of loss.

Jim opened one bloodshot eye. ‘Cut out that infernal racket,’ he said crossly.

Willis shrieked, ‘Jim boy!’ and jumped upon his stomach, where he continued to bounce up and down in an ecstasy of greeting.

Jim brushed him off, then gathered him up in one arm. ‘Calm down. Behave yourself. Ouch!’

'What's the matter, Jim boy?’

'My arm's stiff. Ooo—ouch!’ Further efforts had shown Jim that his legs were stiff as well. Also his back. And his neck.

'What's the matter with you?’ demanded Frank.

'Stiff as board. I'd do better to skate on my hands today. Say —’

'Say what?’

'Maybe we don't skate. I wonder if the spring floods have started?’

'Huh? What are you gibbering about?’ Frank sat up, slowly and carefully.

'Why, the spring floods, of course. Somehow we lasted through the winter, though I don't know how. Now we —’

'Don't be any sillier than you have to be. Look where the Sun is rising.’

Jim looked. Martian colonials are more acutely aware of the apparent movements of the Sun than any Earthbound men, except, possibly, the Eskimos. All he said was, ‘Oh ... ,’ then added, ‘I guess it was a dream.’

'Either that or you are even nuttier than usual. Let's get going.' Frank struggled to his feet with a groan.

'How do you feel?'

'Like my own grandfather.'

'I mean, how's your throat?' Jim persisted.

'Oh, it's all right.' Frank promptly contradicted himself by a fit of coughing. By great effort he controlled it shortly; coughing while wearing a respirator is a bad idea. Sneezing is worse.

'Want some breakfast?'

'I'm not hungry now,' Frank answered. 'Let's find a shelter first, so we can eat in comfort.'

'Okay.' Jim stuffed Willis back into the bag; discovered by experiment that he could stand and walk. Noticing the flashlight, he tucked it in with Willis and followed Frank toward the bank. The canal vegetation was beginning to show; even as they walked the footing grew more tangled. The green plants, still stiff with night cold, could not draw away quickly as they brushed through them.

They reached the bank. 'The ramp must be about a hundred yards off to the right,' Frank decided. 'Yep—I see it. Come on.'

Jim grabbed his arm and drew him back. ''Smatter?' demanded Frank.

'Look on up the canal, north.'

'Huh? O!' A scooter was proceeding toward them. Instead of the two hundred fifty miles per hour or more that such craft usually make, this one was throttled down to a minimum. Two men were seated on top of it, out in the open.

Frank drew back hastily. 'Good boy, Jim,' he approved. 'I was just about to walk right into them. I guess we had better let them get well ahead.'

'Willis good boy, too,' Willis put in smugly.

'Let them get ahead, my foot!' Jim answered. 'Can't you see what they're doing?'

'Huh?'

'They're following our tracks!'

Frank looked startled but did not answer. He peered cautiously out. 'Look out!' Jim snapped. 'He's got binoculars.' Frank ducked back. But he had seen enough; the scooter had stopped at approximately the spot where they had stopped the night before. One of the men on top was gesturing through the observation dome at the driver and pointing to the ramp.

Canal ice was, of course, never cleaned of skate marks; the surface was renewed from time to time by midday thaws until the dead freeze of winter set in. However, it was unlikely that anyone but the two boys had skated over this stretch of ice, so far from any settlement, any time in months. The ice held scooter tracks, to be sure, but, like all skaters, Jim and Frank had avoided them in favour of untouched ice.

Now their unmistakable spoor lay for any to read from Cynia station to the ramp near them.

'If we head back into the bushes,' Jim whispered. 'We can hide until they go away. They'll never find us in this stuff.'

'Suppose they don't go away. Do you want to spend another night in the cabbage?'

'They're bound to go away eventually.'

'Sure but not soon enough. They know we went up the ramp; they'll stay and they'll search, longer than we can hold out. They can afford to; they've got a base.'

'Well, what do we do?'

'We head south along the bank, on foot, at least as far as the next ramp.'

'Let's get going, then. They'll be up the ramp in no time.'

With Frank in the lead they dogtrotted to the south. The plants along the bank were high enough now to permit them to go under; Frank held a course about thirty feet in from the bank. The gloom under the spreading leaves and the stems of the plants themselves protected them from any distant observation.

Jim kept an eye out for snake worms and waterseekers and cautioned Willis to do likewise. They made fair time. After a few minutes Frank stopped, motioned for silence, and they both listened. All that Jim could hear was Frank's rasping breath; if they were being pursued, the pursuers were not close.

They were at least two miles south of the ramp when Frank stopped very suddenly. Jim bumped into him and the two almost tumbled into the thing that had caused Frank to stop—another canal. This one ran east and west and was a much narrower branch of the main canal. There were several such between Cynia and Charax. Some of them joined the east and west legs of Strymon canal; some merely carried water to local depressions in the desert plateau.

Jim stared down into the deep and narrow gash. 'For the love of Mike! We nearly took a header.'

Frank did not answer. He sank down to his knees, then sat and held his head. Suddenly he was overcome by a spasm of coughing. When it was over, his shoulders still shook, as if he were racked by dry sobs.

Jim put a hand on his arm. 'You're pretty sick, aren't you, fellow?'

Frank did not answer. Willis said, 'Poor Frank boy,' and tut-tutted.

Jim stared again at the canal, his forehead wrinkled. Presently Frank raised his head and said, 'I'm all right. It just got me for a moment—running into the canal and all and realizing it had us stopped. I was so tired.’

Jim said, ‘Look here, Frank, I've got a new plan. I'm going to follow this ditch off to the east until I find some way to get down to it. You're going to go back and give yourself up —’

'No!'

'Wait till I finish! This makes sense. You're too sick to keep going. If you stay out here, you're going to die. You might as well admit it. Somebody's got to get the word to our folks—me. You go back, surrender, and then give them a song and dance about how I went that way—any way but this. If you make it good, you can stall them and keep them chasing their tails for a full day and give me that much head start. In the mean time you lie around in the scooter, warm and safe, and tonight you're in bed in the infirmary at school. There—doesn't that make sense?’

'No.’

'Why not? You're just being stubborn.’

'No,’ repeated Frank, ‘it's no good. In the first place I won't turn myself over to them. I'd rather die out here —’

'Nuts!’

'Nuts yourself. In the second place, a day's start will do you no good. Once they are sure you aren't where I say you are, they'll just go back to combing the canal, by scooter. They'll pick you up tomorrow.’

'But—well, what is the answer then?’

'I don't know, but it's not that.’ He was seized again by coughing.

Neither one of them said anything for several minutes. At last Jim said, ‘What kind of a scooter was that?’

'The usual cargo sort, a Hudson Six Hundred I think. Why?’

'Could it turn around on that ice down there?’

Frank looked down into the small canal. Its sides sloped in toward the bottom; the water level was so low that the ice surface was barely twenty feet across. ‘Not a chance,’ he answered.

'Then they won't try to search this branch by scooter—at least not in *that* scooter.’

'I'm way ahead of you,’ put in Frank. ‘You figure we'll cross to east Strymon and go home that way. But how do you know this cut runs all the way through? You remember the map that well?’

'No, I don't. But there is a good chance it does. If it doesn't, it will run most of the way across and we'll just have to hoof it the rest of the way.’

'After we get to the east leg it will still be five hundred miles or so to Charax. This leg has shelters on it, even if we did miss the one last night.’

'We've got just as good a chance of finding project shelters on east leg as on west leg,’ Jim answered. ‘The Project starts next spring on both sides. I know—Dad's talked about it enough. Anyhow, we can't use this leg any further; they're searching it—so why beat your choppers about it? The real question is: can you skate? If you can't, I still say you ought to surrender.’

Frank stood up. ‘I'll skate,’ he said grimly. ‘Come on.’

They went boldly along the stone embankment, convinced that their pursuers were still searching the neighbourhood of the ramp. They were three or four miles further east when they came to a ramp leading down to the ice. ‘Shall we chance it?’ asked Jim.

'Sure. Even if they send a man in on skates I doubt if he would come this far with no tracks to lead him on. I'm tired of walking.’ They went down, put on their skates, and started. Most of the kinks from their uncomfortable night had been smoothed out by walking; it felt good to be on the ice again. Jim let Frank set the pace; despite his illness he stroked right into it and pushed the miles behind them.

They had come perhaps forty miles when the banks began to be noticeably lower. Jim, seeing this, got a sick feeling that the little canal was not cross-connecting from west to east leg, but merely a feeder to a low spot in the desert. He kept his suspicion to himself. At the end of the next hour it was no longer necessary to spare his chum; the truth was evident to them both. The banks were now so low that they could see over them and the ice ahead no longer disappeared into the blue sky but dead-ended in some fashion.

They came to the dead end presently, a frozen swamp. The banks were gone; the rough ice spread out in all directions and was bordered in the distance by green plants. Here and there, canal grass, caught by the freeze, stuck up in dead tufts through the ice.

They continued east, skating where they could and picking their way around bits of higher ground. At last Frank said, ‘All out! End of the line!’ and sat down to take off his skates.

'I'm sorry, Frank.’

'About what? We'll leg it the rest of the way. It can't be so many miles.’

They set out through the surrounding greenery, walking just fast enough to let the plants draw out their way. The vegetation that surrounded the marsh was lower than the canal plants, hardly shoulder high, and showed smaller leaves. After a couple of miles of this they found themselves out on the sand dunes.

The shifting, red, iron-oxide sands made hard walking and the dunes, to be climbed or skirted, made it worse. Jim usually elected to climb them even if Frank went around; he was looking for a dark green line against the horizon that would mark east Strymon. It continued to disappoint him.

Willis insisted on getting down. First he gave himself a dust bath in the clean sand; thereafter he kept somewhat ahead of Jim, exploring this way and that and startling the spin bugs. Jim had just topped a dune and was staring down the other side when he heard an agonized squeak from Willis. He looked around.

Frank was just coming around the end of the dune and Willis was with him, that is to say, Willis had skittered on ahead. Now the bouncer was standing dead still. Frank apparently had noticed nothing; he was dragging along in a listless fashion, his head down.

Charging straight at them was a waterseeker.

It was a long shot, even for a match marksman. The scene took on a curious unreality to Jim. It seemed as if Frank were frozen in his tracks and as if the waterseeker itself were strolling slowly towards his victims. Jim himself seemed to have all the time in the world to draw, take a steady, careful bead, and let go his first charge.

It burned the creature, but it kept coming.

Jim sighted on it again, held the stud down. His beam, held steadily on the centreline of the varmint, sliced it in two as if it had run into a buzz saw. It kept coming until its two halves were no longer joined, until they fell two ways, twitching. The great scimitar claw on the left stopped within inches of Willis.

Jim ran down the dune. Frank, no longer a statue, actually had stopped. He was standing, blinking at what had been a moment before the incarnation of sudden and bloody death. He looked around as Jim came up. ‘Thanks,’ he said.

Jim did not answer but kicked at a trembling leg of the beast. ‘The filthy thing,’ he said intensely. ‘Gosh, how I hate them. I wish I could burn every one on Mars, all at once.’ He walked on up along the body, located the egg sac, and carefully blasted every bit of it.

Willis had not moved. He was sobbing quietly. Jim came back, picked him up, and popped him into the travel bag. ‘Let's stick together from here on,’ he said. ‘If you don't feel like climbing, I'll go around.’

'Okay.’

'Frank!’

'Uh? Yes, what is it, Jim?’ Frank's voice was listless.

'What do you see ahead?’

'Ahead?’ Frank tried manfully to make his eyes focus, to chase the fuzz from them. ‘Uh, it's the canal, the green belt I mean. I guess we made it.’

'And what else? Don't you see a tower?’

'What? Where? Oh, there—Yes, I guess I do. It's a tower all right.’

'Well, for heaven's sake, don't you know what that means? Martians!’

'Yeah, I suppose so.'

'Well, show some enthusiasm!'

'Why should I?'

'They'll take us in, man! Martians are good people; you'll have a warm place to rest, before we go on.'

Frank looked a bit more interested, but said nothing. They might even know Gekko, 'Jim went on. This is a real break.'

'Maybe so.'

It took another hour of foot-slogging before the little Martian town was reached. It was so small that it boasted only one tower, but to Jim it was even more beautiful than Syrtis Major. They followed its wall and presently found a gate.

They had not been inside more than a few minutes when Jim's hopes, so high, were almost as low as they could be. Even before he saw the weed-choked central garden, the empty walks and silent courts had told him the bad truth: the little town was deserted.

Mars must once have held a larger native population than it does today. Ghost cities are not unknown and even the greater centres of population, such as Charax, Syrtis Major and Minor, and Hesperidum, have areas which are no longer used and through which tourists from Earth may sometimes be conducted. This little town, apparently never of great importance, might have been abandoned before Noah laid the keel of his ship.

Jim paused in the plaza, unwilling to speak. Frank stopped and sat down on a metal slab, its burnished face bright with characters that an Earthly scholar would have given an arm to read. 'Well,' said Jim, 'rest a bit, then I guess we had better find a way to get down on to the canal.'

Frank answered dully, 'Not for me. I've come as far as I can.'

'Don't talk that way.'

'I'm telling you, Jim, that's how it is.'

Jim puzzled at it. 'I tell you what—I'll search around. These places are always honeycombed underneath. I'll find a place for us to hole up over night.'

'Just as you like.'

'You just stay here.' He started to leave, then suddenly became aware that Willis was not with him. He then recalled that the bouncer had jumped down when they entered the city. 'Willis—where's Willis?'

'How would I know?'

'I've got to find him. Oh, Willis! Hey, Willis! Come, boy!' His voice echoed around the dead square.

'Hi, Jim!'

It was Willis, rightly enough, his voice reaching Jim from some distance. Presently he came into sight. But he was not alone; he was being carried by a Martian.

The Martian came near them, dropped his third leg, and leaned down. His voice boomed gently at Jim. ‘What's he saying, Frank?’

'Huh? Oh, I don't know. Tell him to go away.’

The Martian spoke again. Jim abandoned the attempt to use Frank as a translator and concentrated on trying to understand. He spotted the question symbol, in the inverted position; the remark was an invitation or a suggestion of some sort. Following it was the operator of motion coupled with some radical that meant nothing to Jim.

He answered it with the question symbol alone, hoping that the native would repeat himself. Willis answered instead. ‘Come along, Jim boy—fine place!’

Why not? he said to himself and answered, ‘Okay, Willis.’ To the Martian he replied with the symbol of general assent, racking his throat to produce the unEarthly triple guttural required. The Martian repeated it, inverted, then picked up the leg closest to them and walked rapidly away without turning around. He had gone about twenty-five yards when he seemed to notice that he was not being followed. He backed up just as rapidly and used the general inquiry symbol in the sense of ‘What's wrong?’

'Willis,’ Jim said urgently, ‘I want him to carry Frank.’

'Carry Frank boy?’

'Yes, the way Gekko carried him.’

'Gekko not here. This K'boomch.’

'His name is K'boomk?’

'Sure—K'boomch,’ Willis agreed, correcting Jim's pronunciation.

'Well, I want K'boomch to carry Frank like Gekko carried him.’

Willis and the Martian mooed and croaked at each other for a moment, then Willis said, ‘K'boomch wants to know does Jim boy know Gekko.’

'Tell him we are friends, water friends.’

'Willis already tell him.’

'How about Frank?’ But it appeared that Willis had already told his new acquaintance about that, too, for K'boomch enclosed Frank in two palm flaps and lifted him up. Frank opened his eyes, then closed them. He seemed indifferent to what happened to him.

Jim trotted after the Martian, stopping only to grab up Frank's skates from where he had abandoned them on the metal slab. The Martian led him into a huge building that seemed even larger inside than out, so richly illuminated in glowing lights were the walls. The Martian did not tarry but went directly into an archway in the far wall; it was a ramp tunnel entrance, leading down.

The Martians appear never to have invented stair steps, or more likely never needed them. The low surface gravity of Mars, only 38%

of that of Earth, permits the use of ramps which would be disastrously steep on Earth. The Martian led Jim down a long sequence of these rapid descents.

Presently Jim discovered, as he had once before under Cynia city, that the air pressure had increased. He raised his mask with a feeling of great relief; he had not had it off for more than twenty four hours. The change in pressure had come abruptly; he knew from this that it had not resulted from descent alone, nor had they come deep enough to make any great difference in pressure.

Jim wondered how the trick was accomplished. He decided that it had pressure locks beat all hollow.

They left the ramps and entered a large domed chamber, evenly lighted from the ceiling itself. Its walls were a continuous series of archways. K'boomch stopped and spoke again to Jim, another inquiry in which he used the name Gekko.

Jim reached into his memory and carefully phrased a simple declaration: ‘Gekko and I have shared water. We are friends.’

The Martian seemed satisfied; he led the way into one of the side rooms and placed Frank gently on the floor. The door closed behind them, sliding silently into place. It was a smallish room, for Martians, and contained several resting frames. K'boomch arranged his ungainly figure on one of them.

Suddenly Jim felt heavy and sat down rather unexpectedly on the floor. The feeling persisted and with it a slight giddiness; he stayed seated. ‘Are you all right, Frank?’ he asked.

Frank muttered something. His breathing seemed laboured and rough. Jim took off Frank's mask and touched his face; it was hot.

There was nothing that he could do for Frank at the moment. The heavy feeling continued. The Martian did not seem disposed to talk and Jim did not feel up to attempting a conversation in the dominant tongue in any case. Willis had withdrawn into a ball. Jim lay down beside Frank, closed his eyes, and tried not to think.

He felt a moment of lightness, almost of vertigo, then felt heavy again and wondered what he was coming down with. He lay still for a few more minutes, to be disturbed presently by the native bending over him and speaking. He sat up and discovered that he felt fine again. K'boomch scooped up Frank and they left the room.

The great domed chamber outside looked the same, except that it now held a crowd of Martians, thirty or more of them. When K'boomch and his two burdens, followed by Jim, came out the archway one of them separated himself from the group and stepped forward. He was rather short as Martians go. ‘Jim-Marlowe,’ he stated, with the vocative symbol.

'Gekko!’ yelled Jim, echoed by Willis.

Gekko bent over him. ‘My friend,’ he boomed softly in his own tongue. ‘My little, crippled friend.’ He raised Jim up and carried him away, the other Martians retreating to make way.

Gekko moved rapidly through a series of tunnels. Jim, looking back, could see that K'boomch and the rest of his party were close behind, so he let matters drift. Gekko turned presently into a medium-sized chamber and put Jim down. Frank was deposited by him. Frank blinked his eyes and said, ‘Where are we?’

Jim looked around. The room held several resting frames, set in a circle. The ceiling was domed and simulated the sky. On one wall a canal flowed past, in convincing miniature. Elsewhere on the curved wall was the silhouette of a Martian city, feathery towers floating in the air. Jim knew those towers, knew of what city they were the signature; Jim knew this room.

It was the very room in which he had ‘grown together’ with Gekko and his friends.

'Oh, my gosh, Frank—we're back in Cynia.’

'Huh?’ Frank sat up suddenly, glared around him—then lay back down and shut his eyes tightly.

Jim did not know whether to laugh or to cry. All that effort! All their striving to escape and to get home, Frank's gallant refusal to give up in the face of sickness and body weariness, the night in the desert cabbage—and here they were not three miles from Cynia station.

8

The Other World

Jim set up housekeeping—or hospital-keeping—in the smallest room that Gekko could find for him. There had been a ‘growing together’ immediately after their arrival. On its conclusion Jim had found, as before, that his command of the dominant tongue was improved. He had made Gekko understand that Frank was sick and needed quiet.

Gekko offered to take over Frank's care, but Jim refused. Martian therapy might cure Frank—or it might kill him. He asked instead for a plentiful supply of drinking water—his right, now that he was a ‘water friend', almost a tribal brother—and he asked for the colourful Martian silks that had been used by the boys in place of resting frames. From these silks Jim made a soft bed for Frank and a nest nearby for himself and Willis. He bedded Frank down, roused him enough to get him to drink deeply of water, and then waited for his friend to get well.

The room was quite comfortably warm; Jim took off his outdoors suit, stretched, and scratched. On second thought he peeled off Frank's elastic suit as well and covered him with a layer of flame-coloured cloth. After that he dug into Frank's travel bag and looked over the food supply. Up to now he had been too busy and too tired to worry about his stomach; now the very sight of the labels made him drool. He picked out a can of synthetic orange juice, vitamin fortified, and a can of simulated chicken fillet. The latter had started life in a yeast tank at North Colony, but Jim was used to yeast proteins and the flavour was every bit as tempting as white breast of chicken. Whistling, he got out his knife and got busy.

Willis had wandered off somewhere but he did not miss him. Subconsciously he was not disposed to worry about Willis while they were both in a native city; the place was filled with an atmosphere of peace and security. In fact Jim hardly thought about his patient until he had finished and wiped his mouth.

Frank was still sleeping but his breathing was noisy and his face still flushed. The air in the room, though warm and of satisfactory pressure, was Mars dry. Jim got a handkerchief from his bag, wet it, and put it over Frank's face, From time to time he moistened it again. Later he got another handkerchief, doused it, and tied it around his own face.

Gekko came in with Willis tagging along. ‘Jim-Marlowe,’ he stated and settled himself. ‘Gekko,’ Jim answered and went on with moistening Frank's face cloth. The Martian remained so quiet for so long that Jim decided that he must have retreated into his ‘other world’ but, when Jim looked at him, Gekko's eyes showed lively, alert interest.

After a long wait he asked Jim what he was doing and why.

Jim tried to explain that his kind must breathe water as well as air but his Martian vocabulary, despite the ‘growing together', was not up to the strain it placed on it. He gave up and there was another long silence. Eventually the Martian left, Willis with him.

Presently Jim noticed that the face cloths, both his and Frank's, were not drying out rapidly. Shortly they were hardly drying at all. He took off his, as it made him uncomfortable, and decided that it must be uncomfortable for Frank as well; he stopped using them entirely.

Gekko returned. After only ten minutes of silence he spoke, showing thereby almost frantic haste for his kind. He wanted to know if the water that flies with the air was now sufficient? Jim assured him that it was and thanked him. After twenty minutes or so of silence Gekko again left. Jim decided to go to bed. It had been a long, hard day and the previous night could hardly be called a night of rest. He looked around for some way to switch off the light but could find none. Giving up, he lay down, pulled a polychrome sheet up to his chin, and went to sleep.

'Hey, Jim—wake up.'

Blearily Jim opened his eyes, and closed them. 'Go away.'

'Come on. Snap out of it. I've been awake the past two hours, while you snored. I want to know some things.'

'What do you want to know? Say—how do you feel?'

'Me?' said Frank. 'I feel fine. Why shouldn't I? Where are we?'

Jim looked him over. Frank's colour was certainly better and his voice sounded normal, the hoarseness all gone. 'You were plenty sick yesterday,' he informed him. 'I think you were out of your head.'

Frank wrinkled his forehead. 'Maybe I was. I've sure had the darnedest dreams. There was a crazy one about a desert cabbage —'

'That was no dream.'

'What?'

'I said that was no dream, the desert cabbage—nor any of the rest of it. Do you know where we are?'

'That's what I was asking you.'

'We're in Cynia, that's where we are. We —'

'In *Cynia?'*

Jim tried to give Frank a coherent account of the preceding two days. He was somewhat hampered by the item of their sudden translation from far up the canal back to Cynia, because he did not understand it clearly himself. 'I figure it's a sort of a subway paralleling the canal. You know—a subway, like you read about.'

'Martians don't do that sort of engineering.'

'Martians built the canals.'

'Yes, but that was a long, long time ago.'

'Maybe they built the subway a long time ago. What do you know about it?'

'Well—nothing, I guess. Never mind. I'm hungry. Anything left to eat?'

'Sure.' Jim got up and looked around. Willis was still missing.

'I'd like to find Gekko and ask him where Willis is,' he fretted.

'Nuts,' said Frank. 'Let's eat breakfast.'

'Well ... all right.'

Once the meal was over, Frank opened the larger question. 'Okay, so we are in Cynia. We've still got to get home and fast. The question is: how do we go about it? Now as I see it, if these Martians could bring us back here so fast, they can turn around and put us back where they found us and then we can head home up the east leg of Strymon. How does that strike you?'

'It sounds all right, I guess,' Jim answered, 'but —'

'Then the first thing to do is to find Gekko and try to arrange it, without fiddling around.'

'The first thing to do,' Jim contradicted, 'is to find Willis.'

'Why? Hasn't he caused enough trouble? Leave him; he's happy here.’

'Frank, you take entirely the wrong attitude toward Willis. Didn't he get us out of a jam? If it hadn't been for Willis, you'd be coughing your lungs out in the desert.’

'If it hadn't been for Willis, we wouldn't have been in that jam in the first place.’

'Now that's not fair. The truth is —’

'Skip it, skip it. Okay, go find Willis.’

Jim left Frank to clean up the litter of breakfast and set out. Although he was never able thereafter to give a fully coherent account of just what happened to him on this errand, certain gross facts are clear. He started by looking for Gekko, asking for him of the first Martian he met in the corridors by the barbarous expedient of voicing the general inquiry followed by Gekko's name.

Jim was not and probably never would be a competent linguist, but his attempt worked. The first Martian he encountered took him to another, as an Earthly citizen might lead a foreigner to a policeman. This Martian took him to Gekko.

Jim had no great trouble in explaining to Gekko that he wanted Willis returned to him. Gekko listened, then explained gently that what Jim wanted was impossible.

Jim started over again, sure that his own poor command of the language had caused misunderstanding. Gekko let him finish, then made it quite clear that he understood correctly what it was that Jim wanted, but that Jim could not have it—could not have Willis. No. Gekko was sorrowful to have to refuse his friend with whom he had shared the pure water of life, but this thing could not be.

Under the direct influence of Gekko's powerful personality Jim understood most of what was said and guessed the rest. Gekko's refusal was unmistakable. It is not important that Jim did not have his gun with him; Gekko could not inspire the hatred in him that Howe did. For one thing Gekko's warm sympathy poured over him in flood; nevertheless Jim was thunderstruck, indignant, and quite unable to accept the verdict. He stared up at the Martian for a long moment. Then he walked away abruptly, not choosing his direction and shouting for Willis as he did so. ‘Willis! Oh, Willis! Here, Willis boy—come to Jim!’

The Martian started after him, each stride three of Jim's. Jim ran, still shouting. He turned a corner, came face to face with three natives and darted between their legs and beyond. Gekko got into a traffic jam with them which required timewasting exercise of Martian protocol to straighten out. Jim got considerably ahead.

He stuck his head into every archway he came to and shouted. One such led into a chamber occupied by Martians frozen in that trancelike state they call visiting the ‘other world'. Jim would no more have disturbed a Martian in a trance, ordinarily, than an American western frontier child would have teased a grizzly—but he was in no shape to care or notice; he shouted in there, too, thereby causing an unheard-of and unthinkable disturbance. The least response was violent trembling; one poor creature was so disturbed that he lifted abruptly all of his legs and fell to the floor.

Jim did not notice; he was already gone, shouting into the next chamber.

Gekko caught up with him and scooped him up with two great hand flaps. ‘Jim-Marlowe!’ he said. ‘Jim-Marlowe, my friend —’

Jim sobbed and beat on the Martian's hard thorax with both his fists. Gekko endured it for a moment, then wrapped a third palm flap around Jim's arms, securing him. Jim looked wildly up at him. ‘Willis,’ he said in his own language, ‘I want Willis. You've got no right!’

Gekko cradled him and answered softly, ‘I have no power. This is beyond me. We must go to the other world.’ He moved away. Jim made no answer, tired by his own outburst. Gekko took a ramp downward, then another and another. Down and down he went, much deeper than Jim had ever been before, deeper perhaps than any terrestrial had ever been. On the upper levels they passed other Martians; farther down there were none.

At last Gekko halted in a small chamber far underground. It was exceptional in that it was totally without decoration; its plain, pearl-gray walls seemed almost unMartian. Gekko laid Jim on the floor here and said, ‘This is a gate to the other world,’

Jim picked himself up. ‘Huh?’ he said. ‘What do you mean?’ and then carefully rephrased the question in the dominant tongue. He need not have bothered; Gekko did not hear him.

Jim craned his neck and looked up. Gekko stood utterly motionless, all legs firmly planted. His eyes were open but lifeless. Gekko had crossed over into the ‘other world'.

'For the love of Mike,’ Jim fretted, ‘he sure picks a sweet time to pull a stunt like that.’ He wondered what he ought to do, try to find his way to the upper levels alone or wait for Gekko. Natives were reputed to be able to hold a trance for weeks at a time, but Doc MacRae had pooh-poohed such stories.

He decided to wait for a while at least and sat down on the floor, hands clasped around his knees. He felt considerably calmed down and in no special hurry, as if Gekko's boundless calm had flowed over into him while the native had carried him.

After a while, an indefinitely long while, the room grew darker. Jim was not disturbed; he was vastly content, feeling again the untroubled happiness that he had known in his two experiences of ‘growing together'.

A tiny light appeared at great distance in the darkness and grew. But it did not illuminate the small pearl-grey room; it built up an outdoor scene instead. It was as if a stereo-movie projector were being used to project New Hollywood's best work, in full, natural colour. That it was not an importation from Earth Jim knew, for the scene, while utterly realistic, had no slick commercial finish, no plot.

He seemed to be seeing a grove of canal plants from a viewpoint about a foot off the ground. The viewpoint shifted steadily and erratically as if the camera were being trucked on a very low dolly here and there through the stalks of the canal plants. The viewpoint would shift quickly for a few feet, stop, then change direction and move again, but it never got very far off the ground. Sometimes it would wheel in a full circle, a panorama of three hundred and sixty degrees.

It was during one of these full rotations that he caught sight of a waterseeker.

It would not have been strange if he had not recognized it as such, for it was enormously magnified. As it charged in, it filled the entire screen. But it was impossible not to recognize those curving scimitar claws, the grisly horror of the gaping sucker orifice, those pounding legs—and most particularly the stomach-clutching revulsion the thing inspired. Jim could almost smell it.

The viewpoint from which he saw it did not change; it was frozen to one spot while the foul horror rushed directly at him in the final death charge. At the last possible instant, when the thing filled the screen, something happened. The face—or where the face should have been—disappeared, went to pieces, and the creature collapsed in a blasted ruin.

The picture was wiped out completely for a few moments, replaced by whirling coloured turmoil. Then a light, sweet voice said, ‘Well, aren't you the cute little fellow!’ The picture built up again as if a curtain had been lifted and Jim stared at another face almost as grotesque as the faceless horror it replaced.

Although this face occupied the whole screen and was weirdly distorted, Jim had no trouble in placing it as a colonial's respirator mask. What startled him almost out of the personal unawareness with which he was accepting this shadow show was that he recognized the mask. It was decorated with the very tiger stripes that Smythe had painted out for a quarter credit; it was his own, as it used to be.

He heard his own voice say, ‘You're too little to be wandering around by yourself; another one of those vermin might really get you. I think I'll take you home.’

The scene went swinging through the canal growth at a greater height, hobbling up and down to the boy's steps. Presently the point of view came out into open country and showed in the distance the star-shaped lay-out and bubble domes of South Colony.

Jim adjusted to the idea of watching himself, hearing himself, and accepted the notion of seeing things from Willis's viewpoint. The record was quite unedited; it pushed forward in a straight line, complete recollection of everything Willis had seen and heard from the time Jim had first taken him under his protection. Willis's visual recollections were not entirely accurate; they seemed to be affected by his understanding of what he saw and how used to it he was. Jim—the ‘Jim’ in the shadow show—at first seemed to have three legs; it was some time before the imaginary excrescence vanished. Other actors, Jim's mother, old Doc MacRae, Frank, developed from formless shapes to full though somewhat distorted representations.

On the other hand, every sound was heard with great clarity and complete accuracy. As Jim listened and watched he found that he was savouring sounds of every sort and most especially voices with a new and rich delight.

Most especially he enjoyed seeing himself as Willis saw him. With affection and warm humour he saw himself stripped of dignity but clothed in a lively regard; he was loved but not respected. He, Jim himself, was a great bumbling servant, helpful but maddeningly unreliable in his attentions, like a poorly trained dog. As for other human beings, they were curious creatures, harmless on the whole, but unpredictable traffic hazards. This bouncer-eye view of people amused Jim mightily.

Day by day and week by week the account unfolded, even to the periods of dark and quiet when Willis chose to sleep or was shut up. It carried on to Syrtis Minor and into a bad time when Jim was missing. Howe appeared as a despised voice and a pair of legs; Beecher was a faceless nonentity. It continued, step by step, and somehow Jim was neither tired nor bored. He was simply in the continuity and could no more escape from it than could Willis—nor did it occur to him to try. At last it wound up in the Martian city of Cynia and ended in a period of dark and quiet.

Jim stretched his cramped legs; the light was returning. He looked around but Gekko was still deep in his trance. He looked back and found that a door had opened in what had appeared to be blank wall. He looked through and into a room beyond, decorated as Martian rooms so frequently are in careful imitation of an outdoor scene—lush countryside more like the sea bottoms south of Cynia than like the desert.

A Martian was in the room. Jim was never able afterwards to visualize him completely for his face and particularly his eyes compelled attention. An Earthling has no good way to estimate the age of a Martian, yet Jim had the unmistakable impression that this Martian was very old—older than his father, older even than Doc MacRae.

'Jim Marlowe,' the native said in clear tones. 'Welcome, Jim Marlowe, friend of my people and friend of mine. I give you water.' He spoke in Basic English, in an accent vaguely familiar.

Jim had never heard a Martian speak an Earthly tongue before, but he knew that some of them did speak Basic. It was a relief to be able to answer in his own speech. 'I drink with you. May you ever enjoy pure and plentiful water.'

'I thank you, Jim Marlowe.' No actual water was used and none was needed. There followed a polite period of quiet, during which Jim thought about the Martian's accent. It was oddly familiar; it put him in mind of his father's voice, again it sounded like Doc MacRae.

'You are troubled, Jim Marlowe. Your unhappiness is ours. How may I help you?'

'I don't want anything,' Jim answered, 'except to go home and take Willis with me. They took Willis away. They shouldn't have done that.'

The silence that followed was even longer than before. At last the Martian answered, 'When one stands on the ground, one may not see over the horizon—yet Phobos sees all horizons.' He hesitated a moment before the word 'Phobos'. As if in afterthought he added, 'Jim Marlowe, I have but lately learned your tongue. Forgive me if I stumble.'

'Oh, you speak it beautifully!' Jim said quite sincerely.

'The words I know; the pictures are not clear. Tell me, Jim Marlowe, what is the london-zoo?'

Jim had to ask him to repeat it before it was clear that the Martian asked about the London Zoo. Jim tried to explain, but broke off before he had finished elaborating the idea. The Martian radiated such cold, implacable anger that Jim was frightened.

After a time the Martian's mood changed abruptly and Jim was again bathed in a warm glow of friendliness that poured out of his host like rays from the Sun and was as real as sunshine to Jim. 'Jim Marlowe, twice you have saved the little one whom you call Willis from —' He used first a Martian term not known to Jim, then changed it to 'waterseekers'. 'Have you killed many such?'

'Uh, quite a few, I guess,' Jim answered, then added, 'I kill 'em whenever I see 'em. They're getting too smart to hang around the colonies much.'

The Martian appeared to be thinking this over, but when he got around to answering he had again changed the subject. 'Jim Marlowe, twice, perhaps three times, you have saved the little one; once, perhaps twice, our little one has saved you. Each time you have grown closer together. Day by day you have grown together until neither one of you is complete without the other. Do not leave here, Jim Marlowe. Stay. You are welcome in my house, a son and a friend.'

Jim shook his head. 'I have to go home. In fact I have to go home right away. It's a mighty kind offer and I want to thank you but —' He explained as clearly as he could the threat to the welfare of the colony and the urgent need for him to carry the message. 'If you please, sir, we—my friend and I—would like to be taken back where K'boomch found us. Only I want Willis back before we go.'

'You wish to go back to the city where you were found? You do not wish to go home?'

Jim explained that Frank and he would go home from there. 'Now, sir, why don't you ask Willis whether or not he wants to stay or to go home with me?'

The old Martian sighed exactly as Jim's father had been known to sigh after a fruitless family discussion. 'There is a law of life and a law of death and both are the law of change. Even the hardest rock is worn away by the wind. You understand my son and friend, that even if the one you call Willis returns with you, there will come a time when the little one *must* leave you?'

'Uh, yes, I guess so. You mean Willis can come home with me?'

'We will speak to the one you call Willis.'

The old one spoke to Gekko, who stirred and muttered in his sleep. Then the three of them wound back up the ramps, with Gekko carrying Jim and the old one following a little behind.

They stopped in a chamber about half way up to the surface. The room was dark when they reached it but it became illuminated as soon as the party entered. Jim saw that the place was lined, floor to ceiling, with little niches and each niche contained a bouncer, as similar, each to the other, as identical twins.

The little fellows raised their eye stalks when the light came on and peered interestedly around. From somewhere in the room came a shout of 'Hi, Jim boy!'

Jim looked around but could not pick out the bouncer that had spoken. Before he could do anything about it the phrase had echoed round the room. 'Hi, Jim boy! Hi, Jim boy! Hi, Jim boy!' each time in Jim's own voice, as borrowed by Willis.

Jim turned to Gekko in bewilderment. 'Which one is Willis?' he demanded, forgetting to speak in the dominant tongue.

The chorus started up again, 'Which one is Willis? Which one is Willis? Which—Which—Which one is Willis?'

Jim stepped out into the middle of the room. 'Willis!' he commanded, ‘come to Jim.’

Off to his right a bouncer popped out from a middle tier, landed on the floor, and waddled up to him. ‘Pick up Willis,’ it demanded. Gratefully, Jim did so.

'Where Jim boy been?’ Willis wanted to know.

Jim scratched the bouncer. ‘You wouldn't understand if I told you. Look, Willis—Jim is about to go home. Does Willis want to go home with him?’

'Jim go?’ Willis said doubtfully, as if the unrelenting echoing chorus had made it hard for him to understand.

'Jim go home, right away. Is Willis coming or is Willis going to stay here?’

'Jim go; Willis go,’ bouncer announced, stating it as a law of nature.

'Okay, tell Gekko that.’

'Why?’ Willis asked suspiciously.

'Tell Gekko that, or you'll get left behind. Go on, tell him.’

'Okay.’ Willis addressed Gekko in a series of clucks and croaks. Neither the old Martian nor Gekko made any comment; Gekko picked up the two smaller creatures and the procession continued on up toward the surface. Gekko put them down outside the room assigned to Frank and Jim. Jim carried Willis inside.

Frank looked up as they came in. He was sprawled on the silks and, arranged beside him on the floor, was a meal, as yet untouched. ‘Well, I see you found him,’ he commented. ‘It sure took you long enough.’

Jim was suddenly overcome with remorse. He had been gone goodness knows how long. Days? Weeks? That moving-picture thing had covered months, in detail. ‘Gee, Frank, I'm sorry,’ he apologized. ‘Were you worried about me?’

'Worried? What for? I just didn't know whether or not to wait lunch on you. You must have been gone at least three hours.’

Three hours? Jim started to object that it had been more like three weeks, then thought better of it. He recalled that he had not eaten while away, nor did he feel anything more than normally hungry.

'Uh—Yeah, sure. Sorry. Look, do you mind waiting lunch a bit longer?’

'Why? I'm starved.’

'Because we're leaving, that's why. Gekko and another native are waiting to take us back to that town where K'boomch found us.’

'Well—Okay!’ Frank stuffed his mouth full and started to pull on his outdoor suit.

Jim imitated him, both as to eating and dressing. ‘We can finish lunch in the subway dingus,’ he said, mumbling with his mouth full.

‘Don't forget to fill your mask reservoir.’

'Don't worry. I won't pull that stunt twice.’ Frank filled his tank and Jim's, took a big drink of water, and offered the rest to Jim. Moments later they slung their skates over their shoulders and were ready to leave. The party filed through ramps and corridors to the ‘subway station’ hall and stopped at one of the archways.

The old Martian went inside, but, somewhat to Jim's surprise, Gekko bade them goodbye. They parted with ritualistic exchange of courtesies appropriate to water friends, then Frank and Jim, with Willis, went inside and the door closed behind them.

The car started up at once. Frank said, ‘Wups! what is this?’ and sat down suddenly. The old Martian, secure on the resting frame, said nothing. Jim laughed.

'Don't you remember the last ride?’

'Not very well. Say, I feel heavy.’

'So do I. That's part of the ride. Now how about a bite to eat? It may be a long time before we get another decent meal.’

Frank got out the remainder of their lunch. When they had finished Frank thought about it and opened another can. Before they had had a chance to eat its contents—cold baked beans and surrogate pork—his stomach suddenly did a flipflop. ‘Hey!’ he yelped. ‘What's happened?’

'Nothing. It was like that last time.’

'I thought we had plowed into something.’

'No, it's all right, I tell you. Hand me over some of those beans.’ They ate the beans and waited; after a time the feeling of extra weight left them and Jim knew that they had arrived.

The door of the car compartment opened and they stepped out into a circular hall exactly like the one they had left. Frank looked around in disappointment. ‘Say, Jim—we haven't gone any place. There's some mistake.’

'No, there's not.’ He turned, intending to speak to the old Martian, but the archway door behind them was already closed. ‘Oh, that's too bad,’ he said.

'What's too bad? That they gave us a run-around?’

'They didn't give us a run-around; it's just that this room looks like the one back in Cynia. You'll see when we get up to the surface. No, I was saying too bad because I let —’ Jim hesitated, realizing that he had never gotten the old Martian's name. ‘— because I let the old fellow, not Gekko, the other one, get away without saying goodbye.’

'Who?’

'You know, the other one. The one that rode with us.’

'What do you mean, the other one? I didn't see anybody but Gekko. And nobody rode with us; we were in there by ourselves.’

'Huh? You must be blind.'

'You must be nuts.'

'Frank Sutton, do you mean to stand there and tell me you didn't see the Martian that rode with us?'

'You heard me the first time.'

Jim took a deep breath. ‘Well, all I've got to say is: if you hadn't had your face buried in your food the whole time and had looked around you occasionally, you'd see more. How in —'

'Forget it, forget it,' Frank interrupted, ‘before you get me sore. There were six Martians, if you like it that way. Let's get on up and outside and see what the score is. We're wasting time.'

'Well, all right.' They started up the ramps. Jim was very silent; the incident bothered him more than it did Frank.

Part way up they were forced to adjust their masks. Ten minutes or so thereafter they reached a room into which the sunlight came flooding; they hurried through it and outdoors.

A moment later it was Frank's turn to be puzzled and uncertain. ‘Jim, I know I was lightheaded at the time but wasn't, uh—wasn't that town we started from just a one-tower burg?'

'It was.'

'This one isn't.'

'No, it isn't.'

'We're lost.'

'That's right.'

9
Politics

They were in a large enclosed courtyard, such as characterizes many Martian buildings. They could make out the tops of the towers of the city, or some of them, but their view was much restricted.

'What do you think we ought to do?' asked Frank.

'Mmm ... try to find a native and see if we can find out where we've landed. I wish I hadn't let the old fellow get away from us,' Jim added. 'He spoke Basic.'

'You still harping on that?' said Frank. 'Anyway I don't think our chances are good; this place looks utterly deserted. You know what I think? I think they've just dumped us.'

'I think they've just dumped us,' agreed Willis.

'Shut up. They wouldn't do that,' Jim went on to Frank in worried tones. He moved around and stared over the roof of the building. 'Say, Frank —'

'Yes?'

'You see those three little towers, just alike? You can just make out their tips.'

'Well? What about them?'

'I think I've seen them before.'

'Say, I think I have, too!'

They began to run. Five minutes later they were standing on the city wall and there was no longer any doubt about it; they were in the deserted part of Charax. Below them and about three miles away were the bubble domes of South Colony.

Forty minutes of brisk walking, varied with dogtrotting, got them home.

They split up and went directly to their respective homes. 'See you later!' Jim called to Frank and hurried away to his father's house. It seemed to take forever for the pressure lock to let him through. Before the pressure had equalized he could hear his mother, echoed by his sister, inquiring via the announcing speaker as to who was at the door, please?—he decided not to answer but to surprise them.

Then he was inside, facing Phyllis whose face was frozen in amazement—only to throw herself around his neck while shouting, 'Mother! Mother! Mother! It's Jim! It's Jim!' and Willis was bouncing around the floor and chorusing ‘It's Jim! It's Jim!’ and his mother was crowding Phyl aside and hugging him and getting his face wet with her tears and Jim himself wasn't feeling any too steady.

He managed to push them away presently. His mother stood back a little and said, ‘Just let me look at you, darling. Oh, my poor baby! Are you all right?’ She was ready to weep again.

'Sure, I'm all right,’ Jim protested. ‘Why shouldn't I be? Say, is Dad home?’

Mrs Marlowe looked suddenly apprehensive. ‘No, Jim, he's at work.’

'I've got to see him right away. Say, Mom, what are you looking funny about?’

'Why, because—Uh, nothing. I'll call your father right away.’ She went to the phone and called the ecological laboratory. He could hear her guarded tones: ‘Mr Marlowe? Dear, this is Jane. Could you come home right away?’ and his father's reply, ‘It wouldn't be convenient. What's up? You sound strange.’

His mother glanced over her shoulder at Jim. ‘Are you alone? Can I be overheard?’ His father answered, ‘What's the matter? Tell me.’ His mother replied, almost in a whisper, ‘He's home.’

There was a short silence. His father answered, ‘I'll be there right away.’

In the meantime Phyllis was grilling Jim. ‘Say, Jimmy, what in the world have you been doing?’

Jim started to answer, thought better of it. ‘Kid, you wouldn't believe me if I told you.’

'I don't doubt that. But what *have* you been doing? You've sure got folks in a stew.’

'Never mind. Say, what day is it?’

'Saturday.’

'Saturday the what?’

'Saturday the fourteenth of Ceres, of course.’

Jim was startled. Four days? Only four days since he had left Syrtis Minor? Then as he reviewed it in his mind, he accepted it. Granting Frank's assertion that the time he had spent down under Cynia was only three hours or so, the rest added up. ‘Gee! I guess I'm in time then.’

'What do you mean, in time?’

'Huh? Oh, you wouldn't understand it. Wait a few years.’

'Smarty!’

Mrs Marlowe came away from the phone. ‘Your father will be right home, Jim.’

'So I heard. Good.’

She looked at him. ‘Are you hungry? Is there anything you would like?’

'Sure, fatted calf and champagne. I'm not really hungry, but I could stand something. How about some cocoa? I've been living on cold stuff out of cans for days.’

'Cocoa there shall be.’

'Better eat what you can now,’ put in Phyllis. ‘Maybe you won't get what you want to eat when —’

'Phyllis!’

'But, Mother, I was just going to say that —’

'Phyllis—keep quiet or leave the room.’

Jim's sister subsided with muttering. Shortly the cocoa was ready and while Jim was drinking it his father came in. His father shook hands with him soberly as if he were a grown man. ‘It's good to see you home, Son.’

'It feels mighty good to be home, Dad.’ Jim gulped the rest of the cocoa. ‘But look, Dad, I've got a lot to tell you and there isn't any time to waste. Where's Willis?’ He looked around. ‘Anybody see where he went?’

'Never mind Willis. I want to know —’

'But Willis is essential to this, Dad. Oh, Willis! Come here!’ Willis came waddling out of the passageway; Jim picked him up.

'All right; you've got Willis,’ Mr Marlowe said. ‘Now pay attention. What is this mess you are in, Son?’

Jim frowned. ‘It's a little hard to know where to start.’

'There's a warrant out for you and Frank!’ blurted out Phyllis.

Mr Marlowe said, ‘Jane, will you please try to keep your daughter quiet?’

'Phyllis, you heard what I said before!’

'Aw, Mother, everybody knows it!’

'Possibly Jim did not know it.’

Jim said, ‘Oh, I guess I did. They had cops chasing us all the way home.’

'Frank came with you?’ asked his father.

'Oh, sure! But we gave ‘em the slip. Those Company cops are stupid.’

Mr Marlowe frowned. ‘See here, Jim—I'm going to call up the Resident and tell him you are here. But I'm not going to let you surrender until something a lot more definite is shown to me than I have seen so far, and certainly not until we've had your side of the matter. When you do surrender, Dad will go along with you and stick by you.’

Jim sat up straight. ‘Surrender? What are you talking about, Dad?’

His father suddenly looked very old and tired. ‘Marlowes don't run away from the law, Son. You know I'll stick by you no matter what you've done. But you've got to face up to it.'

Jim looked at his father defiantly. 'Dad, if you think Frank and I have beaten our way across better than two thousand miles of Mars just to give up when we get here—well, you've just got another think coming. And anybody that tries to arrest me is going to find it a hard job.' Phyllis was listening round-eyed; his mother was quietly dripping tears.

His father said, 'Son, you can't take that attitude.'

Jim said, 'Can't I? Well, I do. Why don't you find out what the score is before you talk about giving me up?' His voice was a bit shrill.

His father bit his lip. His mother said, 'Please, James—why don't you wait and hear what he has to say?'

'Of course I want to hear what he has to say,' Mr Marlowe answered irritably. 'Didn't I say that? But I can't let my own son sit there and declare himself an outlaw.'

'Please, James!'

'Speak your piece, Son.'

Jim looked around. 'I don't know as I'm so anxious to, now,' he said bitterly. 'This is a fine homecoming. You'd think I was a criminal or something.'

'I'm sorry, Jim,' his father said slowly. 'Let's keep first things first. Tell us what happened.'

'Well ... all right. But wait a minute—Phyllis said there was a warrant out for me. For what?'

'Well ... truancy—but that's not important. Actions to the prejudice of good order and discipline at the school and I myself don't know what they mean by that. It doesn't worry me. But the real charges are burglary and theft—and another one they tacked on a day later, escaping arrest.'

'Escaping arrest? That's silly! They never caught us.'

'So? How about the others?'

'Theft is silly, too. I didn't steal anything from *him*—Howe, I mean, Headmaster Howe—he stole Willis from *me*. And then he laughed at me when I tried to get him back! I'll theft him!'

'Go on with your story.'

'The burglary business has got something to it. I busted in to his office, or tried to. But he can't prove anything. I'd like to see him show how I could crawl through a ten-inch round hole. And we didn't leave any fingerprints.' He added, 'Anyhow, I had a right to. He had Willis locked up inside. Say, Dad, can't we swear out a warrant against Howe for stealing Willis? Why should he have it all his own way?'

'Wait a minute, now. You've got me confused. If you have a cause for action against the headmaster, I'll certainly back you up in it. But I want to get things straight. What hole? Did you cut a hole in the headmaster's door?’

'No, Willis did.’

'Willis! How can he cut anything?’

'Darned if I know. He just grew an arm with a sort of a claw on the end and cut his way out. I called to him and out he came.’

Mr Marlowe rubbed his forehead. ‘This gets more confusing all the time. How did you boys get here?’

'By subway. You see —’

'By subway!’

Jim looked thwarted. His mother put in, ‘James dear, I think perhaps he could tell his story better if we just let him tell it straight through, without interrupting.’

'I think you are right,’ Mr Marlowe agreed. ‘I'll reserve my questions. Phyllis, get me a pad and pencil.’

Thus facilitated, Jim started over and told a reasonably consecutive and complete story, from Howe's announcement of military-school inspections to their translation via Martian ‘subway’ from Cynia to Charax. When Jim had done, Mr Marlowe pulled his chin. ‘Jim, if you didn't have a lifetime reputation for stubborn honesty, I'd think you were romancing. As it is, I have to believe it, but it is the most fantastic thing I ever heard.’

'You still think I ought to surrender?’

'Eh? No, no—this puts it in a different light. You leave it up to Dad. I'll call the Resident and —’

'Just a second, Dad.’

'Eh?’

'I didn't tell you all of it.’

'What? You must, Son, if I am to —’

'I didn't want to get my story fouled up with another issue entirely. I'll tell you, but I want to know something. Isn't the colony supposed to be on its way by now?’

'It was supposed to have been,’ agreed his father. ‘Migration would have started yesterday by the original schedule. But there has been a two weeks’ postponement.’

'That's not a postponement, Dad; that's a frame up. The Company isn't going to allow the colony to migrate this year. They mean to make us stay here all through the winter.’

'What? Why, that's ridiculous, Son; a polar winter is no place for terrestrials. But you are mistaken, it's just a postponement; the Company is revamping the power system at North Colony and is taking advantage of an unusually late winter to finish it before we get there.’

'I'm telling you, Dad, that's just a stall. The plan is to keep the colony here until it's too late and force you to stay here through the winter. I can prove it.'

'How?'

'Where's Willis?' The bouncer had wandered off again, checking up on his domain.

'Never mind Willis. You've made an unbelievable charge. What makes you think such a thing? Speak up, Son.'

'But I've got to have Willis to prove it. Here, boy! Come to Jim.' Jim gave a rapid summary of what he had learned through Willis's phonographic hearing, following which he tried to get Willis to perform.

Willis was glad to perform. He ran over almost all of the boys' conversation of the past few days, repeated a great amount of Martian speech that was incomprehensible out of context, and sang *¿Quién es la Señorita?* But he could not, or would not, recall Beecher's conversation.

Jim was still coaxing him when the phone sounded. Mr Marlowe said, 'Phyllis, answer that.'

She trotted back in a moment. 'It's for you, Daddy.'

Jim shut Willis up; they could hear both ends of the conversation. 'Marlowe? This is the Resident Agent. I hear that boy of yours has turned up.'

Jim's father glanced over his shoulder, hesitated. 'Yes. He's here.'

'Well, keep him there. I'm sending a man over to pick him up.'

Mr Marlowe hesitated again. 'That's not necessary, Mr Kruger. I'm not through talking with him. He won't go away.'

'Come, come, Marlowe—you can't interfere with orderly legal processes. I'm executing that warrant at once.'

'You are? You just think you are.' Mr Marlowe started to add something, thought better of it, and switched off. The phone sounded again almost at once. 'If that's the Resident,' he said, 'I won't speak to him. If I do, I'll say something I'll regret.'

But it was not; it was Frank's father. 'Marlowe? Jamie, this is Pat Sutton.' The conversation showed that each father had gotten about to the same point with his son.

'We were just about to try to get something out of Jim's bouncer,' Mr Marlowe added. 'It seems he overheard a pretty damning conversation.'

'Yes, I know,' agreed Mr Sutton. 'I want to hear it, too. Hold it till we get there.'

'Fine. Oh, by the way—friend Kruger is out to arrest the kids right away. Watch out.'

'How well I know it; he just called me. And I put a flea in his ear. 'Bye now!'

Mr Marlowe switched off, then went to the front door and locked it. He did the same to the door to the tunnels. He was none too soon; the signal showing that someone had entered the pressure lock came on shortly. ‘Who is it?’ called out Jim's father.

'Company business!’

'What sort of Company business and who is it?’

'This is the Resident's proctor. I've come for James Marlowe, Junior.’

'You might as well go away again. You won't get him.’ There was a whispered exchange outside the door, then the lock was rattled.

'Open up that door,’ came another voice. ‘We have a warrant.’

'Go away. I'm switching off the speaker.’ Mr Marlow did so.

The pressure lock indicator showed presently that the visitors had left, but shortly it indicated occupancy again. Mr Marlowe switched the speaker back on. ‘If you've come back, you might as well leave,’ he said.

'What sort of a welcome is this, Jamie my boy?’ came Mr Sutton's voice.

'Oh, Pat! Are you alone?’

'Only my boy Francis and that's all.’

They were let in. ‘Did you see anything of proctors?’ Mr Marlowe inquired.

'Yep, I ran into ‘em.’

'Pop told them that if they touched me he'd make them sorry,’ Frank said proudly, ‘and he would, too.’

Jim caught his father's eye. Mr Marlowe looked away. Mr Sutton went on, ‘Now what's this about Jim's pet having evidence for us? Let's crank him up and hear him talk.’

'We've been trying to,’ Jim said. ‘I'll try again. Here, Willis —’ Jim took him in his lap. ‘Now, look, Willis, do you remember Headmaster Howe?’

Willis promptly became a featureless ball.

'That's not the way to do it,’ objected Frank. ‘You remember what set him off before. Hey, Willis.’ Willis extended his eyes. ‘Listen to me, chum. Good afternoon. Good afternoon, Mark,’ Frank continued in a fair imitation of the Agent General's rich, affected tones.’ Sit down, my boy.’

'Always happy to see you,’ Willis continued in exact imitation of Beecher's voice. He went on from there, reciting perfectly the two conversations he had overheard between the headmaster and the Resident Agent General, and including the meaningless interlude between them.

When he had finished and seemed disposed to continue with all that had followed up to the present moment, Jim shut him off.

'Well,’ said Jim's father, ‘what do you think of it, Pat?’

'I think it's terrible,' put in Jim's mother.

Mr Sutton screwed up his face. 'Tomorrow I am taking myself down to Syrtis Minor and there I shall take the place apart with my two hands.'

'An admirable sentiment,' agreed Mr Marlowe, 'but this is a matter for the whole colony. I think our first step should be to call a town meeting and let everyone know what we are up against.'

'Humph! No doubt you are right but you'll be taking all the fun out of it.'

Mr Marlowe smiled. 'I imagine there will be excitement enough to suit you before this is over. Kruger isn't going to like it—and neither is the Honourable Mr Gaines Beecher.'

Mr Sutton wanted Dr MacRae to examine Frank's throat and Jim's father decided, over Jim's protest, that it would be a good idea to have him examine Jim as well. The two men escorted the boys to the Doctor's house. There Mr Marlowe instructed them, 'Stay here until we get back, kids. I don't want Kruger's proctors picking you up.'

'I'd like to see them try!'

'Me, too.'

'I don't want them to try; I want to settle the matter first. We're going over to the Resident's office and offer to pay for the food you kids appropriated and, Jim, I'll offer to pay for the damage Willis did to Headmaster Howe's precious door. Then —'

'But, Dad, we oughtn't to pay for that. Howe shouldn't have locked him up.'

'I agree with the kid,' said Mr Sutton. 'The food, now, that's another matter. The boys took it; we pay for it.'

'You're both right,' agreed Mr Marlowe, 'but it's worth it to knock the props out of these ridiculous charges. Then I'm going to swear out a warrant against Howe for attempting to steal, or enslave, Willis. What would you say it was, Pat? Steal, or enslave?'

'Call it steal; you'll not be raising side issues, then.'

'All right. Then I shall insist that he consult the planet office before taking any action. I think that will stop his clock for the time being.'

'Dad,' put in Jim, 'you aren't going to tell the Resident that we've found out about the migration frameup, are you? He would just turn around and call Beecher.'

'Not just yet, though he's bound to know at the town meeting. He won't be able to call Beecher then; Deimos sets in two hours.' Mr Marlowe glanced at his watch. 'See you later, boys. We've got things to do.'

Doctor MacRae looked up as they came in. 'Maggie, bar the door!' he called out. 'We've got two dangerous criminals.'

'Howdy, Doc.'

'Come in and rest yourselves. Tell me all about it.'

It was fully an hour later that MacRae said, 'Well, Frank, I suppose I had better look you over. Then I'll have a look at you, Jim.'

'There's nothing wrong with me, Doc.'

'Start some more coffee while I take care of Frank.' The room was well stocked with the latest diagnostic equipment, but MacRae did not bother with it. He tilted Frank's head back, told him to say *aaaah!,* thumped his chest, and listened to his heart. 'You'll live, he decided. 'Any kid who can hitchhike from Syrtis to Charax will live a long time.'

'Hitchhike?' asked Frank.

'Beat your way. It's an expression that was used way back when. Your turn, Jim.' He took even less time to dispose of Jim. Then the three friends settled back to visit.

'I want to know more about this night you spent in the cabbage head,' Doc announced. 'Willis can understand, since any Martian creature can tuck his tail in and live indefinitely without air. But by rights you two should have smothered. The plant closed up entirely?'

'Oh, yes,' Jim assured him, then related the event in more detail. When he got to the point about the flashlight MacRae stopped him.

'That's it, that's it. You didn't mention that before. The flashlight saved your lives, son.'

'Huh? How?'

'Photosynthesis. You shine light on green leaf and it can no more help taking in carbon dioxide and giving off oxygen than you can help breathing.' The doctor stared at the ceiling, his lips moving while he figured. 'Must have been pretty stuffy, just the same; you were short on green leaf surface. What kind of a torch was it?'

'A G.E. Midnight Sun. It *was* stuffy, terribly.'

'A Midnight Sun has enough candle power to do the trick. Hereafter I'll carry one if I'm going further than twenty feet from my front stoop. It's a good dodge.'

'Something that still puzzles me,' said Jim, 'is how I could see a movie that covered every bit of the time I've had Willis, minute by minute, without missing anything, and have it turn out to be only three or four hours.'

'That,' Doc said slowly, 'is not nearly so mysterious as the other matter, the matter of why you were shown this.'

'Huh?'

'I've wondered about that, too,' put in Frank. 'After all, Willis is a pretty insignificant creature—take it easy, Jim! What was the point in running over his biography for Jim? What do you think, Doc?'

'The only hypothesis I've got on that point is so wildly fantastic that I'll keep it to myself, thank you. But on the point of time, Jim—

can you think of any way to photograph a person's memories?’

'Uh, no.’

'I'll go further and state flatly that it is impossible. Yet you described *seeing* what Willis *remembered.* That suggest anything to you?’

'No,’ admitted Jim, ‘it's got me stumped. But I did see it.’

'Sure, you did—because seeing takes place in the brain and not in the eye. I can close my eyes and see the Great Pyramid shimmering in the desert heat. I can see the donkeys and hear the porters yelling at the tourists. See ‘em? Shucks, I can smell ‘em—but it's just memory. Now back to what I was saying, Jim. When only one hypothesis covers the facts, you've got to accept it. You saw what the old Martian wanted you to see. Call it hypnosis.’

'But—But —’ Jim was wildly indignant; it felt like an attack on his very inner being. ‘But I did see it, I tell you. I was there.’

'I'll string along with Doc,’ Frank told him. ‘You were still seeing things on the trip back.’

'The old boy did so make the trip back with us; if you had kept your eyes open, you would have seen him.’

'Easy there,’ cautioned Doc, ‘if you lugs want to fight, go outside. Has it occurred to you that both of you might be right?’

'What? How could we be?’ objected Frank.

'I don't like to put words to it, but I can tell you this: I've lived long enough to know that man does not live by bread alone and that the cadaver I perform an autopsy on is not the man himself. The most wildly impossible philosophy of all is materialism. We'll leave it at that.’

Frank was about to object again when the lock signalled visitors; the boys’ parents were back. ‘Come in, come in, gentlemen,’ the doctor roared. ‘You're just in time. We were having a go at solipsism. Pull up a pulpit and take part. Coffee?’

'Solipsism, is it?’ said Mr Sutton. ‘Francis, pay no mind to the old heathen. You listen to what Father Cleary tells you.’

'He'll pay no mind to me anyhow,’ MacRae answered. ‘That's the healthy thing about kids. How did you make out with the Lord High Executioner?’

Mr Marlowe chuckled. ‘Kruger was fit to be tied.’

The called meeting of the colonists took place that evening in the town hall, central building of the star-shaped group. Mr Marlowe and Mr Sutton, having sponsored the meeting, arrived early. They found the meeting-room doors closed and Kruger's two proctors posted outside. Mr Marlowe ignored the fact that they had been attempting to arrest Frank and Jim only a few hours ago; he offered them a civil good evening and said, ‘Let's get the place opened up. People will be arriving any minute now.’

The proctors did not move. The senior of them, a man named Dumont, announced, ‘There'll be no meeting tonight.’

'What? Why not?’

'Mr Kruger's orders.’

'Did he say why?’

'No.’

'This meeting,’ Mr Marlowe told him, ‘has been properly called and will be held. Stand aside.’

'Now, Mr Marlowe, don't make things tough for yourself. I've got my orders and —’

Mr Sutton crowded forward. ‘Let me handle him, Jamie.’ He hitched at his belt. Behind the men, Frank glanced at Jim with a grin and hitched at *his* belt. All four of them were armed, as were the proctors; the two fathers had decided not to depend on Kruger's self-restraint while waiting for instructions from Syrtis Minor about the warrant.

Dumont looked nervously at Sutton. The colony had no real police force; these two were clerks in the Company's office and proctors only by Kruger's deputization. ‘You people have got no call to be running around armed to the teeth, inside the colony,’ he complained.

'Oh, so that's it?’ Mr Sutton said sweetly. ‘Well this job calls for no gun. Here, Francis—hold my heater.’ With empty holster he advanced on them. ‘Now would you like to be tossed out gently or would you prefer to bounce?’

For years before coming to Mars Mr Sutton had used something other than his engineering degree to dominate tough construction gangs. He was not much bigger than Dumont but immeasurably tougher. Dumont backed into his cohort and stepped on his toes. ‘Now see here, Mr Sutton, you've no—Hey! Mr Kruger!’

They all looked around. The Resident was approaching. He took in the scene and said briskly, ‘What's this? Sutton, are you interfering with my men?’

'Not a bit of it,’ denied Mr Sutton. ‘They were interfering with me. Tell them to stand aside.’

Kruger shook his head. ‘The meeting is cancelled.’

Mr Marlowe stepped forward. ‘By whom?’

'*I* cancelled it.’

'By what authority? I have the approval of all councillors and will, if necessary, get you the names of twenty colonists.’ Twenty colonists could call a meeting without permission from the council, under the colony's rules.

'That's beside the point. The rule reads that meetings are to consider matters of public interest; it cannot be construed as of public interest to agitate about criminal indictments in advance of trial—and I won't let you take advantage of the rules to do so. After all, I have the final word. I do not intend to surrender to mob rule and agitation.'

A crowd was forming, colonists come to the meeting. Marlowe said, 'Are you through?'

'Yes, except to say that these others and you yourself should return to your quarters.'

'They will do as they please—and so will I. Mr Kruger, I am amazed to hear you say that a civil-rights case is not of public interest. Our neighbours here have boys who are still under the care, if you call it that, of Headmaster Howe; they are interested in how their sons are treated. However, that is not the purpose of the meeting. I give you my word that neither Mr Sutton nor I intend to ask the colony to take any action about the charges against our sons. Will you accept that and withdraw your proctors?'

'What is the purpose, then?'

'It's a matter of urgent interest to every member of the colony. I'll discuss it inside.'

'Hummph!'

By this time several councillors were in the crowd. One of them, Mr Juan Montez, stepped forward. 'Just a minute. Mr Marlowe, when you called me about this meeting, I had no notion that the Resident objected.'

'The Resident has no option in the matter.'

'Well, that's never come up before. He does have a veto over actions of meetings. Why don't you tell us what the meeting is for?'

'Don't give in, Jamie!' It was Doctor MacRae; he shouldered forward. 'What kind of nincompoop are you, Montez? I'm sorry I voted for you. We meet when it suits us, not when Kruger says we may. How about it, folks?'

There was a murmur of approval. Mr Marlowe said, 'I wasn't going to tell him, Doc. I want everybody here and the doors closed when I talk.'

Montez went into a huddle with other councillors. Out of it came Hendrix, the chairman. 'Mr Marlowe, just to keep things regular, will you tell the council why you want this meeting?'

Jim's father shook his head. 'You okayed the meeting. Otherwise I would have collected twenty signatures and forced a meeting. Can't you stand up to Kruger?'

'We don't need them, Jamie,' MacRae assured him. He turned to the crowd, now growing fast. 'Who wants a meeting? Who wants to hear what Marlowe has to tell us?'

'I do!' came a shout.

'Who's that? Oh—Kelly. All right, Kelly and I make two. Are there eighteen more here who don't have to ask Kruger for permission to sneeze? Speak up.'

There was another shout and another. 'That's three—and four.' Seconds later MacRae called off the twentieth; he turned to the Resident. 'Get your stooges out of that doorway, Kruger.'

Kruger sputtered. Hendrix whispered with him, then motioned the two proctors away. They were only too happy to treat this as a relayed order from Kruger; the crowd poured into the hall.

Kruger took a seat in the rear; ordinarily he sat on the platform.

Jim's father found that none of the councillors cared to preside; he stepped to the platform himself. 'Let's elect a chairman,' he announced.

'You run it, Jamie.' It was Doc MacRae.

'Let's have order, please. Do I hear a nomination?'

'Mr Chairman —'

'Yes, Mr Konski?'

'I nominate you.'

'Very well. Now let's have some others.' But there were none; he kept the gavel by unanimous consent.

Mr Marlowe told them that news had come to him which vitally affected the colony. He then gave the bald facts about how Willis had come into Howe's hands. Kruger stood up. 'Marlowe!'

'Address the chair, please.'

'Mr Chairman,' Kruger acceded sourly, 'you said this meeting was not to stir up sympathy for your son. You are simply trying to keep him from having to take his medicine. You —'

Mr Marlowe pounded his gavel. 'You're out of order. Sit down.'

'I won't sit down. You had the barefaced gall to —'

'Mr Kelly, I appoint you sergeant-at-arms. Keep order. Pick your own deputies.'

Kruger sat down. Mr Marlowe went on, 'This meeting has nothing to do with the charges against my son and Pat Sutton's boy, but the news I have came through them. You've all seen Martian roundheads —bouncers, the kids call them, and you know their amazing ability to repeat sounds. Probably most of you have heard my son's pet perform. It happened that this particular roundhead was within hearing when some things were discussed that we all need to know about. Jim— bring your pet here.'

Jim, feeling selfconscious, mounted the platform and sat Willis on the speaker's table. Willis looked around and promptly battened down all hatches. 'Jim,' his father whispered urgently, 'snap him out of it.'

'I'll try,' agreed Jim. 'Come on, boy. Nobody's going to hurt Willis. Come out; Jim wants to talk to you.'

His father said to the audience, 'These creatures are timid. Please be very quiet.' Then, 'How about it, Jim?'

'I'm trying.'

'Confound it, we should have made a recording.'

Willis chose this minute to come out of hiding. 'Look, Willis boy,' Jim went on, 'Jim wants you to talk. Everybody is waiting for Willis to talk. Come on, now. Good afternoon. Good afternoon, Mark.'

Willis picked it up. 'Sit down, my boy. Always happy to see you.' He went on, reeling off the words of Howe and Beecher.

Somebody recognized Beecher's voice; there was a muffled exclamation as he passed his knowledge on. Mr Marlowe made frantic shushing signs.

Presently, as Beecher was expounding by proxy his theory of 'legitimate graft', Kruger got up. Kelly placed hands on his shoulders and pushed him down. Kruger started to protest; Kelly placed a hand over Kruger's mouth. He then smiled; it was something he had been wanting to do ever since Kruger had first been assigned to the colony.

The audience got restless between the two significant conversations; Mr Marlowe promised by pantomime that the best was yet to come. He need not have worried; Willis, once wound up, was as hard to stop as an after-dinner speaker.

There was amazed silence when he had finished, then a murmur that became a growl. It changed to uproar as everyone tried to talk at once. Marlowe pounded for order and Willis closed up. Presently Andrews, a young technician, got the floor.

'Mr Chairman ... we know how important this is, if it's true—but how reliable is that beastie?'

'Eh? I don't think it's possible for one of them to repeat other than *verbatim.* Is there a psychological expert present who might give us an opinion? How about you, Dr Ibañez?'

'I agree, Mr Marlowe. A roundhead can originate speech on its mental level, but a speech such as we just heard is something it has listened to. It repeats parrot-fashion exactly what it has heard. I doubt if such a recording, if I may call it that, may be modified after it has been impressed on the animal's nervous system; it's an involuntary reflex—complicated and beautiful, but reflex nevertheless.'

'Does that satisfy you, Andy?'

'Uh, no. Everybody knows that a bouncer is just a superparrot and not smart enough to lie. But is that the Resident General's voice? It sounds like it, but I've only heard him over the radio.'

Someone called out, 'It's Beecher. I had to listen to his drivel often enough, when I was stationed at Syrtis.'

Andrews shook his head. 'Sure, it sounds like him, but we've got to *know*. It could be a clever actor.'

Kruger had been quiet, in a condition resembling shock. The revelation had come as a surprise to him, too, as Beecher had not dared trust anyone on the spot. But Kruger's conscience was not easy; there were telltale signs in his own despatch file that Willis's report was correct; migration required a number of routine orders from the planet office. He was uncomfortably aware that none of the proper groundwork had been laid if, as was the official claim, migration were to take place in less than two weeks.

But Andrews' comment gave him a straw to clutch. Standing, he said, 'I'm glad somebody has sense enough not to be swindled. How long did it take you to teach him that, Marlowe?'

Kelly said, 'Shall I gag him, chief?'

'No. This has to be met. I suppose it's a matter of whether or not you believe my boy and his chum. Do any of you wish to question them?'

A long, lean, lanky individual unfolded himself from a rear seat. 'I can settle it.'

'Eh? Very well, Mr Toland, you have the floor.'

'Got to get some apparatus. Take a few minutes.' Toland was an electronics engineer and sound technician.

'Oh—I think I see what you mean. You'll need a comparison model of Beecher's voice, won't you?'

'Sure. But I've got all I need. Every time Beecher made a speech, Kruger wanted it recorded.'

Volunteers were found to help Toland, then Marlowe suggested that it was time for a stretch. At once Mrs Pottle stood up. 'Mr Marlowe!'

'Yes, Mrs Pottle. Quiet, everybody.'

'I for one will not remain here one minute longer and listen to this nonsense! The idea of making such charges against dear Mr Beecher! To say nothing of what you let that awful man Kelly do to Mr Kruger! And as for that beast —' She pointed to Willis. 'It is utterly unreliable, as I know full well.' She paused to snort, then said, 'Come, dear,' to Mr Pottle, and started to flounce out.

'Stop her, Kelly!' Mr Marlowe went on quietly, 'I had hoped that no one would try to leave until we reached a decision. If the colony decides to act it may be to our advantage to keep it as a surprise. Will the meeting authorize me to take steps to see that no scooter leaves the colony until you have made up your minds about the issue?'

There was just one 'no', from Mrs Pottle. 'Conscript some help, Mr Kelly,' Marlowe ordered, 'and carry out the will of the meeting.'

'Right, chief!'

'You can go now, Mrs Pottle. Not you, Mr Kruger.' Mr Pottle hesitated in bewilderment, then trotted after his wife.

Toland returned and set up his apparatus on the platform. With

Jim's help, Willis was persuaded to perform again, this time into a recorder. Shortly Toland held up his hand. ‘That's enough. Let me find some matching words.’ He selected ‘colony', ‘company', ‘afternoon', and ‘Martian’ because they were easy to find in each recording, Willis's and an identified radio speech of the Resident General. Each he checked with care, throwing complex standing waves on the bright screen of an oscilloscope, waves that earmarked the peculiar timbre of an individual's voice as certainly as a fingerprint would identify his body.

At last he stood up. ‘It's Beecher's voice,’ he said flatly.

Jim's father again had to pound for order. When he had got it, he said, ‘Very well—what is your pleasure?’

Someone shouted, ‘Let's lynch Beecher.’ The chairman suggested that they stick to practical objectives.

Someone else called out, ‘What's Kruger got to say about it?’

Marlowe turned to Kruger. ‘Mr Resident Agent, you speak for the Company. What about it?’

Kruger wet his lips. ‘If one assumes that that beast is actually reporting statements of the Agent-General —’

'Quit stalling!’

'Toland proved it!’

Kruger's eyes darted around; he was faced with a decision impossible for a man of his temperament. ‘Well, it's really no business of mine,’ he said angrily. ‘I'm about to be transferred.’

MacRae got up. ‘Mr Kruger, you are custodian of our welfare. You mean to say you won't stand up for our rights?’

'Well, now, Doctor, I work for the Company. If this is its policy—and I'm not admitting it—you can't expect me to go against it.’

'I work for the Company, too,’ the Doctor growled, ‘but I didn't sell myself to it, body and soul.’ His eyes swept the crowd. ‘How about it, folks? Shall we throw him out on his ear?’

Marlowe had to bang for order. ‘Sit down, Doctor. We haven't time to waste on trivia.’

'Mr Chairman —’

'Yes, Mrs Palmer?’

'What do you think we ought to do?’

'I would rather that suggestions came from the floor.’

'Oh, nonsense—you've known about it longer than we have; you must have an opinion. Speak up.’

Marlowe saw that her wish was popular. ‘Very well, I speak for myself and Mr Sutton. By contract we are entitled to migrate and the Company is obligated to let us. I say go ahead and do so, at once.’

'I so move!’

'I second!’

'Question!'—'Question!'

'Is there debate?' asked Marlowe.

'Just a moment, Mr Chairman —' The speaker was one Humphrey Gibbs, a small precise individual. '— we are acting hastily and, if I may say so, not in proper procedure. We have not exhausted our possible reliefs. We should communicate with Mr Beecher. It may be that there are good reasons for this change of policy —'

'How are *you* going to like a hundred below?'

'Mr Chairman, I really must insist on order.'

'Let him have his say,' Marlowe ordered.

'As I was saying, there may be good reasons, but the Company board back on Earth is perhaps not fully aware of conditions here. If Mr Beecher is unable to grant us relief, then we should communicate with the board, reason with them. But we should not take the law into our own hands. If worst comes to worst, we have a contract; if forced to do so, we can always sue.' He sat down.

MacRae got up again. 'Anybody mind if I talk? I don't want to hog the proceedings.' Silence gave approval; he went on, 'So this pantywaist wants to sue! With the temperature outside a hundred and thirty below by the time he has exhausted his means—and us!—and with the rime frost a foot deep on the ground he wants it put on some judge's calendar, back on Earth, and hire a lawyer!

'If you want a contract enforced, you have to enforce it yourself. You know what lies behind this; it showed up last season when the Company cut down on the household allowance and started charging excess baggage. I warned you then—but the board was a hundred million miles away and you paid rather than fight. The Company hates the expense of moving us, but more important they are very anxious to move more immigrants in here faster than we can take them; they think they see a cheap way out by keeping both North Colony and South Colony filled up all the time, instead of building more buildings. As Sister Gibbs put it, they don't realize the conditions here and they don't know that we can't do effective work in the winter.

The question is not whether or not we can last out a polar winter; the Eskimo caretakers do that every season. It isn't just a matter of contract; it's a matter of whether we are going to be free men, or are we going to let our decisions be made for us on another planet, by men who have never set foot on Mars!

'Just a minute—let me finish! We are the advance guard. When the atmosphere project is finished, millions of others will follow. Are they going to be ruled by a board of absentee owners on Terra? Is Mars to remain a colony of Earth? Now is the time to settle it!'

There was dead silence, then scattered applause. Marlowe said, 'Is there more debate?’

Mr Sutton got up. ‘Doc has something there. It was never in my blood to love absentee landlords.’

Kelly called out, ‘Right you are, Pat!’

Jim's father said, ‘I rule that subject out of order. The question before the house is to migrate, at once, and nothing else. Are you ready for the question?’

They were—and it was carried unanimously. If any refrained from voting, at least they did not vote against. That matter settled, by another ballot they set up an emergency committee, the chairman to hold power subject to review by the committee, and the committee's decisions to be subject to review by the colony.

James Marlowe, Senior, was elected chairman. Dr MacRae's name was proposed but he refused to let it be considered. Mr Marlowe got even with him by sticking him on the committee.

South Colony held at the time five hundred and nine persons, from the youngest baby to old Doc MacRae. There were eleven scooters on hand; enough but barely enough to move everyone at one time, provided they were stacked almost like freight and each person was limited to a few pounds only of hand baggage. A routine migration was usually made in three or more sections, with extra scooters provided from Syrtis Minor.

Jim's father decided to move everyone at once and hoped that events would permit sending back for personal possessions. The squawks were many, but he stood by his guns, the committee ratified and no one tried to call a town meeting. He set dawn Monday as the zero hour.

Kruger was allowed to keep his office; Marlowe preferred to run the show from his own. But Kelly, who remained a sort of *de facto* chief of police, was instructed to keep a constant watch over him. Kelly called Marlowe Sunday afternoon. ‘Hey, chief, what do you know? A couple of Company cops just arrived by scooter to take your boy and the Sutton kid back to Syrtis.’

Marlowe considered it. Kruger must have phoned Beecher the moment he heard that the boys were home, he decided. ‘Where are they now?’

'Right here, in Kruger's office. *We* arrested *them.*'

'Bring them over. I'd like to question them.’

'Right.’

They showed up shortly, two very disgruntled men, disarmed and escorted by Kelly and an assistant. ‘That's fine, Mr Kelly. No, no need to stay—I'm armed.’

When Kelly and his deputy had left, one of the Company men said, ‘You can't get away with this, you know.’

'You're not hurt,' Marlowe said reasonably, 'and you'll get your guns back presently. I just want to ask you some questions.' But all he had gotten out of them, several minutes later, was a series of begrudged negative answers. The intracolony phone sounded again; Kelly's face appeared on the screen. 'Chief? You wouldn't believe it —'

'Wouldn't believe what?'

'That old fox Kruger has skipped in the scooter those two birds came in on. I didn't even know he could drive.'

Marlowe's calm face concealed his feelings. After a short time he answered, 'Departure time is stepped up to sundown, today. Drop everything and get the word around.' He consulted a chart. 'That's two hours and ten minutes from now.'

The squawks were louder even than before; nevertheless as the Sun touched the horizon, the first scooter got underway. The rest followed at thirty second intervals. As the Sun disappeared the last one shoved off and the colony was headed north on its seasonal migration.

10

'We're Boxed In!'

Four of the scooters were older types and slower, less than two hundred miles per hour top speed. They were placed in the van as pacesetters. Around midnight one of them developed engine trouble; the column had to slow down. About 3 am it quit completely; it was necessary to stop and distribute its passengers among the other scooters—a cold and risky business.

MacRae and Marlowe climbed back into the headquarters car, last in the column. The doctor glanced at his watch. 'Planning to stop in Hesperidum now, Skipper?' he asked as the scooter started up. They had passed Cynia station without stopping; Hesperidum lay a short distance ahead, with Syrtis Minor some seven hundred miles beyond it.

Marlowe frowned. 'I don't want to. If we lay over at Hesperidum, that means waiting until sundown for ice and a full day's loss of time. With Kruger ahead of us that gives Beecher a whole day in which to figure out a way to stop us. If I were sure the ice would hold after sunrise long enough for us to get there —' He stopped and chewed his lip.

Back at South Colony it was early winter and the canal ice would remain hard until spring, but here they were already close to the equator; the canals froze every night and thawed every day under the extreme daily changes in temperature permitted by Mars' thin blanket of air. North of the equator, where they were headed, the spring floods from the melting northern polar cap had already started; ice formed in the flooding canal currents at night, but it was floe ice, riding with the current, and night clouds helped to save the day time heat.

'Suppose you do go on through, what's your plan, Skipper?' MacRae persisted.

'Go straight to the boat basin, ramp the scooters, and load whatever boats are there. As soon as the ice is rotten enough for the boats to break through it, start them north. I'd like to have a hundred and fifty or so of us out of Syrtis Minor and headed north before Beecher recovers from his surprise. I haven't any real plan except to keep forcing events so that *he* doesn't have time to plan, either. I want to hand him a set of accomplished facts.'

MacRae nodded. 'Audacity, that's the ticket. Go ahead with it.'

'I want to, but I'm afraid of the ice. If a scooter breaks through there'll be people killed—and my fault.'

'Your drivers are smart enough to spread out in echelon once the Sun is up. Jamie, I found out a long time ago that you have to take some chances in this life. Otherwise you are just a vegetable, headed for the soup pot.' He paused and peered out past the driver. 'I see a light ahead that ought to be Hesperidum. Make up your mind, Jamie.'

Marlowe did not answer. After a time the light was behind them.

When the Sun came up Marlowe had his driver cut out of column and take the lead. It was near nine when they passed Syrtis Minor scooter station, without stopping. They ploughed on past the space port and turned right into the boat basin that marked the terminus of the main canal from the north. Marlowe's driver drove onto the ramp while still lowering his crawling gear, with no respect for his runners. The lead car crawled along the ramp and parked; the others closed in behind it.

Out of the headquarters car climbed Marlowe, Kelly, and MacRae, followed by Jim, carrying Willis. Other scooter doors opened and people started getting out. 'Tell them to get back into their cars, Kelly,' Mr Marlowe snapped. Hearing this, Jim placed himself behind his father and tried to avoid attracting attention.

Marlowe stared angrily at the basin. There was not a boat in it. Across the basin one small launch was drawn up on skids, its engine dismounted. Finally Marlowe turned to MacRae. 'Well, Doc, I'm up a tree; how do I get down?'

'You are no worse off than if you had stopped at Hesperidum.'

'And no better.'

A man came out of one of the row of warehouses ringing the basin and approached them. 'What's all this?' he inquired, staring at the parked scooters. 'A circus?'

'It's the seasonal migration.'

'Wondered when you folks were coming through. Hadn't heard anything about it.'

'Where are all the boats?'

'Still spread out here and there, at the Project camps mostly, I suppose. Not my responsibility. Better call the traffic office.'

Marlowe frowned again. 'At least you can tell me where the temporary quarters are.' To take care of the relays of colonists a warehouse was always set aside at each migration and fitted up as a barracks; the one Company hostelry, Hotel Marsopolis, had only twenty beds.

The man looked puzzled. 'Now that you mention it, I don't know of any such preparations being made. Looks like the schedule was kind of fouled up, doesn't it?'

Marlowe swore, realizing his question had been foolish. Beecher, of course, had made no preparations for a migration he did not intend to permit. 'Is there a phone around here?'

'Inside, in my office—I'm the warehouse storekeeper. Help yourself.'

'Thanks,' said Marlowe and started off, MacRae followed him.

'What's your plan, son?'

'I'm going to call Beecher.'

'Do you think that's wise?'

'Confound it, I've got to get those people out of those cars. There are young babies in there—and women.'

'They're safe.'

'Look, Doc, Beecher has got to do *something* about it, now that we're here.'

MacRae shrugged. 'You're the cook.'

Marlowe argued his way past several secretaries and finally got Beecher on the screen. The Agent General looked out at him without recognition. 'Yes? Speak up, my good man, what is this urgent business?'

'My name is Marlowe. I'm executive chairman of the colonists from South Colony. I want to know —'

'Oh, yes! The famous Mr Marlowe. We saw your tattered army coming through.' Beecher turned away and said something in an aside. Kruger's voice answered him.

'Well, now that we are here, what are you going to do about us?'

'Do? Isn't that obvious. As soon as the ice forms tonight you can all turn around and go back where you came from. All except you—you stay here for trial. And your son, if I recall correctly.'

Marlowe held his temper. 'That isn't what I mean. I want living space, with cooking and toilet accommodations, for five hundred people.'

Beecher waved the problem away. ‘Let them stay where they are. A day won't hurt them. Teach them a lesson.’

Marlowe started to answer, thought better of it and switched oft. ‘You were right, Doc. There was no point in talking with him.’

'Well—no harm done, either.’

They went outside, there to find that Kelly had strung a line of his deputies around the scooters. ‘After you went inside, Boss, I got uneasy, so I stationed some of the boys around.’

'You're a better general than I am,’ Marlowe told him. ‘Any trouble?’

'One of Beecher's cops showed up, but he went away again.’

'Why didn't you grab him?’ asked MacRae.

'Well, I wanted to,’ Kelly answered, ‘but he kept going when I yelled at him. I couldn't stop him without shooting, so I let him go.’

'Should have winged him,’ said MacRae.

'Should I have?’ Kelly said to Marlowe. ‘I was tempted to, but I didn't know where we stood. Is this a shooting war, or is it just a row with the Company?’

'You did right,’ Marlowe assured him. ‘There will be no shooting unless Beecher starts it.’ MacRae snorted. Marlowe turned to him. ‘You disagree?’

'Jamie, you put me in mind of a case I ran into in the American West. A respected citizen shot a professional gun-thrower in the back. When asked why he didn't give the other chap a chance to draw, the survivor said, Well, he's dead and I'm alive and that's how I wanted it to be. Jamie, if you use sportsmanship on a known scamp, you put yourself at a terrible disadvantage.’

'Doctor, this is no time to swap stories. I've got to get these people safely housed and at once.’

'That's my point,’ persisted MacRae. ‘Finding housing isn't the first thing to do.’

'What is it, then?’

'Set up a task force of your best shots and send them over to grab Beecher and the Company offices. I volunteer to lead it.’

Marlowe gestured angrily. ‘Out of the question. At present we are a group of citizens going about our lawful occasions. One move like that and we're outlaws.’

MacRae shook his head. ‘You don't see the logic of the actions you've already taken. You know that water runs down hill, but you think it'll never reach the bottom. In Beecher's books you are an outlaw now. All of us.’

'Nonsense, we're just enforcing our contract. If Beecher behaves, we'll behave.’

'I'm telling you, son—the way to grasp a nettle is firmly.’

'Doctor MacRae, if you are so sure how this matter should be conducted, why did you refuse to accept leadership?’

MacRae turned red. ‘I beg your pardon, sir. What are your orders?’

'You know Syrtis better than I do. Where is a building we can commandeer as a barracks?’

Jim decided that this was a good time to come out of hiding. ‘Dad,’ he said, coming around in front of him, ‘I know where we are and the school is —’

'Jim, I've no time to chat. Get in the car.’

'But, Dad, it's only about ten minutes walk!’

'I think he's got something,’ put in the doctor. ‘The school will have real beds for the kids, and a kitchen.’

'Hmmm ... very well. Possibly we should use both schools and put the women and small children in the girls’ school.’

'Jamie,’ advised the doctor, ‘at the risk of getting my ears batted down again, I say no. Don't divide your forces.’

'I didn't really want to. Kelly!’

'Yes, sir.’

'Get them all out and put a deputy in charge of each car party to keep them together. We're moving out.’

'Right.’

There is very little foot traffic in the streets of the Earth settlement at Syrtis Minor; pedestrians prefer to go by tunnel. The few they did meet seemed startled but no one bothered them.

The pressure lock at the school's front door could hold about twenty people at a time. As the outer door opened after the second load, Howe stepped out. Even with his mask on it could be seen that he was angry. ‘What is the meaning of this?’ he demanded.

Willis took one look at him and closed up. Jim got behind his father. Marlowe stepped forward. ‘We're sorry but we've got to use the school as an emergency shelter.’

'You can't do that. Who are you, anyway?’

'My name is Marlowe. I'm in charge of the migration.’

'But —’ Howe turned suddenly, pushed his way through the crowd and went inside.

Nearly thirty minutes later Marlowe, MacRae, and Kelly went inside with the last party. Marlowe directed Kelly to station guards on the inside at each door. MacRae considered suggesting a string of armed guards around the outside of the building, but he held his tongue.

Mr Sutton was waiting for Marlowe in the entrance hall. ‘A news flash from Mrs Palmer, Chief—she says to tell you that chow will be ready in about twenty minutes.’

'Good! I could use a bite myself.’

'And the school's regular cook is sulking in the dining room. She wants to talk to you.'

'You deal with her. Where is Howe?'

'Derned if I know. He went through here like a destroying angel.'

A man pressed forward—the entrance hall was jammed, not only with colonists but with students. Reunions were going on all around, between parents and sons. Kelly was pounding a smaller replica of himself on the back, and was himself being pounded. The babble was deafening. The man who had forced his way forward put his mouth to Marlowe's ear and said, 'Mr Howe is in his office. He's locked himself in; I've just come from trying to see him.'

'Let him stay,' decided Marlowe. 'Who are you?'

'Jan van der Linden, instructor here in natural sciences. Who, may I ask, are you?'

'Name's Marlowe. I'm in charge of this mad house. Look here, could you round up the boys who live outside the school? We are going to have to stay here for a day or two at least. You might as well send the town boys home—and the teachers, too.'

The teacher looked doubtful. 'Mr Howe won't like me doing it without his say-so.'

'I'm going to do it in any case but you can speed things up. I take full responsibility.'

Jim saw his mother through the crowd and did not wait to hear the outcome. She was leaning against the wall, holding Oliver and looking very tired. Phyllis was standing close to her. Jim wormed his way through the crowd. 'Mother!'

She looked up. 'What is it Jimmy?'

'You come with me.'

'Oh, Jimmy—I'm too tired to move.'

'Come on! I know a place where you can lie down.' A few minutes later he had the three in the room abandoned by Frank and himself. His mother sank down on his bunk. 'Jimmy, you're an angel.'

'You take it easy. Phyl can bring you something to eat. I'm going back and see what's going on.' He started to leave, then hesitated. 'Phyl—would you take care of Willis for me?'

'Why? I want to see what's doing, too.'

'You're a girl; you'd better stay out from under foot.'

'Well, I like that! I guess I've got just as much business —'

'Stop it, children. Jimmy, we'll take care of Willis. Tell your father where we are.'

Jim delivered the message, then found himself late in the chow line. By the time he had gone through for seconds, and eaten same, he discovered that most of the colonists were gathered in the school auditorium. He went in, spotted Frank and Doctor MacRae and squeezed over to them.

His father was pounding for order, using the butt of his gun as a gavel. ‘Mr Linthicum has the floor.’

The speaker was a man about thirty with an annoyingly aggressive manner. ‘I say Doctor MacRae is right; we shouldn't fool around. We've got to have boats to get to Copais. Right? Beecher won't give ‘em to us. Right? But all the actual force Beecher has is a squad of cops. Right? Even if he deputizes every man in Syrtis he only has maybe a hundred and fifty guns. Right? We've got twice that many. Besides which Beecher won't be able to get all the local employees to fight us. So what do we do? We go over and grab him by the neck and force him to do right by us. Right?’ He sat down triumphantly.

MacRae muttered, ‘Heaven defend me from my friends.’

Several tried to speak; Marlowe picked one out. ‘Mr Gibbs has the floor.’

'Mr Chairman ... neighbours ... I have rarely heard a more rash and provocative speech. You persuaded us, Mr Marlowe, to embark on this reckless adventure, a project of which I never approved —’

'You came along!’ someone shouted.

'Order!’ called Marlowe. ‘Get to the point, Mr Gibbs.’

'— but in which I acceded rather than oppose the will of the majority. Now the hasty and ill-tempered would make matters worse with outright violence. But now that we are here, at the seat of government, the obvious thing to do is to petition for redress of grievances.’

'If you mean by that to ask Beecher for transportation to Copais, Mr Gibbs, I've already done so.’

Gibbs smiled thinly. ‘Forgive me, Mr Marlowe, if I say that the personality of the petitioner sometimes affects the outcome of the petition? I understand we have here, Mr Howe, the Headmaster of this school and a person of influence with the Resident Agent General. Would it not be wise to seek his help in approaching the Resident?’

Mr Sutton shouted, ‘He's the last man on Mars I'd let speak for me!’

'Address the chair, Pat,’ Marlowe cautioned. ‘I feel the same way, but I won't oppose it if that's what the crowd wants. But,’ he continued, to the audience, ‘is Howe still here? I haven't seen him.’

Kelly stood up. ‘Oh, he's here; he's holed up in his office. I've talked to him through the ventilator, I've promised him a honey of a beating if he will only come out and stand up to me like a man.’

Mr Gibbs looked scandalized. ‘Well, really!’

'It's a personal matter involving my boy,’ explained Kelly.

Marlowe banged the table. ‘I imagine Mr Kelly will waive his privilege if you folks want Howe to speak for you. Do I hear a motion?’ Gibbs proposed it; in the end only he and the Pottles voted for it.

After the vote Jim said, ‘Dad?’

'Address the chair, son. What is it?’

'Er, Mr Chairman—I got an idea. I was wondering, since we haven't got any boats, maybe we could get to Copais the way Frank and I got back to Charax—that is, if the Martians would help us.’ He added, ‘If folks wanted us to, I guess Frank and I could go back and find Gekko and see what could be done about it.’

There was a moment of silence, then murmurs of ‘What's he talking about?’ Although almost all of the colonists had heard the two boys’ story, it was the simple fact that it had not been believed, or had been ignored or discounted. The report ran counter to experience and most of the colonists were as bogged down in ‘common sense’ as their relatives back on Earth.

Mr Marlowe frowned. ‘We don't know that the natives have these conveyances between here and Copais —’

'I'll bet they have!’

’—and we don't know that they would let us ride in them even if they have.’

'But, Dad, Frank and I —’

'A point of order, Mr Chairman!’ It was Gibbs again. ‘Under what rules do you permit children to speak in the councils of adults?’

Mr Marlowe looked embarrassed; Doctor MacRae spoke up. ‘Another point of order, Mr Chairman. Since when does this cream puff —’ He motioned at Gibbs.

'Order, Doctor.’

'Correction. I mean this fine upstanding male citizen, Mr Gibbs, get the notion that Frank and Jim and the other gun-toting men their age ain't citizens? I might add that I was a man grown when this Gibbs party was still drooling on his bib —’

'Order!’

'Sorry. I mean even before he had reached that stage. Now this is a frontier society and any man old enough to fight is a man and must be treated as such—and any girl old enough to cook and tend babies is adult, too. Whether you folks know it or not, you are headed into a period when you'll have to fight for your rights. The youngsters will do the fighting; it behooves you to treat them accordingly. Twenty-five may be the right age for citizenship in a moribund, age-ridden society back on Earth, but we aren't bound to follow customs that aren't appropriate to our needs here.’

Mr Marlowe banged his gun. ‘I declare this subject out of order. Jim, see me later. Has anyone any action to propose that can be carried out at this time? Do we negotiate, or do we resort to force?’

Mr Konski said, ‘I favour taking what we have to have, if necessary, but it may not be necessary. Wouldn't it be well for you, Mr Marlowe, to phone Mr Beecher again? You could point out that we have force enough to do as we see fit; perhaps he will see reason. I so move.'

The motion was carried; Mr Marlowe suggested that some one else speak for them, but was turned down. He left the rostrum and went out to the communications booth. It was necessary to break the lock Howe had placed on it.

Beecher seemed pleased with himself. 'Ah, yes—my good friend, Marlowe. You've called to give yourself up?'

Marlowe explained civilly to Beecher the purpose of his call.

'Boats to Copais?' Beecher laughed. 'Scooters will be ready at nightfall to take the colonists back to South Colony. All who are ready to go at that time will escape the consequences of their hasty actions. Not you, of course.'

'Let me point out to you that we are considerably larger in numbers than the largest force you can drum up here in Syrtis Minor. We intend to carry out the contract. If you crowd us into using force to get our rights, force we will use.'

Beecher sneered through the TV screen. 'Threats do not move me, Marlowe. Surrender. Come out one at a time and unarmed, hands up.'

'Is that your last word?'

'One more thing. You are holding Mr Howe a prisoner. Let him go at once, or I shall see to it that you are prosecuted for kidnapping.'

'Howe? He's not a prisoner; he's free to leave at any time.'

Beecher elaborated. Marlowe answered, 'That's a private matter between Kelly and Howe. You can call Howe in his office and tell him so.'

'You must give him safe conduct,' Beecher insisted.

Marlowe shook his head. 'I'm not going to interfere in a private quarrel. Howe is safe where he is; why should I bother? Beecher, I am offering you one more chance to provide boats peacefully.'

Beecher stared at him and switched off.

Kelly said, 'Maybe you should have thrown me to the wolves, Chief.'

Marlowe scratched his chin. 'I don't think so. I can't hold a hostage—but this building is safer with Howe in it. So far as I know there isn't a bomb nor any other heavy weapon in Syrtis—but I would like to know what makes Beecher so confident.'

'He's bluffing.'

'I wonder.' Marlowe went back and reported the conversation to all the colonists.

Mrs Pottle stood up. 'Well, *we* are accepting Mr Beecher's gracious offer at once! As for holding poor Mr Howe a prisoner—why, the very idea! I hope that you are properly punished, and that ungentlemanly Mr Kelly as well. Come, dear!' Again she made a grand exit, with Mr Pottle trotting after.

Marlowe said, 'Any more who want to surrender?'

Gibbs looked around uncertainly and followed them. No one spoke until he had left, then Toland said, 'I move that we organize for action.'

'Second!'—'Second the motion!'

No one wanted to debate it; it was carried. Toland then proposed that Marlowe be elected captain, with power to appoint officers. It, too, was carried.

At this point Gibbs came stumbling back, his face white, his hands trembling. 'They're dead! They're dead!' he cried.

Marlowe found it impossible to restore order. Instead he crowded into the circle around Gibbs and demanded, 'Who's dead? What happened?'

'The Pottles. I was almost killed myself.' He quieted down enough to tell his story; the three had assumed their masks and got out through the lock. Mrs Pottle, without bothering to look around, had stomped out into the street, her husband a close shadow. As soon as they had stepped clear of the archway they had both been blasted. Their bodies lay in the street in front of the school. 'It's your fault,' Gibbs finished shrilly, looking at Marlowe. 'You got us into this.'

'Just a moment,' said Marlowe, 'did they do the things Beecher demanded? Hands up, one at a time, and so forth? Was Pottle wearing his gun?'

Gibbs shook his head and turned away. 'That's not the point,' MacRae said bitterly. 'While we've been debating, Beecher has boxed us in.'

11

Besieged

It was maddeningly true, as investigation soon proved. The front and back exits were covered by gunmen—Beecher's police, supposedly—who were able to blast anyone emerging from the building without themselves being under fire. The airlock nature of the doors made a rush suicidal.

The school was at a distance from the settlement's dwellings; it was not connected by tunnel. Nor had it any windows. The colony listed hundreds of licensed gun wearers—and yet a handful of gun fighters outside could keep them holed up.

Under the influence of Doc MacRae's bellowing voice the assembly got back to work. 'Before I go ahead,' Marlowe announced, 'does anyone else want to surrender? I'm fairly sure that the Pottles were shot because they blundered out without notice. If you shout and wave something white, I think your surrender will be accepted.’

He waited. Presently a man got up with his wife, and then another. A few more trickled out. They left in dead silence.

When they were gone Captain Marlowe went on with organizing. Mrs Palmer he confirmed as head of commissary, Doc he designated as executive officer, Kelly he appointed officer of the watch, responsible for interior guard. Sutton and Toland were given the job of devising some sort of portable screen to block the enfilading fire that had dropped Mr and Mrs Pottle. Jim followed all this with excited interest until, after the appointment of platoon leaders, it became evident that his father did not intend to use boys as combatants. The students from the school were organized into two platoons, designated as reserve, and dismissed.

Jim hung around, trying to get a word with his father. At last he managed to catch his eye. ‘Dad —’

'Don't bother us now, Jim.’

'But, Dad, you *told* me to see you about getting the Martians to help us get to Copais.’

'The Martians? Oh —’ Mr Marlowe thought about it, then said, ‘Forget it, Jim. Until we can break out of here, neither that scheme, nor any other, will work. Go see how your mother is doing.’

Thus brushed off, Jim turned disconsolately away. As he was leaving Frank fell in step with him. ‘Do you know, Jim, sometimes you aren't as full of guff as you are other times.’

Jim eyed him suspiciously. ‘If that's a compliment—thanks.’

'Not a compliment, Jim, merely justice. Seldom as I approve of your weary notions, this time I admit that you had a bright idea.’

'Quit making a speech and get to the point.’

'Very well. Point: when you suggested getting the Martians to help us you were firing on all jets.’

'Huh? Well, thanks, but I don't see it myself. As Dad pointed out, there's nothing we can do about it until we find some way to break out of here. Then I suppose we won't need their help.’

'You're supposing too fast. Let's, as Doc would say, analyse the situation. In the first place, your father got us boxed in here —’

'You lay off my father!’

'I wasn't picking on your father. Your father is a swell guy. But by behaving like a gentleman he got us cornered and we can't get out. I'm not blaming him, but that's the situation. So what are they going to do about it? Your old man tells my old man and that drip Toland to work out a shield, some sort of armour, that will let us get out the door and into the open where we can fight. Do you think they'll have any luck?’

'Well, I hadn't thought about it.'

'I have. They are going to get exactly no place. Dad is a good engineer. You give him equipment and materials and he'll build you anything. But what's he got to work with? He's got the school workshop and you know what a sad mess that is. The Company never spent any money on equipping it; it's about right for making bookends. Materials? What are they going to make a shield out of? Dining room table tops? A heater would cut through a table top like soft cheese.'

'Oh, there must be something around they can use.'

'You name it.'

'Well, what do you want us to do?' Jim said in exasperation. 'Surrender?'

'Certainly not. The old folks are stuck in a rut. Here's where we show finesse—using your idea.'

'Quit calling it my idea. I haven't got any idea.'

'Okay, I'll take all the credit. We get word to Gekko that we need help. He's our water friend; he'll see to it.'

'How can Gekko help us? Martians don't fight.'

'That's right, but, as it says in geometry, what's the corollary? Human beings never fight Martians, *never.* Beecher can't risk offending the Martians. Everybody knows what a terrible time the Company had persuading the Martians that it was all right to let us settle here in the first place. Now suppose that about twenty or thirty Martians—or even one—came stomping up to the front door of this place: what do Beecher's cops do?'

'Huh?'

'They cease fire, that's what—and we come swarming out. That's what Gekko can do for us. He can fix it so that Beecher is forced to call off his gun toters. He'll *have* to.'

Jim thought about it. There was certainly merit in it. Every human who set foot on Mars had it thoroughly drummed into him that the natives must not be interfered with, provoked, nor their customs violated—nor, above all things, hurt. The strange and distressing history of the first generation of contact with the Martians had resulted in this being the first law of the settlements on Mars. Jim could not imagine Beecher violating this rule—nor could he imagine the Company police doing so. In normal times the principal duty of the police was the enforcement of this rule, particularly with respect to tourists from Earth, who were never allowed to come in contact with natives.

'There is just one thing wrong, Frank. Supposing Gekko and his friends were willing, how are we going to let him know that we need help? We can't just call him on the phone.'

'No, we can't—but that is where you come in. *You* can send him a message.'

'How?'

'Willis.'

'You're crazy!'

'Am I? Suppose you go out that front door—*fsst*! You are done for. But suppose Willis goes out? Who's going to shoot a bouncer?'

'I don't like it. Willis might get hurt.'

'If we just sit tight and do nothing, you'll wish he was dead. Beecher will sell him to the London Zoo.'

Jim considered this, then answered, 'Anyhow, your scheme is full of holes. Even if he gets outside safely, Willis couldn't find Gekko and couldn't be depended on to deliver a message. He'd be just as likely to sing or recite some of Doc's bum jokes. I've got a better idea.'

'Convince me.'

'I'll bet that Beecher's plug-uglies didn't think to keep watch on the garbage dump. I'll deliver the message to Gekko myself.'

Frank thought it over. 'No good. Even if they aren't watching the dump, they can see you from where they are watching the back door. They'd nail you before you could scramble to your feet.'

'I'll wait till dark.'

'Mmmm ... could work. Only I'll do it. I'm faster on my feet than you are.'

'Look who's talking!'

'All right! We'll *both* do it—an hour apart.' Frank went on, 'But that doesn't cut Willis out of it. He'll try it, too. One of us might get through. Now wait a minute—you underrate your little pal. We'll teach him just what he's to say. Then you tell him to go over into the native city, stop the first Martian he meets and recite his piece. The Martian does the rest because we'll put it all into the message. The only question is whether or not Willis is bright enough to do as you tell him. I've got grave doubts about that.'

Jim bristled. 'You're always trying to make out that Willis is stupid. He's not; you just don't understand him.'

'Okay, then he can find his way over to the city and deliver the message. Or can't he?'

'Well—I don't like it.'

'Which do you prefer, to take a small risk with Willis or to have your mother and your baby brother have to spend the winter at South Colony?'

Jim chewed his lip. 'All right—we'll try it. Let's get Willis.'

'Don't get in a rush. Neither you nor I know the native language well enough to whip up just what we want to say. But Doc does. He'll help us.'

'He's the only one of the grown ups I'd trust with this anyhow. Come on.'

They found MacRae, but were not able to speak with him at once. He was in the communications booth, bellowing at the screen. They could hear his half of the conversation. 'I want to talk to Doctor Rawlings. Well, get him—don't sit there chewing your pencil! Tell him it's Doctor MacRae.... Ah, good day, Doctor! ... No, I just got here ... How's business, Doctor? Still cremating your mistakes? ... Well, don't we all? ... Sorry, I can't; I'm locked up.... Locked up, I said ...—L ... O ... C ... K ... E ... D up, like a disorderly drunk.... No reason, none at all. It's that simian moron, Beecher.... Yes, hadn't you heard? The entire colony, penned up in the schoolhouse ... shoots us down if we so much as stick our noses out.... No, I'm not joking. You know Skinny Pottle—he and his wife were killed not two hours ago. Come see for yourself and find out what kind of a madman you have ruling you here ...' The screen suddenly went blank. MacRae swore and fiddled with the controls.

Presently, by experiment, he realized the instrument had been cut off completely. He came out, shrugging. 'Well, they finally caught on to me,' he remarked to the room in general, 'but I talked to three key men.'

'What were you doing, Doc?' asked Jim.

'Starting some fifth column activity behind Beecher's lines. There are good people everywhere, son, but you have to spell it out for them.'

'Oh. Look, Doc, could you spare us some time?'

'What for? Your father has a number of things for me to do, Jim.'

'This is important.' They got MacRae aside and explained to him their plans.

MacRae looked thoughtful. 'It just might work. That notion of making use of Martian immunity is brilliant, Frank; you should go into politics. However, about the other stunt—the garbage can paratrooper act—if you ask your father, he'll veto it.'

'Can't you ask him? He'll listen to you.'

'I said *If* you ask your father.'

'Oh. I get you.'

'About the other matter—chase up the little beastie and meet me in classroom "C"; I'm using it as an office.'

Jim and Frank left to do so. Jim found his mother and Oliver asleep, his sister and Willis gone. He had started to leave when his mother woke up. 'Jimmy?'

'I didn't mean to wake you, Mother. Where's Phyl? I want to find Willis.'

'Your sister is in the kitchen, I think, helping out. Isn't Willis here?

He was here on the bed with baby and me.'

Jim looked again, but found no sign of Willis. 'I'll go ask Phyl. Maybe she came back and got him.'

'He can't have wandered far. I'm sorry, Jim.'

'I'll find him.'

He went to the kitchen, found his sister. 'How would I know?' she protested. 'He was with mother when I left. Don't go looking at me.'

Jim joined Frank. 'Darn it, they've let him wander off. We'll just have to search.'

One hour and hundreds of inquiries later they were convinced that, if the bouncer was in the school, he had found a very special hiding place. Jim was so annoyed that he had forgotten completely the essential danger that they were all in. 'That's what comes of trusting women,' he said bitterly. 'Frank, what'll I do now?'

'Search me.'

They were in the far end of the building from their former room. They started back toward it on the chance that Willis might have come back. As they were passing through the entrance hall, Jim stopped suddenly. 'I heard him!'

They both listened. 'Open up!' came a replica of Jim's voice. 'Let Willis in!' The voice came through the door's announcing speaker.

Jim darted for the pressure lock, was stopped by the guard. 'Hey,' he protested, 'open the lock. That's Willis.'

'More likely it's a trap. Stand back.'

'Let him in. That's Willis, I tell you.' The guard ignored him, but threw the switch that caused the lock to cycle. He cleared everybody out of range, then watched the door from one side, gun drawn.

The inner door opened and Willis waddled through.

Willis was bland about the whole thing. 'Jim go away. Everybody go away. Willis go for walk.'

'How did you get outdoors?'

'Went out.'

'But how?' Willis apparently could see nothing difficult about that; he did not amplify.

'Maybe he went out when the Pottles did?' suggested Frank.

'Maybe. Well, I guess it doesn't matter.'

'Go see people,' Willis offered. He named off a string of native names, then added, 'Fine time. Water friends. Give Willis good water, big drink.' He made lip-smacking noises in imitation of Jim, although he had no lips himself.

'You had a drink just a week ago,' Jim said accusingly.

'Willis good boy!' Willis countered.

'Wait a minute,' said Frank. 'He was with *Martians.'*

'Huh? I don't care if he was with Cleopatra; he shouldn't run away.'

'But don't you see? He can get to the natives; he already has. All we've got to do is to be sure he carries a message for them to pass on to Gekko.'

The point, relayed to MacRae, increased his interest. The three composed a message in English for MacRae to translate. 'Greetings,' it began, 'this is a message from Jim Marlowe, water friend of Gekko of the city of —' Here they inserted the unspellable and most unpronounceable Martian name of Cynia. 'Whoever you may be, friend of my friend, you are implored to send this word at once to Gekko. I am in great trouble and I need your help.' The message went on to tell the nature of the trouble, who was responsible, and what they hoped would be done about it. Telegraphic simplicity was not attempted, since Willis's nervous system could hold a thousand words as easily as ten.

MacRae translated it, then drilled Jim in reading it, after which they attempted to impress on Willis what he was to do. Willis was willing, but his consistently slaphappy, featherbrained approach to any problem exasperated them almost to hysteria. At last it seemed likely that he might carry out his assignment; at least (a) when asked what he was to do he would answer, 'go see friends,' and (b) when asked what he would tell them he would (usually) answer by reciting the message.

'It might work,' decided MacRae. 'We know the Martians have means of rapid communication, even though we've never known what sort. If our plump friend doesn't forget what he is doing and why he is making the trip...'

Jim took him to the front door. On MacRae's authorization the guard let them through. Jim checked Willis again while the lock was cycling; the bouncer appeared to be sure of his instructions, although his answers showed his usual mental leapfrog.

Jim hung back in the doorway, out of the line of fire, while Willis rolled off the stoop. The Pottles still lay where they had fallen; Willis looked at them, then took a zig-zag course down the street and disappeared from Jim's view, cut off as he was by the door frame. Jim wished then that he had had the foresight to bring along a mirror to use as a periscope. Finally he screwed up his courage, lay down, and peeked around the edge of the door at the bottommost part.

Willis was well down the street and nothing had happened to him. Far down the street some sort of a cover had been set up. Jim stuck his head out an inch farther, trying to see what it was, when the corner of the door frame above him gave off a puff of smoke and he felt the electric tingle of a near miss. He jerked his head back and reentered the lock.

He had an all-gone feeling at the pit of his stomach and a conviction that he would never see Willis again.

12

'Don't Shoot!'

The day passed wearily for Jim and Frank. There was nothing they could do about their own plan until after dark. In the meantime discussions were taking place among colonial leaders, but they were held behind closed doors and the boys were not invited.

Supper was welcome diversion, both because they were hungry and because it meant that the kitchen would presently be deserted and the way left open to the garbage dump. Or so they thought. They found that, in practice, the womenfolk running the kitchen first took a leisurely time to clean up, then seemed disposed to sit around all night, drinking coffee and talking.

The boys found excuses to come into the kitchen, excuses which began to arouse Mrs Palmer's suspicions. Finally Jim followed another boy in, wondering what he would say this time, when he heard the other boy say, ‘Mrs Palmer, Captain Marlowe wants to know if it would be too much trouble to keep a night watch for coffee and sandwiches for the men on guard.’

'Why, no,’ Jim heard her say, ‘we'll be glad to. Henrietta, will you find some volunteers? I'll take the first stint.’

Jim backed out and went to where Frank awaited him. ‘What's the chances?’ asked Frank. ‘Does it look like they're going to break up any time soon?’

Jim told him what the chances were—or, rather, were not. Frank swore, using a couple of words that Jim had not heard before. ‘What'll we do, Jim?’

'I don't know. Maybe when it's down to just one of them, she'll go out occasionally.’

'Maybe we could get her out with some song and dance.’

'Maybe we could tell her that she's wanted in the headquarters room. That ought to do it.’

They were still discussing it when the lights went out.

The place was suddenly as dark as the inside of a rock. Worse than that, there was a disturbing silence. Jim had just realized that the complete emptiness of sound resulted from the ending of the noise of circulating air, from the stopping of the supercharger on the roof, when a woman began to scream.

She was joined by another, in a higher key. Then there were voices everywhere in the darkness, questioning, complaining, soothing.

Down the hall a light sprang out and Jim heard his father's voice. ‘Quiet, everybody. It's just a power failure. Be patient.’

The light moved toward them, suddenly hit them. ‘You boys get to bed.’ Jim's father moved on. In the other direction they could hear Doc's bellow, ordering people to shut up and calm down.

Jim's father came back. This time he was saying, ‘Into your suits, everybody. Have your respirators on your head. We hope to correct this in a few minutes, but we don't want anybody hurt. Don't get excited; this building will hold pressure for half an hour at least. Plenty of time to get ready for thin air, even if it takes a while to correct the trouble.’

Other lights sprang up; shortly the passageways throughout the building, if not the rooms, were adequately lighted. The corridors were crowded with dim shapes, struggling into their outdoors suits. Jim and Frank, planning as they were to attempt to go outside, had long been in their suits, armed, and with respirators at the ready. ‘Maybe this is a good time,’ suggested Frank.

'No,’ Jim answered. ‘They're still in the kitchen. I can see a light.’

MacRae came down the corridor; Jim stopped him. ‘Doc, how long do you think it will be until they get the lights on?’

MacRae said, ‘Are you kidding?’

'What do you mean, Doc?’

'This is one of Beecher's stunts. He's pulled the switch on us, at the power house.’

'Are you sure?’

'There's no failure—we've checked it. I'm surprised Beecher didn't do it hours ago. But don't you birds go blabbing, Jim; your Pop has his hands full keeping the nervous nellies from blowing their tops.’ He moved on.

In spite of Captain Marlowe's reassuring words the true state of things was soon common knowledge. The pressure dropped slowly, so slowly that it was necessary to warn everyone to adjust his respirator, lest oxygen starvation sneak up on the unwary. After that it was hardly possible to maintain the fiction that the power loss was temporary, to be corrected any minute now. The temperature in the building fell slowly; there was no danger of them freezing in the closed and insulated building—but the night chill penetrated.

Marlowe set up headquarters in the entrance hall in a circle of light cast by a single torch. Jim and Frank loitered there, discreetly back in the shadows, unwilling to miss what might be going on and quite unwilling to go to bed as ordered ... as Frank pointed out to Jim, the only beds they had were occupied, by Mrs Marlowe, Phyllis, and Oliver. Neither of them had given up the idea of attempting the garbage chute route, but they knew in their hearts that the place was too stirred up to give them the privacy they would require.

Joseph Hartley, one of the colony's hydroponists, came up to

Marlowe. His wife was behind him, carrying their baby daughter in a pressurized crib, its supercharger sticking up above the clear plastic shell of it like a chimney. ‘Mr Marlowe—I mean Captain Marlowe —’

'Yes?’
